AMERICAN

MEDICAL SCIENCE

REPORTS OF THE

SECOND EDITION

WILLIAM C. COTTELL, M.D., F.R.C.S.

CHICAGO

W. B. SAUNDERS CO.

1895

MEDICAL LEXICON.

A NEW DICTIONARY
OF
MEDICAL SCIENCE,
CONTAINING
A CONCISE ACCOUNT OF THE VARIOUS SUBJECTS AND TERMS;
WITH A VOCABULARY OF
SYNONYMES IN DIFFERENT LANGUAGES,
AND
FORMULÆ FOR VARIOUS OFFICINAL AND EMPIRICAL PREPARATIONS, &c.

SECOND EDITION,
WITH NUMEROUS MODIFICATIONS AND ADDITIONS.

BY
ROBLEY DUNGLISON, M. D., M. A. P. S., &c.

PHILADELPHIA:
LEA AND BLANCHARD,
SUCCESSORS TO CAREY AND CO.

1839.

Entered, according to the Act of Congress, in the year 1839, by LEA & BLANCHARD, in the Clerk's Office of the District Court of the Eastern District of Pennsylvania.

C. SHERMAN & CO. PRINTERS.

TO

ROBERT M. PATTERSON, M. D.,

DIRECTOR OF THE MINT OF THE UNITED STATES; VICE PRESIDENT OF THE AMERICAN
PHILOSOPHICAL SOCIETY; LATE PROFESSOR OF NATURAL PHILOSOPHY
IN THE UNIVERSITY OF VIRGINIA; ETC. ETC.

MY DEAR DOCTOR,

When I dedicated the first edition of this work to you, we were colleagues in the University of Virginia. Since that period, we have been placed in various relations with regard to each other; and in all you have maintained those sterling qualities which led me at the time to inscribe it to you. Need I add, that I embrace with eagerness the opportunity, which another edition affords me, of again manifesting to you the regard and esteem with which I am

Faithfully Yours,

ROBLEY DUNGLISON.

PHILADELPHIA,

GIRARD STREET, JULY 1, 1839.

PREFACE TO THE SECOND EDITION.

THE present undertaking was suggested by the frequent complaints, made by the author's pupils, that they were unable to meet with information on numerous topics of professional inquiry,—especially of recent introduction,—in the medical dictionaries accessible to them.

It may, indeed, be correctly affirmed, that we have no dictionary of medical subjects and terms which can be looked upon as adapted to the state of the science. In proof of this the author need but remark, that he has found occasion to add several thousand medical terms, which are not to be met with in the only medical lexicon at this time in circulation in the country.

The present edition will be found to contain many hundred terms more than the first, and to have experienced numerous additions and modifications.

The author's object has not been to make the work a mere lexicon or dictionary of terms, but to afford, under each, a condensed view of its various medical relations, and thus to render the work an epitome of the existing condition of medical science. In its preparation, he has freely availed himself of the English, French, and German works of the same nature, and has endeavoured to add every subject and term of recent introduction, which has fallen under his notice; yet, with all his care, it will doubtless be found that subjects have been omitted. The numerous additions, however, which he has made, and his strong desire of being useful, "by removing rubbish and clearing obstructions from the paths through which learning and genius press forward to conquest and glory," will, he trusts, extenuate these and other objections that might be urged

against the work; especially when the toil, which every compiler of a dictionary must endure, is taken into consideration; a toil which has been so forcibly depicted by the great English Lexicographer, as well as by the distinguished SCALIGER :

“Si quelqu'un a commis quelque crime odieux,
S'il a tué son père, ou blasphémé les Dieux,
Qu'il fasse un Lexicon : s'il est supplice au monde
Qui le punisse mieux, je veux que l'on me tonde.”*

* Some idea of the “toil” may be formed by the fact, that, exclusive of the manifold additions and modifications in the body of the work, the index or vocabulary of synonymes at the end, consisting of more than *twenty thousand words*, was entirely written and arranged for the present edition.

PHILADELPHIA,

9 GIRARD STREET, JULY 1, 1839.

EXPLANATIONS.

SHOULD any term be found wanting in the body of the dictionary, reference must be made to the index or vocabulary of synonymes, at the end of the volume. If the simple synonymy of the term be needed, such reference may be sufficient; if not, further information regarding it may be obtained in the body of the work, under the term referred to. For example: the French word *Tronc*, in the index, is said to be synonymous with "Trunk." This may be sufficient for the reader; should it not, however, the requisite information may be found by turning to "Trunk" in the body of the dictionary.

ABBREVIATIONS, &c.

ARBITRARILY EMPLOYED IN THIS WORK.

<i>Arab.</i>	Arabic.	P.	Portuguese.
Ch.	Chaussier.	<i>Ph. A.</i>	Pharmacopœia of America.
D.	Dutch.	<i>Ph. D.</i>	Do. of Dublin.
Da.	Danish.	<i>Ph. E.</i>	Do. of Edinburgh.
E.	English.	<i>Ph. L.</i>	Do. of London.
F.	French.	<i>Ph. P.</i>	Do. of Paris.
F. or Fah.	Fahrenheit.	<i>Ph. U. S.</i>	Do. of America.
G.	German.	R.	Réaumur.
Heb.	Hebrew.	S.	Spanish.
I.	Italian.	S. G.	Specific Gravity.
L.	Latin.	Sw.	Swedish.
<i>Linn.</i>	Linnæus.	V. S.	Venesection.

A

NEW DICTIONARY OF MEDICAL SCIENCE.

A

A

ABBREVIATION.

A, before a consonant; *An* before a vowel, *a*, *av*, have, in the compound medical terms, a privative or debasing signification, like that of the particles *in*, *im*, *un*, *ir*, in English. Thus: *Stheni'a* means strength. *Astheni'a*, want of strength. *Anæmia*, want of blood, &c.

A, or AA. See Abbreviation.

AARZHIL, MINERAL WATERS OF.

A. is in the canton of Berne in Switzerland. The chief spring contains muriates of lime and soda, sulphates of lime and soda, oxyd of iron, and hydrosulphuric acid gas.

ABACH, MINERAL WATERS OF. A hydrosulphuretted saline spring, not far from Ratisbon or Regensburg in Bavaria.

ABALIENA'TUS. *Corruptus*. Corrupted. *Membra abaliena'ta*. Limbs dead, or benumbed.—Celsus, Scribonius Largus.

ABANGA. Name given by the inhabitants of St. Thomas to the fruit of a palm-tree, the seeds of which they consider very useful in diseases of the chest, in the dose of three or four, given two or three times a day.

ABAPTIST'A. *Abaptiston*, from *a* privative, and *βαπτίζω*, 'to plunge.' A term applied to the old Trepan, the conical shape of which prevented it from plunging suddenly into the cavity of the cranium.

ABAREMO-TEMO. A Brazilian tree, which grows in the mountains, and appears to be a mimosa. Piso relates that the decoction of its bark, which is bitter and astringent, was applied, in that country, to ulcers of a bad character.

ABBECOURT, MINERAL WATERS OF. A chalybeate spring, six leagues from Paris, and one from Poissy. It was once much frequented, but is now abandoned.

ABBEVILLE, MINERAL WATERS OF. An acidulous chalybeate at Abbeville, in the department of the Somme.

ABBREVIATION. *Abbreviatio*, *Brachyn'sis*, *Brachys'mos*, *Abbreviatu'ra*. (F.) *Abreviation*. Abbreviations are chiefly used in medicinal formulæ. They are by no means as frequently employed now as of old, when every article had its appropriate symbol. The chief abbreviations now adopted are the following:

R. *Recipe*, Take.

A. AA, ANA, (*ava*) *utriusque*, of each.

ABDOM. *Abdomen*.

ABS. FEBR. *Absente febre*, In the absence of fever.

AD. or ADD. *Adde* or *addatur*.

AD. LIB. *Ad libitum*, At pleasure.

ADMOV. *Admoveatur*, Let it be applied.

ALTERN. HOR. *Alternis horis*, Every other hour.

ALV. ADSTRICT. *Alvo adstrictâ*, The bowels being confined.

AQ. *Aqua*, Water.

AQ. COMM. *Aqua communis*, Common water.

AQ. FONT. *Aqua fontis*, Spring water.

AQ. BULL. *Aqua bulliens*, Boiling water.

AQ. FERV. *Aqua fervens*, Hot water.

AQ. MARIN. *Aqua marina*, Sea water.

B. A. *Balneum arenæ*, A sand-bath.

BALS. *Balsamum*, Balsam.

B. B. BBDS. *Barbadensis*, Barbadoes.

BIB. *Bibe*, Drink.

BIS IND. *Bis indies*, Twice daily.

B. M. *Balneum mariæ*, A water-bath.

BOL. *Bolus*.

BULL. *Bulliat*, Let it boil.

BUT. *Butyrum*, Butter.

B. V. *Balneum vaporis*, A vapor-bath.

CÆRUL. *Cæruleus*, Blue.

CAP. *Capiat*, Let him take.

C. C. *Cornu cervi*, Hartshorn,

C. C. U. *Cornu cervi ustum*, Burnt harts-horn.
 C. M. *Cras manè*, To-morrow morning.
 COCHL. *Cochleare*, A spoonful.
 COCHL. AMPL. *Cochleare amplum*, A large spoonful.
 COCHL. INF. *Cochleare infantum*, A child's spoonful.
 COCHL. MOD. or MED. *Cochleare modicum* or *medium*, A dessert spoonful.
 COCHL. PARV. *Cochleare parvum*, A teaspoonful.
 COL. *Cola, colaturæ*, Strain, and to the strained.
 COMP. *Compositus*, Compound.
 CONF. *Confectio*, Confection.
 CONS. *Conserva*, Conserve.
 CONT. *Continuetur*, Let it be continued.
 COQ. *Coque*, Boil.
 CORT. *Cortex*, Bark.
 CRAST. *Crastinus*, For to-morrow.
 CUJ. *Cujus*, Of which.
 CUJUSL. *Cujuslibet*, Of any.
 CYATH. *Cyathus*, A glassful.
 CYATH. THEÆ, A cup of tea.
 D. *Dosis*, A dose.
 D. et S. *Detur et signetur*, (placed at the end of a prescription.)
 D. D. *Detur ad*, Let it be given in or to.
 D. D. VITR. *Detur ad vitrum*, Let it be given in a glass.
 DEAUR. PIL. *Deaurentur pilulæ*, Let the pills be gilded.
 DEB. SPISS. *Debita spissitudo*, A due consistence.
 DEC. *Decanta*, Pour off.
 DECUB. *Decubitus*, Lying down, going to bed.
 DE D. IN D. *De die in diem*, From day to day.
 DEJ. ALV. *Dejectiones alvi*, Alvine evacuations.
 DEP. *Depuratus*, Purified.
 DET. *Detur*, Let it be given.
 DIEB. ALTERN. *Diebus alternis*, Every other day.
 DIEB. TERT. *Diebus tertiis*, Every third day.
 DIG. *Digeratur*, Let it be digested.
 DIL. *Dilutus*, Dilute.
 DIM. *Dimidius*, One half.
 DIST. *Distilla*, Distil.
 DIV. *Divide*, Divide.
 DONEC ALV. SOLUT. FUER. *Donec alvus soluta fuerit*, Until the bowels are opened.
 DRACH. *Drachma*, A drachm.
 EJUSD. *Ejusdem*, Of the same.
 ENEM. *Enema*, A clyster.
 EXHIB. *Exhibeatur*, Let it be exhibited.
 EXT. SUPER ALUT. *Extende super alutam*, Spread upon leather.
 F. *Fiat*, Let it be made.
 F. PIL. *Fiat pilula*, Make into a pill.
 F. VENÆ. or F. V. S. *Fiat venæ sectio*, Let bleeding be performed.

FEB. DUR. *Febre durante*, The fever continuing.
 FEM. INTERN. *Femoribus internis*, To the inside of the thighs.
 FIST. ARMAT. *Fistula armata*, A bag and pipe, a clyster pipe and bladder fitted for use.
 FL. *Fluidus*, and *Flores*, Fluid, and Flowers.
 FRUST. *Frustillatim*, In small pieces.
 GEL. QUAVIS. *Gelatinâ quavis*, In any kind of jelly.
 G. G. G. *Gummi guttæ Gambiæ*, Gamboge.
 GR. *Granum*, A grain.
 GTT. *Gutta*, A drop.
 GTT. or GUTT. QUIBUSD. *Guttis quibusdam*, With some drops.
 GUM. *Gummi*, Gum.
 GUTTAT. *Guttatim*, By drops.
 HOR. DECUB. *Horâ decubitûs*, At bed-time.
 HOR. INTERM. *Horis intermediis*, At intermediate hours.
 H. S. *Horâ somni*, At bed-time.
 INF. *Infunde*, Infuse.
 IND. *Indies*, Daily.
 INJ. ENEM. *Injiciatur enema*, Let a clyster be given.
 IN PULM. *In pulmento*, In gruel.
 JUL. *Julepus*, A julep.
 LAT. DOL. *Lateri dolenti*, To the pained side.
 LB. and LIB. *Libra*, A pound weight.
 LLB. *Libræ*, Pounds.
 LIQ. *Liquor*.
 M. *Misce*, Mix.
 MAC. *Macera*, Macerate.
 MAN. *Manipulus*, A handful.
 MAN. PRIM. *Mane primo*, Early in the morning.
 MIC. PAN. *Mica panis*, Crumb of bread.
 MIN. *Minimum*, The 60th part of a drachm, by measure.
 MITT. *Mitte*, Send.
 MITT. SANG. *Mittatur sanguinis*, Let blood be drawn.
 MOD. PRÆSCRIPT. *Modo præscripto*, In the manner directed.
 MOR. SOL. *More solito*, In the usual manner.
 MUC. *Mucilago*, Mucilage.
 N. M. *Nux moschata*, Nutmeg.
 O. *Octarius*, A pint.
 OL. *Oleum*, Oil.
 OL. LINI, S. I. *Oleum lini sine igne*, Cold-drawn linseed oil.
 OMN. BID. *Omni biduo*, Every two days.
 OMN. BIH. *Omni bihorio*, Every two hours.
 OMN. HOR. *Omni horâ*, Every hour.
 OMN. MAN. *Omni mane*, Every morning.
 OMN. NOCTE, Every night.
 OMN. QUADR. HOR. *Omni quadrante horæ*, Every quarter of an hour.

O. O. O. *Oleum olivæ optimum*, Best olive oil.

Ov. *Ovum*, An egg.

Ox. *Oxymel*.

Oz. *Uncia*; An ounce.

P. *Pondere*, by weight.

P. and PUG. *Pugillus*, A pugil.

P. Æ. *Partes æquales*, Equal parts.

PART. VIC. *Partitis vicibus*, In divided doses.

PERACT. OP. EMET. *Peractâ operatione emetici*, The operation of the emetic being over.

PIL. *Pilula*, A pill.

POST. SING. SED. LIQ. *Post singulas sedes liquidas*, After every liquid evacuation.

POT. *Potio*, A potion.

P. P. *Pulvis patrum*, Jesuits' bark.

P. RAT. ÆTAT. *Pro ratione ætatis*, According to the age.

P. R. N. *Pro re natâ*, As occasion may be.

PULV. *Pulvis*, A powder.

Q. P. *Quantum placeat*, As much as may please.

Q. S. *Quantum sufficiat*, as much as is sufficient.

QUOR. *Quorum*, Of which.

Q. V. *Quantum volueris*, As much as you wish.

RAD. *Radix*, Root.

RAS. *Rasuræ*, Shavings.

RECT. *Rectificatus*, Rectified.

RED. or REDIG. IN PULV. *Redactus in pulverem*, or *Redigatur in pulverem*, Powdered, or Let it be powdered.

REG. UMBIL. *Regio umbilici*, The umbilical region.

REPET. *Repetatur*, Let it be repeated.

S. A. *Secundum artem*, According to art.

SEM. *Semen*, Seed.

SEMI-DR. *Semi-drachma*, Half a drachm.

SEMI-H. *Semi-hora*, Half an hour.

SERV. *Serva*, Keep, preserve.

SESQUIH. *Sesquihora*, An hour and a half.

SESUNC. *Sesuncia*, An ounce and a half.

SI NON VAL. *Si non valeat*, If it does not answer,

SI OP SIT. *Si opus sit*. If there be need.

SI VIR. PERM. *Si vires permittant*, If the strength will permit.

SOLV. *Solve*, Dissolve.

SP. and SPIR. *Spiritus*, Spirit.

Ss. *Semi*, One half.

ST. *Stet*, Let it stand.

SUB FIN. COCT. *Sub finem coctionis*, Towards the end of the boiling.

SUM. *Sumat*, Let him take; also, *Summitates*, The tops.

S. V. *Spiritus vini*, Spirit of wine.

S. V. R. *Spiritus vini rectificatus*, Rectified spirits of wine.

S. V. T. *Spiritus vini tenuior*, Proof spirit of wine.

SYR. *Syrupus*, Syrup.

TEMP. DEXT. *Tempori dextro*, To the right temple.

T. O. *Tinctura opii*, Tincture of opium.

TR. and T. and TINCT. *Tinctura*, Tincture.

TRIT. *Tritura*, Triturate.

V. O. S. or VIT. OV. SOL. *Vitello ori solutus*, Dissolved in the yolk of an egg.

Z. Z. anciently *myrrh*: now *zinziber*, or ginger.

℔, *Libra*, A pound.

℥, *Uncia*, An ounce.

ʒ, *Drachma*, A drachm.

ʒ *Scrupulum*, A scruple.

℥ *Minimum*, A minim.

ss, *Semissis*, or half; iss, one and a half.

j, one; ij, two; iij, three; iv, four, &c.

The same system is not always followed in abbreviating. The subjoined will exhibit the usual mode:

R

Infus. Calumb. ʒ iss

Tinct. gent. c. ʒ i

Syr. Cort. Aurant. ʒ ij

Tinct. Caps. gtt. XL. M.

Capt. Coch. ij. p. r. n.

This written at length is as follows:

Recipe.

Infusi Calumbæ, sesqui-unciam,

Tincturæ Gentianæ Compositæ, drachmam,

Syrupi Corticis Aurantiorum, scrupula duo,

Tincturæ Capsici, guttas quadraginta.

Misce.

Capiat cochlearia duo pro re natâ.

ABDOMEN, from *ab'dere*, 'to conceal'; *Etron*, *Hypogastrion*, *Epischion*, *Lapara*, *Hypochoilion*, *Gaster*, *Hypotrion*, *Nedys*. *Abdu'men*, *Venter imus*, *Venter in'fimus*, *Alvus*, *Uterus*. (F) *Ventre*, *V. inférieur*, *Bas ventre*. The largest of the three splanchnic cavities, bounded, above, by the diaphragm; below, by the pelvis; behind, by the lumbar vertebræ; and at the sides and fore part, by muscular expansions. It is distinguished into three anterior regions, from above to below; viz. the epigastric, umbilical, and hypogastric, each of which is itself divided into three others, one middle and two lateral: thus the epigastric region comprises the epigastrium and hypochondria; the umbilical, the umbilicus and flanks or lumbar regions; and the hypogastric, the hypogastrium and iliac regions. None of these regions has its limits well defined. The chief viscera contained in the Abdomen are the stomach, intestines, liver, spleen, pancreas, kidneys, &c. It is lined by the Peritoneum.

ABDOMINAL, *Abdomina'lis*. That which belongs to the Abdomen, as *abdominal muscles*, *abdominal viscera*, &c.

ABDOMINOSCOPIA. A hybrid word, from *Abdomen*, 'the lower belly,' and

σκοπία, 'I view.' *Laparosco'pia*, examination of the lower belly as a means of Diagnosis.

ABDUCTION. *Abductio*, from *abdu'cere*, to separate. The movement which separates a limb or other part from the axis of the body.

The word has also been used synonymously with *Abruptio*, ἀπαγμα, ἀποκλασμα, *Apag'ma*, *Apoclas'ma*, a fracture near the articular extremity of a bone, with separation of the fragments.

ABDUCTOR, same etymon. (F) *Abducteur*. A muscle which moves certain parts by separating them from the axis of the body.

ABDUCTOR AURIS, *Abductor auricula'ris*. (F) *Abducteur de l'oreille*. A portion of the posterior auris, the existence of which is not constant, and which passes from the mastoid process to the concha.

ABDUCTOR IN'DICIS. *Semi-interos'seus indicis*, a muscle which arises from the os trapezium and metacarpal bone of the thumb, and is inserted into the first bone of the forefinger. Its use is to bring the forefinger towards the thumb.

ABDUCTOR MIN'IMI DIG'ITI, *Carpo-phalangeus min'imi digiti*, *Carpo-phalangien du petit doigt*, *Extensor ter'tii internodii minimi digiti*—(Douglas.) *Hypoth'entar minor metacarpeus*. It originates fleshy from the os pisiforme, and from the annular ligament near it; and is inserted, tendinous, into the inner side of the base of the first bone of the little finger. *Use*, To draw the little finger from the rest.

ABDUCTOR MINIMI DIGITI PEDIS, *Calco-sub-phalangeus minimi digiti*, *Calcaneo-phalangien du petit orteil*, *Parath'entar major*—(Winslow, by whom the muscle is divided into two portions.) *Parathentar major* and *metatarsus*. *Calcaneo-sous-phalangien du petit orteil*—(Ch.) (F) *Abducteur du petit orteil*. This muscle forms the outer margin of the sole of the foot, and is immediately beneath the plantar aponeurosis. It arises, tendinous and fleshy, from the outer side of the protuberance of the os calcis, and from the root of the metatarsal bone of the little toe, and is inserted into the outer part of the root of the first bone of the little toe. *Use*. To draw the little toe outwards.

ABDUCTOR POL'ICIS BREVIS, *Abductor Pollicis Manus*, *Scapho-Carpo-super-phalangeus Pollicis*, *Sus-phalangien du pouce*, *A. pollicis manus* and *A. brevis alter*—(Albinus). (F) *Abducteur court du pouce*. *Carpo-sus-phalangien du pouce*—(Ch.) A short, flat, triangular muscle, which arises from the anterior surface of the os scaphoides and the annular ligament of the carpus, and terminates at the outside of the upper extremity of the first phalanx of the thumb. A particular portion,

on the inner side of this muscle, is called, by Albinus, *Abduc'tor bre'vis alter*.

ABDUCTOR LONGUS POLLICIS, *A. l. P. Manûs*, *Extensor ossis metacarpi pollicis manûs*, *Extensor primi internodii*—(Douglas), *Extensor primus Pollicis*, *Cubito-radi-sus-métacarpien du pouce*, *Cubito-sus-métacarpien du pouce*,—(Ch.) (F) *Abducteur long du pouce*. A long, thin muscle, arising from the posterior surface of the ulna, radius, and interosseous ligament, and inserted at the outer side of the upper extremity of the first metacarpal bone.

ABDUCTOR POLLICIS PEDIS, *Calco-sub-phalangeus Pollicis*. (F) *Abducteur du gros orteil*. This muscle arises, fleshy, from the anterior and inner part of the protuberance of the os calcis, and tendinous from the same bone where it joins with the os naviculare. It is inserted, tendinous, into the internal os sesamoideum and root of the first bone of the great toe. *Use*. To pull the great toe from the rest.

The name *Abductor* has been given also to all those interosseous muscles of the hand and foot, which perform the motion of abduction on the fingers or toes, and to muscles which execute the same function on other parts of the body.

ABEBÆ'OS, from *a* neg. and βεβαιος, 'firm,' *infirmus*, *deb'ilis*, weak, infirm, unsteady.

ABELMELUCH. One of the names of the Ricinus, according to some authors.—Prosper Alpinus says that a tree, which grows about Mecca, is so called. Its seeds, which are black and oblong, are said to be a most violent cathartic.

ABENSBERG, MINERAL WATERS OF. A. is a city of Bavaria, where there is a cold, sulphureous spring.

ABERRA'TION, *Aberra'tio*, from *aberra're*, 'to wander from.' This word has several meanings.

1. The passage of a fluid of the living body into an order of vessels not destined for it. The passage of red blood, for example, into white vessels.

In this sense it is synonymous with the *Error Loci* of Boerhaave.

2. The flow of a fluid towards an organ different from that to which it is ordinarily directed; as in cases of vicarious hemorrhage. *Aberrations of sense or judgment* are certain errors in the images perceived or certain derangements of the intellectual faculties.

The word is used in optics to designate the dispersion of the rays of light in passing through a lens.

The **ABERRATION OF SPHERIC'ITY**, or *spher'ical aberra'tion*, takes place, when the rays, as in a common lens, which pass through the centre of the lens, and those which pass near the circumference, are unequally refracted, so that they do not meet at a common focus.

This aberration of sphericity in the human eye is corrected by the iris.

The **ABERRATION OF REFRANGIBILITY** exists, when, as in a common lens, the rays that pass near the circumference of the lens are decomposed, so that a coloured image is observed. This aberration in the human eye is corrected by the iris, which does not permit the rays to fall near the circumference of the lens, and also by the crystalline lens itself, which, owing to its structure, serves the purposes of an achromatic glass.

ABEVACUATIO. *Apoceno'sis*, from *ab*, diminutive, and *evacuo*, 'I empty.' An evacuation. A partial or imperfect evacuation. By some, it is applied to an immoderate evacuation.—Kraus.

ABHAL. A fruit well known in India, and obtained from a species of cypress. It passes for an emmenagogue.

ABIRRITA'TION. *Ab-irrita'tio*, from *ab*, privative, and *irrita'tio*, 'irritation.' This word strictly means, absence or defect of irritation. The disciples of Broussais use it to indicate a pathological condition, opposite to that of irritation. It may be considered as synonymous with Debility, Asthenia, &c.

ABLU'TION. *Ablu'tio*, *Aponip'sis*, *Cataclysmus*, from *Ablu'erē*, 'to wash.' A name given to legal ceremonies in which the body is subjected to particular affusions. Ablution (especially of the extremities) with cold or tepid water is employed, therapeutically, to reduce febrile heat. Also, the washing by which medicines are separated from the extraneous matters mixed with them.

ABNORMOUS. *Abnormal*, *Anormal*, from *ab*, from, and *norma*, 'rule.' Not conformable to rule, irregular.

ABOLI'TION. *Aboli'tio*, destruction or suppression. A word, often employed, especially by the French, to express the complete suspension of any symptom or function. *Abolition of the sight*, e. g. is the complete loss of sight.

ABOMA'SUS. *Abomasum*, *Enys'tron*, *ενυστρον*, *Rennet*. The lowermost or fourth stomach of ruminating animals.

ABORTION. *Abor'tus*, *Abor'sus*, *Abor'sio*, *Dysto'cia aborti'va*, *Omotocia*, *Paracye'sis abortus*, *Amblo'sis*, *Amblo'ma*, *Diaph'thora*, *Ectro'sis*, *Examblo'ma*, *Examblo'sis*, *Ectros'mos*, *Apopalle'sis*, *Apopal'sis*, *Apoph'thora*, *Pthora*, *Convul'sio u'teri*, *Deperdi'tio*. (F) *Avortement*, *Blessure*, 'Miscarriage.' The expulsion of the fœtus before the seventh month of uterogestation, or before it is *viable*. (q. v.) The causes of this accident are referable either to the mother, and particularly to the uterus; or to the fœtus and its dependencies. The causes in the mother, may be:—extreme nervous susceptibility, great debility, plethora; faulty conformation, &c.; and it is frequently induced immediately by intense mental emotion, violent exercise, &c. The causes seated

in the fœtus are its death, rupture of the membranes, &c. It most frequently occurs between the 8th and 12th weeks of gestation. The symptoms of abortion are:—uterine hemorrhage with or without flakes of decidua, with intermitting pain. When abortion has once taken place, it is extremely apt to recur in subsequent pregnancies about the same period. Some writers have called abortion, when it occurs prior to three months, *Effluxion*. The treatment must vary according to the constitution of the patient and the causes giving rise to it. In all cases, the horizontal posture and perfect quietude are indispensable.

ABORTION is likewise applied to the product of an untimely birth. *Amblothrid'ion*, *Ectroma*, *Abortment*. (F) *Avorton*, *Avortin*.

TO ABORT', *Abori'ri*, is to miscarry. (F) *Avorter*.

ABOR'TIVE. *Aborti'vus*, *Amblo'ticus*, *Phthor'ius*, *Ecbolius*, *Apophthor'ius*. *Ectrot'icus*. (F) *Abortif*. A medicine to which is attributed the property of causing abortion. There is probably no direct agent of the kind.

ABOULAZA, a tree of Madagascar, used, according to Flacourt, in the practice of the country, in diseases of the heart.

ABRABAX, *Abrasax*, *Abraxas*, a mystic term expressing the number 365, and to which the Cabalists attributed miraculous properties.

ABRACADA'BRA, the name of a Syrian Idol, according to Selden. This word, when pronounced and repeated in a certain form and a certain number of times, was supposed to have the power of curing fevers and preventing many diseases. It was figured on amulets and worn suspended round the neck.

ABRACALAN, A cabalistic term to which the Jews attributed the same virtue as to the word ABRACADABRA.

ABRA'SION. *Abra'sio*, *Aposyr'ma*, *Apoxy'smus*, from *abra'dere*, 'to rasp.' A superficial excoriation, with loss of substance, under the form of small *shreds*, in the mucous membrane of the intestines. (F) *Raclure des Boyaux*. Also, an ulceration of the skin, possessing similar characters. According to Vicq d'Azyr, the word has been used for the absorption of the molecules composing the various organs.

ABROTONI'TES. *αβροτονιτης*, (*αβρο*

'wine' understood.) Wine impregnated with the *Artemisia Abrotanum* or Southernwood.

ABSCESS, from *Abscedo*, 'I depart,' or 'separate from.' *Absces'sus*, *Absces'sio*, *Aphis-te'sis*, *Aposte'ma*, *Impos'thume*, *Ecpye'ma*, *Ecpye'sis*, *Reces'sus*. (F) *Abcès*, *Depôt*. A collection of pus in a cavity, the result of a morbid process. See *Pyogenia* and *Suppuration*.

The French have various distinctive terms for Abscesses.

The *Abcès chaud, aigu, soudain*, is one which follows violent inflammation.

The *Abcès froid, chronique, scrofuleux*, one which is the result of chronic or scrofulous inflammation.

The *Abcès par congestion, A. métastatique*, is a symptomatic abscess, one which occurs in a part at a distance from the inflammation by which it is occasioned: e. g. a *lumbar abscess*; (q. v.) in which the inflammation may be in the lumbar vertebræ, whilst the pus exhibits itself at the groin.

ABSCISION, *Abscis'io*, *Abscis'sio*, from *absci'dere* or *abscin'dere*, 'to cut off,' *apoc'opē*, *apothrau'sis*, *Diac'opē*. Excision or extirpation of a part, especially of a soft part.—*Fabricius Hildanus*.

A fracture or injury of soft parts with loss of substance.—*Hippocrates*.

Diminution, or loss of voice.—*Celsus*.

Sudden and premature termination of a disease.—*Galen*.

ABSINTHITES, *αψινθιτης*, *Apsinthi'tes*, Wine impregnated with *Absinthium* or *Wormwood*.—*Dioscorides*.

ABSORBENT, *Absor'bens*, from *absorbere*, 'to drink, to suck up.' (F) *Absorbant*. That which absorbs.

The **ABSORBENT SYSTEM** is the collection of vessels and glands, which concur in the exercise of absorption.

A medicine used for absorbing acidity in the stomach and bowels, as *magnesia*, *chalk*, &c.

Also, any substance, such as *cobweb*, *sponge*, &c., which, when applied to a bleeding surface, retains the blood, and forms with it a solid and adhesive compound, which arrests the hemorrhage.

ABSORPTION, *Resorp'tio*, *Inhala'tio*, *Imbibit'io*, *Absorp'tio*, *Catarrhophe'sis*, *Catar'rhophe*, same etymon. The function of absorbent vessels, by virtue of which they take up substances from without or within the body. Two great divisions have been made of this function. 1. *External absorption* or the *absorption of composition*, which obtains, from without the organs, the materials intended for their composition: and, 2. *Internal absorption*, or the *absorption of decomposition*, which takes up from the organs the materials that have to be replaced by the exhalants.

By *external absorption* is meant not only

that which takes place at the external surface of the body, but also that of the mucous membranes of the digestive and respiratory passages. Hence, again, the division of external absorption into *cutaneous*, *intestinal* or *digestive*, and *pulmonary* or *respiratory*.

Internal absorption is also subdivided into, 1. *Molecular* or *interstitial*, *nutritive* or *organic*, which takes up from each organ the materials that constitute it, so that the decomposition is always in equilibrium with the deposition. 2. The *absorption of recrementalial secreted fluids*, such as the fluid of serous membranes, *synovia*, &c. As these are constantly exhaled on surfaces, which have no external outlet, they would augment indefinitely, if absorption did not remove them in the same proportion as that in which they are deposited. 3. The *absorption of a part of the excremential secreted fluids*, as they pass over their excretory passages.

Absorption does not effect the decomposition of the body immediately. It merely prepares the fluid which has to be eliminated by the secretory organs.

The great agents of external absorption are the veins and chyliferous vessels; of internal absorption, probably the lymphatics. In the chyliferous vessels and lymphatics the fluid is always found to possess the same general properties. In them, therefore, an action of elaboration or selection must have taken place.

The veins, on the other hand, seem to exert no selection. Any fluid, possessing the necessary tenuity, passes through the coats of the vessel readily by imbibition, and proceeds along with the torrent of the circulation. Watery fluids in this manner enter the blood when they are taken into the stomach. Substances that require digestion, on the other hand, must pass through the chyliferous vessels and thoracic duct.

ABSTEMIOUS, *Abste'mius*, *Aoi'nos*, *αοινος*, from *abs*, 'without,' and *teme'tum*, 'wine.' (F) *Abstème*. Used by the ancient writers as well as by the French in the sense only of its roots;—one who abstains from wine or fermented liquors in general.

ABSTERGENT, from *abster'gere*, 'to clean.' *Abstersi'vus*, *abster'sive*, *ab'luens*, *absterso'rius*, *Deter'gens*, *Rhypt'icus*, *Traumaticus*, a medicine that cleanses the part to which it is applied.

ABSTINENCE, *Abstinen'tia*, from *abs*, 'from,' and *tenere*, 'to hold,' *Abrosia*, *Asitia*, *Liman'chia*, *Limocto'nia*, Fasting. Privation, usually voluntary, as when we speak of *abstinence from pleasure*, *abstinence from drink*, &c. It is more particularly used to signify voluntary privation of certain articles of food. Fasting is a useful remedial agent in certain diseases, particularly in those of an inflammatory character.

ABSUS, a kind of cassia. *C. Absus*, which

grows in Egypt and in India, the seeds of which, pulverized and mixed with powdered sugar, have been employed, in form of a dry collyrium, in the endemic ophthalmia of Egypt.

ABVACUA'TIO, an excessive or colliquative evacuation of any kind.

ACA'CLÆ GUMMI, *G. Aca'ciæ Arab'icæ*, *G. Arab'icum*, *G. Acanthinum*, *G. Leucum*, *G. Thebaicum*, *G. Serapio'nis*, *G. Lamac*, *G. Sen'ega* or *Sen'eca*, *Gum Arabic*. (F) *Gomme Arabique*. The gum of the *Mimosa Nilot'ica*, *Aca'cia vera*, *Spina Ægyptiaca*, of Upper Egypt. *Nat. Ord. Mimoseæ. Sex. Syst. Polygamia Monœcia*. It is in irregular pieces, colourless, or of a pale yellow colour, hard, brittle, of a shining fracture, transparent, soluble in water, and insoluble in alcohol. s. g. 1.4317.

It is mucilaginous: but rarely used, except in Pharmacy. Sometimes it is administered alone as a demulcent.

ACAM'ATOS, from *a* priv. and *καμνω*, 'I labour.' This word has been sometimes used for a good constitution of the body. According to Galen, it means that position in which a limb is intermediate between flexion and extension; a position which may be long maintained without fatigue.

ACANTHABOLOS, *Acan'thulus*, *Vol'sel'la*, from *ακανθα*, 'a spine,' and *βαλλω*, 'I cast out.' A kind of forceps for removing extraneous substances from wounds.—Paulus of Ægina, Fabricius ab Acquapendente, Scultetus, &c.

ACANTHUS MOLLIS, *Melamphyl'lum*, *Bran'ca ursi'na*, *Brankur'sine*, *Bear's Breech*, (F) *Pied d'ours*. This plant is mucilaginous like the *Althæa*, and is used as a demulcent.

ACAR'DIA from *a* priv., and *καρδια*, 'the heart.' The state of a fœtus without a heart.

ACARICOBIA. The Brazilian name for the *Hydrocot'yle umbella'tum*, used by the Indians as an aromatic, alexipharmic, and emetic.

ACARUS from *a* privative, and *καρς*, 'divisible.' A minute insect, noticed by several observers, in the itch. The *Acarus Scabiei*, *Sarcopte*, *Ciron*.

ACATALEP'SIA from *a* privative, and *καταλαμβάνω*, 'I comprehend.' Uncertainty in diagnosis. Its opposite is Catalepsia.—Galen.

ACATAP'OSIS, from *a* privative, and *καταποσις*, 'deglutition.' Incapacity of swallowing. Vogel has given this name to difficulty in deglutition.

ACATASTATIC, *Acatastat'icus*, from *a* priv., and *καθίστημι*, 'to determine.' An epithet given to fevers, &c., when irregular in their periods or symptoms.—Hippocrates.

ACATHAR'SIA, from *a* priv., and *καθαρίζω*, 'I purge.' *Sordes*, *impurities*. Omission of a purgative.—Fœsius.

ACATSJAVALLI, a Malabar plant, which

is astringent and aromatic. A bath of it is used in the country in cases of Hemiplegia. It is supposed to be the *Cassytha filiformis* of Linnæus.

ACCELERATOR URINÆ, *Bulbo-cavernosus*, *Bulbo-uretral*—(Ch.) *Ejacula'tor Sem'inis*, *Bulbo-syndesmo-caverneux*. (F) *Accélérateur*. A muscle of the penis, which arises, fleshy, from the sphincter ani and membranous part of the urethra, and tendinous from the crus and beginning of the corpus cavernosum penis. In its course it forms a thin, fleshy layer, the inferior fibres of which run more transversely than the superior, which descend in an oblique direction; the muscles of both sides completely inclosing the bulb of the urethra. It is inserted into its fellow by a tendinous line running longitudinally on the middle of the bulb. Its use is to propel the urine or semen forwards.

ACCENT, *Sonus vocis*. Inflection or modification of the voice, which consists in raising or dropping it on certain syllables.

The accent exhibits various alterations in disease.

ACCES'SION, *Acces'sio*, from *acce'do*, 'I approach.' The invasion, approach, or commencement of a disease.

AC'CESSORY, *Accesso'rius*, (F) *Accessoire*, *Annexe*. A consequence or dependance on any thing; as *accessory ligament*, *muscle*, *nerve*, &c.

The ACCESSORY SCIENCES TO MEDICINE are those which do not relate directly to the science of man in a state of health or disease; as physics, chymistry, &c.

The term *accessory* is also given to several muscles.

The ACCESSORY OF THE PAROTID is a name given by Haller to a small gland, which accompanies the parotid duct, and which is commonly a mere prolongation of the Parotid itself.

AC'CIDENT, *Accidens*, from *accidere*, to happen. A casualty; an unforeseen event. The French use the term in nearly the same sense as *symptom*. It means also an unexpected symptom.

ACCIDENTAL, *adventi'tius*. That which happens unexpectedly.

The French give the name *Tissus accidentels* to those adventitious textures, that are the result of a morbid process.

ACCIP'ITER, *Hierax*, *ἰεραξ*, 'the hawk.' *Menec'ratis Accip'iter*. (F) *Épervier*. A bandage applied over the nose, so called from its likeness to the claw of a hawk.

ACCLIMATED, *Clima'ti assue'tus*, a word of recent introduction from the French, which means 'accustomed to a climate.'

ACCLIMATION, *Seasoning*. (F) *Acclimatement*. The act of becoming acclimated, or accustomed to a climate.

The constitution of a person, who goes to live in another and very different climate,

usually experiences changes, which are frequently of an unfavourable character, and the study of which is of considerable importance in medicine.

ACCOMPANIMENT, *Adjunctum*. (F) *Accompagnement*. That which is joined to any thing.

An *Accompaniment to the cataract* is a whitish, viscid substance, which sometimes surrounds the opaque crystalline and remains after the operation for a cataract, causing a secondary cataract.

ACCOUCHEUR, (F). *Adju'tor Partus*, *Obstet'ricans*, *Maieuter*. He who practises the art of midwifery. *A Physician-Accoucheur*, *a Surgeon-Accoucheur*, *A man-midwife*, &c.

ACCRETION, *Accre'tio*, from *ad*, 'to,' and *crescere*, 'to increase.' Augmentation; also, increase by juxta-position.

ACE'DIA, *Incuria*, from *a* privative, and *κηδος*, 'care.' Want of care, neglect. Also, fatigue.—Hippocrates.

ACEPH'ALOBRA'CHUS, from *a* privative, *κεφαλη*, 'head,' and *βραχιον*, 'arm.' A foetus without head or arms.

ACEPH'ALOHIRUS, from *a* privative, *κεφαλη*, 'head,' and *χειρ*, 'hand.' A foetus without head or hands.

ACEPH'ALOCYS'TIS, from *a* privative, *κεφαλη*, 'head,' and *κυστις*, 'bladder.' An hydatiform vesicle, without head or visible organs, ranked amongst the Entozoa, although possessed of few animated characteristics.—See Hydatid.

ACEPH'ALOGAS'TER, *Athoraco-ceph'alus*, from *a* privative, *κεφαλη*, 'head,' and *γαστηρ*, 'the belly.' A name given to monsters devoid of head, chest, and abdomen; or to those which have an abdomen but no chest or head.

ACEPHALOS'TOMA, from *a* privative, *κεφαλη*, 'head,' and *στομα*, 'mouth.' An acephalous foetus, at the upper part of which there is an opening resembling a mouth.

ACEPH'ALOTHORUS, from *a* privative, *κεφαλη*, 'head,' and *θωραξ*, 'chest,' *apectocephalus*. A monster, devoid of head or chest.

ACEPH'ALOUS, from *a* priv. and *κεφαλη*, 'head.' A monster born devoid of head. The condition is called *Acephalia*.

ACER SACCHARI'NUM. The *Maple*. *Sugar Maple*. (F) *Erable*. This tree contains a large amount of sweet sap, whence a considerable quantity of sugar may be extracted. When purified, this sugar can scarcely be distinguished from that obtained from the cane.—See Saccharum.

ACERB, *Acer'bus*, *Stryphnos*, from *acer*, 'sharp.' A savour, or taste, compounded of the acid, bitter, and astringent; such as is met with in unripe fruits, &c.

ACE'RIDES, from *a* privative, and *κηρος*, 'wax.' Plasters devoid of wax.—Galen.

ACERO'SUS, *Achyro'des*, *Pithyri'nus*, from

αχυρον, 'chaff.' *Furfuraceous*. An epithet used, by Hippocrates, for the coarsest bread, made of flour not separated from the chaff.—Foësius.

ACES'CENCY, *Acescen'tia*, from *acescere*, 'to grow sour.' A disposition to acidity. The Humourists believed that the animal humours are susceptible of this change.

ACETAB'ULUM, from *ace'tum*, 'vinegar,' because it resembles the old vinegar vessel *oxybaphon*, *οξυβαφον*. A measure capable of containing the 8th part of a modern pint.—Athenæus. Galen. See Cotyloid. According to Castelli, the lobes or cotyledons of the placenta of ruminating animals have been so called.

ACETA'RIA, same etymon. A salad or pickle.

AC'ETATE, *Ac'e'tas*. A salt formed by the union of the acetic acid with an alkaline, earthy, or metallic base. The acetates, chiefly used in medicine, are the acetates of ammonia, lead, potash, and zinc.

ACE'TICUM, **AC'IDUM**, *Acidum Ac'e'ticum* *for'tius*, *A. A. forte*. *A. Ac'e'ticum purum*, *Ac'e'tum radica'le*, *Oxos*, *Ac'e'tic Acid*, *Strong Ac'e'tous Acid*, *Acidum Aceto'sum forte*, *Rad'ical Vinegar*, *Spir'itus Ven'eris* (when made from verdigris), *Spirit of Verdigris*. Concentrated acetic acid, prepared by decomposing an acetate and receiving the acetic acid by distillation, has a very pungent and grateful odour, and an acid and acrid taste. Its s. g. is about 1.046, and it is very volatile.

It is stimulant, rubefacient, and escharotic, and is applied to the nostrils in syncope, asphyxia, headaches, &c. It destroys warts.

An **AROMATIC SPIRIT OF VINEGAR**, *Ac'idum Ac'e'ticum Camphora'tum*, *A. aceto'sum camphora'tum*, is formed of this strong acid, $\frac{3}{4}$ vj, Camphor, $\frac{3}{4}$ ss, *Ol. Caryoph.* gtt. xv.

A strong Acetic Acid is ordered by the London Pharmacopœia prepared from wood. It is called *Vinegar of wood*, *Improved distilled Vinegar*, *Pyroligneous Acid*, *Ac'e'tum Ligno'rum*, and its strength is such, that 87 gr. of crystallized subcarbonate of soda should saturate 100 grains of the acid.

The **AC'IDUM ACE'TICUM DILU'TUM**, *A. a. ten'uē*, *Ac'e'tum distilla'tum*, *Ac'idum ac'e'ticum*, *Acidum aceto'sum distilla'tum*, *Acidum ac'e'ticum debil'ius*, *Distil'led vin'egar*, (F) *Acide Acétique faible*, *Vinaigre distillé*, is prepared by distilling vinegar, rejecting a 4th or 5th part of that which comes over first, and avoiding empyreuma. Its properties are like those of vinegar.

ACE'TICA, *Ac'e'ta Medica'ta*, (F) *Vinai-gres Medicinæ*. Pharmaceutical preparations of Vinegar.

ACETUM, *οξυς*, *Oxys*, *Ac'e'tum Vini*, *Com-mon Vinegar*, *Acidum aceto'sum*, *A'legar*, *Ac'e'tum Cerevis'iæ*, (F) *Vinaigre*. A liquor obtained by the acetous fermentation. Vinegar

has a pungent odour, and pleasant acid taste, s. g. 1.0204. It is refrigerant in fevers; antiseptic, and anti-narcotic; and externally is stimulant and discutient.

ACETUM AROMATICUM, *Acidum Aceticum Aromaticum*, *Acetum Theriacale*, *Thieves' Vinegar*, *Vinegar of the four Thieves*, *Marseilles Vinegar*, (F) *Vinaigre Aromaticque*. V. des quatre voleurs. (Rorismarin. *Cacum. sicc. Fol. Salviae* sing. 3 j. *Lavand. flor. sicc.* 3 iv. *Caryoph. cont.* 3 ss. *Acid. Acet.* ℞ ij. Macerate 7 days and filter. Ph. E.) Odour pungent and aromatic. Used as a perfume.

ACETUM COLCHICI, *Vinegar of meadow saffron*. (*Colch. rad. recent. concis.* 3 j, *Acid. Acetic.* ℞ j. *Sp. tenuior*, 3 j. Ph. L.) It is used as a diuretic and also in gout. Dose, 3 ss to 3 iss.

ACETUM SCILLÆ, *Acidum Aceticum Scilliticum*. *Vinegar of Squills*. *Vinaigre scillitique*. (*Scilla rad. recent. exsicc.* ℞ j. *Aceti*, ℞ vj. *Sp. tenuior.* ℞ ss. Ph. L.) Diuretic, expectorant, and emetic. Dose 3 ss. to 3 ij as a diuretic and expectorant.

ACÉYTE DE SAL. A remedy for Bronchocele used in S. America. Roulin found it to contain a portion of Iodine.

ACHACANA. A species of Cactus, in the province of Potosi in Peru. Its root is thick and fleshy, and of a conical shape. It is a good edible, and is sold in the markets of the country.

ACHANACA. A plant of the kingdom of Mely in Africa. It is used by the natives as an antisyphilitic.

ACHAOVAN, a species of Egyptian chamomile.—Prosper Alpinus.

ACHAOVAN-ABIAT. The Egyptian name of the *cineraria maritima*, used in female diseases.

ACHEI'LIA, from α priv. and χεῖλος, 'lip.' A malformation, consisting in a deficiency of lips.

ACHEIR, *demanus*, from α privative, and χεῖρ, hand. One devoid of hands.—Galen.

ACHIA, *Achiar*. A name given in India to the pickled shoots of the bamboo.

ACHIC'OLUM, *Achitolus*, *Hidrote'rion*, *Suda'rium*, *Fornix*, *Tholus*, *Sudato'rium*. The sweating-room in the ancient bagnios.

ACHILLE'A AGERATUM, *Balsami'ta femin'ea*, *Eupato'rium* MESUES, *Ageratum*, *Cos'tus horto'rum* Mi'nor, *Maudlin*, *Maudlin Tansey*. (F) *Achille Visqueuse*. Nat. Ord. Compositæ. Sub. Ord. Anthemideæ. Sex. Syst. Syngenesia Polygamia superflua. Has the same properties as tansey, bitter and aromatic, and is used in like affections.

The ACHILLE'A ATRA'TA, *Herba Gen'ipi veri*, (F) *Achillée Noire*, has similar virtues.

ACHILLE'A MILLEFO'LIIUM, *Achille'a Myriophyllon*, *Chrysoc'oma*, *Millefo'lium*, *Chilio-phyl'lon*, *Lambus Ven'eris*, *Milita'ris herba*, *Stratio'tes*, *Carpento'ria*, *Spec'ulum Ven'eris*,

Common Yarrow or *Milfoil*. (F) *Millefeuille*. The leaves and flowers have an aromatic smell, and a rough, bitterish, somewhat pungent taste. They have been used in dyspepsia, flatulence, &c.

ACHILLE'A PTAR'MICA, *Pseudo-pyre'thrum*, *Pyre'thrum sylves'trè*, *Draco sylves'tris*, *Tarchon sylves'tris*, *Sternutamento'ria*, *Dracunculus Praten'sis*, *Sneeze-wort*, *Bastard Pel'litory*, *Ptar'mica*. (F) *Herbe à éternuer*. The roots and flowers have a hot, biting taste, approaching that of the Pyrethrum. Their principal use is as a masticatory and sialogogue.

ACHILLE'IS, a beautiful species of barley, mentioned by Theophrastus and Galen, called after a labourer, Achilles. The decoction was used in fevers and jaundice.—Hippocrates.

ACHILLIS, TENDO, *Funis HIPPOCRATIS*, *Corda HIPPOCRATIS*, *Corda magna*, *Nervus latus*, (F) *Tendon d'Achille*. The strong tendon of the gastrocnemii muscles above the heel; so called, because it was the only vulnerable part of ACHILLES, or because of its strength. See Tendon.

ACHIMBASSI, *Archia'ter*. The chief of physicians. A name given, at Grand Cairo, to a magistrate who licenses physicians.

ACHNE. Lint. Also, small mucous floculi situated in front of the cornea.—Hippocrates.

ACHOLUS, from α privative, and χολη, 'bile.' Deficient in bile.

ACHO'RES. A term often employed by the ancients to designate both the *crusta lactea*, and small superficial ulcerations on the skin of the face and head. See Porrigo Larva'lis.

ACHORIS'TOS, from α privative, and χωρίζω, 'I separate.' Any sign which necessarily accompanies a state of health or disease.

ACHOUROU. The Caraib name for a species of myrtle used in dropsy.

ACHRAS SAPOTA, *El Nispero*. A very abundant tree in South America, the fruit of which is excellent. It is astringent. The leaves are likewise astringent. The seeds are aperient and diuretic. It belongs to the family Sapotæ.—Sex. Syst. Hexandria Monogynia.

ACHROI, from α privative, and χρομα, 'colour.' Pale individuals.—Hippocrates. It is nearly synonymous with λευκαῖμοι, persons without colour, bloodless.

ACHROMAT'IC, *Achromat'icus*, from α privative, and χρομα, 'colour.' A lens so constructed as to correct the aberration of refrangibility of common lenses. The *Crystalline Lens* is an achromatic lens.

ACHROMATOP'SIA, from α privative, χρομα, 'colour,' and σκοπομαι, 'I see.' Incapability of distinguishing colours. A defect situated in the cerebral part of the visual organ.

ACIA, from ακη, a point. A word used

by Celsus, and which has puzzled commentators; some believing it to have meant a needle; others the thread; and others, again, the kind of suture. "*Acia mollis, non nimis torta.*"—Celsus, Galen. (Chifflet thinks it meant the thread, Antwerp, 1638.)

ACIDS, *Ac'ida*, *Aco'res*, from *ακίς* 'a point,' genitive *ακίδος*. Any liquid, solid, or gaseous body, possessed of a sour, more or less caustic taste, and the principal character of which is the capability of saturating, wholly or in part, the alkaline properties of bases.

The acids, in general, are refrigerant and antiseptic. Their particular uses are pointed out under the individual articles.

ACIDITIES, *Aco'res*, *Acidita'tio*, *Ac'id-um morbo'sum*, *Ac'idum prima'rum via'rum*, (F) *Aigreurs*. Sourness of the stomach, the result of indigestion, indicated by acid eructations, &c. The affection is very common with children, and must be obviated by absorbents, as magnesia, chalk, &c., and by regulated diet.

To ACIDULATE. To render acidulous, or slightly acid. (F) *Aiguiser*, *Aciduler*.

ACIDULOUS, *Acid'ulus*, *Oxodes*. (F) *Acidule*, *Aigre*, *Aigret*. Substances are called acidulous, which possess a sourish taste, as tamarinds, cream of tartar, &c.

ACIDULOUS FRUITS. Oranges, Gooseberries, &c.

ACIDULOUS WATERS, *Aquæ acid'ulæ*. Mineral Waters containing carbonic acid gas sufficient to render them sourish. See Waters, Mineral.

A SIMPLE ACIDULOUS WATER, *Aqua a'eris fixi*, *Aqua acid'ula simplex*. (F) *Eau Acidule simple*, is water impregnated with fixed air.

Water, so impregnated, is cooling, and slightly stimulating. It is used beneficially in dyspepsia, and in cases of vomiting, &c.

ACINESIA, *Akine'sia*, *Immobil'itas*, *Quies*, *Esychia*, *Erem'ia*, from *α* privative, and *κινειν*, 'to move.' Immobility. Also, the interval between the systole and diastole of the heart.

ACINUS, *Ac'inus glandulo'sus*, from *ακινος*, or *ac'inus*, 'a grape-stone.' A *glandiform corpuscle* or *granulation*. A fancied termination of a secretory artery of a gland in a granular body, in which the secretion is supposed to take place, and the excretory radicle to take its rise. They are the *globuli arteria'rum termini* of Nichols. The term *acini glandulosi* has also been given to glands, which, like the pancreas, are arranged as it were in clusters.

ACMAS'TICOS, from *ακμη*, 'the top,' and *σταω*, 'I remain.' A fever, which preserves an equal degree of intensity throughout its course. It is also called *Homot'onos*.

The Greeks gave it the name *Epacmas'ticos*, and *Syn'ochos*, when it went on increasing, and *Paracmas'ticos*, when it decreased.—Galen.

ACME, *Vigor*, *Status*, *Fasti'gium*. The period of a disease at which the symptoms are most violent. *Αρχη*, is 'the commencement;' *αυαβασις*, 'the period of increase;' and *ακμη*, 'the height.'

ACNE, *Acna*, *Ionthus varus*, *Psydra'cia Acne*, *Stone Pock*. A small pimple or tubercle on the face.—Gorræus. Foësius thinks the word ought to be *Acme*, and, according to Cassius, it is, at all events, derived from *ακμη*, 'vigour;' the disease affecting those in the vigour of life, especially.

Willan and Bateman have adopted the term in their Nosology of cutaneous diseases, and placed it in the Order, **TUBERCULA**.

Acne, with them, is an eruption of distinct, hard, inflamed tubercles, sometimes continuing for a considerable length of time, and sometimes suppurating slowly and partially. They usually appear on the forehead, temples, and chin; and are common to both sexes; but the most severe forms are seen in young men. They require but little management, and consist of four varieties; the *Acne indura'ta*, *A. simplex*, *A. puncta'ta* (*Ionthus varus puncta'tus*, *Punctæ mucosæ* or *Maggot Pimple*), *A. rosa'cea*.—See *Gutta Rosea*.

ACNES'TIS, from *α* privative, and *νασσιν*, 'to scratch.' The part of the spine which extends, in quadrupeds, from between the shoulders to the loins. According to Pollux, the middle of the loins.

ACCE'LIOS, from *α* privative, and *κοιλια*, 'belly.' Devoid of belly. One who is so emaciated as to appear to have no belly.—Galen.

ACONI'TUM, from *Aconē*, a place in Bithynia, where it is common. *Cynoc'tonon*, *Canici'da*, *Ac'onite*, *Wolfsbane*, *Monkshood*. Nat. Ord. Ranunculaceæ. Sex Syst. Polyandria Trigynia.

ACONI'TUM AN'THORA. *Aconi'tum Salutiferum*, *An'thora vulga'ris*, *Antith'ora*, *Salutary Monks'hood*. (F) *Aconit Salulaire*. The root of this variety, like all the rest, is poisonous. It is used as a cathartic and anthelmintic. Dose ʒss to ʒj.

The **ACONI'TUM CAM'MARUM**, (F) *Aconit à grands fleurs*, resembles the *Aconitum Napellus* in properties.

ACONI'TUM NAPEL'LUS, *Napel'lus verus*, *Aconi'tum*, *Common Monkshood* or *Wolfsbane*. *A. Neomonta'num*. (F) *Chaperon de Moine*. The leaves are narcotic, sudorific, and deobstruent(?) They have been used in chronic rheumatism, scrophula, scirrhus, paralysis, amaurosis, &c. Its active principle is called *Aconitine*. It has been used of late, applied externally, in Neuralgic cases, iatra-

leptically and endermically. Dose of the Aconitum, gr. j. to gr. iij.

ACONU'SI, from *ακον*, 'audition,' and *νους*, 'a disease.' *Morbi aurium et auditus*. Diseases of the ears and audition.

AC'OPON, from *α* privative, and *κοπος*, 'weariness.' A remedy against weariness.—Foesius, Gorraeus, &c. *Acopum*,—Celsus, Pliny.

AC'OPIS. Pliny gives this name to a precious stone, which was boiled in oil and used against weariness.

ACO'RIA, from *α* privative, and *κορσσω*, 'I satiate.' An inordinate or canine appetite.—Hippocrates.

ACORITES. A wine made of the *Acorus*.—Dioscorides.

ACORUS CAL'AMUS. *A. Verus*, *Cal'amus Aromaticus*, *C. Odoratus*, *Cal'amus vulgaris*, *Typha Aromatica*, *Acorus Brazilian'sis*. (F) *Jonc Roseau ou Canne aromatique*, *Acore odorant*. *Nat. Ord. Aroideæ*. *Sex. Syst. Hexandria Monogynia*. *Clava rugosa*, *Sweetflag* or *Ac'orus*. The root is stomachic and carminative, but is rarely used. It is regarded a good adjuvant to bark and quinine in intermittents.

ACOS'MIA, from *α* privative, and *κοσμος*, 'order, ornament.' Disorder, irregularity in the critical days, according to Galen, who uses the word *κοσμος* for regularity in those days. Others, and particularly Pollux, call bald persons *ακοσμοι*, because they are deprived of one of their most beautiful ornaments.

ACOUN'ETER, from *ακουω*, 'I hear,' and *μετρον*, 'measure.' An instrument designed by Itard for measuring the degree of hearing.

ACOUS'MA, an imaginary noise. Depraved sense of hearing.

ACOUSTIC, *Acus'ticus*, that which belongs to the ear; as *Acoustic nerve*, *Acoustic trumpet*, &c.

An ACOUSTIC MEDICINE is one used in diseased Audition.

ACOUS'TICS, *Acustica*, (F) *Acoustique*, is the part of physics which treats of the theory of sounds. It is also called *Phonics*.

ACQUIRED DISEASES, *Morbi acquisiti*, *Adventitious diseases*, *M. Adventitii*. Diseases which occur after birth, and which are not dependent upon hereditary predisposition.

ACRAI'PALA, from *α* privative, and *κρατ-παλη*, 'drunkenness.' Remedies against the effects of a debauch.—Gorraeus.

ACRA'LEA, the extreme parts of the body, as the head, hands, feet, nose, ears, &c.—Hippocrates and Galen. See *Acrea*.

ACRA'NIA, from *α* privative, and *κρανιον*, 'the cranium.' Want of cranium, wholly, or in part.

ACRASIA, from *α* privative, or 'bad,' and *κρασις*, 'mixture.' Excess of any kind.—Hippocrates.

It has been employed to denote debility, synonymously with *Acratia*; but this may have been a typographical inaccuracy.

ACRATI'A, from *α* privative, and *κρατος*, 'strength.' Impotence; weakness.

ACRATIS'MA, from *α* privative, and *κραννυμι*, 'to mix.' A breakfast, consisting of bread steeped in wine, not mixed with water.—Galen, Athenæus.

ACRATOM'ELI, from *ακρατον*, 'pure wine,' and *μελι*, 'honey.' Wine mixed with honey.

ACRE. The extremity or tip of the nose.

A'CREA, *ακρωτηρια*, *Acrote'ria*, from *ακρος*, 'the summit.' The extreme parts of the body, as the feet, hands, nose, ears, &c.

Also, the extreme parts of animals that are used as food. *Acroco'lia*.

ACRID, from *ακρος*, 'a point or summit,' or from *ακη*, 'a point,' *Acer*. An epithet for substances which occasion a disagreeable sense of irritation or of constriction at the top of the throat.

ACRIDS, in Pathology, are certain imaginary substances, supposed, by the Humourists, to exist in the humours, and to cause various diseases. See *Acrimony*.

An *Acrid heat*, (F) *Chaleur âcre*, is one that causes a hot, tingling sensation at the extremities of the fingers.

ACRIDOPH'AGI, from *ακρις*, 'a locust,' and *φαγω*, 'I eat.' *Locust-eaters*. *Acridophagous* tribes are said to exist in Africa.—Strabo.

AC'RIMONY, *Acu'itas*, *Acrimo'nia*, *Acre*. *Acrimony* of the humours. An imaginary acrid change of the blood, lymph, &c., which, by the Humourists, was conceived to cause many diseases.

ACRIN'IA, from *α* privative, and *κρινω*, 'I separate.' A diminution in the quantity, or a total suspension of the secretions.

ACRIS, a sharp bony prominence. Also, the locust.

ACRIS'IA, from *α* privative, and *κρισις*, 'judgment.' A condition of disease, in which no judgment can be formed; or in which an unfavourable opinion must be given.—Hipp. and Galen.

ACRITICAL, *Acritos*, from *α* privative, and *κρισις*, 'judgment.' That which takes place without any crisis, or which does not foretell a crisis; as *a critical symptom*, *Abcess*, &c.

ACROBYS'TIA, *Acropos'thia*, from *ακρος*, 'top,' and *βυω*, 'I cover.' The extremity of the prepuce.—Hippocrates. Rufus.

ACROCHEIR', *Acrochir'*, *Acrocheir'on*, from *ακρος*, 'extremity,' and *χερς*, 'the hand.' The fore-arm and hand.—Gorraeus. Also, the hand.

ACHROCHOR'DON, from *ακρος*, 'extremity,' and *χορδη*, 'a string.' A tumour,

which hangs by a pedicle. A kind of hard wart.—Aëtius, Celsus.

ACHROCHORIS'MUS, from *ακρος*, 'extremity,' and *χορῶσα*, 'I dance.' A kind of dance with the ancients, in which the arms and legs were violently agitated.

ACROD'RYA, from *ακρος*, 'extremity,' and *δρυς*, 'a tree.' Autumnal fruits, as nuts, apples, &c.

ACRODYN'IA, from *ακρος*, 'extremity,' and *δύνη*, 'pain.' A painful affection of the wrists and ankles especially, which appeared at Paris as an epidemic, in 1828 and 1829. It was supposed by some to be rheumatic, by others to be owing to spinal irritation.

ACRO'MIAL, *Acromia'lis*. Relating to the Acromion.

The **ACROMIAL ARTERY**. *External Scap'ular*. *A. Artéria Thorac'ica humera'lis*, *Artère troisième des Thoraciques*.—(Ch.) *A. Thoracique humérale*, arises from the anterior part of the axillary artery, opposite the upper edge of the pectoralis minor. It divides into two branches: one, *superior*; the other, *inferior*: the branches of which are distributed to the subclavius, serratus major anticus, first intercostal, deltoid, and pectoralis major muscles, as well as to the shoulder joint, &c. They anastomose with the superior scapular, thoracics, and the circumflex arteries.

The **ACROMIAL VEIN** has the same arrangement as the artery.

ACRO'MIO-CORACOIDEUS. Belonging to the acromion and coracoid process.

The triangular ligament between the acromion and coracoid process of the scapula is so called.

ACRO'MION, *Acro'mium*, from *ακρος*, 'the top,' and *ωμος*, 'the shoulder,' *Os Acro'mii*, *Humerus summus*, *Armus summus*, *Mucro humeri*, *Rostrum porci'num*, *Caput Scap'ulae*. The process which terminates the spine of the scapula, and is articulated with the clavicle.

ACROM'PHALON, *Acrompha'lion*, from *ακρος*, 'the top,' and *ομφαλος*, 'the navel.' The extremity of the umbilical cord, which remains attached to the fœtus after birth.

ACROPSI'LON, from *ακρος*, 'extremity,' and *ψιλος*, 'naked.' The extremity of the glans penis.

ACROS, *ακρος*, 'extremity, top.' The strength of the *Athletæ*, and of diseases: the prominences of bones: the extremities of the fingers, &c. See *Acrocheir*, *Acromion*, &c.

ACROT'ERIAS'MUS, from *ακροτηρια*, 'the extremities;' hence *ακροτηριαζειν*, 'to mutilate.' Amputation of the extremities.

ACROTHYM'ION, from *ακρος*, 'top,' and *θυμον*, 'thyme.' A kind of conical, rugous, bloody wart: compared by Celsus to the flower of thyme.

ACROT'ICA, from *ακρος*, 'summit.' Diseases affecting the excrement functions of the external surface of the body.

Pravity of the fluids or emunctories that open on the external surface;—without fever or other internal affection, as a necessary accompaniment.

The 3d order of the class *Eccrit'ica* of Good.

ACT, *Actus*. The effective exercise of a power or faculty. The action of an agent. *Acte* is used by the French, to signify the public discussion, which occurs in supporting a thesis:—thus, *soutenir un Acte aux Ecoles de Médecine*, is, 'to defend a Thesis in the Schools of Medicine.'

ACTÆ'A RACEMO'SA. *Black snake-root*, *Richweed*. (F) *Actée à grappes*. *Nat. Ord.* Ranunculacæ. *Sex. Syst.* Polyandria Monogynia. A common plant in the United States. The root is astringent; and, according to Barton, has been successfully used in the form of decoction, as a gargle in putrid sore throat. A decoction of the root cures the itch. It is acro-narcotic.

ACTION, *Actio*, *Operat'io*, *Enérgi'a*, *Praxis*: from *Agere*, 'to act.' Mode in which one object influences another.

The *animal actions* are those that occur in the animal body: the *vital*, those that are seen in bodies endowed with life: the *physiological*, those of a healthy character: the *pathological* or *morbific*, those that occur in disease, &c. The ancients divided the *physiological actions* into *vital*, *animal*, *natural*, *sexual*, *particular*, *general*, &c. See *Function*.

ACTIVE, same etymon. *Dras'ticus*, *Acti'vus*, *Sten'icus*, *Hypersten'icus*. (F) *Actif*. This adjective is used, in *Pathology*, to convey the idea of superabundant energy or strength. *Active symptoms*, e. g. are those of excitement. In *Therapeutics*, it signifies *energetic*:—as, an *active treatment*. The French use the expression *Médecine agissante*, in contradistinction to *Médecine expectante*. In *Physiology*, *active* has a similar signification, many of the functions being divided into active and passive.

ACTON. A village near London, at which there is a purgative mineral spring, like that at Epsom.

ACTUAL, *Actua'lis*. That which acts immediately. A term usually restricted to the red hot iron, or to heat in any form; in contradistinction to the *potential* or *virtual*, which is applied to caustics or escharotics.

ACTUA'RIOUS. Originally a title of dignity given to the Byzantine physicians.

ACUPUNC'TURE. *Acupunctura*, from *a'cus*, 'a needle,' and *punctu'ra*, 'a puncture.' A surgical operation, much in use amongst the Chinese and Japanese, which consists in puncturing parts with a very fine needle. It has been employed, of late years, in obstinate rheumatic affections, and apparently with success. Acupuncture is likewise a mode of infanticide in some countries: the needle being forced into the brain through

the fontanelles, or into the spinal marrow, &c.

ACUTE, *Acutus*, οξύς. (F) *Aigu*. A disease which, with a certain degree of severity, has a rapid progress, and short duration. *Ozynose'ma*, *Ozyn'osos*, *Ozynu'sos*.

Diseases were formerly subdivided into *Morbi acutis'simi*, very acute, or those which last only three or four days: *M. subacutis'simi*, which continue seven days: and *M. subacu'ti*, or those which last from twenty to forty days.

The antithesis to *acute* is *chronic*. *Acute*, when applied to pain, sound, cries, &c., means *sharp*.

ACYANOBLEP'SIA, α privative, κυανος, 'blue,' and βλέπω, 'I see.' Defective vision, which consists in incapability of distinguishing blue.

ADAKO'DIEN. A Malabar plant of the family Apocinæ, used in that country in diseases of the eyes.

ADACA. The *Sphæran'thus In'dicus*, a Malabar plant, which is acrid and aromatic.

AD'ALI, *Lippia*. A Malabar plant, which the Orientals regard as an antidote to the bite of the *naja*.

ADAMI'TA, *Adami'tum*. A very hard white calculus.—Paracelsus.

The first word has been used for stone in the bladder: the second for lithiasis or the calculous condition.

ADAR'CE, *Adar'cion*, *Adar'cis*. A concretion found about the reeds and grass in the marshy regions of Galatia, and hiding them, as it were: hence the name; from α privative, and δῖσκα, 'I see.' It was formerly in repute for cleansing the skin from freckles, &c.

ADDAD. A Numidian plant. Bitter and poisonous.

ADDEPHA'GIA, from ἀδν, 'much,' and φάγειν, 'to eat.' *Voraciousness*. Galen and Hoffman have given this name to the voracious appetite in children affected with worms. Sauvages refers it to *Bulimia*. Also, the goddess of gluttony.

ADDITAMEN'TUM. A term once used synonymously with *Epiphysis*. It is now restricted to the prolongations of two cranial sutures, the lambdoidal and squamous.

ADDUCTION, *Adduc'tio*, from *ad*, 'to,' and *ducere*, 'to draw.' *Parago'ge*. The action by which parts are drawn towards the axis of the body.

The muscles, which execute this function, are called *Adduc'tors*.

ADDUCTORS OF THE THIGH. These are three in number, which have, by some anatomists, been united into one muscle—the *Triceps Adduc'tor Fem'oris*.

1. The *Adduc'tor longus fem'oris*, *Adduc'tor fem'oris primus*, *Triceps minor*, *Pu'bio-femora'lis*.—(Ch.) (F) *Premier ou moyen adducteur*. Arises by a strong tendon from

the upper and fore part of the os pubis and ligament of the symphysis, at the inner side of the pectinalis. It runs downwards and outwards, and is inserted by a broad, flat tendon into the middle of the linea aspera.

2. The *Adduc'tor brevis*, *A fem'oris secundus*, *Triceps secundus*. *Sub-pubio-femora'lis*.—(Ch.) (F) *Secund ou petit Adducteur*. Arises tendinous from the os pubis, at the side of its symphysis, below and behind the last muscle. It runs obliquely outwards, and is inserted by a short, flat tendon into the inner and upper part of the linea aspera, from a little below the trochanter minor to the beginning of the insertion of the adductor longus.

3. The *Adduc'tor magnus*, *Adduc'tor fem'oris tertius et quartus*, *Triceps magnus*, *Is'chio-femoralis*.—(Ch.) (F) *Troisième ou grand adducteur*, is much larger than either of the others. It arises from the ramus of the pubis, from that of the ischium, and from the tuber ischii, and is inserted into the whole length of the linea aspera. Near the lower part of the linea aspera it is pierced by a kind of oblique, fibrous canal, through which the crural artery and vein pass.

ADDUC'TOR POL'LICIS MANUS, *A. Pol'licis*, *A. ad minimum dig'itum*, *Metacar'po-phalangæ'us pol'licis*.—(Ch.) (F) *Adducteur du pouce*. A muscle which arises, fleshy, from almost the whole length of the metacarpal bone of the middle finger, and is inserted into the inner part of the root of the first bone of the thumb.

The ADDUC'TOR POL'LICIS PEDIS, *Antith'entar Metatarso-subphalangæus pollicis*.—(Ch.) *Tarso-metatarsi-phalangien du pouce*. (F) *Adducteur du gros orteil*, arises by a long, thin tendon, from the under part of the os calcis, from the os cuboides, os cuneiforme externum, and from the root of the metatarsal bone of the second toe. It is divided into two fleshy portions, and is inserted into the external sesamoid bone, and root of the metatarsal bone of the great toe.

The ADDUC'TOR METACAR'PI MIN'IMI DIG'ITI, *Metacarpeus*, *Car'po-metacarpeus min'imi dig'iti*, is situated between the abductor and flexor, next to the metacarpal bone. It arises, fleshy, from the unciform process of the os unciforme, and from the contiguous part of the annular ligament of the wrist, and is inserted, tendinous and fleshy, into the forepart of the metacarpal bone of the little finger, from its base to its head.

Bichat has given the general name, *Adduc'tors*, to those of the interosseous muscles of the hand or foot, which perform the action of adduction.

ADEC. The inner man.—Paracelsus.

ADELODAGAM. A bitter Malabar plant, used in asthma, catarrh, and gout.

ADELPHIX'IA, *Adelphix'is*, from ἀδελφός, 'brother.' Consanguinity of parts in health

or disease. *Frater'nitas*, *Fratra'tio*. Hippocrates used the epithet *αδελφία*, *Adel'phia*, for diseases that resemble each other.

ADEN, *αδην*, 'a gland;' hence *Adenalgia*, *Adeniform*, &c.

ADENALGIA, from *αδην*, 'a gland,' and *αλγος*, 'pain,' glandular pain.

ADENEMPHRAXIS, from *αδην*, 'a gland,' and *εμφραξις*, 'obstruction,' glandular obstruction.

ADENIFORM, *Adeniformis*, *Adenoi'des*, *αδενειδης*, from *Aden*, 'a gland,' and *Forma*, 'form or resemblance.' *Glandiform*, or resembling a gland.

ADENITIS, from *αδην*, 'a gland,' and *Itis*, a termination denoting inflammation. Glandular inflammation.

ADENOCHIRAPSOLOG'IA, from *αδην*, 'a gland,' *χειρ*, 'the hand,' *απτω*, 'I lay hold of,' and *λογος*, 'a description.' The doctrine of curing scrophula or the king's evil by the royal touch.

ADENOGRAPHY, *Adenographia*, from *αδην*, 'a gland,' and *γραφω*, 'I describe.' That part of anatomy which describes the glands.

ADENOL'OGY, *Adenologia*, from *αδην*, 'a gland,' and *λογος*, 'a description.' A treatise on the glands.

ADE'NO-PHARYNGÆ'US, from *αδην*, 'a gland,' and *φαρυγξ*, 'the pharynx.' Some fleshy fibres have received this name, which pass from the constrictor pharyngis inferior to the thyroid gland. Their existence is not constant.

ADE'NO-PHARYNGI'TIS, same etymon. Inflammation of the tonsils and pharynx.

ADENO'SUS, (*Absces'sus*.) A hard, glandular abscess, which suppurates slowly.—M. A. Severinus.

ADENOT'OMY, *Adenotomia*, from *αδην*, 'a gland,' and *τεμνω*, 'I cut.' Dissection of the glands.

ADEPS SUILLÆ, *A'deps*, *Oxyn'gium*, *οξύγιον*. Pig's flare. The fat of the hog.

The ADEPS PRÆPARA'TA, *Hog's lard*, *Barrow's grease*, *Lard*, *Ax'unge*, *Axun'gia*, *Adeps suill'æ præpara'ta*, *A. præpara'ta*, *Axun'gia porci'na*, (F) *Graisse de Porc*, *Saindoux*, is prepared by melting the pig's flare, and straining it. This is called *rendering* the lard. Lard is emollient, but is chiefly used for forming ointments and plasters.

The ADEPS ANSERI'NA, *A'deps an'seris*, or *Goose grease*, (F) *Graisse d'Oie*, is also emollient. It has been used as an emetic.

ADEP'TA MEDICI'NA. Medicine, which treated of diseases contracted by celestial operations, or communicated from heaven.

ADHATO'DA, *Justic'ia adhatoda*. The *Malabar Nut Tree*. (F) *Noyer de Ceylon*. Used in India for expelling the dead fœtus in abortion. The word is said to convey this meaning in the Ceylonese.

ADHE'RENCE, *Adhe'sion*, *Adhæren'tia*, *Concre'tio*, *Atre'sia*, *Pros'physis*, *Proscolle'sis*, *Adhæ'sio*, from *adhæ'rere*, 'to stick to.' These words are usually employed synonymously. The French often use *adherence* for the state of union, and *adhesion* for the act of adhering.

ADHE'SIVE (INFLAMMATION), is that inflammation, which terminates by an adhesion between inflamed and separated surfaces.

Adhe'sive is also an epithet for certain plasters, which stick closely to the skin.

ADIAN'THUM CAPIL'LUS VEN'ERIS, *Maiden hair*. *Nat. Ord.* Filices. *Sex. Syst.* Cryptogamia Filices. (F) *Capillaire de Montpellier*. A European plant, of feeble aromatic and demulcent properties. It is used for forming the *Sirop de Capillaire* or *Capillaire*.

ADIAN'THUM PEDA'TUM, *A. Canaden'se*, *Capil'lus Canaden'sis*, *Canada Maidenhair*, (F) *Capillaire du Canada*, has the same properties. The *Capillaire* was once made from this.

ADIAPHRO'SIS, *Adiaphore'sis*, from *α* privative, *δια*, 'through,' and *πορος*, 'a pore.' Defect or suppression of perspiration, *Adiapneus'tia*, *αδιαπνευστία*.

ADIAPH'OROUS, *Adiaphorus*, *Indifferens*, *Neutral*. A medicine, which will neither do harm nor good.

ADIARRHCE'A, from *α* privative, and *διαρρην*, 'to flow.' Retention of any excretion.—Hipp.

AD'IPOCIRE, *Adipocira*, from *ad'eps*, 'fat,' and *ce'ra*, 'wax.' The base of biliary calculi, called also *Cholesterine*. (F) *Gras des Cadavres*, *Gras des Cimetières*. Also, a sort of soap, formed from animal matter under certain circumstances. The human body, when it has been for some weeks in water, assumes this appearance; and it has been a subject for legal inquiry, what length of time is necessary to produce it. This must, of course, depend upon various circumstances, as climate, season, &c.

AD'IPOSE, *Ad'ipous*, *Adipo'sus*, from *adeps*, 'fat.' (F) *Adipeux*. That which relates to fat:—as the *Adipose membrane*, *A. vessels*, &c. See *Fatty*.

The AD'IPOSE SARCO'MA of ABERNETHY, *Emphy'ma sarco'ma adipo'sum*, is suetty throughout, and is inclosed in a thin capsule of condensed cellular substance, connected by means of minute vessels. It is chiefly found on the fore and back part of the trunk. See *Sarcoma*.

ADIP'SIA, *Dipso'sis expers*. Absence of thirst.

ADIP'SON, from *α* privative, and *διψα*, 'thirst.' Any substance which relieves thirst. Applied to a decoction of barley to which oxymel has been added.—Hipp.

ADITUS, 'an entrance,' 'an approach;' *Prosodos*. The entrance to a canal or duct, as *Aditus ad Aquæductum Fallopii*.

ADIULIS'TOS, from *a* privative, and *δωλίζω*, 'I run.' Unstrained wine for pharmaceutical purposes.—Gorræus.

ADJUVANT, *Adjuvans*, from *Adjuva're*, 'to aid.' A medicine, introduced into a prescription to aid the operation of the principal ingredient or basis. Also, whatever assists in the removal or prevention of disease.

ADOLESCENCE, *Adolescen'tia*, *Juven'tus*, *Youth*. (F) *Jeunesse*. The period between puberty and that at which the body acquires its full developement; being, in man, between the 14th and 25th year; and, in woman, between the 12th and 21st.

ADO'LIA. A Malabar plant, whose leaves, put in oil, form a liniment, used in facilitating labour.

AD PONDUS OM'NIUM. The weight of the whole. In a prescription it means, that any particular ingredient shall equal in weight the whole of the others.

ADROBO'LON, from *αδρος*, 'great,' and *βωλος*, 'mass.' The Bdellium of India, which is in larger pieces than that of Arabia.

ADROS, *αδρος*, 'plump and full.' Applied to the habit of body, and also to the pulse.—Hippocrates.

ADULAS'SO. The *Justitia bivalvis*. A small shrub, used in India as a local application in gout.

ADULT AGE, *Andri'a*, from *Adoles'cere*, 'to grow.' *Viril'ity*. The age succeeding adolescence, and preceding old age. *Adult*, *Adul'tus*, is also used for one in the adult age.

ADUST, *Adus'tus*, from *Adu'rere*, 'to burn.' The blood and fluids were formerly said to be adust, when there was much heat in the constitution and but little serum in the blood.

ADUS'TION, *Adus'tio*. State of the body described under Adust. In Surgery, it signifies *cauterization*.

ADYNA'MIA, *Impoten'tia*, from *a* priv. and *δυναμις*, 'strength.' *Adyna'sia*, *Ady'natia*. Considerable debility of the vital powers; as in typhus fever. Some Nosologists have a class of diseases under the name *Adynamia*.

ÆDÆAG'RAPHY, *Ædæagraph'ia*, from *αἰδία*, 'organs of generation,' and *γράφω*, 'I describe.' A description of the organs of generation.

ÆDÆAL'OGY, *Ædæalog'ia*, from *αἰδία*, 'the pudendum,' and *λογος*, 'a description.' A Treatise on the organs of generation.

ÆDÆAT'OMY, *Ædæato'mia*, from *αἰδία*, 'the pudendum,' and *τέμνω*, 'I cut.' Dissection of the parts of generation.

ÆDÆI'TIS. Inflammation of the genital organs.

ÆDOPSO'PHIA, from *αἰδία*, 'the pu-

dendum,' and *φασκύνω*, 'to make a noise.' Emission of wind by the urethra in man, by the vagina in woman.—Sauvages and Sagar.

ÆEIG'LUCES, *Æeig'luces*, from *αι*, 'always,' and *γλυκύς*, 'sweet.' A kind of sweet wine or must.—Gorræus.

ÆGAGROPHI'LA, from *αἰγαγρος*, 'the rock goat,' and *πῖλος*, 'hair.' *Bezoar d'Allemagne*, *Pila Dama'rum seu Rupicapra'rum*. A ball, composed of hairs, found in the stomach of the goat; once used medicinally. See Bezoar.

ÆGIAS, *Ægis*, *Æglia*, *Ægides*, from *αιξ*, 'the goat;' why, is not known. (F) *Aige* or *Aigle*. There is obscurity regarding the precise meaning of this word. It was used to designate an ulcer, or speck on the transparent cornea.—Hippocrates.

Maitre Jean uses it for a calcareous deposit between the conjunctiva and sclerotica.

Æ'GILOPS, *An'chilops*, *An'kylops*, from *αιξ*, 'a goat,' and *ωφ*, 'the eye.' An ulcer at the greater angle of the eye, which sometimes does not penetrate to the lacrymal sac, but at others does, and constitutes fistula lacrymalis.—Galen, Celsus, Oribasius, Aëtius, Paulus of Ægina, &c.

ÆGIR'INON, an ointment of which the fruit or flower of the poplar was an ingredient; from *αργυρος*, 'the black poplar.'

ÆGYPT'IA, an epithet for several medicines, mentioned by Galen, Paulus of Ægina, and Myrepsus.

ÆGYPT'IA STYPTE'RIA, *αιγυπτια στυπτηρια*, *Egyptian alum*, recommended by Hippocrates.

ÆGYPT'IA UL'CERA; *Egyptian ulcers*. Ulcers of the fauces and tonsils, described by Aretæus, as common in Egypt and Syria.

ÆGYPTIACUM, *αιγυπτιον, μανδησιον*, *Mel Egyptiacum*, *Phar'macum Egyptiacum*; a preparation of vinegar, honey, and verdigris, scarcely used now, except by veterinary surgeons, as a detergent. See Linimentum Æruginis.

ÆGYPTIUS PESSUS; *Egyptian Pessary*. A pessary, composed of honey, turpentine, butter, oil of lily or rose, saffron, each one part; with sometimes a small quantity of verdigris.

ÆON, *αιων*. The entire age of a man from birth till death.—Hippocrates, Galen. Also, the spinal marrow.

ÆO'RA, from *αιωρεω*, 'I suspend.' Gestation, Swinging.—Aëtius, Celsus, &c.

ÆQUAT'OR OCULI. The line formed by the union of the upper and under eyelid, when they are closed. It is below the middle of the globe.

ÆREOLUM, *Æreolus*, *Chalcus*. The sixth part of an obolus, by weight; consequently about 2 grains.

Æ'RESIS, *αιρεσις*, 'the removal of any thing.' A suffix denoting a removal or separation, as *Aphæresis*, *Diæresis*, &c.

AERIFLUX'US. The discharge of gas, and the fetid emanations from the sick.—Sauvages.

AEROL'OGY, *Aerologia, Aerolog'ice*, from *αἰρ*, 'air,' and *λογος*, 'a description.' That part of Physics which treats of the air, its qualities, uses, and its action on the animal economy.

AEROMAN'CY, *Aeromanti'a*, from *αἰρ*, 'air,' and *μαντια*, 'divination.' An art in judicial astrology, which consists in foretelling, by means of the air or substances found in the atmosphere.

AEROPHO'BIA, from *αἰρ*, 'air,' and *φοβος*, 'fear.' Dread of the air. This symptom often accompanies hydrophobia, and sometimes hysteria and other affections.

ÆRU'GO, *ῥος*, from *αἰς*, 'copper.' The rust of any metal, properly of brass. See *Cupri Acetas*.

ÆRU'GINOUS, *Ærugino'sus, ῥιδης*, from *Ærugo*, 'verdigris.' (F) *Erugineux*. Resembling verdigris in colour; as the bile when discharged at times from the stomach.

ÆSCHOS, *αισχος*. Deformity of the body generally, or of some part.—Hippoc.

ÆSCULUS HIPPOCAS'TANUM, *Castan'ea equi'na, Pavi'na, Horse-chestnut, Buckeye*. (F) *Marronier d'Inde*. *Nat. Ord.* Hippocastanæ. *Sex. Syst.* Heptandria Monogynia. The bark has been advised as a substitute for the cinchona. Both bark and fruit are astringent. Externally, it has been employed, like the cinchona, in gangrene.

ÆSTHEMA, *αισθημα*, gen. *αισθηματος*, 'a sensation, a perception.'

ÆSTHEMATONU'SI, from *αισθημα*, and *νευροι*, 'diseases.' Diseases affecting sensation.

ÆSTHEMATORGANONU'SI. Diseases of the organs of sensation.

ÆSTHE'SIS, *αισθησις, Aisthe'sis*, from *αισθανομαι*, 'I feel.' The faculty of being affected by a sensation. Sensibility, as well as the senses themselves.

ÆSTHET'ICA, from *αισθανομαι*, 'I feel.' Diseases affecting the sensations. Dullness, depravation or abolition of one or more of the external organs of sense. The 2d order, class *Neurotica* of Good.

ÆSTUS VOLAT'ICUS. Sudden heat; scorching or flushing of the face.—Vogel.

ÆTHER, *Ether*, from *αιθρ*, 'air,' or from *αιθα*, 'I burn.' *Liquor æthereus*. A volatile liquor obtained by distillation from a mixture of alcohol and a concentrated acid.

The **ÆTHER CHLORICUS**, *Chloric Ether*, has been administered in spasmodic asthma, and in adynamic conditions of the nervous system, in the dose of 3ss.

The **ÆTHER HYDROCYANICUS**, *Æther Prussicus*, or *Hydrocyanic Ether*, has been advised in whooping cough, and where the Hydrocyanic Acid is indicated. Dose, 6 drops.

ÆTHER SULPHU'RICUS, *Æ. Vitriol'icus*,

Naphtha Vitrioli. Ether prepared from sulphuric ether and alcohol. (*Sp. rectificat. Acid. Sulph.* aa ℥ iss. Distil until a heavier liquid passes over Ph. L.)

The *Rectified Ether*, *Æther rectificatus* prepared by distilling 12 oz. from a mixture of *sulphuric ether*, f. 3 xiv, *fused potass*, 3 ss, and *distilled water*, f. 3 ij, is a limpid, colourless, very inflammable, volatile liquor; of a penetrating and fragrant odour, and hot, pungent taste. Its s. g. is 0.732. It is a diffusible stimulant, narcotic and antispasmodic, and is externally refrigerant. Dose grtt xxx to 3 iss.

The Parisian Codex has an *Æther acet'icus*, an *Æther muriat'icus* or *Æther hydrochlor'icus*, an *Æther nit'ricus vel nitro'sus*, and an *Æther phosphora'tus*. They all possess similar virtues.

ÆTHE'REAL, *Æthereus*. (F) *Ethe'rée, Teinture étherée*. An æthereal tincture is one formed by the action of sulphuric ether, at the ordinary temperature, on medicinal substances.

ÆTHIOP'ICUS LAPIS. Ethiopian stone. A stone formerly supposed to be possessed of considerable virtue.—Oribasius.

ÆTHIOPS, from *αιθα*, 'I burn,' and *ωψ*, 'countenance.' A black or burnt countenance. The ancients gave this name to certain oxides and sulphurets of metals, which were of a black colour.

ÆTHIOPS MARTIAL, *Deutoxydum Ferri nigrum*. The black deutoxide of iron. Once in repute as a tonic.

ÆTHOL'ICES, from *αιθα*, 'I burn.' Fiery pustules on the skin. Some have considered them to have been boils.

ÆTHU'SA MEUM, *Meum, Meu, Spig-nel, Baldmoney*. (F) *Ethuse Meum*. The root has been advised as carminative, stomachic, &c.

ÆTIOL'OGY, *Ætiolo'gia, Etiol'ogy, Ai-tiolo'gia*, from *αιτια*, 'a cause,' and *λογος*, 'a discourse.' The doctrine of the causes of disease.

ÆTI'TES, *Eagle-stone. Pierre d'Aigle, Hydrate de tritoxide de fer*. This stone was formerly supposed to facilitate delivery, if bound on the thigh; and to prevent abortion, if bound on the arm. It was, also, called *Lapis Collymus*.

AFFADISSEMENT. (F) That condition of the digestive function in which the appetite is diminished, the sense of taste blunted, and the action of the stomach enfeebled; a state usually accompanied by general languor.

AFFEC'TION, *Affec'tio*; any mode in which the mind or body is affected or modified.

The **AFFECTIONS OF THE MIND**, *Affec'tus An'imi*, (F) *Affections de l'âme*, include not only the different passions, as love, hatred, jealousy, &c., but every condition of the

mind that is accompanied by an agreeable or disagreeable feeling, as pleasure, fear, sorrow, &c.

In Pathology, *Affection*, *Pathos*, *Pathe'ma*, is synonymous with disease: thus we speak of a *pulmonary affection*, a *calculous affection*, &c.

AFFECTIVE. That which affects, touches, &c. Gall gives the term *affective faculties*, (F) *Facultés affectives*, to functions dependent upon organization of the brain, and comprising the sentiments, affections, &c.

AFFERENT, *Afferens*, from *affero*, 'I bring.' The vessels which convey the lymph to the lymphatic glands, are called *afferent*.

AFFION or **OF'FIUM**, *O'pium*, (q. v.) The Bantamese thus designate an electuary of which opium is the basis, and which they use as an excitant.

AFFLA'TUS or **ADFLA'TUS**, *επιπνοια*, from *ad*, 'to,' and *flare*, 'to blow.' When any air strikes the body and produces disease, it is thus called.

AFFLUENCE and **AF'FLUX**, from *affluere*, 'to flow to.' A flow or determination of humours, and particularly of blood, towards any part.

AFFUSION, *Pros'chysis*, *Epich'ysis*, *Affusio*, from *ad*, 'to,' and *fundere*, 'to pour.' The action of pouring a liquid on any body. *Affusions*, cold and warm, are used in different diseases. The cold *affusion* is sometimes very beneficial in cutting short typhus fever and scarlatina, if used during the first week. It consists in placing the patient in a tub, and pouring cold water over him; then wiping him dry, and putting him to bed. The only precaution necessary, is, to use it in the state of greatest heat and exacerbation; not when chilliness, or topical inflammation is present.

AGACEMENT, (F), from *ακάζειν*, 'to sharpen.' The setting on edge.

Agacement des dents; a disagreeable sensation experienced when acids are placed in contact with the teeth. *Tooth edge*. Setting the teeth on edge.

Agacement des nerfs; a slight irritation of the system, and particularly of the organs of sense and locomotion, corresponding nearly to the English *Fidgets*.

AGALAC'TIA, *Agalax'is*, *Agalac'tio*, and *Agalacta'tio*, *Defectus lac'tis*, *Oligoga'lia*, from *a* privative, and *γαλα*, 'milk.' Absence of milk in the mammæ.

AGAL'LOCHUM, *Calambac*, *Calambouk*, *Lignum Agal'lochi ve'ri*, *Lignum Al'oës*, *L. Aspal'athi*, *Xylo-aloës*, *Aloes wood*. A resinous and very aromatic wood of the East Indies, from the *Excæcaria Agallocha*. Used in making pastils, &c.—Dioscorides, Oribasius, Paulus.

AG'ARIC, *Agar'icum*. A genus of plants in the Linnæan system, some of which are edible, others poisonous. It was so called from *Agaria*, a region of Sarmatia.—Dioscorides.

Among the edible varieties of the *Boletus*, the following are the chief. 1. The *Agar'icus edu'lis*, (F) *Agaric comestible et champignon de couche*. 2. The *Agar'icus odora'tus*, (F) *Mousseron*.

The most common poisonous varieties are the *Agar'icus Neca'tor*, (F) *Agaric meurtrier*; and 2. The *Agar'icus acris*, (F) *Agaric âcre*; besides the *Auranite*, a sub-genus, which includes several species. One of the most delicate is the *Agaricus Aurantiacus*, but care must be taken not to confound it with the *A. Pseudo-Aurantiacus*, which is very poisonous. The *A. aurantiacus* is called, in French, *Oronge*. See Poisons, Table of.

AGA'VE **AMERICA'NA**, *American Agave*. Nat. Ord. Bromeliaceæ, Sex. Syst. Hexandria Monogynia. This plant has been considered diuretic and antisyphilitic.

AGE, *ἡλικια*, *Helikia*, *æ'tas*. Period of life. Time that has elapsed since birth, &c. Five ages are often designated in the life of man. 1. First infancy (*Infan'tia*): 2. Second infancy (*Pueri'tia*): Adolescence (*Adolescen'tia*): 4. The adult age (*Viril'itas*): 5. Old age (*Senec'tus*): all which see.

AGEN'ESIS, from *a* privative, and *γενεσις*, 'generation.' Imperfect developement of any part of the body: as *cerebral agenesis*, i. e. imperfect developement of the brain in the fœtus.

AGENT, *Agens*, from *ag'ere*, 'to act.' Any power which produces, or tends to produce, an effect on the human body. Morbific agents, (F) *Agens morbifiques*, are the causes of disease. Therapeutical agents, (F) *Agens thérapeutiques*, the means of treating it, &c.

AGERA'SIA, *Insenescen'tia*, from *a* privative, and *γενεσις*, 'old age.' A vigorous and green old age.

AGE'RATUS LAPIS. A stone used by cobblers to polish shoes. It was formerly esteemed discutient and astringent.—Galen, Oribasius, Paulus.

AGEUS'TIA or **AGHEUS'TIA**, *Apogeus'tia*, *Apogeu'sis*, *Dysæsthe'sia gustato'ria*, *Parageu'sis*, from *a* priv., and *γαστρις*, 'taste.' Diminution or loss of taste.—Sauvages, Cullen.

AGGLOM'ERATE, *Agglomera'tus*. Applied to humours or glands in aggregation.

AGGLU'TINANT, *Agglutinans*, *Collet'iticus*, *Glu'tinans*, from *gluten*, 'glue.' (F) *Agglutinant*, *Agglutinatif*, *Glutinatif*. Remedies were formerly so called, which were considered capable of uniting divided parts.—Paulus.

Plasters are called *agglutinant*, (F) *agglutinatifs*, which adhere strongly to the skin. Certain bandages are likewise so termed. (F) *Bandelettes agglutinatives*.

AGGLUTINA'TION, *Colle'sis*, *Epicolle'sis*, *Proscolle'sis*, *Glutina'tio*, from *agglutinare*, 'to glue together.' The first degree of adhesion. Also, the action of agglutinants.

AGGLU'TINATE, from *agglutina're*, 'to glue together.' The French use the word *agglutiner*, in the sense of 'to reunite;' as

agglutiner les lèvres d'une plaie, 'to unite the lips of a wound.'

AGIAHA'LID OR **AGIHA'LID**, or **AGRAHA'LID**, An Egyptian and Ethiopian shrub, similar to the *Ximenia*. The Ethiopians use it as a vermifuge. The fruit is purgative.

AG'GREGATE, *Aggregatus*, from *aggre-gare*, 'to assemble together.' Glands are called *aggregate*, which are in clusters. *Aggregate pills* (F) *Pilules agrégatives*, signified, formerly, those which were believed to contain the properties of a considerable number of medicines, and to be able to supply their place.

AGITA'TION, *Agitatio*: *Done'sis*, constant and fatiguing motion of the body (*inquiēs*), or distressing mental inquietude (*Animi agita'tio*).

AGLO'SSIA, from *a* priv. and *γλωσσα*, 'the tongue.' A malformation which consists in the want of a tongue.

AGLOSSOSTOMOG'RAPHY, *Aglossostomogra'phia*, from *a* priv. *γλωσσα*, 'the tongue,' *στομα*, 'the mouth,' and *γραφω*, 'I describe.' Description of a mouth without a tongue.—Roland (of Saumur).

AGLUTI'TION, *Agluti'tio*, from *a* priv., and *glutire*, 'to swallow.' A hybrid term, designating the impossibility of swallowing.—Linnæus.

AGNA'THIA, from *a* priv. and *γναθος*, 'jaw.' A malformation which consists of a want of the jaw, especially of the lower.

AGNOIA, from *a* priv. and *γινωσκω*, 'I know.' State of a patient, who does not recognise individuals.—Hippocr., Galen, Foësius.

AGO'GE, *αγωγή*, the order or condition of a disease.—Hippocr., Galen. Likewise the state of the air.—Hippocr., Galen, Gorræus, Foësius.

AGOGUE, *αγωγός*, 'a leader,' from *αγω*, 'I lead or expel.' Hence *Cholagogue*, an expeller of bile; *Hydragogue*, &c.

AGOMPHI'ASIS, *Agompho'sis*, from *a* privative, and *γομφω*, 'I nail.' Looseness of the teeth. Gorræus.

AGONIS'TICA, from *αγων*, 'a combat.' The part of ancient gymnastics, which had reference to the combats of the *Athletæ*.

Also, very cold water, given internally, to calm febrile heat.—Paulus of Ægina.

AG'ONY, *ago'nia*, *an'gor*, from *αγων*, 'a combat.' The last struggle of life.—Galen, Gorræus, &c. The agony, which is of longer or shorter duration, is characterized by great change in the features, gradual abolition of sensation and motion, loss of voice, dryness or lividity of the tongue and lips, rattling in the throat, small and intermittent pulse, and coldness of the extremities. This state is not present in those who die suddenly. See *Facies Hippocratica*.

AGOS'TUS, from *αγω*, 'I lead.' The fore arm from the elbow to the fingers. Also the palm of the hand.—Gorræus.

AGRA, *αγρα*, from *αγρω*, 'I seize hold of,'—a seizure, as *Odontagra*, a tooth seizure, tooth-ache; *Chiragra*, *Podagra*, &c.

AG'RIMONY, *Eupato'rium*, *Caf'al*, *Lap-pula Hepat'ica*. (F) *Aigremoine*. The *Agri-mo'nia Eupato'ria*. Nat. Ord. Rosaceæ, *Sex. Syst.* Icosandria Digynia. A mild astringent and stomachic. Dose, in powder, from ℥j to ℥j.

AGRIOTHYM'IA, from *αγριος*, 'ferocious,' and *θυμος*, 'disposition.' Ferocious insanity.—Sauvages.

AGRIP'PA or **ÆGRIP'PA**, from *ager partus*, 'difficult birth:' or perhaps from *αγρα*, 'taking or seizure,' and *πους*, 'the foot.' This term has been given to those born by the feet. It is pretended that the family of Agrippa obtained their name from this circumstance. Parturition where the feet present is called *Agrippæ partus*, *Agrippinus partus*.

AGRYPNO'DES, *αγρυπνωδης*, from *αγρυπ-νος*, 'sleepless.' Characterized by sleeplessness, as *Febris agrypnodes*, a fever accompanied with sleeplessness.

AGRYP'NUS, *αγρυπνος*, 'sleepless,' 'vigilant;' hence *Agrypnodes* (Febris), fever attended with watching.

A'GUE CAKE, *Placen'ta febrilis*, *Phys-co'nia splen'icum*, *P. splenica*, *Splenis Tu-mor*; (F) *Gâteau fébrile*,—a visceral obstruction (generally in the spleen), which follows agues, and is distinctly felt by external examination. It is not common.

AGUL or **ALHA'GI**, the *Hedisarum alhagi*. A thorny shrub of Persia and Mesopotamia, which affords manna. The leaves are purgative.

AGY'ION, from *a* priv. and *γυιον*, 'limb.' Mutilated, or wanting limbs.—Hippocr. Weak, feeble.—Galen.

AGYR'IAS, from *αγυγίς*, 'a collection.' Opacity of the crystalline.—Aëtius. Paré.

AGYR'TÆ, from *αγυγίς*, 'a crowd.' Formerly meant certain strollers, who pretended to supernatural powers. Subsequently, a quack or illiterate pretender.

AIDE, (F) *Ad'jutor min'ister*. An assistant to a surgeon in his operations.

AIGLE. Near the city of this name, in Normandy, is the chalybeate spring of Saint Xantin, much used in the 16th and 17th centuries.

AIGUILLON, (F) *Spina Helmontii*. A term used since the time of Van Helmont, to designate the proximate cause of inflammation. According to him, an inflamed part is in the same condition as if an *aiguillon* or thorn was thrust into it.

AILERON, (F) *Extréma ala vel Pin'nula*, diminutive of (F) *Aile*, a wing. The extremity of the wing of a bird, to which the great feathers are attached.

AILERONS DE LA MATRICE, three folds at the base of the broad ligaments of the uterus, which are occupied by the ovary and its ligament, the Fallopian tube, and the round ligament.

AIMA, 'αἷμα, See Hæma.

AIR, *Aer*, from *αἶρ*, 'I breathe,' *Common air*, *Atmospheric air*, is an invisible, transparent, inodorous, insipid, ponderable, compressible, and elastic fluid, which, under the form of the atmosphere, surrounds the earth to the height of 15 or 16 leagues.

Air is essentially composed of two gases, oxygen and azote, in the proportion of 20 of the former to 80 of the latter. Oxygen is the vital portion, but the azote is necessary to dilute it. Air also contains a small portion of carbonic acid gas, and it has, always floating in it, aqueous vapour, different terrestrial emanations, &c. Its effects upon the human body vary according to its greater or less density, temperature, moisture, &c.; hence, change of air is found extremely serviceable in the prevention and cure of certain morbid conditions. See CLIMATE.

The AIR PASSAGES, (F) *Voies aériennes*, *aërières*, are the larynx, trachea, bronchi, &c.

AITHOMOMA from *αἴθος*, 'black.' A black condition of all the humours of the eye. A. Paré.

AIX-LA-CHAPELLE, MINERAL WATERS OF. Called by the Germans, *Aachen*. A thermal, sulphureous, mineral water, which contains, in 1000 grammes, 28.54 cubic inches of hydro-sulphuric acid gas, 18.05 cubic inches of carbonic acid gas, 0.1304 grammes of carbonate of lime, 0.0440 grammes of carbonate of magnesia, 0.5444 grammes of subcarbonate of soda, 2.3697 grammes of muriate of soda, 0.2637 of sulphate of soda, and 0.0705 of silica. The temperature is 46° R. (135.5 F.)

The *factitious water of Aix-la-Chapelle*, *Aqua Aquisgranensis*, (F) *Eau d'Aix-la-Chapelle*, is made by adding *pure water* 3 xviijss, to *hydrosulphuretted water* 3 iv, *carbonate of soda* gr. xx, *muriate of soda* gr. ix. Ph. P.

There are thermal sulphureous springs at Aix in Savoy, and some thermal springs at Aix in Provence.

AJU'GA. *A. pyramidalis*, *Consolida Media*, *Bugula*, *Upright Bugloss*, *Middle Consound*. (F) *Bugle pyramidale*. This plant is substringent and bitter.

The AJU'GA REPTANS, *Bugula*, *Common Bugle*, (F) *Bugle rampante*, has similar properties.

ALA, *Pinna*, *Pteryx*, 'a wing.' (F) *Aile*. A term often used by Anatomists for parts which project, like a wing, from the median line; as the *Alæ nasi*, *Alæ of the uterus*, &c.

ALABASTER, *Alabastrum*. (F) *Albâtre*, *Alabastrites*. A variety of compact gypsum; of which an ointment was once made;—the *unguentum alabastrinum*; used as a discutient. Alabaster likewise entered into several Dentifrices.

ALANFU'TA. A name given, by the Arabians, to a vein, situate between the chin and lower lip, which they were in the habit

of opening in cases of fœtor of the breath.—Avicenna.

ALAUQUE'CA. The Hindustanee name of a stone, found in small, polished fragments, which is considered efficacious in arresting hemorrhage when applied externally. It is a sulphuret of iron.

ALA'RES VENÆ. The superficial veins at the fold of the arm.

ALA'RIA OSSA. The wing-like processes of the sphenoid bone.

ALA'TUS. *Pterygo'des*. One whose scapulae project backwards like wings.

ALBADA'RA. The sesamoid bone of the metatarso-phalangeal joint of the great toe. The Rabbis and Magicians attributed extraordinary virtues to it.—Arabians.

ALBAN, SAINT, MINERAL WATERS OF. A French acidulous chalybeate, in the department of the Loire.

ALBICANTIA COR'PORA. *C. Candican'tia*, from *al'bico*, 'I grow white.' Willis's glands in the brain; anterior to the tuber annulare. See Mammillary Eminence.

ALBI'NO. 'White.' *Leuca'thiops*, *Æthiops albus*, *Dondo*, from *albus*, 'white.' (F) *Blafard*, *Nègre-blanc*. A Spanish word applied to individuals of the human race who have the skin and hair white, the iris very pale, bordering on red; and the eyes so sensible, that they cannot bear the light of day. This condition, which has been called *Leucæthiop'ia*, *Alpho'sis Æthiop'ica*, *Albino's'mus*, *Leucopathi'a*, is seen more frequently in the Negro. Both sexes are exposed to it; but it does not seem to be true, that there are tribes of Albinos in the interior of Africa.

AL'BORA. A kind of itch or complicated leprosy.—Paracelsus.

ALBUGIN'EUS. *Albugin'eus*, from *albus*, 'white.' A term applied to textures, humours, &c., which are perfectly white.

ALBUGIN'EA, *Tunica albugin'ea*, *A. Testis*, *Peritestis*, *Membra'na capsula'ris testis*. (F) *Albuginée*, *Tunique albuginée*, is a strong, fibrous, and resisting membrane, which immediately envelopes the testicle, and has, at its upper part, an enlargement, called corpus Highmorianum. From its inner surface it sends off a number of flat, filiform prolongations or septa, between which are contained the seminiferous vessels. Externally, it is covered by the tunica vaginalis testis.

ALBUGIN'EUS FIBRE, (F) *Fibre albuginée*, a name given by Chaussier to what he considers one of the four elementary fibres.

The albugineous fibre is linear, cylindrical, tenacious, elastic, but little extensible, and of a shining, satiny appearance. It always forms fasciæ or fasciculi, which constitute the tendons, articular ligaments, and aponeuroses: hence the name *albugineous membranes*, given by Chaussier to the fibrous membranes.

Gauthier considers that the rete mucosum consists of four layers, to two of which he gives the names,—*membra'na albugin'ea*

profunda, and *membra'na albugin'ea superficialis*, respectively.

ALBUM GRÆCUM *Cynocoprus*, *Spo'dium Græco'rum*, *Album Canis*, *Stercus Caninum Album*. The white dung of the dog. It consists almost wholly of *phosphate of lime*, from the bones used as food. It was formerly applied as a discutient to the inside of the throat in quinseys, but is now justly banished from practice.

ALBUM NIGRUM. The excrement of the mouse.

ALBU'MEN, from *albus*, 'white.' (F) *Albumine*. An immediate principle of animals and vegetables, which constitutes the chief part of the white of egg. It is found in the serum, chyle, synovia, serous fluids, &c.

The **ALBU'MEN OVI**, *Albu'mor*, *Albu'go Ovi*, *Albor Ovi*, *Can'didum Ovi*, *Albu'men*, *Clare'ta*, *Ovi albus liquor*, *Albamen'tum*, *Lac avis* or *white of egg*. (F) *Blanc d'œuf*, (Old F) *Albin d'œuf*, is used in pharmacy for suspending oils, &c., in water. See *Ovum*.

ALBUMINURIA, a hybrid, from '*Albumen*,' and *ουρον*, 'the urine.' The condition of the urine in which it contains albumen, the presence of which is indicated by its coagulation on the application of adequate heat.

AL'CAEST, *Al'cahest* *Al'chaest*, perhaps from (G) *all*, 'all,' and *geist*, 'spirit.' A word invented by Paracelsus to designate a liquor, which, according to him, was capable of removing every kind of swelling.

The same word was used by Van Helmont for a fancied universal solvent, capable of reducing every body to its elements.

The **ALCAEST OF GLAUBER** is a thick liquor obtained by detonating nitrate of potass on hot coals, which transforms it into subcarbonate of potass.

The **ALCAEST OF RESPOUR** is a mixture of potass and oxyd of zinc.

ALCALES'CENCE, *Alkales'cence*, *Alcalescen'tia*. The condition in which a fluid becomes alkaline.

ALCALESCENCE OF THE HUMOURS was an old notion of the Humorists. It can only occur during the putrid fermentation of animal matters, which contain azote, and produce ammonia. 'Alcalinity' is the quality of being alkaline.

AL'CALI or **AL'KALI**, from *al* (*Arab.*), 'the,' and *kali*, the name of the *Salso'la Soda*, a plant which contains a large quantity of one of the principal alkalis—*soda*. The alkalis are substances soluble in water, possessing generally a urinous, acrid, and caustic taste, turning the syrup of violets green, and restoring to blue the infusion of litmus, which has been reddened by acids; reddening the yellow of turmeric, and having the greatest tendency to unite with acids, whose character they modify, and form salts with them. In medicine we understand by this term *Potassa*, *Soda*, or *Ammonia* (q. v.)

CAUSTIC ALKALI, *Al'kali Caus'ticum*. A pure alkali. One deprived of its carbonic acid.

The **FIXED ALKALIS** are soda and potassa; the **Volatile Alkali**, ammonia.

ALCE'A RO'SEA, *Common Hollyhock*. Emollient, like the *Althæa*.

ALCHEMIL'LA, *A. vulga'ris*, *Common Ladies' Mantle*. *Pes Leo'nis*, *Leontopo'dium* (F) *Pied de Lion*. Formerly in great repute as an astringent in hemorrhage.

ALCHYMY, *Al'chemy*, *Alchemi'a*, *Alchimi'a*, *Adep'ta Philoso'phia*, from *al*, an Arabic particle, signifying superiority, excellence, and *Chimia*, 'Chymistry.' This word was formerly synonymous with Chymistry; but, from the 7th century, it has been applied to the mysterious art of endeavouring to discover a universal remedy, and a mode of transmuting the baser metals into gold: an operation to which they gave the name *Opus magnum*, and *Philosopher's stone*.

Alchymy has also been called *Scien'tia vel Philoso'phia Hermet'ica*, from an idea that Hermes or Mercury was its inventor.

Harris has well defined this chimerical art: '*Ars sine arte, cujus principium est mentiri, medium laborare, et finis mendicare.*'

AL'CHYMIST, *Flatua'rius*, *Adept'*; one pretending to Alchymy.

AL'COHOL, *Al'cool*, *Al'kool*; an Arabic word, formerly used for an impalpable powder, and signifying 'very subtile, much divided.' At the present day it is applied to the highly rectified spirit of wine. See *Spiritus rectificatus*, or rectified spirit, distilled from dried subcarbonate of potassa.

Alcohol is an inflammable liquor, lighter than water, of a warm, acrid taste, colourless, transparent, and of a pungent, aromatic smell. It is the product of the distillation of vinous liquors. Alcohol is miscible with water in all proportions, and it is the direct solvent of resins, balsams, &c. Various other vegetable principles are soluble in it, and hence it is used, in different states of concentration, in the preparation of *elixirs*, *tinctures*, *essences*, &c.

Alcohol acts on the animal body as a powerful stimulus: as such, in a dilute form, it is used in the prevention and cure of disease. Its habitual and inordinate use is the cause of many serious affections, of a chronic character especially, as visceral obstructions, dropsy, &c.

ALCOOLISER (F), Formerly, 'to reduce into an impalpable powder.' No longer used.

ALCORNOCQUE (F), *Cortex Alcornoco*, A bark but little known and distributed in France, which has been considered capable of curing phthisis. It is bitter, tonic, and slightly astringent. Dose of the powder $\mathfrak{z}$ i to $\mathfrak{z}$ ss.

AL'CYON, *Hal'cyon*. A swallow of *Cochin China*, whose nests are gelatinous and

very nutritious. They have been proposed in medicine as analeptic and aphrodisiac.

ALCYONIUM, *Bastard sponge*. The ashes were formerly employed as dentifrices: they were believed proper for favouring the growth of the hair and the beard, and were used in Alopecia.

ALECTORIUS LAPIS, *Alectoria*; from αλεκτορ, 'a cock.' The name of a stone, supposed to exist in the stomach of the cock, or, according to others, in that of the capon, 4 years old. Many marvellous properties were formerly attributed to it, which are as groundless as its existence. There are no stones in the stomach, except what have been swallowed.

ALEIPTERIUM, from αλειψω, 'I anoint.' The place in the ancient gymnasium where the combatants anointed themselves.

ALEIPTRON, Same etymon. A box for containing ointments.

ALEM'BIC (*Arab.*) *Moorshead, Capitel'ium, Capitulum*, (F) *Alambic*. A utensil made of glass, metal, or earthen ware, and adapted for distillation. It consists of a *body* or *cucurbit*, to which is attached a *head* or *capital*, and out of this a *beak* descends laterally to be inserted into the receiver.

ALEM'BROTH (*Salt.*) The alchymists designated by this name, and by those of *Sal sapientiae*, *Sal vitæ* and *S. Scientiæ* the product resulting from the sublimation of a mixture of corrosive sublimate and sal ammoniac. It is stimulant, but not employed.

ALESE (F.) *Alèze, Lin'teum*, from αλεξω, 'I preserve.' A *guard*. A cloth arranged in several folds, and placed upon a bed, so as to *guard* it from the lochial or other discharges.

AL'ETRIS FARINO'SA. *Stargrass, Starwort. Nat. Ord. Asphodeleæ, Sex. Syst. Hexandria Monogynia*. This plant is an intense and permanent bitter, and is used as a tonic and stomachic. It is common in the United States.

ALEXAN'DRINE, *Emplas'trum Alexan'dri*, a garlic plaster, invented by Alexander, contemporary of Mesuë. Other ancient preparations were called 'Alexandrine;' as the *Alexan'dri antid'otus au'rea*, used in apoplexy; the *Colly'r'ium siccum Alexandri'num*, or 'Collyrium of King Alexander,' mentioned by Aëtius.

ALEXIPHAR'MIC, *Alexiphar'micus, Antiphar'macus, Alexica'cus, Caco-alexite'ria, Lexiphar'macus*, (F) *Alexipharmaque*, from αλεξω, 'to repel,' and φαρμακον, 'poison.' A term formerly used for medicines which were considered proper for expelling from the body various morbid principles, or for preventing the bad effects of poisons taken inwardly.

ALEXITE'RIA, from αλεξασθαι, 'to assist.' Originally, *alexiterium* was used synonymously with remedy. In more modern times it has been applied to a class of medicines, that counteract poisons placed in con-

tact with the exterior of the body, in contradistinction to alexipharmic.

AL'GAROTH, *Al'garot, Algaro'thi Pulvis, Pulvis Angel'icus, Ox'idum seu submu'rias Stib'ii præcipitan'do para'tum: Antimo'nii Ox'y'dum; Ox'idum antimo'nii Nitro-muriaticum, Ox'idum Stib'ii Ac'ido Murial'ico oxygena'to para'tum, Mercu'rius Vitæ, Mercu'rius Mortis*, so called from Victor Algarothi, a Veronese physician; the *sub-muriate of protoxide of antimony*, separated from the muriate of antimony by washing away some of its acid. It was formerly much used as an emetic, purgative, and diaphoretic.

ALGE'DO, from αλγος, 'pain.' Violent pain about the neck of the bladder, occasionally occurring in gonorrhœa.—Cockburn.

AL'GIDUS, from *algor*, 'cold.' That which is accompanied by coldness.

FEBRIS AL'GIDA, *F. horrif'ica, F. quer'quera*. (F) *Fièvre algide*. A pernicious intermittent, accompanied by icy coldness, which is often fatal in the second or third paroxysms.

ALGOS, αλγος, 'pain.' Hence, *Alget'icus, αλγετικός*, 'painful,' as *Epilepsia algetica*. The suffix *algia* has the same signification, as in *Cephalalgia; Pleuralgia, Neuralgia, &c.*

AL'ICA, *Hal'ica, Farina'rium, Chondrus*, from αλιζ, 'bouillie.' A grain from which the ancients made their tisanes; supposed, by some, to have been the *Triticum Spelta*. At times, it seems to have meant the tisane itself.

AL'ICES, from αλιζω, 'I sprinkle.' Spots which precede the eruption of smallpox.

AL'IMENT, *Alimen'tum, Ciba'rium, Bro-ma, Comis'te, Cibus, Esca, Nutri'tus, Nutri-men'tum, Sitos, Trophê*, (F) *Aliment, Nourri-ture*, from *alere*, 'to nourish;' *food*. Any substance, which, if introduced into the system, is capable of nourishing it and repairing its losses.

The study of Aliments forms one of the most important branches of Hygiène. They are confined to the organized kingdom: the mineral affording none.

As regards the immediate principles, which predominate in their composition, they may be classed as follows.

TABLE OF ALIMENTS.

1. <i>Feculaceous.</i>	{ Wheat, barley, oats, rye, rice, Indian corn, potatoe, sago, peas, beans, &c.
2. <i>Mucilaginous.</i>	{ Carrot, salsify, beet, turnip, asparagus, cabbage, lettuce, artichoke, melon, &c.
3. <i>Saccharine.</i>	{ Sugar, fig, date, raisin, apricot, &c.
4. <i>Acidulous.</i>	{ Orange, currant, gooseberry, cherry, peach, strawberry, raspberry, mulberry, prune, pear, apple, sorrel, &c.
5. <i>Oleaginous and Fatty.</i>	{ Cocoa, olive, sweet almond, nut, walnut, animal fat, oil, butter, &c.
6. <i>Caseous.</i>	{ Different kinds of milk, cheese.
7. <i>Gelatinous.</i>	{ Tendon, aponeurosis, true skin, cellular texture; very young animals.
8. <i>Albuminous.</i>	{ Brain, nerve, eggs, &c.
9. <i>Fibrinous.</i>	{ Flesh and blood.

ALIMENTA'TION, *Alimenta'tio*; the act of nourishing.

ALINDE'SIS, from *αλινδομαι*, 'to be turned about.' A species of exercise, which consisted in rolling in the dust, after having been anointed with oil.—Hippocr.

ALIPÆ'NOS, *Alipæ'num*, *Alipan'tos*, from *α* priv. and *λιπαρην*, 'to be fat.' An epithet formerly given to every external remedy, devoid of fat or moisture; such as powders.—Galen.

ALIP'TA, *Alip'tes*, from *αλειφω*, 'I anoint.' He who anointed the *Athletæ* after bathing. The place where this was done was called *Alipterium*.

ALIP'TICA, same etymon. The part of ancient medicine, which treated of inunction, as a means of preserving health.

ALIS'MA PLANTAGO, *Water Plantain*, (F) *Plantain d'Eau*. *Nat. Ord.* Alismaceæ, *Sex. Syst.* Hexandria Polygynia. The fresh root is acrid, and the dried leaves will vesicate. The leaves have been proposed as substitutes for the *Uva Ursi*.

AL'KALE, *O'leum Galli'næ*; an ancient pharmaceutical name for pullets' fat.

ALKER'MES, *Confec'tio Alker'mes*, *Alcher'mes*. A celebrated electuary, composed of a multitude of substances. It was so called from the grains of kermes contained in it. It was used as a stimulant.

ALLAMAN'DA, *A. cathar'tica*, *Ore'lia grandiflora*, *Gal'arips*, *Echi'nus scandens*, *Apoc'ynum scan'dens*: a shrub, native of Guiana, the infusion of whose leaves is said by Linnæus to be useful in colica pictorum.

ALLANTOIC ACID, *Ac'idum allantoi-cum*, a peculiar acid, found in the liquor of the allantois of the cow.

ALLIA'CEOUS, *allia'ceus*, from *allium*, 'garlic.' Belonging to garlic, as *alliaceous* odour.

ALLANTOIS, *Allantoi'des*, *Membra'na urina'ria*, *M. Farcimina'lis*, *M. Intestinalis*, the *Allantoid Vesicle*, from *αλλας*, 'a sausage,' and *ειδος*, 'shape.' A sort of elongated bladder, between the chorion and amnion of the fœtus, and communicating with the bladder by the urachus. It is very apparent in quadrupeds, but not in the human species. The fluid of the allantoid has been considered inservient to the nutrition of the fœtus, but our ideas, in regard to the vesicle, in man, are far from being determinate.

ALLANTOTOX'ICUM, from *αλλας*, 'a sausage,' and *τοξικον*, 'a poison.' The Germans have given this name to a poison developed in sausages formed of blood and liver.

ALLIA'RIA, *Erysimum allia'ria*, *Jack-in-the-hedge*, *Stinking hedge mustard*, *Sauce-alone*, *Hesperis allia'ria*, (F) *Alliaire*. This plant has been sometimes given in humid asthma and dyspnœa. It is reputed to be diaphoretic, diuretic, and antiscorbutic.

The Parisian Codex has a compound syrup

of *alliaria*, *Sirop d'erysimum composé*, which is used in hoarseness.

AL'LIUM, from *oleo*, 'I smell.' *A. sativum*, *Theriaca rustico'rum*, *Ampelop'rasum*, *Scor'odon*, *Garlic*, (F) *Ail. Nat. Ord.* Asphodelææ, *Sex. Syst.* Hexandria Monogynia. A native of Sicily, but cultivated for use. The bulbs or cloves, *Ag'lithes*, have a strong, offensive, and penetrating odour; and a sweetish, biting, and caustic taste. Internally, garlic is stimulant, diuretic, expectorant, emmenagogue (?), diaphoretic, and anthelmintic. Externally, it is rubefacient, maturative, and repellent.

Dose, one to six cloves, swallowed whole, or from ʒss to ʒij of the juice.

TAYLOR'S *Remedy for Deafness*, a nostrum, appears to consist of garlic, infused in oil of almonds, and coloured by *alkanet root*.

AL'LIUM CEPA, *Common Onion*, *Cepul'la*, *Crom'myon*. (F) *Oignon*. Acrid and stimulating, and possessing very little nutriment. Onions have been used as stimulants, diuretics, and anthelmintics. The boiled or roasted onion, as a cataplasm, is emollient and maturating. The fresh root is rubefacient. The expressed juice is sometimes used in otalgia and in rheumatism.

AL'LIUM PORRUM, *Porrum*, *Prasum*, *πρασον*, the *Leek* or *Porret*, (F) *Poireau*, *Porreau*. Possesses the same properties as the onion.

The virtues of the genus *Allium* depend upon an acrid principle, soluble in water, alcohol, acids, and alkalies.

AL'LIUM VICTORIA'LE, *Victoria'lis longa*. The root, which, when dried, loses its alliaceous smell and taste, is said to be efficacious in allaying the abdominal spasms of pregnant women (?).

ALLOCHROMA'SIA, from *αλλος*, 'another,' and *χρωμα*, 'colour.' A change of colour.

ALLOPATH'IC, *Allopath'icus*, *Heteropath'ic*, from *αλλος*, 'another,' and *παθος*, 'affection.' Relating to the ordinary method of medical practice, in contradistinction to Homeopathic.

ALLOPATHY, *Allopathia*, from *αλλος*, 'another,' 'different,' and *παθος*, disease. The opposite to Homeopathy. The ordinary medical practice.

ALLOTRIODON'TIA, from *αλλοτριος*, 'foreign,' and *οδους*, 'a tooth.' Transplantation of teeth.

ALLOTRIU'RIA, from *αλλοτριος*, 'foreign,' and *ουρον*, 'urine.' Admixture of foreign matters with the urine.

ALMOND BLOOM. A liquid cosmetic: formed of *Brazil dust*, ʒi, *water* ℥iij; boil and strain; and add *isinglass* ʒvj, *grand sylvestria* ʒij, or *cochineal* ʒij, *alum* ʒj, *borax* ʒiij; boil again, and strain through a fine cloth.

ALOEDA'RIMUM, *αλονδαριον*; a compound medicine, containing aloes.—Gorræus.

ALOES, *Al'oë*, *Fel Natu'ræ*; the inspiss-

sated juice of the *aloe*. *Nat. Ord.* Asphodeleæ, *Sex. Syst.* Hexandria Monogynia.

The SOCOTRINE ALOES, *A. Succotori'na*, *Turkey aloes*, *East India aloes*, *Alões lu'cida*, *A. Zoclorinia*, *A. spica'ta*, *A. spica'tæ extractum*, *A. extractum*, *An'ima Alões*, is the best species. Its odour is not unpleasant, taste very bitter, and slightly aromatic; colour reddish-brown, with a shade of purple; mass hard, friable, fracture conchoidal and glossy; soluble in dilute alcohol. Powder of a bright cinnamon-yellow colour. It is cathartic, warm, and stimulating: emmenagogue, anthelmintic, and stomachic. As a cathartic it affects the rectum chiefly. *Dose*, as a cathartic, gr. v to ʒj in pill.

ALOES HEPATICA, *A. vulga'ris*, *A. Barbadosis*, *Hepatic aloes*, *Bombay aloes*, *Barbadoes aloes*, *A. vulgaris extractum*, (F) *Aloes en calébasses*, *A. des Barbadoes*. This species has a very disagreeable odour, and an intensely bitter and nauseous taste. Properties the same as the last.

ALOES CABALLINA, *A. Guinien'sis*, *Horse-aloes*; used chiefly for horses. It is collected in Spain and Portugal, and is very coarse.

ALOETIC, *Aloet'icus*. A preparation, which contains aloes.

ALOGOTROPHIA, from *αλογος*, 'disproportionate,' and *τροφή*, 'nutrition.' Irregular nutrition. Used particularly to designate the irregular manner in which the nutrition of bones is operated in rickety individuals.

ALOPE'CIA, from *αλοπηξ*, 'a fox;' (this animal being said to be subject to the affection.) *Capillo'rum deflu'vium*, *Athrix dep'ilis*, *Phalacro'tis*, *A'rea*, *Depila'tio*, *Tricho'sis* *Ath'rix*, *Gangræ'na Alope'cia*; falling off of the hair; loss of the hair. When this is confined to the crown of the head, it is called *calvities* (q. v.), although the terms are often used synonymously.

ALOUCH'I. The name of a gum procured from the canella alba tree.

ALPAM. A shrub which grows on the coast of Malabar. Certain parts of this, infused in oil, form an antipsoric ointment. The juice of the leaves, mixed with that of the *calamus*, is employed against the bites of serpents.

AL'PHITON, *αλφιτον*, *Polen'ta*, *Fari'na*. Any kind of meal. Toasted barley-meal.—Hippocrates. Polenta means also a food composed of Indian meal, cheese, &c.

ALPHON'SIN, *Alphonsi'num*; a kind of bullet forceps, similar to a *Porte-Crayon*, so called from the inventor, Alphonso Ferri, of Naples.—Sculletus.

ALSINE ME'DIA, *Morsus Galli'næ*, *Holosteum Alsine*, *Mouse-ear*, *Chickweed*, (F) *Mouron des Oiseaux*, *Morgeline*. This plant, if boiled tender, may be eaten like spinach, and forms an excellent emollient poultice. It was formerly regarded as a vulnerary and detergent.

ALTERATION, *Alterat'io*, from *alter*, 'other,' *Alloio'sis*. This word is used in France to express the change which supervenes in the expression of the countenance (*altération de la face*), or in the structure of an organ (*altération organique*), or in the nature of fluids excreted (*altération de l'urine, des larmes, du lait, &c.*).

Alteration is also used in an entirely different sense, to express intense thirst in disease. In this case its etymology is different. It comes from *haleter*, and was formerly written *haletération*.

AL'TERATIVE, *Al'terans*, *Alloiot'icus*, a medicine considered to be capable of producing a salutary change in a disease, but without exciting any sensible evacuation. As Medicine improves, this uncertain class of remedies becomes, of necessity, diminished in number.

(F) *Altérant*. (The French term likewise means, that which causes thirst. *Siticulo'sus*, *Dipsel'icus*, as *Altérer* means both to change and to cause thirst. *S'altérer*, is, to experience a change for the worse,—*corrum'pi*.)

ALTHÆ'A, from *αλθω*, 'to heal;' *A. officina'lis*, *Malvavis'cum*, *Aristalthæa*, *Hibiscus*, *Ibis'cha mismal'va*, *Bismal'va*, *Marsh-mallow*. (F) *Guimauve*. *Nat. Ord.* Malvaceæ. *Sex. Syst.* Monodelphia Polyandria. The leaves and root contain much mucilage. They are emollient and demulcent, and are employed wherever medicines, possessing such properties, are required.

ALU'DEL, *Alu'tel*, *Vitrum sublimato'rium*; a hollow sphere of stone, glass, or earthenware, with a short neck projecting at each end, by means of which one glass might be set upon the other. The uppermost had no aperture at the top. Aludels were formerly used in the sublimation of various substances.

ALU'MEN, (an Arabic term, *alum*) *Alum*, *Hypersul'phas Alu'minæ et Potas'sæ*, *Sul'phas Aluminæ Acid'ulus cum Potas'sâ*, *Sul'phas Alu'minæ*, *Sul'phas Kal'ico-alumin'icum*, *Supersul'phas alu'minæ et potas'sæ*, *Argil'la sulphu'rica alcalisa'ta*, *A. vitriola'ta*, *Stypte'ria*, *Supersul'phas Argil'læ alcalisa'tum*, *Argilla Kali-sulphurica*. (F) *Alun*.

COMMON ALUM, *English alum*, *Rock alum*, *Alu'men facti'tium*, *Alu'men commu'ne*, *A. crystalli'num*, *A. ru'peum*, (F) *Alun d'Angleterre*, is the variety usually employed. It is in octahedral crystals, but generally in large, white, semitransparent masses; has a sweetish, styptic taste; effloresces in the air, and is soluble in 16 parts of water at 60°. It is tonic and astringent, and as such is used internally and externally. *Dose*, gr. v. to xv.

ROMAN ALUM, *Alu'men Roma'num*, *A. Ru'tilum*, *A. Rubrum*. (F) *Alun de Rome*. In crystals, which are of a pale red when broken, and covered with a reddish efflorescence.

ROCHE ALUM, *Alu'men de Rochi*, (F) *Alun*

de Roche, so called from Roccha in Syria, where there was a manufactory. It is in pieces of the size of an almond, covered with a reddish efflorescence.

COMMON ROCHE ALUM, *A. Rochi Gallis*. Fragments of common alum, moistened and shaken with prepared bole. It is white when broken.

ALU'MEN EXSICCA'TUM, *Alu'men ustum*, *A. calcina'tum*, *Sulphas alu'minæ fusus*, *Argil'la sulphu'rica usta*, *Burnt alum*, *dried alum*. (F) *Alun calciné*, (*alum melted in an earthen vessel until the ebullition ceases*.) Escharotic.

ALVE'OLAR. *Alveola'ris*, from *al'veus*, 'a cavity.' (F) *Alvéolaire*. That which relates to the alveoli.

The ALVE'OLAR ARCHES. (F) *Arcades alvéolaires*, are formed by the margins of the two jaws, which are hollowed by the Alveoli (q. v.)

The ALVE'OLAR ARTERY, *Supra-max'illary* (*Artère sus-maxillaire*) of Chaussier, arises from the internal maxillary, descends behind the tuberosity of the upper jaw, and gives branches to the upper molar teeth, gums, periosteum, membrane of the maxillary sinus, and buccinator muscle.

The ALVE'OLAR VEIN has a similar distribution.

The ALVE'OLAR MEMBRANES, are very fine membranes situate between the teeth and alveoli, and formed by a portion of the sac or follicle which inclosed the tooth before it pierced the gum. By some this membrane has been called the *alveolo-dental periosteum*.

ALVE'OLUS, same etymon. *Botrion*, *Bothrion*, *Frena*, *Mortariolum*, *Hol'micos*, *Præsepiolum*, *Phat'nion*, *Præsepium*, *Patne*, *Pathne*. (F) *Alvéole*. The alveoli are the sockets of the teeth, into which they are, as it were, driven. Their size and shape are determined by the teeth which they receive, and they are pierced, at the apex, by small holes, which give passage to the dental vessels and nerves.

ALVINE. *Alvi'nus*, from *alvus*, 'the abdomen.' That which relates to the lower belly, as *alvine dejections*, *alvine flux*, &c.

ALYPON, from *a* privative, and *λυπη*, 'pain.' An acrid, purging plant, described by Matthioli. By some it has been supposed to be the *Globula'ria alypum* of botanists.

AL'ZILAT. In some of the Arabian writers, a weight of three grains.—Ruland and Johnson.

AMANI'TÆ, from *a* priv, and *μανια*, 'madness:' i. e. not poisonous. A name given, by the Greeks and Romans, to the edible *champignons*. *Amanita* forms, at the present day, a genus, some of which are edible, others poisonous. Amongst others, it contains the *Agaricus aurantiacus* and *A. pseudo-aurantiacus*.

AMARACI'NUM, an ancient and esteemed plaster, containing several aromatics, the marjoram, *αμαρακος*, in particular.

AMA'RUS, *Picros*, bitter. (F) *Amèr*. The bitter principle of vegetables is the great natural tonic, and hence *bitters*, as they are termed collectively, belong to the class of tonics. Several are used in medicine; the chief are, gentian, quassia, cinchona, calumba, dogwood, &c.

AMASE'SIS, *Amasse'sis*, from *a*, privative, and *μασσησις*, 'mastication.' Mastication when impeded or impracticable.

AMAURO'SIS, *Obfusca'tio*, *offusca'tio*, from *αμαυρος*, 'obscure.' *Drop serene*, *Gutta sere'na*, *Catarac'ta nigra*, *Parop'sis amauro'sis*, *Immobil'itas pupil'læ*, *Black cat'aract*. (F) *Goutte-sereine*, *Cataracte noire*. Diminution, or complete loss of sight, without any perceptible alteration in the organization of the eye; generally, perhaps, owing to loss of power of the optic nerve or retina. Counter-irritants are the most successful remedial agents, although the disease is always very difficult of removal, and generally totally incurable.

AMBE, from *αμβανω*, 'I ascend;' *Ambi*. A superficial eminence on a bone. Also, an old surgical machine for reducing dislocations of the shoulder; the invention of which is ascribed to Hippocrates. It is no longer used.—Hippocr., Scultetus.

AM'BERGRIS. *Ambra gri'sea*, *Ambor*, *Ambra cinera'cea*, *A. ambrosiaca*, *Am'barum*, *Suc'cinum cine'reum*, *S. gri'seum*, *Am'barum cineri'tium*. A concrete substance, of the consistence of wax, cineritious colour, studded with yellow and blackish spots, and exhaling a very pleasant odour. It seems highly probable that ambergris is formed in the intestines of the whale, and voided with its excrements. Like all aromatic substances, ambergris is slightly antispasmodic and excitant; but it is oftener employed as a perfume than as a medicine.

AMBIA. A liquid, yellow bitumen, the smell and virtues of which are similar to those of the resin *tacamahaca*. It is obtained from a spring in India.

AMBIDEX'TER, *Amphidex'ios*, from *ambo*, 'both,' and *dexter*, 'right.' One who uses both his hands with equal facility. Celsus says the surgeon ought to be '*non minus sinistra quam dextra promptus*.' One of the aphorisms of Hippocrates says, that a woman is never ambidexter. This is a mistake.

AMBLUS, *αμβλυσ*, 'obscure.' Hence.

AMBLYO'PIA, from *αμβλυσ*, 'obscure,' and *οφθαλμος*, 'the eye.' *Amblyos'mos*, *Amblyog'mos*, *Amplio'pea* (so called by some, according to Castelli, *ob ignorantiam Græcæ linguæ*.) *Hebetu'do visûs*. Feebleness of sight. (F) *Vue faible*. First degree of amaurosis.—Hippocr.

AMBON, *αμβων*, 'the raised rim of a shield or dish,' from *αμβανω*, 'I ascend.' The fibro-cartilaginous rings or *bourrelets*, which surround the articular cavities, as the glenoid cavity of the scapula, the acetabulum, &c., have been so called.—Galen.

AMBROSIA, from α privative, and $\beta\rho\sigma\tau\omicron\varsigma$, 'mortal.' Food which makes immortal, or the food of immortals. The food of the gods.—Homer.

AMBROSIA MARITIMA. A plant which grows on the shores of the Levant, and has a pleasant, bitter, and aromatic taste. It is given, in infusion, as a tonic and antispasmodic.

AMBULANCE, (F) from *ambula're*, 'to walk. A military hospital attached to an army, and moving along with it. Also called *Hôpital ambulant*.

AMBULANT, (F) *Am'bulans*, *Ambulati'vus*, *Am'bulative*. A morbid affection is said to be *ambulante*, when it leaves one part and goes to another; as *Erysipêles ambulants*, &c. When blisters are applied successively on different parts of the body, they are called *Vésicatoires ambulants*.

AM'BULI. The Brachmanic name for an Indian aquatic herb, which appears to belong to the family *Lysimachia*. The whole plant has a sweet smell. Its decoction has a very bitter taste, and is an excellent febrifuge. It is also taken in milk in cases of vertigo.

AM'BULO FLATULEN'TUS ET FURIOSUS. *Flatus furio'sus*, *Vare'ni*. Painful, mobile, and periodical tumours affecting different parts, which were once considered as the effect of very subtile vapours.—Michaelis. Their nature is by no means clear.

AMBUYA-EMBO. A very beautiful, creeping Aristolochia of Brazil, the decoction of which is exhibited successfully in obstructions. It is also used in fumigation and in baths as a tonic.

AM'ELI. A Malabar shrub, belonging to a genus unknown. The decoction of its leaves is said to relieve colic. Its roots, boiled in oil, are used to repel tumours.

AMENORRHŒA. *Paramé'nia obstructio'nis*, *Menocryph'ia*, *Menosta'sia*, *Apophrax'is*, *Arrhæ'a*, *Defec'tus men'sium*, *Menstrua'tio impedi'ta*, *Ischomé'nia*, *Amé'nia*, from α privative, $\mu\eta\nu$, 'a month,' and $\rho\alpha\iota$, 'I flow.' *Suppression of the menses*. This suppression is most commonly symptomatic, and hence the chief attention must be paid to the cause. Usually, there is an atonic state of the system generally, or of the uterus in particular, and hence chalybeates and other tonics are advisable.

Two great varieties of Amenorrhœa are commonly reckoned. 1. *A. Emansio'nis*, *Eman'sio men'sium*, *Menos'chesis*, or *retention of the menses*, when the menses do not appear at the usual age: and, 2. *Suppres'sio Men'sium*, *Amenorrhæ'a Suppressio'nis*, *Interrup'tio menstrua'tio'nis*, in which the catamenia are obstructed in their regular periods of recurrence. See *Emansio Mensium*, and *Menses*.

AM'ETHYST, *Amethys'tus*, from α priv. $\mu\epsilon\theta\upsilon\alpha$, 'I am drunk.' A precious stone, to which the ancients attributed the property of

preventing drunkenness. It was also used as an anti-diarrhœic and absorbent.—Pliny, Albertus Magnus.

AMINÆUM VINUM, *Aminean wine*, highly esteemed as a stomachic. Virgil distinguishes it from the Falernian.—Pliny, Macrobius, &c.

AMMI, *Ammi majus*, *Bishop's weed*, *A. Vulga'rē*. The seeds of this plant are aromatic and pungent. They are said to be carminative and diuretic, and are tonic and stomachic.

AMMOCHO'SIA, from $\alpha\mu\mu\omicron\varsigma$, 'sand,' and $\chi\iota\omega$, 'I pour.' *Arena'tio*. Putting the human body in hot sand, for the cure of disease.

AMMONIA, *Ammo'nia* or *Ammoni'acal gas*. *Volatile al'kali*, *Al'cali ammoni'acum caus'ticum*, *A. volat'ile caus'ticum*, *Ammo'nia caus'tica*, *A. pura*, *Ammoni'acum*, *A. caus'ticum*, (F) *Ammoniaque*, *Air alcalin*, *Gaz ammoniacal*. An alkali so called, because obtained principally by decomposing sal ammoniac (*muriate of ammonia*) by lime. This gas is colourless, transparent, elastic, of a pungent, characteristic odour, and an acrid urinous taste. It turns the syrup of violets green, and its specific gravity is 0.596. When inhaled, largely diluted with common air, it is a powerful irritant. When unmixed, it instantly induces suffocation.

AMMONIAC, GUM, *Gum'mi Ammoni'acum*, (F) *Ammoniac*, *Gomme ammoniaque*, so called from Ammonia in Libya, whence it is brought. A gum-resin, obtained from the *Heracle'um* or *Bubon gummiferum* of Barbary, Abyssinia, &c. It is in irregular, dry masses and tears, yellow externally, whitish within. Its odour is peculiar, and not ungrateful: taste nauseous, sweet, and bitter. It forms a white emulsion with water: is soluble in vinegar, partially so in alcohol, ether, and solutions of the alkalies.

Gum Ammoniacum is expectorant, deobstruent(?) antispasmodic, discutient, and resolvent. It is chiefly, however, used in the first capacity, and in the formation of certain plasters.

Two varieties are met with in the market, the *Guttæ ammoni'aci*, the best; and the *Lapis ammoni'aci*, the more impure.

AMMONIÆ CARBONAS. *A. Subcar'bonas*, *Salt of bones*, *Sal Os'sium*, *Salt of wood-soot*, *Sal Fulig'inis*, *Salt of urine*, *Volatile Sal Ammoniac*, *Baker's salt*, *Al'cali volat'ile aëra'tum*, *A. volat'ile ammoniacale*, *A. volat'ile ex sale ammoni'aco*, *Ammoni'acum volat'ile mite*, *Ammo'nium carbon'icum*, *A. subcarbo'neum*, *Car'bonas ammo'niæ alkali'nus seu incomple'tus seu super-ammoni'acus*, *Hypocar'bonas ammo'niæ*, *Flores salis ammoni'aci*, *Sal cornu cervi volat'ile*, *Sal volat'ilis salis ammoni'aci*, *Concrete volatile alkali*, *Carbonate or subcarbonate of ammonia*, *Ammo'nia præpara'ta*, *Sal volat'ile*, *Smelling salt*. (F) *Carbonate d'ammoniaque*, *Sel vola-*

til d'Angleterre. A white, striated, crystalline mass: odour and taste pungent and ammoniacal: soluble in two parts of water: insoluble in alcohol: effloresces in the air. It is stimulant, antacid, diaphoretic, and antispasmodic. Dose, gr. v to xv.

AMMO'NIÆ MU'RIAS, *Muriate of Ammonia, Hydroch'lorate of Ammo'nia, Sal Ammoni'acum, Sal Ammo'niac, S. Ammoni'acus, Ammo'nia Muriat'ica, Ammo'nium Muria'tum, Hydroch'loras Ammo'niæ, Sal Armoni'acum, Salmiac, Fuligo Al'ba Philosopho'rum, (F) Muriate d'Ammoniaque.* A saline concrete, formed by the combination of the muriatic acid with ammonia. In Egypt it is manufactured in large quantities by subliming the soot formed by burning camels' dung—26 pounds of the soot yielding 6 pounds. It is also prepared, in great quantities, by adding sulphuric acid to the volatile alkali obtained from soot, bones, &c., mixing this with common salt, and subliming.

Muriate of ammonia is inodorous, but has an acrid, pungent, bitterish, and urinous taste. Three parts of cold water dissolve one. Soluble also in 4.5 parts of alcohol. It is aperient and diuretic, but seldom used internally. Externally, it is employed, producing cold during its solution, in inflammations, &c.

AMMO'NIÆ NITRAS, *Nitrate of Ammonia, Al'kali volat'ile nitra'tum, Sal. ammoni'acus nitro'sus, Ammo'nia nitra'ta, Nitras ammoni'acæ, Nitrum flammans. (F) Nitrate d'Ammoniaque.* A salt composed of nitric acid and ammonia. It is diuretic and deobstruent.(?) Externally discutient and sialagogue.

AMMO'NIÆ SULPHAS, *Sulphate of Ammonia, Sulphas ammoni'acæ, Ammo'nium sulphu'ricum, Al'kali volat'ile vitriola'tum, Sal Ammoni'acum secretum GLAUBERI, Sal secretus GLAUBERI, Vitriolum ammoniacale, (F) Sulfate d'Ammoniaque.* Formed by adding sulphuric acid either to sal ammoniac or to ammoniacal liquor. Its properties are like those of the muriate of ammonia.

AMMO'NIÆ SULPHURE'TUM, *Sulphuret of Ammonia, Hydrosulphuret of Ammonia, Hydrosulphas Ammo'niæ, Spir'itus BEGUI'NIS, Sp. fumans BEGUI'NI, Sulphure'tum ammoni'acæ, Sp. salis ammoni'aci sulphura'tus, Liquor ammo'nii hydrothiodis, Hydrosulphure'tum Ammon'icum, Hyd. ammoniacale aquo'sum, Hydrog'eno-sulphure'tum ammoni'acæ li'quidum, Spir'itus sulphuris volat'ilis, Hepar sulphuris volat'ile, BOYLE'S or BEGUINE'S fuming spirit. (F) Hydrosulfate sulfuré d'Ammoniaque, Liqueur fumante de BOYLE. Sulfure hydrogené d'Ammoniaque. Hydrosulfure d'Ammoniaque.* Odour very foetid; taste nauseous and styptic; colour dark yellowish green. It is reputed to be sedative, nauseating, emetic, disoxygenizing,(?) and has been given in diabetes and diseases of increased excitement. Dose, gtt. viij to gtt. xx.

AMMO'NIÆ TARTRAS, *Al'kali volat'ile tar-*

tariza'tum, Sal ammoni'acum tarta'reum, Tar'tarus ammo'niæ, Tartrate of Ammo'nia, (F) Tartrate d'Ammoniaque. A salt composed of tartaric acid and ammonia. It is diaphoretic and diuretic; but not much used.

AMMO'NION, from *αμμος*, 'sand.' An ancient collyrium of great virtues in many diseases of the eye, and which was said to remove sand from that organ.

AMNE'SIA, *Amnes'tia*, from *α* priv. and *μνησις*, 'memory.' *Moria imbec'ilis amne'sia, obliv'io, Memo'riæ debil'itas, Recollectio'nis jactu'ra, Dysæsthe'sia inter'na, Debil'itas memo'riæ, memo'ria dele'ta, (F) Perte de Memoire, 'loss of memory.'* By some Nosologists, Amnesia constitutes a genus of diseases. By most it is considered only as a symptom, which may occur in many diseases.

AMNIOCLEP'SIS, from *Amnion*, and *κλεπτα*, 'I steal or take away clandestinely.' Premature escape of the liquor amnii.

AM'NIOS, *Am'nion, Am'nium, Charta virgin'ea, Armatu'ra, Agni'na membra'na, Pellu'cida membra'na, Galea, Indu'sium, Amic'ulum, Membra'na fœtum invol'vens.* The innermost of the enveloping membranes of the fœtus. So called because first observed in the sheep.(?) *αμνος*, 'a sheep.' It is thin, transparent, perspirable, and possesses many delicate, colourless vessels, which have not been injected. It sends a prolongation, which serves as a sheath to the umbilical cord. Its external surface is feebly united to the chorion by cellular and vascular filaments. Its inner surface is polished, and is in contact with the body of the fœtus and the liquor amnii, (q. v.)

AMNIOT'IC ACID, *Ac'idum Am'nicum vel amniot'icum.* A peculiar acid, found, by Vauquelin and Buniva, in the liquor amnii of the cow.

AMNI'TIS or AMNII'TIS, from *Amnion* and *itis*, Inflammation. Inflammation of the Amnion.

AMO'MUM CARDAMO'MUM, *A. racemo'sum, A. verum, Alpin'ia cardamo'mum, Caró'pi, Mato'nia Cardamo'mum, Eletta'ria Cardamo'mum, Cardamo'mum Minus, Lesser or officinal Car'damom, Amo'mum repens. (F) Cardamome de la Côte de Malabar, Cardamome.* The seeds of this East India plant have an agreeable, aromatic odour; and a pungent, grateful taste. They are carminative and stomachic: but are chiefly used to give warmth to other remedies. The fruit is called *Amomis*. Dose, gr. v to ʒj.

AMOMUM GRANUM PARADÍ'SI, *Cardamo'mum majus, Meleguet'ta, Maniguet'ta, Cardamo'mum piperat'um, A. maximum, (F) Graines de Paradis.* Greater cardamom seeds resemble the last in properties. They are extremely hot, and are not much used.

AMOMUM ZIN'GIBER, *Zin'giber officina'le, Zin'giber album, Z. nigrum, Z. commune, Zin'ziber, Ginger, (F) Gingembre.* The white and black ginger, *Zin'ziber fuscum* and *album*, are the produce of the same plant, the

difference depending upon the mode of preparing them.

The odour of ginger is aromatic; taste warm, aromatic, and acrid. It yields its virtues to alcohol, and in a great degree to water. It is carminative, stimulant, and sialogogue.

The PRESERVED GINGER, *Zingib'eri Radix Condi'ta*, *Radix Zingib'eri condi'ta ex Indiâ alla'ta*, is a condiment, which possesses all the virtues of ginger.

GINGER-BEER POWDERS may be formed of white sugar, 3j and ʒij, zingib. gr. v, sodæ subcarb. gr. xxxvj in each blue paper: acid of tartar, ʒiiss in each white paper,—for half a pint of water.

OXLEY'S Concentrated Essence of Jamaica Ginger is a mere solution of ginger in rectified spirit.

AMPAC, *Ampacus*; an East India tree, the leaves of which have a strong odour, and are used in baths as detergents. A very odoriferous resin is obtained from it.

AMPHARISTEROS, *Ambilæ'vus*, awkward, from ἀμφι, and ἀριστερος, 'the left;' opposed to ambidexter.

AMPHI, ἀμφι, 'both, around, on all sides.' Hence.

AMPHIARTHRO'SIS, from ἀμφι, 'both,' and ἀρθρῶσις, 'articulation.' A mixed articulation, in which the corresponding surfaces of bones are united in an intimate manner by an intermediate body, which allows, however, of some slight motion. Such is the junction of the bodies of the vertebræ by means of the intervertebral cartilages. This articulation has also been called *Diarthrose de Continuité*. The motion it permits is but slight.

AMPHIBRAN'CHIA, from ἀμφι, 'around,' and βραγχία, 'the throat.' *Amphibron'chia*. The tonsils and neighbouring parts.—Hippoc.

AMPHIDIARTHRO'SIS, from ἀμφι, 'about,' and διαρθρῶσις, 'a movable joint.' A name given by Winslow to the temporomaxillary articulation, because, according to that anatomist, it partakes both of the ginglymus and arthrodia.

AMPHISPHAL'SIS, *Circumac'tio*, *Circumduc'tio*, from ἀμφι, 'around,' and σφαλλω, 'I wander.' The movement of circumduction used in reducing luxations.—Hippoc.

AM'PHORA, per syncop. for ἀμφιφορεῖς, from ἀμφι, 'on both sides,' and φερω, 'I bear;' because it had two handles. A liquid measure among the ancients, containing above 7 gallons. Also called *Quadrantal*, *Cera'mium*, *Ceram'nium*, *Cadus*.

AMPUTA'TION, *Amputa'tio*, from *amputa're*, 'to cut off.' *Apot'omē*, *Apotom'ia*. The operation of separating, by means of a cutting instrument, a limb or a part of a limb, or a projecting part, as the mamma, penis, &c., from the rest of the body. In the case of a tumour, the term *excision*, *removal*, or *extirpation*, (F) *Resection*, is more commonly used.

CIRCULAR AMPUTATION is that in which the integuments and muscles are divided circularly.

The FLAP AMPUTATION, (F) *A. à lambeaux*, is when one or two flaps are left so as to cover the stump, when the limb has been removed.

JOINT AMPUTATION, (F) *A. dans l'article ou dans la contiguité des membres*, is when the limb is removed at an articulation.

Each amputation requires a different process, which is described in works on operative surgery.

AMULE'TUM, from *Amoli'ri*, 'to remove.' An Amulet. *Periam'ma*, *Apotropæ'um*, *Periap'ton*, *Phylacte'rion*, *Apoteles'ma*, *Exarte'ma*, *Alexica'cum*, (F) *Amulette*. Any image or substance worn about the person for the purpose of preventing disease or danger.

AMURCA, ἀμουργη. The marc or grounds remaining after olives have been crushed and deprived of their oil. It has been used as an application to ulcers.

AMYC'TICA, from ἀμυσσω, 'I lacerate.' Medicines, which stimulate and vellicate the skin.—Cælius Aurelianus.

AMYG'DALA, same etymon; because there seem to be fissures on the shell. The almond, of which there are two kinds; the *Amyg'dalæ ama'ræ* and *A. dulces*, (F) *Amandes douces*, *A. amères*, obtained from two varieties of the *Amyg'dalus commu'nis*; or *A. sati'va*, a native of Barbary. *Nat. Ord.* Amygdalæ. *Sex Syst.* Icosandria Monogynia.

The taste of the *Amyg'dala dulcis* is soft and sweet; that of the *A. amara*, bitter. Both yield, by expression, a sweet, bland oil. The bitter almond contains Prussic acid. They are chiefly used for forming emulsions.

ALMOND CAKE, *Amyg'dalæ Placenta*, is the cake left after the expression of the oil. The ground Almond Cake, Almond Powder, *Fari'na Amygdala'rum*, is used instead of soap for washing the hands.

ALMOND PASTE, a cosmetic for softening the skin and preventing chaps, is made of bitter almonds, blanched, ʒiv, white of one egg, rose water, and rectified spirit, equal parts, and as much as is sufficient.

AMYG'DALUS PER'SICA. The common peach-tree, (F) *Pêcher*. The leaves and flowers have been considered laxative. They are bitter and aromatic, and have been given in hæmaturia, nephritis, &c. The fruit is one of the pleasant and wholesome summer fruits, when ripe. The kernels, *Amyg'dalæ Per'sicæ*, contain prussic acid, as well as the flowers.

PEACH BRANDY is distilled from the fruit, and is much used in the United States.

AM'YLUM, *Am'idum*, *Fec'ula*, *Amyl'eon*, *Amyl'ion*, from α priv. and μύλη, 'a mill,' because made without a mill. *Starch*. (F) *Amidon*, *Amydon*. The Starch of Wheat, *Fari'na*,

Trit'ici fari'na, *Fec'ula amyla'cea*, is inodorous and insipid, white and friable. It is insoluble in cold water and alcohol; but forms with boiling water a strong, semi-transparent jelly. It is demulcent; and is used as an emollient glyster, and as the vehicle for opium, when given *per anum*. Starch is met with abundantly in all the cereal grains, in the stalks of many of the palms, in some lichens, and in many tuberous roots, particularly in the bulbs of the orchis.

A'MYON, from *a* priv. and *μῦον*, 'a muscle.' *Emuscula'tus*, without muscle. Applied to the limbs, when so extenuated that the muscles cannot be distinguished.

AM'YRIS ELEMIF'ERA, (F) *Balsamier Elémifère*. Nat. Ord. Terebinthaceæ, Sex. Syst. Octandria Monogynia. The plant whence, it is supposed, the GUM EL'EMI is obtained. This gum or resin is brought from the Spanish West Indies. It is softish, transparent, of a pale whitish colour, inclining a little to green, and of a strong, though not unpleasant smell. It is only used in ointments and plasters, and is a digestive.

AM'YRIS OPOBAL'SAMUM, (F) *Balsamier de la Mecque*, *Bal'sem*, *Bal'samum*. The plant from which is obtained the BALSAM OF MECCA, *Bal'samum genuinum antiquorum*, *Balsamelæon*, *Ægyptiacum Bal'samum*, *Bal'samum Asiaticum*, *B. Judaicum*, *B. Syriacum*, *B. e Meccâ*, *Cocobal'samum*, *B. Alpi'ni*, *Oleum Bal'sami*, *Opobal'samum*, *Xylobal'samum*, *Balsam or Balm of Gilead*. (F) *Baume blanc*, *B. de Constantinople blanc*, *B. de Galaad*, *B. du Grand Caire*, *B. Vrai*, *Térébinthine de Giléad*, *T. d'Egypte*, *T. du Grand Kaire*, *T. de Judée*. A resinous juice obtained by making incisions into the *Amyris Gileadensis* of Linnæus. The juice of the fruit is called *Carpobal'samum*; that of the wood and branches *Xylobal'samum*. It has the general properties of the milder Terebinthines.

ANA, *ανα*, a word which signifies 'of each.' It is used in prescriptions as well as *a* and *aa*, its abbreviations. As a prefix to words, it means 'in,' 'through,' 'upwards,' 'above,' in opposition to *Cata*, (q. v.); also 'repetition,' like the English *re*. Hence,—

ANAB'ASIS, from *αναβαινω*, 'I ascend.' The first period of a disease, or that of increase.—Galen.

ANABLEP'SIS, from *ανα*, 'again,' and *βλεπω*, 'I see.' Restoration to sight.

ANABOLÆ'ON, *Anaboleus*, from *αναβαλλω*, 'I cast up.' An ointment for extracting darts or other extraneous bodies.

ANAB'OLE, from *ανα*, 'upwards,' and *βαλλω*, 'I cast.' *Anagoge*, *Anaph'ora*. An evacuation upwards. An act by which certain matters are rejected by the mouth. In common acceptation it includes, *Expuition*, *expectoration*, *regurgitation*, and *vomiting*.

ANABROCHIS'MUS, *Anabronchismus*, from *ανα*, 'with,' and *βροχος*, 'a running

knot.' An operation for removing the eyelashes, when they irritate the eye, by means of a hair knotted around them.—Hippocr., Galen, Celsus, &c.

ANACAR'DIUM OCCIDENTA'LE, *Cassu'vium pomif'erum*, (F) *Ac'ajou*, *Cashew* (W. Indies). Nat. Ord. Terebinthaceæ, Sex. Syst. Enneandria Monogynia. The Oil of the *Cashew Nut*, *O'leum Anacar'dii*, (F) *Huile d'Acajou*, is an active caustic, and used as such in the countries where it grows, especially for destroying warts, &c.

ANACATHAR'SIS, from *ανα*, 'upwards,' and *καθαριζειν*, 'to purge.' Purgation upwards. Expectoration.

ANACLINTE'RIUM, *Recubito'rium*, from *ανακλινω*, 'I recline.' A long chair or seat, so formed, that the person can rest in a reclining posture.

ANACOLLE'MA, from *ανα*, 'together,' and *κολλω*, 'I glue.' A healing medicine.

ANACOLUP'PA, a creeping plant of Malabar, the juice of which, mixed with powdered pepper, passes in India as a cure for epilepsy, and as the only remedy for the bite of the naja. It is supposed to be the *Zapania Nodiflora*.

ANADIPLO'SIS, from *ανα*, 'again,' and *διπλω*, 'I double.' *Epanadiplo'sis*, *Epanalep'sis*, *Reduplica'tio*. The redoubling which occurs in a paroxysm of an intermittent, when its type is double.—Galen, Alexander of Tralles.

ANAD'OSIS, from *αναδιδωμι*, 'I distribute.' Purgation upwards, as by vomiting. *Anadosis* seems also to have meant, occasionally, chylification, whilst *diadosis* meant capillary nutrition.—Hippocr., Galen.

ANAD'ROME, from *ανα*, 'upwards,' and *δρεμω*, 'I run.' The transport of a humour or pain from a lower to an upper part.—Hippocr.

ANÆMATOPOE'SIS, from *a*, *αν*, privative, *αιμα*, 'blood,' and *ποιω*, 'I make.' Impeded or obstructed hæmatosis.

ANÆ'MIA, *Anæmiasis*, *Anhæ'mia*, *Anæmo'sis*, *Oligæ'mia*, *Anæ'mia*, *αναιμια*, from *a* priv. and *αιμα*, 'blood.' Privation of blood. The opposite to plethora (q. v.) It is characterized by every sign of debility. Also, diminished quantity of fluids in the capillary vessels:—the opposite to *Hyperæmia*.—Andral.

ANÆSTHE'SIA, *Insensibil'itas*, *Anaph'ia*, *Anhaph'ia*, *Analge'sia*, from *a* priv. and *αισθανομαι*, 'I feel.' Privation of sensation, and especially of that of touch, according to some. It may be general or partial, and is almost always symptomatic.

ANAGAL'LIS, from *ανα* and *γαλα*, 'milk,' from its power of coagulating milk. *A. Phœnic'ea*, *Red Pimpernel*. Nat. Ord. Primulaceæ, Sex. Syst. Pentandria Monogynia. (F) *Mouron rouge*. A common European plant; a reputed antispasmodic and stomachic.

ANAG'YRIS, *Ac'opon*, *Anag'yris fœt'ida*,

Stinking Bean Trefoil. Native of Italy. The leaves are powerfully purgative. The juice is said to be diuretic, and the seeds emetic.—Dioscorides, Paulus.

ANAL, *Ana'lis*. That which refers to the anus;—as *Anal region*, &c.

ANALEP'SIA, *Analep'sis*, *Analen'tia*, *Analem'sia*, from *ανα*, 'afresh,' and *λαμβάνειν*, 'to take.' Restoration to strength after disease.—Galen. A kind of sympathetic epilepsy, originating from gastric disorder.

Also, the support given to a fractured extremity. *Appensio*.—Hippocr.

ANALEP'TICA, same etymon; *Analep'tics*. Restorative medicines or food; such as are adapted to recruit the strength during convalescence:—as sago, salep, tapioca, jelly, &c.

JAMES'S ANALEPTIC PILLS consist of *James's Powder*, *Gum Ammoniacum*, and *Pill of Aloës and Myrrh*, equal parts, with *Tincture of Castor* sufficient to form a mass.

ANALGE'SIA, from *α* priv. and *αλγος*, 'pain.' Absence of pain both in health and disease.

ANAMNES'TIC, from *ανα*, 'again,' and *μνησμαι*, 'I remember.' A medicine for improving the memory. See, also, *Commemorative*.

ANANAZIP'TA, a word formerly scrawled on amulets to charm away disease.

ANAPETIA, *Expan'sio mea'tuum*, from *ανα*, and *πτεταω*, 'I dilate.' A state opposite to the closure of vessels.—Galen.

ANAPHALANTI'ASIS, from *αναφαλαντιας*, 'bald.' Loss of the hair of the eyebrows. Also, baldness in general.

ANAPHONE'SIS, from *ανα*, 'high,' and *φωνη*, 'the voice.' Exercise of the voice: vociferation:—the act of crying out. *Vociferatio*, *Clamor*.

ANAPHRODIS'IA, from *α* priv. and *Αφροδιτη*, 'Venus.' Absence of the venereal appetite. Sometimes used for *Impotence* and *Sterility*.

ANAP'LASIS, from *αναπλασσω*, 'I restore.' *Confirmatio*. Union or consolidation of a fractured bone.—Hippocr.

ANAPLERO'SIS, from *αναπληρωω*, 'I fill up.' Repletion. That part of Surgical Therapeutics whose object is to supply parts that are wanting. Also, *Apposition* or *Pros'thesis*, *προσθεσις*.

ANAPLEU'SIS, *Fluctua'tio*, *Innata'tio*, from *αναπλεειν*, 'to swim above.' The looseness or shaking of an exfoliated bone; or of a carious or other tooth, &c.—Hippocr., Paulus.

ANAP'OSIS, *Ampo'sis*, from *ανα*, 'again,' and *ποσις*, 'drink.' A recession of humours from the circumference to the centre of the body.—Hippocr.

ANARRHEGNU'MINA, from *αναρρηγνυμαι*, 'I break out again.' Fractures are so called when they become disunited; as well as ulcers when they break out afresh.

ANARRHI'NON, from *ανα*, 'upwards,' and *ρινη*, 'the nose.' That which returns by the nose.—Gorræus.

According to others, that which issues by the skin, from *ανα*, and *ρινος*, 'the skin.'

ANARRHŒ'A, *Anarrho'pia*, *Anas'tasis*, from *ανα*, 'upwards,' and *ρῖω*, 'I flow.' Afflux of fluid towards the upper parts of the body.

ANAR'THROS *αναρθρος*, from *α* priv. and *αρθρον*, 'a joint.' One who is so fat, that his joints are scarcely perceptible.—Hippocrates.

ANASAR'CA, from *ανα*, 'through,' and *σαρξ*, 'the flesh.' *Anasarch'a*, *Aqua intercutem*, *Hyposar'ca*, *Hydrops cellula'ris totius corporis*, *General dropsy*, *Katasar'ca*, *Epi-sarcid'ium*, *Hy'deros*, *Hydrosar'ca*, *Sarci'tes*, *Polylym'phia*, *Hyposarcid'ios*, *Leucophlegma'tia*, *Dropsy of the cellular membrane*. (F) *Anasarque*. Commonly, it begins to manifest itself by swelling around the ancles: and is characterized by tumefaction of the limbs and of the soft parts covering the abdomen, thorax, and even the face, with paleness and dryness of the skin, and pitting when any of these (especially the ancles) are pressed upon. Like dropsy in general, *Anasarca* may be *active* or *passive*; and its treatment must be regulated by the rules that are applicable to general dropsy. See *Hydrops*.

ANASPADLŒ'US, *Anaspadias*, from *ανα*, 'upwards,' and *σπασω*, 'I draw.' One whose urethra opens on the upper surface of the penis.

ANAS'PASIS, from *ανασπασω*, 'I contract.' Contraction, *Retractio*, especially of the stomach.—Hippocrates.

ANASTECHŒIO'SIS, from *ανα*, 'again,' and *στοιχειον*, 'element.' *Re-elementa'tio*. Resolution of a body or its parts into their elements.—Galen.

ANASTOMO'SIS, from *ανα*, 'with,' and *στομα*, 'a mouth.' *Inoscula'tio*, *Exanastomo'sis*, *Concur'sus*. (F) *Abouchement*. Communication between two vessels. By considering the nerves to be channels, in which a nervous fluid circulates, their communication has likewise been called *Anastomosis*. By means of anastomoses, if the course of a fluid be arrested in one vessel, it can proceed along others.

ANASTOMOT'ICS, *Anastomot'ica*. Certain medicines were so called, which were formerly believed to be capable of opening the mouths of vessels:—as aperients, diuretics, &c.

ANASTOMOT'ICUS MAGNUS, RAMUS, (F) *Artère collaterale interne*, *A. collatérale du coude*, is a branch of the brachial artery, which comes off a little above the elbow, and bestows branches to the brachialis internus, to the under edge of the triceps, and to the muscles, ligaments, &c. about the elbow-joint.

ANATHYMIASIS, from *ανα*, 'upwards,' and *θυμα*, 'fumigation.' *Œdéma fugax*,

œde'ma spas'ticum, œde'ma hyster'icum, Anasar'ca hyster'icum. An uncertain and transient swelling, said to have been at times observed in nervous and hysterical persons.

ANATOMIST, *Anatom'icus.* One who occupies himself with anatomy. One versed in Anatomy.

ANATOMY, *Anat'omê, Anato'mia*, from *ανα*, and *τεμνειν*, 'to cut.' (F) *Anatomie.*

The word *Anatomy* properly signifies *dissection*: but it has been appropriated to the study and knowledge of the number, shape, situation, structure, and connexion, in a word, of all the apparent properties of organized bodies. Anatomy is the science of organization. Some have given the term a still more extended acceptation, applying it to every mechanical decomposition, even of extra-organic bodies. Thus, *Crystallography* has been termed the *Anatomy* of crystallized minerals. Anatomy has also been called *Morphol'ogy, Somatol'ogy, Somatot'omy, Organol'ogy, &c.* It assumes different names according as the study is confined to one organized being, or to a species or class of beings. Thus *Androt'omy*, or *Anthropot'omy*, or *Anthropog'raphy*, or *Anthroposomatol'ogy*, is the *Anatomy of man*:—*Zoôt'omy*, that of the other species of the animal kingdom: and *Vet'erinary Anat'omy*, is the Anatomy of domestic animals: but when the word is used abstractedly, it means *human Anatomy*, and particularly the study of the organs in a physiological or healthy state. The Anatomy of the diseased human body is called *Patholog'ical* or *Morbid Anatomy*, and, when applied to Medical Jurisprudence, *Forensic Anatomy*. Several of the organs possessing a similarity of structure, and being formed of the same tissues, they have been grouped into *Systems* or *Genera of Organs*; and the study of, or acquaintance with, such systems, has been called *Gen'eral Anat'omy, Histol'ogy, or Morphol'omy*, whilst the study of each organ, in particular, has been termed *Descriptive Anat'omy*. Descriptive Anatomy has been divided into *Skeletol'ogy*, which comprises *Osteol'ogy* and *Syndesmolog'ogy*; and into *Sarcolog'ogy*, which is subdivided into *Myol'ogy, Neurol'ogy, Angiol'ogy, Adenol'ogy, Splanchnol'ogy, and Dermol'ogy. Sur'gical Anat'omy, Medico-Chirurgical Anatomy, (F.) Anatomie chirurgicale, A. des Régions, Topograph'ical Anat'omy, Regional (!) Anatomy*, is the particular study of the bones, muscles, nerves, vessels, &c., with which it is indispensable to be acquainted before performing operations. *Compar'ative Anat'omy* is the comparative study of each organ, with a view to an acquaintance with the modifications of its structure in different animals or in the different classes of animals. *Transcendental* or *Philosophical Anatomy* inquires into the mode, plan, or model upon which the animal frame or organs are formed; and *Artific'ial Anat'omy* is the art of modelling and representing,

in wax or other substance, the different organs or different parts of the human body, in the sound or diseased state.

ANATRIPSOL'OGY, *Anatripsolog'ia*, from *ανατριψις*, 'friction,' and *λογος*, 'a discourse.' A treatise on friction as a remedy.

ANATROPE, from *ανα*, 'upwards,' and *τρεπω*, 'I turn.' A *subversion*. A turning or subversion or inverted action of the stomach, characterized by nausea, vomiting, &c.—Galen. We still speak of the stomach turning against any thing.

ANCHU'SA OFFICINA'LIS, *Alca'na, Lingua Bovis, Buglos'sum sylves'tre, Offic'inal* or *Garden Al'kanet* or *Bugloss*; *Nat. Ord. Boragineæ, Sex. Syst. Pentandria Monogynia, (F) Buglose*; a native of Great Britain. The herb was formerly esteemed as a cordial in melancholia and hypochondriasis; but it is now rarely used. It is also called *Buglos'sa, Buglos'sum angustifo'lium majus, B. vulga're majus, and B. sati'vum.*

ANCHU'SA TINCTO'RIA, *Alcan'na spu'ria, Dyer's Bugloss, Ane'bium, Buglos'sum Tincto'rum, Lithosper'mum villo'sum, Dyer's Al'kanet, (F) Orcanette*; a European plant. The medical properties are equivocal. It is used to give a beautiful red colour to ointments.

ANCONE'US, from *αγκων*, 'the elbow.' A term once applied to every muscle attached to the olecranon. Winslow distinguished four:—the *great, external, internal, and small*; the three first being portions of the same muscle, the *triceps brachialis*. The last has, alone, retained the name. It is the *Ancone'us minor* of Winslow: the *Ancone'us vel Cubitalis* RIOLA'NI of Douglas: the *Epicon'dylo-Cubitalis* of Chaussier: the *Brevis Cu'biti, (F) Anconé*, and is situated at the upper and back part of the fore-arm. It arises from the external condyle of the os humeri, and is inserted into the posterior edge of the upper third of the ulna. Its use is to aid in the extension of the fore-arm.

ANCTE'RES, 'Fibulae or Clasps,' by which the lips of wounds were formerly kept together.—Celsus, Galen.

ANCU'BITUS, *Petrifac'tio*. An affection of the eye, in which there is a sensation as if sand was irritating the organ.

ANCUNULEN'TÆ. A name formerly given, according to James, to females during menstruation, who were regarded as unclean.

ANCUS. *Ankus*, from *αγκων*, 'the elbow.' One who cannot extend his arms completely.

Also, the deformity resulting from a luxation of the humerus or fore-arm.—Hippocr.

ANDA. A tree of Brazil. *Anda Gomesii, Joannesia princeps. Nat. Order, Euphorbiaceæ. Sex. Syst. Monœcia Monadelphia.* An oil is obtained from the seeds by pressure, 50 to 60 drops of which act as a cathartic. The fruit is an oval nut, containing two seeds. These have the taste of the chestnut; but are strongly cathartic, and even emetic.

The shell is astringent, and used as such in diarrhœa, &c.

ANDELY, MINERAL WATERS OF. A. is in France, near Gisors, and 8 leagues from Rouen. The water is a cold and weak chalybeate. It is used in chlorosis and abdominal obstructions.

ANDRANATO'MIA. *Andranat'omē, Androt'omia, Androt'ome, Anthropot'omy*, from *ανδρ*, genitive *ανδρος*, 'a man,' and *τεμνειν*, 'to cut.' The anatomy of man.

ANDRIA MU'LIER. *Mu'lier Hermaphrodit'ica.* A female hermaphrodite.

ANDROGENI'A, from *ανδρ*, 'a man,' and *γενεσις*, 'generation.' The procreation of males.—Hippocr.

ANDROG'YNUS, from *ανδρ*, 'a man,' and *γυνη*, 'a woman.' An hermaphrodite. An effeminate person.—Hippocr.

ANDROM'EDA MARIA'NA. *Broad-leaved Moorwort.* A decoction of this American plant is said to have been successfully employed as a wash, in a disagreeable affection,—not uncommon amongst the slaves in the southern parts of the United States,—called the *Toe Itch*, and *Ground Itch*.—Barton.

ANDRUM. An Indian word, latinized by Kämpfer, and signifying a kind of elephantiasis of the scrotum, endemic in southern Asia.

ANEANTISSEMENT, (F) *Virium extinctio.* This word is often employed hyperbolically by patients, in France, to signify excessive fatigue, debility, or syncope.

ANECPYE'TUS, from *αν*, for *ανεω*, 'without,' and *πυωω*, 'I promote suppuration.' That which does not suppurate, or is not likely to suppurate.

ANEGER'TICE, from *ανεγειρω*, 'I awaken.' The art of resuscitating the apparently dead.

ANEILE'MA, *Aneile'sis*, from *ανελεισθαι*, 'to be rolled upwards.' Applied particularly to the motion of air in the intestines and the tormina accompanying it.—Hippocr.

ANEMONE. The *Wind Flower*, from *ανεμος*, 'the wind,' because it does not open its flowers till blown upon by the wind.

ANEMONE HEPAT'ICA, *Hepat'ica nobilis, Herba Trinitatis, Hepat'ica* or *Herb Trinity, Hepat'icus Flos, Trifo'lium Hepat'icum, Anem'ony.* The plant is a mild astringent and tonic. Dose, ʒj of the powder. It may be given in infusion.

ANEMONE NEMORO'SA, *Ranun'culus albus, Wood anem'ony.* (F) *Anémone des bois.* The herb and flowers are poisonous, acrid, and corrosive. They have been used as rubefacients.

ANEMONE PRATEN'SIS, *Pulsatilla nigricans.* This plant has similar properties with the last. It is also called *Meadow Anemony.* (F) *Pulsatilla noire, P. des prés.*

The **ANEMONE PULSATIL'LA,** *Pulsatilla vulgaris, Herba ventis, Nola culinaria, Pas-*

que flower, (F) *Coquelourde*, possesses like properties.

ANENCEPH'ALUS, from *α* priv. and *εγκεφαλος*, 'brain.' A monster devoid of brain.—Bonetus. Also, one that has a part only of the brain. A weak, silly person.—Hippocr.

ANEPITHYM'IA, from *α* priv. and *επιθυμια*, 'desire.' Many Nosologists have used this word for a loss of the appetites; as those of hunger, thirst, venery, &c.

ANERETHIS'IA, *Inirritabil'itas*, from *α* priv. and *ερεθισις*, 'irritability.' Defect of irritability.—Swediaur.

ANE'THUM. *Aneson, Aneton, Anetrum, Fœnic'ulum, Fœnic'ulum, F. dulce, Ligus'ticum fœnic'ulum, Fennel* or *Finckle, Mar'athrum, Anet, Sweet Fennel,* (F) *Fenouil ou Anis doux. Nat. Ord. Umbelliferæ. Sex. Syst. Pentandria Digynia.* The seeds have an aromatic odour, and warm, sweetish taste. They are carminative. The root is said to be pectoral and diuretic.

ANE'THUM GRAVEOLENS, *A. horten'se, Dill, Anethum.* (F) *Aneth, Fenouil puant.* A native of the south of Europe. The seeds are stimulant and carminative. Dose, gr. xv to ʒj.

The **OLEUM ANE'THI,** or *Oil of Dill,* (F) *Huile d'Aneth*, possesses the carminative properties of the plant.

AN'EURISM, *An'eurysm, Aneuris'ma*, from *ανευρυνειν*, 'to dilate or distend.' *Dilatatio Arteria'rum, Ecta'sia, Emboris'ma, Exangi'a aneuris'ma, Absces'sus spirituosus, Arteriec'tasis,* (F) *Anévrysme, Aneurysme.* Properly, Aneurism signifies a tumour, produced by the dilatation of an artery; but it has been extended to various lesions of arteries, as well as to dilatations of the heart.

There are various kinds of aneurisms. The following are the chief.

I. When the blood, which forms the tumour, is inclosed within the dilated coats of the artery. This is the *true aneurism, Aneuris'ma verum, Hernia Arteria'rum.* (F) *Anévrysme vrai.*

II. When the blood has escaped from the opened artery, it is called *spurious* or *false aneurism, Aneuris'ma spu'rium, Ruptu'ra Arte'riæ, Arteriorrhex'is, Arte'riodial'ysis, Ecchymo'ma arterio'sum.* (F) *Anévrysme faux.* The latter is divided into three varieties.

1. The *diffused false aneurism,* (F) *Anévrysme faux, primitif, diffus, noncirconscriit, ou par infiltration*, which occurs immediately after the division or rupture of an artery, and consists of an extravasation of blood into the cellular texture of the part.

2. The *circumscribed false aneurism,* (F) *A. faux consécutif, circonscrit ou par épanchement, enkysté ou sacciforme, tumeur hémorrhagiale circonscrite*, in which the blood issues from the vessel, some time after the receipt of the wound, and forms itself a sac in the neighbouring cellular membrane.

3. The *An'eurism by Anastomo'sis*, or *Var'icose An'eurism*, *Phlebarteriodial'ysis*, *Aneurysma venoso-arteriosum*, *A. varico'sum*, (F) *Anévrysma par Anastomose ou variqueux*, *A. par Erosion*, *A. de Pott*, *A. des plus petites artères*, is that which arises from the simultaneous wounding of an artery and vein: the arterial blood passing into the vein, and producing a varicose state of it.

III. *Mixed Aneurism*, (F) *Anévrysme mixte*, is that which arises from the dilatation of one or two of the coats, with division or rupture of the other. Some authors have made two varieties of this.

1. *Mixed external Aneurism*, where the internal and middle coats are ruptured, and the cellular is dilated.

2. *Mixed internal Aneurism*, in which the internal coat is dilated, and protrudes, like a hernial sac, through the ruptured middle and outer coats. This variety has been called *Aneurisma Her'niam Art'eriæ sis'tens*.

Aneurisms have been likewise termed *Traumat'ic* and *Sponta'neous*, according as they may have been caused by a wound, or have originated spontaneously. They have also been divided into *internal* and *external*.

The *internal aneurisms* are situated in the great splanchnic cavities, and occur in the heart and great vessels of the chest, abdomen, &c. Their diagnosis is difficult, and they are often inaccessible to surgical treatment.

The *external aneurisms* are situated at the exterior of the head, neck, and limbs, and are distinctly pulsatory.

Aneurisms, especially the internal, may be combated by a debilitating treatment, on the plan of VALSALVA, which consists in repeated blood-letting, with food enough merely to support life. In external aneurism the artery can be obliterated. This is usually done by applying a ligature above the aneurismal tumour.

Aneurisms of the Heart, *Cardion'chi*, *Cardieurys'ma*, (F) *Anévrysmes du cœur*, have been divided into *active* and *passive*. The former can scarcely be esteemed aneurisms, as they most commonly consist of increased thickness of the parietes of the heart, which diminishes its cavity instead of increasing it. The term, *Hypertrophy of the heart*, (q. v.) better indicates their character. *Passive* aneurisms, on the contrary, are attended with extenuation of the parietes of the organ, and enlargement of the cavities. The physical signs of *dilatation of the heart* are the following.—The action of the heart is not visible, and no impulse is conveyed to the hand. On percussion, there is a loss of resonance over a larger surface than usual, but the dulness is much less intense than that which accompanies hypertrophy. On auscultation, the action of the heart is only slightly felt, and communicates at once the impression of its diminished power. The impulse is feebler than usual. Both sounds are widely transmitted over the

thorax, and are not much fainter at a distance from their point of origin.

ANEURIS'MAL, *Aneurys'mal*, *Aneuris-mat'ic*, *Aneurisma'lis*. That which belongs to Aneurism.

The ANEURISMAL SAC or CYST, (F) *Sac ou Kyste anévrysmal*, is a sort of pouch, formed by the dilatation of the coats of an artery, in which the blood, forming the aneurismal tumour, is contained.

ANFRACTUOS'ITY, *Anfrac'tus*, *Gyrus*, a groove or furrow. Used in anatomy to signify sinuous depressions, of greater or less depth, like those which separate the convolutions of the brain from each other.

These CEREBRAL ANFRACTUOSITIES, *Anfrac'tus Cer'ebri*, *Gyri Cer'ebri*, *Intestinu'la Cer'ebri*, (F) *Anfractuosités Cérébrales*, are always narrow, and deeper at the upper surface of the brain than at its base; and are lined by a prolongation of the pia mater.

The Ethmoid Cells are, sometimes, called *Anfractuosités ethmoïdales*.

ANGEIOG'RAPHY or ANGIOG'RA-PHY, *Angeiographia*, from *αγγειον*, 'a vessel,' and *γραφειν*, 'a description.' The anatomy of the vessels.

ANGEIOHYDROG'RAPHY, *Angiohy-drog'raphy*, *Angeiondrog'raphy*, *Angeiohydro-gra'phia*, from *αγγειον*, 'a vessel,' *υδωρ*, 'water,' and *γραφειν*, 'I describe.' A treatise on the lymphatics.

ANGEIOHYDROT'OMY, *Angiohydrot'omy*, *Angeiondrot'omy*, *Angeiohydrotomia*, from *αγγειον*, 'a vessel,' *υδωρ*, 'water,' and *τεμνειν*, 'to cut.' Dissection of the lymphatics.

ANGEIOLEUCITIS, *Lymphangei'tis*, from *αγγειον*, 'a vessel,' *λευκος*, 'white,' and *itis*, inflammation, (F) *Inflammation des tisses blancs*. Inflammation of the lymphatics: lymphatic or serophulous inflammation.

ANGEIOL'OGY, *Angiol'ogy*, *Angeiolo-gia*, from *αγγειον*, 'a vessel,' and *λογος*, 'a discourse.' A description of the vessels. The anatomy of the vessels. It includes *Arteri-ol'ogy*, *Phlebol'ogy*, and *Angeiohydrolog'ogy*.

ANGEIOPATHIA, from *αγγειον*, 'a vessel,' and *παθος*, 'a disease.' Disease of the vessels.

ANGEIOSTEO'SIS, *Angiosto'sis*, from *αγγειον*, 'a vessel,' and *οσσεωσις*, 'ossification.' Ossification of vessels.

ANGEIOT'OMY, *Angiot'omy*, *Angeioto-mia*, from *αγγειον*, 'a vessel,' and *τεμνειν*, 'to cut.' Dissection of the vessels.

ANGEL'ICA. So called from its supposed angelic virtues. *Angel'ica Archangel'ica*, *Nat. Ord. Umbelliferæ*, *Sex. Syst. Pentandria Digynia*. Native of Lapland. *Garden Angelica*. (F) *Angélique*, *Racine de Saint Esprit*. The roots, stalk, leaves, and seed are aromatic and carminative. A sweetmeat is made of the root, which is agreeable.

ANGEL'ICA SYLVES'TRIS, *A sati'va*, *Wild Angel'ica*, (F) *Angelique sauvage*. It pos-

sesses similar properties to the last, but in an inferior degree. The seeds, powdered and put into the hair, are used to destroy lice.

ANGELINÆ CORTEX. The bark of a Grenada tree, which has been recommended as an anthelmintic and cathartic.

ANGIEC'TASIS, from *αγγειον*, 'a vessel,' and *εκτασις*, 'dilatation.' Any dilatation of vessels.—Gräfe and Alibert.

ANGINA, *Febris Angino'sa*, from *angere*, 'to suffocate.' *Quinsey* or *Sore throat*, *Isthmi'tis*. Inflammation of the mucous membrane of the supra-diaphragmatic portion of the alimentary canal, as well as of the air-passages. The Latin writers applied the term to every disease in which deglutition or respiration, separately or united, was affected, provided that such affection was above the stomach and lungs.—Boerhaave speaks of the angina of the moribund, which is nothing more than the dysphagia or difficult deglutition preceding death.—See *Cynanche*.

ANGINA NASALIS, *Nasi'tis postica*. An inflammation of the posterior portion of the Schneiderian membrane lining the nose.

The ANGINA ŒDEMATOSA, (F) *Angine œdémateuse*, *Œdème de la Glotte*, is an œdematous swelling of the glottis; the effect of chronic cynanche laryngea.

The ANGINA SICCA, (F) *Angine sèche*, is a chronic inflammation of the pharynx, with a distressing sense of dryness and heat, in chronic diseases of the stomach and lungs.

The ANGINA SQUIRRO'SA, (F) *Angine squirrheuse*, consists in difficulty of deglutition, caused by scirrhus disorganization of the pharynx or œsophagus.

ANGINA PECTORIS, *Sternal'gia*, *Asthma spas'tico-arthritis'icum incon'stans*, *Sternodynia syncoptica et palpitans*, *Cardiog'mus Cordis sinistri*, *Astheni'a pectoralis*, *Angor pectoris*, *Stenocardia*, *Diaphragmatic gout*, *Asthma convulsi'vum*, *Asthma arthritis'icum*, *A. dolorificum*, *Syn'copè angino'sa*, (F) *Angine de Poitrine*. A disease, the precise pathology of which is not well known. The principal symptoms are: violent pain about the sternum, extending towards the arms; anxiety, dyspnœa, and sense of suffocation. It is an affection of great danger, being usually dependent upon ossification, or other morbid affection of the heart. The most powerful stimulating and narcotic antispasmodics are required during the paroxysm.

ANGINA PELLICULARIS, *Diphtheri'tis*, *Diphtheritic Inflammation*. A name recently given to those inflammations about the throat and elsewhere, in which exudations or false membranes are thrown out, during the phlogosis of mucous membranes. *Aphthæ*, *Tracheitis*, when accompanied with the membraniform exudation, and *Diarrhœa tubularis* are specimens of diphtheritic inflammation.

ANGINO'SA, (F) *Angineux*. That which is accompanied with angina; as the *Scarlati'na angino'sa*.

ANGIO'SIS, from *αγγειον*, 'a vessel.' Under this term, Alibert includes every disease of the blood-vessels.

ANGLE, *An'gulus*, from *αγκυλος*, 'a hook.' The space between two lines which meet in a point.

The FACIAL ANGLE, pointed out by Camper, is formed by the union of two lines, one of which is drawn from the most prominent part of the forehead to the alveolar edge of the upper jaw, opposite the incisor teeth, and the other from the meatus auditorius externus to the same point of the jaw. According to the size of this angle it has been attempted to appreciate the respective proportions of the cranium and face, and, to a certain extent, the degree of intelligence of individuals and of animals. In the white varieties of the species, this angle is generally 80°; in the negro not more than 70°, and sometimes only 65°. As we descend the scale of animals, the angle becomes less and less; until, in fishes, it nearly or entirely disappears. Animals, which have the snout long and facial angle small, are proverbially foolish; at least they are so esteemed, such as the snipe, crane, stork, &c., whilst intelligence is ascribed to those in which the angle is more largely developed, as the elephant and the owl. In these last animals, however, the large facial angle is caused by the size of the frontal sinuses:—so that this mode of appreciating the size of the brain is very inexact, and cannot be depended upon.

The following is a table of the angle in man and certain animals.

FACIAL ANGLES.

Man	from 65° to 85°
Sapajou	65
Orang-Utang	56 to 58
Guenon	57
Mandrill	30 to 42
Coati	28
Pole-cat	31
Pug-dog	35
Mastiff	41
Hare	30
Ram	30
Horse	23

The OPTIC ANGLE, (F) *Angle optique*, is the angle formed by two lines, which shave the extremities of an object, and meet at the centre of the pupil.

ANGOLAM, a very tall Malabar tree, which possesses vermifuge properties.

AN'GONE, *Præfoca'tio Fau'cium*, *Globus hyster'icus*, *Orthopnœ'a hyster'ica*, *Dyspha'gia globosa*, *D. hyster'ica*, *Nervous Quinsey*. A feeling of strangulation, with dread of suffocation. It is common in hysterical females, and is accompanied with a sensation as if a ball arose from the abdomen to the throat.

ANGOR, *Anguish*, (F) *Angoisse*. Extreme anxiety, accompanied with painful constriction at the epigastrium, and often with palpitation and oppression. It is frequently an unfavourable symptom.

AN'GULAR, *Angula'ris*, from *angulus*,

'an angle.' (F) *Angulaire*. That which relates to an angle.

The ANGULAR PROCESSES of the frontal bone are seated near the angles of the eyes. See Orbital.

ANGULAR ARTERY AND VEIN. A name given, 1. to the termination of the facial artery and vein because they pass by the greater angle of the eye; and, 2. to the facial artery and vein themselves, because they pass under the angle of the jaw. See Facial.

The ANGULAR NERVE is a filament furnished by the inferior maxillary, which passes near the greater angle of the eye.

ANGUS'TIA, *Angusta'tio*, *Stenoch'o'ria*. Anxiety or constriction.

ANHELA'TIO, from *anhelo*, 'I pant.' *Anhel'itus*, *Panting*. (F) *Essoufflement*. Short and rapid breathing. See Dyspnœa.

Anhela'tio is sometimes employed synonymously with Asthma.

ANHIS'TOUS, from *α, αν*, 'privative,' and *ιστος*, 'organic texture,' 'anorganic.' The tunica decidua uteri is termed by Velpeau the *anhistous membrane*.

ANICE'TON, *Mesia'mum*, from *α* privative, and *νικη*, 'victory,' 'invincible.' A plaster much extolled by the ancients in cases of achores. It was formed of litharge, cerusse, thus, alum, turpentine, white pepper, and oil.

ANIDRO'SIS, from *α* priv. and *ιδρωσ*, 'sweat.' *Sudo'ris nul'litas vel priva'tio*. Absence of sweat. Deficiency of perspiration.—Hippocr.

AN'IMA, *Ani'mus*, *Mens*, *Psyche*, the mind, breath, &c., from *ανεμος*, 'wind or breath.' (F) *Ame*. The principle of the intellectual and moral manifestations. Also, the principle of life: the life of plants being termed *An'ima vegetati'va*, (F) *Ame vége'tative*; that of man, *An'ima sensi'tiva*, (F) *Ame sensitive*.

Under the term *Anima Mundi*, the ancient philosophers meant a universal Spirit, which they supposed spread over every part of the universe.

The precise seat of the mind in the brain has given rise to many speculations. The point is unsettled.

AN'IMAL, ζῷον, from *an'ima*, 'the mind.' A name given to every animated being provided with digestive organs; even if such be merely a simple tube, as in the polypi. The greater part of animals have the power of locomotion; some can merely execute partial movements, such as contraction and dilatation. In other respects it is often a matter of difficulty to determine what is an animal characteristic. The study of animals is called *Zoölogy*.

AN'IMAL, (adjective), *Anima'lis*. That which concerns, or belongs to, an animal.

The ANIMAL KINGDOM, (F) *Règne Animal*, comprises all animated beings.

ANIMAL HEAT, *Calor anima'lis*, *Cal'idum anima'le*, *C. inna'tum*, *Biolych'nion*, (F) *Chaleur animale*, is the caloric constantly secreted

by the body of a living animal, and by virtue of which it preserves nearly the same temperature, whatever may be that of the medium in which it is placed. This secretion seems to take place in the capillary system over the whole of the body, and to be connected with the action of nutrition.

The following are the natural temperatures of certain animals; that of man being 98° or 100°.

ANIMALS.	Temperatures.
Arctic fox,	107
Arctic wolf,	105
Squirrel,	104
Hare,	103
Whale,	80 to 84
Arctomys citillus, <i>zivil</i> —in summer,	103
Do. when torpid,	103
Goat,	102
Bat, in summer,	101 or 102
Musk,	101
Marmota bobac, — <i>Bobac</i> ,	101 or 102
House mouse,	101
Arctomys marmota, <i>marmot</i> ,—in summer,	101 or 102
Arctomys marmota, <i>marmot</i> ,—when torpid,	43
Rabbit,	100 to 104
Polar bear,	100
Dog,	100 to 103
Cat,	100 to 103
Swine,	100 to 103
Sheep,	100 to 103
Ox,	100 to 102
Guinea-pig,	99
Arctomys glis,	98
Shrew,	96
Young wolf,	96
Fringilla arctica, <i>Arctic finch</i> ,	111
Rubecola, <i>redbreast</i> ,	110 or 111
Fringilla linaria, <i>lesser red poll</i> ,	100
Falco palumbarius, <i>goshawk</i> ,	109 to 110
Caprimulgus Europæus, <i>European goat-sucker</i> ,	109
Emberiza nivalis, <i>snow-bunting</i> ,	109
Falco lanarius, <i>lanner</i> ,	108
Fringilla carduelis, <i>goldfinch</i> ,	108
Corvus corax, <i>raven</i> ,	108
Turdus, <i>thrush</i> , (of Ceylon,)	108
Tetrao perdrix, <i>partridge</i> ,	108
Anas clypeata, <i>shoveler</i> ,	108
Tringa pugnax, <i>ruffe</i> ,	108
Scolopax limosa, <i>lesser godwit</i> ,	108
Tetrao tetrix, <i>grouse</i> ,	108
Fringilla brumalis, <i>winterfinch</i> ,	108
Loxia pyrrhula,	108
Falco nisus, <i>sparrowhawk</i> ,	108
Vultur Barbatus,	108
Anser pulchricollis,	108
Colymbus Auritus, <i>dusky grebe</i> ,	108
Tringa vanellus, <i>lapwing</i> , (wounded,)	107
Tetrao lagopus, <i>ptarmigan</i> ,	107 to 111
Fringilla domestica, <i>house-sparrow</i> ,	107 to 111
Strix passerina, <i>little owl</i> ,	106
Hematopus ostralegus, <i>sea-pie</i> ,	106
Anas penelope, <i>widgeon</i> ,	106
Anas strepera, <i>gadwall</i> ,	106
Pelecanus carbo,	106
Falco ossifragus, <i>sea-eagle</i> ,	105
Fulica atra, <i>coot</i> ,	105
Anas acuta, <i>pintail-duck</i> ,	105
Falco milvus, <i>kite</i> , (wounded,)	104
Merops apiaster, <i>bee-eater</i> ,	104
Goose,	103 to 107
Hen,	103 to 107
Dove,	103 to 107
Duck,	103 to 107
Ardea stellaris,	103
Falco albicollis,	103
Picus major,	103
Cossus ligniperda,	89 to 91
Shark,	83
Torpedo Marmorata,	74

ANIMAL'CULE, *Animalculum*, a diminutive of *animal*. A small animal. An animal perceptible only by means of the microscope.

ANIMAL'CULIST, *An'imalist*. One who attempts to explain different physiological or pathological phenomena by means of animalcules.

ANIMAL'ITY, *Animal'itas*. Qualities which distinguish that which is animated. That which constitutes the animal.

ANIMALIZA'TION, *Animalisa'tio*. The transformation of the nutritive parts of food into the living substance of the body to be nourished.

ANIMA'TION, *Zoo'sis*, *Anima'tio*, from *anima*, 'the soul or mind.' The act of animating. The state of being enlivened.

To **ANIMATE**, *Anima're*. To unite the living principle with an organized body. The French use it in the sense of,—to excite or render active; as, *animer un vésicatoire*: to excite a blister to suppurate.

AN'IME, *Gum an'imē*, *Aminē'a*, *Can'camy*, *Gummi an'imē*, *Can'camum*. A resin obtained from the trunk of the *Hymenē'a cour'baril*. It has been given as a cephalic and uterine. It is not used. The plant is also called *Cour'baril*.

ANIME, (F) an epithet applied to the countenance, when florid, in health or disease.

AN'IMIST, from *an'ima*, 'the soul.' The Animists are those who, following the example of Stahl, refer all the phenomena of the animal economy to the soul.

The soul, according to Stahl, is the immediate and intelligent agent of every movement, and of every material change in the body. Stahl therefore concluded, that disease was nothing more than a disturbance or disorder in the government of the economy, or an effort by which the soul, attentive to every morbid cause, endeavoured to expel whatever might be deranging the habitual order of health.

ANISA'TUM, from *Anisum*, *Anise*. A sort of medicated wine, formerly prepared with honey, wine of Ascalon, and aniseed.

ANISOS'THENES, *Inæqua'li rob'ore pol'lens*. That which is unequal in strength: from *a priv.* *ισος*, 'equal,' and *σθενος*, 'strength.' An epithet applied particularly to the muscular contractility, which, in the sick, is sometimes augmented in certain muscles only: in the flexors, for example.

ANISOT'ACHYS, from *a priv.* *ισος*, 'equal,' and *ταχυσ*, 'quick.' An epithet for the pulse when at the same time quick and unequal.—Gorræus.

ANKYLOBLEPH'ARON, *Ancylobleph'aron*, *Palpebra'rum coal'itus*, from *αγκυλη*, 'contraction,' and *βλεφαρον*, 'eyelid.' A preternatural union between the free edges of the eyelids. Also called *Symbleph'aron*, *Symblepharo'sis*, and *Pros'physis*.

Also, union between the eyelids and globe of the eye.—Aëtius.

ANKYLOGLOS'SUM, *Ancyloglos'sum*, *Concre'tio linguæ*, from *αγκυλος*, 'crooked,' or 'contracted,' and *γλωσσα*, 'the tongue.' Impeded motion of the tongue in consequence of adhesion between its margins and the gums; or in consequence of the shortness of the frænum: the latter affection constituting the *Tongue-tie*, *Olopho'nia lin'guæ fræna'ta*. It merely requires the frænum to be divided with a pair of scissors.

ANKYLOME'LE, *Ancylome'le*, from *αγκυλος*, 'crooked,' and *μηλη*, 'a probe.' A curved probe.—Galen.

ANKYLOMERIS'MUS, *Ancylomeris'mus*, from *αγκυλη*, 'a contraction,' and *μερος*, 'a part.' Morbid adhesion between parts.

ANKYLO'SIS, *Ancylō'sis*, *Anchylo'sis*, *Orthoco'lon*, *Orthocyllo'sis*, *An'cylē*, *Stiff Joint*, from *αγκυλος*, 'crooked.' An affection, in which there is great difficulty or even impossibility of moving a diarthrodial articulation. It is so called, because the limb remains, commonly, in a constant state of flexion. Anchylosis is said to be *complete* or *true*, when there is an intimate adhesion between the synovial surfaces and union of the articular extremities of the bones. In the *incomplete* or *false* anchylosis, there is obscure motion, but the fibrous parts around the joint are more or less stiff and thickened. In the treatment of this last state, the joint must be gently and gradually exercised; and oily, relaxing applications be assiduously employed.

ANKYLOT'OMUS, *Ancylot'omus*, *αγκυλοτομος*, from *αγκυλος*, 'crooked,' and *τεμνω*, 'to cut.' Any kind of curved knife.—Paulus. An instrument for dividing the frænum linguæ.—Sculletus.

ANNO'TA'TIO, *Episema'sia*. Under this term some have included the preludes to an attack of intermittent fever—as 'yawning, stretching, somnolency, chilliness, &c.

ANNUAL DISE'ASES, *Morbi an'nui*, *M. anniversa'rii*. (F) *Maladies annuelles*. A name given, by some, to diseases which recur, every year, about the same period. *Feb'ris annua* is a term used for a fancied intermittent of this type. (F) *Fièvre annuelle*.

ANNUIT'IO *Nod'ding*. A gesture denoting assent in most countries. Also, the state of somnolency, (when the individual is in the erect or sitting posture, with the head unsupported,) in which the power of volition over the extensor muscles of the head is lost, and the head drops forward.

AN'NULAR, *Annula'ris*, *Cricoei'des*. Any thing relating to a ring, or which has the shape or fulfils the functions of a ring; from *annulus*, 'a ring.'

The **ANNULAR FINGER**, or *Ring Finger*, *Dig'itus annula'ris*, *Param'esos*, is the fourth

finger ; so called from the wedding-ring being worn there.

The AN'NULAR LIG'AMENT OF THE RA'DIUS, is a very strong fibro-cartilaginous band, which forms, with the lesser sigmoid cavity of the cubitus, a kind of ring in which the head of the radius turns with facility.

The AN'NULAR LIG'AMENTS OF THE CARPUS, *Armil'lae manus membranosæ*, are two in number. The one, *anterior*, is a broad, fibrous, quadrilateral band, extending transversely before the carpus, and forming the gutter, made by the wrist, into a canal. It is attached, externally, to the trapezium and scaphoides ; and internally to the os pisiforme and process of the unciforme. It keeps the tendons of the flexor muscles, median nerve, &c., applied against the carpus. The *posterior* ligament is situated transversely behind the joint of the hand, and covers the sheaths of the tendons, which pass to the back of the hand. Its fibres are white and shining, and are attached, externally, to the inferior and outer part of the radius ; internally, to the ulna and os pisiforme.

The AN'NULAR LIG'AMENTS OF THE TARSUS are two in number. The *anterior* is quadrilateral, and extends transversely above the instep. It is attached to the superior depression of the os calcis, and to the malleolus internus. It embraces the tendons of the extensor muscles of the toes, the *tibialis anticus*, and *peroneus anticus*. The *internal* is broader than the last. It descends from the malleolus internus to the posterior and inner part of the os calcis, with which it forms a kind of canal, inclosing the sheaths of the tendons of the *tibialis posticus*, *flexor longus digitorum pedis*, and *F. longus pollicis pedis*, as well as the plantar vessels and nerves.

The ANNULAR VEIN, *Vena annula'ris*, is situate between the annular finger and the little finger. Aëtius recommends it to be opened in diseases of the spleen.

ANO, *ανα*, a prefix denoting 'above, up.'

ANO'DIA, from *αν* priv. and *αδν*, 'song.' An unconnected or dissonant mode of speech.

AN'ODYNE, *Anod'ynus*, *Paregor'icus*, *Hypnot'icus*, *Anel'icus*, *Antal'gicus*, (F) *Anodin* or *Anodyn*, from *α*, *αν*, priv. and *αδυνν*, 'pain.' *Anodynes* are those medicines, which relieve pain, or cause it to cease ; as opium, belladonna, &c. They act by blunting the sensibility of the brain, so that it does not appreciate the morbid sensation.

ANODY'NIA, *Indolen'tia*. Cessation or absence of pain. Vogel has given this name to a genus of diseases, characterized by a cessation of pain, and the exasperation of other symptoms ; as we see in gangrene.

ANCEA, from *α* privative, and *νοος*, 'mind.' Delirium, imbecility.

ANOMA'LIA, from *αν* priv. and *ομαλος*, 'regular.' *Abnor'mitas*, *Aliena'tio*. Anom-

aly, irregularity. In Pathology, anomaly means something unusual in the symptoms proper to a disease.

ANOM'ALOUS, *Ano'malis* ; the same etymon. Irregular, contrary to rule. (F) *Anomal*. In Medicine, a disease is called *anomalous*, in whose symptoms or progress there is something unusual. Affections are also called anomalous, which cannot be referred to any known species.

ANOMOCEPH'ALUS, from *α* priv. *νομος*, 'rule,' and *κεφαλη*, 'head.' An individual, whose head is deformed.—Geoffroi Saint-Hilaire.

ANOM'PHALOS, from *αν* priv. and *ομφαλος*, 'the navel.' Devoid of navel. Many writers have endeavoured to show that Adam and Eve must have been *ανομφαλοι*, as they could not have been nourished by umbilical vessels.

ANON'YMOUS, *Anon'ymus*, *innomina'tus*, (F) *Anonyme*, from *αν* priv. and *ονομα*, 'name.' That which has no name.

The word has been applied to many parts of the body :—to the *Anonymous bone* or *Os innominatum* :—the *Anonymous foramen* or *Foramen innominatum*, &c.

ANOPS'IA, from *αν* priv. and *οψ*, 'the eye.' A case of monstrosity in which the eye and orbit are wanting.

ANOR'CHIDES, from *αν* priv. and *ορχις*, 'a testicle.' Those born without testicles.—Fortunatus Fidelis.

ANOREX'IA, from *αν* priv. and *ορεξις*, 'appetite.' *Inappeten'tia*, *Limo'sis expers*, (F) *Perte d'appetit*. Absence of appetite, without loathing. Anorexia or want of appetite is symptomatic of most diseases. Indigestion.

ANO'SIA, from *α* priv. and *νοσος*, 'disease.' Health. Freedom from disease.

ANOS'MIA, from *α* privative, and *οσμη*, 'odour.' Loss of smell. Diminution of the sense of smell. Called, also, *Anosphre'sia*, *Paros'mis*, *Olfac'tus amis'sio*, *Dysæsthe'sia olfacto'ria*, *Odora'tus deper'ditus*, *Caco'dia*.

ANSE (F), *Ansa* (L), signifies, properly, the handle of certain vessels, usually of an arched form. By analogy it has been applied to that which is curved in the form of such handle. Thus, the French speak of—*Anse intestinale*, to signify a portion of intestine, supported by its mesentery, and describing a curved line :—also, *Anse nerveuse*, *Anse anastomotique*, &c.

Anse de fil is used, in Surgery, to designate a thread, curved in form of an *Anse*.

ANTAC'IDS or ANTI-AC'IDS, *Anti-ac'ida*. Remedies, which obviate acidity in the stomach. They are chemical agents, and act by neutralizing the acid. Those chiefly used are ammonia, calcis carbonas, calx, magnesia, magnesiæ carbonas, potassa, potassæ bicarbonas, p. carbonas, sodæ bicarbonas, and s. carbonas. They are, of course, only palli-

atives, removing that which exists, not preventing its formation.

ANTAG'ONISM, *Antagonis'mus*, from *αντι*, 'against,' and *αγωνίζω*, 'to act.' Action in an opposite direction. It applies to the action of muscles which act in a contrary direction to others. In estimating the force of the muscles, this antagonism must be attended to.

ANTAG'ONIST, *Antagonis'ta*. A muscle, whose action produces an effect contrary to that of another muscle. Every muscle has its antagonist, because there is no motion in one direction without a capability of it in another.

ANTAPHRODIS'IAC and **ANTAPHRODIT'IC**, *Antaphrodisiacus*, from *αντι*, 'against,' and *αφροδισιακος*, 'aphrodisiac,' *Anteroticus*. A substance capable of blunting the venereal appetite.

ANTAPOD'OSIS, from *ανταποδιδωμι*, 'I return in exchange.' The succession and return of febrile periods.—Hippocr.

ANTATROPH'IC *Antatroph'icus*, *Antiatroph'icus*, from *αντι*, 'against,' and *ατροφια*, 'atrophy.' A remedy opposed to atrophy or consumption.

ANTECEDEN'TIA. The precursory or warning symptoms of a disease.

ANTELA'BIA, *Prochei'la*, from *ante*, 'before,' and *labia*, 'the lips.' The extremity of the lips.

ANTEM'BASIS, from *αντι*, mutually, and *μεβαινω*, 'I enter.' *Mu'tuus ingres'sus*. The mutual reception of bones.—Galen.

ANTENEAS'MUS, from *αντι*, 'against,' and *εξω*, 'audacious.' One furious against himself. Mania, in which the patient attempts his own life.—Zacchias.

ANTENNA'RIA DIOICA, *Catsfoot*, *Gnaphalium Dioicum*, *Hispid'ula*, *Pes cati*, *Elich'rysum montanum* (F) *Pied de chat*. A common European plant, which has been advised in hemorrhage, diarrhoea, &c.

ANTEREISIS, from *αντι*, 'against,' and *εσθω*, 'I support.' The resistance—the solidity—of bones.—Hippocr.

ANTE'RIOR, *Ante'rior*, *Anti'cus*. Situate before. Great confusion has prevailed with Anatomists in the use of the terms *before*, *behind*, &c. Generally, the word *anterior* is applied to parts situate before the median line, the body being in the erect posture, with the face and palms of the hands turned forwards; and the feet applied longitudinally together.

ANTE'RIOR AURIS Muscle, *Auricula'ris ante'rior*, (F) *Auriculaire antérieur*, *antérieur de l'oreille*, *Zygomato-oriculaire*. A small muscle, passing from the posterior part of the zygoma to the helix. *Use*. To draw the ear forwards and upwards.

ANTEVER'SION, *Antever'sio*, from *ante*, 'before,' and *ver'tere*, 'to turn.' Displacement of the uterus, in which the fundus is turned towards the pubis, whilst its orifice is towards the sacrum. It may be caused by

extraordinary size of the pelvis, the pressure of the viscera on the uterus, &c.; and is recognised by examination *per vaginam*. See *Retroversio uteri*.

ANTHELITRAGUS, (F) *Anthélitragien*, one of the proper muscles of the pavilion of the ear.

AN'THELIX or **ANTI-HELIX**, from *αντι*, 'before,' and *ελξ*, 'the helix.' An eminence on the cartilage of the ear, in front of the helix, and extending from the concha to the groove of the helix, where it bifurcates.

ANTHELMIN'TIC, *Antihelmin'ticus*, *Antiscol'icus*, *Antivermino'sus*, *Vermif'ugus*, *Ver'mifuge*, from *αντι*, 'against,' and *ελμινς*, 'a worm.' A remedy which destroys or expels worms, or prevents their formation and development. The chief anthelmintics are, the *Chenopodium*, *Dolichos*, *oleum animale Dippelii*, *oleum Terebinthinæ*, *Sodii Chloridum*, *Spigelia*, and *Pulvis Stanni*. See *Worms*.

AN'THEMIS COT'ULA, *Cot'ula fœt'ida*, *Cota*, *Cynan'themis*, *Chamæme'lum fœt'idum*, *Mayweed*, *Stinking Chamomile*. *Nat. Ord.* *Compositæ Corymbiferae*, *Sex. Syst.* *Syngenesia Superflua*, (F) *Maroute*, *Camomille fétide*. This plant has a very disagreeable smell; and the leaves have a strong, acrid, bitterish taste. It is reputed to have been useful in hysterical affections.

AN'THEMIS NO'BILIS, *Chamæme'lum*, *Chamæme'lum No'bile*, *Chamomil'la Roma'na*, *Euan'themon*, *An'themis*, *Chamæme'lum odora'tum*, *Leucan'themum*, *Matrica'ria*, *ανθιμις*, *ανθιμις*, (F) *Camomille Romaine*. The leaves and flowers have a strong smell, and bitter, nauseous taste. The flowers are chiefly used. They possess tonic and stomachic properties, and are much given as a pleasant and cheap bitter. A simple infusion is taken to produce or to assist vomiting. Externally, they are often used in fomentations.

The *O'LEUM ANTHEM'IDIS* possesses the aromatic properties of the plant, but not the bitter and tonic. Consequently the '*Chamomile Drops*,' as sold by the druggists, must be void of the latter qualities. They are made by adding *Ol. anthem.* 3j to *Sp. vini rectific.* ℞j.

AN'THEMIS PYRE'THRUM, *Pyre'thrum*, *Pyre'thrum verum*, *Buphthal'mum cret'icum*, *Denta'ria*, *Herba saliva'ris*, *Pes Alexandri'nus*, *Spanish Chamomile*, *Pellitory of Spain*, (F) *Pyrèthre*, *Racine salivaire*, *Pied d'Alexandre*. The root is hot and acrid; its acrimony residing in a resinous principle. It is never used except as a masticatory in toothache rheumatism of the face, paralysis of the tongue, &c. It acts as a powerful sialagogue.

AN'THEMIS TINCTORIA, *Buphthalmi Herba*, *Dyers' Chamomile*. A European plant. Has a bitter and astringent taste, and has been regarded stomachic and vulnerary, (F) *Camomille des Teinturiers*, *Œil de Bœuf*.

ANTHERA, *ανδρα*. A remedy com-

pounded of several substances, myrrh, sandarac, alum, saffron, &c. It was used under the form of liniment, collyrium, electuary, and powder.—Celsus, Galen.

ANTHRA'CIA, from *ανθραξ*, 'coal.' *Carbun'cular Exan'them*. An eruption of tumours, imperfectly suppurating, with indurated edges, and, for the most part, a sordid and sanious core. A genus in the order *Exanthematica*; class *Hæmatica* of Good, and including Plague and Yaws.

AN'THRACOID, *Anthraco'des*, from *ανθραξ*, 'coal,' and *ειδος*, 'a resemblance,' (F) *Charbonneux*. That which is black as a coal. That which is accompanied by or resembles anthrax.

ANTHRACO'SIS, *Anthra'cia*, *Carbo Palpebra'rum*, from *ανθραξ*, 'a coal.' A species of carbuncle, which attacks the eyelids and globe of the eye.—Paulus of Ægina. Also, carbuncle in general. It has been used recently for the black lung of coal miners.

ANTHRAX, *An'trax*, *Carbo*, *Rubinus verus*, *Codesel'la*, *Erythe'ma gangrenosum*, *Grantristum*, *Pruna*, *Per'sicus Ignis*, *Granatristum*, *Phyma anthrax*, *Erythe'ma anthrax*, *Carbun'culus*, *Anthroco'sia*, *Anthrocoma*, *Absces'sus gangrænascens*, *A. gangrænosus*, *Furun'culus malignus*, *F. gangrænusus*, *Carbuncle*, (F) *Charbon*. An inflammation, essentially gangrenous, of the cellular membrane and skin, which may arise from an internal or external cause. In the latter case it is called, by the French pathologists, *Pustule maligne*, *Anthra'cion*, *Bouton d'Alep*, and is characterized at the outset by a vesication or bleb filled with a sero-sanguinolent fluid, under which a small induration is formed, surrounded by an areolar inflammation, which becomes gangrenous. It has been thought by some to be induced altogether by contact with the matter of the carbuncle of animals, or of the exuviae of bodies of such as had died with the disease. But it is now known to arise primarily in the human subject.

Anthrax is a malignant boil, and its treatment is similar to that which is required in cases of gangrene attacking a part.

ANTHROPOGE'NIA, from *ανθρωπος*, 'man,' and *γενεσις*, 'generation.' Knowledge or study of human generation.

ANTHROPOL'OGY, *Anthropolo'gia*, from *ανθρωπος*, 'man,' and *λογος*, 'a discourse.' A treatise on man. By some this word is used for the science of the structure and functions of the human body. Frequently, it is employed synonymously with,—*Natural history of man*.

ANTHROPOMANCY, *Anthropomanti'a*, from *ανθρωπος*, 'a man,' and *μαντεια*, 'divination.' Divination by inspecting the entrails of a dead man.

ANTHROPOM'ETRY, from *ανθρωπος*, 'a man,' and *μετρον*, 'measure.' An acquaintance with the dimensions of the different parts of the human body.

ANTHROPOPH'AGUS, from *ανθρωπος*, 'a man,' and *φαγω*, 'I eat.' A name given to one who eats his own species.

ANTHROPOPH'AGY, *Anthropopha'gia*, same etymon. The custom of eating human flesh. A disease in which there is a desire to eat it.

ANTHYPNOT'IC, *Anthypnot'icus*, from *αντι*, 'against,' and *υπνωτικος*, 'stupefying.' A remedy for stupor.

ANTHYPOCHON'DRIAC, *Anthypochondri'acus*, from *αντι*, 'against,' and *υποχονδριακος*, 'hypochondriac.' A remedy for hypochondriasis.

ANTHYSTER'IC, *Antihyster'ic*, *Antihyster'icus*, from *αντι*, 'against,' and *υστερα*, 'the uterus.' A remedy for hysteria.

ANTI, *αντι*, as a prefix, in composition generally means 'opposition.'

ANTIADON'CUS, from *αντιαδεις*, 'the tonsils,' and *ογκος*, 'tumour.' A swelling of the tonsils.—Swediaur. *Anti'ager* has a similar meaning.

ANTIAPOPLEC'TIC, *Antiapoplec'ticus*, from *αντι*, 'against,' and *αποπληξια*, 'apoplexy.' A remedy for apoplexy.

ANTIARTHRIT'IC, *Antarthrit'ic*, *Antiarthrit'icus*, *Antipoda'gric*, from *αντι*, 'against,' and *αρθριτις*, 'the gout,' (F) *Antigoutteux*. A remedy for gout.

ANTIASTHMAT'IC, *Anti-asthmaticus*, from *αντι*, 'against,' and *ασμα*, 'asthma.' A remedy for asthma.

ANTIBRA'CHIAL, *Antibrachia'lis*. That which concerns the fore-arm.—Bichat. J. Cloquet suggests that the word should be written *antebrachial*, from *ante*, 'before,' and *brachium*, 'the arm:'—as *antebrachial region*, *antebrachial aponeurosis*, &c.

The **ANTEBRA'CHIAL APONEURO'SIS**, (F) *Apo-névrose antebrachiale*, is a portion of the aponeurotic sheath which envelopes the whole of the upper limb. It arises from the brachial aponeurosis, from a fibrous expansion of the tendon of the biceps muscle, from the epicondyle, epitrochlea, and, behind, from the tendon of the triceps brachialis. Within, it is inserted into the cubitus, &c.; and, below, is confounded with the two annular ligaments of the carpus. It is covered by the skin, by veins, lymphatics, and by filaments of superficial nerves; covers the muscles of the fore-arm, adheres to them, and sends between them several fibrous septa, which serve them for points of insertion.

ANTICACHEC'TIC, *Anti-cachec'ticus*, *Anti-cacochym'ic* from *αντι*, 'against,' and *καχεξια*, 'cachexy.' A remedy against cachexy.

ANTICAN'CEROUS, *Anti-cancero'sus*, *Anti-cancro'sus*, *Anti-carcinom'atous*, from *αντι*, 'against,' and *καρκινωμα*, 'cancer,' 'carcinoma.' Opposed to cancer.

ANTICATAR'RHAL, *Anti-catarrrha'lis*, from *αντι*, 'against,' and *καταρρhis*, 'catarrh.' A remedy for catarrh.

ANTICAUSOD'IC, *Anti-causot'ic*, *Anti-*

causodicus, from *αντι*, 'against,' and *καυσος*, 'a burning fever.' A remedy for *Causus*, or inflammatory fever. Junken speaks of a *Syrupus Anticausol'icus*.

ANTICIPATING, *Antic'ipans*, *Prolept'icus*. Periodical phenomena recurring at progressively shorter intervals. An *anticipating intermittent* is one in which the intervals between the paroxysms become progressively less.

ANTICOL'IC, *Anticol'icus*, from *αντι*, 'against,' and *κολικος*, 'the colic.' That which is opposed to colic.

ANTIDIARRHÆ'IC, *Anti-diarrhæ'icus*. A remedy for diarrhœa. Opposed to diarrhœa.

ANTIDIN'IC, *Antidin'icus*, from *αντι*, 'against,' and *δινος*, 'vertigo.' Opposed to vertigo.

ANTIDOTA'R'IUM, from *αντιδοτος*, 'an antidote.' A Dispensatory. A Pharmacopœia or Formulary.

ANTIDOTE, *Antid'otus*, from *αντι*, 'against,' and *διδωμι*, 'I give.' Originally this word signified an *internal remedy*. It is now used synonymously with *counter-poison*, and signifies any remedy capable of combating the effect of poisons, by decomposing them.

ANTIDYSENTER'IC, *Anti-dysenter'icus*, from *αντι*, 'against,' *δυσ*, 'with difficulty,' and *εντερον*, 'intestine.' Opposed to dysentery.

ANTIEMET'IC or **ANTEMET'IC**, *Anti-emet'icus*, from *αντι*, 'against,' and *εμετικος*, 'emetic.' A remedy for vomiting.

ANTIEPHIAL'TIC or **ANTEPHIAL'TIC**, *Antiephial'ticus*, from *αντι*, 'against,' and *εφιαλτης*, 'nightmare.' A remedy for nightmare.

ANTIEPILEP'TIC or **ANTEPILEP'TIC**, *Antiepilep'ticus*, from *αντι*, 'against,' and *επιληψια*, 'epilepsy.' A remedy for epilepsy.

ANTIGALAC'TIC, *Antigalac'ticus*, *Antilac'teus*, from *αντι*, 'against,' and *γαλα*, 'milk.' (F) *Antilaiteux*. Opposed to the secretion of milk, or to diseases caused by the milk.

ANTIG'ONI COLLYR'IUM NIGRUM, *Black collyrium of ANTIG'ONUS*. It was composed of cadmia, antimony, pepper, verdigris, gum arabic, and water.

ANTIHEC'TIC, *Antithec'ticus*, from *αντι*, 'against,' and *ἔξω*, 'habit of body.' The *Antithec'ticum POTE'RII* is the white oxyd of antimony: also called *Diaphoret'icum Joviale*.

ANTHEMORRHOI'DAL, *Antihæmorhoida'lis*, from *αντι*, 'against,' and *αἰμορροειδης*, 'hemorrhoids.' A remedy for hemorrhoids.

ANTHERPET'IC, *Antiherpel'icus*, from *αντι*, 'against,' and *ἑρπης*, 'herpes.' (F) *Antidartreux*. A remedy for herpes.

ANTIHYDROPHOB'IC, *Antihydrophob'icus*, *Antily'ssus*, from *αντι*, 'against,' *υδαρ*,

'water,' and *φοβος*, 'dread.' A remedy for hydrophobia.

ANTIHYDROP'IC, *Antihydroph'icus*, from *αντι*, 'against,' and *υδρωψ*, 'dropsy.' A remedy for dropsy.

ANTI-ICTERIC, from *αντι*, 'against,' and *ικτερος*, 'jaundice.' A remedy for jaundice.

ANTILEP'SIS, *Apprehen'sio*, from *αντιλαμβανω*, 'I take hold of.' The mode of attaching a bandage over a diseased part, by fixing it upon the sound parts.—Hippocrates. The mode of securing bandages, &c. from slipping.

ANTILITH'ICS, *Antilith'ica*, from *αντι*, 'against,' and *λιθος*, 'a stone.' A substance that prevents the formation of calculi in the urinary organs.

The chief antilithics, according as the calculi are lithic acid or phosphatic, are alkalies or acids; with revellents, especially change of air; tonics, especially the *diosma crenata*,(?) and *uva ursi*.(?)

ANTILLY, MINERAL WATERS OF. A celebrated French medicinal spring, near Méaux in France. The waters have not been analyzed; but astonishing and chimerical effects have been ascribed to them.

ANTILOI'MIC, *Antiloi'micus*, *Antipestilentia'lis*, from *αντι*, 'against,' and *λοιμος*, 'the plague.' A remedy for the plague.

ANTIL'OPUS. The *An'telope*. (F) *Gazelle*. An African animal, whose hoofs and horns were formerly given in hysteric and epileptic cases.

ANTIMELANCHOL'IC, *Antimelanchol'icus*, from *αντι*, 'against,' and *μελαγχολια*, 'melancholy.' A remedy for melancholy.

ANTIMO'NIAL, *Antimonia'lis*, *Stibia'lis*, from *Antimo'nium*, 'antimony.' A composition into which antimony enters. A preparation of antimony.

The **ANTIMO'NIAL POWDER**, *Pulvis antimonia'lis*, *Ox'idum antimoni cum phos'phate calcis*, *Phosphas calcis stibia'tus*, *P. Cal'cium stibia'tum*, *Pulvis Jame'sii*, *Pulvis stibia'tus*, *Pulvis de phos'phate calcis et stib'ii compos'itus*, *Factitious JAMES'S Powder*, *SCHWANBERG'S Fever Powder*, *CHENEVIX'S Antimonial Powder*. (F) *Poudre antimoniale composée, ou de JAMES*. A peroxide of antimony combined with phosphate of lime. (Take of common sulphuret of antimony, ℥j; hartshorn shavings, ℥ij. Roast in an iron pot, until they form a gray powder. Put this into a long pot, with a small hole in the cover. Keep it in a red heat for two hours. and grind to a fine powder.) This preparation has long been esteemed as a febrifuge: but it is extremely uncertain in its action. The ordinary dose is 6 or 8 grains.

ANTIMO'NIUM, from *αντι*, 'against,' and *μονος*, 'alone:' i. e. not found alone: or according to others, from *αντι*, 'against,' and *moine*, 'a monk:' because it is asserted certain monks suffered much from it. *Stibi*, *Stib'ium*, *Reg'ulus Antimo'nii*, *Minera'lium*,

Gynæceum, *Magne'sia Satur'ni*, *Marcasi'ta plum'bea*, *Platyophthal'mon*, *Stim'mi*, *Aurum lepro'sum*, *Common Antimony*, *Sulphuret of Antimony*, *Antimo'nium crudum*, *Antimo'nii sulphure'tum*, *Sulphure'tum stib'ii nigrum*. (F) *Antimoine*. The sulphuret of antimony is the ore from which all the preparations of antimony are formed. When prepared for medical use, by trituration and levigation, it forms a powder of a black, or bluish gray colour, which is insoluble. It is slightly diaphoretic and alterative, and has been used in chronic rheumatism, cutaneous diseases, &c.

ANTIMO'NIUM DIAPHORET'ICUM, *Diaphoret'ic Antimony*, *Antimo'nious Acid*, *Min'eral Bez'oard*, *Antimo'nium Calcina'tum*, *Mineral Diaphoret'ic*, *Matière perlée de KERKRING*, *Peroxide of Antimony*, *Calx Antimo'nii*, *Antimo'nium diaphoret'icum lotum*, *Cerus'sa Antimo'nii*, *Calx Antimo'nii elo'ta*, *Oxo'des stib'ii album*, *Ox'idum stibio'sum*, *Deutoxide of Antimony*, *Ox'idum stib'ii album median'te nitro confectum*. (F) *Oxide blanc d'Antimoine préparé par le moyen du nitre*. (*Common antimony*, ℞j; *purified nitre*, ℞iij.—Throw it by spoonfuls into a red-hot crucible; powder and wash. The flowers that stick to the side of the crucible must be carefully separated, otherwise they render it emetic. Dose, gr. x to xxx.

ANTIMO'NIUM MEDICINA'LE, *Reg'ulus Antimo'nii Medicina'lis*, *Medicinal Reg'ulus of Antimony*. (*Common Antimony*, 3v, *Kali ppt.* 3i, *Sodæ muriat.* 3iv. Powder, mix, and melt. When cold, separate the scorixæ at top, powder the mass, and wash it well.) It is conceived to be more active than common antimony.

ANTIMO'NIUM MURIA'TUM, *Antimo'nii Mu'rias*, *Chlor'uret of Antimony*, *Chlorure'tum stib'ii*, *Caus'ticum antimoniale*, *Spuma trium draco'num*, *Deuto-mu'rias stib'ii sublima'tus*, *Butter of Antimony*, *Muriate of Antimony*, *Chloride of Antimony*, *Buty'rum Antimo'nii*, *O'leum Antimo'nii*, *Buty'rum stib'ii*, *Caus'ticum antimoniale*; *Antimonium sali'tum*. (F) *Chlorure d'Antimoine*, *Beurre d'Antimoine*. (*Common antimony and corrosive sublimate, of each equal parts: grind together, and distil in a wide-necked retort, and let the butyraceous matter that comes over, run, in a moist place, to a liquid oil.*) A caustic, but not much used as such. Sometimes taken as poison.

ANTIMO'NIUM SULPHURE'TUM PRÆCIPITA'TUM, *Sulphur antimoniatum*, *Hydrosulphure'tum stibio'sum cum sul'phure*, *Oxo'des stib'ii sulphura'tum*, *Oxyd'ulum antimo'nii hydrosulphura'tum aurantiacum*, *Ox'y'dum aurat'um antimo'nii*, *Sulphure'tum stib'ii oxydula'ti*, *Hydro-sulphure'tum lu'teum ox'ydi stib'ii sulfura'ti*, *Sulphur antimo'nii præcipita'tum*, *Sulphur aurat'um antimo'nii*, *Golden Sulphur of Antimony*.

The *Antimo'nii Sulphure'tum Præcipita'tum*,

(F) *Soufre doré d'Antimoine*, of the London Pharmacopœia, is nearly the same as the old *Kermes Mineral*. It is a powder of an orange colour, and of a metalline, styptic taste. It is emetic, diaphoretic, and cathartic, according to the dose, and has been chiefly used in chronic rheumatism and in cutaneous affections. Dose, gr. j to gr. iv.

ANTIMO'NIUM SULPHURE'TUM RUBRUM, *Red Sulphuret of Antimony*, *Hydrosulphure'tum stib'ii rubrum*, *Sub-hydrosul'fas stib'ii*, *Hydrosulphure'tum rubrum stib'ii sulphura'ti*, *Pulvis Carthusiano'rum*, *Kermes mineral*. (F) *Hydrosulfure rouge d'Antimoine sulfuré*, *Vermillon de Provence*. Properties the same as the last. Dose, gr. j to gr. iv.

ANTIMO'NIUM TARTARIZA'TUM, *Tartris Antimo'nii*, *Tartar Antimoniatum*, *Sal Antimo'nii*, *Tartras Potas'sæ stibio'sus seu stibia'lis*, *Tartris lixiv'ixæ stibia'tus*, *Deuto-tartras potas'sæ et stib'ii*, *Tartarized Antimony*, *Emetic Tartar*, *Tartar Emetic*. (F) *Tartre stibié*, *Tartre emétique*, *Emétique*. In some parts of the United States vulgarly and improperly called *Tartar*, *Tar'tarus emet'icus*, *Tar'tarum emet'icum*, *Tartras antimo'nii*, *Tartras Antimo'nii et Potassæ*. (*Glass of Antimony*, *Cream of Tartar*, each ℞j; *water*, one gallon. Boil, filter, and crystallize.—Ph. L. 1824.)

Tartarized antimony is emetic, sometimes cathartic and diaphoretic. Externally, it is rubefacient. Dose, as an emetic, gr. j to gr. iv. in solution:—as a diaphoretic, gr. one-sixteenth to gr. one-quarter.

The empirical preparation, called *NORRIS'S Drops*, consists of a solution of *tartarized antimony* in *rectified spirit*, disguised by the addition of some vegetable colouring matter.

ANTIMO'NIUM VITRUM, *Glass of Antimony*, *Antimo'nii ox'y'dum sulphure'tum vitrifac'tum*, *Ox'y'dum stib'ii semivit'reum*, *Antimo'nium vitrifac'tum*, *Ox'idum antimonii cum sul'phure vitrifac'tum*, *Vitrum stib'ii*, *Antimo'nii vitrum hyacin'thinum*, *Oxyd'ulum stib'ii vitrea'tum*. (F) *Verre d'Antimoine*. (Formed by roasting powdered common antimony in a shallow vessel over a gentle fire, till it is of a whitish grey colour, and emits no fumes in a red heat, then melting it, in a quick fire, into a clean, brownish-red glass.) It is used for preparing the tartarized antimony and antimonial wine.

ANTINEPHRIT'IC, *Antinephret'ic*, *Antinephret'icus*, from *αντι*, 'against,' and *νεφρις*, 'nephritis.' A remedy for inflammation or pain of the kidney.

ANTI'OCHI HIERA. A preparation extolled by the ancients in melancholy, hydrophobia, epilepsy, &c. It was formed of *germander*, *agaric*, *pulp of colocynth*, *Arabian stœchas*, *opoponax*, *sagapenum*, *parsley*, *aristolochia*, *white pepper*, *cinnamon*, *lavender*, *myrrh*, *honey*, &c.

ANTI'OCHI THERIACA. A theriac employed by Antiochus against every kind of poison. It was composed of *thyme*, *opopo-*

nax, millet, trefoil, fennel, aniseed, nigella sativa, &c.

ANTIODONTAL'GIC, *Antodontal'gic*, *Antodontal'gicus*, *Odontal'gic*, *Odont'ic*, *Antiodontal'gicus*, from *αντι*, 'against,' and *odontalgia*, 'toothache.' A remedy for toothache.

ANTIORGAS'TIC, *Antiorgas'ticus*, from *αντι*, 'against,' and *οργαα*, 'I desire vehemently.' A remedy for orgasm or erethism, and for irritation in general.

ANTIPARALYT'IC, *Antiparalyt'icus*, from *αντι*, 'against,' and *παρалуσις*, 'palsy.' Opposed to palsy.

ANTIPATHI'A, from *αντι*, 'against,' and *παθος*, 'passion, affection.' Aversion. A natural repugnance for any person or thing.

ANTIPATH'IC, *Antipath'icus*. (F) *Antipathique*. Belonging to antipathy. 'Opposite, contrary;' as '*Humeurs Antipathiques*.' Humours opposed to each other.

ANTIP'ATRI THERIACA, *Theriac of Antipater*. A farrago of more than 40 articles: used as an antidote against the bites of serpents.

ANTIPERISTAL'TIC, *Antiperistal'ticus*, *Antivermic'ular*, from *αντι*, 'against,' and *περιστella*, 'I contract.' An inverted action of the intestinal tube.

ANTIPERIS'TASIS, from *αντι*, 'against,' and *περιστασις*, 'reunion, aggregation.' A union of opposite circumstances: the action of two contrary qualities, one of which augments the force of the other.

The Peripateticians asserted, that it is by Antiperistasis that fire is hotter in winter than in summer. Theophrastus attributes the cause, which renders men more vigorous, and makes them digest more readily in winter, to the augmentation of heat caused by Antiperistasis.

ANTIPHAR'MACON, from *αντι*, 'against,' and *φαρμακον*, 'poison.' A counter-poison. An antidote.—Dioscorides.

ANTIPHLOGIS'TIC, *Antiphlogis'ticus*, from *αντι*, 'against,' and *φλεγω*, 'I burn.' Opposed to inflammation;—as *Antiphlogistic remedies*, *A. regimen*, &c.

ANTIPHTHIS'ICAL, *Antiphthis'icus*, from *αντι*, 'against,' and *φθισις*, 'consumption.' Opposed to phthisis.

ANTIPHYS'ICAL, *Antiphys'icus*, from *αντι*, 'against,' and *φυσα*, 'I blow.' An expeller of wind: a carminative, (q. v.)

It has also been used for any thing preternatural; here the derivation is from *αντι*, 'against,' and *φυσικ*, 'nature.' The French sometimes say, '*Un goût antiphysique*.'

ANTIPLEURIT'IC, *Antipleuret'icus*, *Antipleuret'ic*, from *αντι*, 'against,' and *πλευριτις*, 'pleurisy.' Opposed to pleurisy.

ANTIPRAX'IS, from *αντι*, 'against,' and *πρασσα*, 'I act.' A contrary state of different parts in the same patient: e. g. an increase of heat in one organ, and diminution in another.

ANTIPSOR'IC, *Antipso'ricus*, from *αντι*, 'against,' and *ζαα*, 'the itch.' (F) *Antigaleux*. Opposed to the itch.

ANTIPTY'IC, *Antipy'icus*, from *αντι*, 'against,' and *πυον*, 'pus.' Opposed to supuration.

ANTIPTYRET'IC, *Antipyret'icus*, from *αντι*, 'against,' and *πυρετος*, 'fever.' A febrifuge.

ANTIPTYROT'IC, *Antipyrot'icus*, from *αντι*, 'against,' and *πυρ*, 'fire.' Opposed to burns.

ANTIQUARTANA'RIMUM, *Antiquar'ticum*. A remedy formerly used against quartan fever.

ANTIRACHIT'IC, *Antirachit'icus*, from *αντι*, 'against,' and *rachitis*. Opposed to rachitis, or rickets.

ANTIRHI'NUM LINA'RIA, *Lina'ria*, *Osyris*, *Urina'ria*, *Common Toad Flax*. (F) *Linnaire*. The leaves have a bitterish taste. They are reputed to be diuretic and cathartic. An ointment made from them has been extolled in hemorrhoids.

The **ANTIRRH'NUM ELATI'NE**, *Elati'ne*, *Fluellen* or *Female Speedwell*, was formerly used against scurvy and old ulcerations.

ANTISCORBU'TIC, *Antiscorbu'ticus*, from *αντι*, 'against,' and *scorbutus*, 'the scurvy.' Opposed to scurvy.

ANTISCROPH'ULOUS, *Antistrumo'sus*. Opposed to scrophula.

ANTISEP'TIC, *Antisepticus*, *Antiputrid*, from *αντι*, 'against,' and *σηπτος*, 'putrid.' *Antiputredinosus*. Opposed to putrefaction. The chief Antiseptics, internally or externally employed, are the Acidum Muriaticum, Acidum Nitricum, Acidum Sulphuricum, Carbo Ligni, Calcis Chloridum, Chlorinum, Cinchona and its active principles, Creosote, Dauci Radix, Fermentum Cerevisiæ, and Sodæ Chloridum.

ANTISPASMOD'IC, *Antispasmod'icus*, from *αντι*, 'against,' and *σπασω*, 'I contract.' Opposed to spasm.

The whole operation is probably revulsive.

The following are the chief reputed antispasmodics. Æther Sulphuricus, Asafœtida, Castoreum, Dracontium, Galbanum, Moschus, Olea Essentialia, Oleum Animale Dipelii, Petroleum, Sagapenum, Spiritus Ætheris Nitrici, Succinum, Valeriana—with the mental antispasmodics,—abstraction, powerful emotions, fear, &c.

Of direct antispasmodics, we have not an example.

ANTISTERIG'MA, from *αντι*, 'against,' and *στηριγμα*, 'a support.' A fulcrum, support, crutch.—Hippocrates.

ANTISTER'NUM, from *αντι*, 'against,' and *στερνον*, 'the sternum.' The back.—Rufus.

ANTISYPHILIT'IC, *Antisymphilit'icus*, *Antisymphilit'ic*, from *αντι*, 'against,' and *sypphilis*, 'the venereal disease.' Opposed to the venereal disease.

ANTITRAG'ICUS, or **ANTITRA'GEUS**, (F) *Muscle de l'Antitragus*, *M. antitragien*.—Ch. Belonging to the Antitragus. A small muscle is so called, the existence of which is not constant. It occupies the space between the antitragus and anthelix.

ANTITRAGUS, from *αντι*, 'opposite to,' and *τραγος*, 'the tragus.' A conical eminence on the pavilion of the ear, opposite the tragus.

ANTITYP'IA, from *αντι*, 'against,' and *τυπτα*, 'I strike.' Resistance. Hardness.

ANTIVENE'REAL. *Antivene'reus*, from *αντι*, 'against,' and *Venus*, 'Venus.' The same as Antisyphilitic. Formerly it was used synonymously with Antaphrodisiac.

ANTRUM. 'A cavern,' *αντρον*, *Bar'athrum*, (F) *Antre*. A name given to certain cavities in bones, the entrance to which is smaller than the bottom.

ANTRUM of Highmore, *Antrum Highmoria'num*, *Antrum Genæ*, *Antrum maxilla're vel maxillæ superio'ris*, *Genyan'trum*. The Maxillary Sinus, *Sinus genæ pituita'rius*. (F) *Antre d' Hyghmore*, *Sinus Maxillaire*. A deep cavity in the substance of the superior maxillary bone communicating with the middle meatus of the nose. It is lined by a prolongation of the Schneiderian membrane.

ANUS, *Podex*, *Potex*, *Mol'ynê*, *Cath'edra*, *Cyr'ceon*, *Cys'saros*, *Cysthos*, *Hedra*, *Proctos*, *Archos*, *Sedes*, *Culus*. The circular opening situate at the inferior extremity of the rectum, by which the excrement is expelled. The *fundament*. The *seat*. The *body*.

ANUS also signifies the anterior orifice of the *Aqueduct of Sylvius*. By some, this *Anus*, called also *Fora'men commu'ne poste'rius*, has been supposed to form a communication between the back part of the third ventricle and the lateral ventricles. It is closed up, however, by the tela choroidea, and also by the fornix, which is intimately connected to this. The foramen is situate between the commissura mollis of the optic thalami and the pineal gland.

ANUS, Artificial. An opening made artificially, in case of the rectum being wanting, to supply the natural anus. The term is often used to include also the following.

ANUS, Preternatural, (F) *Anus contre nature* or *A. anormal*. An accidental opening which gives issue to the whole or to a part of the fæces. It may be owing to a wound, or, which is most common, to gangrene attacking the intestine in a hernial sac.

This term is also employed, as well as *Anus devié*, *devious anus*, to the case where the anus, instead of being in its natural situation, is in some neighbouring cavity, as the bladder, vagina, &c.

ANUS, imperforate. A malformation in which there is no natural anus. See Imperforation.

ANUS, contracted. (F) *Anus rétréci*. A state of the anus when, from some cause, it is constricted.

ANXI'ETY, *Anxi'etas*, *Anxietude*, *Adæmo'nia*, *Dyspho'ria anxi'etas*, *Alys'mus*, *Al'yce*, *Al'ysis*, *Asê*. A state of restlessness and agitation, with general indisposition, and a distressing sense of oppression at the epigastrium. *Inquietude*, *anxiety*, and *anguish*, represent degrees of the same condition.

AOCHLE'SIA, from *α* priv. and *οχλος*, 'disturbance.' Tranquillity. Calmness.

AOR'TA, *Arte'ria magna*, *A. crassa*, *A. maxima*. (F) *Aorte*. This name was given by Aristotle to the chief artery of the body. It may have been derived from *αορτεομαι*, 'I am suspended,' as it seems to be suspended from the heart: or from *αηρ*, 'air,' and *τηρηα*, 'I keep,' because it was supposed to contain air. It is probable, that Hippocrates meant by *αορται*, the bronchi and their ramifications. The Aorta is the common trunk of the arteries of the body. It arises from the left ventricle of the heart, about opposite the fifth dorsal vertebra, passes upwards (*ascending Aorta*), forms the *great arch* of the Aorta, and descends along the left of the spine (*descending Aorta*), until it reaches the middle of the fourth or fifth lumbar vertebra, where it bifurcates, to give origin to the common iliacs. The Aorta is sometimes divided into the *Thoracic* or *pectoral* and the *Abdominal*. For the arteries which arise from it, &c., see Artery.

AORTEURIS'MA, from *αορτη*, 'the aorta,' and *ευρος*, 'dilated.' Aneurism of the Aorta. By carefully ausculting over the dorsal vertebræ, a bellows' sound, with a deep and not always perceptible impulse, may be detected.

AOR'TIC, *Aor'ticus*. Relating to the Aorta. The *Aortic ventricle*, (F) *Ventricle aortique*, is the left ventricle. The *Aortic valves* are the sigmoid valves at the origin of the Aorta, &c.

AORTRA, **AORTRON**, *αορτρα*, *αορτρον*. A lobe of the lungs.—Hipp.

APAG'MA, *Apoclas'ma*, *Apocecaulis'menon*, from *απο*, 'from,' and *αγα*, 'I remove.' Separation, abduction. Separation of a fractured bone.—Galenus, Foësius.

APAL'LAGE, from *απαλαττα*, 'I change.' Mutation, change. It is generally taken in a good sense, and means the change from disease to health.—Hippocr.

APALOT'ICA, from *απαλοτης*, 'softness, tenderness.' Fortuitous lesions or deformities affecting the soft parts. The first Order in the Class *Tychica* of Good.

APANTHIS'MUS, from *απο*, 'from,' and *ανθια*, 'I flower.' The obliteration of parts, previously inservient to useful purposes, as of the ductus venosus and ductus arteriosus, which are essential to fœtal existence, but are subsequently unnecessary.

APANTHRO'PIA, from *απο*, 'from,' and *ανθρωπος*, 'man.' Detestation of men; desire for solitude.—Hippocrates. One of the symptoms of hypochondriasis.

APARACH'YTUM VI'NUM, from *α* priv. and *παραχωω*, 'I pour over.' The purest wine:

that which has not been mixed with sea-water.—Galen.

AP'ATHY, *Apathi'a*, from *a* priv. and *παθος*, 'affection.' (F) *Apathie*. Accidental suspension of the moral feelings. It takes place in very severe diseases, particularly in malignant fevers.

APECHE'MA, from *απο*, 'from,' and *ηχος*, 'sound.' Properly the action of reflecting sound. In Medicine, it is synonymous with the Latin *Contrafissura*. A counter-fissure, a counter-blow.—Gorræus, Celsus.

APEL'LA or APPEL'LA, *Leipodermos*, from *a* priv. and *pellis*, 'skin.' One whose prepuce does not cover the glans.—Galenus, Linnæus, Vogel. Retraction or smallness of any other soft appendage.—Sagar.

APE'RIENT, *Ape'riens*, *Aperiti'vus*, from *aperire*, 'to open.' A *laxative*, (q. v.) (F) *Apéritif*. A medicine which gently opens the bowels. The term had, formerly, a much more extensive signification, and was given to every substance supposed to have the power of opening any of the passages, and even the blood-vessels.

APERIS'TATON, *Aperis'tatum*, from *a* privative, and *περιστημι*, 'I surround.' An epithet for an ulcer not dangerous or considerable, or surrounded by inflammation.

APERTO'RIUM, from *aperio*, 'I open.' An instrument for dilating the os uteri during labour.

APEX. The point or extremity of a part:—as the apex of the tongue, nose, &c.

APHASSOM'ENOS, from *αφασσα*, 'I touch, I feel.' The touching of the parts of generation of the female as a means of diagnosis.—Hippocr. See Esaphe.

APHELI'A, *αφελης*, 'simple.' Simplicity. The simple manners of the sect of Methodists in teaching and practising Medicine.

APHELX'IA, from *αφελκω*, 'I abstract.' Voluntary inactivity of the whole or the greater part of the external senses to the impressions of surrounding objects, during wakefulness. *Revery*, (F) *Reverie*.

Dr. Good has introduced this into his Nosology, as well as *Aphelx'ia socors* or *absence of mind*—*A. inten'ta* or *abstraction of mind*: and *A. otio'sa*, *Stu'dium ina'ne*, *brown study* or *listless musing*.

APHE'RESIS or APHÆ'RESIS, from *αφαιρω*, 'I take away.' An operation by which any part of the body is separated from the other. Hippocrates, according to Foësius, uses the expression *Aphæresis Sanguinis*, for excessive hemorrhage; and Sennertus, to express the condition of an animal deprived both of the faculties of the mind and of the mind itself.

APH'ESIS, from *αφηναι*, 'I relax.' A remission. This word expresses sometimes the diminution or cessation of a disease; at others, languor and debility of the lower extremities.

APHILAN'THROPY, *Aphilanthro'pia*,

from *a* privative, *φιλειω*, 'I love,' and *ανθρωπος*, 'a man.' Dislike to man. Love of solitude. Vogel has given this name to the first degree of melancholy.

APHOR'ME, *αφορμη*, 'occasion.' The external and manifest cause of any thing. The occasional cause of a disease.—Hippocrates.

APHRO'DES, *αφροδης*, 'frothy,' from *αφρος*, 'foam,' and *ειδος*, 'resemblance.' Applied to the blood and the excrements.—Hippocrates.

APHRODIS'IAC, *Aphrodisiacus*, from *Αφροδιτη*, 'Venus.' (F) *Aphrodisiaque*. Medicine or food believed to be capable of exciting to the pleasures of love; as ginger, cantharides, &c. They are generally stimulants.

APHRODISIOG'RAPHY, from *Αφροδιτη*, 'Venus,' and *γραφω*, 'I describe.' Etymologically, this term means a description of the pleasures of love, but it has been placed at the head of a work describing the venereal disease.

APHROG'ALA, from *αφρος*, 'foam,' and *γαλα*, 'milk.' *Lac spumosum*. A name formerly given to milk rendered frothy by agitation.

APHTHÆ or APHTÆ, *Apthæ*, from *απτω*, 'I inflame.' The *Thrush* or *sore mouth*. *Aptha lactu'cimen*, *Em'phlysis apthæ*, *Ulcers serpentina Oris*, *Pustula oris*, *Febris aptho'sa*, *Angina aptho'sa*, *Vesic'ulæ gingiva'rum*, *Typhus apthoidæ'us*. It consists of roundish, pearl-coloured vesicles, confined to the lips, mouth, and intestinal canal, and generally terminating in curd-like sloughs. In France, the Aphthæ of children, *Apthes des enfans*, is called *Muguet*, and *Catarrhe buccal*: and generally receives two divisions—the *mild* or *discreet*, (F) *Muguet bénin ou discret*, and the *malignant*, (F) *Muguet malin ou confluent*, the *Black Thrush*. Common Thrush is a disease of no consequence, requiring merely the use of absorbent laxatives. The malignant variety, which is rare, is of a more serious character, and is accompanied with typhoid symptoms.

APH'THOUS, *Aptho'sus*, (F) *Apthoux*. Belonging to Aphtha; complicated with Aphtha. As *Apthous Fever*.

APITES, *απιτης*, from *απιον*, 'a pear.' *Perry*.—Gorræus.

APIUM GRAVEOLENS, *Apium*, *Paluda'pium*, *Belinum*, *Smallage*. (F) *Ache*. *Nat. Ord. Umbelliferae*. *Sex. Syst. Pentandria Digynia*. The plants, roots, and seeds are aperient and carminative.

The Selery is a variety of this.

APIUM PETROSELI'NUM, *A'pium Horten'se*, *Eleoseli'num*(?), *Grielum*; the *Petroseli'num* or *Common Parsley*. (F) *Persil*. The roots and seeds are diuretic and aperient.

APLEU'ROS, from *a* privative, and *πλευρος*, 'a rib.' One without ribs.—Hippocrates. Galen.

APLOT'OMY, *Aplotomia*, from *απλος*,

'simple,' and τεμνω, 'I cut.' A simple incision.

APNŒA, from α privative, and πνεω, 'I respire.' Absence of respiration, or insensible respiration.—*Asphyxia, Apneustia.*

APNUS, απνους. One devoid of respiration. An epithet applied by authors to cases in which the respiration is so small and slow, that it seems suspended.—Castelli. It is probable, however, that the word was always applied to the patient, not to the disease.

APO, απο, a prefix, denoting 'from, of, off, out.' Hence.

APOCENO'SIS, from απο, 'out,' and κενωσις, 'evacuation.' A partial evacuation, according to some, in opposition to Cenosis, which signifies a general evacuation.—Cullen and Swediaur apply it to morbid fluxes.

APOCH'YMA, from αποχεω, 'I pour out.' A sort of tar, obtained from old ships; and which is impregnated with muriate of soda.—Aëtius, Paulus, Gorræus.

APOC'OPE, from απο, and κοπτειν, 'to cut.' Abscission. A wound with loss of substance. Fracture, with loss of part of the bone. Amputation.

APOCROUS'TIC, *Apocrous'tica remedia*, from απο, 'out,' and κρονω, 'I push.' An astringent and repellent.—Galenus.

APOC'YNUM ANDROSÆMIFO'LIIUM, *Dog's Bane.* (F) *Apocin gobe-mouche.* *Nat. Ord.* Apocynæ. *Sex. Syst.* Pentandria Digynia. The root of this plant is found from Canada to Carolina. Thirty grains evacuate the stomach as effectually as two-thirds of the amount of Ipecacuanha, by which name it is known in various parts of the eastern states. It is in the secondary list of the Pharmacopœia of the United States.

APOC'YNUM CAMNAB'INUM, *Indian Hemp.* This American plant possesses emetic, cathartic, diaphoretic and diuretic properties, and has been strongly recommended in dropsy. It has been given in decoction,—3ij of the root boiled in three pints of water to two. A wine-glassful for a dose.

APODACRYT'ICUS, *Delachrymati'vus*, from απο, 'from,' and δακρυω, 'I weep.' A substance, supposed to occasion a flow of the tears, and then to arrest them.—Columella, Pliny, Galenus.

APODYTE'RIUM, *Coniste'rium, Spolia.to'rium, Spolia'rium*, from αποδυω, 'I strip off.' The ante-room, where the bathers stripped themselves in the ancient Gymnasia.

APOG'ONUM, from απο, and γινομαι, 'I exist.' A living fœtus in utero.—Hippocrates.

APOLEP'SIS, from απολαμβανω, 'I retain.' Retention, suppression.—Hippocrates. *Asphyxia.*

APOLEX'IS, from αποληγω, 'I cease.' Old age, decrepitude.

APOLINO'SIS, from λινον, 'a flaxen thread.' The mode of operating for Fistula in ano, by means of a thread of *Ho-*

molinson or *Linum crudum*.—Hippocrates, Paulus.

APOLYS'IA or APOL'YSIS, from απολυω, 'I loosen.' Solution. Relaxation:—debility of the limbs or looseness of bandages.—Erotian. Expulsion of the fœtus and its dependencies. Termination of a disease.—Hippocrates, Galen.

APOMATHE'MA or APOMATHE'SIS, from απο, and μαθησθαι, 'I learn.' Forgetfulness of things taught.—Hippocr.

APOM'ELI, from απο, 'of,' and μελι, 'honey.' An oxymel or decoction made of honey.—Galen, Aëtius, Paulus, &c.

APOMYLE'NAS, from απομυλλανω, 'I make a wry mouth.' One who pushes his lips forwards, pressing them against each other. Occasionally a symptom of nervous fever.—Galen, Erotian.

APOMYTHO'SIS, from απομυσσω, 'I snore.' A disease in which there is Stertor.—Sauvages, Sagar.

APONEUROG'RAPHY, *Aponeurographia*, from απονευρωσις, an 'aponeurosis,' and γραφη, 'a description.' A description of the Aponeuroses.

APONEUROL'OGY, *Aponeurologia*, from απονευρωσις, 'an aponeurosis,' and λογος, 'a discourse.' *Aponeurosiology.* The Anatomy of the Aponeuroses.

APONEURO'SIS or APONEVRO'SIS, from απο, 'from,' and νευρον, 'a nerve.' *Pronervatio, Expan'sio nervosa.* (F) *Aponeurose, Aponévrose.* The ancients called every white part νευρον, and regarded the Aponeurosis as a nervous expansion. The Aponeuroses are white, shining membranes, very resisting, and composed of fibres interlaced. Some are continuous with the muscular fibres, and differ only from tendons, by their flat form. They are called *Aponeuroses of insertion*, (F) *Aponévroses d'insertion*, when they are at the extremities of muscles, and attach them to the bone.—*Aponeuroses of intersection*, (F) *Aponévroses d'intersection*, if they interrupt the continuity of the muscle, and are continuous on both sides with muscular fibres. The others surround the muscle, and prevent its displacement: they are called *Enveloping Aponeuroses*, (F) *Aponévroses d'enveloppe*.

APONEUROT'IC, *Aponeurot'icus.* What relates to Aponeuroses:—thus we say, *Aponeurotic expansion, Aponeurotic muscle, &c.*

APONEUROT'OMY, *Aponeurotomia*, from απονευρωσις, 'aponeurosis,' and τεμνω, 'I cut.' Anatomy of Aponeuroses.

It has, also, been proposed for the division, (*débridement*) of filaments, &c. in aponeurotic openings.

APONIA, from α privative, and πονος, 'pain.' Freedom from pain.

APOPALLE'SIS or APOPAL'SIS, from αποπαλλω, 'I throw off.' Expulsion. Protrusion.—Hippocr.

APOPATE'MA and APOP'ATHOS. The

excrements, and the place where they are deposited.—Dioscorides, Erotian.

APOPHLEGMATISANTIA, *Apophlegmatison'ta*, from *απο*, 'out,' and *φλεγμα*, 'phlegm.' Medicines, which facilitate the upward expulsion of mucus from the mucous membrane of the digestive or air-passages,—as gargles, masticatories, &c.

APOPHLEGMATISM, *Apophlegmatis'mus*, the action of Apophlegmatisantia.—Galen.

APOPH'RADES, from *αποφρας*, 'unlucky,' an epithet applied to unlucky days (*dies nefandi*.) Days on which a favourable change is not expected to occur in a disease.—A. Laurentius.

APOPHTHAR'MA and **APOPH'THORA**, from *απο*, and *φθειρω*, 'I corrupt.' Abortion, as well as a medicine to procure abortion.

APOPHY'ADES, from *απο*, 'from,' and *φυα*, 'I spring.' The ramifications of veins and arteries.—Hippocr.

APOPH'YSIS, from *απο*, 'from,' and *φυα*, 'I rise,' *Proces'sus*, *Appendix*. A process of a bone. When the apophysis is yet separated from the body of the bone by intervening cartilage, it is called *Epiphysis*. The apophyses or processes are, at times, distinguished by epithets, expressive of their form; as *A. styloid*, *A. coracoid*, &c. Others are not preceded by the word apophysis; as *Trochanter*, *Tuberosity*, &c.

APOPH'YSIS OF INGRAS'SIAS, is a term applied to the lesser ala of the sphenoid bone.

APOPIES'MA, from *αποπιζω*, 'I compress.' Hippocrates uses the term to signify a fancied expression or forcing out of humours, by the application of bandages in wounds and fractures.

APOPLEC'TIC, *Apoplec'ticus*. Referring to Apoplexy. This word has various significations. It is applied, 1. To individuals labouring under apoplexy: 2. To remedies proper for combating apoplexy: 3. To the constitution or temperament, which predisposes to it: and, 4. To the symptoms, which characterize apoplexy; as *Apoplectic sleep*, *A. stroke*, *A. stertor*, &c. The jugular veins have also, by some, been called *Apoplectic veins*.—*Venæ apoplec'ticæ*.

APOPLEXY, *Apoplex'ia*, *Hæmorrh'gia Cerebri*, *Aphro'nia*, *Carus Apoplex'ia*, *Coma Apoplex'ia*, *Pulpe'zia*, *Sidera'tio*, *Apilep'sia*, *Morbus atton'itus*, *Gutta*, *Theople'gia*, *Theoplex'ia*, from *αποπληττειν*, 'to strike with violence.' (F) *Apoplexie*, *Coup de sang*. A disease, characterized by diminution, or loss of sensation and mental manifestation; by the cessation, more or less complete, of motion; and by a comatose state:—circulation and respiration continuing. It generally consists in pressure upon the brain; either from turgescence of vessels or from extravasation of blood: and the general prognosis is unfavourable: especially when it occurs after the

age of 35. When A. is accompanied with a hard, full pulse, and flushed countenance, it is called *apoplexia sanguin'ea*, *cataph'ora coma*; when with a feeble pulse and pale countenance, *Apoplexia serosa*, and *A. pituitosa*, *serous apoplexy*, *cataphora hydrocephalica*.

APOPTO'SIS, from *αποπιπτω*, 'I fall down.' A relaxation of bandages.—Erotian.

APORRŒ'A, from *απορρεω*, 'I flow from.' An emanation, effluvium, contagion.—Moschion. A falling off of the hair, according to some.

APOSCEM'MA, and **APOSCEP'SIS**, from *αποσκηπτω*, 'I lie down, I direct myself towards.' Afflux of fluids towards a part. Metastasis. The first word has been applied to the excrements.—Hippocr., Galen.

APOSCEPARNIS'MUS, *Deascia'tio*, from *απο*, and *σκεπαγνον*, 'a hatchet.' Wound of the cranium, by a cutting instrument, in which a piece of the bone has been cut out, as with a hatchet.—Gorræus.

APOS'CHASIS or **APOSCHAS'MOS**, from *αποσχαζω*, 'I scarify.' Scarification. A slight superficial incision in the skin. Also, blood-letting.—Hippocr.

APOS'IA, *Sitis defec'tus*, from *α* privative, and *ποσις*, 'drink,' want of thirst, absence of desire for liquids.

APOSI'TIA, from *απο*, 'from,' and *σιτος*, 'food.' Aversion for food.—Galen.

APOSIT'IC, *Apositicus*; the same etymology. Any substance which destroys the appetite, or suspends hunger.

APOSPAS'MA, from *αποσπαιω*, 'I tear or lacerate.' A solution of continuity, especially of a ligament. *Rhegma ligamenta're*, *Lacera'tio ligamenta'ria*.

APOSPHACEL'ESIS, *Aposphacelis'mus*, from *απο*, and *σφακελος*, 'mortification.' Gangrene in wounds and fractures, owing to the bandages being too tight.—Hippocr.

APOSPHINX'IS, *αποσφιγξις*; constriction, compression. The action of a tight bandage.—Hippocr.

APOSPONGIS'MUS, *αποσπογγισμος*; the act of sponging for any purpose.—Gorræus.

APOSTALAG'MA, and **APOSTAG'MA**, from *απο*, 'from,' and *σταλαζω*, 'I flow.' The ancient name for the saccharine liquor which flows from grapes when not yet pressed.

APOS'TASIS, from *απο*, and *ιστημι*, 'I stop.' The ancients had different significations for this word. It was most commonly used for an abscess. The separation of a fragment of bone by fracture. Removal of disease by some excretion, &c.

APOSTAX'IS, from *αποσταζω*, 'I distil from.' The defluxion of any humour, as of blood from the nose.—Hippocr.

APOSTE'MA, from *απο*, 'from,' and *ιστημι*, 'I settle,' or from *αφιστημι*, 'I recede from.' This word is used, by the ancients, somewhat vaguely. It meant an affection in which

parts, previously in contact, are separated from each other by a fluid collected between them. The moderns regard it as synonymous with *Abscess*. Some, even of the moderns, have applied it to any watery tumour, and even to tumours in general.

APOSTERIG'MA, from ἀποστηρίζω, 'I support.' Any thing that supports a diseased part, as a cushion, a pillow, &c.—Galen. A deep-seated and inveterate disease of the intestines.—Hippocr.

APOSTOLO'RUM UNGUEN'TUM, *Do-decaphar'macum*, *Ointment of the Apostles*. So called, because as many solid ingredients entered into its composition as there were Apostles. It contained several resins and gum resins, yellow wax, oil, vinegar, verdigris, &c., and was formerly employed as a vulnerary.

APOS'TROPHE, from ἀπο, and στρέφω, 'I turn.' An aversion, disgust for food.—Paulus.

APOTELES'MA, from ἀπο, and τελεσμα, 'completion.' The result or termination of a disease.

APOTHE'CA, ἀποθήκη, *Pharmace'um*, from ἀπο, and τίθημι, 'to place.' Any place where things are kept, and therefore 'a shop.' A place where medicines are kept.

APOTH'ECARY, *Apotheca'rius*, *Dispensa'tor*, *Pharmacopo'la*, *Pigmenta'rius*, *Pharmacopœ'us*, *Rhizotomus*, *Myrop'oles*, same derivation. (F) *Apothicaire*, *Pharmacien*, *Pharmacopole*. In every country, except Great Britain, it means one who sells drugs, makes up prescriptions, &c. In addition to these offices, which, indeed, they rarely exercise, except in the case of their own patients, the Apothecaries in England, form a privileged class of practitioners,—a kind of sub-physician.

APOTHECARIES' HALL; the Hall of the Corporation or Society of Apothecaries of London: where medicines are prepared and sold under their direction, &c. This Company obtained a charter of incorporation in the 15th year of James the First. No general practitioner can establish himself in England or Wales without having obtained a license from the Court of Examiners of the Company.

APOTHERAPEI'A, from ἀποθεραπεύω, 'I cure.' A perfect cure.—Hippocr. In the ancient Gymnastics it meant the last part of the exercises:—the friction, inunction, and bathing, for the purpose of obviating fatigue, or curing disease.—Galen, Gorræus.

APOTHER'MUM, a pickle made of mustard, oil, and vinegar.—Galen. From ἀπο, and θέρμην, 'heat.'

APOTH'ESIS, from ἀποτίθημι, 'I replace.' The position proper to be given to a fractured limb, after reduction.

APOTHICAIRERIE (F), from ἀποθήκη, 'warehouse, shop.' The same as *Apotheca*; also, a gallipot.

APOTHLIM'MA, from ἀπο, and θλίβω, 'I press from.' Anciently, the dregs, and sometimes the expressed juice of plants.—Gorræus.

APOTHRAU'SIS, from ἀποθραύω, 'I break.' Fracture of a bone, with spicula remaining. Also, extraction of a spiculum of bone.—Gorræus.

APOT'OKOS, from ἀπο, and τικτω, 'I bring forth.' An abortive foetus.—Hippocr.

APPARA'TUS, *Parasceue*, from παρα're, 'to prepare.' This word signifies,—a collection of instruments, &c. for any operation whatever. (F) *Appareil*.

In surgery it means the methodical arrangement of all the instruments and objects, necessary for an operation or dressing. By extension, the French give the name *Appareil*, *capsa chirurgica*, to the case or drawers, in which the apparatus is arranged.

Apparatus has likewise been applied to the different modes of operating for the stone.—See Lithotomy.

In *Physiology*, *Apparatus* (*Appareil*) is applied to a collection of organs, all of which work towards the same end. A *system of organs* comprehends all those formed of a similar texture. An *apparatus* often comprehends organs of very different nature. In the former there is analogy of structure; in the latter, analogy of functions.

APPAREILS DE FORMATION (F). Gall admits, in the brain, two kinds of fibres: the one, divergent, and proceeding from the cerebral peduncles to the convolutions, and constituting what he calls *appareils de formation*: the other, convergent, and proceeding from the convolutions to the centre of the organ, constituting what he calls *appareils de réunion*. The first, as a whole, form the organs of the mental faculties: the latter are commissures, which unite parts of the organ that are double and in pairs.

APPEN'DIX, ἐπιφύσις, from ἀπεν'dere, 'to hang from.' Any part that adheres to an organ, or is continuous with it:—seeming as if added to it. An *appendage*. (F) *Appendice*, *Annexe*.

APPEN'DIX OF APPENDIC'ULA VERMIFORMIS CÆCI, *Ec'phyas*, ἐκφυας, *Additamentum Coli*, *Appen'dix Cæci*. (F) *Appendice vermiform*, *A. cæcal ou digital*. A vermicular process, the size of a goose-quill, which hangs from the intestinum cæcum. Its functions are unknown.

APPENDIC'ULÆ EPIPLOICÆ, *Appen'dices coli adipo'sæ*. (F) *Appendices Epiploïques*. Prolongations of the peritoneum beyond the surface of the great intestine, which are analogous in texture and arrangement to omenta.

APPETENCE, *Appeten'tia*, from ἀπ'petere, 'to desire.' An ardent, passionate desire for any object.

APPETITE, *Appeti'tus*, *Appeten'tia*, *Appeti'tia*, *Cupi'do*, *Orex'is*, *Ormē*, same etymology as the last. An internal sensation,

which warns us of the necessity of exerting certain functions, especially those of digestion and generation. In the latter case it is called *venereal appetite*, (F) *Appetit vénérien*: in the former, simply *appetite*, (F) *Appetit ou appetition*. If the desire for food, occasioned by a real want, be carried to a certain extent, it is called *hunger*, when solid food is concerned; *thirst*, when liquid. *Appetite* and *hunger* ought not, however, to be employed synonymously: they are different degrees of the same want. Hunger is an imperious desire: it cannot be provoked, like the appetite. It is always allayed by eating: but not so the appetite; for, at times, it may be excited in this manner. They are very generally, however, used synonymously.

APPLICA'TA, from *applica're*, 'to apply.' A word, unnecessarily introduced into medical language, to express the objects which are applied immediately to the surface of the body, as clothes, cosmetics, baths, &c.—Hallé.

APPLICA'TION, *Applica'tio*, in a moral signification, is synonymous with Attention. The act of applying one thing to another; as the A. of an apparatus, of a bandage, blister, &c.

APPREHEN'SIO. This word is employed in various senses. It means catalepsy or catochia.—Paul Zacchias. A kind of bandage for securing any part. Also, a therapeutical indication.

APPROXIMA'TION, *Approxima'tio*. Ettmüller gave this name to a pretended method of curing disease, by making it pass from man into some animal or vegetable, by the aid of immediate contact.

APRAC'T, from α priv. and $\pi\rho\alpha\sigma\sigma\alpha$, 'I act.' Without action. An epithet for the parts of generation, when unfit for copulation or generation.

APROSOP'IA, from α priv. and $\pi\rho\sigma\omega\pi\omicron\nu$, 'the face.' A malformation, which consists in the face being deficient.

APSINTHA'TUM, from $\alpha\psi\iota\nu\theta\iota\omicron\nu$, 'wormwood.' A sort of drink made of wormwood.—Aëtius.

APTYS'TOS, from α priv. and $\pi\tau\upsilon\omega$, 'I spit.' Devoid of expectoration. An epithet given to certain pleurisies, in which there is no expectoration.—Hippocr.

APYE'TOS, from α priv. and $\pi\upsilon\omicron\nu$, 'pus.' An external affection, which does not end in suppuration.

AP'YOS, from α priv. and $\pi\upsilon\omicron\nu$, 'pus,' (F) *Apyique*. That which does not afford pus.

APYRET'IC, *Apyret'icus*, from α priv. and $\pi\upsilon\varsigma$, 'fire, fever.' Without fever. This epithet is given to days in which there is no paroxysm of a disease; as in the case of an intermittent; as well as to some local affections which do not induce fever. Urticaria is sometimes called an *apyretic exanthem*.

APYREX'IA, the same etymology. Absence of fever: *Dialeim'ma*, *Intermis'sio*.

Apyrexia is the condition of an intermittent fever between the paroxysms: the duration of the apyrexia, consequently, depends on the type of the intermittent. Occasionally, the term has been applied to the cessation of the febrile condition in acute diseases.

APYROME'LE or **APYRENOME'LE**, from α priv. $\pi\upsilon\gamma\eta\nu$, 'a nut,' and $\mu\eta\lambda\eta$, 'a sound.' A sound or probe, without a button or nut. It is the *Melo'tis*, *Specil'lum auricula'rium* or *auricular sound* of Galen.

AQUA BINELLII, *Acqua Binelli*. A celebrated Italian hæmostatic, invented by one Binelli. Its composition is unknown, but its virtues have been ascribed to creosote; although there is reason for believing it to possess no more activity than cold water.

AQUÆ DISTILLA'TÆ, *Distilled Waters*. These are made by putting vegetable substances, as roses, mint, pennyroyal, &c. into a still with water, and drawing off as much as is found to possess the aromatic properties of the plant. To every gallon of the distilled water, 5 oz. of spirit should be added to preserve it. The *simple distilled waters* are sometimes called *Aquæ stillatit'ie simplices*: the *spirituous*, *Aquæ stillatit'ie spirituosæ*, but more commonly *Spir'itus*.

AQ'UÆDUCT, *Aquæduc'tus*, (F) *Aqueduc*. Properly, a canal for conducting water from one place to another. Anatomists have used it to designate certain canals.

AQUÆDUCTUS FALLO'PII, *Canal spiroïde de l'os temporal*, of Chaussier, *Aqueduc de Fallope*. A canal in the pars petrosa of the temporal bone, which extends from the meatus auditorius internus to the foramen stylo-mastoïdeum, and gives passage to the facial nerve. The opening into this aqueduct is called the *Hia'tus Fallo'pii*.

AQUÆDUCTUS VESTIBULI or *Aquæductus Cotun'nii*, (F) *Aqueduc du vestibule* and *Aqueduc de Cotugno*. This begins in the vestibule, near the common orifice of the two semicircular canals, and opens at the posterior surface of the *pars petrosa*.

AQUÆDUCTUS COCH'LEÆ, (F) *Aqueduc du Limaçon*;—a very narrow canal, which proceeds from the tympanic scala of the cochlea, to the posterior edge of the *pars petrosa*.

AQUÆDUCTUS SYL'VII, *Aqueduc de Sylvius*, *Iter ad quartum ventric'ulum*, *Canalis medius*, *Canal intermédiaire des ventricules* of Chaussier. A canal forming a communication between the third and fourth ventricles of the brain.

AQUALIC'ULUS. That part of the abdomen, which extends from the umbilicus to the pubes. See Hypogastrium. It has also been applied to the stomach or intestinal canal.

AQUAS'TER. A word used, by Paracelsus, to express the visions or hallucinations of patients.

A'QUEOUS, *Aqu'osus*, 'watery,' *Hydato'*.

des, Hydro'des, from *aqua*, 'water,' (F) *Aqueux*.

The absorbents or lymphatics are sometimes called, in France, *Conduits ou canaux aqueux*.

AQUEOUS HUMOUR OF THE EYE, *Humor aquo'sus*, the *Albugineous humour*, *Oœi'des*, *ωοιδης*, *Hydaloï'des*, *ὕδατοςιδης*, *Ova'tus* or *Ovifor'mis humor*, (F) *Humeur aqueuse*. The limpid fluid, which fills the two chambers of the eye, from the cornea to the crystalline, and which is, consequently, in contact with the two surfaces of the iris. Quantity, 5 or 6 grains: s. g. 1.0003. It contains gelatine, albumen, muriate of soda, and phosphate of lime in small quantity; and is enveloped in a fine membrane:—the membrane of the aqueous humour—the *Tunica propria seu Vagina humo'ris a'quei*, *Demuria'na membra'na*.

AQ'UILA. The alchemists used this word for sublimed sal ammoniac, precipitated mercury, arsenic, sulphur, and the philosopher's stone.

AQ'UILA CŒLESTIS; a sort of panacea, of which mercury was a constituent.

AQ'UILA LACH'RYMÆ; a liquid prepared from several ingredients, especially from calomel.

AQ'UILA PHILOSOPHO'RUM; the alchemists, whose terms were always mysterious, called mercury thus, when reduced to its original form.

AQ'UILA VEN'ERIS; an ancient preparation, made by subliming verdigris and sal ammoniac.

AQUILE'GIA VULGA'RIS, *Common Colombine*, (F) *Ancolie*. The seeds, herb, and flowers were formerly used in jaundice and cutaneous diseases. They are still retained in many of the Pharmacopœias of continental Europe.

ARA PARVA, a small altar;—a kind of bandage invented by Sostratus, which represents the corners of an altar.—Galen.

AR'ABE; a wound, a blow.—Erotian.

ARAB'ICA ANTID'OTUS HEPAT'ICA, *Arabie Hepat'ic An'tidote*. A powder, composed of myrrh, costus, white pepper, &c. It was administered in new wine.

ARAB'ICUS LAPIS. A sort of white marble, found in Arabia and analogous to alabaster. It was regarded as an absorbent and desiccative, and was employed in hæmorrhoids.

AR'ABIS MALAG'MA. An antiscrophulous medicine, composed of myrrh, olibanum, wax, sal ammoniac, iron pyrites, &c.—Celsus.

AR'ABS, MEDICINE OF THE. The Arabians kept the torch of medical science illuminated, during a dark period of the middle ages. Before the year of the Hegira, they had Schools of Medicine; but these were most flourishing during the 10th, 11th, and 12th centuries. The chief additions,

made by them to medical science, occurred in the departments of pharmacy and in the description of diseases. Their principal writers were Avicenna, Serapion, Averrhoes, Hali Abbas, Moses Maimonides, Avenzoar, Rhazes, Albucasis, &c.

ARACH'NE, *αραχνη*, 'a spider, a cobweb.' Hence—

ARACHNI'TIS or ARACHNOIDI'TIS, *Inflammation of the Arachnoid*. A variety of phrenitis; which see.

ARACH'NOID MEM'BRANE, *Meninx Me'dia*, *Arachnoïdeus*, *Arachno'des*, from *αραχνη*, 'a cobweb,' and *ειδος*, 'form, resemblance.' *Tu'nica ara'nea*, *Tu'nica arachno'des*, *Menin'gion*. A name given to several membranes, which, by their extreme thinness, resemble spider-webs.—Celsus and Galen called thus the membrane of the vitreous humour,—the *tunica hyaloidea*. The moderns use it now for one of the membranes of the brain, situate between the dura mater and pia mater. It is a serous membrane, and composed of two layers; the *external* being confounded, in the greater part of its extent, with the dura mater, and, like it, lining the interior of the cranium and spinal canal: the *other* being extended over the brain, from which it is separated by the pia mater, without passing into the sinuosities between the convolutions, and penetrating into the interior of the brain by an opening at its posterior part under the corpus callosum. It forms a part of the investing sheath of the nerves, as they pass from the encephalic cavities. Its chief uses seem to be;—to envelope, and, in some measure, protect the brain, and to secrete a fluid for the purpose of keeping it in a state best adapted for the proper performance of its functions.

ARACK', *Arrack'*; Indian. A spirituous liquor made in India in various ways, often from rice, sometimes from sugar, fermented along with the juice of the cocoa nut: frequently from toddy, the juice which flows from the cocoa nut tree by incision, and from other substances. It is a strong, heating spirit.

MOCK ARACK is made by adding ʒij of *Benzoic acid* to a quart of rum. The celebrated Vauxhall punch is made with such arack.

AR'ADOS, from *αγαδω*, 'I am turbulent.' The agitation excited in the stomach by the coction of aliments of different nature.—Hippocr. Likewise, the motion produced by cathartics.

ARÆOT'ICA, from *αραιω*, 'I rarefy.' A medicine supposed to have the quality of rarefying the humours.

ARA'LIA NUDICAULIS, *False Sarsaparil'la*. This American plant is said to be a mild stimulant and diaphoretic, and has been recommended as a substitute for the sarsaparilla. It is used, also, as a tonic. In the secondary list, Pharm. United States.

ARA'LIA SPINO'SA, *Angelica Tree*, *Prickly Ash*, *Toothache Tree*. Its properties are not clear. The berries and a tincture of them have been employed, it is said, successfully in *toothache*. A spirituous infusion has also been used in colic.

ARA'NEI TELA, *Cobweb*, (F) *Toile d'Araignée*. Formerly, this substance was much employed, and supposed to possess extraordinary virtues, especially when applied to the wrists. It has been recently used again in intermittents. It is a mechanical styptic, and is so applied, externally, at times.

ARANEO'SA URI'NA; a term applied to the urine when loaded with filaments, like cobwebs.

ARANEO'SUS PULSUS; a term employed to express extreme weakness of pulse; when the movements resemble those of a delicate net raised by the wind.

ARA'NEUM ULCUS, *Astakil'los*. A name given by Paracelsus to a malignant, gangrenous ulcer, extending from the feet to the legs.

ARBOR VITÆ, (F) *Arbre de vie*. A name given to an arborescent appearance, observed on cutting the cerebellum longitudinally; and which results from the particular arrangement of the white substance with the cineritious.

AR'BORES. A morbid alteration of the skin, which precedes its ulceration.—Ruland.

AR'BUTUS UVA URSI, *Arctostaph'ylos*, *Uva Ursi Fo'lia*. *Nat. Ord.* Ericææ, *Sex. Syst.* Decandria Monogynia, (F) *Busserolle* ou *Raisin d'Ours*. The leaves of this plant are tonic and astringent, and have been employed, chiefly, in diseases of the urinary organs. Dose of powder from gr. xv to 3 ss. The English name is *Bear's Whortleberry*.

The AR'BUTUS UNE'DO, *Andrach'ne*, *Une'do*, *Une'do papyra'cea*, *κομαρος*, (F) *Arbousier*. A decoction of the leaves is astringent, and has been used in diarrhœa.

ARC or ARCH, *Arcus*. Any part of the body resembling an arch in form; as the *Arch of the colon*, (F) *Arc du colon*;—the transverse portion of that intestine:—*Arch of the aorta*, *Ar'cus aor'tæ*, (F) *Crosse de l'Aorte*, &c. the turn which the aorta takes in the thorax.

An ANASTOMOTIC ARCH, (F) *Arcade anastomotique*, is the union of two vessels, which anastomose by describing a curved line. The vessels of the mesentery anastomose in this manner.

ARCHES OF THE PALATE. These are two in number on each side of the throat, one of which is termed *anterior*, the other *posterior*.

The *anterior arch* arises from the middle of the velum palati, at the side of the uvula, and is fixed to the edge of the base of the tongue.

The *posterior arch* has its origin, likewise,

from the side of the uvula, and passes downwards to be inserted into the side of the pharynx.

The anterior arch contains the circumflexus palati, and forms the isthmus faucium. The posterior arch has, within it, the levator palati: and between the arches are the tonsils.

ARCÆUS or ARCÆUS, BALSAM OF. (F) *Baume d'Arcæus*. A kind of soft ointment used in sores, contusions, &c. It is made by melting two parts of mutton suet, one part of hog's lard: of turpentine and rosin, each one part and a half: straining and agitating till cold.

ARCA'NUM, from *ar'ca*, 'a chest.' A secret, a *nostrum*, (F) *Arcane*. A remedy whose composition is kept secret; but which is reputed to possess great efficacy.

ARCHÆUS, *Archeus*, from *αρχη*, 'commencement,' (F) *Archée*. A word, invented by Basil Valentine, and afterwards adopted by Paracelsus and Van Helmont. The latter used it for the internal principle of our motions and actions. This archæus, according to Van Helmont, is an immaterial principle, existing in the seed, prior to fecundation, and presiding over the developement of the body, and over all organic phenomena. Besides this chief archæus, whose seat Van Helmont placed in the upper orifice of the stomach, he admitted several of a subordinate character, which had to execute its orders: one, for instance, in each organ, to preside over its functions: each of them being subject to anger, caprice, error, and every human failing.

ARCHE, *αρχη*, *Initium*, *Princip'ium*, *Inva'sio*; the first attack of a disorder.

ARCHELO'GIA, from *αρχη*, 'beginning,' and *λογος*, 'a discourse.' A treatise on the fundamental principles of Medicine.

ARCHEN'DA. A powder of the leaves of the *ligustrum*, used, by the Ægyptians, after bathing, to obviate the unpleasant odour of the feet.—Prosper Alpinus.

ARCHIA'TER; *Protomed'icus*, *Protiatros*, from *αρχη*, 'authority,' and *ιατρος*, 'physician.' The original signification of this word is a matter of dispute. Some consider, with Mercurialis, that it meant physician to a prince, king, emperor, &c.; others, with C. Hoffmann, apply it to every physician who, by his situation, is raised above his colleagues. The former opinion seems to have prevailed,—*Archiatre des Rois de France*, being applied to the chief physician to the king.

ARCHIG'ENI MOR'BI. Acute diseases; because they hold the first rank: from *αρχη*, 'beginning,' and *γινωμαι*, 'I am.'

ARCHINGEAY, MINERAL WATERS OF. Archingeay is situate in France, three leagues from St. Jean d'Angely. The waters are prized in all diseases. They seem to contain carbonate of lime, a little muriate of soda, carbonate of iron, and some bitumen.

ARCHORRHA'GIA, from *αρχος*, 'the anus,' and *ῥεω*, 'I flow.' Hemorrhage from the anus. *Archorrhœa*.

ARCTA'TIO and **ARCTITU'DO**, from *arcto*, 'I make narrow.' Contraction of a natural opening or of a canal, and especially of the vulva; of the orifice of the uterus, or of the intestinal canal. Constipation. Reunion by suture or infibulation.—Scribonius Largus, Paul Zacchias, &c.

ARCTIUM LAPPA. The root and seed; the *Clit-bur*, *Barda'na*, *Arctium*, *Flaphis*, *Lappa glabra*, *Lappa major*, *L. persona'ta*, *Burdock*, (F) *Bardane*, *Glouteron*. *Nat. Ord.* Compositæ, *Sex. Syst.* Syngenesia æqualis. *Root* diuretic, *seed* cathartic. It has been used in decoction in diseases of the skin and in syphilis.

ARCTU'RA, from *arcto*, 'I straiten.' The effects of a nail grown into the flesh, *Arctu'ra ung'uis*.—Linnaeus.

ARCUA'TIO. An anterior gibbosity or projection of the sternum. *Concava'tio*.

ARCUEIL, WATERS OF. Arcueil is about one league south of Paris. The water contains carbonic acid, carbonate of lime, sulphate of lime, muriate of soda, and some deliquescent salts.

A celebrated society held its meetings at this village, of which Berthollet, Humboldt, La Place, &c. were members.

AR'CULÆ. The Orbital Fossæ: *πρωλιδες*.—Rufus of Ephesus.

AR'CULUS. A small arch; a cradle. (F) *Arceau*, *Archet*. A semicircular box or basket used for preventing the coverings of the body from coming in contact with injured or diseased parts. An ordinance of the Grand Duke of Tuscany forbade mothers to sleep with an infant near them, unless it was put under a solid cradle.

ARDENT. *Ardens*, from *ar'dere*, 'to burn.' *Ardent Fever*, (F) *Fièvre ardent*. The *Causus*, *Synocha*, or inflammatory fever.

Mal des ardens, a name given to a species of pestilential erysipelas, or *Saint Anthony's Fire*, which reigned epidemically in France in 1130.

Ardent eyes, (F) *Yeux ardents*, or inflamed; so called when they are injected, red.

Ardent urine, (F) *Urines ardentes*; when it is of a deep red, &c.

AR'DOR, (F) *Ardeur*. A feeling of burning, of violent heat. *Æst'us*, *Æstua'tio*, *Causo'ma*.

ARDOR URI'NÆ, (F) *Ardeur d'Urine*, a scalding sensation occasioned by the urine in passing over the inflamed mucous membrane of the urethra, or over the neck of the bladder.

ARDOR FEBRI'LIS, (F) *Ardeur de la Fièvre*, the hot period of fever.

ARDOR VENTRIC'ULI, (F) *Ardeur d'Estomac*, *Heartburn*. See *Cardialgia*.

A'REA. A Latin word, used by some authors to designate a variety of Alopecia, in which the hair changes colour, but does not fall off.

ARE'CA. The fruit of the *Are'ca Cat'echu*, *Caun'ga*. *Nat. Ord.* Palmæ, *Sex. Syst.* Monœcia Monadelphia. (F) *Arec*, is astringent and tonic, and enters into the composition of the *Betel*, the great masticatory of Orientals.

AREFAC'TION, *Arefac'tio*, *ξηγανσις*, from *arefacere*, 'to make dry.' The process of drying substances, prior to pulverization.

ARENA'TIO, *Sand* or *Earth Bath*, from *are'na*, 'sand.' *Saburratio*. The application of hot sand to the body of a patient, instead of placing him in a water-bath. *Pedilu'via* of sand were formerly used in Ascites.

ARENO'SA URI'NA. *Sandy Urine*. Urine when it deposits a sandy sediment. The person, passing such urine, has been called *Arenosus*.

ARE'OLA. A diminutive of *A'rea*. Anatomists understand, by *Areolæ*, the interstices between the fibres composing organs; or those existing between laminæ, or between vessels which interlace with each other.

Areola is, also, applied to the coloured circle or *Halo*, which surrounds the nipple; and which becomes much darker during pregnancy, as well as to the circle surrounding certain vesicles, pustules, &c.; as the pustules of the small-pox, the vaccine vesicle, &c. Chaussier, in such cases, recommends the word *Aurè'ola*. (F) *Auréole*, *Aire*.

AREOLAR, *Areola'ris*, appertaining to an areola.

AREOLAR EXHALATIONS are those recremental secretions, which are effected within the organs of sense, or in parenchymatous structures,—as the aqueous, crystalline and vitreous humours, &c.

AREOM'ETER, *Areom'etrum*, *Gravim'eter*. *Alcoölom'eter*, *Aërostat'ic Bal'ance*, from *αἶστος*, 'light,' and *μετρον*, 'measure:' i. e. *measure of lightness*. An instrument, so called, because first employed to take the specific gravity of fluids lighter than water. The *Areometer of Beaumé*, which is the most used in Pharmacy, particularly in France, consists of a tube of glass, largely expanded towards its inferior extremity, and terminating, below, by a small ball, containing mercury or lead, which serves it as a balance, so that it may remain upright in the fluid. This tube is furnished with a graduated scale. If the fluid, into which the Areometer is plunged, be heavier than water, the instrument rises: if lighter, it sinks. There are various Areometers, as those of the Dutch, of Fahrenheit, Nicholson, &c. The Areometer is also called *Hydrom'eter*, (F) *Aréomètre*, *Pèse-li-queur*.

SCALE OF THE AREOMETER WITH CORRESPONDING SPECIFIC GRAVITIES.

1. *Ascending Scale for light liquids.*
(Beaumé.)

Scale of Beaumé.	Specific Gravities.	Substances.
	700	Pure hydrocyanic acid.— <i>Gay Lussac.</i>
66	715	Very pure sulphuric ether.
60	742	The same concentrated.
50	782	
48	792	Equal parts of alcohol, and ether.
42	819	Very pure alcohol for pharmaceutical purposes.
40	827	
36	847	Pure alcohol. Naphtha.
33	863	Alcohol of commerce.
32	868	Essential oil of turpentine.
30	878	
	900	Hydrocyanic acid of Scheele and pure hydrocyanic acid, mixed with an equal portion of water. (<i>Robiquet.</i>)
25	906	
23	915	Acetic ether.
		Nitric ether.
Id.	Id.	Muriatic ether.
22	923	Liquid ammonia.
		Olive oil.
Id.	Id.	
20	935	Brandy.
18	948	
13	980	Burgundy wine.
12	986	
11	993	Bordeaux wine.
10	1000	Distilled water.

2. *Descending Scale for heavy liquids.*
(Dutch.)

Scale of Beaumé.	Specific Gravities.	Substances.
0	1000	Common distilled water.
1	1007	
	1009	Distilled vinegar.
2	1014	Common vinegar.
5		
4	1032	Cow's milk.
10	1075	
12	1091	Concentrated acetic acid.
20	1161	
21	1180	
25	1210	Liquid hydrochloric acid.
30	1261	Boiling syrup.
35	1321	Cold syrup.
		Common nitric acid.
40	1384	
41	1398	Concentrated nitric acid.
45	1454	
Id.	Id.	Phosphoric acid for medical use.
50	1532	
60	1714	
66	1847	Very concentrated sulphuric acid.
70	1946	Very concentrated phosphoric acid.

ARES; a term, invented by Paracelsus to designate the principle on which depends the form of mercury, sulphur, and salt. These the Alchymists regarded as the three bodies that give birth to every other.

AR'ETE, ἀρετή, 'virtue.' Mental or corporeal vigour.—Hippocrates.

AREUS. A pessary, mentioned by Paulus of Aegina.

AR'GEMA and AR'GEMON, from ἀργός,

'white.' *Fos'sula*, (F) *Encavure*; a white spot or ulceration of the eye.—Hippocr. See Leucoma.

ARGEMONE MEXICANA, *Thorn Poppy*. A native of Mexico, but naturalized in most parts of the world. *Nat. Ord.* Papaveraceæ. *Sex. Syst.* Polyandria Monogynia. The juice resembles gamboge, and has been used as a hydragogue. The seeds are employed in the West Indies as a substitute for Ipecacuanha. They are also used as a cathartic.

ARGENSON, MINERAL WATERS OF. A chalybeate situate at Argenson in Dauphiny: used in cases of obstruction, jaundice, &c.

ARGEN'TUM, *Ar'gyrus*, from ἀργός, 'white.' *Silver*, *Luna*, (F) *Argent*. A solid metal, of a shining, white appearance; insipid; inodorous; highly sonorous; malleable and ductile; somewhat hard; crystallizable in triangular pyramids; fusible a little above a red heat, and volatilizable. Not used at all in Medicine, unless in some places for silvering pills. *SILVER LEAF*, *Argen'tum folia'tum*, is the state in which it is used for this purpose.

The *argentum divi'sum*, or metallic silver in very fine powder has been recommended internally in syphilis.

ARGEN'TI NITRAS, *Argen'tum Nitra'tum*, *Sal argen'ti*, *Argentum Nit'ricum*, *Nitrate of Silver*. This preparation is sometimes kept in crystals, the *Nitras Argen'ti in crystal'los concre'tus*, *Nitrate d'Argent cristallisé* of the Codex of Paris, *Crystalli Lunæ*, *Argen'tum nit'ricum crystallisa'tum*, *Ni'tras argen'ti crystal'linus*, *Ni'trum luna're*, *Hydragogum*, *BOY'LEI*. Generally, however, it is in the fused state: and it is this which is admitted into most Pharmacopœias; and which, besides the name *Nitras Argenti*, is called, *Ni'tras argen'ti fu'sus*, *Caus'ticum luna're*, *Lapis inferna'lis*, *Argen'tum nit'ricum fu'sum*, and *lunar caustic*. (F) *Nitrate d'argent fondu*, *Pierre infernale*.

The *virtues* of Nitrate of Silver, are tonic, and escharotic. It is given in chorea, epilepsy, &c.; locally, it is used in various cases as an escharotic. Dose, gr. 1-8 to gr. 1-4 in pill, three times a day.

The CHLORIDE, CYANIDE and IODIDE OF SILVER, the *Oxide* and the *Chloride of Ammonia* and *Silver*, have been used in Syphilis. At first, these different preparations were administered iatroleptically on the gums; the chloride, the cyanide and the iodide in the dose of 1-12th of a grain; the chloride of silver and ammonia in the dose of 1-14th of a grain, and the oxide of silver and the divided silver in the dose of 1-8th and 1-4th of a grain. M. Serre, of Montpellier, who made many trials with them, soon found that these doses were too small, he therefore raised that of the chloride to 1-10th, and of the iodide to 1-8th of a grain, without any inconvenience resulting. The dose of the other preparations

was likewise increased in a similar ratio. M. Serre extols the preparations of silver, used internally, as well as iatroleptically, as antisyphilitics.

ARGILLA PURA, *Terra Aluminis*, *T. bolaris seu argilla'cea pura*, pure Argil or Alumina, Alumine factice. This substance, which is prepared by drying alum and exposing it, for twenty or twenty-five minutes to a red heat, until the sulphuric acid is driven off, has been recommended in indigestion as antacid, as well as in vomiting and diarrhœa accompanied with acidity. The dose to a very young child is from ʒss to ʒj; for older children from ʒj to ʒij.

ARGYROPH'ORA, from *αργυρος*, 'silver,' and *φωρα*, 'I bear.' A name given, by Myrepsus, to an antidote which he regarded as extremely precious.

ARHEUMATIC, *Arheumaticus*, *αρευματιστος*, from *α* privative, and *ρευμα*, 'fluxion, rheumatism.' One without fluxion or rheumatism.

ARIC'YMON, *αρικυμων*. A name given to women who conceive readily.—Hippocr.

ARIDE'NA. A Latin word, employed to designate the leanness of any part.—Ettmuller, Sauvages.

ARID'ITY, *Ariditas*. (F) *Aridité*. The French use the word *Aridité* to express the dryness of any organ, and particularly of the skin and tongue, when such dryness is so great as to render the organ rough to the touch. *Aridité*, also, means the lanuginous appearance of the hair in some diseases, in which they seem covered with dust. *ξηρασία*.

ARIDU'RA. Wasting or emaciation of the whole or any part of the body.—Marasmus, Atrophy, (q. v.)

ARISTOLOCHI'A, from *αριστος*, 'very good,' and *λοχεια*, 'parturition;' so called, because the different varieties were supposed to aid parturition. *Birthwort*. (F) *Aristolochie*. Several varieties were once in use.

ARISTOLOCHI'A CLEMAT'IS, *Aristolochi'a Vulga'ris*, *Adra Riza*, *Aristolochi'a ten'uis*, (F) *Aristolochie ordinaire*, *Upright Birthwort*.

The root has been considered stimulant and emmenagogue, and as such has been used in amenorrhœa, chlorosis, and cachexia.

ARISTOLOCHI'A LONGA and **A. ROTUN'DA**, (F) *Aristolochie longue et ronde*, *Long and round Birthwort*. Virtues the same as the preceding.

ARISTOLOCHI'A PISTOLOCHI'A, *Pistolochi'a*, *Aristolochi'a polyrrhi'za*. This variety has an aromatic odour, and an acrid and bitter taste. (F) *Aristolochie crénelée*.

ARISTOLOCHI'A SERPENTA'RIA, *Serpenta'ria*, *Vipera'ria*, *Viperi'na Virginia'na*, *Colubri'na Virginia'na*, *Contrayer'va Virginia'na*, *Coluvrine de Virginie*, *S. Virginia'na*, (F) *Serpentaire* and *Aristolochie serpentaire de Virginie*, *Virginia Snake Root*. Virtues—tonic, stimulant; and, as such, em-

ployed in debility, intermittents, &c. The other varieties of *Aristolochia* have similar properties.

ARISTOLOCHI'A TRILOBATA. (F) *Aristolochie trilobée*. A plant of Surinam and Jamaica: possessing the general virtues of the *Aristolochiæ*.

ARISTOLOCH'IC, same etymology. An old term for remedies supposed to have the property of promoting the flow of the Lochia.—Hippocr., Theophrastus, Dioscorides, &c.

ARIS'TON MAGNUM and **ARIS'TON PARVUM**. These names were formerly given to pharmaceutical preparations, used in phthisis, tormina, and fever.—Avicenna.

ARISTOPHANEI'ON. A sort of emollient plaster, prepared with four pounds of pitch, two of *apochyma*, one of wax, an ounce of opoponax, and half a pint of vinegar.—Gorræus. Not used.

ARKANSAS', MINERAL WATERS OF. About 5 miles from the Washita river, and about a quarter of a degree north of the Louisiana line, there are 70 of those springs. They are thermal, and upwards of 150° Fahrenheit, and are employed in rheumatism, cutaneous affections, &c.

ARME, from *αρω*, 'I adapt;' *αρμη*. Any physiological or mechanical junction or union of parts.—Hesychius. The sutures of the cranium.—Galen.

ARMENIACA MALUS. The A'pricot. See *Prunus*.

ARNICA MONTA'NA. Derivation uncertain. *Arnica*, *Leopard's Bane*, *Doron'icum German'icum*, *Alis'ma*, *Acyrus*, *Diuret'ica*, *Arnica Plauen'sis*, *Panace'a lapsorum*, *Ptar'mica monta'na*, *Caltha seu Calen'dula Alpi'na*. (F) *Arnique*, *Bétoine des Montagnes*, *Tabac des Vosges*. *Sex. Syst.* Syngenesia, Polygamia superflua. *Nat. Ord.* Synantheræ. The plant and flower are considered, or have been considered, narcotic, stimulant, emmenagogue, &c.; and, as such, have been given in amaurosis, paralysis, all nervous affections, rheumatism, gout, chlorosis, &c. Dose, gr. v to x in powder. In large doses it is deleterious.

AROMA, *αρωμα*, 'perfume:' *Spir'itus Rector*. (F) *Arôme*. The odorous part of plants: an emanation—frequently imponderable—from bodies, which acts on the organ of smell, and varies with the body exhaling it.

AROMATIC, *Aromat'icus*, (F) *Aromate*. Any odoriferous substance obtained from the vegetable kingdom, which contains much volatile oil, or a light and expansible resin. Aromatics are used in perfumes, in seasoning, and embalming. In Medicine they are employed as stimulants. Ginger, cinnamon, cardamoms, mint, &c., belong to this class.

AROMATOPO'LA, from *αρωμα*, 'an odour,' and *πωλειν*, 'I sell.' An apothecary or druggist. One who sells spices.

AROPH. A barbarous word, which had various significations with the ancients. Paracelsus employed it to designate a lithontriptic remedy. The Mandragore, according to some:—Also, a mixture of bread, saffron and wine.—Helmont.

ARQUEBUSADE, Eau d', *Aqua traumatica Thedénii*, *Aqua Thedia'na*, *Aqua sclopetaria*, *Aqua vulneraria*, *Aqua catapulta'rum*, *Mistu'ra vulneraria ac'ida*. A sort of vulnerary water, distilled from a farrago of aromatic plants. (Rosemary ℥ iss, millefoil, thyme, each ℥ ss. Proof spirit 2 gallons—distil a gallon.) This is one form.

ARRACHEMENT (F) from *arracher*, 'to tear out,' *Apospas'ma*, *Abruptio*, *Avulsio*. Act of separating a part of the body by tearing it from the bonds connecting it with others.

Arrachement, is applied to certain operations, as to the extraction of a tooth, the extirpation of a polypus, &c.

AR'RAPHON or **AR'RABON**, from α priv. and ῥαφα, 'a suture,' 'without suture.' A term applied to the cranium when it presents no sutures.

ARRHŒA, from α priv. and ῥεω, 'I flow.' The suppression of any flux.

ARRIERE-GOUT (F), 'after-taste.' The taste left by certain bodies in the mouth for some time after they have been swallowed, owing probably to the papillæ of the mouth having imbibed the savoury substance.

ARROW ROOT. The fecula of the *Maranta Arundinacea*, *Fec'ula Marantæ*, which, like all feculæ, is emollient and nutritive, when prepared with water or milk.

ARSENAL (F), *Chirapotheca*, *Armamentarium*. A collection of surgical instruments. A work containing a description of surgical instruments.

ARSENIATE, *Arse'nias*. A salt formed by a combination of arsenic acid with a salifiable base.

ARSENIATE OF AMMONIA, *Arse'nias Ammoniacæ*, *Ammonium Arsenicum*, (F) *Arse'niatè d'Ammoniaque*. This preparation is highly extolled in cutaneous diseases. A grain of the salt may be dissolved in an ounce of distilled water, and 20 to 25 drops be commenced with as a dose.

ARSENIATE OF IRON, *Arse'nias Ferri*, *Ferum Arseniatum*, (F) *Arsenicum oxydulum*, (F) *Arseniate de Fer*. This preparation has been applied externally to cancerous ulcers. An ointment may be made of 3 ss of the arseniate, 3 ij of the phosphate of iron and 3 vj of spermaceti ointment: the arseniate has also been given internally in cancerous affections, in the dose of one-sixteenth of a grain.

ARSENIATE of Protoxide of Potassium, *Proto-arseniate of Potassium*, *Arse'niatè of Potass*, *Arse'nias Potassæ*, *Arse'nias Kali*. Properties the same as those of the Arsenious Acid.

ARSENIC, *Arsenicum*. A solid metal; of a steel-gray colour; granular texture; very brittle; volatilizing before melting; very combustible and acidifiable. It is not dangerous of itself, and only becomes so, by virtue of the facility with which it absorbs oxygen.

ARSENIC, IODIDE OF, *Arsen'ici Iodidum*, *A. Ioduratum*, *Arsenicum Iodatum*. This preparation has been highly extolled by Bielt in various cutaneous affections, applied externally. The ointment he uses contains 3 grains of iodide to 3 j of lard.

ARSENICAL PASTE, (F) *Pâte Arsénicale*. This application to cancers is formed of 70 parts of cinnabar, 22 of dragon's blood, and 8 of arsenious acid; made into a paste with saliva, when about to be applied.

ARSENIUS ACID; *White Arsenic*, *Oxide of Arsenic*, *Ratsbane*, *Arsen'ici oxydum album*, *Arsenicum album*, *Ac'idum Arsenicosum*, *Calx Arsen'ici alba*. An acid, which is met with in commerce, in compact, white, heavy, fragile masses; of a vitreous aspect, opaque, and covered with a white dust: of an acrid and nauseous taste; without smell when cold; volatilizable by heat, and exhaling the odour of garlic: soluble in water, alcohol, and oil; crystallizable in regular octaedrons. It is this that is meant by the name *Arsenic*, as commonly used.

The **ARSENICUM ALBUM SUBLIMATUM** or *Sublimed Oxide of Arsenic* is the one employed in medicine. It is tonic and escharotic, and is the most virulent of mineral poisons. It is used in intermittents, periodical headaches, neuroses, &c. Dose, gr. one-tenth to one-eighth in pill.

See Poisons, *Table of*.

ARSENITE, *Ar'senis*. A salt, formed by a combination of the arsenious acid with a salifiable base.

ARSENITE OF PROTOXIDE of Potassium, *Proto-arsenite of Potassium*, *Ar'senite of Potass*, *Ar'senis Potassæ*. An uncrystallizable and colourless salt, which forms the basis of the *Liquor Arsenicalis*, which see.

ART, HEALING, *Ars sanandi*. The appropriate application of the precepts of the best physicians, and of the results of experience to the treatment of disease.

ARTABA, ἀρταβη. Name of a measure for dry substances, in use with the ancients; equal, at times, to 5 modii: at others, to 3; and at others, again, to 7.—Galen.

ARTELSHEIM, MINERAL WATERS OF. These German waters have been much recommended in hysteria, gout, palsy, &c. Their physical or chymical properties have not been described.

ARTEMISIA, *Anactirion*: called after a queen of the name, who first employed it; or from Ἀρτεμης, 'Diana;' because it was, formerly, used in diseases of women, over whom she presided. The Gauls called it *Bricumum*.

ARTEMIS'IA ABROT'ANUM, *Abrot'anum Cathsum, Abrot'anum mas, Abrathan, South'ernwood, (F) Aurone, Aurone mâle, Aurone des Jardins, Garderobe, Citronelle.* Supposed to be possessed of stimulant properties.

The Oil of Southernwood, *O'leum Abrot'ani, (F) Huile d'Aurone*, possesses the aromatic properties of the plant.

ARTEMIS'IA ABSIN'THIUM, *Absin'thium, Absin'thium vulga're, Barypi'cron, Common Wormwood, (F) Absinthe.* Properties:—tonic and anthelmintic. The Oil of Wormwood, *O'leum Absin'thii, (F) Huile d'Absinthe*, contains the aromatic virtues of the plant.

ARTEMIS'IA CAMPES'TRIS, *Field Southernwood, (F) Aurone des Champs.* This possesses the same properties as the *A. Abrot'anum*.

ARTEMIS'IA DRACUN'culus, *Tar'agon, (F) Armoise estragon.* Virtues:—the same as the last.

ARTEMIS'IA PON'TICA, *A. Roma'na, Absin'thium Pon'ticum seu Romanum, Roman Wormwood, Lesser Wormwood.* This plant possesses like virtues:—as well as the

ARTEMIS'IA GLACIA'LIS or Silky Wormwood; and the

ARTEMIS'IA MARIT'IMA, *Absin'thium Marit'imum, Sea Wormwood, Maritime Southernwood.*

ARTEMIS'IA RUPES'TRIS, *Creeping Wormwood, Gen'ipi al'bum, (F) Armoise blanc, Genipi blanc.* This variety has aromatic virtues, and is used in intermittents and in amenorrhœa.

ARTEMIS'IA SANTON'ICA, *Santon'icum, Artemis'ia contra, Semen contra Vermes, Semen contra, S. Zedoa'riæ, Canni Herba, Chamæcedris, Chamæcyparis'sus, Semen Cinæ, Hagioper'mum, Sanctum Semen, Absin'thium Santon'icum, Sementi'na, Xantoli'na, Scheba Ar'abum, Artemis'ia Juda'ica, Wormseed, Tartarian Southernwood, (F) Barbotine.* Virtues:—anthelmintic and stimulant. Dose, gr. x to 3j in powder.

ARTEMIS'IA VULGA'RIS, *Artemis'ia rubra et alba, Cin'gulum Sancti Joannis, Mater Herbarum, Berenisecum, Bubastecor'dium, Canapa'cia, Mug'wort, (F) Armoise ordinaire, Herbe de Saint Jean.* This, as well as some other varieties, possesses the general tonic virtues of the Artemisiæ. The Artemisia Vulgaris has been of late highly extolled by the Germans in cases of epilepsy. Dose of the powder in the 24 hours from 3ss to 3j.

From the Mugwort the Chinese form their Moxa (q. v.)

ARTE'RIAC, *Arteriaca, αρτηριακα.* A medicine prescribed in diseases of the windpipe.

ARTE'RIÆ ADIPO'SÆ. The arteries, which secrete the fat about the kidneys, are sometimes so called. They are ramifications of the capsular, diaphragmatic, renal, and spermatic arteries.

ARTE'RIAL, *Arterio'sus.* Belonging to arteries.

The ARTE'RIAL DUCT, *Canalis arterio'sus, Ductus arterio'sus, D. Botalli, (F) Canal artériel*, is the portion of the pulmonary artery, which terminates in the aorta, in the fœtus. When this duct is obliterated after birth, it is called *Arte'rial Lig'ament, (F) Ligament artériel*.

ARTERIAL BLOOD, (F) *Sang artériel.* Red blood is so called because contained in the arteries. The pulmonary veins, however, also contain red blood: hence the name *arterial veins, (F) Veines artérielles*, applied to them.

The ARTE'RIAL SYS'TEM includes all the arteries, from their origin in the heart to their termination in the organs.

ARTERIOG'RAPHY, *Arteriōgra'phia*; from *αρτηρια*, 'artery,' and *γραφειν*, 'a description.' A description of the arteries.

ARTERIOLO. A small artery.

ARTERIOLO'GY, *Arteriolo'gia*; from *αρτηρια*, 'artery,' and *λογος*, 'a discourse.' A treatise on the arteries.

ARTERIO-PITU'ITOUS. An epithet applied to vessels, which creep along the interior of the nostrils.—Ruysch.

ARTERIO'TOMY, *Arterioto'mia*, from *αρτηρια*, 'an artery,' and *τεμνω*, 'I cut.' This word has been used for the dissection of arteries. Most commonly, however, it means a surgical operation, which consists in opening an artery, to draw blood from it.

Arteriotomy is chiefly used in inflammatory affections of the head, when the blood is generally obtained from the temporal artery.

ARTERIT'IS, from *αρτηρια*, 'an artery,' and *itis*, a termination denoting inflammation. Inflammation of an artery.

AR'TERY, *Arte'ria, (F) Artère*, from *αἰρ*, 'air,' and *τηρειν*, 'to preserve,' *quasi*, 'receptacle of air,' because the ancients believed that it contained air. They, at first, gave the name, *Artery*, to the trachea, *αρτηρια τραχεια*, because it is filled with air; and afterwards they used the same term for the arteries, properly so called, probably because they commonly found them empty in the dead body. We find, also, *φλεβες* to designate the arteries, called by the Latins, *Venæ micantes, pulsatiles*. Arteries, with the moderns, signify that order of vessels, which arise from the two ventricles of the heart, and have valves only at their origin. They are cylindrical, firm, and elastic canals: of a yellowish-white colour; little dilatable; easily lacerable; formed, 1. Of an external, laminated or cellular membrane, of a dense and close character: 2. Of a middle coat composed of fibres, which does not, however, contract on the application of the galvanic stimulus: and, 3. Of an inner coat, which is thin, diaphanous, reddish, and polished.

The use of the arteries is, to carry the blood from the heart to the various parts of the system. It will be obvious, that they cannot, however, all convey *arterial* blood. The pulmonary artery, for example, is destined to

convey the *venous* blood to the lungs, there to be converted into *arterial*; whilst the pulmonary veins convey *arterial* blood back to the heart.

A TABLE OF THE PRINCIPAL ARTERIES OF THE BODY.

All the arteries take their rise from the Pulmonary Artery, or the Aorta: and the names will generally indicate the parts to which they are distributed.

I. ARTERIA PULMONARIS.

The Pulmonary Artery arises from the right ventricle, and soon divides into a right and left branch, which are distributed to each lung.

II. ARTERIA AORTA.

The Aorta rises from the left ventricle. It is the common trunk of the arteries of the body, and may be divided into five portions.

a. Arteries furnished by the Aorta at its origin.

1. A. cardiaca or coronaria anterior.
2. A. cardiaca or coronaria posterior.

b. Arteries furnished by the Aorta at its arch.

The arch of the Aorta gives off, to the left, two considerable trunks—the *Arteria carotidea primitiva*, and the *A. subclavia*; and, to the right, a single trunk, which is larger—the *A. innominata* or *Brachio-cephalica*, which divides into the *primitive carotid* and *subclavian*.

A. ARTERIA CAROTIDEA PRIMITIVA.

Divides into A. Carotidea externa, A. Carotidea interna.

a. A. Carotidea externa.

- Furnishes, 1. *A. Thyroidea superior*.
 2. *A. lingualis*, which gives off the *A. dorsalis lingue* and *A. sublingualis*.
 3. *A. facialis* or *A. Maxillaris externa*, which furnishes the *A. palatina inferior*, the *A. submentalis*, and *A. coronaria superior* and *inferior*.
 4. *A. occipitalis*, which gives off the *A. mastoidea posterior*.
 5. *A. auricularis posterior*, which gives off *A. stylo-mastoidea*.
 6. *A. pharyngea inferior*.

The external carotid ultimately divides into the temporal artery and internal maxillary.

1. A. Temporalis.

Furnishes *A. transversalis faciei*, *A. auricularis anterior*, and *A. temporalis media*.

2. A. Maxillaris interna.

Furnishes 13 branches, viz. *A. meningea media*, *A. dentaris inferior*, *A. temporalis profunda posterior*, *A. masseterina*, *A. pterygoidea*, *A. buccalis*, *A. temporalis profunda anterior*, *A. alveolaris*; *A. suborbitaris*, *A. vidiana*, *A. pterygopalatina* or *pharyngea superior*, *A. palatina superior*, and *A. sphenopalatina*.

b. A. Carotidea interna.

Furnishes, 1. *A. ophthalmica*, which gives off *A. lachrymalis*, *A. centralis retinae*, *A. supraorbitaria* or *superciliaris*, *A. ciliares posteriores*, *A. ciliares longæ*, *A. muscularis superior et inferior*, *A. ethmoidalis posterior et anterior*, *A. palpebralis superior et inferior*, *A. nasalis*, and *A. frontalis*. 2. *A. communicans Willesii*. 3. *A. choroidea*. 4. *A. cerebralis anterior*. 5. *A. cerebralis media*.

B. ARTERIA SUBCLAVIA.

Furnishes, 1. *A. Vertebralis*, which gives off *A. spinalis anterior et posterior*, *A. cerebellosa inferior*, and forms by uniting itself with that of the opposite side—the *A. basilaris*, divided into *A. cerebellosa superior* and *A. cerebralis posterior*. 2. *A. thyroidea inferior*, which gives off *A. cervicalis ascendens*. 3. *A. mammaria interna*, which gives off the *A. mediastina anterior* and *A. diaphragmatica superior*. 4. *A. intercostalis superior*. 5. *A. cervicalis transversa*. 6. *A. scapularis superior*. 7. *A. cervicalis posterior vel profunda*. Farther on, the subclavian artery continues its progress under the name *A. axillaris*.

A. Axillaris.

Furnishes, 1. *A. acromialis*. 2. *A. thoracica superior*. 3. *A. thoracica inferior* or *longa* or *mammaria externa*. 4. *A. scapularis inferior* or *communis*. 5. *A. circumflexa posterior*. 6. *A. circumflexa anterior*. Farther on, the axillary artery continues under the name *A. brachialis*.

A. Brachialis.

Furnishes *A. humeralis profunda* or *collateralis externa*. 2. *A. collateralis interna*. It afterwards divides into the *radial* and *cubital* arteries.

1. A. Radialis.

Gives off *A. recurrens radialis*, *A. dorsalis carpi*, *A. dorsalis metacarpi*, *A. dorsalis pollicis*, and terminates in forming the *Arcus palmaris profundus*.

2. A. Cubitalis.

Gives off *A. recurrens cubitalis anterior* and *posterior*; *A. interossea anterior* and *posterior*, which latter furnishes *A. recurrens radialis posterior*. It terminates in forming the *superficial palmar arch*, which gives off *A. collaterales digitorum*.

c. Arteries given off by the Aorta in the Thorax.

These arteries are,

1. *A. bronchica, dextra et sinistra*.
2. *A. œsophageæ* (to the number of four, five, or six.)
3. *A. mediastinæ posteriores*.
4. *A. intercostales inferiores vel Aorticæ* (to the number of eight, nine, or ten.)

d. Arteries furnished by the Aorta in the Abdomen.

- These Branches are,
1. The *A. diaphragmatica vel phrenica, dextra et sinistra.*
 2. *A. Celiaca.* Which divides into three branches, 1. *A. coronaria ventriculi.* 2. *A. Hepatica,* which gives off *A. pylorica,* *A. gastro-epiploica dextra* and *A. cystica*; and, lastly, the *A. splenica,* which gives off *A. gastro-epiploica sinistra* and *vasa brevia.*
 3. *A. Mesenterica superior.* Which gives off at its concavity the *A. colica dextra superior, media et inferior,* and at its convex part from 15 to 20 *Rami intestinales.*
 4. *A. Mesenterica inferior.* Which gives off *A. colica superior, media,* and *inferior,* and divides into *A. hæmorrhoidales superiores.*
 5. The *A. Capsulares mediae* (to the number of two on each side.)
 6. *A. Renales* or *Emulgentes.*
 7. *A. Spermaticæ.*
 8. *A. Lumbares* (to the number of four or five on each side.)

e. Arteries resulting from the Bifurcation of the Aorta.

The Aorta, a little above its Bifurcation, gives off the *A. sacra media,* and divides into *A. iliaca primitiva.*

A. Iliaca primitiva. Divides into *A. iliaca interna* and *A. iliaca externa.*

a. *A. Iliaca interna.* Furnishes, 1. *A. iliolumbaris.* 2. *A. sacra lateralis.* 3. *A. glutea* or *iliaca posterior.* 4. *A. umbilicalis.* 5. *A. vesicales.* 6. *A. obturatorea.* 7. *A. hæmorrhoidæa media.* 8. *A. uterina.* 9. *A. vaginalis.* 10. *A. ischiatica.* 11. *A. pudenda interna,* which gives off the *A. hæmorrhoidales inferiores,* *A. of the septum A. transversa perinei,* *A. corporis cavernosi,* and *A. dorsalis penis.*

b. *A. Iliaca externa.* Furnishes, 1. *A. epigastrica.* 2. *A. iliaca anterior* or *circumflexa illi,* and is continued afterwards under the name of *Crural Artery.*

A. Cruralis. Furnishes, 1. *A. subcutanea abdominalis.* 2. *A. pudenda superficialis* and *profunda.* 3. *A. muscularis superficialis.* 4. *A. muscularis profunda,* which gives off the *A. circumflexa externa* and *interna,* and the three *Perforantes,* distinguished into superior, middle, and inferior. Farther on, the crural artery continues under the name *A. Poplitea.*

A. Poplitea. Furnishes, 1. *A. articulares superiores, interna, media, et externa.* 2. *A. gemellæ.* 3. *A. articulares inferiores, interna et externa.* 4. *A. tibialis antica,* which, at the foot, takes the name *A. Dorsalis Tarsi,* and gives off the tarsal and metatarsal arteries. In the leg, the popliteal artery divides into the peroneal and posterior tibial.

1. *A. Peronæa.*

Divides into *A. peronæa antica* and *A. peronæa postica.*

2. *A. Tibialis postica.*

Divides into *A. plantaris interna* and *A. plantaris externa.* The latter, by anastomosing with the *A. dorsalis tarsi,* forms the *plantar arch,* whence arise *Rami superiores* or *perforantes postici,* *R. inferiores, postici et antici,* which give off *Rami perforantes antici.*

ARTETIS'CUS; from *artus,* 'a limb.' One who has lost a limb.

ARTHANI'TA, from *αἶστος,* 'bread:' the *Cyc'lamen* or *Sowbread.* It was formerly made into ointments, with many other substances, and was employed to act as a purgative, being rubbed on the abdomen. It formed the *Unguentum Arthani'tæ.*

ARTHRAL'GIA, *Arthronal'gia,* from *αἰσθρον,* 'a joint,' and *αλγος,* 'pain.' Pain in the joints.

ARTHREM'BOLUS, from *αἰσθρον,* 'a joint,' *εν,* 'in,' and *βαλλω,* 'I cast.' An ancient instrument used in the reduction of dislocations.

ARTHRIT'IC, *Arthrit'icus,* from *αἰσθρον,* 'a joint.' (F) *Arthritique, Goutteux.* That which relates to gout, as *arthritic symptoms,* &c.

ARTHROC'ACE, from *αἰσθρον,* 'a joint,' and *κακος,* 'bad.' Disease of the joints; and especially caries of the articular surfaces.

ARTHROCACOLOG'IA, from *Arthrocacia*,—according to Rust, a chronic disease of the joints; and *λογος,* 'a description.' The doctrine of chronic disease of the joints.

ARTHRO'DIA, from *αἰσθρον,* 'a joint,' *αἰσθρωδια,* *Adarticula'tio.* A movable joint, formed by the head of a bone applied to the surface of a shallow socket, so that it can execute movements in every direction. *Arthrodium* is 'a small joint:' diminutive of *Arthrody.*

ARTHRODYN'IA, *Arthronal'gia,* from *αἰσθρον,* 'articulation,' and *δυνη,* 'pain.' Articular pain. Pain in the joints.

ARTHROM'BOLE, from *αἰσθρον,* and *βαλλω,* 'I cast.' Coaptation, reduction. Reduction of a luxated or fractured bone.

ARTHRON, 'a joint.' The ancients used the word *Arthron,* for the articulation of bones with motion, in opposition to *Symphysis,* or articulation without motion.

ARTHROPHLOGO'SIS, from *αἰσθρον,* 'a joint,' and *φλεγω,* 'I burn.' Inflammation of the joints.

ARTHROPUO'SIS, from *αἰσθρον,* 'a joint,' and *πυον,* 'pus.' Suppuration or abscess of the joints.

ARTHRO'SIA, from *αἰσθρωω,* 'I articulate.' *Arthritis,* (of some). Inflammation mostly confined to the joints, severely painful; occasionally extending to the surrounding muscles. A genus of diseases in the No-

sology of Good, including *Rheumatism, Gout, &c. Articular inflammation, Jointache.*

ARTHROSPONGUS, from *αρθρον*, 'a joint,' and *σπογγος*, 'a sponge.' A white, fungous tumour of the joints.

ARTIA. According to some, this word is synonymous with *αρθρία*; others use it synonymously with *Trachea*.

ARTICULAR, *Articula'ris*: that which relates to the articulations;—as the *articular capsules, &c.*

The ARTICULAR FACETTES are the contiguous surfaces, by means of which the bones are articulated.

The ARTICULAR ARTERIES OF THE KNEE, arise from the popliteal artery, and surround the tibio-femoral articulation. Although of a small size, they are important, as they furnish blood to the lower extremity after the operation for popliteal aneurism. They are distinguished into *superior* and *inferior*.

The *superior articular arteries, popliteal articular arteries*, are commonly three in number: one of which is *internal*, another *external*, and another *middle*. The *first* anastomoses by one branch with the external circumflex; and by another with the external superior articular. The *second* anastomoses with the external circumflex, the superior internal articular, and the inferior external articular; and the *third* is distributed within the joint.

The *inferior articular arteries* are two in number: an *internal* and *external*. The former anastomoses with the internal superior articular, and the external inferior articular. The latter anastomoses with the recurrent branch of the anterior tibial, and the external superior articular.

The ARTICULAR VEINS of the knee follow the same course as the arteries.

ARTICULATION. A *Joint*; *Articula'tio, Arthro'sis, Assarthro'sis, Artic'ulus, Junctu'ra, Cola, Conjunctio, Nodus, Commissu'ra, Compages, Syntax'is*, (F) *Articulation, Article*. The union of bones with each other, as well as the kind of union.

TABLE OF ARTICULATIONS.

Articulations are generally divided into *Diarthroses* or movable articulations, and *Synarthroses* or immovable.

Diarthroses.	{	1. Amphiarthrosis.	{	Enarthrosis Arthro'dia.
		2. Diarthrosis, orbicular or vague.		
		3. Alternative or Ginglymus, which admits of varieties.		
Synarthroses.	{	1. Suture.		
		2. Harmony.		
		3. Gomphosis.		
		4. Schindylesis.		

ARTICULATION means the combination of letters which constitute words. See *Voice*.

ARTICULATION, FALSE, *Pseudarthrosis, Artic'ulus falsus*, (F) *A. fausse, A. accidentelle, A. contre nature, A. anormale*. A false joint, formed between fragments of bone, that

have remained ununited: or between a luxated bone and the surrounding parts.

The Articulations are subject to a number of diseases, which are generally somewhat severe. These may be physical, as wounds, sprains, luxations, &c.; or they may be organic, as ankyloses, extraneous bodies, caries-rheumatism, gout, hydrarthrosis, arthropuosis, &c.

ARTIFICIAL, *Artificia'lis*. (F) *Artificiel*. That which is formed by art.

ARTIFICIAL TEETH are teeth made of ivory, porcelain, &c.

ARTIFICIAL EYES are usually made of enamel, and represent a sort of hollow hemisphere, which is applied beneath the eyelids, where the eye is lost.

Pièces d'anatomie artificielles are preparations of anatomy, modelled in wax, plaster, paper, &c.

ARTISCUS, from *αρτος*, 'bread.' A troch of the shape of a small loaf. Also, especially, a troch made of vipers.

ARTOCAR'PUS. The *Bread-fruit Tree*. An Otaheitan tree, so called because the fruit, which is milky and juicy, supplies the place of bread to the inhabitants. It grows to the height of 40 feet.

ARTOC'REAS, from *αρτος*, 'bread,' and *κρεας*, 'flesh.' A kind of nourishing food made of various aliments boiled together.—Galen.

ARTOG'ALA, from *αρτος*, 'bread,' and *γαλα*, 'milk.' An alimentary preparation of bread and milk. A *poultice*.

ARTOM'ELI, from *αρτος*, 'bread,' and *μελι*, 'honey.' A cataplasm of bread and honey.—Galen.

ARUM DRACUN'CULUS, *Dracunculus polyphyl'lus, Colubri'na Dracon'tia, Erva de Sanc'ta Maria, Gig'arus serpenta'ria, Arum polyphyl'lum, Serpenta'ria Gallo'rum*. Family, Aroideæ. Sex. Syst. Monœcia Polyandria. The roots and leaves are very acrimonious. The plant resembles the next in its properties.

ARUM MACULA'TUM, *Cuckow Pint, Barba Aaro'nis, Serpenta'ria minor, Zin'giber German'icum, Wake Robin*. (F) *Gouet, Pied de Veau*. The fresh root is stimulant internally. Dose, ʒj of the dried root. Externally it is very acrid.

From the root of this Arum a starch is prepared, which is called *Portland Island Sago, Gersa serpenta'ria, Cerus'sa serpenta'ria, Fec'ula ari macula'ti*.

ARUM TRIPHYL'LUM, *Indian Turnip, Dragon Root*. This plant grows all over the United States, and is received into their Pharmacopœia under the title *Arum*. The recent root is very acrimonious, and has been employed in asthma, croup, and hooping-cough. Boiled in lard, it has been used in tinea capitis, and boiled in milk in consumption.

ARYTÆ'NA, *αρυταινα*, 'a ladle.' Hence, ARYTÆNO-EPIGLOTTICUS. *Arytæ'no-epiglottida'us*. That which belongs to the arytenoid cartilages and epiglottis. Winslow

gives this name to small, fleshy fasciculi, which are attached, at one extremity, to the arytenoid cartilages, and, by the other, to the free edge of the epiglottis. These fibres do not always exist. They form part of the arytenoid muscle of modern anatomists.

ARYTENOID, *Arytenoi'des*, ἀρυταινοειδής, from ἀρυταίνα, 'a ladle,' and εἶδος, 'shape.' Ladle-shaped.

The ARYTENOID CAR'TILAGES, *Cartilag'ines arytenoi'des*, *C. guttura'les*, *C. gutturi'næ*, *C. gutturifor'mes*, *C. triq'uetra*, *Guttur'nia*, are two cartilages of the larynx, situate posteriorly above the cricoid, and which, by approximation, diminish the aperture of the glottis. Their upper extremities or cornua are turned towards each other, and are now and then found loose, in the form of appendices, which are considered, by some, as distinct cartilages, and termed *cuneiform* or *tuberculated*, or *Cornic'ula Laryn'gis*.

The ARYTENOID GLANDS, *Glandulæ Arytenoidæ'æ*, are small, glandular, whitish bodies, situate anterior to the A. cartilages. They pour out a mucous fluid to lubricate the larynx.

ARYTENOIDÆ'US. (F) *Arytenoidien*. A small muscle, which passes from one arytenoid cartilage to the other, by its contraction brings them together, and diminishes the aperture of the glottis. Winslow divided the muscle into three portions;—the *Arytenoidæ'us transver'sus*, and two *Arytenoidæ'i obli'qui*.

ARYTH'M, *Aryth'mus*, from α privative, and ῥυθμός, 'rythm,' 'measure.' Irregular. This word is applied chiefly to the pulse.

ASAFETIDA, *Assafæt'ida*, *Stercus diab'oli*, *Asa*, *Devil's dung*. A gum resin obtained from the *Fer'ula Assafæt'ida*. Order, Umbelliferæ. It is in small masses, of a whitish, reddish, and violet hue, adhering together. Taste bitter and subacid: smell insupportably alliaceous. The Asiatics use it regularly as a condiment.

Its medical properties are antispasmodic, stimulant, and anthelmintic. Dose, gr. v to xx, in pill.

AS'APES, 'crude,' *Asep'ton*. A term, applied to the sputum, or to other matters evacuated, which do not give signs of coction.

ASAPH'ATUM, from α priv. and σαφής, 'clear.' This term has been applied to collections in the sebaceous follicles of the skin, which may be pressed out like little worms, with a black head.

ASAPHI'A, from α privative, and σαφής, 'clear.' *Dyspho'nia immodula'ta palati'na*, *Parapho'nia guttura'lis*, *P. palati'na*. Defective articulation, dependent upon diseased palate.—Hippocr., Vogel.

ASAR'CON, from α privative, and σαρκής, 'flesh.' Devoid of flesh. Aristotle uses the term for the head, when it is but little fleshy, compared with the chest and abdomen.

ASARI'TES, from ασαρον, 'the asarum.' A diuretic wine, of which asarum was an ingredient.—Dioscorides.

AS'ARUM, from α priv., and σαγην, 'to adorn:' because not admitted into the ancient coronal wreaths. *As'arum Europæ'um*, *Nardus Monta'na*, *Nardus Rust'ica*, *Azarum*. (F) *Asaret* ou *Cabaret*, *Oreille d'homme*, *Oreillette*, *Girard-Roussin*, *Nard Sauvage*. Fam. Aroidæ. Sex. Syst. Dodecandria Monogynia. The plant, used in medicine, is the *As'arum Europæ'um*, the *Asarabac'ca*, and of this the leaves. They are emetic, cathartic, errhine, but are hardly ever employed, except for the last purpose.

AS'ARUM CANADEN'SE, *Canada Snakeroot*, *Wild Ginger*, *Colt's Foot*. It is used as a substitute for ginger, and is said to act as a warm stimulant and diaphoretic.

ASCAIN, MINERAL WATERS OF. Ascain is a village, situate about a league from St. Jean-de-Luz in France. The water is a cold chalybeate.

ASCARDAMYC'TES, from α priv., and σκαρδαμυττώ, 'I twinkle the eyes.' One who stares with fixed eyes, and without moving the eyelids.—Hippocr.

AS'CARIS, pl. ASCAR'IDES, from ασκαρίζω, 'I leap.' A genus of intestinal worms, characterized by a long, cylindrical body, attenuated at the extremities; and having a mouth furnished with three tubercles, from which a very short tube is sometimes seen issuing.

Formerly, there were reckoned two varieties of the Ascaris—the *As'caris lumbricoi'des*, *Lumbri'cus*. L. *Teres*, or long round worm; and the *As'caris Vermicula'ris*—the Ascaris proper—the *thread worm* or *maw-worm*. The former is alone included under the genus, at present,—a new genus having been formed of the *A. vermicularis* under the name *Oxyu'ris*.

AS'CELES or AS'KELES, *Carens cru'ribus*, from α privative, and σκέλος, 'a leg.' One who has no legs.

ASCEN'DENS, from *Ascen'dere*, 'to ascend.' (F) *Ascendant*. Parts are thus called, which are supposed to arise in a region lower than that where they terminate. Thus, *Aorta ascendens*, is the aorta from its origin to the arch: *Vena cava ascendens*, the large vein, which carries the blood from the inferior parts to the heart: *Obliquus ascendens* (*muscle*), the lesser oblique muscle of the abdomen, &c.

ASCEN'SUS MORBI. The period of increase of a disease.

ASCIA, *Axinē*, 'an axe,' *Scepar'nos*, *Dolabra*, *Fascia spiralis*. Name of a bandage mentioned by Hippocrates and Galen, and figured by Scultetus, in the shape of an axe or hatchet.—Galen. See Doloire.

ASCI'TES, from ασκος, 'a bottle:'—*Hydroce'le Peritonæ'i*, *Hy'drops Abdom'inis*, *Hydrogas'ter*, *Ascli'tes*. A collection of serous

fluid in the abdomen. *Dropsy of the lower belly.* (F) *Ascite.* Ascites proper, is dropsy of the peritoneum; and is characterized by increased size of the abdomen, by fluctuation and the general signs of dropsy. It is rarely a primary disease, but is always dangerous, and but little susceptible of cure. Most generally, it is owing to obstructed circulation in some of the viscera, or to excitement of the vessels of the abdominal organs. The treatment is essentially the same as that of other dropsies. Paracentesis, when had recourse to, can only be regarded as a palliative.

ASCLEPIAS TUBEROSA, *Butterfly Weed, Pleurisy Root, Flux Root, Wind Root, White Root.* Nat. Ord. Asclepiadæ, Sex. Syst. Pentandria Digynia. Said to have been first recommended by Ασκληπιάδης. In Virginia and the Carolinas, the root of this plant has been long celebrated as a remedy in pneumonic affections. It is sudorific, and the powder acts as a mild purgative. Its chief powers are said to be expectorant, diaphoretic, and febrifuge. It is occasionally given to relieve pains of the stomach from flatulence and indigestion.

ASCLEPIAS SYRIACA, *Common Silkweed, Milk Weed,* (F) *Herbe à la houette.* The cortical part of the root has been given, in powder, in asthmatic and pulmonic affections in general, and, it is said, with success.

ASCLEPIAS VINCETOXICUM. Called from Æsculapius probably. The *Swallow Wort.* (F) *Asclepiade, Dompte-venin.* The root is said to be stimulant, diuretic, and emmenagogue, but is hardly ever used. It is called, also, *Hirundinaria.*

ASCLEPIAS DECUMBENS, the root. Escharotic, cathartic, sudorific, diuretic.

ASCLEPIAS ASTHMATICA. (F) *Ipecacuanha blanc de l'île de France.* A creeping plant of the Isle of France, regarded as a specific in asthma.

ASCLEPIAS CURASSAVICA. The leaves are emetic in the dose of one or two scruples. It is the *Ipecacuanha blanc* of St. Domingo.

ASCLEPIAS GIGANTEA. The milky juice is very caustic. It is used in Malabar against herpes; and, mixed with oil, in gout.

ASCLEPIAS PROCERA (?) *Beidel-ossar; Beidelsar.* An Egyptian plant, the leaves of which are made into plaster, and applied to indolent tumours. The milky juice is caustic, and is used as such.

ASCOMA, from ασκος, 'a bottle.' The eminence of the pubes at the period of puberty in females.—Rufus of Ephesus.

ASEMA CRISIS, κρισις ασημα, from α priv. and σημα, 'a sign.' A crisis occurring unexpectedly, and without the ordinary precursory signs.

ASITIA, from α priv. and σιτος, 'food.' Abstinence from food. Want of appetite.

ASJAGAN, *As'jogam.* An Indian tree, the juice of whose leaves, mixed with powdered cumin seeds, is employed, in India, in colic.

ASODES, *Asso'des*, from αση, 'disgust,' 'satiety.' A fever accompanied with anxiety and nausea. *Febris aso'des vel azo'des.*

ASPARAGUS, *Aspar'agus officina'lis, Common Asparagus, Sparrow Grass, Grass.* Nat. Ord. Asphodeleæ, Sex. Syst. Hexandria Monogynia. *Aspar'agi officina'lis Turio'nes.* (F) *Asperge.* The fresh roots are diuretic, perhaps owing to the immediate, crystallizable principle, *Asparagine.* The young shoots are a well known and esteemed vegetable diet. They communicate a peculiar odour to the urine. A syrup made of the young shoots has been recently recommended as a sedative in heart affections.

ASPA'SIA. A ball of wood soaked in an infusion of galls, and used by females for constringing the vagina.

ASPER'ITY, *Asperitas*, roughness. Asperities are inequalities on the surfaces of bones, which often serve for the insertion of fibrous organs.

ASPERMATIS'MUS, from α priv. and σπέρμα, 'sperm.' Reflux of sperm from the urethra into the bladder, during the venereal orgasm.

ASPER'SION, *Asper'sio*, (F) *Arroisement.* Act of sprinkling or pouring a liquid *guttatim* over a wound, ulcer, &c.

ASPER'ULA ODORATA, *Matrisyl'va, Hepat'ica stella'ta*, (F) *Aspérule odorante ou Muguet des bois, Hepatique étoilée.* Fam. Rubiaceæ. Sex. Syst. Tetrandria Monogynia. *Sweet-scented Woodroof.* Said to be diuretic, deobstruent, tonic, and vulnerary.

ASPHAL'TUM, *Nep'ta, Arsal'tos, Aspal'tum*, from ασφαλίζω, 'to strengthen.' With the Greeks this word signified any kind of bitumen. It is now restricted chiefly to the BITUMEN OF JUDÆA, *B. Juda'icum, B. solidum, Jew's Pitch*, or *Karabê* of Sodom. (F) *Asphalte.* It is solid, friable, vitreous, black, shining, inflammable, and of a fetid smell. An oil is obtained from it by distillation. It enters into the composition of certain ointments and plasters.

It is collected on the surface of the water of the Dead Sea, or Lake Asphaltites in Judæa.

ASPHALTITES, same etymon. A name, given by some to the last lumbar vertebra.—Gorræus.

ASPHOD'ELUS RAMOSUS, *Asphodelus, A. Albus, A. maris, Hastula Regis.* (F) *Lis asphodèle.* The bulbs of this southern European plant have an acrimony, which they lose in boiling water. They contain a fecula with which bread has been made, and have been considered diuretic. They have been used as a succedaneum for the squill.

ASPHYX'IA, from α priv. and σφυξίς, 'pulse.' *Defec'tus Pulsûs, Acrotis'mos.* For a long time, Asphyxia was confined to the sense of 'suspension of circulation.' It now generally means *suspended animation*, produced by the nonconversion of the venous

blood of the lungs into arterial blood. Owing to the supply of air being cut off, the unchanged venous blood of the pulmonary artery passes into the minute radicles of the pulmonary veins, but their peculiar irritability requiring arterial blood to excite them, stagnation takes place in the pulmonary radicles, and death occurs from this cause,—not owing to venous blood being distributed through the system, and ‘poisoning’ it, as was the idea of Bichat. *Carus asphyxia*, *Mors apparens*, *Mors putativa*, *Apnæasphyxia* or *Apparent death*, is characterized by suspension of respiration, of the cerebral functions, &c. Several varieties of Asphyxia have been designated.

1. ASPHYXIA BY SUBMERSION, as occurs in the drowned, who perish in consequence of the medium in which they are plunged being unfit for respiration.

2. ASPHYXIA BY STRANGULATION or *Suffocation*; produced by mechanical impediment to respiration, as in strangulation.

3. ASPHYXIA BY NOXIOUS INHALATION, or inhalation of Gases, some of which cause death by producing a spasmodic closure of the glottis: others by the want of oxygen, and others are positively deleterious or poisonous.

4. ASPHYXIA OF THE NEW-BORN. This is often dependent upon the feeble condition of the infant, not permitting respiration to be established.

Mr. Chevalier has used the term *Asphyxia Idiopathica* for fatal syncope owing to relaxation of the heart. See Suffocation.

ASPIRATION, *Adspira'tio*, *Aspira'tio*. The French sometimes use the term synonymously with inspiration. It also means the act of attracting or sucking like a pump. Also, the pronunciation of a vowel with a full breath.

ASPIS, *ασπις*. A name given by the ancients to a venomous serpent—the *Egyptian viper* of Lacépède. (F) *Aspic*. Its bite is very dangerous, and it is supposed to have been the reptile used by Cleopatra for her destruction.

ASPLENIUM, from *a* priv. and *σπλην*, ‘the spleen.’ *Spleenwort*, *Miltwaste*.

ASPLENIUM CET'ERACH, *Doradil'la*, *Blechnum squamo'sum*, *Scolopen'dria*, *Athy'rion*, *Cet'erach officinarum*. (F) *Doradille*. Supposed to be subastringent and mucilaginous, and has been recommended as a pectoral. It has also been given in calculous cases.

ASPLENIUM RUTA MURA'RIA, *A. mura'le*, *Paronych'ia*, *Wallrue*, *White Maidenhair*, *Tentwort*, *Adian'thum album*, *Ruta mura'ria*, *Salvia vitæ*. (F) *Rue des murailles*, *Sauvée*. Used in the same cases as the last.

ASPLENIUM SCOLOPEN'DRIUM, *Scolopen'drium officina'rum*, *Hart's Tongue*, *Spleenwort*, *Phylli'tis*, *Lingua cervi'na*, *Blechnum lignifo'lium*. (F) *Scolopendre*, *Langue de cerf*. Properties like the last.

ASPLENIUM TRICHOMANOIDES, *A. Trichom'*

anes, *Calliphyl'lum*, *καλλιφυλλον*, *Trichom'anes*, *Adian'thum rubrum*, *Common Maidenhair*, *Polyt'ricum commu'ne*, (F) *Polytric*. Properties like the last.

AS'SABA. A Guinea shrub whose leaves are considered capable of dispersing buboes.

ASSAIERET. A compound of bitter, stomachic, and purgative medicines, in the form of pill.—Avicenna.

ASSA'TIO, *Opte'sis*. The boiling of food or medicines in their own juice, without the addition of any liquid. Various kinds of cooking by heat.—Galen.

AS'SERAC, *Assis*. A preparation of opium or of some narcotic, used by the Turks as an excitant.

AS'SIDENS, from *ad*, ‘to,’ and *sedere*, ‘to be seated.’ That which accompanies or is concomitant. An epithet applied to the accessory symptoms and general phenomena of disease.

ASSIMILATION, *Assimila'tio*, *Appropriat'io*, *Exomoio'sis*, *Homoio'sis*, *Threpsis*, *Threpticæ*: from *assimila're*, ‘to render similar.’ The act by which living bodies appropriate and transform into their own substance, matters with which they may be placed in contact. In man, assimilation is a function of nutrition.

AS'SIUS LAPIS, *A'sius Lapis*. A sort of stone or earth found near the town of Assa in the Troad, and which had the property of destroying proud flesh.

ASTARZOF. An ointment, composed of litharge, frog's spawn, &c. Also, camphor dissolved in rose-water.—Paracelsus.

ASTE'RIA GEMMA, *Aste'rias*, *Astroï'tes*, *As'trios*, *Astrob'olos*. The ancients attributed imaginary virtues to this stone,—that of dispersing *Nævi Materni*, e. g.

ASTHENIA, from *a* priv. and *σθενος*, ‘force,’ ‘strength.’ Want of strength, general debility. A word used in this sense by Galen, and employed especially by Brown to designate debility of the whole economy or diminution of the vital forces. He distinguished it into *direct* and *indirect*: the former proceeding from diminution of stimuli; the latter from exhaustion of incitability by the abuse of stimuli.

ASTHMA, from *αα*, ‘I respire,’ *A. spas'ticum adulto'rum*, *A. Seniorum*, *A. Convulsivum*, *A. spas'ticum intermit'tens*, *Dyspnæ'a et orthopnæ'a convulsiva*, *Broken windedness*. Difficulty of breathing, recurring at intervals, accompanied with a wheezing sound and sense of constriction in the chest; cough and expectoration.

Asthma is a chronic disease, and not curable with facility. Excitant and narcotic antispasmodics are required.

The ASTHMA ACUTUM of Millar, *A. spasticum infan'tum*, *Cynan'chè trachea'lis spasmod'ica*, (F) *Asthma aigu*, probably spasmodic croup.(?)

The ASTHMA SICCUM, so called when the paroxysm is sudden, violent, and of short

duration: cough slight, and expectoration scanty: spasmodic constriction.

The **ASTHMA HUMIDUM**, *Humid, Common* or *spitting asthma*, is when the disease is accompanied with expectoration. It is also called *A. humoralé*, *A. flatulentum*, *A. pneumonicum*, *Blennorrhœa chronica*, &c.

There are no pathognomonic physical signs of asthma. In some cases, the respiration is universally puerile during the attack. In the spasmodic form the respiratory murmur is very feeble or absent during the fit; and in all forms of the disease percussion elicits a clear pulmonary sound.

The disease generally consists in some source of irritation, and occasionally, perhaps, in paralysis of the pneumogastric nerves: more frequently the former—all the phenomena indicating constriction of the smaller bronchial ramifications.

The treatment is one that relieves spasmodic action—narcotics, counter-irritants—change of air, &c.

ASTHMA THYMICUM, *A. T. Koppii*, *Spasmus glottidis*, *A. intermittens infantum*, *A. Dentitium*, *A. periodicum acutum*, *Koppian Asthma*, *Thymic Asthma*, *Laryngismus stridulus*. A disease of infants characterized by suspension of respiration at intervals; great difficulty of breathing, especially on waking, swallowing, or crying, ending often in a fit of suffocation with convulsions.

The pathology of the disease has been supposed to consist in enlargement of the Thymus gland, or of the glands of the neck pressing on the pneumogastric nerves.

The ear, on auscultation, at a distance from the chest, detects an incomplete, acute, hissing inspiration or rather cry; whilst the expiration and voice are croupal, both at the accession and termination of the paroxysm. The heart's action has been observed to be distinct and feeble.

ASTHMATIC, *Asthmaticus*; one affected with asthma. What relates to asthma.

ASTOMUS, *αστομος*, from *a* priv. and *στομα*, 'a mouth.' One without a mouth. Pliny speaks of a people in India without mouths, who live *anhelatu et odore*!

ASTRAGALUS, *Talus*, the *Ankle*, *Quadratio*, *Diabæbos*, *Peza*, *Cavicula*, *Cavilla*, *Tetroros*, *As'trion*, *Os Ballistæ*. A short bone situate at the superior and middle part of the tarsus, where it is articulated with the tibia. It is the *ankle bone*, *sling bone* or *first bone of the foot*. The anterior surface is convex, and has a well-marked prominence, supported by a kind of neck, and hence has been called the *head of the Astragalus*. The astragalus is developed by two points of ossification.

ASTRAGALUS EXSCAPUS, *Stemless Milk-vetch*, (F) *Astragale à gousses velus*. *Nat. Ord.* Legaminosæ. *Sex. Syst.* Diadelphia Decandria. The root is said to have cured confirmed syphilis.

ASTRAGALUS VERUS, *Goat's thorn*, *Milk-vetch*, *Spina hirci*, *Astragalus aculeatus*. The plant which affords *Gum Tragacanth*. See *Tragacantha*.

ASTRAPE, *Coruscatio*, *Fulgur*, *Lightning*. Galen reckons it amongst the remote causes of epilepsy.

ASTRICT'ION, *Astrictio*, *στυψις*, from *adstringere*, 'to constringe.' Action of an astringent substance on the animal economy.

ASTRINGENTS, *Astringentia*, *Katas'taltica*, *Constringentia*, *contrahentia*, *Stegnotica*, *Syncritica*, *Astrictoria*, from *astringere*, 'to constringe.' Medicines, which have the property of constringing the organic textures. External astringents are called *Styptics*.

The following are the chief astringents:

Acidum Sulphuricum,	Kino,
Alumen,	Krameria,
Argenti Nitras,	Liquor Calcis,
Catechu,	Plumb. Acetas,
Cupri Sulphas,	Quercus Alba,
Ferri Murialis, Tinct.	" Tinctoria,
Ferri Nitratis, Liquor,	Tannin,
Ferri Sulphas,	Zinci Sulphas,
Gallæ,	
Hæmatoxylon,	Creosote.

ASTROBLES, from *αστρον*, 'a star,' and *βαλλω*, 'I strike.' One struck by the stars (*sideratus*). One who is in a state of sideration—in an apoplectic state.—Gorræus.

ASTROBOLIS'MOS, same etymology. *Sideration* or action of the stars on a person. *Apoplexy*.—Theophr., Gorræus.

ASTROL'OGY, *Astrol'ogia*, from *αστρον*, 'a star,' and *λογος*, 'a discourse.' The art of divining by inspecting the stars. This was formerly considered to be a part of Medicine; and was called *Judicial Astrology*, to distinguish it from Astronomy.

ASTRON'OMY, *Astrono'mia*, from *αστρον*, 'a star,' and *νομος*, 'a law,' 'rule.' A science, which makes known the heavenly phenomena, and the laws that govern them. Hippocrates places this and Astrology amongst the necessary studies of a physician.

ATARACTAPOIE'SIA, from *a* priv. *ταραχτος*, 'troubled,' and *ποιειν*, 'to make.' Intrepidity, firmness. A quality of which, according to Hippocrates, the physician ought to be possessed in the highest degree.

ATARAX'IA, from *a* priv. and *ταραξις*, 'trouble,' 'emotion.' Moral tranquillity, peace of mind.

ATAX'IA, from *a* priv. and *ταξις*, 'order.' Disorder, irregularity. Hippocrates employs the word in its most extensive acceptation. Galen applies it, especially, to irregularity of pulse; and Sydenham speaks of *Ataxia Spirituum* for disorder of the nervous system. Ataxia, now, usually means the state of disorder that characterizes nervous fevers, and the nervous condition.

ATCHAR, *Achia*, *Achar*. A condiment used in India. It is formed of green fruits of various kinds,—garlic, ginger, mustard, and pimento, pickled in vinegar.

ATELES, ατελης, 'imperfect, defective.' Hence,

ATELOËNCEPHAL'IA, from ατελης, 'imperfect,' and ἐγκεφαλον, 'the encephalon.' State of imperfect development of the brain.—Andral.

ATELOCHEI'LIA, from ατελης, 'imperfect,' and χειλος, 'lip.' A malformation which consists in an imperfect development of the lip.

ATELOGLOS'SIA, from ατελης, 'imperfect,' and γλωσσα, 'tongue.' A malformation consisting in an imperfect development of the tongue.

ATELOGNA'THIA, from ατελης, 'imperfect,' and γναθος, 'the jaw.' A malformation which consists in an imperfect development of the jaw.

ATELOMYELIA, from ατελης, 'imperfect,' and μυελος, 'marrow.' State of imperfect development of the spinal marrow.—Béclard.

ATELOPROSO'PIA, from ατελης, 'imperfect,' and προσωπον, 'the face.' A malformation which consists in imperfect development of the face.

ATELOSTO'MIA, from ατελης, 'imperfect,' and στομα, 'mouth.' One whose mouth is imperfectly developed.

ATHAMAN'TA, from Athamas, a place in Thessaly. A genus of plants.

ATHAMAN'TA CRETEN'SIS or *Cret'ica, Daucus Creticus*; *D. Candianus, Myrrhis annua, Candy Carrot*. The seeds of this plant are acrid and aromatic. They have been used as carminatives and diuretics.

ATHAMAN'TA AUREOSELI'NUM, *Oreoseli'num, Black Mountain Parsley*. (F) *Persil de Montagne*. The plant, seed and roots are aromatic. It has been considered attenuant, aperient, deobstruent, and lithontriptic. The distilled oil has been used in toothache.

ATHANA'SIA, from α priv. and θανατος, 'death.' An antidote for diseases of the liver, jaundice, gravel, &c. It consisted of saffron, cinnamon, lavender, cassia, myrrh, juncus odoratus, honey, &c., and was esteemed to be sudorific.

ATHELAS'MUS, from α priv. and θηλη, 'a breast or nipple.' Impracticability of giving suck; from want of nipple or otherwise.

ATHE'NA, αθηνα. Name of a plaster, recommended by Asclepiades, and composed of oxide of copper, sublimed oxide of zinc, sal ammoniac, verdigris, gall-nuts, and a variety of resinous and other ingredients.—Orbasius, Aëtius, and P. Ægineta.

ATHENIO'NIS CATAPOTIUM. A pill, composed of myrrh, pepper, castor, and opium; used to allay coughing.—Celsus.

ATHE'RA, Αθα'ρα, from αθηρ, 'an ear of corn.' A kind of pap for children: also, a kind of liniment.—Dioscorides, Pliny.

ATHERO'MA, from αθηρα, 'pap or pulp.' *Emphy'ma encys'tis athero'ma, Mollus'cum*. A tumour formed by a cyst containing matter like pap or Bouillie.

ATHERO'MATOUS, *Atheromato'des*. Having the nature of Atheroma.

ATHLE'TA, from αθλος, 'combat.' Athletes were men, who exercised themselves in combat at the public festivals.—Vitruv.

ATHLET'IC, *Athlet'icus*; concerning *Athle'tæ*. Strong in muscular powers.—Foësius.

ATHYM'IA, *An'imi defec'tus et anxietas, An'imi demis'sio, Tristia*, from α priv. and θυμος, 'heart,' 'courage.' *Despondency*. The prostration of spirits, often observable in the sick.—Hippocr. Melancholy.—Swe diaur.

ATLAS, *Atlantion*, from ατλαω, 'I sustain.' The *first cervi'cal ver'tebra*: so called, from its supporting the whole weight of the head, as Atlas is said to have supported the globe on his shoulders. Chaussier calls it *Atloid*. This vertebra in no respect resembles the others. It is a kind of irregular ring, into which, anteriorly, the *processus dentatus* of the second vertebra is received. Posteriorly it gives passage to the medulla spinalis.

ATLOI'DO-AXOID, (F) *Atloido-axoidien*. Relating to both the Atlas and the Axis or Vertebra Dentata.

ATLOI'DO-AXOID ARTICULATION. The articulation between the two first cervical vertebræ.

ATLOI'DO AXOID LIG'AMENTS. These are two in number; one *anterior* and another *posterior*, passing between the two vertebræ.

ATLOI'DO-OCCIP'ITAL. Relating to the Atlas and occiput. The *Atloi'do-occip'ital Articulation* is formed by the condyles of the occipital bone and the superior articular surfaces of the Atlas.

ATMIATRI'A, *Atmidiat'rica*, from ατμος, 'vapour,' and ιατρεία, 'treatment.' Treatment of diseases by fumigation.

ATMOSPHERE, *Atmosphæ'ra*, from ατμος, 'vapour,' and σφαῖρα, 'a sphere,'—as it were, *Sphere of vapours*. The atmosphere is a spherical mass of air, surrounding the earth in every part; the height of which is estimated at 15 or 16 leagues. It presses on the surface of the earth, and this pressure has, necessarily, sensible effects on organized bodies. The surface of the human body being reckoned at 15 square feet, it is computed that a pressure of 33,000 pounds or more exists under ordinary circumstances; and this pressure cannot be increased or diminished materially, without modifying the circulation and all the functions.

ATOL'MIA, from α priv. and τολμα, 'confidence.' Want of confidence; discouragement. A state of mind, unfavourable to health, and injurious in disease. It is the antithesis of *Eutol'mia*.

ATONY, *Ato'nia, Infir'mitas et Remis'sio vi'rium, Languor, Lax'itas*, from α priv. and τονος, 'tone,' 'force.' Want of tone. Weakness of every organ, and particularly of

those that are contractile. Violent gastritis has been described by Scribonius Largus under a similar name, *ατρονον*, *Atonon*.

ATRABIL'IARY, *Atrabil'ious*, *Atrabil'iaris*, *Atrabilio'sus*. An epithet given by the ancients to the melancholic and hypochondriac, because they believed the Atrabilis to predominate in such.

The *Atrabiliary capsules*, *arteries*, and *veins*, are the renal capsules, arteries, and veins; the formation of Atrabilis having been attributed to them.

ATRABI'LIS, from *atra*, 'black,' and *bilis*, 'bile:' *Ater succus*, *Black Bile* or *Melancholy*. According to the ancients, a thick, black, acrid humour, secreted, in the opinion of some, by the pancreas; in that of others, by the supra-renal capsules. Hippocrates, Galen, Aëtius, and others ascribe great influence to the Atrabilis in the production of hypochondriasis, melancholy, and mania. There is really no such humour. It was an imaginary creation.—Aretæus, Rufus of Ephesus, &c.

ATRACHELOCEPH'ALUS, from *α* priv. *τραχηλος*, 'neck,' and *κεφαλη*, 'head.' A monster whose neck is partially or wholly deficient.

ATRACHE'LUS, from *α* priv. and *τραχηλος*, 'neck.' One who is very short-necked.—Galen.

ATRAC'TYLIS GUMMIF'ERA, *Car'duus pi'neus*, *Ixi'ne*, *Gummy-rooted Atractylis*, *Pine Thistle*. The root, when wounded, yields a milky, viscid juice, which concretes into tenacious masses, and is said to be chewed with the same views as Mastich.

ATRAMEN'TUM, *A. Suto'rium*, *Ink*. *Calcan'thon*, (F) *Encre*. It has been advised as an astringent, and as an external application in herpetic affections.

ATRE'TUS, from *α* priv. and *τρεω*, 'I perforate.' One whose anus or parts of generation are imperforate.

ATRICES. Small tumours, which appear occasionally around the anus. Some commentators consider the word to be synonymous with condylomata.—Forestus.

ATRICI. Small sinuses in the vicinity of the anus, not penetrating the rectum.

ATRIPLEX HORTEN'SIS, *A. Sati'va*. (F) *Arroche*, *Bonne Dame*. The herb and seed of this plant have been exhibited as antiscorbutics.

The *At'riplex al'imus*, *A. Portulacoi'des*, and *A. Patula*, are used as pickles, and have similar properties.

ATROPA, from *Ατροπος*, 'the goddess of destiny;' so called from its fatal effects.

ATROPA BELLADON'NA, *Belladon'na*, *Deadly Nightshade*, *Sola'num leth'le*, *Sola'num maniacum*, *S. Furio'sum*, *Sola'num melanocer'asus*. (F) *Belladone*, *Morelle furieuse*, *Belle Dame*. *Nat. Ord.* Solanæ, *Sex. Syst.* Tetrandria Monogynia. The leaves are powerfully narcotic, diaphoretic, diuretic, and re-

pellent. They are occasionally used where narcotics are indicated. Sprinkling the powdered leaves over cancerous sores has been found to allay the pain; and the leaves form a good poultice. Dose, gr. $\frac{1}{2}$ to gr. j. of the powdered leaves.

ATROPA MANDRAG'ORA, *Mandrag'ora*, *Mandrake*. The boiled root has been used in the form of poultice in indolent swellings.

ATROPINE, *Atropi'na*, *Atro'pia*, *Atro'pium*. The active principle of the *Atropa Belladonna*, separated by Brandes, by a process similar to that for procuring Morphine.

ATROPHY, *Maras'mus Atro'phia*, *Atro'phia*, *Maras'mus*, *Macies*, *Contabescen'tia*, *Tabes*, *Marco'res*, *Analo'sis*, from *α* privative, and *τροφη*, 'nourishment.' (F) *Atrope*, *Des-séchement*. Progressive and morbid diminution in the bulk of the whole body or of a part. Atrophy is generally symptomatic.

ATTACK', *Insul'tus*, *Irrep'tio*, *Inva'sio*, *Eis'bole*, *Lepsis*, (F) *Attaque*. A sudden attack, invasion or onset of a disease. A seizure.

AT'TAGEN, *At'tagas*, the *Fran'colin*. Celebrated with the ancients both as food and medicine.—Martial, Aristophanes.

AT'TALUS, *Attalicum*. A name given to certain compound medicines by Galen.

ATTANCOURT, MINERAL WATERS OF. A mineral water in France at Attancourt in Champagne; and about 3 leagues north of Joinville. The water is a chalybeate, and contains sulphate of lime. In large doses it is purgative.

ATTENÖTING, MINERAL WATERS OF, in Bavaria. The water contains carbonic acid, carbonates of lime and soda, sulphates of lime and magnesia, muriate of soda, iron, and alum. It is much used in skin diseases, fistula, old ulcers, calculi, and hæmorrhoids.

ATTEN'UANTS, *Attenuan'tia*, *Leptun'tica*, from *ten'uis*, 'thin.' Medicines which augment the fluidity of the humours.

AT'TITUDE, *Situs Cor'poris*. Situation, position of the body. The attitudes are the different postures which man is capable of assuming. In *General Pathology*, the attitude will often enable the physician to pronounce at once upon the character of a disease, or it will aid him materially in his judgment. In St. Vitus's dance, in fractures, luxations, &c., it is the great index. It will also indicate the degree of nervous or cerebral power: hence the sinking down in bed is an evidence of great cerebral debility in fever.

The position of a patient during an operation is an interesting subject of attention to the surgeon.

ATTOL'LENS AUREM, *Attol'lens Auric'ulæ*, *Leva'tor Auris*, *Superior Auris*, *Attol'lens Auric'ulam*, (F) *Auriculaire supérieur*, *Temporo-auriculaire*. A muscle of the ear, which arises, thin, broad, and tendinous, from the tendon of the occipito-frontalis, and

is inserted into the upper part of the ear, opposite to the antihelix. It raises the ear.

ATTRAHENT, *At'trahens*, *Attractivus*, *Attractorius*, from *ad*, 'to,' and *traho*, 'I draw.' (F) *Attractif*, *Attirant*. Remedies are so called, which attract fluids to the parts to which they are applied, as blisters, rubefacients, &c.

ATTRAPE-LOURDAUT, (F). A bistouri invented by a French surgeon, called Biennaise, and used in the operation for hernia. See Bistour caché.

ATTRITION, *Attri'tio*, *Ecthlomma*, from *terere*, 'to bruise.' Friction or bruising. Chafing.—Galen. Also, a kind of cardialgia.—Sennertus. Likewise, a violent contusion.

ATYPIC, *Atyp'icus*, *At'ypos*, from α privative, and *τυπος*, 'type.' That which has no type. Irregular. Chiefly applied to an irregular intermittent. *Febris atypica*.

AUAN'TE, *Anap'se*, from *αυανσις*, 'desiccation.' Hippocrates gave this name to a disease, the principal symptom of which was emaciation.—Atrophy.

AUDINAC, MINERAL WATERS OF. Audinac is situate in the department of Ariège, France. The water contains a small quantity of hydrosulphuric acid; carbonic acid, sulphates of lime and magnesia, carbonates of lime and iron, and a bituminous substance. It is much used in chronic rheumatism, herpes, scrophulous diseases, &c.

AUDITION, from *audi're*, 'to hear.' *Acoë*, *Audi'tio*, *Audi'tus*, *Acoe'sis*, *Acu'sis*. Hearing. The act of hearing. The sensation arising from an impression made on the auditory nerves by the vibrations of the air, produced by a sonorous body. The Physiology of Audition is obscure. It probably takes place:—1. By the vibrations being communicated from the membrana tympani along the chain of small bones to the membrane of the foramen ovale. 2. By means of the air in the cavity of the tympanum, the membrane of the foramen rotundum is agitated. 3. The transmission may be made by means of the bony parietes.

In these three ways the vibrations, produced by a sonorous body, may reach the auditory nerves. Audition may be *active* or *passive*: hence the difference between *listening* and simply *hearing*.

AUDITORY, *Audito'rius*, *Auditi'vus*. That which relates to audition.

The EXTER'NAL AUDITORY CANAL, *Mea'tus audito'rius exter'nus*, *Alvea'rium*, (F) *Conduit auditif externe*, *Conduit auriculaire*, commences at the bottom of the concha, at the *Fora'men auditi'vum exter'num*, passes inwards, forwards, and a little downwards, and terminates at the membrana tympani. It is partly cartilaginous, partly osseous, and partly fibrous.

The INTERNAL AUDITORY CANAL, *Mea'tus audito'rius inter'nus*, *Cyar*, (F) *Conduit au-*

ditif interne, *C. labyrinthique*, is situate in the posterior surface of the pars petrosa of the temporal bone. From the *Fora'men auditi'vum inter'num*, where it commences, it passes forwards and outwards, and terminates by a kind of *cul-de-sac*, perforated by many holes, one of which is the orifice of the Aquæductus Fallopii; and the others communicate with the labyrinth.

The AUDITORY NERVE, *Nerf labyrinthique*—(Ch.), is the *Portio Mollis* of the 7th pair. It arises from the corpus restiforme, from the floor of the fourth ventricle, and, by means of white striæ, from the sides of the calamus scriptorius. As it leaves the encephalon, it forms a flattened cord, and proceeds with the facial nerve through the foramen auditivum internum, and as far as the bottom of the meatus, where it separates from the facial and divides into two branches, one going to the cochlea;—the other to the vestibule and semicircular canals.

The AUDITORY ARTERIES AND VEINS, are vessels which enter the auditory canals, and are, like them, distinguished into *internal* and *external*. The *external auditory artery*, *A. Tympanique*—(Ch.), is given off by the styloid, a branch of the external carotid: the *internal* is a branch of the basilar artery, which accompanies the auditory nerve, and is distributed to it.

The AUDITORY VEINS empty into the internal and external jugulars.

AUGE, *Al'veus*. Some of the older Anatomists gave this name to reservoirs, into which liquids flow in an interrupted manner, so that they are alternately full and empty. Such are the ventricles and auricles of the heart.

AUGMENTA'TION, from *augere*, 'to increase.' *Augmen'tum*, *Incremen'tum*, *Anabasis*, *Auc'tio*, *Auxe'sis*. The stage of a disease in which the symptoms go on increasing.

AUMALE, MINERAL WATERS OF. Aumale is a town of Upper Normandy, in the country of Caux. Several springs of ferruginous mineral waters are found there, whose odour is penetrating, and taste rough and astringent. They are tonic, and employed in debility of the viscera, &c.

AURA, *Pnoë*. A vapour or emanation from any body, surrounding it like an atmosphere. Van Helmont regarded the vital principle as a gas and volatile spirit, which he called *Aura vitalis*.

AURA SEM'INIS or *A. semina'lis*:—an active principle fancied to exist in the sperm, and regarded by some as the fecundating agent. Such is not the case.

AURA SAN'GUINIS. The odour exhaled by blood newly drawn. See Gaz Sanguinis.

In Pathology, Aura means the sensation of a light vapour, which, in some diseases, appears to set out from the trunk or limbs; and to rise towards the head. This feeling has been found to precede attacks of epilepsy and

hysteria, and hence it has been called *Aura epileptica* and *A. hysterica*.

AURANTIA CURASSAVENTIA. *Curassoa apples* or *oranges*. Immature oranges, checked, by accident, in their growth. They are a grateful, aromatic bitter, devoid of acidity. Infused in wine or brandy they make a good stomachic. They are also used for *issue peas*.

AURICULA. Diminutive of *auris*, an ear. The auricle of the ear. See Pavilion.

The **AURICLES OF THE HEART**, *Cavita'tes innomina'tæ*, (F) *Oreillettes*, are two cavities; one right, the other left, each communicating with the ventricle of its side. These two cavities receive the blood from every part of the body. Into the *right auricle*, the two *venæ cavæ* and coronary vein open: into the *left*, the four pulmonary veins. Chaussier calls the former the *Sinus of the Venæ Cavæ*:—the latter, the *Sinus of the Pulmonary Veins*. See *Sinus*.

AURICULAR, *Oric'ular*, *Auricula'ris*, from *auric'ula*, 'the ear.' That which belongs to the ear, especially to the external ear.

The **AURICULAR ARTERIES AND VEINS**, *Oriculaires*—(Ch.), are divided into *anterior* and *posterior*. The *anterior* are of indeterminate number. They arise from the temporal artery, and are distributed to the meatus auditorius externus, and to the pavilion of the ear. The *posterior auricular* is given off by the external carotid, from which it separates in the substance of the parotid gland. When it reaches the inferior part of the pavilion of the ear it bifurcates; one of its branches being distributed to the inner surface of the pavilion, the other passing over the mastoid process, and being distributed to the temporal and posterior auris muscles, &c. Before its bifurcation it gives off the *stylo-mastoid artery*.

The **ANTERIOR AND POSTERIOR AURICULAR VEINS** open into the temporal and external jugular.

The **AURICULAR NERVES** are several. 1. The *auricular branch*, *Zygomato-auricular*, is one of the ascending branches of the cervical plexus. It ramifies and spreads over the two surfaces of the pavilion. 2. The *auricular* or *superficial temporal*, *Temporal-cutaneous*—(Ch.), is given off from the inferior maxillary. It ascends between the condyle of the jaw and the meatus auditorius externus, sends numerous filaments to the meatus and pavilion, and divides into two twigs, which accompany the branches of the temporal artery, and are distributed to the integuments of the head. There is also a *posterior auricular* furnished by the facial.

The **AURICULAR FINGER**, (F) *Doigt auriculaire*, is the little finger, so called because, owing to its size, it can be more readily introduced into the meatus auditorius.

AURICULO-VENTRICULAR, *Auric'ulo-ventricula'ris*. That which belongs to the

auricles and ventricles of the heart. The communications between the auricles and ventricles are so called. The *Tricuspid* and *Mitral Valves* are auriculo-ventricular valves.

AURI'GA. A species of bandage for the ribs, described by Galen.

AURIST, from *auris*, 'the ear.' One who occupies himself chiefly with the diseases of the ear and their treatment.

AURUM, 'Gold.' (q. v.)

AURUM MUSIVUM, *Aurum Mosa'icum*, *Sulphuret of Tin*. The *deutosulphuret* or *persulphuret of tin*. (Quicksilver, tin, sulphur, sal ammoniac, aa, equal parts. The tin being first melted, the quicksilver is poured into it, and then the whole are ground together, and sublimed in a bolthead. The *aurum musivum* lies at the bottom.) It is used in some empirical preparations.

AUSCULTA'TION, *Auscul'tatio*, from *auscul'tare*, 'to listen:' act of listening. Buisson has used it synonymously with *listening*. Laennec introduced *auscultation* to appreciate the different sounds, which can be heard in the chest, and in the diagnosis of diseases of the heart, lungs, &c. This may be done by the aid of an instrument called a *stethoscope* (q. v.), one extremity of which is applied to the ear, the other to the chest of the patient. This mode of examination is called *Mediate Auscultation*, (F) *Auscultation mé-diate*,—the application of the ear to the chest forming *immediate auscultation*.

The act of exploring the chest is called *Stethoscop'ia*, and *Thoracoscop'ia*; of the abdomen, *Abdominoscop'ia*. (q. v.)

AUSTE'RE, *Auste'rus*. Substances, which produce a high degree of acerb impression on the organs of taste.

AUSTROMAN'CY; *Austromanti'a*. The art of predicting from observance of the winds.

AUTARCI'A, from *αυτος*, 'himself,' and *αρκτω*, 'I am satisfied.' Moral tranquillity.—Galen.

AUTEMES'IA, from *αυτος*, 'self,' and *εμεσις*, 'vomiting.' Spontaneous or idiopathic vomiting.—Alibert.

AUTHE'MERON. A medicine which cures on the day of its exhibition; from *αυτος*, 'the same,' and *ημερα*, 'day.'

AUTOC'RASY, *Autocrati'a*, *Autocrat'ia*, from *αυτος*, 'himself,' and *κρατος*, 'strength.' Independent force. Action of the vital principle, or of the instinctive powers towards the preservation of the individual.—See *Vis Mediatricis Naturæ*. Also, the vital principle.

AUTOLITHOT'OMUS, *Autolithot'omist*, from *αυτος*, 'himself,' *λιθος*, 'a stone,' and *τεμνειν*, 'to cut.' One who operates upon himself for the stone.

AUTOMATIC, *Automat'icus*, from *αυτοματος*, 'spontaneous.' That which acts of itself. Those movements are called *automatic*, which the patient executes without any object; apparently without volition being exercised.

AUTOP'SIA or **AUTOP'SY**; from *αυτος*, 'himself,' and *οψις*, 'vision.' *Autoph'ia*. Attentive examination by one's self. Improperly used occasionally for the following:—

AUTOP'SIA **CADAVER'ICA**, (F) *Autopsie*, *Ouverture cadavérique*. Attentive examination after death, *Examination post mortem*, *Section Cadav'ericis*, *Dissection*, *Necros'copy*, *Necropsy*;—practised for the purpose of investigating the causes and seat of an affection of which a person may have died, &c.

AUTUMN, *Autum'nus*, *Phthiropo'ron*, (F) *Automne*. One of the seasons of the year, between the 23d of September and the 22d of December. In all climates the Autumn or Fall is liable to disease; a combination of local and atmospheric causes being then present, favourable to its production.

AUTUM'NAL; *Autumna'lis*. (F) *Automnale*. Relating to autumn; as *Autumnal Fruits*, *Autumnal Fevers*, &c.

AUTUMNAL FEVER, generally assumes a bilious aspect. Those of the intermittent kind are much more obstinate than when they appear in the spring.

AUXIL'IARY, *Auxilia'ris*, from *auxil'ium*, 'aid.' (F) *Auxiliare*. That which assists;—from which assistance is obtained.

AUXIL'IARY MUSCLES are those which concur in the same movement. Some Anatomists have applied the term to several ligaments, as well as to the fleshy fibres, which hang from the *sacro-spinalis* muscle.

An **AUXIL'IARY MEDICINE** is one which assists the principal medicine or basis. It is synonymous with *Adjuvant*.

AVAILLES, WATERS OF. A small village in France, 13 leagues S. S. E. of Poitiers, at which there is a cold saline chalybeate. It contains muriates of soda and lime, sulphate and subcarbonate of soda, iron, &c.

AVANT-BOUCHE, (F), *Os anti'cum*. This name has been applied by some, to the mouth properly so called, in contradistinction to the *Arrière-bouche* or *Pharynx*.

AVANT-GOUT (F), *Prægusta'tio*; a Fore-aste, *Prægustation*.

AVANT-MAIN (F), *Adver'sa Manus*. The inside of the hand, when extended.

AVANT-PIED (F). The most advanced part of the foot.

AVANT-POIGNET (F). The anterior part of the wrist.

AVE'NA *Oats*, *Bromos*. The seeds of the *Ave'na sati'va*. *Nat. Ord.* Gramineæ. *Sex. Syst.* Triandria Digynia. (F) *Avoine*. Oats are used as food for man, in some parts, particularly in the North of England and Scotland. When deprived of the husks they form *GROATS*, which see. Reduced to meal, they are applied as cataplasms, to promote suppuration. The dry meal is sprinkled over erysipelatous parts.

AVENHEIM, MINERAL WATERS OF. Avenheim is three leagues from Strasburg, and near it is an aperient mineral water.

AVENNES, MINERAL WATERS OF. Avennes is a village in the department of Herault in France, and near it is a saline spring, the temperature of which rises to 84° Fahrenheit.

AVERRHO'A CARAM'BOLA. *Malum Coën'se*, *Prunum stella'tum*, *Tam'ara conga*, *Caram'bolo*. An Indian tree, whose fruits are agreeably acid. The bark, bruised, is employed as a cataplasm, and its fruit is used as a refrigerant in bilious fever and dysentery.

The **AVERRHO'A** **BILIM'BI**, *Bilim'bi*, *Bilim-bing teres*, has a fruit, which is too acid to be eaten alone. It is used as a condiment, and in the form of syrup as a refrigerant.

AVER'SION, *Aver'sio*, *αποτροπή*, from *avertere*, 'to turn from.' Extreme repugnance for any thing whatever.

AVERSION (F) also means, in Therapeutics, the action of medicines which turn the afflux of fluids from one organ, and direct them to others: being synonymous with *counter-irritation*, or rather *revulsion* or *derivation*.

AVERTIN (F). A disease of the mind, which, according to LAVOISIEN, renders the patient obstinate and furious.

AVICEN'NIA TOMENTO'SA. The plant which affords the *Malac'ca Bean* or *Anacar'dium Orienta'le* of the Pharmacopœias, *Semecar'pus Anacar'dium*. The oil drawn from the bark of the fruit is a corrosive and active vesicatory, but it is not used.

AX, MINERAL WATERS OF. Ax is a small town in the department of Arriège, France; where there are several sulphurous springs; the temperature of which varies from 77° to 162° of Fahrenheit.

AX'EA COMMISSU'RA, *Trochoi'des*. A pivot-joint.

AXIL'LA, *Ala*, *Ascel'la*, *Assel'la*, *Ascil'la*, *Acel'la*, *Cordis emuncto'rium*, *Male*, *Hypo'mia*, *Fovea axillaris*, *Mas'chalē*, (F) *Aisselle*. The cavity beneath the junction of the arm with the shoulder; the *armpit*. It is bounded, anteriorly, by a portion of the pectoralis major; posteriorly, by the latissimus dorsi. It is covered with hair, contains much cellular membrane, lymphatic ganglions, important vessels and nerves, and numerous sebaceous follicles, furnishing an odorous secretion. In consequence of such secretion, the ancients called it *emuncto'rium cordis*.

AX'ILLARY, (F) *Axillaire*, from *axil'la*, 'the armpit.' Belonging to the armpit.

ARTE'RIA AXILLA'RIS; a continuation of the subclavian, extending from the passage of the latter between the scaleni muscles as far as the insertion of the pectoralis major, when it takes the name *Brachial*.

VENA AXILLA'RIS, *Vena Subala'ris*. This vein corresponds with the artery; anterior to which it is situated. It is a continuation of the *brachial veins*; and, at its termination, assumes the name *Subclavian*.

The **AX'ILLARY NERVE**, *Scap'ulohu'meral*

(Ch.) *Nerf circonflexe*, *Articular nerve*, arises from the posterior part of the brachial plexus, particularly from the two last cervical pairs and the first dorsal. It is chiefly distributed to the posterior margin of the deltoid.

The **AXILLARY GLANDS** are lymphatic glands, seated in the armpit; into which the lymphatic glands of the upper extremity open.

AXIRNACH, An Arabic word, used by **ALBUCASIS** to designate a fatty tumour of the upper eyelid, observed particularly in children.

AXIS, *Axon*, (F) *Axe*. A right line which passes through the centre of a body.

THE **AXIS OF THE EYE**, (F) *Axe de l'œil*, called, also, *Visual Axis* and *Optic Axis*, is a right line, which falls perpendicularly on the eye; and passes through the centre of the pupil.

AXIS, is also the second vertebra of the neck, *Axon*, *Epistrophæus*, *Maschalister*; the *Vertebra Denta'ta*. (F) *Essieu*. So called because it forms a kind of axis on which the head moves. *Chaussier* calls it *Axoide*, from *ἄξων*, 'axis,' and *εἶδος*, 'shape.'

AXOIDO-ATLOIDEUS. What refers to both the axis and atlas; as *Axoido-atloidean* articulation.

The lesions of the Axoido-atloidean articulation are, 1. Fracture of the *Processus dentatus*. 2. Rupture of the odontoid ligaments, and consequently passage and pressure of the processus behind the transverse ligament: and, 3. The simultaneous rupture of the odontoid and transverse ligaments. These different accidents are fatal.

AZODYNAMIA, from *α* priv. *ζωή*, 'life,' and *δυναμική*, 'strength.' Privation or diminution of the vital powers.—*Gilibert*.

AZOTE, **AZOTUM**, from *α* priv. and *ζωή*, 'life.' *Azote* or *Nitrogen*, *Alcaligene*, *Gas azoticum*, *Zoogenium*, (F) *Air gaté*, *Air vicié*, is a gas, which is unfit for respiration. It is not positively deleterious, but proves fatal, owing to the want of oxygen. It is one of the constituents of atmospheric air, and is the

distinguishing principle of animals. Vegetables have it not generally diffused, whilst it is met with in most animal substances. It has been variously called, *phlogistic air*, *vitiated air*, &c.; has been looked upon as sedative, and recommended to be respired, when properly diluted, in diseases of the chest.

AZOTENESSES, from *azote*, and *νόσος*, 'disease.' Diseases fancied to be occasioned by the predominance of azote in the body.—*Baumes*.

AZURIUM. A compound of two parts of mercury, one-third of sulphur, and one-fourth of sal ammoniac.—*Albert the Great*.

AZYGES, *Azygos*, *sine pari*, from *α* priv. and *ἴσος*, 'equal.' Unequal. The *sphenoid bone*, because it has no fellow. Also, a process, *Processus Azygos*, projecting from under the middle and forepart of this bone.

VENA AZYGOS, *Veine Prelombothoracique*—(Ch.) *Vena sine pari*, *Vena pari carens*. This vein was so called by *Galen*. It forms a communication between the *V. cava inferior* and *V. cava superior*, permitting the blood to pass freely between the two. It rises from the vena cava inferior, or from one of the lumbar or renal veins, passes through the diaphragm, ascends along the spine to the right of the aorta and thoracic duct, and opens into the *V. cava superior*, where it penetrates the pericardium. On the left side, the *SEMIAZYGOUS*, *Left Bronchial* or *left superior intercostal vein*, *V. demi-azygos*, *Veine petite prelombo-thoracique*—(Ch.), presents, in miniature, nearly the same arrangement.

The **AZYGOS MUSCLE**, *Azygos Uvulae*, is the small muscle, which occupies the substance of the uvula.—*Morgagni*. The name is, however, inappropriate, as there are two distinct fasciculi, placed along side each other, forming the *Palato-staphyli'ni*, *Staphyli'ni*, or *Epistaphyli'ni* muscles, *Staphyli'ni medii* of *Winslow*.

AZYMUS, from *α* priv. and *ζυμῆν*, 'leaven.' *Azymous* bread is unfermented, unleavened bread.—*Galen*.

B

BACARIS, *Bach'aris*. A name given by the ancients to an ointment described by *Galen* under the name *Ointment of Lydia*. It was sometimes employed in diseases of the womb.—*Hippocr*.

BACCAR or **BACCARIS**. An herb used by the ancients in their garlands, to destroy enchantment. Perhaps the *Digitalis purpurea* (q. v.) Some authors have erroneously thought it to be the *Asarum*.

BACCHI'A, from *Bac'chus*, 'wine.' A name applied to the red or pimped face of the drunkard.

BACILLUM, *Bac'ulus*, *Bac'culus*; 'a stick.' This name has been applied to a kind of troch, composed of expectorants, and having the shape of a stick. *Bacillum* was used, by the ancient chemists, for several instruments of iron.

BADEN, MINERAL WATERS OF.

Baden is a town six miles from Vienna. Here are 12 springs, containing carbonates of lime and magnesia; sulphates of lime, magnesia, and soda; and the muriates of soda and alumina. The water is used in diseases of the skin, rheumatism, &c. There are two other towns of the same name; one in Suabia, and the other in Switzerland, where are mineral springs. The waters of the last are sulphureous.

BADIAGA. A kind of sponge, sold in Russia; the powder of which is said to take away the livid marks from blows and bruises in a few hours. Its nature is not understood.

BAGNERES-ADOUR, MINERAL WATERS OF. Bagnères-Adour is a small town in the department of the *Hautes Pyrénées*, having a great number of mineral springs; some, cold chalybeates; others, thermal salines, but the greatest part sulphureous and warm. The temperature of the last rises as high as 97° Fahrenheit.

BAGNERES DE LUCHON is a small town in the department of *Haute Garonne*, on the frontiers of Spain. It has been, for a long time, famous for its numerous sulphureous springs, the temperature of which is from 86° to 147° of Fahrenheit.

BAGNIGGE WELLS. A saline mineral spring in London, resembling the Epsom.

BAGNOLES, MINERAL WATERS OF. Bagnoles is a village in the department of the Orne. The water resembles that of the *Bagnères de Luchon*.

BAGNOLS, MINERAL WATERS OF. Bagnols is a village, two leagues from Mende, in the department of Lozère. The waters are hydrosulphurous and thermal: 113° Fahrenheit.

BAHEL, *Colum'nea longifo'lia*; a labiated plant of Malabar, whose leaves, bruised, are applied as cataplasms to suppurating tumours.

BAIGNOIRE, (F) *Baptiste'rium*, a *Bathing tub*, *Bagnio*, *Solium*, *Pisci'na*. The vessel or place in which bathing is performed. *Baignoire oculaire*, an *eye-bath*,—a small vessel for bathing the eyes.

BAINS, MINERAL WATERS OF. These are situated at Plombières, department of the Vosges. They are said to be saline and thermal by some; others deny them any medical properties.

BAL'ANOS, βαλανος, 'glans,' 'an acorn.' The glans penis. Hence, *Balanoblennorrhœa*, *Blennorrhœa* of the glans, and *Balanitis*, Inflammation of the glans. Suppositories and pessaries were, also, so called.

BALARUC, MINERAL WATERS OF. Balaruc is a town in the department of Hérault, in France. The waters are saline and thermal. They contain carbonic acid, carbonate of lime, carbonate of magnesia, muriates of soda, lime, and magnesia, sulphate of lime, and a little iron. They are considered tonic, and are largely used. Their temperature is about 118° Fahrenheit.

The **FACTITIOUS BALARUC WATER, (F)** *Eau de Balaruc*; *Aqua Bellilucana*, is made of *simple acidulous water* (containing twice its bulk of carbonic acid) 3 xxss; *muriate of soda*, 3iss; *muriate of lime*, gr. xviii; *muriate of magnesia*, gr. 56; *carbonate of magnesia*, gr. j.

BALBIS, βαλβις, 'a foundation.' Any oblong cavity.—Galen. Hippocrates, in his treatise on the joints, gives the name *Balbito'des* to the olecranon cavity of the humerus.

BALBUS, (F) *Bègue*. One habitually affected with stammering. A stammerer.

BALBU'TIES, Psellis'mus, Psel'lotes, Blæ'sitas, Baryglossia, Dysla'lia, Mogila'lia, Battaris'mus, Bamba'lia, Stammering. (F) *Balbutiement, Bégaïement*. Also, vicious and incomplete pronunciation, in which almost all the consonants are replaced by the letters B and L, *Traulis'mus*.

BALLO'TA FÆTIDA, Marru'bium nigrum, Black Horehound, Stinking H. (F) *Marrube noir*. This plant is esteemed to be antispasmodic, resolvent, and detersive.(?)

BALLO'TA LANA'TA, Leonu'rus lana'tus. A plant of the *Nat. Family Labiatae, Sex. Syst. Didynamia Gymnospermia*, which grows in Siberia. The whole plant, with the exception of the root, has recently been recommended in Dropsy and in Rheumatism and Gout, as a diuretic. It is usually given in decoction (3ss to 3i to 3viij of water.)

BALLOTTEMENT (F). *Agitation, succussion, Mouvement de Ballottement, Repercussion*, means the motion impressed on the fœtus in utero, by alternately pressing the uterus by means of the index finger of one hand introduced into the vagina; the other hand being applied on the abdomen. It is one of the least equivocal signs of pregnancy.

BALLSTON SPA. This village is situated in Saratoga County, New York. The springs, which are much frequented, belong to the class of Acidulous Chalybeates. There is also a sulphur spring.

BALSAM, Bal'samum, Bol'eson, Bel'eson. (F) *Baume*. This name is given to natural vegetable substances, concrete or liquid, but very odorous, bitter, and piquant; composed of resin, benzoic acid, and sometimes of an essential oil;—which allow benzoic acid to be disengaged by the action of heat; readily dissolve in volatile oil, alcohol, and ether; and, when treated with alcalis, afford a soluble benzoate, and throw down resin. We know of only five balsams:—those of Peru, of Tolu, Benzoin, *solid* Styrax or Storax, and *liquid* Styrax. See those different words.

There is, however, a multitude of pharmaceutical preparations, and of resinous substances, possessed of a balsamic smell, and to which the name *balsam*, has been given; but they differ essentially in composition and properties: hence the distinction of balsams into *natural* and *artificial*. The *natural balsams* including the five before mentioned: the *artificial* the remainder.

BALSAM ACOUS'TIC, *Bal'samum Acous'ticum*. (F) *Baume acoustique*. A mixture of fixed and essential oils, sulphur, and tinctures of fetid gums. Used in cases of atonic deafness, dropped into the ear.

BALSAM, APOPLEC'TIC, *Bal'samum Apoplec'ticum*, (F) *Baume Apoplectique*; a medicine, composed of several balsams properly so called, resins, and volatile oils. It is of a stiff consistence, is worn in ivory boxes about the person, and is smelled at, in headaches, &c.

BALSAM OF ARCE'US, *Bal'samum Arcæi*, *Unguentum Elemi*, (F) *Baume d'Arcæus*; a soft ointment; sometimes employed in wounds, ulcers, &c. It is made by melting, with a gentle heat, two parts of mutton suet, one of lard, one and a half of turpentine, and as much resin.

BALSAM OF CARPA'THIA, *Bal'samum Carpathicum*. (F) *Baume de Carpathie*. The resin of the *Pinus Cembra*, a tree, which grows in Switzerland, Libya, and the Krack mountains in Hungary.

BALSAM, CHALYBE'ATE, *Bal'samum Chalybeatum*, (F) *Baume d'acier ou d'aiguilles*; a mixture of nitrate of iron, alcohol, and oil, prepared by dissolving needles in nitric acid. It was, formerly, employed in frictions in pains of the joints.

BALSAM, CORDIAL, OF SENNER'TUS, *Bal'samum Cordiale Senner'ti*, (F) *Baume cordiale de Sennert*. A stimulant medicine, composed of the essential oils of citron, cloves, and cinnamon, of musk, and ambergris. Dose, 6 to 15 drops.

BALSAM, SPIR'ITUOUS, OF FIORAVENTI, *Bal'samum Fioraven'ti spirituosum*, (F) *Baume de Fioraven'ti spiritueux*. Different products of the distillation of resinous and balsamic substances, and of a number of aromatic substances, previously macerated in alcohol, have been thus called. The *Spirituous Balsam of Fioraven'ti*, the only one now used in friction, in chronic rheumatism, is the first product of the distillation from a sand-bath. It is entirely alcoholic. The *Oily Balsam of Fioraven'ti* is obtained by removing the residue; and distilling it in an iron vessel, at a white heat. It has the appearance of a citrine-coloured oil. The *Black Balsam of Fioraven'ti*, is the black oil, obtained when the temperature is sufficient to carbonize the substances, in the cucurbit.

BALSAM OF FOURCROY OR OF LABORDE, (F) *Baume de Fourcroy ou de Laborde*; a kind of liniment, composed of aromatic plants, balsams, resins, aloes, turpentine, theriac, and olive oil. Used in chaps of the skin and nipples.

BALSAM OF GENEVIEVE, (F) *Baume de Geneviève*; an ointment composed of wax, turpentine, oil, red saunders, and camphor. Used in contused wounds, gangrene, &c.

BALSAM OF HONEY (HILL'S); a tincture of *tolu*, honey (aa ℥j) and spirit, (a gallon.) A pectoral, used in coughs. The committee of

the New York College of Pharmacy recommend the following formula:—(*Gum Benzoin* 3v, *Bals. Tolut* 3j, *Mellis*, f. 3viij, *Alcohol Olij*—digest for 10 days and filter.)

BALSAM OF HOREHOUND (FORD'S); a tincture of *horehound*, *liquorice-root*, *camphor*, *opium*, *benzoin*, *dried squills*, *oil of aniseed*, and *honey*. The same property as the above.

BALSAM, HYPNOT'IC, *Bal'samum Hypnoticum*, (F) *Baume Hypnotique*; a preparation of which *opium*, *hyoscyamus*, *camphor*, and some other sedative substances form the base. It is used externally, to provoke sleep, in friction.

BALSAM, HYSTER'IC, *Bal'samum Hystericum*, (F) *Baume Hysterique*; a preparation, made of *opium*, *aloes*, *asafetida*, *castor*, *distilled oils of rue*, *amber*, &c. It is held to the nose, applied to the navel, or rubbed on the hypogastrium in hysterical cases.

BALSAM OF LEIC'TOURE, OF CONDOM OR VINCEGUERE, *Bal'samum Lectorense*. A strongly stimulant and aromatic mixture of *camphor*, *saffron*, *musk*, and *ambergris*, dissolved in essential oils. The ancients burnt it for the purpose of purifying the air of a chamber, when infested with a disagreeable odour.

BALSAM OF LOCATEL'LI OR LUCATEL'LI, *Bal'samum Lucatel'li*, (F) *Baume de Lucatel*; a sort of ointment, composed of wax, oil, turpentine, sherry, and balsam of Peru, coloured with red saunders. It was once administered in pulmonary consumption.

BALSAM, NEPHRIT'IC, OF FULLER, *Bal'samum Nephreticum Fulleri*; a liquid medicine, composed of oils, resins, and balsams, which have experienced an incipient state of carbonization from concentrated sulphuric acid. It was given in the dose of 15 or 30 drops in certain affections of the kidneys.

BALSAM, NER'VOUS, *Bal'samum Nervinum*, (F) *Baume nervin ou nerval*. A kind of ointment, composed of fatty bodies, volatile oils, balsam of Peru, camphor, &c. It is employed by friction in cases of sprains and rheumatic pains.

BALSAM, PARALYT'IC, OF MYN'SICHT. A sort of liniment or soft mixture of the essential oils of different aromatic plants, oils of turpentine and amber.—Léméry.

BALSAM OF PAREI'RA-BRAVA, *Bal'samum Pareiræ-bravæ*. A soft mixture of balsam, resin, muriate of ammonia, and powder of the root of the *Paireira-brava*. It is given, internally, to excite the urinary secretion.

BALSAM OF RACKASI'RA OR OF RAKASI'RI. This substance is of a yellowish-brown colour; semi-transparent; fragile, when dry, but softening by heat; adhering to the teeth, when chewed. It has a smell similar to that of the Balsam of Tolu, and is slightly bitter. It is brought from India in gourd shells, and has been employed in diseases of the urinary organs, especially in gonorrhœa.

BALSAM, RIGA. Prepared from the shoots of the Scotch Fir, macerated in spirit of

wine. *Internally*, stimulant and diuretic; *externally*, a vulnerary.

BALSAM OF SAT'URN, *Bal'samum Satur'ni*. A solution of acetate of lead in spirit of turpentine, concentrated by evaporation; and to which camphor has been added. This balsam was applied to hasten the cicatrization of wounds.

BALSAM OF THE SAMAR'ITAN, (F) *Baume du Samaritain*. A sort of liniment, prepared by boiling together, at a gentle heat, equal parts of wine and oil. It is said to have been the ointment used by the Samaritan of the Gospel to cure a patient covered with ulcers.

BALSAM, SAXON, (F) *Baume Saxon*. A mixture of several volatile oils, as those of lavender, nutmeg, rue, amber, &c. It was employed in friction as a stimulant.

BALSAM OF SULPHUR, *Bal'samum Sul'phuris*, (F) *Baume de Soufre*. A solution of sulphur in oil.—*B. sulph. anisa'tum*, (F) *B. de soufre anisé*. A solution of sulphur in essential oil of aniseed; given as a carminative.—*B. sulph. succina'tum*, (F) *B. de soufre succiné*. A solution of sulphur in oil of amber.—*B. sulphur terebinthina'tum*, *Common Dutch Drops*, (F) *B. de soufre térébinthiné*. A solution of sulphur in essential oil of turpentine, administered as a diuretic.—The *Balsam of Sulphur of RULAND* is a solution of sulphur in linseed oil or nut oil.

BALSAM OF SYM'PATHY, *Bal'samum Sympath'icum*, (F) *Baume de Sympathie*. A balsam, used in the days when sympathetic influence was strongly believed in. It was composed of the raspings of a human skull, of blood, and human fat, and was applied to the instrument which had inflicted the wound.

BALSAM, THIBAUT'S. A tincture of myrrh, aloes, dragon's blood, flowers of St. John's wort, and Chio turpentine. *Internally*, diuretic; *externally*, vulnerary.

BALSAM, TRANQUIL, *Bal'samum tranquil'um*, (F) *B. tranquille*. A liquid medicine, employed externally in the shape of friction: it is prepared by macerating and boiling, in olive oil, narcotic and poisonous plants,—belladonna, mandragora, hyoscyamus, &c.—and afterwards infusing, in the filtered decoction, different aromatic plants. It was employed as an anodyne.

BALSAM OF TUR'PENTINE, *Dutch Drops*, *Bal'samum Terebin'thinæ*. Obtained by distilling oil of turpentine in a glass retort, until a red balsam is left. It possesses the properties of the turpentine.

BALSAM, GREEN, OF METZ, *Bal'samum Vir'idē Meten'sium*, *Bal'samum Vir'idē*, (F) *Baume vert de Metz*, *Baume de Feuillet*, *Huile verte*, *O'leum ox'ydii cupri vir'idē*. This is composed of several fixed oils, holding, in solution, subcarbonate of copper, sulphate of zinc, turpentine, aloes, and the essential oils of cloves and juniper. It is green and caustic, and is employed to hasten the cicatrization of atonic ulcers.

BALSAM OF LIFE, OF HOFF'MANN, *Bal'samum Vitæ Hoffman'ni*, (F) *Baume de vie d'Hoffmann*. A tincture, composed of essential oils and ambergris, employed internally and externally as a stimulant. A mixture of essential oils without alcohol constitutes the *Saxon Balsam*, *Bal'samum apoplec'ticum*, *B. aromaticum*, *B. cephal'icum*, *B. Saxon'icum*, *B. nervinum*, *B. SCHERZERI*, *B. stomach'icum*.

BALSAM, VUL'NERARY, OF MINDERERUS, *Bal'samum vulnera'rium Mindere'ri*, (F) *B. vulnéraire de MINDERER*. A kind of liniment, composed of turpentine, resin elemi, oil of St. John's wort, and wax. Employed in friction, and as a dressing to wounds.

BALSAM'IC, *Balsam'icus*, from βαλσαμον, 'balsam.' Possessing the qualities of balsams. *Balsamic odour*:—a sweet, faint, and slightly nauseous smell. A *balsamic substance*;—One resembling the balsams in property.

BALSAMI'TA SUAVEOLENS, *B. odora'ta*, *B. maris*, *Mentha saracen'ica*, *M. Roma'na*. *Fam. Compositæ Corymbiferae. Sex. Syst. Sygenesia Polygamia superflua*. A plant, common in the south of France, and cultivated in the gardens; where it bears the names *Menthe-coq*, *Grand baume*, *Baume des Jardins*. Its smell is strong and aromatic, and taste hot. It is used for the same purposes as the tansey, i. e. as a stimulant, vermifuge, &c.

BAMBA'LIO, *Bala'tro*, from βαμβανω, 'I speak inarticulately.' One who stammers or lisps, or utters inarticulate sounds. According to KRAUS, one who speaks as if he had pap in his mouth, or as if the tongue were paralyzed.

BAMBOO, (F) *Bambou*, *Bambu*. *Fam. Gramineæ; Sex. Syst. Hexandria Monogynia*. The young shoots of the *Bambos arundina'cea* or *Arun'do bambos*, and of the *Bambos verticilla'ta* contain a saccharine pith, of which the people of both the Indies are very fond. They are sometimes made into a pickle.

BAMMA, from βαπτω, 'I plunge,' 'a paint; a dye.' Anciently, liquids were so called, in which certain bodies were plunged, to moisten or soften them. In the case of tea, for instance, into which bread is dipped, the tea would be the *bamma*.

BANCAL (F). One who has deformed legs. It includes the *valgus*, *compennis*, and *varus*, which see.

BANCROCHE (F). A vulgar epithet for a rickety individual.

BAN'DAGE, *Desma*, *Hypodes'mis*. This word, with the French, is generally used to express the methodical application of rollers, compresses, &c., to fix an apparatus upon any part: corresponding to the words *deliga'tio*, *fascio'tio*, *fascia'rum applica'tio*, *Epid'esia*. With us, the noun is usually applied to the result of the application; or to the bandages themselves:—a sense in which the French employ the word *Bande*.

Bandages are *simple* or *compound*. The simple bandage is *equal*, if the turns are ap

plied circularly above each other; *unequal*, if the turns are not accurately applied upon each other. If each turn of the bandage be only covered one-third, it forms the *doloire* of the French: if the edges touch only slightly, it is the *moussé*; if the turns are very oblique and separated, it is the *spiral* or *creeping*, (F) *rampant*; if folded upon each other, it is termed the *reversed*, (F) *renversé*. By uniting various kinds of bandaging, we have the *compound*; and these compound bandages have received various names, expressive of their figure, or of the parts to which they are applied, as *capistrum*, *spica*, &c.

Bandages are divided, also, as regards their uses, into *uniting*, *dividing*, *retaining*, *expelling*, and *compressing*.

BANDAGE OF SEPARATE STRIPS, or **B. OF SCULTETUS**, *Fascia fasciolis separa'tim dispos'itis, seu Sculte'ti*, (F) *Bandage à bandelettes séparées ou de Scultet*. This is formed of linen strips, each capable of surrounding, once and a half, the part to which they have to be applied, and placed upon each other, so as to cover, successively, one-third of their width. It is used chiefly for fractures, requiring frequent dressing.

The **EIGHTEEN-TAILED BANDAGE**, *Fascia octod'ecim capit'ibus*, (F) *Bandage à dixhuit chefs*. This bandage is made of a longitudinal portion of a common roller; and with a sufficient number of transverse pieces or tails, to cover as much of the part as is requisite. It is a very useful bandage, inasmuch as it can be undone without disturbing the part.

The **COMPRESSING BANDAGE OF ROLLER**, *Fascia compressi'va seu convolu'ta*, (F) *Bandage compressif ou roulé*, is the simple roller with one head; and is employed in cases of ulcers, varices, &c. of the limbs. Whenever this roller is applied to the lower part of the limbs, it is carried upwards by the *doloire* and *reversed* methods above described.

The **BODY BANDAGE**, *Mantile*, (F) *Bandage de Corps*, is used for fixing dressings, &c. to the trunk. It is formed of a towel, napkin, or some large compress, folded three or four times; the extremities of which are fastened by pins. This is again fixed, by means of the *scapulary bandage*, which is nothing more than an ordinary bandage, stitched to the anterior and middle part of the napkin, passing over the clavicles and behind the head, to be attached to the back part of the napkin.

GALEN'S BANDAGE, or **B. for the Poor**, *Fascia Gale'ni seu Pau'perum*, (F) *Bandage de Galien ou des pauvres*, *Galea*, is a kind of *cucullus* or hood, (F) *Couvrechef*, divided into three parts on each side; and of which **GALEN** has given a description. For *Hernial Bandages*, see **TRUSS**.

INGUINAL BANDAGE, *Fascia inguina'lis*. A bandage for keeping dressings applied to the groin. It consists of a cincture, to which is attached a triangular compress, adapted for covering the groin. To the lower extremity

of this, one or two bandages are attached, which pass under the thigh, and are fixed to the posterior part of the cincture. This bandage may be either simple or double.

Other bandages will be found described under their various names.

The **BANDAGE OF ROLLER**, the *Fascia*, *Tænia*, *Epides'mos*, *Vin'culum*, the *Bande* of the French, is derived from (G) *binden*, 'to bind.' It may be made of linen, flannel, or other stuff, capable of offering a certain resistance. The two extremities of a bandage are called *tails*, (F) *chefs*, and the rolled part is termed its *head*, (F) *globe*. If rolled at both extremities, it is called a *double-headed roller* or *bandage*, (F) *Bande à deux globes*.

The word *Bande*, in Anatomy, is used by the French for various, narrow, flat, and elongated expansions. *Bande d'Heliodore*, is a kind of bandage for supporting the mammae.

BANDAGIST. One whose business it is to make bandages, and especially those for hernia.

BANDEAU (F). A kind of simple bandage, which consists of a piece of cloth, folded four times, and applied round the head. There is also the *Bandeau* or *Mouchoir en triangle* or *triangular bandage*, a kind of *Couvrechef* (which see), made of a square piece of cloth or a handkerchief, folded diagonally, and applied round the head.

BANDELETTE (F). Diminutive of *Bande*, *Fasciola*, *Tæniola*, *Vitta*; a narrow bandage, strip or fillet.

BANDELETES AGGLUTINATIVES, small strips, covered with a glutinous plaster. *Vittæ agglutinan'tes*.

BANDELETES DECOUPÉES, are strips of linen, notched on one edge, and covered, on one side, with ointment. They are applied to wounds to prevent the lint from sticking, and the laceration of the cicatrix.

BANGUE or **BANGI** or **BENG**. A species of Indian hemp, which Adanson believes to be the *Nepenthes* of the ancients, *Can'nabis Ind'ica*. Family, *Urticææ*. Sex. Syst. *Diœcia Pentandria*. Its leaves and flowers are astringent. They are chewed and smoked. Its seeds, mixed with opium, areca, and sugar, produce a kind of intoxication, and are used for this purpose by the people of India.

BANISTERIA ANGULO'SA. This plant, in Brazil and the Antilles, passes for a powerful sudorific, and an antidote to the poison of serpents.

BANNIERES, MINERAL WATERS OF. Bannières is a village in Quercy, Diocese of Cahors, France. The waters are probably chalybeate. They are celebrated in amenorrhœa, cachexia, jaundice, &c.

BA'OBAB. The *Adansonia digita'ta* of Africa; *Nat. Ord.* *Bombacææ*; one of the largest productions of the vegetable kingdom. Its fruit is called, in the country, *Pain de singe*. The pulp is sourish, and agreeable to

eat; and a refreshing drink is made from it, which is used in fevers. Prospero Alpini and Dr. L. Franck, think that the *Terra Lemnia* was prepared, in Egypt, from the pulp. All the parts of the Baobab abound in mucilage.

BARAQUETTE (F). A name given by Rasous, physician at Nîmes in France, to a catarrhal epidemic, which occurred there in 1761.

BARBAROS'SÆ PIL'ULÆ, *Barbarossa's Pills*. An ancient composition of quicksilver, rhubarb, diagridium, musk, &c. It was the first internal mercurial medicine, which obtained any real credit.

BARBER-CHIRUR'GEONS. A Corporation of London, instituted by king Edward IV. The Barbers were separated from the Surgeons, by 18 Geo. II. c. 15; and the latter were erected into a *Royal College of Surgeons* at the commencement of the present century.

BARBERIE, MINERAL WATERS OF. These mineral waters are half a league from Nantes. They contain carbonic acid, muriates of magnesia and soda, sulphate of magnesia, carbonates of magnesia, lime, and iron. They are used as chalybeates.

BAREGES, MINERAL WATERS OF. Baréges is a village in the department of Hautes Pyrénées, near which are several springs. They are sulphureous and thermal, the heat varying from 73° to 120° Fahrenheit. They contain muriates of magnesia and soda, sulphates of magnesia and lime, carbonate of lime, sulphur, &c.

These springs have long enjoyed a high reputation, and are daily advised in cutaneous and scrophulous affections, &c.

FACTITIOUS BAREGES WATER, *Aqua Bareginensis*, (F) *Eau de Baréges*, is made by adding, *hydrosulphuretted water*, 3 iv, to *pure water*, 3 xvijss, *carbonate of soda*, gr. xvj, *muriate of soda*, gr. ss. Bottle closely.

BARNET, MINERAL WATERS OF. Barnet is not far from London. The water is of a purging quality, like that of Epsom, and about half the strength.

BAROMACROM'ETER. *Baromacrom'etrum*, from βαρος, 'weight,' μακρος, 'long,' and μετρον, 'measure.' An instrument, invented by Stein to indicate the length and weight of a new-born infant.

BAROM'ETER, from βαρος, 'weight,' and μετρον, 'measure.' (F) *Baromètre*. An instrument which measures the weight of the air. A certain degree of density in this medium is necessary for health: when we ascend high mountains great inconvenience is experienced, owing to the diminished density. Changes of this character are indicated by the Barometer or Weatherglass.

BA'ROS, βαρος, 'heaviness.' Employed by the Greek physicians to designate the feeling of lassitude and heaviness observable in many diseases.—Hippocrates, Galen.

BARRE (F), *Bar'rure*, *Vara*. Projection

or prolongation of the symphysis pubis;—a deformity, rendering delivery difficult.

BARRE (F). A term applied, in France, to females, whose pelves have the deformity described under Barre.

DENTS BARREES. The molar teeth, when the roots are spread or tortuous, so that they cannot be extracted without being broken; or without a portion of the alveolar arch being removed.

BARRE, MINERAL WATERS OF. Barre is a small town, six leagues from Strasbourg. The waters are thermal, and contain much iron, calcareous salt, &c. They are diuretic and tonic.

BARYECOI'A or BARYCOI'TA, *Paracu'sia obtu'sa*, *Disecoi'a*, *Dysecæ'a*, *Audi'tus diffic'ilis*, *Oaudi'tio*, *A. gravis*, *A. immi-nu'tus*, *Hypocopho'sis*, (F) *Durété d'Oreille*, from βαρυς, 'heavy,' and ακον, 'hearing.' Hardness of hearing, incomplete deafness. See Cophosis.

BARYOD'YNE, from βαρυς, 'heavy,' and οδυνη, 'pain.' A dull heavy pain.

BARYPHO'NIA, from βαρυς, 'heavy,' and φωνη, 'voice.' Difficulty of speech.

BARYTA, from βαρυς, 'heavy,' *Terra pondero'sa*, *Barytes*, *Protox'ide of Ba'rium*, *Heavy Earth*, *Ponderous Earth*, (F) *Baryte*, *Terre pesante*. This earth and its soluble salts are all highly corrosive poisons. It is never employed in medicine in the pure state. When externally applied it is caustic, like potassa and soda.

The MU'RIATE OF HYDROCHLORATE OF BARYTA, *Chlo'ride of Ba'rium*, *Chlo'ruret of Ba'rium*, *Terra pondero'sa sali'ta seu muria'ta*, *Sal muriat'icum barot'icum*, *Baro'tes sali'tus*, is the combination chiefly used. It is given in the form of the *Solu'tio Muria'tis Barytæ*, (F) *Solution de Muriate de Baryte*. (*Barytæ Murias*, one part; *distilled water*, three parts.) It is employed in scrophulous cases, worms, and cutaneous diseases. Externally, to fungous ulcers and to specks on the cornea.

The HYDRIODATE OF BARYTA, *Barytæ Hydriodas*, *Baryta Hydriod'ica*, *Hydras Baryi Ioda'ti*, (in the dry state,—the *Iodide of Baryum*, *B. Ioda'tum*, *Baryum iodi'dum*) has been given in scrophulous and similar morbid conditions. It may be administered internally in the dose of one-eighth of a grain three or four times a day, and applied externally to scrophulous swellings, in the form of ointment, (gr. iv to 3i of lard.)

BASAAL. The name of an Indian tree; the decoction of whose leaves, in water, with ginger, is used as a gargle in diseases of the fauces. The kernels of the fruit are vermifuge.

BASANA'STRA'GALA, from βασανος, 'torture,' and αστραγαλος, the 'astragalus.' Pain in the ankle joint, gout in the foot.

BASANIS'MOS, from βασανιζειν, 'to explore.' 'A touch-stone.' Investigation or examination.—Hippocr., Galen.

BASE, *Ba'sis*, from βασις, 'I proceed,' 'I rest,' 'I support myself.' That which serves as a foundation or support. That which enters, as a principal matter, into a mixture or combination. In Anatomy, it is employed in the former sense, as *Base of the Cranium*, *Base of a Process*, &c., *Base of the Heart*, *Basis vel corona cordis*. In the art of prescribing, *Basis* is the chief substance which enters into a compound formula.

BASILARY, *Basila'ris*, (F) *Basilaire*. That which belongs to the Base, from βασις, 'base.'

This name has been given to several parts, which seem to serve as bases to others. The sacrum and sphenoid have been hence so called.

The **BASILARY VERTEBRA** is the last vertebra of the loins.

The **BASILARY PROCESS**, *Proces'sus basila'ris ossis occip'itis*, *P. cuneiformis ossis occip'itis*, (F) *Apophyse Basilaire*, *Prolongement sousoccipital*, *Cu'neiform Proc'ess*, is the bony projection, formed by the inferior angle of the os occipitis, which is articulated with the sphenoid.

BASILARY SURFACE, (F) *Surface basilaire*, is the inferior surface of this process. It is covered by the mucous membrane of the pharynx.

BASILARY FOSSA, (F) *Gouttière ou Fosse basilaire*, is the upper surface of the same process,—so called because it is channeled like a *Fossa* or *Gutter*. The *Tuber annulare* rests upon it.

BASILARY AR'TERY, *A. basila'ris*, *A. cervicalis*, (F) *Artère ou Tronc basilaire*, *A. mesocéphalique* (CH.):—the union of the two vertebral arteries. It is larger than either of these, but smaller than the two taken together. It ascends along the middle groove on the inferior surface of the tuber, and is supported, beneath, by the *Fossa basilaris*. It terminates in the posterior cerebral arteries.

BASIL'IC, *Basil'icus*, from βασιλικός, 'royal.' This name was given, by the ancients, to parts, which they conceived to play an important part in the animal economy.

BASILIC VEIN, *Vena Basil'ica*, *V. Cu'biti interior*, (F) *Veine Basilique*, *Veine cubitale cutanée* of Chaussier. This vein is one of those on which the operation of blood-letting is performed. It is situate at the internal part of the fold of the elbow, in front of the humeral artery, and is formed by the *anterior and posterior cubital veins*, and by the *median basilic*. It terminates, in the armpit, in the axillary vein. The ancients thought, that the basilic of the right arm had some connexion with the liver, and hence they called it *hepatic*. The vein of the left arm, for a similar reason, they called *splenic*. The *Median Basilic Vein*, (F) *Veine médiane basilique*, is one of the branches of the preceding vein. It joins the median cephalic at an acute angle, or rather by a transverse branch,

and receives some branches of the deep radial and cubital veins, and a considerable subcutaneous vein—the *common median*.

BASIL'ICON or **BASIL'ICUM**. 'Royal,' or of great virtue. An ointment, composed of yellow wax, black pitch, and resin, of each one part, olive oil four parts. Hence it was called *Unguen'tum Tetraphar'macum*, (τετραφαρμακα, 'four drugs.')

—Celsus, Scribonius Largus. The **BASILICON** or **BASILICUM** of the Parisian Codex is the *Onguent de Poix et de Cire*. In most Pharmacopœias, it is represented by the *Unguen'tum* or *Cera'tum Resinæ*. It is used as a stimulating ointment. See *Ceratum Resinæ*, and *Unguentum Resinæ Nigræ*.

BA'SIO-CER'ATO-GLOSSUS, from βασις, 'base,' κερας, 'cornu,' and γλωσσα, 'tongue.' A name given to a part of the hyoglossus, which is inserted into the cornu of the os hyoides and base of the tongue.

BASIOCESTRUM, from βασις, 'the base,' and κεστρα, 'a dart.' An instrument for opening the head of the fœtus in utero, invented by Mesler, a German.

BA'SIO-GLOS'SUS, *Hypseloglos'sus*, *Hyo-basioglossus*, *Ypseloglos'sus*, from βασις, 'base,' and γλωσσα, 'the tongue.' A name formerly given to the portion of the hyoglossus, which is inserted into the base of the os hyoides.—Riolan, Thomas Bartholinæ.

BASIO-PHARYNGÆ'US, from βασις, 'base,' and φαρυγξ, 'the pharynx.' A name given to some fibres of the constrictor pharyngis medius.—Winslow.

BASSI-COL'ICA. Name of a medicine, composed of aromatics and honey.—Scribonius Largus.

BATA'TAS. The inhabitants of Peru gave this appellation to several tuberous roots, especially to the *Convolvulus Batatas*, or *Sweet Potatoe* (q. v.) Our word, *Potatoe*, comes from this.

BATH, *Balneum*, *Balane'um*, *Loutron*, (F) *Bain*. Immersion, or stay, for a longer or shorter duration, of the whole or a part of the body in another medium than the atmosphere.

Immersion, total or partial, of the body in water.

Act of plunging into a liquid, sand, or other substance, in which it is the custom to bathe.

Also, the vessel in which the water is put for bathing.

A public or private establishment for bathing.

In *Pharmacy*, a vessel, placed over a fire, and filled with any substance, into which another vessel is placed, containing matters for digestion, evaporation or distillation.

The **HOT BATH**, *Balneum cal'idum*, (F) *Bain chaud*, is a bath, the temperature of which is 98° and upwards; the **TEPID** or **WARM BATH**, (F) *Bain tiède*, *B. tempéré*,

Balneum tep'idum, from 62° to 98°; the COLD BATH, *Balneum frig'idum*, *Frigida'rium*, (F) *Bain froid*, below 62°; and the VAPOUR BATH *Balneum Vapo'ris*, (F) *Bain de Vapeur*, *Etuve humide*, from 100° to 130°, and upwards. See Vaporarium.

AN ELEC'TRIC BATH, (F) *Bain électrique*, is given, by placing the person upon an insulated stool, communicating, by a metallic wire, with the principal conductor of the electrical machine in action. The Electric Bath produces general excitement of all the functions, and especially of the circulation and secretions.

A GENERAL BATH, (F) *Bain entier*, is one, in which the whole body is plunged except the head; in contradistinction to the *partial bath*, *Merobalane'um*, *Merobal'neum*.

A HIP BATH, *Coxælu'vium*, (F) *Bain de Fauteuil*, *Bain de Siège*, is one in which the lower part of the trunk and upper part of the thighs are immersed.

THE HAND BATH, *Manulu'vium*, (F) *Bain de Mains ou Manuluve*, is a bath for the hands.

THE FOOT BATH, *Pedilu'vium*, (F) *Bain de Pieds*, a bath for the feet: and the

HEAD BATH, *Capitulu'vium*. (F) *Bain de Tête ou Capitiluve*, a bath for the head.

A HALF BATH, *Semicu'pium*, *Excathis'ma*, *Inces'sio*, is one adapted for half the body. One, for receiving only the hips or extremities, is also so called.

A SHOWER BATH, is one in which the water is made to fall like a shower on the body. See Douche.

A MEDICATED BATH, *Balneum medica'tum*, (F) *Bain medicinal*, is a bath, formed of decoctions or infusions of vegetable substances, or of any ingredient, introduced into the water for therapeutical purposes.

AN ANIMAL BATH, *Balneum Anima'le*, consists in wrapping an animal, recently killed, or its skin, around the body or some part of it.

A WATER BATH, *Balneum Mar'ie*, (F) *Bain Marie*, consists of a vessel filled with boiling water, in which the vessel is placed, that contains the substance to be evaporated.

A STEAM BATH may be formed by introducing steam into the first of those vessels, properly closed, in place of water.

A SAND BATH, *Balneum Are'næ*, (F) *Bain de Sable*, consists of a vessel filled with sand, and placed over the fire. Into this vessel, the one is put, which contains the substance to be evaporated.

A DRY BATH is one made of ashes, salt, sand, &c. The ancients used these frequently for therapeutical purposes.

Bathing is much employed in the treatment of disease. The cold bath is a sedative and indirect tonic, and especially the cold sea bath: the warm bath is a relaxant; and the hot bath stimulates.

The regular use of the bath is extremely conducive to health: but if too much indulged in, it is apt to produce injurious effects.

BATH, MINERAL WATERS OF, *Aquæ Batho'niæ vel Bad'izæ*, *Aquæ Solis*, *Aquæ Bad'iguæ*. Celebrated thermal springs at Bath, in England. They contain but little impregnation, and are chiefly indebted to their temperature, which is about 116° Fahrenheit, for their utility.

These waters are employed in the most heterogeneous cases; and are serviceable where the simple thermal springs are indicated, as in rheumatism, paralysis, &c.

BATHER, *Balnea'rius*, *Balineator*, *Balnea'tor*. (F) *Baigneur*. One who bathes. Anciently, the name was given to those, that administered baths to the diseased,—the *Etuvistes* of the French.

BATHMIS, *Bathma*, 'base, support.' The cavity of a bone, which receives the eminence of another; and especially the two *Fossettes* at the inferior extremity of the humerus; into which the processes of the ulna are received, during the flexion and extension of the fore arm.

BATHRON, *Scamnum Hippoc'ratis*, *Bate'rion*, 'a step, a ladder.' (F) *Banc d'Hippocrate*. An instrument, used for the extension of a limb, in cases of fracture or luxation. The description of it is found in Galen, Orisbasius, and Scultetus, with a figure.

BATISSE, MINERAL WATERS OF. Batisse is three leagues from Clermont in France. The water is tepid, and contains subcarbonate and sulphate of soda, sulphates of lime and iron, muriate of magnesia, and carbonate of lime.

BAUDRICOURT, MINERAL WATERS OF. Baudricourt is a town of France, two leagues and a half from Mirecourt. The waters are sulphureous.

BAUHIN, VALVE OF, *Valve of TULPIUS*, *FALLOPIUS* or *VAROLIUS*, *Il'eo-cæcal Valve*, *Ileo-colic Valve*, *Val'vula Ilei*, *Valvula Coli*, *V. Cæci*, *Oper'culum Ilei*, *Sphincter Ilei*. This name is given to the valve, situate transversely at the place where the ilcum opens into the cæcum, and which Bauhin says he discovered at Paris, in 1759. It had, however, been previously described by several Anatomists; as by Vidus Vidius, Postius, &c.

BAURAC, (Arab.) Nitre, or salt in general. From this word comes Borax.

BAURIN, MINERAL WATERS OF. Baurin is a village four leagues from Roye, department of Somme. The waters are strongly chalybeate.

BAVE, (F) *Sali'va ex ore fluens*, *Spuma*, *Humor sali'vus*. Frothy, thick, viscid saliva, issuing from the mouth. This *driveling*, or, *slavering*, we see in children, old people, &c. The term is, also, applied to the frothy liquid, which flows from the mouth of rabid animals. Sauvages uses it synonymously with salivation.

BDELLIUM, *Myrrha imperfec'ta*, *Bolchon*, *Madeleon*, *Balchus*. A gum resin, brought from the Levant and India; and sup-

posed to be obtained from a species of *Amyris*, little known. It is solid, brittle, of a deep brown colour, of an acrid and bitter taste, and sweet odour. It was much vaunted by the ancients, but is now little employed.

BDELLOMETER, from *βδελλα*, 'a leech,' and *μετρον*, 'measure.' An instrument, proposed as a substitute for the leech; inasmuch as we can tell the quantity of blood obtained by it, whilst we cannot by the leech. It consists of a cupping-glass, to which a scarificator and exhausting syringe are attached.

BEARD, *Barba*, *Pogon*, *Genion*, *Barbitium*, (F) *Barbe*. The hair, which covers a part of the cheeks, the lips, and chin of the male sex, at the age of puberty.

BEAUGENCY, MINERAL WATERS OF. Beaugency is a quarter of a league from Orleans. The waters contain subcarbonate of soda, iron, magnesia, and lime. They are tonic and aperient.

BEAUVAIS, MINERAL WATERS OF. These waters are chalybeate. Beauvais is in *Picardie*.

BEBEERU, a tree of British Guiana, which yields an active principle—*Bebeerine*; and in its properties resembles the *Cinchona*. The *Sulphate of Bebeerine* has been employed in intermittents.

BEC (F), *Rostrum*, *Beak*. This name has been applied to various parts.

The **CORACOID BEAK**, (F) *Bec Coracoidien*, is the end of the coracoid process. The beak of the *Calamus Scriptorius*, (F) *Bec de la plume à écrire*, is a small cavity at the superior part of the medulla oblongata, which forms part of the 4th ventricle.

BEC DE CUILLER, *Hamulus*. An instrument used for the extraction of balls. It consists of an iron rod, 7 or 8 inches long, having at one extremity a small cavity, into which the ball is received to be drawn outwards.

BEC (LE), MINERAL WATERS OF. Bec is six leagues from Rouen in Normandy. The water is strongly chalybeate.

BECHIC, *Bechica*, *Becha*, *Bec'hica*, *Be-chita*, from *βηξ*, 'cough.' (F) *Bechique*. Medicines adapted for allaying cough.

BEDEGAR, BEDEGUAR, or BEDEGUARD, *Spongia Cynosbati*, *Fungus Rosarum*, *F. Cynosbati*. (F) *Pomme mousseuse*, *Eponge d'eglantier*. An excrescence, which makes its appearance on different species of wild roses, and which is produced by the puncture of a small insect—the *Cynips Rosæ*. It was formerly employed as a lithontriptic and vermifuge, but is not now used. It is slightly astringent.

BEE. Sax. *beo*, *Apis*, *Melis'sa*, *Melitta*. (F) *Abeille*. This insect was formerly exhibited, when dried and powdered, as a diuretic.

BEDFORD, MINERAL WATERS OF. Bedford is a village, situate on the great

Western Turnpike road from Philadelphia to Pittsburgh, a few miles east of the chief elevation of the Alleghany mountains. There are various springs, saline, chalybeate, and sulphureous.

BEGMA, *βηγμα*, according to some *Bregma*, *βρηγμα*, from *βησσειν* or *βησσαν*, 'to expectorate after coughing.' The sputum or expectorated matter.—Hipp.

BEGONIA. The *Begonia grandiflora* and *B. tomentosa* have astringent roots, which are used in Peru in cases of hemorrhage, scurvy, low fevers, &c.

BELA-AYE or BE-LAHE. A tonic and astringent bark of a Madagascar tree. Dupetit-Thouars and Sonnerat think it may be substituted for the Simarouba.

BELADAMBOC. A species of convolvulus of the Malabar coast, which contains an acrid milky juice. From this a liniment is formed with oil and ginger, which is used against the bites of rabid animals.

BELA-MODAGAM. A kind of *Scævola* of the Malabar coast, the leaves of which are considered diuretic and emmenagogue.

BELANDRE, (F). A litter, surrounded with curtains, in which patients are sometimes carried to hospitals.

BEL'ENOID, BEL'ONOID, or BEL'EM-NOID or BELOID, *Belenoides* or *Belem-noides Proces'sus*, from *βελος*, 'an arrow,' and *ειδος*, 'shape.' This name has been given to the styloid processes in general.

BELLESME, MINERAL WATERS OF. Bellesme is about three leagues from Montagne in France. The waters are chalybeate.

BELLEY, MINERAL WATERS OF. The waters at Belley, department of Ain, in France, are saline aperients.

BELLIS, *B. perennis*, *B. minor*, *Bruisewort*, *Common Daisy*. (F) *Paquerette vivace*, *petite Marguerite*. The leaves and flowers are rather acrid. They were, at one time, considered to cure different species of wounds. It is called also *Symphytum minimum*.

BELL METAL, *Cal'cos*. (F) *Airain*, *Metal des cloches*. An alloy of copper, zinc, tin, and a small quantity of antimony, used for making bells. The mortars of the apothecary are often formed of this material. They require to be kept clean, to avoid the formation of verdigris.

BELLOC'ULUS, *Beli Oculus*. A kind of gem, which the Assyrians considered efficacious in the cure of many diseases. They imagined that the figure of an eye could be seen in it, and hence its name, *Bel's Eye*.

BELUL'CUM, from *βελος*, 'a dart,' and *ελκω*, 'I draw out.' An instrument, used for extracting darts or arrows. Many instruments of this kind have been noticed by surgeons.—Ambrose Paré, Fabricius ab Acquapendente.

BEN MOENJA. A Malabar tree. An

alexipharmic decoction is made of its roots, in the country, which is much praised in cases of malignant fever. Its bark, boiled with *Calamus aromaticus* and salt, forms a decoction used in bites of poisonous serpents.

BENEFICIUM NATURÆ. (F) *Bénéfice de la Nature*. This term is used, by the French Pathologists, for cases, in which diseases have got well without medical treatment. With them, *Bénéfice de nature* or *B. de ventre*, is synonymous also with *Alvi Proflu'vium*; a spontaneous diarrhœa, acting favourably either in the prevention or cure of disease.

BENEOLEN'TIA, from *bene*, 'well,' and *ole're*, 'to smell.' *Euodes*. Sweet-scented medicines, as gums, &c.

BENIGN', *Benig'nus*, *Euethes*, (F) *Bénin*, *bénigne*. Diseases of a mild character are so called; as well as medicines, whose action is not violent, as a *Benign Fever*, *Febris benign'a*, *imputris*, &c.

BEN'JAMIN, FLOWERS OF, or BENZO'IC ACID, *Ac'idum Benzo'icum Flores Benzoës, Flores Benzo'ini, Ac'idum Benzo'icum per sublimatio'nem*. (F) *Acide Benzoïque*. This acid exists in all the balsams, but chiefly in the Benzoin. It is in the vanilla, canella, the urine of infants, and of herbivorous animals. Its odour is aromatic and fragrant; taste hot, slightly acidulous, and agreeable. The crystals, consist of white, satiny flakes, slightly ductile. It is probably stimulant; and has been used, as such, in chronic catarrh; but it has little efficacy.

BEN'JAMIN or BENZOIN, *Benzo'inum, Benzo'inum verum, Belzo'inum, Assa odora'ta, Benjui, Benjuin, Assa dulcis, Ben'jaoy, Benjo'inum, Belzoë, Belzoim, Benzoë, Sty'racis Benzo'ini Bal'samum, Liquor Cyreniacus, Croton Benzoe, Ben of Judæ'a, Acor Benzo'inus, Sal Ac'idum seu essentia'lè seu volat'ilè Benzoës*. (F) *Benjoin, Baume Benjoin, Assa doux*. A resinous, dry, brittle substance, obtained from the *Styrax Benzoin, Arbor Benivi*, of Sumatra. The odour is extremely fragrant, and taste slightly aromatic. It is principally used for the preparation of the acid which it contains. It is also employed in some vulnerary tinctures, and as an expectorant. The Benzoic Acid is obtained from it by sublimation. The purest is in *amygdaloid masses*: hence so called. (F) *Benjoin amygdaloïde*.

BERGAMOTE, *Bergamot'ta*, (F) *Bergamotte*. A small orange, of a very agreeable taste; and a peculiar odour. From its bark an oil is obtained, which is much employed as a perfume, and sometimes in medicine.

BER'IBERI, *Beribe'ria, Syn'clonus Beribe'ria, Paral'ysis Ber'iberi*. This word is said to be Hindusthanee, and to mean a *sheep*.—Bontius. The Beriberi is an Indian disease, little known in Europe. It consists in debility and tremors of the limbs; sometimes, indeed, of the whole body; with painful

numbness of the affected parts, &c.:—the patient walking doubled; and imitating the movements of sheep! Some authors have esteemed it rheumatic; others, paralytic; others, to be a kind of chorea. It is, almost always, incurable, but rarely fatal; and is treated by exercise, stimulant frictions, sudorifics, &c. It is sometimes called *Bar'biers*.

BERS. A sort of electuary, composed of pepper, seed of the white hyoscyamus, opium, euphorbium, saffron, &c. The Egyptians used it as an excitant.—Prospero Alpini.

BERU, MINERAL WATERS OF. Beru is in Champagne, France. The waters are slightly chalybeate.

BESSANEM. A word used by Avicenna for redness of the skin, limbs, and face, produced by the action of cold.

BE'TA. The *Beet, Sic'ula*, (F) *Bette, Betterave*. *Family*, Chenopodææ. *Sex. Syst.* Pentandria Digynia. A genus of plants, of which the following are the chief varieties.

1. **BETA VULGA'RIS ALBA**, *White Beet*. The root yields sugar, and leaves are eaten as a substitute for spinach.

2. **BETA VULGA'RIS RUBRA**, *Red Beet*. Root red and nutritive: yields a small quantity of sugar.

3. **BETA HYB'RIDA**, *Root of Scarcity*. Root red, outside; white, within. Very nutritive; yields sugar.

BETEL, *Piper Betel*. A species of pepper, cultivated in several parts of India. The Indians are in the habit of chewing the leaves with lime and areca; and they give the name *Betel* to this preparation. It is used in all the equatorial countries of Asia. Betel is said to be tonic and astringent. It is also called *Bette, Betre, Bettle*.

BETON'ICA OFFICINA'LIS, *Cestron, Beton'ica purpu'rea, Vetoni'ca Cordi, &c., Bel'ony, Psychot'rophum, Veroni'ca purpu'rea*, (F) *Betoine*. *Family*, Labiatæ. *Sex. Syst.* Didynamia Gymnospermia. Betony was in much esteem amongst the ancients, who employed the flowers and leaves in decoction, in gout, sciatica, cephalalgia, &c. Antonius Musa is said to have written a volume in praise of it; recommending it in no less than 47 different diseases. It has, however, little or no virtue. The leaves are said to be aperient, and the root emetic.

BET'ULA ALBA. The *Birch*, (F) *Bouleau commun*. The young leaves are slightly odorous, astringent, and bitter. They are applied to wounds and ulcers. They have been regarded as antiscorbutic and anthelmintic. The tree furnishes a saccharine juice, which is considered antiscorbutic and diuretic.

BEUVRIGNY, MINERAL WATERS OF. Beuvrigny is in the vicinity of Bayeux in Normandy. The water is chalybeate.

BEXUGO. Under this name a purgative

root was introduced into Europe, formerly from Peru. It is supposed to have been the root of a Hippocratea.

BEZOAR, BEZ'AAR, BÉZ'EHARD, PA'ZAHAR, from Persian *pa*, 'against,' and *zahr*, 'poison.' *Lapis Bezoar'dicus*, *Enterolithus Bezoar'dus*, *Bezoard*. A calculous concretion, found in the stomach, intestines, and bladder of animals. Wonderful virtues were formerly attributed to these Bezoars. There were two great varieties: the *Bez'oar orientale*, *Animal Bezoar'ticum orientale*, formed in the fourth stomach of the gazelle of India (*Gazella Indica*, or rather *Antilope cervicapra*); and the *Bez'oar occidentale*, *Animal Bezoar'ticum occidentale*, found in the fourth stomach of the wild goat or chamois of Peru. These substances were esteemed to be powerful alexipharmics; but the former was the more valued. It was believed that no poison, and no eruptive, pestilential, or putrid disease could resist its influence. As so many virtues were ascribed to it, other animal concretions were substituted for it; and factitious Bezoards were made of crabs' eyes and claws, bruised and mixed with musk, ambergris, &c.

BEZOAR BOVINUM, (F) *Bézoard de Bœuf*, *Bezoard of the Beef*. A concretion formed in the fourth stomach of beeves; also, a biliary calculus found in the gall-bladder.

BEZOARD OF CAYMAN. This was once much prized. It is now unknown.

The BEZOARD OF THE CHAMOIS, HORSE, &c., exhibit their origin in their names.

The BEZOARD OF THE INDIAN PORCUPINE, BEZOAR HYS'TRICIS, LAPIS PORCINUS, LAPIS MALUCENSIS, *Petro del Porco*, (F) *Bézoard de Porc Epic*, was formerly the dearest of all the Bezoards, and was sold at an enormous price in Spain and Portugal.

BEZOAR'DIC, *Bezoar'dicus*, (F) *Bézoardique*, concerning the Bezoard. Bezoardic medicines are those supposed to possess the same properties with the Bezoard; as antidotes, alexiteria, alexipharmics, cordials.

BEZOAR'DICUM SATURNI. A pharmaceutical preparation, regarded by the ancients as antihysteria. It was formed of protoxide of lead, butter of antimony, and nitric acid.

BEZOAR'DICUM VEN'ERIS. A pharmaceutical preparation, formerly employed in lepra, diseases of the brain, &c.; and which was made from filings of copper, butter of antimony, and nitric acid.

BEZOAR'DICUM HUMA'NUM. *Urinary cal'culi* were formerly employed under this name as powerful alexipharmics.

BEZOAR'DICUM JOVIA'LE. A sort of greenish powder, used as a diaphoretic, and formed of antimony, tin, mercury, and nitric acid.

BEZOAR'DICUM LUNA'RE. A medicine, formerly regarded as a specific in epilepsy, convulsions, megrim, &c. It was prepared of nitrate of silver, and butter of antimony.

BEZOAR'DICUM MARTIA'LE. A tonic medicine, used by the ancients in diarrhœa. It

was prepared from the tritoxide of iron and butter of antimony.

BEZOAR'DICUM MERCURIA'LE. A medicine, formerly vaunted as an antisyphilitic, and prepared from the submuriate of mercury, butter of antimony, and nitric acid.

BEZOAR'DICUM MINERA'LE. The deutoxide of antimony, so called, because its properties were supposed to resemble those of animal Bezoard.

BEZOAR'DICUM SOLA'RE. A diaphoretic medicine, prepared of gold filings, nitric acid, and butter of antimony.

BI, as a prefix to words, has the same signification as DI.

BIBLIOGRAPHY, MEDICAL, from *βιβλος*, 'a book,' and *γραφω*, 'I describe.' Skill in the knowledge of medical books. The most distinguished medical bibliographers have been:—J. A. VAN DER LINDEN, Amstelod. 1662, 8vo. (L). M. LIPENIUS, Francf. ad Mœn. 1679, fol. (L). G. A. MERCKLEIN, Norimb. 1686 (L). J. J. MANGET, Genev. 1695 to 1731 (L). TARIN (anatomical), Paris, 1753 (F). A. VON HALLER, Zurich, 1774, &c. (L). VIGILIUS VON CREUTZENFELD (surgical), Vindob. 1781 (L). C. G. KUHN, Lips. 1794 (L). C. L. SCHWEICKARD (anat., phys., and legal medicine), Stuttgart, 1796 to 1800 (L). G. G. PLOUCQUET, Tubing. 1808 to 1814 (L). C. F. BURDACH, Gotha, 1810 to 1821 (G). J. S. ERSCH, (since 1750), Leipz. 1822 (G). TH. CH. FR. ENSLIN, (of Germany, since 1750), Berlin, 1826 (G). J. B. MONTFALCON, Paris, 1827 (F). J. FORBES, M. D., F. R. S., Lond. 1835.

BICEPHA'LIIUM. A hybrid word, from *bi* and *κεφαλη*, 'head.' Sauvages applies this epithet to a very large sarcoma on the head, which seems to form a double head. Also, a monster with two heads, *Diceph'alon*, *Dicephal'ion*.

BICEPS, from *bis*, 'twice,' and *caput*, 'head.' That which has two heads. This name has been particularly given to two muscles; one belonging to the arm, the other to the thigh.

BICEPS FLEXOR CRURIS, *Biceps Cruris*, *Biceps*, (F) *Biceps Crural*, *Biceps Fem'oris*, *Is'chio-fem'oro pero'nier*—(Ch.) A muscle on the posterior part of the thigh; one head arising from the tuberosity of the ischium, and the other from a great part of the linea aspera. It is inserted into the top of the fibula. It serves to bend the leg on the thigh.

BICEPS FLEXOR CU'BITI, *Biceps Brachii*, *Cor'aco-radial'is* or *Biceps*, *Biceps manus*, *Biceps inter'nus*, *Biceps inter'nus hu'meri*, (F) *Scap'ulo-radial* (Ch.),—*Biceps Brachial*. A muscle, situate at the anterior and internal part of the arm; and extending from the edge of the glenoid cavity and from the top of the coracoid process to the tuberosity of the radius. It bends the fore-arm upon the arm.

BICEPS EXTER'NUS, *MUS'culus*. The long portion of the *Triceps Brachia'lis*.—Douglas.

BICHICHILÆ, Pectoral medicines, composed of liquorice juice, sugar, blanched almonds, &c.—Rhazes.

BICHO DI CULO (S). A disease about the anus, said to be endemic in Brazil. It is attributed to bad food; the use of pimento, &c.; and is treated by astringents.

BICHOS; a Portuguese name for the worms that get under the toes of people in the Indies; and which are destroyed by the oil of the cashew nut.

BICIPITAL, *Bicipitalis*; relating to the biceps.

The **BICIPITAL GROOVE**, (F) *Coulisse ou gouttière bicipitale*, *Coulisse humérale* (CH.), is a longitudinal groove, situate between the tuberosities of the os humeri, and which lodges the long head of the biceps.

BICIPITAL TUBERCLE or **TUBEROSITY**, (F) *Tubérosité Bicipitale*;—a prominence near the upper extremity of the radius, to which the tendon of the biceps is attached.

BICUSPID, *Bicuspidatus*, from *bis*, 'twice,' and *cuspis*, 'a spear.' That which has two points or tubercles.

The **BICUSPID TEETH**, *Dentes Bicuspidati*, (F) *Dents bicuspidées*, are the small molares. See **MOLAR**.

BIFURCATION, *Bifurcatio*; from *bis*, 'twice,' and *furca*, 'a fork.' Division of a trunk into two branches; as the *bifurcation of the trachea, aorta, &c.*

BIGNONIA INDICA. The leaves are employed in India, as emollients, to ulcers.

BILAZAY, MINERAL WATERS OF. Bilazay is a town in France, two leagues from Thouar, department of Deux Sèvres, near which is a thermal sulphureous spring. Temperature about 77° Fahrenheit.

BILE, *Bilis*, *Fel*, *Chol'os*, *Cholē*, (F) *Bile*, *Fiel*. A yellow, greenish, viscid, bitter, nauseous fluid, secreted by the liver. It is distinguished into *hepat'ic* and *cystic*; according as it flows immediately into the duodenum from the liver or from the gall-bladder. It contains soda; phosphate, sulphate, and muriate of soda:—a little phosphate of lime and oxide of iron:—albumen, and a yellowish and resinous matter. Its use is,—to complete the digestive process in the small intestines, by aiding in the separation of the chyle.

The **GALL OF THE OX**, *Ox Gall*, *Fel Tauri*, *Fel Bovis*, (F) *Bile de Bœuf*, was once reputed cosmetic and detergent, antitonic and emmenagogue; as well as to possess the power of facilitating labour. It has also been given as a bitter stomachic and anthelmintic.

The **GALL OF THE BEAR**, *Fel Ursi*, was thought to be antiepileptic, and that of the *Eel*, *Fel anguillæ*, to facilitate labour.

BILIARY, *Biliaris*, *Biliaris*. That which relates to bile.

BILIARY APPARATUS, *B. organs*, *B. passages*. The collection of parts, that concur in the secretion and excretion of bile:—viz:

the liver, *pori bilarii* or *tubuli biliferi*; hepatic, cystic, and choledoch ducts and gall-bladder.

BILIARY CONCRETIONS are concretions found in some parts of the biliary apparatus.

BILIOUS, *Bilio'sus*, *Epich'olos*, *Picroch'olos*, (F) *Bilieux*. That which relates to bile, contains bile, or is produced by bile. An epithet given to certain constitutions and diseases, which are believed to be the effect of superabundance of the biliary secretion; as *Bilious temperament*, *B. symptoms*, *B. fever*.

BIMANUS. One that has two hands. A term applied only to man, because he is the sole mammiferous animal that possesses two perfect hands.

BINOCULUS, *Bin'ocle*, *Diophthal'mica Fascia*, *Oculus duplex*, from *bis*, 'twice,' and *oculus*, 'an eye.' (F) *Œil double*. A bandage applied over both eyes. It was formerly called, also, *Diophthalmus*.

BIN'SICA. Disorder of the mind. According to VAN HELMONT, an atrophy of the organ of imagination.

BIODYNAMICS, *Biodynam'ica*, *Byodynam'icē*; from *βίος*, 'life,' and *δυναμικ*, 'power,' force. The doctrine of the vital activity, or forces.

BIOLYCHNIUM, from *βίος* 'life,' and *λυχνιον*, 'a lamp.' Innate heat, vital heat. Also, a secret preparation of which BEGUIN and BURGRAVE make mention.

BIOS, *βίος*. Life. Also, what is necessary for the preservation of life.

BIOETHANATI,—from *βίος*, 'life,' and *θανάτος*, 'death.' Those who die very suddenly, or as if there was no space between life and death.

BISCHE, *Biecho*. A malignant kind of dysentery, which often prevails in the Island of Trinidad.

BISCUIT, *Biscoctus*, 'twice baked.' A kind of dry, hard bread, or cake, which is variously made; and, when without eggs or butter, is easy of digestion. It was formerly called *Dipyrites*, *διπυριτης*, and *Dip'yros*.

BISMUTH, *Bismuthum*, *Wismuthum*, *Regulus of Bis'muth*, *Marcasita*, *Tin Glass*. (F) *Etain gris*, *E. de Glace*. A metal, in spicular plates, of a yellowish-white colour; s. g. 9.822. Fusible at 400° Fahrenheit, and volatilizable at a high temperature. It is used only in the preparation of the subnitrate.

BISMUTH, SUBNITRATE OF, *Oxyd of Bismuth*, *Marcasita alba*, *Plumbum cinereum*, *Mag'istry of Bismuth*, *Pearl White*, *Spanish White*, *Magisterium Marcasitæ*, *Bismuthum Nitricum*, *B. Subnitricum*, *Nitras Subbismuthicum*, *Nitras Bismuthi*, *Calx Vismuthi*, *Bismuthum oxydulatum album*. (F) *Sous-nitrate de bismuth*, *oxide blanc de B.*, *Blanc de fard*, *Blanc de perle*. It is considered to be tonic and antispasmodic, and has been chiefly used in gastrodynia.

BISSUS. The silky filaments, which fix the *Pinna Marina* to the rocks. In Italy

and Corsica, clothes are made of these, which are considered to favour perspiration, and are recommended to be worn next the skin in rheumatism, gout, &c.—See Byssus.

BISTORTIER (F). A name given, by the *Pharmacien*, to a long wooden pestle used for reducing soft substances to powder, and in the preparation of electuaries.

BISTOURI (F), *Pistorien'sis gla'dius, Scalpel'lus*; from *scal'pere*, 'to cut.' A *Bistoury*. A small cutting knife, used in Surgery, so called, according to Huet, from the town of Pistori, which was formerly celebrated for the manufacture of those instruments. A bistoury has the form of a small knife, and is composed of a blade and handle. The blade, which is most commonly movable in the handle, may be fixed by a button, spring, &c. When fixed in the handle, the bistouri is called by the French, *B. à lame fixe ou dormante*.

The chief Bistouries are:—1. The **STRAIGHT B.** (F) *B. droit*, in which the blade and cutting edge are straight: the point being fine, round, or square. 2. The **CONVEX B.** (F) *B. convexe*; the blade of which is convex at the cutting edge, concave at the back. 3. The **CONCAVE B.** (F) *B. concave*; the blade of which is concave at its edge, and convex at the back. 4. **BLUNT-POINTED B.** (F) *B. boutonné*; the blade of which has a button at its extremity. 5. The **BLUNT OR PROBE-POINTED BISTOURI OF POTT** is concave at its cutting edge, and its point is blunt; so that it can be carried on the palmar surface of the index finger, to divide the stricture, in strangulated hernia. Sir Astley Cooper has recommended a useful modification of this, to avoid wounding the intestine, should it come in contact with the edge of the knife. His Bistouri has an edge of not more than eight lines in length, and situate about five lines from the point. 6. **BISTOURI A LA LIME** (F), is a straight Bistoury; the blade fixed in the handle; the extremity with a button, and the edge made with a file. It is chiefly used for dilating parts. 7. **BISTOURI ROYAL** (F). A Bistouri, used in operating upon Louis XIV, for fistula in ano. 8. **BISTOURI GASTRIQUE** (F). A complicated instrument, invented by Morand, for dilating wounds of the abdomen. 9. The **BISTOURI CACHÉ, B. herniaire, ou Attrape-lourdaud of Bienaise**. A curved bistouri, the blade of which is placed in a canula, whence it issues, on pressing a spring.

The word, *Bistouri*, is used by the French, at times, where we would employ *knife*.

BIT NOBEN, *Salt of Bitumen, Padnoon, Soucherloon, Khala mimuc*. A white, saline substance, which is a Hindoo preparation of great antiquity, and has been supposed to be the *Sal Asphaltites* and *Sal Sodome'nis* of the ancients. It is used by the Hindoo in the prevention or cure of almost all diseases.

BITHNIMAL'CA or **GAS'TERANAX**. Two words, used by Dolæus, to designate an

active principle supposed to have its seat in the stomach, and preside over chymification, &c.

BIT'TERNESS, *Amaritu'do, amarit'ies, Ama'ror, Picria*, (F) *Amertume*. A particular taste, which belongs to many substances. In some diseases there is a sense of bitterness felt in the mouth.

BITTOS. A disease, in which the chief symptom is an acute pain in the anus.—Chomel.

BLÆ'SITAS, *Blæsa lingua*. Some authors have used this word as synonymous with stammering. Sauvages understands by it a defect in pronunciation, which consists in substituting soft consonants for those that are hard; as the *z* for *s*, the *d* for *t*, the *s* for *g* and *j*, &c. Also, *Lisping, Traulis'mus, Trau'lotes*, (F) *Blésité Blé-parler*.

BLÆSUS. A distortion; especially the outward distortion of the legs. Also, a stammerer.

BLAFARD (F), *Pal'lidus, Pallid'ulus*. This epithet is sometimes given to the skin, when pale and dull; but, most frequently, to the flesh of a wound, when it has lost its colour, and become white. The word is, also, sometimes used synonymously with *Albino* (q. v.)

BLANC MANGER (F), *Cibus albus, Leucopha'gium, Argyrotrophe'ma*. An animal jelly, (so called on account of its colour,) combined with an emulsion of sweet almonds, to which sugar has been added, and some aromatic. It is sometimes prescribed as a nutrient in convalescence and chronic diseases.

BLANC RHAZIS or **BLANC-RAISIN**. An ointment composed of cerusse, white wax, and olive oil.

TO BLANCH, from (F) *blanchir*, 'to whiten, to bleach.' To deprive of the outer rind; as 'to *blanch* almonds;' i. e. to peel them.

BLANCHET (F). A blanket. A term given, by the French *Pharmaciens*, to the woollen strainer, through which they filter syrup and other thick fluids.

BLAS; an unmeaning term, invented by Van Helmont, to designate a kind of movement in the body; at times local, at others, under extraneous influence. Thus he speaks of the *Blas meteoros*, or of the heavenly bodies, and the *Blas huma'num*, that which operates in man.

BLASE (F). An epithet given to one whom the abuse of enjoyment has prevented from any longer deriving satisfaction or pleasure from it.

BLASTE'MA, *Blaste'sis*, from *βλαστανω*, 'I bud.' The sense of this word, which is often used by Hippocrates, is obscure. Castelli thinks it means the eruption of some morbid principle at the surface of the body.

BLATTA BYZAN'TIA, *Unguis odo-*

ra'tus, (F) *Blatte de Byzance*. This name seems, formerly, to have been given to a marine production, from some of the Conchylia. It had an agreeable smell, a reddish tint, and the shape of a nail. It was prescribed in epilepsy, hysteria, and hepatic obstructions. Rondelet affirms, that it was the production of the shell-fish *murex* or *purpura*; and that the name *Blatta* is derived from the Greek *βλαττος*, 'purple.'

BLE, *Bladum*. This word answers, in France, to the word *Corn* in England; i. e. any kind of grain employed for making bread. Wheat being most commonly used for this purpose, *Blé* is sometimes restricted to this. *Blé meteil* is a mixture of wheat and rye.

BLECHROS, *βληχρος*, 'weak, feeble, slow.' An epithet, applied to different affections, and particularly to fevers. Hence *Blechrop'ya*, 'a slow fever:' *Blechrosphyg'mia*, 'a slow pulse.'

BLEME, (F). This word has nearly the same signification as *Blasard*. Generally, however, it includes, also, emaciation of the countenance.

BLENNELYTRIA, from *βλεννα*, 'mucus,' and *ελυτρον*, 'a sheath.' A discharge of mucus from the vagina.—Alibert.

BLENNEMESIS, *Blennoēm'esis*, *Vom'itus pituito'sus*, from *βλεννα*, 'mucus,' and *εμεσις*, 'vomiting.' Vomiting of mucus.

BLENNISTH'MIA, from *βλεννα*, 'mucus,' and *ισθμος*, 'the gullet.' Increased flow of mucus from the pharynx and larynx.—Alibert.

BLENNOG'ENOUS, *Blenno'genus*, from *βλεννα*, 'mucus,' and *γενω*, 'I form.' Forming or generating mucus. Breschet and Rousset de Vauzème describe an apparatus of this kind for the secretion of the mucous matter that constitutes the cuticle, composed of a glandular parenchyma or organ of secretion situate in the substance of the true skin, and of excretory ducts, which issue from the organ, and deposite the mucous matter between the papillæ.

BLENNOP'TYSIS, from *βλεννα*, and *πτύω*, 'I spit.' Expectoration of mucus.

BLENNOPYR'IA, from *βλεννα*, and *πυρ*, 'fire.' Alibert has classed, under this head, various fevers with mucous complications; as *Mesenteric fever*, *Adeno-meningeal fever*, &c.

BLENNORRHŒA, *Blenorrhœa*, *Blenorrhag'ia*, from *βλεννα*, 'mucus,' and *ρεω*, 'I flow.' Inordinate secretion and discharge of mucus.

BLENNO'SES, from *βλεννα*, 'mucus.' Affections of the mucous membranes.—Alibert.

BLEPHARONCO'SIS, *Palpebrarum Tum'or*, from *βλεφαρον*, 'eyelid.' A tumour on the eyelid.

BLEPHAROPLAS'TICE, *Blepharido-plas'tice*, *Insisio Cilio'rum*, from *βλεφαρον*, 'the eyelid,' and *πλαστικός*, 'forming,' 'formative.' The formation of a new eyelid.

BLEPHAROPTO'SIS, *Blepharople'gia*, *Casus pal'pebræ superio'ris*, *Delap'sus pal'pebræ*, *Prolap'sus pal'pebræ*, *Propto'sis pal'pebræ*, *Pto'sis pal'pebræ*, *Ato'niaton blepharon*, from *βλεφαρον*, 'the eyelid,' and *πτωσις*, 'fall.' A falling down of the upper eyelid over the eye, caused by a paralysis of the *Levator palpebræ superioris* muscle. This paralysis is an unfavourable symptom, as it is generally connected with a state of the brain favouring apoplexy or palsy.

BLEPHAROXYS'TUM, from *βλεφαρον*, 'eyelid,' and *ξύω*, 'I scrape.' An instrument used, by the ancients, for removing callosities, which made their appearance in the affection called, by the Greeks, *τραχωμα*.—Paulus of Ægina, Gorræus.

BLESTRIS'MOS. Restlessness of the sick.—Hippocr.

BLETA. A word, used by Paracelsus for white or milky urine, arising from diseased kidneys. *Blota alba* has the same meaning.

BLEVILLE, MINERAL WATERS OF. Bleville is a village about two miles from Havre. The waters are acidulous chalybeates.

BLISTER, *Vesicato'rium*, *Emplas'trum Vesicato'rium*, *Emplas'trum Lyttæ*, *Epispas'ticum*, from *Vesi'ca*, 'a bladder.' (F) *Vesicatoire*, *Vesicant*. Any substance which, when applied to the skin, irritates it, and occasions a serous secretion, raising the epidermis, and constituting a vesicle. Various articles produce this effect, as *cantharides*, *mustard*, *garou*, *euphorbium*, *garlic*, *ammonia*, &c.

Blisters are used as counter-irritants. By exciting a disease artificially on the surface, we can often remove another, which may be at the time existing internally.

A *perpetual blister* is one, that is kept open for a longer or shorter time by means of appropriate dressings.

Blister or *vesication* also means the vesicle produced by vesicatories.

BLOOD, *Sanguis*, *Cruor*, *Lapis animalis*, *Hæma*, *αἷμα*, (F) *Sang*. An animal fluid, formed chiefly from the chyle; acquiring important properties during respiration; entering every organ through the circulation; distributing the nutritive principles to every texture, and the source of every secretion. The blood is white, in the molluscos and inferior animals, which have been, hence, called *white-blooded*; to distinguish them from the *red-blooded*; which class includes the mammalia, birds, reptiles, and fishes. Human blood is composed of water, albumen, fibrine, an animal colouring substance, a little fatty matter, and different salts; as muriates of potass and soda, phosphate of lime, subcarbonate of soda, lime, magnesia, oxide of iron, and lactate of soda, united with an animal matter.

Arterial blood is of a florid red colour, strong smell, temp. 100°; s. g. 1.049. Venous blood is of a brownish-red; temp. 98°;

s. g. 1.051. This difference in colour has given occasion to the first being called *red blood*; the latter *black*. The former, which is distributed from the heart, is nearly the same through its whole extent: the latter is the remains of the arterial blood after the different elements have been taken from it, in nutrition, and probably differs in composition. It likewise contains different substances absorbed. Venous blood, taken from a vessel and left to itself, becomes solid; and separates into two distinct parts;—the *serum* or watery, supernatant fluid; and the *cruor*, *coagulum*, *crassamentum*, *hepar sanguinis*, *placenta*, *insula*, or *clot*. The serum is chiefly water, holding albumen in solution and the salts of the blood. The clot contains the fibrine, colouring matter, a little serum, and a small quantity of salts. The colouring portion of the blood consists of red globules, which contain iron; and this is probably one of the agents of the coloration operated in the lungs:—the oxygen of the air combining with the venous blood in the pulmonary artery. In diabetes, the blood contains a large quantity of sugar formed at the expense of the system.

M. Lecanu found the blood to be composed—in 1000 parts—of water 785.590; albumen, 69.415; fibrine, 3.565; colouring matter, 119.626; crystallizable fatty matter, 4.300; oily matter, 2.270; extractive matter soluble in alcohol and water, 1.920; albumen combined with soda, 2.010; chlorides of sodium and potassium, alkaline phosphate, sulphate, and subcarbonates, 7.304; subcarbonate of lime and magnesia, phosphate of lime, magnesia and iron, peroxide of iron, 1.414; loss, 2.586.

The following table exhibits the computations of different physiologists regarding the weight of the circulating fluid—arterial and venous.

		lbs.

The proportion of arterial blood to venous is about as 4 to 9.

Dried human blood was, at one time, considered to be antiepileptic. That of the goat, dried, *Sanguis hirci siccat'us*, is sudorific, and antipleuritic.

BLOOD-LETTING, *Missio San'guinis*, *Hemaxis*. (F) *Saignée*. A discharge of a certain quantity of blood produced by art:—

an operation, which consists in making an opening into a vessel to draw blood from it. When practised on an artery, it is called *Arteriotomy*; on a vein, *Phlebotomy*; and on the capillary vessels, *local* or *capillary*, in contradistinction to the former, which is termed *general*.

Blood-letting is used both during the existence of a disease, as in inflammation; and in the way of prophylaxis. It is employed to fulfil various indications. 1. To diminish the actual mass of blood:—when it is termed, by the French Pathologists, *Saignée évacuative*. In such case, fluids ought not to be allowed too freely afterwards. 2. To diminish the turgescence in any particular organ—(F) *Saignée révulsive*, when performed far from the part affected; and *Saignée dérivative*, when near.) 3. To diminish the consistence, or the red particles, of the blood, (F) *Saignée spoliative*.) The immediate effects of blood-letting are: diminution of the mass of blood and of heat; retardation of the pulse, and sometimes syncope. Blood-letting from the veins, or *phlebotomy*, is practised on the subcutaneous veins of the neck, the face, the fore-arm, and the leg; sometimes on those of the hand or foot. The necessary apparatus consists of a bandage or riband, a compress of rag, and a lancet or phleam.

The veins, selected for the operation, are, 1. *In the fold of the arm*, five;—the cephalic, basilic, the two median, and the anterior cubital. 2. *In the hand*, the cephalic and salivata. 3. *In the foot*, the great and little saphena. 4. *In the neck*, the external jugular. 9. *In the forehead*, the frontal. 6. *In the mouth*, the ranine. The operation of phlebotomy in the limbs is performed by tying a circular bandage round the limb, in order that the subcutaneous veins may become turgid, by the course of the blood being obstructed: the bandage not being so tight, however, as to compress the arteries of the limb. A puncture is made into the vein, and the desired quantity allowed to flow. The ligature is now removed; and a compress and retaining bandage applied. *Capillary* or *local blood-letting* is practised on the skin or mucous membranes, by means of leeches, the lancet, or cupping.

BLOW, *Ictus*, *Plegè*, (F) *Coup*. Effect produced by one body striking another. The impression made by any body, which strikes us, or against which we strike;—a common cause of wounds, contusions, fractures, &c.

BOA. An eruption of red, ichorous pimples.—Pliny.

BODY, *Corpus*, *Soma*, (F) *Corps*. The human body is the collection of organs, which compose the frame. At times, however, body is used synonymously with *trunk*. We say, also, *the body of the femur*, *of the sphenoid*, &c., to designate the shaft or middle portion of those bones; *the body of the uterus*, &c.

BOISSE, MINERAL WATERS OF.

These waters are situate about half a league from Fontenay-le-Comte in France. They are purgative, and seem to contain carbonate and sulphate of lime and muriate of soda.

BOITE (F). A box or case, *Capsa*, *Pyxis*. An apparatus for the reception of any matters, which it may be desirable to preserve. In *Surgery* and *Anatomy*, *Boîtes à dissection*, *B. à amputation*, *B. à trepan*, *B. à cataracte*, &c. mean the cases in which these various instruments are kept. *Boîte du Crane* is the bony case which receives the brain. *Boîte* is, also, the portion of the stem of the trephine, which receives the pyramid or centrepin. *Boîte de Petit* is a machine, invented by M. Petit, to retain the fractured portions of bone in apposition, when the leg has been fractured in a complicated manner. *Boîte* is, also, a kind of case put before an artificial anus to receive the feces, which are continually being discharged. The vulgar, in France, give the name *Boîte* to various articulations,—*B. de genou*, *B. de la hanche*; *Knee-joint*, *Hip-joint*.

BOITIER (F), *Cap'sula*, *Unguenta'ria*. A *Dressing-case*. A box, containing salves and different apparatus, used more particularly by the dressers in hospitals.

BOLBID'ION, **BOLBID'EON**, **BOLBIT'ION**, *βολβιτιον*, *βολβιδιον*. A species of polypus, recommended by Hippocrates to be boiled in oil and wine, and to be given in different diseases, and especially in amenorrhœa.

BOLE ARME'NIAN, **BOLE ARME'NIAC** or **B. AR'MENIC**, *Argil'la ferrugin'ea rubra*, *Sinapi'sis*, *Arena'men*, *Bolus Orienta'lis*, *Bolus Armena*, *B. Arme'niæ*, *B. rubra*. (F) *Bol d'Armenie*. A red, clayey earth, found, not only in Armenia, but in several countries of Europe,—in Tuscany, Silesia, France, &c. It was once esteemed a tonic and astringent, and was applied as a styptic. It is now scarcely, if ever, used. It consists of Argil, mixed with lime and iron.

BOLE'TUS ESCULEN'TUS, (F) *Morelle*. An eatable mushroom, found in the woods in Europe, and much admired by *Gastronomes*. It was formerly esteemed to be aphrodisiac.

BOLE'TUS IGNIA'RIVS. The systematic name for the *Agaricus* of the Pharmacopœias. *Agar'icus Chirurgo'rum*, *Agar'icus Quercûs*, *Is'ca*, *icaz*, *Bole'tus Ungula'tus*, *Spunk*, *Am'adou*, *Punk*, *Fungus Ignia'rivus*, *Fungus Querci'nus*, *Agaric of the Oak*, *Touchwood Boletus*, *Female Agaric*. (F) *Agaric de chêne*, *Amadouvier*. It was formerly much used by Surgeons as a styptic.

BOLE'TUS LAR'ICIS, **B. LARICI'NUS**, *Fun'gus La'ricis*, *Polyporus officina'lis*, *Agar'icus albus*, *A. albus op'timus*, *B. purgans*, *B. albus*, (F) *Agaric blanc*. On the continent of Europe it has been given as a cathartic and emetic, as well as to moderate the sweats in phthisis—(De Haen). Externally, styptic.

BOLE'TUS SUAV'EOLENS, *Fungus sal'icis*, *Fungus albus salig'neus*, *Dædale'a suav'eolens*. (F) *Agaric odorant*. It has been used in phthisis pulmonalis, and asthma, in powder. Dose, from 3ss to 3ij.

BOLI'TES. The *Mushroom*; perhaps the *Agar'icus Aurantiacus*.—Pliny, Martial, Suetonius, Galen. It was so called, in consequence of its shape, from *Bolus*.

BOLUS, *βωλος*, a morsel, a mouthful, a bole. (F) *Bol*. A pharmaceutical preparation, having a pilular shape, but larger; capable, however, of being swallowed as a pill.

BOLUS ALBA, *Terra sigilla'ta*, *Argil'la pallid'ior*:—called *sigilla'ta*, from being commonly made into small cakes or flat masses, and stamped or sealed with certain impressions. (F) *Bol blanc*, *Terre sigillée*, *Argile ochreuse pâle*. It was used like the *Bolus Armeniæ*, and was brought from Etruria. See *Terra*.

BOLUS ALIMEN'TARY. *Bolus alimenta'rius*. The bole, formed by the food, after it has undergone mastication and insalivation, in the mouth; and been collected upon the tongue prior to deglutition.

BOLUS ORIENTA'LIS. A kind of Bolar earth only distinguished from Bole Armenian, in being brought from Constantinople.

BOMA'REA SALSIL'LA. The inhabitants of Chili use this plant as a sudorific. It is given in infusion, in cutaneous diseases.

BOMBUS, *Au'rium fluctua'tio*, *A. sib'ilus*, *A. son'itus*, *A. susur'rus*, (F) *Bombement*. A kind of ringing or buzzing in the ears;—characterized, according to SAUVAGES, by the perception of blows or beating repeated at certain intervals.

BONE, *Os*, *Osteon*, *οστειον*, (F) *Os*. The bones are the solid and hard parts, which form the basis of the bodies of animals, of the superior classes; and the union of which constitutes the *skeleton*. The human body has, at the adult age, 208 bones, without including the 32 teeth, the ossa wormiana and the sesamoid bones. Anatomists divide them, from their shape, into, 1. *Long Bones*, which form part of the limbs and represent columns, for supporting the weight of the body, or levers of different kinds, for the muscles to act upon. 2. *Flat Bones*, which form the parietes of splanchnic cavities: and, 3. *Short Bones*, met with in parts of the body, where solidity and some mobility are necessary. Bones are formed of two different textures; the *spongy* and *compact*. They afford, on analysis, much phosphate and carbonate of lime, a little phosphate of magnesia, phosphate of ammonia, oxides of iron and manganese, some traces of alumine and silica, gelatine, fat, and water. The uses of the bones are mentioned under each bone. They give shape to the body, contain and defend the viscera: and act as levers to the muscles.

TABLE OF THE BONES.

TABLE OF THE BONES.			No.	
BONES OF THE HEAD.	Bones of the <i>Cranium</i> or <i>Skull.</i>	Frontal	1

BONE NIPPERS, *Tenacula*, from *te'neo*, 'I hold.' (F) *Tenaille incisive*. An instrument used for cutting off splinters and cartilages. It is a kind of forceps, the handles of which are strong, and the edges, which touch each other, cutting.

BONNES, MINERAL WATERS OF. Bonnes is a village six leagues from Pau, in the department *Basses Pyrénées*, France. Here are several thermal springs. They were celebrated as early as the time of FRANCIS I., under the name *Eaux d'Arquebusade*. They contain muriates of soda and magnesia, sulphates of magnesia and lime, sulphur, and

silica. The temperature is from 86° to 90° Fahrenheit.

The *factitious* EAU de BONNES is made of *Hydrosulphuretted water*, 3iv; pure water, ℥j and 3ss; *muriate of soda*, 30 grains; *sulphate of magnesia*, 1 grain.

BONNET D'HIPPOCRATE, *Cap of Hippocrates*, *Mitra Hippocrat'ica*, *Fascia capit'alis*, *Pileus Hippocrat'icus*. A kind of bandage, the invention of which is ascribed to HIPPOCRATES. It consists of a double-headed roller, passed over the head, so as to envelope it, like a cap. The French, also, name it, *Bonnet à deux globes*, *Capeline de la tête*.

BONNYCLAB'BER, from Irish, *baine*, 'milk,' and *clabar*, 'mire.' Sour milk.

BORAC'IC ACID, *Ac'idum Borac'icum*, *Sal sedati'vus HOMBER'GII*, *Boric Acid*. An acid obtained from Borax, which was once looked upon as sedative. It was also called *Acor Borac'icus*, *Sal vitrioli narcoticum*, *Sal volat'ile Bora'cis*, and *Flores Bora'cis*.

BORA'GO OFFICINA'LIS, *Buglos'sum verum*, *Borra'go*, *Corra'go*, *Bug. latifo'lium*, *Borag. horten'sis*, *Borage*, (F) *Bourrache*. *Nat. Ord.* Boraginæ. *Sex. Syst.* Pentandria Monogynia. The leaves and flowers have been considered aperient.

BORAX, *Boras Sodæ*, *Subboras Sodæ*, *Boras supersat'urus sodæ*, *Soda Boraxata*, *Chrysocol'la*, *Capis'trum auri*, *Subborate of protox'ide of Sodium*, *Subprotoborate of Sodium*, *Boras Sodæ alcal'es'cens seu alcali-num*, *Boras superso'dicus*, *Borax Ven'etus*, *Subbo'ras Na'tricum*, *Borax'trion*, *Nitrum facti'tium*, &c. The *Subbo'rate of Soda*, (F) *Sous-borate de soude*, *Borate sursaturé de soude*. It is found in an impure state, in Thibet and Persia. It is inodorous; taste cool, and somewhat alkaline; soluble in 12 parts of water. Borax is seldom used except as a lotion in aphthæ.

The *Borate of Mercury* has been recommended as an antisyphilitic.

BORBORYG'MUS, from *βορβορυζα*, 'I make a dull noise.' *Murmur*, *Motus Intestino'rum*, (F) *Gargouillement*, *Grouillement d'Entrailles*. The noise made by flatus in the intestines. This happens often in health, especially in nervous individuals.

BORD (F), *Margo*, *Edge*, *Margin*. Anatomists have so named the boundaries of an organ. Thus, the bones, muscles, &c. have *bords* as well as bodies. The 'free edge,' *bord libre*, is one not connected with any part; the 'adhering edge,' *bord adhérent*, one that is connected; and the *bord articulaire*, or 'articular margin, or edge,' that which is joined to another bone.

BORDEAUX, MINERAL WATERS OF. Near this great city, in the south-west of France, is a saline, chalybeate spring. It contains oxide of iron, carbonate and sulphate of lime, muriates of soda and lime, subcarbonate of soda, and sulphate of magnesia.

from *βovs*, 'an ox,' and *λιμος*, 'hunger'; or from *βε*, augmentative particle, and *λιμος*, 'hunger.' (F) *Boulimie*, *Faim canine*. An almost insatiable hunger. A *canine appetite*. It is sometimes seen in hysteria and pregnancy; rarely under other circumstances.

BOULOGNE, MINERAL WATERS OF. B. is in the department, Pas-de-Calais, France. The waters are chalybeate.

BOUQUET ANATOMIQUE DE RIO-LAN (F), from *bouquet*, a collection of flowers or other substances tied together. A name given, by some Anatomists, to the collection of ligaments and muscles, inserted into the styloid process of the temporal bone.

BOURBON-LANCY, MINERAL WATERS OF. Bourbon-Lancy is a small village in the department of Saône-et-Loire, France; where there are thermal, saline springs, containing carbonic acid, muriate and sulphate of soda, muriate and carbonate of lime, iron, and silica. Their heat is from 106° to 135° Fahrenheit.

BOURBON L'ARCHAMBAUT, MINERAL WATERS OF. This town is in the department of the Allier, and has been long celebrated for its thermal chalybeate waters. They contain muriate and sulphate of soda, magnesia, and lime, carbonate of iron, and silica. Their temperature varies between 140° and 145° Fahrenheit.

BOURBONNE-LES-BAINS, MINERAL WATERS OF. These springs are seven leagues from Langres, department of Haute-Marne, France. They are thermal and saline, and have been long celebrated. Temperature from 106° to 133° Fahrenheit. The *Factitious water*, (F) *Eau de Bourbonne-les-Bains*, *Aqua Borvonen'sis*, is composed of water, containing twice its bulk of carbonic acid, 3 xxss; muriate of soda 3j, muriate of lime, gr. x, &c.

BOURBOULE, MINERAL WATERS OF. A village near Mont d'Or, where there are two thermal saline springs.

BOURDONNEMENT (F), *Bruissement*, *Murmur*, *Susurrus*. A sensation of buzzing or humming in the ear, which may be either dependent on some modified condition of the ear itself, or may be seated in the brain.

BOURRELET (F). A *Pad*, a *Border*. A fibro-cartilaginous border, which surrounds certain articular cavities, such as the glenoid cavity of the scapula and the acetabulum; and by which the depth of those cavities is augmented.

BOUTONNIÈRE (F); *Fissu'ra*, *Incis'io*. A small incision made in the urethra to extract a calculus from the canal, when it is too large to be discharged.

Also, a small incision or puncture, made in the peritoneum, or above the pubes, to penetrate the bladder in certain cases of retention of urine.

BRA'CHIAL, *Brachia'lis*, *Brachia'us*,

from *bra'chium*, 'the arm.' What belongs to the arm.

MUS'culus BRACHIA'lis ANTE'rior, *Brachia'lis internus*, *Brachia'us*, *Brachia'us internus*, (F) *Muscle brachial interne*, *Humero-cubital*—(Ch.) This muscle is situate at the anterior and inferior part of the arm, and before the elbow-joint. It arises, fleshy, from the middle of the os humeri; and is inserted into the coronoid process of the ulna. *Use*. To bend the forearm.

The **BRACHIAL ARTERY**, *Arte'ria brachia'lis*, *Humeral Artery*, (F) *Artère ou Tronc brachial*. The artery, which extends from the axilla to the bend of the elbow; where it divides into *A. cubitalis* and *A. radialis*. It passes along the internal edge of the biceps, behind the median nerve and between the accompanying veins. Under the name *Brachial Artery*, M. Chaussier includes the subclavian, axillary, and humeral; the last being the *brachial proper*.

The **BRACHIAL VEINS** are two in number, and accompany the artery,—frequently anastomosing with each other; they terminate in the axillary. Under the term *Brachial Vein*, Chaussier includes the humeral, axillary, and subclavian.

BRACHIAL APONEURO'SIS. An aponeurosis, formed particularly by expansions of the tendons of the latissimus dorsi, pectoralis major, and deltoides muscles, and which completely envelopes the muscles of the arm.

The **BRACHIAL PLEXUS**, *Plexus Brachia'lis*, is a nervous plexus, formed by the interlacing of the anterior branches of the four last cervical pairs and the first dorsal. It is deeply seated in the hollow of the axilla, and extends as far as the inferior and lateral part of the neck. It gives off the *thoracic nerves supra* and *infra scapular*, and the *brachial* (which are six in number), the *axillary*, *cutaneous*, *musculo-cutaneous*, *radial*, *cubital*, and *median*.

BRACHIO-CU'BITAL, *Brachio-cubita'lis*. That which belongs both to the arm and cubitus. This name has been given to the internal lateral ligament at the elbow-joint; because it is attached to the os brachii or os humeri and to the cubitus or ulna.

BRACHIO-RADIAL, *Brachio-radia'lis*. That which belongs to the brachium and radius. This name, has been applied to the external lateral ligament of the elbow-joint, because it is attached to the humerus and to the radius.

BRACHIUM, *Lacer'tus*, (F) *Bras*, the arm. The arm from the shoulder to the wrist, or the part between the shoulder and elbow.

BRACHYAU'CHEN, from *βραχυς*, 'short,' and *αυχην*, 'neck.' One who has a short neck.

BRACHYCHRO'NIUS, from *βραχυς*, 'short,' and *χρονος*, 'time.' That which continues but a short time. A term applied to diseases which are of short duration.—Galen.

BRACHYPOTI, from *βραχυς*, 'short,' and *ποτης*, 'drinker.' They who drink little, or who drink rarely.—Hippocr., Galen, Foësius.

BRADYMASESIS, *Bradymasse'sis*, from *βραδύς*, 'difficult,' and *μασησις*, 'mastication.' Difficult mastication.

BRADYPEPSIA, *Tarda cibo'rum concoctio*, from *βραδύς*, 'slow,' and *πεπτα*, 'I digest.' Slow digestion.—Galen. See *Dyspepsia*.

BRADYSPERMATISMUS, from *βραδύς*, 'slow,' and *σπέρμα*, 'sperm.' A slow emission of sperm.

BRADYSURIA, *Tenes'mus vesicæ*, from *βραδύς*, 'difficult,' and *ουρίσιν*, 'to pass the urine.' Painful evacuation of the urine, with perpetual desire to void it.

BRAGGAT. A name formerly applied to a tisan of honey and water.

BRAINE, MINERAL WATERS OF. Braine is a small village, three leagues from Soissons, France, which has purgative waters similar to those of Passy.

BRANCH, from (F) *Branche*, originally probably from *βραχίων*, 'an arm;' because branches of trees, &c., go off like arms. A term, applied, generally, to the principal division of an artery or nerve. The word is commonly used synonymously with *Ramus*; but often, with the French, *Branche* signifies the great division;—*Rameau*, Lat. *Ramus*, the division of the branches; and *Ramusculi*, Lat. *Ramusculi*, the divisions of these last.

The French, also, speak of the *branches* of the pubes, for the *Rami* of that bone, *branches* of the ischium, for the *rami* of the I., &c.

BRANCHI or **BRANCHÆ**. Swellings of the tonsils, or parotid, according to some;—of the thyroid gland, according to others.

BRANCHUS, *βραγχος*. A catarrhal affection of the mucous membrane of the fauces, trachea, &c.—Galen.

BRANDY. (G) *Branntwein*, 'burnt wine.' *Aqua Vitæ*. (F) *Eau de vie*. The first liquid product obtained by distilling wine. It is composed of water, alcohol, and an aromatic, oily matter, which gives it its flavour. Brandy is a powerful and diffusible stimulant, and as such is used in medicine. It has been also called *Liquor Aquile'gius*.

BRASÉGUR, MINERAL WATERS OF. Braségur is a place in the diocese of Rhodéz, where there are cathartic waters.

BRASS. *Sax. brar, Welsh, prés*. A yellow metal, formed by mixing copper with calamine. *Aurichal'cum, Orichal'cum, Æscavum, Chrysochalcus*. (F) *Airain*. The same remarks apply to it as to copper. See *Cuprum*.

BRAS'SICA. The *Cabbage*. The *Bras'sica olera'cea*; the *B. capita'ta* or *cuma'na* of the old Romans. (F) *Chou potager*. *Family, Cruciferae. Sex. Syst. Tetradynamia Siliquosa*. Cato wrote a book on its virtues. It is a vegetable by no means easy of digestion when boiled; raw, it appears to be

more digestible. When forming a solid globular mass, like a head, it is the *B. Capita'ta*, (F) *Chou-Cabus, Chou-Pommé*.

BRAS'SICA FLOR'IDA. The *Bras'sica Pompeia'na* of the ancients—the *Cauliflower, Caulis Flor'ida*, (F) *Chou-fleur*, is a more tender and digestible variety.

The *Broc'coli* belongs to this variety; the *B. Sabel'lica* of the Romans—*B. Ital'ica*.

BRAS'SICA RAPA, *Rapa rotun'da, Rapum majus, Rapa napus*, the *Turnip*. (F) *Chou-navet, Navet, Rave*. The turnip is liable to the same objection (but to a less extent) as the cabbage.

BRAS'SICA NAPUS, NAPUS SYLVES'TRIS or **BU'NIAS**, *Rape*. (F) *Navette*. The seed yields a quantity of oil.

BRAS'SICA ERU'CA, Eru'ca, Garden Rocket, Roman Rocket, &c. (F) *Chou-Roquette, Roquette*. This was considered, by the Romans, an aphrodisiac.—Columella. The seeds were ordinarily used.

BRAYERA ANTHELMIN'TICA. An Abyssinian plant, of the *Family Rosaceæ. Sex. Syst. Icosandria Digynia*. The flowers have been highly extolled as anthelmintic, especially in cases of Tapeworm. They are given in decoction.

BREATH, *Hal'itus, Anhel'itus, An'imus, Spir'itus, Atmos.* (F) *Haleine*. The air expelled from the chest, at each expiration. It requires to be studied in the diagnosis of thoracic diseases especially.

BREATH, OFFENSIVE; Fætor Oris. An offensive condition, which is usually dependent upon carious teeth, or some faulty condition of the secretions of the air passages. The internal use of the chlorides may be advantageous.

BRECHET (F). The *Brisket*. This name is given, in some parts of France, to the *cartilago ensiformis*, and sometimes to the sternum itself.

BREDISSURE (F), *Trismus Capistra'tus*. Incapacity of opening the mouth, in consequence of preternatural adhesion between the internal part of the cheek and gums; often occasioned by the abuse of mercury.

BREDOUILLEMENT (F), *Tituban'tia*. A precipitate and indistinct mode of utterance, in which a part only of the words is pronounced, and several of the syllables viciously changed. This defect is analogous to stuttering, but differs from it in being dependent on too great rapidity of speech; whilst stammering is characterized by continual hesitation, and frequent repetition of the same syllables.

BREGMA, from *βρεχσιν*, 'to sprinkle.' The top of the head was thus called, because it was believed to be humid in infants, and, according to some, because it was conceived to correspond to the most humid part of the brain.

BRE'VIA VASA, Short Vessels. This

name has been given to several branches of the splenic arteries and veins, which are distributed to the great *cul-de-sac* of the stomach.

BRICK, (F) *Brique*. Hot bricks are sometimes used to apply heat to a part, as to the abdomen in colic, or after the operation for popliteal aneurism: or, reduced to very fine powder, and mixed with fat, as an application to herpetic and psoric affections.

BRICKS, Fornacæ Testæ, or tiles, were formerly bruised in vinegar, and the liquid used as a specific in cutaneous affections. They entered, also, into a cerate used for scrophulous tumours, &c.

To the *Terra Fornacum*, the same virtues were assigned.

BRIDE (F). A bridle. *Frenulum, Retinaculum*. This term is given, in the plural, to membranous filaments, which are found within abscesses or in deep-seated wounds, and which prevent the exit of pus. The term is, also, applied to preternatural adhesions, which occur in cicatrices in the skin, in the urethra, or in inflamed serous or synovial membranes.

BRIQUEBEC, MINERAL WATERS OF. This town is three leagues from Cherbourg, in France. The water contains muriate of Iron.

BRISE PIERRE ARTICULÉ (F). An instrument invented by Jacobson for crushing the stone in the bladder.

BRISTOL HOT WELL, Bristolien'sis Aqua. Bristol is about thirteen miles from Bath, in England. The water is a pure thermal; slightly acidulated. Temperature—74° Fahrenheit. The *Hot Well* has been long celebrated. Its action is like that of the thermal waters in general. The climate of Bristol is, however, mild; and hence the water has been celebrated for the cure of incipient pulmonary consumption.

BROAD. Sax. bpað, Latus. (F) Large. Any body is so termed whose transverse extent is considerable compared with its length. The *Broad Bones*, such as the frontal, parietal, occipital, iliac, aid in forming the parietes of splanchnic cavities. *Broad Muscles* generally occupy the parietes of cavities, and especially those of the chest and abdomen. The epithet has also been applied to other parts—as to the *broad ligaments* of the womb, &c.

BROCH'OS, βροχος. A *laqueus* or bandage.

BROCH'THUS, βροχθος, Gula. The throat. Also a small kind of drinking-vessel.—Hippocr.

BROCHUS, βροχος. This name has been given to one who has a very prominent upper lip.—Castelli. According to others, it means one, whose teeth project in front of the mouth.

BRO'DIUM. A synonyme of *Jus* or *Jusculum*. Broth, or the liquor in which anything is boiled. *Bro'dium Salis*—a decoction of salt.

BROMATOG'RAPHY, from βρομα, 'food,' and γραφη, 'a description.' *Bromography*. A description of aliments.

BROMATOL'OGY, βρομα, 'food,' and λογος, 'a discourse.' A treatise on food. *Sitiol'ogy*.

BROME'LIA ANA'NAS, Car'duus Brazilia'nus, Ana'nas acos'tæ ora'tæ seu aculeatus, Anas'sa, Ca'pa-Isiak'ka, Ana'nas or *Pine Apple*. A West Indian tree, which produces the most delicious of fruits.

BROME'LIA PINGVIN, Ana'nas America'na, Pinguin, Broad-leaved wild Ana'nas, &c. The West India plant, which affords the *Pinguin* fruit. The fruit is refrigerant, and the juice, when ripe, very austere. It is used to acidulate punch. A wine is made from the *Pinguin*, which is very intoxicating, and has a good flavour.

BROMINE, BROMINUM, Brome, a simple body, of a very volatile nature, and highly offensive and suffocating odour, whence its name, from βρομος, 'a stench.' It is met with chiefly in sea-water, and in many animal and vegetable bodies that live therein. It has likewise been found in many mineral waters of this, and other countries.

In its chemical relations, it may be placed between chlorine and iodine. With oxygen it forms an acid, the *Bromic*, and with hydrogen another—the *Hydrobromic*.

The pure Bromine and the *Bromide of Potassium*, or *Hydrobromate of Potassa*, (dose gr. iv to viij in the day,) the *Bromide of Iron* (dose gr. i. or ij) and the *Bromide of Potassium* or *Hydrobromate of Potassa*, (dose gr. iv to viij in the day,) have been used medically, and chiefly in scrophulosis, internally as well as applied externally. Bromine may be dissolved in forty parts of distilled water, and six drops be commenced with as a dose. The *Bromide of Mercury (Hydrargyri Bromidum)* has been given in syphilis.

BROMOS, βρομος. One of the cerealia, supposed, by some, to be oats.

BRON'CHIA, BRON'CHIAE, Bronchi, from βρογχος, 'the throat.' The Latins used the term *Bronchus*, for the whole of the trachea; whilst they called its ramifications *Bronchia*. *Bronchia*, *Bronchiæ*, and *Bronchi*, (F) *Bronches*, now mean the two tubes, which arise from the bifurcation of the trachea, and carry air into the lungs.

BRONCHIA, DILATATION OF THE. Dilated Bronchi. The physical signs of this condition are the following:

Percussion usually clear but not unfrequently less so than natural, although very seldom quite dull.

Auscultation detects coarse mucous or gurgling ronchi, increased by the cough, combined with, or replaced by, bronchial or cavernous respiration, which is often effected as if by a sudden puff or whiff. The resonance of the voice is increased, but it seldom amounts to perfect pectoriloquy.

The most common situations for dilated Bronchi are the scapular, mammary, or lateral regions. They are almost always confined to one side.

BRONCHIA, OBLITERATION OR COMPRESSION OF THE. The inspiratory murmur on auscultation is weaker or wholly suppressed over a limited portion of the chest; the expiration is generally more distinct and prolonged: all the other conditions are natural.

BRONCHIAL or BRONCHIC. That which relates to the bronchi.

BRONCHIAL CELLS, (F) *Cellules bronchiques*, the *Air-cells*; the terminations of the bronchi.

BRONCHIAL GLANDS, (F) *Glandes bronchiques* ou *Ganglions lymphatiques des bronches*, are numerous glands of an ovoid shape; of a reddish hue in the infant, and subsequently brown and black, seated in the course of the bronchi. Their functions are unknown. The Bronchial glands may be presumed to be affected by scrophulosis, when, in addition to the existence of tumours in the neck, percussion gives a dull sound under the upper and central part of the sternum, whilst there is no appreciable lesion of the lungs.

The BRONCHIAL ARTERIES, (F) *Artères Bronchiques*. These are generally two in number, one going to each lung. They arise from the thoracic aorta, and accompany the bronchi and their ramifications.

The BRONCHIAL VEINS arise from the last divisions of the arteries of the same name, and pass, on the right side, into the vena azygos; on the left, into the superior intercostal.

The BRONCHIAL NERVES, (F) *Nerfs Bronchiques*, are furnished by the two pulmonary plexuses.

BRONCHIAL RESPIRATION. See Murmur, Respiratory.

BRONCHIAL COUGH, (F) *Toux bronchique*, *T. tubaire*. This generally accompanies bronchial respiration. They both indicate obstruction to the entrance of air into the air-cells.

BRONCHITIS, *Angi'na bronchialis*. Inflammation of the lining membrane of the bronchial tubes.

This is always more or less present in cases of pulmonary catarrh; and is accompanied by cough, mucous expectoration, dyspnoea, and more or less uneasiness in breathing. The *acute* form is accompanied with all the signs of internal inflammation, and requires the employment of antiphlogistics followed by revulsives.

The *chronic* form may be confounded with phthisis; from which it must be distinguished mainly by the absence of hectic fever and of the physical signs that are characteristic of the latter, as well as by the nature of the expectoration, which is generally mucous, although at times muco-purulent.

Peripneumonia Notha, q. v. is nothing more than chronic bronchitis.

BRONCH'OCELE, from *βρογχος*, 'a bronchus,' and *κηλη*, 'tumour.' An inaccurate name for the affection which is called, also, *Bo'chium*, *Bo'tium*, *Hernia gut'turis*, *Guttur tu'midum*, *Trachelophy'ma*, *Hernia guttura'lis*, *Thy'rocelē*, *Thyreocelē*, *Thyremphraxis*, *Thyreon'cus*. *Thyron'cus*, *Thyrophrax'ia*, *Gossum*, *Exechebron'chus*, *Gongro'na*, *Struma*, *Bocium*, *Hernia bronchia'lis*, *Trach'elocelē*, &c., the *Derbyshire neck*, *Swelled neck*, &c., (F) *Goitre*, *Gouëtre*. This is no rupture, but consists of an enlargement of the thyroid gland. It is common at the base of lofty mountains in every part of the world; and has been supposed to be owing to the drinking of snow water, but it occurs where there is no snow. The tumour is, sometimes, very extensive. Iodine has great power over it, and will generally occasion its absorption, when the case has not been of such duration as to be of a cartilaginous condition.

BRONCHOTOME, *Bronchot'omus*, from *βρογχος* and *τεμνειν*, 'to cut.' A kind of lancet, with a blunt and rounded point, mounted on a handle, and fitted to a canula, which passes in along with it, and is allowed to remain in the opening made in the trachea. The instrument is not used.

BRONCHOTOMY, *Bronchotomie*. Same etymology. A surgical operation, which consists in making an opening either into the trachea (*Tracheot'omy*); into the larynx (*Laringot'omy*); or into both (*Tracheo-laryngot'omy*), to extract foreign bodies or to permit the passage of air to the lungs. These different parts are divided transversely or vertically, according to circumstances.

BROSSARDIÈRE, MINERAL WATERS OF. Brossardièrre is a chateau in Bas-Poitou, France. The waters contain carbonates of iron and lime, muriate of soda, and sulphate of lime. They are aperient.

BROUSSAIST. One who is a believer in, and professor of, the physiological and pathological opinions of Broussais. The system itself is called *Broussaism* or the *Physiological Doctrine*.

BROWNIAN or BRUNO'NIAN. Relating to the system or opinions of John Brown.

BROWNISM or BRUNONIANISM. The doctrines of Brown.

BROWNIST or BRUNO'NIAN. A follower of the system of Brown.

BRUCEA ANTI-DYSENTER'ICA. *B. ferrugin'ea*, *Angustu'ra spuria*, (F) *Fausse Angusture*, *A. Ferrugineuse*. The systematic name of the plant, whence is obtained the *false Angustura Bark*. It affords the *Brucine*.

BRUCINE, BRUCIA, BRUCINA. An organic, salifiable base, discovered in the false *Angustura*—*Brucea anti-dysenterica*, and obtained from the *Strychnos nux vomica*. It is of a pearly white; crystallized in oblique prisms with a parallelogrammatic base; very

bitter, slightly acrid and styptic, and soluble in water, but more so in alcohol.

Brucine is a less active poison than strychnine. It resembles it, however, and may be used as a substitute for the extract of nuxvomica. Dose, half a grain.

BRUCOURT, MINERAL WATERS OF.

Brucourt is three leagues and a half from Caen in Normandy. The waters contain carbonic acid, muriate and sulphate of soda, much sulphate of lime, &c.

BRUISSEMENT (F), *Frem'itus*. This word has much the same signification as *Bourdonnement*, as well as *Bruit*.

BRUIT (F), Sound. A term applied to various sounds heard on percussion and auscultation, viz.

BRUIT DE CRAQUEMENT, *B. de Tiraillement*, *Bruit de cuir neuf*, 'sound of crackling, or bursting, or of new leather.' A sound produced by the friction of the pericardium, when dried and roughened by inflammation.

BRUIT DE DIABLE, *Ronflement de Diable*, 'noise of the diable or humming-top.' A high degree of *Bruit de soufflet*, heard on ausculting the arteries. It denotes an impoverished state of the blood.

BRUIT DU FROTTEMENT ASCENDANT ET DESCENDANT, 'Sound of friction of ascent and descent.' Sounds said to be produced by the rubbing of the lung against the parietes of the chest, as it rises and falls during inspiration and expiration. It is asserted by Reynaud that they are distinctly heard in pleuritis, when the pleura has become roughened by the disease.

BRUIT HUMORIQUE, *B. Hydropneumatique*. The sound afforded on percussion when organs are filled with liquid and air.

BRUIT DE PARCHEMIN, 'Parchment tone.' A sound as if produced by two sheets of parchment applied to each other. It is said to be produced by thickening and rigidity of the valves of the heart.

BRUIT PLACENTAIRE, *B. de soufflet placentaire*, *Placental bellows' sound*. The bellows' sound heard on ausculting over the site of the placenta in a pregnant female.

BRUIT DE POT FÉLÉ, 'Sound of a cracked vessel.' This sound is heard on percussion, when a cavern in the lungs is filled with air, and has a narrow outlet.

BRUIT DE RACLEMENT, 'Sound of scraping.' A sound produced by the scraping of a hard, bony substance against the pericardium.

BRUIT DE RAPE, 'Sound of a rasp.' A sound heard during the contraction of either auricles or ventricles. It is constant; and the contraction of the cavity is more prolonged than natural, and emits a hard, rough, and—as it were—stified sound.

It indicates contraction of the valvular orifices, by cartilaginous deposits or ossification, and accompanies the contraction of the auricles if the auriculo-ventricular valves are concerned,—that of the ventricles if the semilunar valves be the seat of the disease.

The **BRUIT DE SCIE**, or 'saw-sound,' and the **BRUIT DE LIME A BOIS**, or 'file-sound,' resemble the last.

BRUIT DE SOUFFLET, 'bellows sound.' A sound like that of a bellows, heard occasionally by the ear applied to the chest during the contraction of the ventricles, auricles, or large arteries. It coexists with affections of the heart, but is heard, also, without any disease in that organ, whenever, indeed, an artery is compressed.

An *Encephalic bellows' sound* has been described by Dr. Fisher, of Boston. It is heard on applying the ear to the occiput or to the top of the head; and is considered to indicate turgescence of vessels, or inflammation. When such turgescence exists, the vessels are compressed, and the compression gives rise to the sound in question.

BRUIT TYMPANIQUE, 'Tympanic sound.' The clear sound afforded by percussing the stomach and intestines when containing air.

BRUNNER'S GLANDS. *Brunneri Glandulæ*, *Glandulæ solitariae*. Muciparous follicles of a small size, seated between the mucous and muscular coats of the stomach, along the two curvatures of that organ, and in the small intestines, especially the duodenum; so called from their discovery having generally been attributed to Brunner. See *Peyeri Glandulæ*.

BRUSH, *Scopula*, (F) *Brosse*. A well known instrument, used in Medicine chiefly for the following purposes. 1. To clean the teeth. 2. To remove the sawdust, which adheres to the teeth of the trephine, during the operation of trephining. 3. To rub the surface of the body, for the purpose of exciting the skin, and favouring transpiration. Westring, a Swedish physician, has recommended metallic brushes for the purpose of conveying galvanism to a part. These brushes consist of a plate of ebony fitted to another of gold, in which threads of the same metal are fixed;—the brush being connected with one of the poles of the galvanic pile.

BRUTIA. A sort of thick pitch, obtained from Brutia in Italy. From the *Pix Brutia* was obtained the *Oleum Picinum*.

BRUXANELI. A Malabar tree, the bark and leaves of which have a strong smell, and are astringent. On the coast of Malabar its juice, mixed with butter, is applied to boils. Its bark is esteemed to be diuretic, and its roots anti-arthritic.

BRUYERES, MINERAL WATERS OF. Bruyères is a small village, 7½ leagues from Luneville. The waters are acidulous and chalybeate.

BRYGMUS, *βρυγμος*, *Stridor Dentium*. Grinding of the teeth.

BRYONIA ALBA. *White Bryony*, *Vitis alba sylvestris*, *Agros'tis*, *Agriam'pelos*, *Am'pelos agria*, *Archeos'tris*, *Echetro'sis*, *Bryo'nia as'pera*, *Cedros'tis*, *Chelido'nium*,

Labrus'ca, *Melo'thrum*, *Ophrostaph'ylon*, *Psilo'thrum*, *Bryonia Dioica*. Nat. Ord. Cucurbitaceæ. Sex. Syst. Monœcia Monadelphia, (F) *Couleuvrée*, *Vigne vierge*, *V. blanche*. The root is large and succulent, and has an acrid, bitter, and disagreeable taste. It is a drastic cathartic. Externally, it has been applied, in form of cataplasm, in gout. When repeatedly washed, a good starch is obtained from it. The active principle has been separated from it, and called *Bry'online*.

BU, *βου*, abbreviation of *βους*, 'an ox,' in composition expresses, 'excess, greatness.' Hence *Bulimus*, *Buphthal'mia*, &c.

BUBO, *βουβων*, *Pano'chia*, *Panus inguina'lis*, *Adenophy'ma inguinalis*, *Bubonopa'nus*, *Cambu'ca*, *Angus*, *Boubon*, *Cod'ocelē*, *Codoscel'la*, (F) *Bubon*, *Poulain*. In the works of Hippocrates and Galen, this word, sometimes, signifies the groin; at others, the inguinal glands; and at others, again, swelling or inflammation of these parts. The moderns apply the term to an inflammatory tumour seated in the groin or axilla, and they generally distinguish, 1. *Simple* or *sympathetic Bubo*, which is independent of any virus in the economy. 2. *Venereal Bubo*, (F) *Bubon vénérien*, which is occasioned by the venereal virus. 3. *Pestilential Bubo* or *B. symptomatic of the Plague*. The two last have by some been called the *malignant Bubo*, (F) *Bubon malin*. *Primary Bubo*, (F) *Bubon primitif*, shows itself with the first symptoms of syphilis: the *consecutive* not till afterwards.

BUBON GAL'BANUM. The systematic name of the plant, which affords the Galbanum. *Metop'ion*. The plant is also called *Ferula Africa'na*, *Oreoseli'num Africa'num*, *Anisum frutico'sum galbanif'erum*, *Anisum Africa'num frutes'cens*. The long-leaved or lovage-leaved *Gal'banum*. Nat. Ord. Umbelliferæ. Galbanum is the gummi-resinous juice of this tree. Its odour is fetid, and taste bitter and acrid: the agglutinated tears are of a white colour, on a ground of reddish-brown. It forms an emulsion, when triturated with water, and is soluble in proof-spirit, wine, and vinegar: s. g. 1.212. It has been given as an antispasmodic, and expectorant, in pill or emulsion. Dose, from gr. 10 to 60. Externally, it is applied as a cataplasm.

BUBON MACEDON'ICUM, *Petroseli'num Macedon'icum*, *Apium petræum*, *Petra'pium*, *Macedo'nian Parsley*, (F) *Persil de Macédoine*. Its properties are similar to those of common parsley, but weaker and less grateful. The seeds are an ingredient in the celebrated compounds—Mithridate and Theriac.

BUBONIUM, *Aster Al'ticus*, *Golden Starwort*. A plant, anciently supposed to be efficacious in diseases of the groin, from *βουβων*, 'the groin.'

BUBONOCE'LE, from *βουβων*, 'the groin,' and *κηλη*, 'tumour,' 'rupture.' *Hernia inguina'lis*, *In'guinal Hernia* or *Rup-*

ture of the Groin, (F) *Hernie inguinale*. Some surgeons have confined this term to hernia when limited to the groin, and have called the same affection when it has descended to the scrotum, *Os'checele* or *Scrotal Hernia*. The rupture passes through the abdominal ring: and in consequence of the greater size of this opening in the male is more frequent in the male sex.

BUBONOREX'IS, from *βουβων*, 'the groin,' and *ρηξις*, 'a rupture.' A name given to bubonocèle when accompanied with a division of the peritoneum, or when, in other words, it is devoid of a sac.

BUBON'ULUS, a diminutive of *Bubo*, (q. v.) A painful swelling of the lymphatics of the penis, extending along the dorsum of that organ to the groin. It is an occasional accompaniment of Gonorrhœa.

BUCCA, *Gnathos*; the mouth. The cheeks and hollow of the cheeks.

BUCCACRATON, from *Bucca*, and *κραταιον*, 'I mix.' A morsel of bread sopped in wine, which served of old for a breakfast.—Linden.

BUCCAL, *Bucca'lis*, from *Bucca*, 'the mouth,' or rather 'the cheek.' That which concerns the mouth, and especially the cheeks.

BUCCAL MEMBRANE, (F) *Membrane Buccale*. The mucous membrane, which lines the interior of the mouth.

BUCCAL or MOLAR GLANDS. Mucous follicles, seated in the buccal membrane, opposite the molar teeth. They secrete a viscid humour, which mixes with the saliva, and lubricates the mouth.

The BUCCAL ARTERY, *A. Sus-maxillaire*—(Ch.), arises from the internal maxillary or from some of its branches, as the *Temporalis profunda antica*, or the *Alveolar*. It distributes its branches to the buccinator muscle, and to the buccal membrane.

The BUCCAL VEIN follows the artery.

The BUCCAL NERVE or *Buccinator Nerve*, *Bucco-labial*—(Ch.), is given off by the inferior maxillary. It sends its branches to the cheek, and especially to the buccinator muscle.

BUCCELA'TON or BUCCELA'TUS. A loaf-shaped cathartic medicine; made chiefly of scammony.—Aëtius, Paulus of Ægina.

BUCCEA and BUCCEL'LA. The fleshy excrescence of nasal polypus, so called because it was believed to proceed from the mouth.—Paracelsus. Also, a mouthful.

BUCCINA'TOR, from *Buccina're*, 'to sound the trumpet.' The *Buccina'tor Muscle*, *Retrac'tor An'guli Oris*, *Bucco-Alve'olo-maxillaire*, *Alveolo-labial*—(Ch.), *Manso'rius*. This muscle is situate in the substance of the cheeks. It extends between the posterior portions of the alveolar arches of the two jaws and the commissure of the lips, which it draws backwards. It assists in mastication, by pushing the food back towards the teeth; and, if the

cheeks are distended by air, its contraction forces it out.

BUCCO. One who is blub-cheeked, or wide-mouthed.

BUCCO-PHARYNGEAL, *Bucco-pharyngeus*. (F) *Bucco-pharyngien*. Belonging to the mouth and pharynx. The *Bucco-Pharyngeal Aponeurosis*, or *Intermaxillary Ligament*, extends from the internal ala of the pterygoid process to the posterior part of the lower alveolar arch, and affords attachment, anteriorly, to the buccinator, and posteriorly to the constrictor pharyngis superior.

BUC'ULA, from *Bucca*, 'the mouth.' A small mouth. The fleshy part beneath the chin.—Bartholine.

BUCELLA'TIO. A mode of arresting hemorrhage, by applying a pledget of lint to the bleeding vessel.—Avicenna, Fallopius.

BUISARD, MINERAL WATERS OF. Buisard is two leagues from Chateau-Thierry in France. The water contains muriate and carbonate of lime.

BULB, *Bulbus*, (F) *Bulbe*. A name, given by Anatomists to different parts which resemble, in shape, certain bulbous roots. The *Bulb of the Aorta* is the great sinus of the Aorta. *Bulb of the Teeth*; the vascular and nervous papilla contained in the cavity of the tooth. The *Bulb or Root of the Hair*, is the part whence the hair originates. The *Bulb of the Urethra*, is the dilated portion formed by the commencement of the *Corpus spongiosum* towards the root of the penis. We say, also, *Bulb*, for *Globe, of the eye*.

BULBUS ESCULENTUS; the *Esculent bulb*; a particular kind, so denominated by the ancients. It is supposed to have been the *Cepa Ascalonica*.—Dioscorides, Celsus, Pliny, &c.

BULBUS VOMITO'RIOUS. A plant, said by Dioscorides to be emetic and diuretic. It is the *Musk-grape-flower*, according to Ray:—the *Hyacinthus Muscari*.

BU'LITHOS, from *βους*, 'an ox,' and *λίθος*, 'a stone.' A bezoar or stone, found in the kidneys, gall-bladder, or urinary bladder of an ox or cow.

BULLA. A *Bleb*. (F) *Bulle*. A portion of the cuticle, detached from the skin by the interposition of a transparent, watery fluid. It forms the 4th Order in Willan's and Bateman's arrangement of cutaneous diseases, and includes Erysipelas, Pemphigus, and Pompholyx. By some Bulla has been used synonymously with *Pemphigus*.

BUNITES VINUM. A wine, made by infusing the *Bunium* in Must. It is stomachic, but scarcely ever used.

BUNIAM BULBOCASTANUM. *Balanocastanum*. The systematic name of a plant, whose root is called the *Pig-nut*. *Agriocastanum*, *Nucula terres'tris*, *Bulbocastaneum*, *Bulbocastanum majus et minus*, *Earth-nut*, *Hawk-nut*, *Kipper-nut*, (F) *Terre-*

noix. The root is tuberous, and is eaten raw or roasted. It has been supposed of use in strangury. It is not employed in Medicine.

BUNYON, from *βουνος*, 'an eminence.' (?) An enlargement and inflammation of the Bursa mucosa at the inside of the ball of the great toe.

BUPHTHAL'MIA, *Bupthal'mos*, from *βους*, 'an ox,' and *οφθαλμος*, 'an eye.' *Ox eye*. Under this name the generality of authors have designated the first stage of hydrophthalmia. Others, with Sabatier, mean, by this term, the turgescence of the vitreous humour, which, by pushing the iris forwards, forms around the crystalline a sort of border.

BUPLEU'RUM ROTUNDIFO'LIIUM, *Bupleu'ron*, *Bupleuroi'des*, *Round-leaved Hare's-Ear* or *Thorow-wax*, (F) *Buplèvre*, *Percefeuille*. The herb and seeds are slightly aromatic. It was formerly celebrated for curing ruptures, being made into a cataplasm with wine and oatmeal.

BURAC, *Borax*. Also, any kind of salt. (Arabic.)

BURIS. Hernia, accompanied by scirrhus tumefaction; or, perhaps, a scirrhus tumour only.—Avicenna.

BURN, *Ustio*, *Ambus'tio*, *Adus'tio*, *Tresis Causis*, *Erythe'ma Ambus'tio*, *Causis*, *Encausis*, *Combustu'ra*, *Catacau'ma*, *Combustio*, (F) *Brûlure*. An injury produced by the action of too great heat on the body. Burns are of greater or less extent; from the simple irritation of the integument to the complete destruction of the part. The consequences are more or less severe, according to the extent of injury and the part affected. Burns of the abdomen, when apparently doing well, are sometimes followed by fatal results. Their treatment varies; at times, the antiphlogistic being required: at others, one more stimulating.

BURNING, or **BRENNING**. A disease mentioned by old historians, from which authors have unsuccessfully endeavoured to demonstrate the antiquity of syphilis.—Parr.

BURRHI SPIRITUS MATRICA'LIS. The *Spirit of Burrhus for diseases of the Womb*. It is prepared by digesting, in alcohol, equal parts of myrrh, olibanum, and mastic. BOERHAAVE frequently prescribed it.

BURSÆ MUCOSÆ, *Synovial Crypts*, or *Follicles*, (F) *Bourses Synoviales*. Small membranous sacs, situate about the joints, particularly about the large ones of the upper and lower extremities, and, for the most part, lying under the tendons. They are naturally filled with an oily kind of fluid, the use of which is to lubricate surfaces over which tendons play. In consequence of bruises or sprains, this fluid sometimes collects to a great extent. The Bursæ are, generally, either of a roundish or oval form, and they have been arranged under two classes, the *spherical* and *vaginal*.

BURSERA GUMMIFERA, *Terebinth'us gummifera*, *Jamaica Bark Tree*. A resin exudes from this tree, which is solid externally, as met with in the shops: softish internally: of a vitreous fracture: transparent: of a pale yellow colour: turpentine smell, and sweet, perfumed taste. It has been used like the Balsams and Turpentine in general, and is called, by the French, *Cachibou*, *Chibou*, and *Resine de Gomart*.

BUSSANG, MINERAL WATERS OF. Bussang is a village in the department of Vosges, France. The waters are slightly chalybeate.

BUSSII SPIRITUS BEZOAR'TICUS. The *Bezoar'dic Spirit of Bussius*. A preparation, regarded as sudorific, diuretic, and antispasmodic: obtained by distilling subcarbonate and muriate of ammonia, amber, oil of cedar or juniper, &c.

BUTTER, *Buty'rum*, *Pice'rion*, (F) *Beurre*. A sort of concrete oil, obtained from the cream, which forms on the surface of the milk, furnished by the females of the mammalia; especially by the cow and the goat. Fresh butter is very nutritious, whilst the rancid is irritating. The ancient chemists gave the name *Butter* to many of the metallic chlorurets. It has also been applied to vegetable substances, which resemble, in some respects, the butter obtained from milk.

BUTTERMILK, (F) *Babeurre*, *Lait de Beurre*. The thin, sour milk, separated from the cream by churning. It contains caseum and a little butter. It is a refreshing drink when newly made.

BUTTER OF BAMBOUC, OR BAMBUC, (F) *Beurre de Bambouc* or *Bambuk*. A vegetable oil obtained from a species of almond, and used in Senegal in neuralgic and rheumatic pains.

BUTTER OF CACAO, *Oil of Cacao*, *Oleum Cacao spissat'um*, *O. Theobromæ Cacao expressum*, (F) *Beurre de Cacao*, *Huile de Cacao*. A fat substance of a sweet and agree-

able taste, obtained from the *Theobroma cacao*, or Chocolate Nut.

BUTTER OF COCOA, (F) *Beurre de Coco*. A fatty, concrete substance, which separates from the milk of the Cocoa nut. It is sweet and agreeable.

BUXTON, MINERAL WATERS OF, *Buxtonien'ses Aquæ*. Buxton is a village in Derbyshire. The springs are thermal, and about 82° Fahrenheit. They are used in cases in which thermal springs, in general, are recommended. They contain little or no mineral impregnation.

BUXUS, *Buxus sempervi'rens*. The Box-tree. (F) *Buis* or *Bouis*. The leaves are bitter and aromatic, and, as such, have been used in medicine, in cases of worms, dyspepsia, &c., in the form of decoction. They are, sometimes also, added to beer. The seed was anciently called *Carthegon*.

BYRE'THRUM. A sort of cap or *Couvrechef*, filled with cephalic substances.—Forestus.

BYRSA, *βυρσα*. A leather skin to spread plasters upon.

BYRSODEP'SICON. A Tan stuff, with which CÆLIUS AURELIANUS sprinkled wool, which he applied in certain cases to the umbilical region: from *βυρσα*, 'leather,' and *δεψω*, 'I tan.'

BYSAU'CHEN, from *βυα*, 'I stop up,' and *αυχνη*, 'the neck.' A morbid stiffness of the neck.

BYSSUS or BYSSUM. The ancients gave this name to several vegetable substances, which were used for the fabrication of stuffs, prized for their fineness, colour, and rarity of the material. It is now chiefly applied to the filaments, by the aid of which the acephalous mollusca attach their shells to the rocks. B. was formerly also applied to the *female pudendum*.

BYTHOS, *βυθος*, 'depth.' An epithet used by HIPPOCRATES for the fundus of the stomach.

C

C. This letter in the chemical alphabet signifies Nitre. It is also sometimes used in prescriptions for Calx.

CAA-AP'IA, *Dorste'nia Brazilien'sis*. The root, according to Piso, is employed as emetic and anti-diarrhœic.

CAA-ATAY'A. A plant of Brazil, supposed to be a species of *Gratiola*. It is very bitter, and considered to be one of the best indigenous cathartics.

CAA-GHIYU'YO, *Frutex bac'cifer Brazilien'sis*. A shrub of Brazil, whose leaves, in powder, are considered detersive.

CAA'ROBA. A Brazilian tree, whose leaves, in decoction, promote perspiration.—See *Ceratonia*.

CABAL, *Cab'ala*, *Cabal'la*, *Cal'bala*, *Cabalia*, *Kabala*, *Gaballa*. This word is from the Hebrew, and signifies knowledge transmitted by tradition. Paracelsus and several

authors of the 16th and 17th centuries have spoken much of this species of magic, which they distinguished into *Judaic* or *Theologian* and *hermetic* or *medicinal*; the latter being, according to them, the art of knowing the most occult properties of bodies by an immediate communication with spirits:—the knowledge being thus acquired by inspiration, and incapable of inducing error. It was also called *Ars cabalis'tica*, cabalistic art.

CABAL'HAU. A plant of Mexico, according to Dalechamps, which passes for an antidote to white hellebore, and yet is used for poisoning arrows. It is unknown to Botanists.

CABALIST, Cabalista. One instructed in the Cabal.

CACAGOGUE, Cacago'gus, from κακον, 'excrement,' and αγω, 'to expel.' An ointment, composed of alum and honey; which, when applied to the anus, produced an evacuation.—Paulus of Aegina.

CACA'LIA ANTEUPHOR'BIUM, Ant-euphor'bium. A plant, which Dodoens and others considered to be capable of tempering the caustic properties of the euphorbium. It is also called *Kleinia*.

Many varieties of the Cacalia are used, in different countries, chiefly as condiments.

CA'CAO, Ca'coa, Co'coa Cacavif'era, Ca-ca'vi, Quahoil, Cacava'ta. The Cocoa or Chocolate Nut; the fruit of the *Theobroma*, Family, Malvaceæ. *Sex. Syst.* Polyadelphia, Pentandria.

CAC'ATORY, Cacato'rius, from caca're, 'to go to stool.' *Febris cacato'ria*; a kind of intermittent fever, accompanied by copious alvine evacuations.—Sylvius.

CACCION'DE. A sort of pill, chiefly formed of catechu, recommended by Baglivi in dysentery.

CACHANG-PARANG. A sort of bean of Sumatra, mentioned by Marsden, whose seeds are given in pleurisy. Jussieu considers it to be the *Mimosa scandens*.

CACHEC'TIC, Cachec'ticus, same etymon as *Cachexia*. One attacked with cachexia. Belonging to cachexia. *Cachec'tica remedia*, are remedies against cachexia.

CACHEX'IA, from κακος, 'bad,' and ἔξις, 'habit.' *Status cachec'ticus.* A condition in which the body is evidently depraved. A bad habit of body; chiefly the result of scorbutic, cancerous, or venereal diseases when in their last stage. Hence we hear of a *Scorbutic C.*, *Cancerous C.*, &c. Sauvages and Cullen have included under this head a number of diseases—consumptions, dropsies, &c. Cachexia has been sometimes confounded with diathesis. The *Cachexia Icteric*a is jaundice or icterus itself, or a disposition thereto. The fluor albus is sometimes called *Cachexia Uterina*.

CACHINNA'TIO, from cachin'no, 'I laugh aloud.' A tendency to immoderate laughter, as in some hysterical and maniacal affections.

CACHIRI. A fermented liquor, made, in Cayenne, from a decoction of the rasped root of the manioc. It resembles perry.

CACHLEX. A small stone or pebble, found on the sea-shore. One of these when heated in the fire, and cooled in whey, communicates an astringency to the liquid, so that it was anciently esteemed to be useful in dysentery.—Galen.

CACHOS. An Oriental fruit, apparently of a *Solanum*, which is esteemed lithontriptic.

CACHRYS LIBANO'TIS. An umbelliferous plant, which grows in Africa and the South of Europe. It is aromatic and astringent. Its seeds are extremely acrid.

CACHUN'DE. An Indian troch or pastile, composed of amber, mastic, musk, cinnamon, aloes, rhubarb, galanga, pearls, rubies, emeralds, garnets, &c. It is regarded by the people of India as an antidote, stomachic, and antispasmodic.

CACOCHO'LIA, from κακος, 'bad,' and χολη, 'bile.' Diseases induced by a depraved condition of the bile.

CACOCROI, from κακος, 'bad,' and χροα, 'colour.' Diseases in which the complexion is morbidly changed in colour.

CACOCHYL'IA, from κακος, 'bad,' and χυλος, 'chyle.' Depraved chylification.

CACOCHYM'IA, Corruptio Humo'rum, from κακος, 'bad,' and χυμος, 'juice,' 'humour.' *Cacoch'ymy.* Depravation of the humours.

CACOCY'MUS, Cacochym'icus. One attacked with cacochymia. Belonging to cacochymia.

CACOCNE'MOS, Malis suris præditus, from κακος, 'bad,' and κνημη, 'the leg.' One who has bad legs.

CACOCORE'MA, from κακος, 'bad,' and κορεω, 'I purge' or 'cleanse.' A medicine which purges off the vitiated humours.

CACODÆ'MON, from κακος, 'bad,' and δαιμων, 'a spirit.' An evil spirit, to which were ascribed many disorders. The *Night-mare*.

CACOË'THES, from κακος, 'bad,' and ἦθος, 'disposition, habit,' &c. Of a bad or vitiated character.

CACOGALAC'TIA, from κακος, 'bad,' and γαλα, gen. γαλακτος, 'milk.' A bad condition of the milk.

CACOPATHI'A, Pas'sio Mala, from κακος, 'bad,' and παθος, 'affection.' A distressed state of mind.—Hippocr.

CACOPHO'NIA, from κακος, 'bad,' and φωνη, 'the voice.' A dissonant condition of voice:—*vitia'ta vox*.

CACOPRA'GIA, from κακος, 'bad,' and πραττω, 'I perform.' Depraved condition of the chylopoietic organs.

CACORRHACHI'TIS, from κακος, 'bad,' and ραχις, 'the spine.' *Cacorrha'chis, Spondylal'gia.* Deformity of the spine. Disease of the spine. Spontaneous luxation of the ver-

tebræ and ribs dependent upon internal causes.

CACORRHYTH'MUS, *Arrhyth'mus*, from κακος, 'bad,' and ρυθμος, 'rhythm,' 'order.' Irregular.

CACO'SIS. Vice. *Mala disposi'tio*. A bad condition of body.—Hippocr.

CACOSIT'IA, from κακος, 'bad,' and σιτιον, 'aliment.' Disgust or aversion for food.—*Fastid'ium cibo'rum*.

CACOSOMIUM, from κακος, 'bad,' and σωμα, 'the body.' An hospital for leprosy, and incurable affections.

CACOSPHYX'IA, from κακος, 'bad,' and σφυξις, 'pulse.'—*Vitio'sus pulsus*. Bad state of pulse.—Galen.

CACOSTOM'ACHUS, from κακος, 'bad,' and στομαχος, 'the stomach.' What disagrees with the stomach. Indigestible.—Gorræus.

CACOS'TOMUS, from κακος, 'bad,' and στομα, 'a mouth.' Having a bad mouth.

CACOTHYM'IA, *Vit'ium An'imi*, from κακος, 'bad,' and θυμος, 'mind,' 'disposition.' A vitious state of mind.—Linden.

CACOTROPH'IA, from κακος, 'bad,' and τροφη, 'nutrition.'—*Vitio'sa nutri'tio*:—disordered nutrition.—Galen.

CACOU'CIA COCCIN'EA, *Cocuin'ea Coccin'ea*, *Schousbæ'a coccin'ea*, *Tikimma*. A perennial twining shrub of South America; the plant of which, as well as the fruit, is possessed of emeto-cathartic properties.

CACTUS OPUN'TIA, *Opun'tia*. The *Indian Fig*, (F) *Cactier*, *Raquette*, *Figuier d'Inde*. This plant grows in South America, Spain, Italy, &c. Its fruit, which has the shape of the fig, is of a sweetish taste, and colours the urine red when eaten. Its leaves are considered refrigerant.

CADA'BA, *Stroë'mia*. A genus of the family *Capparideæ*, natives of India and Arabia. The young shoot of the *Cada'ba farino'sa* are considered to be an antidote against venomous bites.

CADA'VER, *Ptoma*, *Necron*, νεκρον. A dead body; a subject; a carcass, (F) *Cadavre*. The word has been supposed to come from *cado*, 'I fall;' and by some, to be a contraction from *caro data vermibus*, 'flesh given to the worms!'

CADAV'EROUS, *Cadavero'sus*, *ne'crodes*, (F) *Cadavereux*. Belonging to the dead body; as *cadaverous smell*. The *Cadav'erous* or *Hippocrat'ic face* (see *Face*), is an unfavourable sign in disease, and generally denotes a fatal termination.

CADIA. An Egyptian, leguminous plant. The Arabs attribute, to its fresh leaves, the power of relieving colic.

CADU'CITY, *Imbecil'litas*, *Debil'itas*, *Cadu'citas*. The French use the word *Caducité*, for the portion of human life, which is comprised generally between 70 and 80 years. The age, which precedes decrepitude. It is so termed in consequence of the limbs not

usually possessing sufficient strength to support the body. The precise age must of course vary in individuals.

CADUS, καδος. A Greek measure, equal to ten gallons English.—Pliny.

CÆCAL, *Cæcalis*. Belonging to the cæcum, from cæcus, 'blind, hidden.' The *Cæcal arteries and veins*, are the branches of the *Arteriæ et venæ colicæ dextræ inferiores*, distributed to the cæcum.

CÆ'CITAS, *Blindness*, *Anap'sia*, *Typh'lotes*, *Typhlo'sis*, (F) *Aveuglement*, *Cécité*. C. may be dependent upon many different diseases,—as upon amaurosis, specks, hypopyon, cataract, glaucoma, ophthalmia, atrophy of the eye, &c.

CÆCUM or CŒCUM, *Intesti'num cæcum*, *Monom'achon*, *Monocolon*, *Monoculum*, *Typhloteron monocolon*, *Ini'tium intestini crassi*, *Saccus*, *Cæcum Caput Coli*, *Prima cella coli*, from cæcus, 'blind.' The *Blind Gut*, so called from its being perforated at one end only. That portion of the intestinal canal, which is seated between the termination of the ileum and commencement of the colon; and which fills, almost wholly, the right iliac fossa: where the peritoneum retains it immovably. Its length is about 3 or 4 fingers' breadth. The *ileo-cæcal valve* or *Valve of Bauhin* shuts off all communication between it and the ileum; and the *Appendix vermiformis cæci* is attached to it.

CÆCUS. 'Blind.' One deprived of sight, (F) *Aveugle*, *Borgne*. In anatomy, it is used to designate certain holes or cavities, which end in a *cul-de-sac*; or have only one opening.

The FORA'MEN CŒCUM of the frontal bone is a small cavity at the inferior extremity of the internal coronal crest or crista—*Frontoethmoidal foramen*—(Ch.), (F) *Trou aveugle* ou *borgne*. Morgagni has given the same name to the small cavity, in the middle of the upper surface of the tongue, near its base; the sides of which are furnished with mucous follicles—*Lacune de la langue*.—(Ch.)

HÆMORRHOÏDES CÆCÆ, *Blind Piles*, (F) *Hémorrhoides aveugles*, are those unaccompanied by any discharge.

BLIND DUCTS of the Ure'thra, (F) *Conduits aveugles de l'urèthre*, are the *Mucous Lacunæ of the Ure'thra*.

The FORAM'INA CÆCA,—ANTERIUS ET POSTERIUS, are situate at the fore and back parts of the tuber annulare of the brain, and at the extremities of the depression made by the vertebral artery. The former is placed between the nerves of the 3d, and the latter between those of the 6th pair.

CÆSALPINIA SAPPAN, (F) *Bresillet*, *Bois de Sappan*. A small Siamese tree, the wood of which is used in decoction, in cases of contusion.

The *Brazil wood* or *Fernambuco wood*, formerly used as an astringent, is the wood of the *Cæsalpin'ia echina'ta*.

CÆSAREAN SECTION or **OPERATION**, *Tomoto'cia*, *Cæsa'rea sectio*, *Partus cæsa'reus*, *Operatio cæsa'rea*, *Metrotom'ia*, from *cædere*, 'to cut.' An incision made through the parietes of the abdomen and uterus to extract the fœtus. In this manner Julius Cæsar is said to have been extracted.—Pliny. It is also called *Hysterotom'ia*, *Hysterotomato'cia*, and *Gastrohysterot'omy*, (F) *Opération Césarienne*.

An incision has been made into the uterus through the vagina; constituting the *Vaginal Cæsarean Section*, (F) *Opération césarienne vaginale*.

The Cæsarean Section may be required when the mother dies before delivery;—when there is some invincible obstacle to delivery, from the faulty conformation of the pelvis; or when the child has passed into the abdominal cavity in consequence of rupture of the uterus.

CÆSONES, CÆSARES. Children brought into the world by the Cæsarean operation.

CÆSU'LIÆ. They who have gray eyes.

CAFÉ A LA SULTANE. This name has been given to an infusion or decoction of the ground *coques* or pericarps which surround the coffee.

CAFÉ CITRIN. The aqueous infusion of unroasted coffee, so called on account of its yellowish tint.

CAGAS'TRUM. The principle or germ of diseases, which are communicable.—Paracelsus.

CAGOT (F). A name given to deformed and miserable beings, met with in the Pyrenees, Béarn, and Upper Gascony in France, where they are also called *Capots*. In other districts they are called *Gézits*, *Gézitains*, *Crétins*, *Gahets*, *Capons*, *Coliberts*, *Cacous*, *Cagneux*, &c. See *Cretin*. The word *Cagot* is supposed to be an abbreviation of *Canis Gothus*, 'Dog of a Goth.'

CAI'EPUT or **KAJ'EPUT**, Oil of. *Kyaput'ty*, *Cajupu'ti Oleum*, *Melaleu'cæ Leucoden'dri Oleum*. The oil has a strong smell, fragrant, like camphor; taste pungent and aromatic: limpid. It is stimulant, and useful where the essential oils in general are employed. It has also been called *Oil of Witneben*, from the person who first distilled it.

CAINCÆ RADEX, *Radix Chiococ'cæ*, *R. Cainanæ*, *Caninanæ*, *Cahincæ*, *Kahincæ*, *Serpentariae Brazilien'sis*, *Cainca Root*. The bark of the root of the *Chiococ'ca anguifuga*, a plant of the Family *Rubiaceæ*, *Sex. Syst.* *Pentandria Monogynia*, of Linnæus. It is bitter, tonic, and diuretic, but has not been long introduced. Dose of the powder from ʒj to ʒss.

Dr. John H. Griscom, of New York, considers there is a remarkable analogy between the *Cainca* and the *Apocynum cannabinum*.

CAIPA SCHORA. A cucurbitaceous Malabar plant, the fruit of which has a pyriform shape. The juice is drunk in that country for the purpose of arresting hiccough. The fruit, when unripe, is emetic.

CALAF, *Salix Ægyptiaca*. A large-leaved Egyptian willow, called, also, *Ban*. The distilled water of the flowers, called *Macahalef*, passes, in that country, for an excellent antiaphrodisiac. It is also used as an antiloinic antiseptic, and cordial.

CALAGUA'LE RADIX, *Calague'læ Radix*. The root of the *Polypodium Calagua'la*, or *Aspidium coriaceum*. It has been exhibited in Italy in dropsy, pleurisy, contusions, abscesses, &c. Its properties are not, however, clear.

CALAME'DON, from *καλαμος*, 'a reed.' This word has had various significations. Some have used it for an oblique fracture of a bone; the fractured portions having the shape of the nib of a pen. Others have used it for a longitudinal fracture, and others, again, for one that is comminuted.—Dictionaries.

CALAMINA, *Cal'amine*, from *cal'amus*, 'a reed,' so called from its reed-like appearance. *Cadmia*, *Cathmir*, *Cadmia lapido'sa aëro'sa*, *Cadmia Fos'silis*, *Lapis Aëro'sus*, *Calim'ia*, *Lapis Calamina'ris*, *Calamina'ris*, *Car'bonas Zinci impu'rus*, (F) *Pierre calaminaire*, *P. c. préparée*. Calamine is chiefly used for pharmaceutical purposes in the form of the *CALAMINA PRÆPARATA*, *Lapis Calamina'ris præpara'tus*, *Car'bonas zinci impu'rus præpara'tus*, *Prepared Calamine*;—Calamine reduced to an impalpable powder by roasting. In this state it is sprinkled or dusted on excoriated parts, or to prevent excoriation, &c.

CALAMUS ALEXANDRINUS. Celsus has thus called a medicine, which was long confounded with the *Calamus Aromaticus*. It is not a root, however, but the stalk of a plant of India and Egypt, probably the *Andropogon Nardus*. It entered into the theriaca, and has been regarded antihysterical and emmenagogue; *Calamus aromaticus verus*.

CALAMUS ROTANG. The systematic name of a plant, whence the *Dragon's Blood*, *Sanguis Draco'nis*, is obtained. The *Cinnabaris Græcorum*, *Draconthæ'ma*, (F) *Sang-Dragon*. It is the red, resinous juice, obtained, in India, from wounding the bark of the *Calamus Rotang*. It has been used as an astringent in hemorrhages, &c.; but is now rarely employed.

CALAMUS SCRIPTORIUS, *Anag'lyphæ*, *Rhomboi'dal Sinus*. A Writing pen. (F) *Fossette angulaire du quatrième ventricule*. A small, angular cavity, situate at the superior extremity of the medulla, in the fourth ventricle of the brain, which has been, by some, supposed to resemble a pen.

CALAPPITE. Rumphius has given this name to calculous concretions, found in the interior of some cocoa nuts. The cocoa tree itself the Malays call *Calappa*. These stones are, likewise, termed *Vegetable Bezoards*. The Malays attribute potent virtues to them, and wear them as amulets.

CALBIANUM. The name of a plaster in

Myrepsus, the composition of which we know not.

CALCA'NEUM, from *calx*, 'the heel.' *Calca'neus*, *Calcar*, *Os Calcis*, *Pterna*. The largest of the tarsal bones; that which forms the heel. It is situate at the posterior and inferior part of the foot; is articulated above and a little anteriorly with the astragalus; anteriorly, also, with the *os cuboides*. Its posterior surface,—called *Heel*, *Talus*, *Calx*, (F) *Talon*,—gives attachment to the *tendo achilles*: the lower has, posteriorly, two tuberosities, to which the superficial muscles of the sole of the foot are attached. The *small Apoph'ysis* or *lateral Apophysis* of the *Calca'neum*, (F) *Petite Apophyse* ou *Apophyse latérale du Calcanéum*, is a projection at the upper surface of this bone, on which is formed the posterior portion of the cavity, that receives the astragalus. The *great Apoph'ysis* or *anterior Apoph'ysis* of the *Calca'neum* is the projection, which corresponds, on one side, with the cuboides; and on the other forms the anterior part of the facette, which receives the astragalus.

CALCA'REOUS, *Calca'rius*, from *calx*, 'lime.' (F) *Calcaire*. Containing lime:—as *calcareous concretions*, *C. depositions*, &c.

CALCE'NA, **CALCE'NON**, **CALCENO'NIA**, **CALCINO'NIA**. Words employed by Paracelsus, to designate the concretions of tartrate of lime, which form in the human body.

CALCEOLA'RIA, from *calceolus*, 'a small slipper;' *Slipperwort*.

The **CALCEOLA'RIA PRIMATA** is used in Peru as a laxative.

The **CALCEOLA'RIA TRIF'IDA** is esteemed to be febrifuge.

CALCE'TUS, *Calceno'nius*, *Calce'nos*. That which abounds in tartrate of lime. An adjective used, by Paracelsus, in speaking of the blood;—*Sanguis calce'tus*. Hence came the expression *Calcined blood*, *Sang calciné*.

CALCIG'RADUS, *Pternobates*, from *Calx* and *πτερυγία*, 'the heel,' and *βαίνω*, 'I walk.' one who walks on his heels.—Hippocr.

CALCINA'TION, *Calcina'tio*, *Calci'non*, *Concrema'tio*, from *calx*, 'lime.' The act of submitting to a strong heat any infusible mineral substance: which we are desirous of depriving either of its water, or of any other volatilizable substance, that enters into its composition; or which we wish to combine with oxygen. *Alum* is calcined to get rid of its water of crystallization;—*chalk*, to reduce it to the state of pure lime, by driving off the carbonic acid; and *certain metals* are subjected to this operation to oxidize them.

CAL'CULUS, *Lapis*, *Lithos*, *λίθος*. A diminutive of *calx*, a lime-stone. (F) *Calcul*, *Pierre*. Calculi are concretions, which may form in every part of the animal body, but which are most frequently found in the or-

gans, that act as reservoirs, and in the excretory canals. They are met with in the tonsils, joints, biliary ducts, digestive passages, lachrymal ducts, mammæ, ears, pancreas, pineal gland, prostate, lungs, salivary, spermatic and urinary passages, and in the uterus. The causes which give rise to them are obscure.

Those, that occur in reservoirs or ducts, are supposed to be owing to the deposition of the substances, which compose them, from the fluid as it passes along the duct; and those, which occur in the substance of an organ, are regarded as the product of some chronic irritation. Their general effect is to irritate, as extraneous bodies, the parts with which they are in contact; and to produce retention of the fluid, whence they have been formed. The symptoms differ, according to the sensibility of the organ, and the importance of the particular secretion, whose discharge they impede. Their *solution* is generally impracticable: the spontaneous expulsion or extraction being the only ways of getting rid of them.

CALCULI OF THE TONSILS. Calculous concretions, which sometimes form in the tonsils. (F) *Calculs des Amygdales*. They are easily recognized by the sight and touch: sometimes they are discharged by spitting, either alone or with the pus of an abscess occasioned by their presence. They have not been analyzed.

CAL'CULI, ARTIC'ULAR. See *Calculi Arthritic*, and *Concretions, Articular*.

CAL'CULI, ARTHRIT'IC, *Chalk stones*, (F) *Pierres crayeuses*, *Calculs arthritiques*. Concretions, which form in the ligaments, and within the capsules of the joints, in persons affected with gout. They are composed of uric acid, soda, and a little animal matter; very rarely, urate of lime and muriate of soda are met with. Similar calculi are found in other parts besides the joints.

BIL'IARY CAL'CULI, *Cal'culi bilio'si*, *Cyst-hepatolithi'asis*, *Bil'iary Concre'tions*, *Gall-stones*, *Cholol'ithus*, *Cholel'ithus*, *Cholelith'ia*, (F) *Calculs biliaires*, *Pierres au fiel*. Some of these contain all the materials of the bile, and seem to be nothing more than that secretion thickened. Several contain *Picromel*; and the greater part are composed of from 88 to 94 parts of *Cholesterine*, and of from 6 to 12 of the yellow matter of the bile. Biliary calculi are most frequently found in the gall-bladder: at other times in the substance of the liver: in the branches of the *Ductus Hepaticus*, or in the *Ductus Communis Choledochus*. The first are called *Cystic*; the second *Hepatic*; and the last, sometimes, *Hepatocystic*. The causes which give rise to them are very obscure. Often they occasion no uneasiness, and at other times the symptoms may be confounded with those of hepatitis. At times, they are rejected by the mouth, or

by the bowels, along with a considerable quantity of bile, which had accumulated behind them; at other times, they occasion violent abdominal inflammation, abscesses, and biliary fistulæ, rupture of the gall-bladder, and fatal effusion into the peritoneum. The passage of a gallstone is extremely painful; yet the pulse is not affected. Antiphlogistics, when there is inflammatory action, and strong doses of opium, to allay the pain and spasm, with the warm bath, are the chief remedies. Solvents are not to be depended upon. They cannot reach the calculi.

CALCULUS OF THE STOMACH AND INTESTINES, Enterolithus, E. Calculus, (F) Calculs de l'estomac. Calculi of the stomach are rare, and have almost always been carried thither by the antiperistaltic action of the intestines. The symptoms, occasioned by them, are those of chronic gastritis. It has been imagined that the continued use of absorbent powders, as magnesia, will give occasion to them.

Intestinal concretions, (F) *Calculs intestinaux*, are not uncommon in animals (see *Bezoard*): but they are rare in man. The causes which give rise to them are little known: sometimes a biliary calculus affords them a nucleus. Their composition varies. They are light, hard, very fetid, and not inflammable. They are formed, ordinarily, between the valvulæ of the small intestines, or in the cells of the large, and sometimes in old herniæ. Whilst they do not obstruct the passage of the alimentary mass, they produce no unpleasant symptom. At times, the movable tumour, which they form, may be felt through the parietes of the abdomen. They are generally evacuated *per anum*.

CALCULI LACHRYMAL, (F) Calculs lacrymaux. Concretions sometimes, but rarely, form in the lachrymal passages, where they occasion abscesses and fistulæ, which do not heal until they are extracted. No analysis has been made of them.

CALCULI OF THE MAMMÆ, (F) Calculs des Mamelles. *HALLER* gives a case of a concretion, of a yellowish-white colour, which had the shape of one of the excretory ducts of the mammary gland, having been extracted from an abscess seated in that organ.

CALCULI IN THE EARS, (F) Calculs de l'oreille. Hard, light, and inflammable concretions, which occur in the *meatus auditorius externus*, and are merely indurated cerumen. They are a frequent cause of deafness. They can be easily seen, and may be extracted by appropriate forceps, after having been detached by injections of soap and water.

CALCULI OF THE PANCREAS, (F) Calculs du Pancréas. These are but little known. Analogy has induced a belief that they resemble the salivary. Some have supposed that certain transparent calculi, rejected by vomiting, or passed in the evacuations, have proceeded

from the pancreas, but there seems no reason for this belief.

CALCULI OF THE PINEAL GLAND, (F) Calculs de la Glande Pinéale. These have been frequently met with. No symptom announces their presence during life. They are composed of phosphate of lime.

CALCULI OF THE PROSTATE. These are not very rare. They have generally the same composition as the preceding. They usually present the symptoms common to every tumefaction of the prostate, and sometimes those of calculi in the bladder.

CALCULI PULMONARY, Phthisie calculeuse of Bayle, (F) Calculs pulmonaires. These concretions are very frequently met with in the dead body, without seeming to have produced unpleasant symptoms during life. At other times, they are accompanied with all the symptoms of phthisis. At times, they are expectorated without the supervention of any unpleasant symptom. They are usually formed of carbonate of lime and animal matter.

CALCULI SALIVARY, (F) Calculs salivaires. Concretions, usually formed of phosphate of lime and animal matter, which are developed in the substance of the salivary glands or in their excretory ducts. In the first case, they may be mistaken for a simple swelling of the gland: in the second, they may be generally detected by the touch. They may be extracted by incision, in the interior of the mouth.

CALCULI, SPERMATIC, (F) Calculs spermaticques. These have been sometimes found in the vesiculæ seminales after death. They cannot be detected during life. No analysis has been made of them.

CALCULI URINARY, Urolithi, (F) Calculs urinaires, Pierres urinaires. Concretions, which form from the crystallizable substances in the urine, and which are met with not only in the whole course of the urinary passages, but in fistulous openings wherever the urine stagnates naturally or accidentally. Their causes are but little known. They are more common at the two extremities of life than at the middle, and more so in some countries and districts than in others. At times, a clot of blood, a portion of mucus, &c., will form the nucleus. The symptoms and treatment vary according to the seat of the calculus. There is no such thing probably as a medicinal solvent. See *Urinary Calculi*.

Modern chymists have demonstrated the existence of several components of urinary calculi, viz. *Lithic Acid, Phosphate of Lime, Ammoniac-Magnesian Phosphate, Oxalate of Lime, Cystic Oxide*, and *Xanthic Oxide*, with an animal cementing ingredient. The varieties of calculi, produced by the combination or intermixture of these ingredients, are thus represented by *Dr. Paris*.

A TABULAR VIEW OF THE DIFFERENT SPECIES OF URINARY CALCULI.

SPECIES OF CALCULI.	EXTERNAL CHARACTERS.	CHYMICAL COMPOSITION.	REMARKS.
1. LITHIC or URIC.	FORM, a flattened oval. S. G. generally exceeds 1.500. Colour, brownish or fawn-like. Surface, smooth. Texture, laminated.	It consists principally of <i>Lithic Acid</i> . When treated with nitric acid a beautiful pink substance results. This calculus is slightly soluble in water, abundantly so in the pure alkalies.	It is the prevailing species; but the surface sometimes occurs finely tuberculated. It frequently constitutes the <i>nuclei</i> of the other species.
2. MULBERRY.	Colour, dark brown. Texture, harder than that of the other species. S. G. from 1.428 to 1.976. Surface, studded with tubercles.	It is <i>oxalate of lime</i> , and is decomposed in the flame of a spirit lamp, swelling out into a white efflorescence, which is <i>quicklime</i> .	This species includes some varieties, which are remarkably smooth and pale-coloured, resembling <i>hempseed</i> .
3. BONE EARTH.	Colour, pale brown or gray; surface, smooth and polished; structure, regularly laminated; the laminae easily separating into concrete crusts.	Principally <i>phosphate of lime</i> . It is soluble in muriatic acid.	
4. TRIPLE.	Colour, generally brilliant white. Surface, uneven, studded with shining crystals, less compact than the preceding species. Between its laminae small cells occur, filled with sparkling particles.	It is an <i>ammoniaco-magnesian phosphate</i> , generally mixed with phosphate of lime. Pure alkalies decompose it, extracting its ammonia.	This species attains a larger size than any of the others.
5. FUSIBLE.	Colour Grayish white.	A compound of the two foregoing species.	It is very fusible, melting into a vitreous globule.
6. CYSTIC.	Very like the triple calculus, but it is unstratified and more compact and homogeneous.	It consists of <i>cystic oxide</i> . Under the blowpipe it yields a peculiarly fetid odour. It is soluble in acids, and in alkalies even if they are fully saturated with carbonic acid.	It is a rare species.
7. ALTERNATING.	Its section exhibits different concentric laminae.	Compounded of several species, alternating with each other.	
8. COMPOUND.	No characteristic form.	The ingredients are separable only by chymical analysis.	

1. *Renal Calculi*, (F) *Calculs renaux*. These have almost always a very irregular shape; at times, there will be no indication of their presence: at others, they occasion attacks of pain in the kidneys, sometimes accompanied with bloody or turbid urine. Often, they cause inflammation of the kidneys, with all its unpleasant results. They are generally formed of uric acid, animal matter, and oxalate of lime, with, sometimes, phosphates. The treatment will have to vary, according to the absence or presence of inflammatory signs, relieving the irritation by opiates. A surgical operation can rarely be applicable.

2. *Calculi in the Ureters*. (F) *Calculs des Uretères*. These come from the kidneys, and do not produce unpleasant effects, unless they are so large as to obstruct the course of the urine, and to occasion distention of the whole of the ureter above them; or unless their surface is so rough as to irritate the mucous membrane, and occasion pain, hemorrhage, abscesses, &c. The pain, during the passage, is sometimes very violent, extending to the testicle of the same side in the male; and occasioning a numbness of the thigh in both sexes. The treatment consists in general or local blood-letting, warm bath and opiates.

3. *Calculi Vesical*. *Stone in the Bladder*,

Lithia Vesica'lis, *Lithi'asis cys'tica*, *Lithi'asis vesica'lis*, *Cysto-lithi'asis*, *Dysu'ria calculo'sa*, *D. irrita'ta*, *Cal'culus vesicae*, (F) *Calculs vesicaux*. These are the most common. Sometimes, they proceed from the kidneys: most commonly, they are formed in the bladder itself. Sense of weight in the perinaeum, and sometimes of a body rolling when the patient changes his position; pain or itching at the extremity of the glans in men: frequent desire to pass the urine; sudden stoppage to its flow; and bloody urine—are the chief signs which induce us to suspect their existence. We cannot, however, be certain of this without sounding the patient. Sometimes, when of a small size, they are expelled: most commonly, they remain in the bladder, the disorganization of which they occasion, unless removed by a surgical operation.

4. *Calculi Ure'thral*. They almost always proceed from the bladder. The obstruction, which they cause to the passage of the urine, the hard tumour, and the noise occasioned when struck by a sound, indicate their presence. They are removed by incision.

5. *Calculi in Fis'tulous Passages*. These arise when there is some fistulous opening into the urethra. They can be readily recognised, and may generally be extracted

with facility. (F) *Calculs placés hors des voies urinaires*. See Urinary Calculi.

CALCULI OF THE UTERUS. (F) *Calculs de l'Uterus*. These are very rare. The signs, which indicate them during life, are those of chronic engorgement of the uterus. Their existence, consequently, cannot be proved till after death.

CAL'CULOUS, (F) *Calculeux, Graveleux*. That which relates to calculi, especially to those of the bladder.

CALDAS, WATERS OF. Caldas is a small town, ten leagues from Lisbon, where are mineral springs; containing carbonic and hydresulphuric acid gases, carbonates and muriates of lime and magnesia, sulphates of soda and lime, sulphuret of iron, silica, and alumina. They are much used in atonic gout. They are thermal. Temperature 93° Fahrenheit.

CALDE'RIÆ ITAL'ICÆ. Warm baths in the neighbourhood of Ferrara in Italy, much employed in dysuria.

CALEFA'CIENTS, *Calefacien'tia, Ther-man'tica*, from *cal'idus*, 'warm,' and *fa'cio*, 'I make.' (F) *Échauffants*. Substances which excite a degree of warmth in the part to which they are applied, as mustard, pepper, &c. They belong to the class of stimulants.

CALEN'DULA OFFICINA'LIS, *C. Sa-ti'va, Chrysan'themum, Sponsa solis, Caltha vulga'ris*; the *Single Mar'igold, Garden Mar'igold*. Family, *Synantheræ*, *Syngene-sia necessaria*, Linn., (F) *Souci*. The flowers and leaves have been exhibited as aperients, diaphoretics, &c. and have been highly extolled, of late, in cancer.

CALEN'DULA ARVEN'SIS, *Caltha Arven'sis, Wild Mar'igold*. (F) *Souci des Champs*. This is, sometimes, preferred to the last. Its juice has been given, in the dose of from 3j to 3iv, in jaundice and cachexia.

CALENTU'RA, from *calere*, 'to be warm.' The word, in Spanish, signifies fever. It is a species of furious delirium, to which sailors are subject in the torrid zone:—a kind of phrenitis, the attack of which comes on suddenly after a broiling day, and seems to be characterized by a desire in the patient, to throw himself into the sea. It is only a variety of phrenitis.

CALENTU'RAS; *Palo de Calentu'ras*. Pomet and Léméry say, that these words are, sometimes, applied to the cinchona. Camelli says, they mean, also, a tree of the Philippine Isles, the wood of which is bitter and febrifuge.

CALI'GO. 'A mist.' *Achlys*. (F) *Brouil-lard*. An obscurity of vision, dependant upon a speck on the cornea: also, the speck itself, *Caligo corneæ, Macula cornea, Phthar-ma caligo, C. à nephe'lio, Hebetu'do visûs, C. à leuco'matè, M. Semipellu'cida, Nebula*, (q. v.) *Opake cornea, Web-eye*. (F) *Nouage de la Cornée, Teye, Obscurcissement de la vue*.

CALIX. *Infundib'ulum*, from *καλιξ*, 'a

cup.' (F) *Calice, Entonnoir*. Anatomists have given this name to small membranous canals, which surround the papillæ of the kidney, and open into its pelvis, whither they convey the urine. *Calices renales, Cy-lind'ri membrana'ceæ Renum, Fis'tulæ urete-rum renum, Canales membra'nei Renum, Tu'buli pelvis renum*. Their number varies from 6 to 12 in each kidney.

CALLIPÆ'DIA, from *καλος*, 'beautiful,' and *παις, παιδος*, 'a child.' The art of beget-ting beautiful children. This was the title of a poem by Claude Quillet in 1655. *Callipæ-dia, sive de pulchræ prolis habendæ ratione*. The author absurdly supposes, that the beau-ty of children is affected by the sensations, which the mother experiences during her pregnancy.

CALLOS'ITY, *Callos'itas, Scyros, Tylo'-ma, Tylo'sis, Dermatol'ylus, Ecphy'ma Cal-lus*. Hardness, induration, and thickness of the skin, which assumes a horny consistence, in places where it is exposed to constant pressure. (F) *Durillon*. Also, that indura-tion, which is observed in old wounds, old ulcers, fistulous passages, &c.

CALLOUS, *Callo'sus, Ochtho'des*, from *callus*, 'hardness.' (F) *Calleux*. That which is hard or indurated. A *Callous Ulcer*, is one, whose edges are thick and indurated.

CALLUS or **CALUS** or **CALLUM.** (F) *Cal*. The bony matter, thrown out between the fractured extremities of a bone; which acts as a cement, and as a new bony forma-tion. The words are, likewise, used occa-sionally in the same sense as Callosity.

CALME (F). The interval that sepa-rates the paroxysms of an acute or chronic disease. When the type is intermittent, the word intermission is used.

CALOMELANOS TURQUE'TI. A name given, by Riverius, to purgative pills, prepared with calomel, sulphur, and resin of jalap.

CALO'NIA, *καλονία*. An epithet, formerly given to myrrh.—Hippoc.

CALORICITÉ, (F.) *Caloric'itas*. The faculty, possessed by living bodies, of gene-rating a sufficient quantity of caloric, to ena-ble them to resist atmospheric cold, and to preserve, at all times and in every part, a temperature nearly equal. See Animal Heat.

CALORIFICA'TION, *Calorifica'tio*. The function of producing animal heat.

CALORINE'SES, from *calor*, 'heat.' The name, under which M. Baumes proposes to arrange all diseases, characterized by a sen-sible change in the quantity of animal heat. The *Calorinèses* form the first class of his Nosology.

CALOTTE (F), *Pileolum*. Anatomists, sometimes, give the name—*Calotte aponeur-otique*—to the aponeurosis of the occipito-frontalis muscle, which covers it externally, and that of *Calotte du crane* to the *skull cap*.

Calotte is also applied to an adhesive plaster, with which the head of a person, labouring under *tinea capitis*, is sometimes covered, after the hair has been shaved off. This plaster is pulled suddenly and violently off, in order to remove the bulbs of the hair. It means also a sort of coif made of boiled leather, worn by those who have undergone the operation of *trepán*, &c.

CALUM'BA, COLOM'BO, CALOM'BA, COLOM'BA, Radix Calum'bæ. (F) *Calumbe* ou *Columbe*. The root of the *Menispermum palmatum*, *Cocculus palma'tus*, indigenous in India and Africa. Its odour is slightly aromatic; taste unpleasantly bitter. It is tonic and antiseptic. Dose, gr. 10 to 3j in powder.

The **FRASE'RA WALTE'RI, F. Carolinien'sis, American** or *Marietta Columbo*, is used in the same cases as the true *Calumba*.

CALVA, CALVA'RIA. The *cranium*;—the upper part especially;—the *Vault of the Cranium, Camara*.

CALVA'TA FERRAMEN'TA. Surgical instruments, which have a head or button.

CALVI'TIES, Calvi'tium, Phalacro'sis, Glabri'ties, Ophi'asis, Depila'tio Cap'itis, Phalacroma, Madaro'sis, &c., from *calvus*, 'bald.' (F) *Chauveté*. Absence of hair, particularly at the top of, and behind, the head. *Calvi'ties palpebra'rum*:—loss of the eyelashes.

CALX, Lime, Ca'rium Terræ, Protox'ide of Cal'cium, Calca'ria pura.

CALX VIVA, Ox'idum Calcii, Calx recens, Fumans nix, Calx usta, Calx et Calx viva. *Lime* or *Quicklime*. (F) *Chaux vive*. The external operation of the *calx viva* is *escharotic*, but it is not used as such. *Lime* is a good disinfecting agent. It is employed internally in the form of *Liquor Calcis* (q. v.)

CALX E TESTIS; lime prepared from shells. It has no advantages over that prepared from marble.

CALCIS CHLO'RIDUM; *Chlo'ride of Lime, Calcii Chlorure'tum, Protoxichlor'uret of Calcium, Calca'ria chlorata, Chlorum Calca'riæ, Chlore'tum Calca'riæ, Calcaria Chlorica, Oxychlorure'tum Calcii, Protochlorure'tum Calcii, Chlorure'tum Oxidi Calcii, Bichlorure'tum Calcis, Ox'ymurias Calcis, Bleaching Powder, Tennant's Powder.* The *Chloride of Lime* is a most valuable disinfecting agent, (see *Disinfection*,) when dissolved in the proportion of one pound, to six gallons of water. It has likewise been employed both internally and externally in various diseases, as in *scrophula, fœtor oris, foul ulcers, &c. &c.*

CALCIS MURIAS; *Muriate of Lime, Calx salita.* This salt has been given, in solution, as a tonic, stimulant, &c., in *scrophulous tumours, glandular obstructions, general debility, &c.* The *Solu'tio Muria'tis Calcis, Li- quor Calcis Muria'tis, Solution of Muriate of*

Lime, Liquid Shell, is composed of *muriate of lime* 3j, dissolved in *distilled water* 3iij. Dose, from gr. xxx to 3j in a cupful of water.

CALCIS SULPHURE'TUM; *Hepar Calcis, Sulphuret of Lime.* (F) *Proto-hydrosulfate de Calcium, Hydrosulfate de chaux.* Principally used in solution, as a bath, in itch and other cutaneous affections.

CAMAREZ, MINERAL WATERS OF. Camarez is a small canton near *Silvanès* in the department of *Aveyron*, France, where there are some acidulous chalybeates.

CAMARO'SIS, Camaro'ma, from *καμαρα*, 'a vault.' *Camera'tio, Testudina'tio Cranii.* A species of fracture of the skull, in which the fragments are placed so as to form a vault, with its base resting on the *dura mater*.—*Galen, Paulus of Ægina.*

CAMBING. A tree of the *Molucca Islands*, from the bark of which a kind of gum-resin exudes, which has been highly extolled in dysentery. It appears to have some resemblance to the *simarouba*.—*Rumphius.*

CAMBIUM, 'Exchange.' A name formerly given to a fancied nutritive juice, which was supposed to originate in the blood; to repair the losses of every organ, and produce their increase.—*Sennertus.*

CAMBO, MINERAL WATERS OF. A village in the department of *Basses Pyrénées*, France, where there are two mineral springs; the one an acidulous chalybeate, the other sulphureous. Temperature, 73° Fahrenheit.

CAMBO'GIA, from *Cambodia*, in the *East Indies*, where it is obtained. Hence, also, its names *Cambo'dia, Cambo'gium, Gambo'gia, Gambo'gium.* It is called, also, *Gutta, Gutta gamba, Gummi Gutta, Catagau'na, Cattagau'ma, Chryso'pus, Laxati'vus Indicus, G. Bogia, Gummi gaman'dræ, G. de Goa, G. de Jemu, Ghitta jemoco, Gutta Gamandra, Gummi ad Podagram, Camboge or Gamboge, &c.* (F) *Gomme Gutte.* *Ord. Guttiferæ.* *Camboge* is the gum of the *Stalagmi'tis Cambogioides*. It is inodorous, of an orange-yellow colour; opaque and brittle: fracture glassy. It is a drastic cathartic, emetic, and anthelmintic; and is used in visceral obstructions and dropsy, and wherever powerful hydrogogue cathartics are required. Dose, from gr. ij to vi in powder, united with calomel, squill, &c.

CAMBU'CA, Cambuc'ca membra'ta. *Buboes* and venereal ulcers, seated in the groin or near the genital organs.—*Paracelsus.*

CAMOSIERS, WATERS OF. C. is a canton, two leagues from *Marseilles*, where are springs containing carbonate of lime, sulphur, muriate of soda, &c. They are purgative, and used in skin complaints.

CAMPAN'ULA. Diminutive of *Campa'na*. A bell.

The **CAMPANULA TRACHE'LIIUM, Canterbury Bell** or *Throatwort*, was formerly used in de-

coction, in relaxation of the fauces. It is, also, called *Cervica'ria*.

CAMPHOR, from Arab. *Kaphur* or *Kam'phur*, *Cam'phora*, *Cam'phura*, *Caffa*, *Caf*, *Casar*, *Caph'ora*, *Altafor*, *Camphire*, *Camphor*, &c. (F) *Camphre*. A concrete substance, prepared, by distillation, from the *Laurus Cam'phora*, an indigenous tree of the East Indies. Order, Laurineæ. Its odour is strong and fragrant: it is volatile, not easily pulverizable; texture crystalline. Soluble in alcohol, ether, oils, vinegar; and slightly so in water. Its properties are narcotic, diaphoretic, and sedative. Dose, gr. v to ʒj. Dissolved in oil or alcohol it is applied externally in rheumatic pains, bruises, sprains, &c.

CAMPHORA'TED, *Camphora'tus*, (F) *Camphré*. Relating to camphor; containing camphor; as a *camphorated smell*, a *camphorated draught*.

CAMPHOROS'MA MONSPELIACA. *Sela'go*, *Camphora'ta hirsu'ta seu Monspe-lien'sium*, *Hairy Camphoros'ma*, (F) *Camphrée de Montpellier*. Family, Atripliceæ. Sex. Syst. Tetrandria Monogynia. This plant, as its name imports (σμν, 'odour,') has an odour of camphor. It is regarded as diuretic, diaphoretic, cephalic, antispasmodic, &c. It is also called *Chamæpeucē* and *Stinking Ground Pine*.

CAMPSIS, καμπή, *Flex'io*, *Curva'tio*. *Inflex'io*. Bone or cartilage, forcibly bent from its proper shape, without breaking.—Good.

CAMUS (F). *Simus*, *Resi'mus*. One who has a short nose. The French speak of a *Nez camus*, a short nose.

CANAL, *Canal'is*, *Ductus*, *Meatus*, *Poros*, *Och'etos*, (F) *Conduit*. A channel, for affording passage to liquids or solids or to certain organs.

CANAL, ALIMENTARY OF DIGES'TIVE. *Canal'is cibi'rius vel digesti'vus*, *Diges'tive Tube*, *Alimentary Duct* or *Tube*, *Ductus cibi'rius*. The canal extending from the mouth to the anus.

CANAL, INTES'TINAL. *Canal'is* or *Ductus intestina'lis*. The portion of the digestive canal, formed by the intestines.

CANAL, VENOUS, *Canal'is* or *Ductus veno'sus*, (F) *Canal veineux*. A canal, which exists only in the fœtus. It extends from the bifurcation of the umbilical vein to the vena cava inferior, into which it opens, below the diaphragm. At times, it ends in one of the infrahepatic veins. It pours into the cava a part of the blood, which passes from the placenta by the umbilical vein. After birth, it becomes a fibro-cellular cord.

CANA'LIS SCALA'RUM COMMU'NIS. The opening by which the canals of the cochlea communicate, through the medium of the infundibulum.—Cassebohm.

CANALS, NU'TRITIVE, or for the Nutrition of Bones, *Ductus nutri'tii*, (F) *Canaux nourriciers* ou de Nutrition des os.—*Conduits nourriciers* ou *nutriciers*. The canals,

through which the vessels pass to the bones. They are lined by a very fine lamina of compact texture, or are formed in the texture itself. There is, generally, one large nutritious canal in a long bone, situate towards its middle.

CANAUX DE TRANSMISSION. According to Bichat, the bony canals intended to give passage to vessels and nerves going to parts more or less distant; as the *Canal'is carot'i-cus*, &c.

CANAUX VEINEUX, *Venous Canals*. The canals, which convey venous blood, situate in the diploe.

CAN'CAMUM. A mixture of several gums and resins, exported from Africa, where it is used to deterge wounds. Dioscorides calls, by the name καρχαμεν, the tears from an Arabian tree, which are similar to myrrh, and of a disagreeable taste. He advises it in numerous diseases. This name is given, also, to the Anime. (q. v.)

CANCEL'LI. *Lattice-work*. The Cellular or Spongy Texture of Bones, (F) *Tissu celluleux*; consisting of numerous cells, communicating with each other. They contain a fatty matter, analogous to marrow. This texture is met with, principally, at the extremities of long bones; and some of the short bones consist almost wholly of it. It allows of the expansion of the extremities of bones, without adding to their weight; and deadens concussions.

CANCEL'LUS, from *cancer*, 'a crab.' A species of crayfish, called the *Wrong Heir*, and *Bernard the Hermit*; which is said to cure rheumatism, if rubbed on the part.

CANCER, καρκινος, *Carcinos*, *Lupus cancro'sus*, *ulcus cancro'sum*, 'a crab.' A disease, so called, either on account of the hideous appearance, which the ulcerated cancer presents; or on account of the great veins, which surround it; and which the ancients compared to the claws of the crab. Called also *Carcino'ma*. It consists of a scirrhous, livid tumour, intersected by firm, whitish, divergent bands; and occurs chiefly in the secernent glands. The pains are acute and lancinating, and often extend to other parts. The tumour, ultimately, terminates in a fetid and ichorous ulcer. It is distinguished, according to its stages, into *occult* and *open*; the former being the scirrhous, the latter the ulcerated condition. At times, there is a simple destruction or erosion of the organs, and, at others, an *encephaloid* or *cerebriform* degeneration. The use of irritants, in cancerous affections, is strongly to be deprecated. When the disease is so situate, that excision can be practised, the sooner it is removed the better.

CANCER AQUAT'ICUS, *Cancrum Oris*, *Canker of the Mouth*. Called, also, *Aphthæ serpen'tes*, *Gangræ'na Oris*, *Noma*, *Nomæ*, *Stomac'acē gangrænosum*, &c. (F) *Cancer aquatique*. Certain sloughing or gangrenous ulcers of the

mouth, so called, perhaps, because they are often accompanied with an afflux of saliva. The disease is not uncommon in children's asylums, and demands the same treatment as hospital gangrene—the employment of caustics, and internal and external antiseptics.

CANCER, CHIMNEY-SWEEPER'S, *Sootwart*, *Cancer munditorum*, *Cancer purgatoris infumiculi*, *cancer scroti*, *cancer caminarii*, *Oschocarcinoma*, (F) *Cancer des Ramoneurs*. This affection begins with a superficial, painful, irregular ulcer, with hard and elevated edges, occupying the lower part of the scrotum. Extirpation of the part affected is the only means of effecting a cure.

CANCER, GALENI, (F) *Cancer de Galien*. A bandage for the head, to which Galen gave the name *Cancer*, from its eight heads resembling, rudely, the claws of the crab. It is now supplied by the bandage with six *chefs* or heads, which is called the *Bandage of Galen* or *B. of the Poor*.

CANCEROUS, *Cancro'sus*, (F) *Cancer-eux*. Relating to cancer. Thus, we say, *Cancerous Ulcer*, *Cancerous Diathesis*, &c.

CANCHALAGUA, *Cachen laguen*, *Cachin lagua*, *Chance lagua*, *Erythræa Chilen'sis*. A bitter Chili plant, which is considered aperient, sudorific, stomachic, vermifuge, and febrifuge.

CANCROID, *Cancroïdeus*, from *cancer* and *ειδος*, 'form.' That which assumes a cancerous appearance. A name given to certain cutaneous cancers by Alibert, called also *Cheloid* or *Keloid* (*χελυς*, 'a tortoise,' and *ειδος*, 'likeness,') from their presenting a flat-tish raised patch of integument, resembling the shell of a tortoise.

CANCORUM CHELÆ, *Oc'uli vel Lap'idēs Cancro'rum*, *Lapil'li cancro'rum*, *Concremen'ta As'taci fluvial'ilis*, *Crab's stones* or *eyes*, (F) *Yeux d'écrevisse*. These are concretions, found, particularly, in the *Cancer As'tacus* or Crayfish. They consist of carbonate of lime, and phosphate of lime; and possess antacid virtues, but not more so than chalk.

CANDI, *Candum*, *Canthum*, *Cantion*; white, bleached, purified. Purified and crystallized sugar. See *Saccharum*.

CANEL'LA ALBA, *Cortex Wintera'nus spu'rius*, *Canella Cubana*, *C. Wintera'nia*, *Cinnamo'mum album*, *Cortex Antiscorbu'ticus*, *C. Aromaticus*, *Costus cortico'sus*, *Cam'in'ga*, *Canella* of Linnæus. *Canella Bark*, (F) *Canelle* ou *Cannelle blanche*, *Fausse Ecorce de Winter*, *Ecorce Cariocostine*. Fam. Magnoliaceæ. Sex. Syst. Dodecandria Monogynia. This bark is a pungent aromatic. Its virtues are partly extracted by water; entirely by alcohol. It is a stimulant, and is added to bitters and cathartics.

CANEPIN (F). A fine lamb's skin or goat's skin, used for trying the quality of lancets.

CAN'ICÆ. Meal, in which there is much

bran. Also, coarse bread, or bread in which there is much bran. *Panis Canica'ceus*.

CANIC'ULA; the *Dogstar*, from *canis*, 'a dog;' *Σειρος*, *Sirius*, (F) *Canicule*. This star, which gives its name to the *Dogdays*, because they commence when the sun rises with it, was formerly believed to exert a powerful influence on the animal economy. The *Dogdays* occur at a period of the year when there is generally great and oppressive heat, and a certain degree of liability to disease.

CANINE, *Caninus*, *Cyn'icus*, *κυνικος*, from *canis*, 'a dog,' (F) *Canin*. That which has a resemblance to the structure, &c. of a dog.

CANINE TEETH, *Dentes Canini*, *Cynodon'tes*, *D. Lania'rii*, *D. angula'res*, *cuspidati*, *columella'res*, *ocula'res*, *morden'tes*, *Eye Teeth*, (F) *Dents canines*, *laniaires*, *angulaires*, *oculaires*, *æillères*, ou *conoides*. The teeth between the lateral incisors and small molares of each jaw;—so named because they resemble the teeth of the dog.

CANINE FOSSA, *Fossa Canina*, (F) *Fosse Canine*. A small depression on the superior maxillary bone, above the *dens caninus*, which gives attachment to the *caninus* or *levator anguli oris* muscle.

CANINE LAUGH, or *Sardon'ic laugh*, *Risus Cani'nus*, *Risus Sardon'icus*, *Sardi'asis*, *Sardoni'asis*, (F) *Ris canin*, *sardonique*, *moqueur*. A sort of laugh, produced particularly by the spasmodic contraction of the *Caninus* muscle. Probably, this expression, as well as *Cynic spasm*, *Can'i'nus spasmus*, may have originated in the resemblance of the affection to certain movements in the upper lip of the dog.

CANI'TIES, from *canus*, 'white.' *Whiteness* or *grayness* of the hair, and especially of that of the head, (F) *Canitie*. When occurring in consequence of old age it is not a disease. Sometimes it happens suddenly, and apparently in consequence of severe mental emotions. The causes, however, are not clear.

CAN'NABIS SATIVA, (F) *Chanvre*, *Chambrie*. The seed of this—*Hempseed*, *Sem'ina Can'nabis*, (F) *Chenevis*,—are oily and mucilaginous. The decoction is sometimes used in gonorrhœa.

CANNELÉ or CANELÉ (F), from *cana'lis*, 'a canal.' *Sulca'tus*, *Stria'tus*, *Canalicula'tus*. Having a canal or groove—as, *Muscle cannelé* (Lieutaud), the Gemini; *Corps cannelés* ou *striés* (*Corpora striata*); *Sonde canelée*, a grooved sound, &c.

CANTERBURY, WATERS OF. *Aqua Cantuarien'ses*. The waters of Canterbury in Kent, England, are impregnated with iron, sulphur, and carbonic acid.

CAN'THARIS, from *κανθαρος*, 'a scarabæus.' *Musca Hispan'ica*, *Mel'oë vesicato'rius*, *Cantharis vesicato'ria*, *Lytta vesicato'ria*. The *Blistering Fly*, *Spanish Fly*, (F) *Cantharides*, *Mouches*, *M. d'Espagne*. This

fly is much employed in medicine. It is the most common vesicatory. Given internally, and even when absorbed from the skin, it affects the urinary organs, exciting strangury. This may be prevented, in cases of blisters, by interposing between the blistering plaster and skin a piece of tissue paper. Diluents will relieve the strangury. Dose, half a grain to one grain. If kept dry, the flies will retain their activity for many years.

Their active principle has been separated from them—*Cantharidine*, *Cantharidin*.

CANTHERIUS, *Cante'rium*. The cross piece of wood in the apparatus, used by Hippocrates, for reducing luxations of the humerus.

CANTHUS, *καθός*, *Epican'this*, *An'gulus ocula'ris*; the corner or angle of the eye. The greater canthus is the inner angle, *Hir'quus*, *Rhanter*; the lesser canthus, the outer angle, *Paro'pia*, *Pega*.

CANTHITIS. Inflammation of the Canthus of the eye.

CANTIANUS PULVIS. A cordial powder, known under the name '*Countess of Kent's powder*;' composed of coral, amber, crabs' eyes, prepared pearls, &c. It was given in cancer.

CAN'ULA or **CAN'NULA**, *Au'liscos*, *Aulos*. Diminutive of *Canna*, 'a reed;' *Tu'bulus*, (F) *Canule* ou *Cannule*. A small tube, of gold, silver, platina, iron, lead, wood, elastic gum, &c., used for various purposes in surgery.

CAOUTCHOUC, *Indian Rubber*, *Elastic Gum*, *Cauchuc*, *Resi'na elas'tica*, *Cayenne Resin*, *Cautchuc*. A substance formed from the milky juice of the *Hevea Guianen'sis*, *Jat'ropha elas'tica*, *Ficus Indica*, and *Artocarpus integrifo'lia*:—South American trees. It is insoluble in water and alcohol; but boiling water softens and swells it. It is soluble in the essential oils and in ether, when it may be blown into bladders. It is used in the fabrication of catheters, bougies, pessaries, &c.

CAPBERN, WATERS OF. C. is in the department Hautes-Pyrénées, France. The waters contain sulphates, and carbonates of lime and magnesia, and muriate of magnesia. Temperature, 75° Fahrenheit. They are purgative.

CAPELINE (F). 'A Woman's Hat,' in French; *Capistrum*, from *caput*, 'head.' A sort of bandage, which, in shape, resembles a riding-hood. There are several kinds of *Capelines*. 1. That of the head, *C. de la tête*. See Bonnet d'Hippocrate. *C. of the clavicle*, employed in fractures of the acromion, clavicle and spine of the scapula. *C. of an amputated limb*—the bandage applied round the stump.

CAPILLAMEN'TUM, from *Capil'lus*, 'a hair.' *Capilli'tium*, *Tricho'ma*, *Trichomation*. Any villous or hairy covering. Also a small fibre, *fibril*.

CAP'ILLARY, *Capilla'ris*, *Capilla'ceus*,

from *capil'lus*, 'a hair,' (F) *Capillaire*. Hair-like; small.

The **CAP'ILLARY VESSELS**, (F) *Vaisseaux capillaires*, are the extreme radicles of the arteries and veins, with perhaps a spongy tissue or parenchyma between the two. These, together, constitute the *Capillary* or *intermediate system*. In this system all the secretions are performed, and animal heat probably elicited. They possess an action distinct from that of the heart, and are the seat of febrile and inflammatory diseases.

CAPIL'LUS, *Coma*, *Chætê*, *Crinis*, *Pilus*, *Thrix*, *Cæsa'ries*, (F) *Cheveu*. This term is generally applied to the hair of the head: the characters of which vary, according to races, individuals, &c. Hairs arise in the cellular membrane, where the bulb is placed: and are composed of two parts—one, external, tubular, and transparent, of an epidermoid character; the other, internal and *sui generis*, which communicates to them their colour. The hair is insensible, and grows from the root.

CAPIPLE'NIUM, from *caput*, 'the head,' and *plenum*, 'full.' A word, employed with different significations. A variety of catarrh.—Schneider. A heaviness or disorder in the head common at Rome, like the *καρβασία*, *Carebaria*, of the Greeks.—Baglivi.

CAPIS'TRUM, *Phimos*, *Cemos*, *κνημος*, 'a halter.' This name has been given to several bandages for the head.—See Capeline, Chevestre.

CAPITON'ES, from *caput*, 'the head.' Fœtuses whose heads are so large as to render labour difficult.

CAPITILU'VIUM, from *caput*, 'the head,' and *lavare*, to 'wash.' A bath for the head.

CAP'PARIS SPINO'SA, *Cap'paris*, *Cappar*, *Ca'pria*. The *Prickly Caper Bush*, (F) *Caprier*. Family, *Capparidæ*. Sex. Syst. Polyandria Monogynia. The bark of the root and the buds have been esteemed astringent and diuretic. The buds are a well known pickle:—Engl. *Capers*, (F) *Capres*.

CAPPARIS BADUC'CA, *Baduk'ka*. A species of caper, cultivated in India, on account of the beauty of its flowers. The Orientals make a liniment with its juice, with which they rub pained parts. The flowers are purgative.

CAPPONE, WATERS OF. At Cappone, in the isle of Ischia, are waters containing carbonate and muriate of soda, and carbonate of lime. Temp. 100°. Fah.

CAPREOLA'RIS, from *capreolus*, 'a tendril,' *Cissoïdes*, *Elicoïdes*, (F) *Capréolaire*. Twisted.

VASA CAPREOLA'RIA. Some have thus called the spermatic arteries and veins, on account of their numerous contortions.

CAPRIZANS, *δοξαδιζαν*. That which leaps like a goat. An epithet used by Herophilus for the pulse when irregular and unequal.

CAP'SICUM AN'NUUM, from *καπτα*, 'I bite.' The systematic name of the plant

whence *Cayenne Pepper* is obtained. *Piper Indicum*, *Sola'num urens*, *Siliquas'trum Plinii*, *Piper Brazilia'num*, *Piper Guineen'se*, *Piper Calecu'ticum*, *Piper Tur'cicum*, *C. Hispan'icum*, *Piper Lusitan'icum*, *Cayenne Pepper*, *Guin'ea Pepper*, (F) *Piment*, *Cap-sique*, *Poivre d'Inde*, *Poivre de Guinée*, *Co-rail des Jardins*. The pungent, aromatic properties of the *Baccæ Cap'sici*, *Capsicum Berries*, are yielded to ether, alcohol, and water. They are highly stimulant and rubefacient, and are used as a condiment. Their active principle is alcaloid, and is called *Cap-sicine*.

CAP'SULAR. Relating to a capsula or capsule, *Capsula'ris*, (F) *Capsulaire*.

CAPSULAR LIG'AMENT, *Ligamen'tum capsularē*, *Cap'sula articula'ris*, *Artic'ular cap-sule*, *Fibrous capsule*, &c. (F) *Ligament capsulaire*, *Capsule articulaire*, *Capsule fibreux*, &c. Membranous, fibrous, and elastic bags or capsules, of a whitish consistence, thick, and resisting, which surround joints.

CAPSULAR OF SUPRARENAL ARTERIES AND VEINS. Vessels, belonging to the suprarenal capsules. They are divided into superior, middle, and inferior. The first proceed from the inferior phrenic, the second from the aorta itself, and the third from the renal artery. The corresponding veins enter the phrenic, vena cava, and renal.

CAPSULE, *Cap'sula*, *Capsa*, a box, (F) *Capsule*. This name has been given, by the Anatomists, to parts bearing no analogy to each other.

CAPSULE OF THE HEART, *Capsula cordis*, the Pericardium, (q. v.)

CAPSULES, GELATINOUS, *Capsulæ gelatinæ*, *capsules of gelatine*. A recent invention by which copaiba and other disagreeable oils can be enveloped in gelatine so as to conceal the taste.

CAPSULE OF GLISSON, *Cap'sula GLISSO'NII*, *C. commu'nis GLISSO'NII*, *Vagi'na Portæ*, *V. GLISSO'NII*. A sort of membrane, described by Glisson, which is nothing more than dense cellular membrane surrounding the vena porta and its ramifications in the liver.

CAPSULES, RENAL OR SUPRARE'NAL OR ATRABIL'IARY, *Renal Glands*, *Glan'dulæ suprarena'les*, *Cap'sulæ rena'les*, *suprarena'les vel atrabilia'res*, *Renes succenturia'ti*, (F) *Capsules surrenales ou atrabiliaires*. Two flat, triangular bodies, which cover the upper part of the kidneys, as with a helmet. A hollow cavity in their interior contains a brown, reddish or yellowish fluid. They were long supposed to be the secretory organs of the fancied atrabilis. They are much larger in the fœtus than in the adult. Their uses are not known.

CAPSULE, SEM'INAL, *Capsula semina'lis*. BARTHOLINE thus designates the extremity of the vas deferens, which is sensibly dilated in the vicinity of the vesiculæ seminales. Some

anatomists apply this name to the vesiculæ themselves.

CAPSULES, SYNO'VIAL, *Capsula Synovia'lis*. Membranous bags, surrounding all the movable articulations and canals, which give passage to tendons. They exhale, from their articular surface, a fluid, whose function is to favour the motions of parts upon each other. See *Bursa Mucosa*, and *Synovia*.

CAPUT, 'the head,' (q. v.) Also the top of a bone or other part, (F) *Tête*. The head of the small bones is sometimes termed *capit'ulum*, *capitell'um*, *cephalid'ium*, and *cephal'ium*.

CAPUT GALLINAG'INIS, *Verumonta'num*, (F) *Crête urétrale*. A projection, situate in the prostate, before the neck of the bladder. It is like the head of a woodcock in miniature, and, around it, open the seminal ducts and the ducts of the prostate.

CAPUT PURGIA. Remedies, which the ancients regarded as proper for purging the head:—*errhines*, *sternutatories*, *apophlegmatisantia*, &c.

CAPUT SUCCEDA'NEUM. A term sometimes used for the tumefied scalp, which first presents in certain cases of labour.

CAQUE-SANGUE OU GAQUE-SANGUE. Old French words, which signify *Bloody evacuations*, (F) *Déjections sanguinolentes*. They come from *cacare*, 'to go to stool,' and *sanguis*, 'blood.' Under this term was comprehended every affection, in which blood is discharged from the bowels.

CARABAC'CIUM. An aromatic wood of India, of a yellowish colour, and a smell like that of the clove. Its decoction and infusion are given as stomachic and antiscorbutic.

CAR'ABUS. A genus of coleopterous insects. Two species, the *chrysoceph'alus* and *ferrugin'eus*, have been recommended for the toothache. They must be pressed between the fingers, and then rubbed on the gum and tooth affected.

CARAMATA, Arumari. A tree in the inland parts of Pomeroon, which furnishes a febrifuge bark, which Dr. Hancock says may be used in typhoid and remittent fevers in which the cinchona is either useless or pernicious.

CARAN'NA, *Caragna*, *Tacamahoca Caragna*, *Caran'næ Gum'mi*, *G. Breli'sis*, (F) *Caragne*, *Gomme Caragne ou Carane*. A gum-resinous substance, obtained from South America in impure masses, which flows from a large tree in New Spain. It preserves its softness for a long time, has an aromatic smell, and a slightly acrid and bitter taste. It was formerly used as a vulnerary and in plasters.

CARA SCHULLI, *Frutex Ind'icus spinosus*, *Barle'ria buxifo'lia*. A Malabar plant, which, when applied externally, is maturative and resolvent. The decoction of its root is used, in the country, in ischuria.

CAR'BASUS, *Linteum Carptum*, *Carpia*,

Motos, Linamen'tum, from *καρπός*, 'a filament, or from *car'pere*, 'to card.' Celsus. *Charpie, Lint*. The filaments, obtained by unravelling old linen cut in small pieces; or by scraping it with a knife. The former is termed *Charpie brute*, the latter *Charpie rapée*. Charpie is applied to many useful purposes in Surgery. Of it are formed compresses, tents, &c.

CARBO, *Carbo Ligni, Charcoal*, (F) *Charbon*. Fresh charcoal is antiseptic. It is used to improve the digestive organs in cases of worms, dyspepsia, &c., as a cataplasm to gangrenous and fetid ulcers, tinea, &c., and forms a good tooth-powder. Dose, gr. x to 3j.

CARBO ANIMA'LIS, *Carbo carnis, animal charcoal*, (F) *Charbon animal*. It is given in the same cases as the *Carbo Ligni*, and has been extolled in cancer. Dose, gr. ss to gr. iij.

CARBON HUMA'NUM. The human excrement.—Paracelsus.

CAR'BONAS. A *car'bonate*, (F) *Carbonate*. A salt, formed by the combination of carbonic acid with a salifiable base. The carbonates are either full, or with an excess of base:—i. e. *Subcarbonates*.

CARBON'IC AC'ID, *Ac'idum Carbon'icum, Solid Air of Hales, Factitious Air, Fixed Air, Carbona'ceous Acid, Calca'reous Acid, Ae'rial Acid, Mephit'ic Acid*, (F) *Acide Carbonique*. This gas, which neither supports respiration nor combustion, is not often used in Medicine. It is the refreshing ingredient in effervescent draughts, poultices, &c. It is often found occupying the lower parts of mines (when it is called the *choke damp*), caverns, tombs, wells, brewers' vats, &c., and not unfrequently has been the cause of death. Lime thrown into such places soon absorbs the acid.

CARBONA'TED, *Carbona'tus, Ae'ra'tus*, (F) *Carboné, aéré*. That which is impregnated with carbonic acid.

CARBONIS SESQUI-IODIDUM, *C. Sesqui-Iodure'tum, Sesqui-Iodide* or *Sesqui-Ioduret of Carbon*. This is made by mixing concentrated alcoholic solutions of iodine and potassa, until the former loses its colour; a solution is obtained from which water throws down a yellow precipitate—the sesqui-iodide of carbon. It has been used in enlarged glands and in some cutaneous affections, applied externally, (3ss to 3vj of cerate.)

CARBONIS SULPHURE'TUM, *Sulphure'tum Carbo'nii, Carbo'neum Sulphura'tum, Al'cohol Sulphuris, Bisulphure'tum Carbo'nii, Sulphuret of Carbon, Carburet of Sulphur*, (F) *Sulfure de Carbon*. This transparent, colourless fluid, which has a very penetrating, disagreeable odour, and a taste which is cooling at first, but afterwards acrid and somewhat aromatic, is a diffusible excitant. It is diaphoretic, diuretic, and has been said to have proved emmenagogue. It is also used in nervous diseases as an antispasmodic.

Dose, one drop to four, repeated frequently.

It is used externally where a cooling influence has to be rapidly exerted.

CARBUN'culus RUBINUS. A red, shining, and transparent stone, from the Isle of Ceylon; formerly employed in medicine as a preservative against several poisons, the plague, &c.

CAR'CAROS, from *καρκαίω*, 'I resound,' 'I tremble.' A fever, in which the patient has a general tremor, accompanied with an unceasing noise in the ears.

CARCINOM'ATOUS, *Carcino'des, Carcinoides*. Relating to cancer.

CARCINO'MA, from *καρκινός*, 'a crab.' Some authors have called thus, indolent tumours different from cancer; others, incipient cancer; and others, again, the species of cancer in which the affected structure assumes the appearance of cerebral substance; whilst the majority of authors use *Carcinoma* in the same sense as *Cancer*.

CARDAMINE PRATEN'SIS, *Cardam'ine, Cardaman'tica, Nastur'tium Aquat'icum, Car'damon, Culi flos, Ibe'ris sophia, Nastur'tium praten'se, Ladies-smock, Cuckoo flower*. Ord. *Cruciferae*. (F) *Cresson élégant, Cresson des près, Passerage sauvage*. The flowers have been considered useful as antispasmodics, in the dose of 3j to 3ij. They are probably inert.

CARDIA, *καρδία*, 'the heart,' *Stom'achus, Orific'ium sinistrum ventric'uli*. The superior or oesophageal orifice of the stomach.

CAR'DIAC, *Cardiacus*, from *καρδία*, 'the heart;' or the upper orifice of the stomach, (F) *Cardiaque*. Relating to the heart or to the upper orifice of the stomach.

The CARDIAC or COR'ONARY AR'TERIES, (F) *Artères cardiaques ou coronaires*, are two in number. They arise from the aorta, a little above the free edge of the sigmoid valves, and are distributed on both surfaces of the heart.

The CARDIAC or COR'ONARY VEINS, (F) *Veines cardiaques*, are commonly four in number; two anterior and two posterior. They open into the right auricle by one orifice, which is furnished with a valve, and is called, by Portal, *Sinus coronaire du Cœur*.

CARDIAC NERVES, (F) *Nerf cardiaques*. These are commonly three on each side; a *superior, middle* and *inferior*, which are furnished by corresponding cervical ganglia. Commonly, there are but two on the left side; the upper and middle, which draw their origin from the two last cervical ganglia. Scarpa calls the *superior*—*C. superficialis*; the *middle*—*C. profundus* or *C. Magnus*; and the *inferior*—*C. parvus*. There are, besides, *Cardiac fil'aments*, (F) *Filets cardiaques*, furnished by the par vagum or pneumo-gastric nerve, and which become confounded with the above.

The CARDIAC PLEXUS, *Ganglion cardiacum*. A nervous network, formed by the

different nerves above mentioned. It is situated at the posterior part of the aorta, near its origin. It affords numerous branches, which are distributed to the heart and great vessels. The name *Cardiac* has also been given to the glands, vessels, and nerves, which surround the superior or *cardiac orifice of the stomach*.

CARDIAG'RAPHY, *Cardiagra'phia*, from *καρδία*, 'the heart,' and *γραφη*, 'a description.' An anatomical description of the heart.

CARDIAL'GIA, *Cardiaca Passio*, *Col'ica Ventric'uli*, *Cordo'lum*, *Cardilæ'a*, *Dyspepsodynia*, *Cardio'dyne*, *Gastral'gia*, *Gastrodyn'ia*, *Stomacal'gia*, *Cardiacus Morbus*, *Cardiog'mus*; from *καρδία*, 'the cardiac orifice of the stomach,' and *αλγος*, 'pain:' *pain of the stomach*, also, *Heartburn*, (F) *Cardialgie*. Impaired appetite, with gnawing or burning pain in the stomach or epigastrium,—*Morsus vel ardor ventric'uli*, *Soda*, *Limo'sis cardial'gia mordens*, *Rosio stom'achi*;—a symptom of dyspepsia.

CARDIALO'GIA, from *καρδία*, 'the heart,' and *λογος*, 'a discourse.' A treatise on the heart.

CARDIA'RIOUS; same etymology. A name given to worms, said to have been found in the heart or pericardium.

CARDIATO'MIA, from *καρδία*, 'the heart,' and *τεμνειν*, 'to cut.' Dissection of the heart.

CARDIM'ELECH, from *καρδία*, 'the heart,' and *מֶלֶךְ*, *Meleck* (Hebr.), 'a governor.' A supposititious active principle seated in the heart, and governing the vital functions.—*Dolæus*.

CARDIOCE'LE, from *καρδία*, 'the heart,' and *κρηνη*, 'rupture.' Rupture of the heart, especially into the abdominal cavity.

CARDIOG'MUS. Hippocrates employed this word synonymously with *Cardialgia*. In the time of Galen, it was used, by some writers, for certain pulsations of the heart, analogous to palpitations. Sauvages understood, by *Cardiogmus*, an aneurism of the heart or great vessels, when still obscure.

CARDIORRHEX'IS, *Ruptu'ra Cordis*, from *καρδία*, 'the heart,' and *ρηξις*, 'laceration.' Laceration of the heart.

CARDIOTRO'TUS, from *καρδία*, 'the heart,' and *τιτρωσκω*, 'I wound.' One affected with a wound of the heart.—Galen.

CARDIOTROMUS, *Palpita'tio Cordis trepidans*, *Cardiopalmus*, *Trepida'tio Cordis*, from *καρδία*, 'the heart,' and *τρομος*, 'tremor.' Rapid and feeble palpitation, or fluttering of the heart.

CARDI'TIS, from *καρδία*, 'the heart,' and the termination *itis*. Inflammation of the fleshy substance of the heart. *Empres'ma Cardi'tis*, (F) *Cardite*. The symptoms of this affection are by no means clear. They are often confounded with those of *Pericarditis*;—the inflammation of the membrane investing the heart. *Carditis*, indeed, with

many, includes both the inflammation of the investing membrane and that of the heart itself. See *Pericarditis*, and *Endocarditis*.

CARDUUS MARIANUS, *Car'duus Ma'riæ*, *Sil'ybum*, *Car'duus lac'teus*, *Spina alba*, *Common Milk Thistle* or *Ladies' Thistle*, (F) *Chardon-Marie*. The herb is a bitter tonic. The seeds are oleaginous. It is not used.

CAREBA'RIA or **CAREBARI'A**, from *καρη*, 'the head,' and *βαρος*, 'weight.' *Scordine'ma*, *Cordine'ma*, heaviness of the head.—Hippocr., Galen.

CARE'NA, *Kare'na*. The twenty-fourth part of a drop.—Ruland and Johnson.

CARIACOU. A beverage, used in Cayenne, and formed of a mixture of cassava, potato, and sugar, fermented.

CAR'ICA PAPAY'A. The *Papaw tree*, (F) *Papayer*. *Ord.* *Artocarpeæ*. A native of America, India, and Africa. The fruit has somewhat of the flavour of a pumpkin, and is eaten like it. The milky juice of the plant, and the seed and root have been regarded as anthelmintic.

CAR'ICUM;—said to have been named after its inventor Caricus. *Car'ycum*. A detergent application to ulcers; composed of black hellebore, sandarach, copper, lead, sulphur, orpiment, cantharides, and oil of cedar.—Hippocrates.

CA'RIES, *Nigri'ties os'sium*. An ulceration of bone,—*Necrosis* being the death of the bone. It resembles the gangrene of soft parts. Hence it has been termed *Caries gangrenosa*, *Gangræna Caries*, *G.Ossium*, *Tere'do*, *Euros*, (F) *Carie*. It is recognised by the swelling of the bone, which precedes and accompanies it; by the abscesses it occasions; the fistulæ which form; by the sanious character, peculiar odour and quantity of the suppuration, and by the evidence afforded by probing.

The most common causes of caries are blows;—the action of some virus, and morbid diatheses. When dependant on any virus in the system, this must be combated by appropriate remedies. When entirely local, it must be converted, where practicable, into a state of necrosis or death of the affected part. For this end stimulants are applied, the actual cautery, &c.

CA'RIOUS, *Cario'sus*, (F) *Carié*, *Carieux*. Affected with caries.

CARLI'NA. 'Carline Thistle.'

The **CARLI'NA ACAULIS**, *Chamæ'leon album*, *Cardopa'tium*, (F) *Carline sans tige*, which grows in the Pyrenees, and on the mountains of Switzerland, Italy, &c., has been recommended as a tonic, emmenagogue, and sudorific.

CARLO SANCTO, RADIX. 'St. Charles's Root:' found in Mechoachan, in America. The bark is aromatic, bitter, and acrid. It is considered to be sudorific, and to strengthen the gums and stomach.

CARLSBAD, MINERAL WATERS OF. Carlsbad is a town in Bohemia, 24 miles

from Egra, celebrated for its hot baths. It contains about 47 parts in the 100 of purging salts. It is a thermal saline; temperature 165° Fahrenheit.

CARMEN, 'a verse,' because charms usually consisted of a verse. A charm, *an amulet*.

CARMINATIVES, *Carminantia* or *Carminativa*, from *carmen*, 'a verse,' or 'charm,' *Antiphysica*, *Xantica*, *ξαντιζα*, (F) *Carminatifs*. Remedies, which allay pain, and cause the expulsion of flatus from the alimentary canal. They are generally of the class of aromatics.

The FOUR GREATER CARMINATIVE HOT SEEDS, *Quatuor semina calida majora carminativa*, were, of old, anise, carui, cummin, and fennel.

The FOUR LESSER CARMINATIVE HOT SEEDS, *Quatuor semina calida minora*, were bishop's weed, stone parsley, smallage, and wild carrot.

CARMOT. A name given, by the alchemists, to the matter, which they believed to constitute the Philosopher's Stone.

CARNEOUS, *Carneous*, *Carnosus*, *Sarcodes*, from *caro*, 'flesh,' (F) *Charnu*. Consisting of flesh, or resembling flesh.

FLESHY or MUSCULAR FIBRES, (F) *Fibres charnues* ou *musculaires*, are fibres belonging to a muscle.

The COLUMNÆ CARNEÆ of the heart, (F) *Colonnes charnues*, are muscular projections, situate in the cavities of the heart. They are called also, *Musculi Papillares*.

PANNICULUS CARNOSUS, (F) *Pannicule charnu*;—*Carnosa Cutis*; a muscular membrane, adhering to the skin of certain animals, whose use is to move the integuments with the hair, feathers, &c.

CARNICULA. Diminutive of *Caro*, 'flesh.' The gums.—Fallopian.

CARNIFICATION, *Carnificatio*, from *caro*, 'flesh,' and *fieri*, 'to become.' *Transformation into flesh*. A morbid state of certain organs, in which the tissue acquires a consistence like that of fleshy or muscular parts. It is sometimes observed in hard parts, the texture becoming softened, as in *Osteo-sarcoma*. When it occurs in the lungs, they present a texture like that of liver. *Hepatisation* is, however, the term more usually applied to this condition.

CARNIFORMIS, ABSCESSUS. An abscess, whose orifice is hard, the sides thick and callous; and which ordinarily occurs in the neighbourhood of the articulations.—M. A. Severinus.

CARNIVOROUS, *Carnivorus*, *Sarcophagus*, *Creatophagus*, *Creophagus* (F) *Carnivore*, from *σαρξ*, 'flesh,' and *φαγω*, 'I eat.' That which eats flesh. Any substance which destroys excrescences in wounds, ulcers, &c.

CARNOSITAS. *Carnosities* or *Caruncles* in the Urethra, (F) *Carnosités* ou *Caroncules de l'urètre*, (F) *Carnosités*, are small fleshy excrescences or fungous growths, which were, at one time, presumed to exist

in the male urethra, whenever retention of urine followed gonorrhœa.

M. Cullerier uses the term, *Carnosité vénérienne*, for a cutaneous, cellular, and membranous tumour, dependant upon the syphilitic virus.

CAROLINA, NORTH, MINERAL WATERS OF. In the counties of Warren, Montgomery, Rockingham, Lincoln, Buncomb, and Rowan, there are mineral springs. They belong generally to the sulphureous or acidulous saline.

CAROLINA, SOUTH, MINERAL WATERS OF. They are numerous. Pacolet Springs, on the west bank of Pacolet River, contain sulphur and iron. Many, with similar properties, but not held in estimation, are scattered about the State.

CAROTICUS, comatose, from *κατος*, 'stupor,' (F) *Carotique*. Relating to stupor or *carus*,—as a *carotic state*, &c.

CAROTID, *Carotides*, (*Artéria*), *Carotica*, *Carotideæ*, *Capitales*, *Jugulares*, *Sopora'les*, *Sopora'ria*, *Soporifera*, *Somnifera*, *Apoplectica*, *Lethargica*, from *κατος*, 'stupor.' The *Carotid Arteries*, *Cephalic Arteries*, (F) *A. Carotides*. The great arteries of the neck, which carry blood to the head. They are divided into, 1. *Primitive* or *common*, the left of which arises from the aorta, and the right from a trunk, common to it and the subclavian. 2. *External* or *pericephalic*, a branch of the primitive, which extends from the last to the neck of the condyle of the lower jaw: and, 3. *Internal*, *Arteria cerebra'lis* vel *encephalica*, another branch of the primitive, which, arising at the same place as the external, enters the cranium, and terminates on a level with the fissure of Sylvius, dividing into several branches.

The CAROTID CANAL, *Canalis Caroticus*, *Canal inflexe de l'os temporal*—(Ch.), (F) *Canal carotidien*, is a canal in the temporal bone, through which the carotid artery and several nervous filaments pass.

The FORAMINA CAROTICA, *Carotid Foramina*, (F) *Trous carotidiens*, are distinguished into *internal* and *external*. They are the foramina at each extremity of the *Canalis Caroticus*.

CARPA'SIUM, CARPASUM, CARPASUS, and CARPE'SIUM. Dioscorides, Pliny, Galen, &c., have given these names, and that of *Carpasos*, to a plant, which cannot now be determined, and whose juice, called *Opo-carpason*, *οποκαρπασον*, passed for a violent, narcotic poison, and was confounded with myrrh.

CARPHOLOGIA, *Tilmus*, *Carpologia*, *Crocidismus*, *Floccorum vena'tio*, *Trichologia*, *Crocidix'is*, from *καρφος*, 'floc'culus,' and *λεγω*, 'I collect,' or 'pluck,' (F) *Carphologie*. Action of gathering flocculi. A delirious picking of the bedclothes, as if to seek some substance, or to pull the flocculi from them. It denotes great cerebral irritability or debility, and is an unfavourable sign in fevers, &c.

CAR'PIAL or **CAR'PIAN**, *Carpia'nus*, *Carpia'lis*, (F) *Carpien*. Belonging to the Carpus.

CAR'PIAL LIG'AMENTS, (F) *Ligaments Carpiens*, are, 1. The fibrous fasciæ, which unite the bones of the carpus: and, 2. The annular ligaments, anterior and posterior. (q. v.)

CARPO-PEDAL, from *carpus*, 'the wrist,' and *pes*, *pedis*, 'the foot.' Relating to the wrist and foot.

CARPO-PEDAL SPASM, *Cerebral spasmodic croup*. A spasmodic affection of the chest and larynx in young children, accompanied by general or partial convulsions. The disease generally occurs between the third and ninth month, and is characterized by excessive dyspnœa, accompanied by a loud croupy noise on inspiration; the thumbs being locked, and the hands and feet rigidly bent for a longer or shorter period.

The seat of the disease is evidently in the cerebro-spinal axis, primarily or secondarily; perhaps it is owing to erethism seated elsewhere being communicated to the cerebro-spinal centre and reflected to the respiratory and other muscles concerned.

It seems to be connected with dental irritation, and consequently, in the treatment, the gums—where such is the case—should be freely divided; after which, cathartics and revulsives, with the use of narcotics and appropriate diet will generally remove the affection; for although extremely alarming, it is not really attended with great danger.

CARPOTICA, from *καρπος*, 'fruit.' Diseases affecting impregnation. Irregularity, difficulty or danger produced by parturition:—the 3d order, class *Genetica*, of Good.

CARPUS, *Carpis'mus*, *Brachia'lê*, *Rasceta*, *Rasteta*, the wrist, (F) *Carpe*, *Poignet*. The part between the forearm and hand. Eight bones compose it (in two rows). In the superior row there are, from without to within—the *Scaphoïdes* or *navicula'rê*, *Luna'rê* or *Semilunarê*, *Cu'neifor'mê*, and *Orbicula'rê* or *Pi'siformê*. In the lower row—*Trape'zium*, *Trapezoi'des*, *Magnum*, and *Un'cifor'mê*.

CARRELET, *Acus triangula'ris*. A straight needle, two or three inches long, the point of which is triangular; and which the ancients used in different operations.

CARRELET (F). A wooden, triangular frame for fixing a cloth through which different pharmaceutical preparations are passed.

CAR'THAMUS TINCTORIUS, *Am'yron*, *Cnicus*, *Crocus German'icus*, *Crocus Saracen'icus*, *Car'thamum officina'rum*, *Car'duus sati'vus*. Saffron flower, *Safr'a'num*, *Safflower*, *Bastard Saffron*, (F) *Carthame*, *Safran batard*, *Carthame des Teinturiers*. Family, *Cynarocephalæ*. Sex. Syst. Syngenesia Polygamia æqualis. The seeds are aromatic, cathartic, and diuretic; yet to the Perroquet they are an article of food, hence their name, *Graines de Perroquet*. The flowers are employed as a cosmetic.

CARTILA'GO, *Chondros*, *Car'tilage*, (F) *Cartilage*. A solid part of the animal body, of a medium consistence between bone and ligament, and which in the fœtus is a substitute for bone, but in the adult exists only in the joints, at the extremities of the ribs, &c. Cartilages are of a whitish colour, flexible, compressible, and very elastic, and some of them apparently inorganic. They are composed, according to J. Davy, of .44 albumen, .55 water, and .01 phosphate of lime.

The **ARTIC'ULAR CARTILAGES**, or *Obdu'cent Car'tilages*, invest bony surfaces, which are in contact; hence they are called *investing* or *incrusting cartilages*, (F) *Cartilages de revêtement ou d'encroulement*.

The **INTERARTICULAR CARTILAGES** are such as are situate within the joints, as in the knee-joint.

The **CARTILAGES OF THE RIBS** are, in some respects, only prolongations of the ribs. Those of the nose, of the meatus auditorius, and eustachian tube, present a similar arrangement. Other cartilages resemble a union of fibrous and cartilaginous textures, hence their name *Fibro-cartilages*.

CARTILAGES OF OSSIFICA'TION are such as, in the progress of ossification, have to form an integrant part of bones; as those of the long bones in the new-born infant. These are termed *temporary*: the others being *permanent*. All the cartilages, with the exception of the articular, are surrounded by a membrane analogous to the periosteum, called *Perichon'drium*.

CARTILAG'INOUS, *Cartilagin'eus*, *Cartilagin'o'sus*, *Chondro'des*, *Chondroi'des*, (F) *Cartilagineux*. Belonging to, or resembling cartilage.

CARUM, from Caria, a province of Asia. *Ca'reum*, *Carum Car'ui*, *Carvi*, *Cumi-num praten'sê*, *Carus*, *Car'uon*, the *Car-away*, (F) *Carvi*, *Cumin des prés*. Family, *Umbelliferae*. Sex. Syst. Pentandria Digynia. The seeds, *Carnaba'dia*, *Car'oua*, are carminative. Dose, gr. x to ʒ ij, swallowed whole or bruised. The oil, *O'leum Car'ui*, (F) *Huile de Carvi*, has the properties of the seeds. Dose, gr^{tt} ij to vj.

CARUNCLE *Carun'cula*, diminutive of *caro*, 'flesh.' A small portion of flesh, *Sar'cion*. A fleshy excrescence,—*Ecphy'ma carun'cula*. (F) *Caroncule*.

CARUN'ULA LACHRYMA'LIS, (F) *Caroncule lacrymale*. A small, reddish, follicular body, situate at the inner angle of the eye. It secretes a gummy substance.

CARUNCULÆ MAMILLA'RES. The extremities of the lactiferous tubes in the nipples. The olfactory nerves have been so called by some.

CARUNCULÆ MYRTIFOR'MES, *C. vagina'les*, *Glan'dulæ myrtifor'mes*, (F) *Caroncules Myrtiformes*. Small, reddish tubercles, more or less firm, of variable form, and uncertain number, situate near the orifice of the vagi-

na, and formed by the mucous membrane. They are regarded as the remains of the Hy-men.

CARUN'CULOUS. Relating to caruncles or carnosities. *Carun'cular.*

CARUS, *καρος*, *Sopor carot'icus*, *Profound sleep.* The last degree of coma, with complete insensibility, which no stimulus can remove, even for a few instants. *Sopor, Coma, Lethargia*, and *Carus*, are four degrees of the same condition.

CARYOCOSTINUS. An electuary prepared of the costus and other aromatic substances, &c. It was cathartic.

CARYOTI. The best kind of dates.—Galen.

CAS RARES (F). *Rare cases.* This term is used, by the French, for pathological facts, which vary from what is usual. See a celebrated article under this head in the *Dictionnaire des Sciences Médicales*, Vol. iv.

CAS'CARA, CASCARIL'LA. Spanish words, which signify *bark* and *little bark*, under which appellations the bark (*Cinchona*) is known in Peru. They are now applied to the bark of the *Croton cascarilla*.

CASE, *Capsa, The'ca*, (F) *Caisse.* This name is given to boxes for the preservation of instruments; or for medicines necessary in hospital or other service. We say,—*A case of amputating*, e.g. or of *trepanning instruments*.

CASE, *Casus.* The condition of a patient, as a *case of fever*, &c. (F) *Observation.* Also, the history of a disease.

CASHOO. An aromatic drug of Hindustan, said to possess pectoral virtues.

CAS'SIA FIS'TULA, *Cas'sia nigra, Cassia fistula'ris, C. Alexandri'na, Canna, Canna soluti'va, Canna fis'tula, Cassia soluti'va, Cathartocar'pus, Purging Cassia*, (F) *Casse Caneficier, Casse en bâtons, Casse des Boutiques.* The pulp of the *Cassia Fis'tula* or *Cathartocar'pus Fis'tula*, *Fam. Leguminosæ.* *Sex. Syst.* Decandria Monogynia, *Pulpa Cas'siæ, Cas'siæ Aramentum*, which is contained in long pods, is black, bright, and shining; sweet, slightly acid, and inodorous. It is laxative in the dose of ʒiv to ʒj.

CASSIA MARILAN'DICA, *American Senna.* The leaves of this plant are similar, in virtue, to the cassia senna. They are, however, much inferior in strength.

CASSIA SENNA. The name of the plant, which affords senna. *Sennæ Fo'lia, Senna Alexandri'na, Senna Ital'ica, Sena, Senna* or *Ægyptian Cassia*, (F) *Sené, Casse Sené.* The leaves of senna have a faint smell, and bitterish taste. The active part is extracted by alcohol and water. Their activity is injured by boiling water. They are a hydrogogue cathartic, and apt to gripe. Dose of the powder ʒj to ʒj. Infusion is the best form.

CASSUMU'NIAR, *Casamu'nar, Casmina, Risagon, Benga'lè Indo'rum, Bengal Root*, (F) *Racine de Bengale.* A root, obtained from

the East Indies, in irregular slices of various forms; some cut transversely, others longitudinally. It is an aromatic bitter, and is consequently tonic and stimulant. It was once considered a panacea.

CASTELLAMARE DI STABIA, WATERS OF. C. is a town in Naples, in the Principato Citra, 15 miles S. S. E. of Naples. There are two springs here, the one sulphureous, the other chalybeate.

CASTELLETTO ADO'NO, WATERS OF. These waters, situate near Acqui in Italy, are sulphureous.

CASTERA-VIVENT, WATERS OF. C. is a small village in the department of Gers, near which is a cold acidulous chalybeate, and another which is sulphureous and thermal. Temp. 84° Fahrenheit.

CASTLE-LEOD, WATERS OF. A sulphureous spring in Ross-shire, Scotland, celebrated for the cure of cutaneous and other diseases.

CASTOR FIBER, *Fiber, Canis Pon'ticus.* The *Beaver*, (F) *Castor.* It furnishes the *Castor.* RONDELET recommends slippers made of its skin in gout. Its blood, urine, bile, and fat, were formerly used in medicine.

CASTOREUM, *Castor*, from *καστορ*, 'the beaver,' quasi *γασταρ*, from *γαστηρ*, 'the belly,' because of the size of its belly, or *à castrando, Casto'reum Ros'sicum et Canaden'se.* A peculiar matter, found in bags, near the rectum of the beaver. Its odour is strong, unpleasant, and peculiar; taste bitter, subacid; and colour orange-brown. It is antispasmodic, and often employed. Dose gr. x to ʒj.

CASTRATION, *Castra'tio, Ectomē, Evi-ra'tio, Excastra'tio, Etesticula'tio, Exec'cio virili'um, Eunuchis'mus, Celoto'mia, Orcho'tomia, Orcheotomy, Orchidotomy.* Operation for removing the testicles. Sometimes, the term is employed for the operation, when performed on one testicle; hence the division into *complete* and *incomplete* castration. Castration renders the individual incapable of reproduction.

CASTRATUS, (I.) *Castra'to, Ectomius, Emasculatus, Exec'tus, Extesticulatus*, from *castra'rē*, 'to castrate.' *One deprived of testicles*, (F) *Castrat, Châtré.* This privation has a great influence on the development of puberty. It is adopted to procure a clearer and sharper voice; and in the East, the guardians of the Harem are, for the sake of security, converted into *Castra'ti* or *Eu'nuchs*, *ευνουχοι*. The ancients called those, deprived of one testicle, *Spado'nes.* *Eunuchs* have generally both testes and penis removed.

CATA, *κατα*, 'downwards,' 'after,'—applied to time: a common prefix, as in:—

CATABASIS, from *καταβαινα*, 'I descend.' An expulsion of humours downwards.

CATABLEMA, *Epible'ma, Perible'ma.*

The outermost bandage which secures the rest.

CATABYTHISMOMANIA, from *καταβυθισμος*, 'submersion,' and *μανια*, 'mania.' Insanity, with a propensity to suicide by drowning.

CATACERAS'TICUS, from *κατακεραυνωμι*, 'I temper,' 'I correct.' The same as *Epicerasticus*. A medicine capable of blunting the acrimony of humours.

CATAC'HYSIS, *Effu'sio*, *Perfu'sio*, from *καταχυνω*, 'I pour upon.' Affusion with cold water.—Hippocr.

CATAC'LASIS, from *κατακλαζω*, 'I break to pieces.' *Cam'pylum*, *Campylo'tis*. Distortion or spasmodic fixation of the eyes; spasmodic occlusion of the eyelids; also, fracture of a bone.—Hippocr., Vogel.

CATACLEIS', from *κατα*, 'beneath,' and *κλεις*, 'the clavicle.' This term has been applied to many parts, as to the first rib, the acromion, the joining of the sternum with the ribs, &c.

CATACLYS'MUS, *Cataclys'ma*, from *κατακλυζεν*, 'to submerge, inundate.' A *Clyster*.—Hippocr. Others mean, by the term, a shower-bath, or copious affusion of water; *Cataone'sis*.

CATAGMAT'ICS, *Catagmat'ica reme'dia*, from *καταγμα*, 'fracture.' Remedies supposed to be capable of occasioning the formation of callus.

CATALEN'TIA. Epilepsy, or some disease resembling it.—Paracelsus.

CAT'ALEPSY, *Catalep'sia*, *Catalep'sis*, *Cat'ochē*, *Cat'ochus*, *Congela'tio*, *Deten'tia*, *Encatalep'sis*, *Aphonia*—(Hippocr.), *Anau'dia*—(Antigenes.), *Apprehen'sio*, *Contempla'tio*, *Prehen'sio*, *Carus Catalep'sia*, *Trance* (?), *Oppres'sio*, *Comprehensio*—(Cæl. Aurelian.), *Apoplex'ia Catalepsia*, from *καταλαμβάνω*, 'I seize hold of,' (F) *Catalepsie*. A disease in which there is sudden suspension of the action of the senses and of volition: the limbs and trunk preserving the different positions given to them. It is a rare affection, but is seen, at times, as a form of hysteria. Some of the Greek writers have used the word in its true acceptance of a *seizure*, *surprise*, &c.

CATAL'PA, *C. Arbo'rea*, *Bigno'nia Catalpa*, *Catal'pa Cordifo'lia*, *C. Arborescens*. The decoction of the pods of the Catalpa, an American Tree, of the *Nat. Fam. Bigno'niaceæ*, *Didynamia Angiospermia*, has been recommended in chronic nervous asthma.

CATANTLE'MA and **CATANTLE'SIS**, from *κατα*, 'upon,' and *αντλαω*, 'I pour,' *Cateone'sis* and *Cataone'sis*. Ablution with warm water; a fomentation.—Moschion, Marcellus Empiricus.

CATAPAS'MA, from *καταπασσω*, 'I sprinkle,' *Catapas'tum*, *Consper'sio*, *Epipas'ton*, *Pasma*, *Sympas'ma*, *Empas'ma*, *Xerion*, *Asper'sio*. Compound medicines, in the form of powder, employed by the ancients to sprin-

kle on ulcers, absorb perspiration, &c.—Paulus of Ægina.

CATAPH'ORA, 'a fall,' from *καταφραω*, 'I throw down.' A state resembling sleep, with privation of feeling and voice. According to others, Cataphora is simply a profound sleep, which it is difficult to rouse from—in this sense being synonymous with *Sopor*. (q. v.)

CATAPHRAC'TA, a *Cuirass*, from *καταφρασσα*, 'I fortify.' A name given by Galen to a bandage applied round the thorax and shoulders. It was also called *Quadri'ga*.

CAT'APLASM, *Cataplas'ma*, *Epiplas'ma*, *Bæos*, from *καταπλασσειν*, 'to besmear,' (F) *Cataplasme*. A medicine to be applied externally, under the form of a thick pap. Cataplasms are formed of various ingredients, and for different objects. They may be *anodyne*, *emollient*, *tonic*, *antiseptic*, *irritating*, &c. A simple poultice acts only by virtue of its warmth and moisture. Meal, fatty substances, leaves of plants, certain fruits, crumb of bread, &c., are the most common bases.

The chief poultices which have been official are the following.

ANODYNE.	EMOLLIENT.	TONIC & ASTRINGENT.
C. Cicutæ,	C. Lini,	C. Alum.
C. Digitalis.	C. Panis,	C. Goulard,
	C. Mali maturi.	C. Rosæ.
ANTISEPTIC.	IRRITATING.	
C. Carbonis,	C. Sinapis,	
C. Dauci,	C. Muriatis Sodæ,	
C. Fermenti,	C. Quercus Marini.	
C. Acetosæ,		
C. Cumini.		

The Parisian Codex has some other official cataplasms. 1. *Cataplas'ma anod'ynum*, made of poppy and hyoscyamus. 2. *Cataplas'ma emol'liens*, made of meal and pulps. 3. *Cataplas'ma ad suppuratio'nem promoven'dam*, of pulps and Basilicon. 4. *Cataplas'ma rubefa'ciens vel antipleurit'icum*, formed of pepper and vinegar.

The only cataplasms, the preparation of which it is important to describe, are the following.

CATAPLAS'MA FERMENTI, *C. efferves'cens*, *Yeast Cataplasm* or *Poultice*, (F) *Cataplasme de Levure*. (Take of meal ℥j, yeast ℥ss. Expose to a gentle heat.) It is antiseptic, and a good application to bruises.

CATAPLAS'MA SINA'PIS, *C. Sina'peos*, *Sin'a-pism*, *Mustard Cataplasm* or *Poultice*, (F) *Cataplasme de Moutard ou Sinapisme*. (*Mustard*, and *Linseed meal* or *meal aa equal parts*. Warm vinegar, q. s.) A rubefacient and stimulant applied to the soles of the feet in coma, low typhus, &c., as well as to the pained part in rheumatism, &c.

CATAPLEX'IS, *Stupor*, from *κατα* and *πλησσω*, 'I strike.' The act of striking with

amazement. Appearance of astonishment as exhibited by the eyes, in particular.

CATAPSYX'IS, from *καταψυχα*, 'I refrigerate.' *Peripsyx'is*. Considerable coldness of the body, without rigor and *horripilatio*.—Galen. Coldness in the extreme parts of the limbs.—Hippocr.

CATAPTO'SIS, *Deciden'tia*, a fall. This word expresses, sometimes, the fall of a patient, attacked with epilepsy or apoplexy; at others, the sudden resolution of a paralytic limb.

CAT'ARACT, *Catarac'ta*, *Catarrhac'ta*, *Suffu'sio Oculi*, *Ptharma catarac'ta*, *Caligo lentis*, *Gutta opaca*, *Hypoc'hyma*, *Hypoc'hysis*, *Phacoscot'oma*, *Parop'sis catarac'ta*, *Glauc'oma Woulhou'si*. A deprivation of sight, which comes on, as if a veil fell before the eyes. Cataract consists in opacity of the crystalline lens or its capsule, which prevents the passage of the rays of light, and precludes vision. The causes are obscure. *Diagnosis*.—The patient is blind, the pupil seems closed by an opaque body, of variable colour, but commonly whitish:—the pupil contracting and dilating. Cataracts have been divided, by some, into *spurious* and *genuine*. The former, where the obstacle to vision is between the capsule of the lens and the uvea: the latter, where it is in the lens or capsule. A *lenticular cataract* is where the affection is seated in the lens;—a *capsular* or *membranous*, where in the capsule. The *capsular* is divided again, by Beer, into the *anterior*, *posterior*, and *complete capsular* cataract. When the capsule is rendered opaque, in consequence of an injury, which cuts or ruptures any part of it, it thickens, becomes leathery, and has been called *Catarac'ta arida siliquo'sa*. *Catarac'ta Morgagniana lactea vel purifor'mis*, is the *milky* variety, in which the crystalline is transformed into a liquid similar to milk, (F) *Cataracte laiteuse*. The *cap'sulo-lentic'ular* affects both lens and capsule, and Beer conceives the liquor Morgagni, in an altered state, may contribute to it. Cataracts are also called *stony* (F) (*pierreuse*,) *milky* or *cheesy* (*laiteuse* ou *caséuse*,) according to their density:—white, pearly, yellow, brown, gray, green, black, (F) *blanche*, *perlée*, *jaune*, *brune*, *grise*, *verte*, *noire*, according to their colour:—*fixed* or *vacillating*,—*catarac'ta capsulo-lenticula'ris fixa vel trem'ula*, (F) *fixe* ou *branlante*, according as they are fixed or movable behind the pupil. They are also called *Catarac'tæ marmora'ciæ*, *fenestra'tæ*, *stella'tæ*, *puncta'tæ*, *dimidia'tæ*, &c., according to the appearances they present.

Cataracts may be *simple* or *complicated* with adhesion, amaurosis, specks, &c. They may be *primary* or *primitive*, when opaque before the operation;—or *secondary*, when the opacity is the result of the operation.

The cataract is commonly a disease of elderly individuals, although, not unfrequent-

ly, *congen'ital*. It forms slowly: objects are at first seen as through a mist, light bodies appear to fly before the eyes, and it is not until after months or years that the sight is wholly lost.

No means will obviate the evil except an operation, which consists in removing the obstacle to the passage of the light to the retina. Four chief methods are employed for this purpose.

1. *Couching* or *Depression*, (F) *Abaissement*, *Déplacement de la Cataracte*. This consists in passing a cataract needle through the sclerotica and subjacent membranes, a little above the transverse diameter of the eye; and at about two lines distance from the circumference of the transparent cornea, until the point arrives in the posterior chamber of the eye. With this the crystalline is depressed to the outer and lower part of the globe of the eye, where it is left. 2. *By absorption*,—by the French termed *broiement*, or *bruising*. This is performed in the same manner as the former; except that, instead of turning the crystalline from the axis of the visual rays, it is divided by the cutting edge of the needle, and its fragments scattered in the humours of the eye, where they are absorbed. 3. *By extraction*, which consists in opening, with a particular kind of knife, the transparent cornea and the anterior portion of the capsule of the crystalline; and causing the lens to issue through the opening. Each of the processes has its advantages and disadvantages, and all are used by surgeons. 4. Some, again, pass a cataract needle through the transparent cornea and pupil, to the crystalline, and depress or cause its absorption. This is called *Keratonyxis*, which see.

CATARACTÉ (F), *Catarac'tus*, *Catarac'tâ vitia'tus*. One affected with cataract. The French use this term, both for the eye affected with cataract and the patient himself.

CATARRH', *Catar'rhus*, *Catar'rhopus*, *Catarrheu'ma*, *Rheuma*, *Deflux'io*, from *κατα*, 'downwards,' and *ρεω*, 'I flow.' A discharge of fluid from a mucous membrane. The ancients considered the catarrh as a simple flux, and not as an inflammation. Generally it partakes of this character, however. *Catarrh* is, with us, usually restricted to the inflammation of the mucous membrane of the air-passages; the French extend it to that of all mucous membranes. (F) *Flux muqueux*, *Fluxion catarrhale*.

CATARRH, in the English sense, *Rheuma Pec'toris*, *Catar'rhus Pec'toris*, *Blennop'tysis*, *Tus'sis catarrha'lis simplex*, *Anacathar'sis catarrha'lis simplex*, *Gravé'do* (of many), a cold, *Febris Catarrha'lis*, *Blennotho'rax*, *Bronchi'tis*, *Catar'rhus à frigore*, (F) *Catarrhe pulmonaire*, *Rhume de Poitrine*, is a superficial inflammation of the mucous follicles of the trachea and bronchi. It is commonly an affection of but little consequence, but apt

to relapse and become *chronic*. It is characterized by cough, thirst, lassitude, fever, watery eyes, with increased secretion of mucus from the air-passages. The antiphlogistic regimen and time usually remove it. Sometimes, the inflammation of the bronchial tubes is so great as to prove fatal.

CATARRH', EPIDEMIC, *Catar'rh'us epidem'icus*, *C. à conta'gio*, *Rheuma epidem'icum*. Catarrh occurring owing to some particular *Constitutio aëris*, and affecting a whole country:—*Influenza*. (q. v.)

CATARRHEC'TICA, from *καταρρηγνυμι*, 'I break down.' Remedies considered proper for dissolving;—as diuretics, cathartics, &c.—Hippoc.

CATARRHEUX (F). *Catarrho'sus*. One subject to catarrh, affected with catarrh.

CATARRHEX'IA, *Catarrhexis*; same etymon as *Catarrhctica*: the action of *Catarrhctica*. Also, effusion, evacuation of the bowels.

CATARRHŒ'CUS, from *καταρρεω*, 'I flow from.' An epithet for disease, produced by a discharge of phlegm; Catarrhal.

CATAR'RHOPA PHY'MATA, from *καταρροπος, καταρροπης*, 'sloping downwards.' Tubercles tending downwards, or with their apices downwards.

CATARRHO'PIA, *Catar'rh'ysis*, from *κατα*, 'downwards,' and *ρροπη*, 'inclination.' An afflux of fluids towards the inferior parts, and especially towards the viscera of the abdomen. The Greek word *αναρροπια* expresses an opposite phenomenon, or a tendency towards the upper parts.

CATARTIS'MUS, from *καταρτιζεν*, 'to repair,' 'replace.' The coaptation of a luxated or fractured bone.

CATAS'TASIS, from *καθιστημι*, 'I establish.' The constitution, state, condition, &c. of any thing.—Hippoc. Also, the reduction of a bone.

CATAT'ASIS, from *κατατεινω*, 'I extend.' The extension and reduction of a fractured limb.—Hippoc.

CATECHU. The extract of various parts of the *Mimosa Cat'echu*, *Caetchu*, an oriental tree. The drug is also called *Terra Japon'ica*, *Extrac'tum Catechu*, *Japan Earth*, *Cascheu*, *Cadtchu*, *Cashow*, *Caitchu*, *Castjoe*, *Cacau*, *Cate*, *Kaath*, *Cuti*, *Cutch*, *Coira*, *Succus Japon'icus*. (F) *Cachou*. It is a powerful astringent, and is used in diarrhœa, intestinal hemorrhage, &c. Dose, gr. xv to 3ss in powder.

CATEIAD'ION, from *κατα*, and *εια*, 'a blade of grass.' A long instrument, thrust into the nostrils to excite hemorrhage in headache.—Aretæus.

CATHÆ'RESIS, *καθαιρεσις*, 'subtraction, diminution.' Extenuation or exhaustion, owing to forced exercise.—Hippoc.

CATHAR'MA, *Purgamen'tum*. Matters evacuated by a purgative, or by spontaneous purging.

CATHAR'MUS. Same etymon; a purgation.—Hippoc. Also, the cure of a disease by magic, &c.

CATHAR'SIS, from *καθαριζεν*, 'to purge.' *Purga'tio*, *Apocathar'sis*, *Copropho'ria*. A natural or artificial purgation by any passage;—mouth, anus, vagina, &c.

CATHAR'TIC, *Cathar'ticus*, *Catharc'ticus*, *Cathar'ma*, *Coprocrit'ica*, *Dejecto'rium Reme'dium*, *Eccathar'ticus*, *Hypac'ticus*, *Hypel'atos*, *Lapac'ticus*, *Apocathar'ticus*. Same etymon, (F) *Cathartique*. A medicine, which, when taken internally, increases the number of alvine evacuations. Some substances act upon the upper part of the intestinal canal, as *calomel* and *colocynth*; others, on the lower part, as *aloes*; and some on the whole extent, as saline purgatives. Hence a choice may be necessary. Cathartics are divided into PURGATIVES and LAXATIVES. (q. v.)

The following is a list of the chief Cathartics:

Aloe,	Podophyllum,
Cassia Marylandica,	Potassæ Acetas,
Colocynthis,	—— Bisulphas.
Elaterium,	—— Sulphas,
Gambogia,	—— Supertartras,
Hydrargyri Chloridum	—— Tartras,
mite,	Rheum,
—— Oxydum nigrum,	Scammonium,
Hydrarg. cum Mag-	Senna,
nesia,	Sinapis,
Jalappa,	Sodæ et Potassæ Tartras,
Juglans,	—— Phosphas,
Magnesia,	—— Sulphas,
—— Carbonas,	Sodii Chloridum,
—— Sulphas.	Sulphur,
Manna,	Veratrina,
Mannita,	Aquæ Minerales Sulphu-
Oleum Euphorbiæ La-	reæ et Salinæ,
thyridis,	Enemata,
—— Ricini,	Suppositoria.
—— Tiglii,	

CATHERETIC, *Catharet'icus*, *Ectylot'icus*, *Sarcoph'agus*, from *καθαριζεν*, 'to eat,' 'destroy.' Substances applied to warts, exuberant granulations, &c., to eat them down. They are *mild caustics*.

CATH'ETER, from *καθιημι*, 'I explore.' *Æne'a*, *Al'galie*, *Cathete'ris*, *Demissor*, *Immis'sor*. A hollow tube, introduced by surgeons into the urinary bladder, for the purpose of drawing off the urine. Catheters are made of silver or elastic gum. See Bougie. The French generally use the word *catheter*, for the solid *sound* or *staff*; and *algalie* and *sonde* for the hollow instrument.

CATHETERIS'MUS, *Catheterisis*, same etymon. The introduction of a catheter into the bladder.

CATHID'RYSIS, from *καθιδεναι*, 'I place together.' Reduction of a part to its natural situation.

CATHOLIC HUMOURS, (F) *Humeurs Catholiques*, are the fluids spread over the whole body.

CATHOL'ICON or CATHOL'ICUM, from *καθ'*, and *ολικος*, 'universal.' A reme-

dy, believed to be capable of curing all diseases—a *panacea*.

CATHOL'ICON DUPLEX, an ancient, purging electuary, chiefly composed of cassia, tamarinds, rhubarb, senna, &c.

CATIL'LIA. A weight of nine ounces.

CATO, κατω, 'below,' 'beneath.' This word, in the writings of Hippocrates, is often used for the abdomen, especially the intestines. When he advises a remedy—κατω, he means a purgative; when ανα, above or upwards, an emetic. As a prefix, *Cato* means 'beneath,' as in

CATOCATHAR'TIC, *Catocathar'ticus*, from κατω, 'downwards,' and καθαιρω, 'I purge.' A medicine, which purges downwards. One that produces alvine evacuations. The antithesis to *Anacathartic*.

CATOCHE or CATOCHEIS, from κατεχα, 'I retain,' 'I hold fast.' This word has, by some, been used synonymously with *Catalepsy*: by others, with *Coma vigil*; by others, with *Tetanus*.

CATOMIS'MOS, from κατω, 'beneath,' and ομος, 'shoulder.' *Subhumera'tio*. A mode of reducing luxation of the humerus with the ancients, by raising the body by the arm.—Paulus of Aegina.

CATOPTROMANCY, from κατοπτρον, 'a mirror,' and μαντια, 'divination.' A kind of divination by means of a mirror.

CATORCHITES. A kind of sour wine, prepared with the orchis and black grape, or dried figs. It was formerly employed as a diuretic and emmenagogue.—Dioscorid. Called, also, *Sycites*.—Galen.

CATOTICA, from κατω, 'beneath.' Diseases infecting internal surfaces. Pravity of the fluids or emunctories, that open on the internal surfaces of organs. The second order in the class *Eccritica* of Good.

CATULOTICUS, from κατουλοειν, 'to cicatrize.' A remedy for removing cicatrices.—Galen. A medicine, proper for producing cicatrization.

CAUDA EQUI'NA. The spinal marrow, at its termination, about the 2d lumbar vertebra, gives off a considerable number of nerves, which, when unravelled, resemble a horse's tail,—hence the name. (F) *Queue de Cheval*, *Q. de la Moelle Epinière*.

CAUDA'TIO. An extraordinary elongation of the clitoris.—Blasius.

CAUDIEZ, MINERAL WATERS OF. Caudiez is a small town, nine leagues from Perpignan, where there is a thermal spring, containing a little sulphate of soda and iron.

CAUL. The English name for the omentum. Also, when a child is born, with the membranes over the face, it is said to have been "born with a Caul." In the catalogue of superstitions, this is one of the favourable omens. The caul itself is, likewise, supposed to confer privileges upon the possessor; hence the membranes are dried, and some-

times sold for a high price. (L) *Pilus*, *Pileolus*, *Galea*, *Vitta*. (F) *Coeffe*, *Coiffe*—(*Etre né coëffé*—"to be born with a caul.")

CAULE'DON, *Sicye'don*, from καυλος, 'a stalk.' A transverse fracture.

CAU'LIFLOWER EXCRES'CENCE, *Excrescen'tia Syphilit'ica*, (F) *Choufleur*. A syphilitic excrescence, which appears about the origin of the mucous membranes, chiefly about the anus and vulva, and which resembles, in appearance, the head of the cauliflower.

CAULOPLE'GIA, from καυλος, 'the male organ,' and πληγη, 'a wound,' or 'stroke.' An injury or paralysis of the male organ.

CAUMA, καυμα, 'a burnt part,' from καιω, 'I burn.' Great heat of the body or atmosphere.

CAUSE, *Cau'sa*, αιτια, *Aitia*, αιτιον, *Aition*. An act, which precedes another, and seems to be a necessary condition for the occurrence of the latter. The causes of disease are generally extremely obscure; although they, sometimes, are evident enough. The *predisponent* and *occasional* causes are the only two, on which any stress can be laid; but as authors have divided them differently, a short explanation is necessary.

CAUSES, ACCESSORY, (F) *Causes Accessoires*, are those, which have only a secondary influence, in the production of disease.

ACCIDENTAL CAUSES, or COMMON CAUSES, (F) *Causes Accidentelles*, are those, which act only in certain given conditions; and which do not always produce the same disease. Cold, e. g., may be the accidental cause of pneumonia, rheumatism, &c.

The PROXIMATE CAUSE, *Causa prox'ima vel continens vel conjuncta*, (F) *Cause continente ou prochaine*, is the disease itself. Superabundance of blood, e. g., is the proximate cause of plethora.

EXTERNAL CAUSES, (F) *Causes externes*, are such as act externally to the individual; as air, cold, &c.

CAUSES FORMELLES (F) are such as determine the form or kind of the disease. They differ from the *Causes matérielles*, which are common to a set of diseases; as, to the *neuroses*, *phlegmasiæ*, &c.

INTERNAL CAUSES, (F) *Causes internes*, are those, which arise within the body;—as mental emotions, &c.

MECHANICAL CAUSES, (F) *Causes mécaniques*, are those, which act mechanically, as pressure upon the windpipe in inducing suffocation.

NEGATIVE CAUSES, (F) *Causes négatives*, comprise all those things, the privation of which may derange the functions;—as abstinence too long continued. They are opposed to *positive causes*, which, of themselves, directly induce disease;—as the use of indigestible food, of spirituous drinks, &c.

OCCASIONAL or EXCITING CAUSES, *Causæ actua'les*, (F) *Causes occasionelles*, are

those which immediately produce the disease.

OCCULT OR HIDDEN OR OBSCURE CAUSES, (F) *Causes occultes ou cachées ou obscures*. Any causes with which we are unacquainted;—also, certain inappreciable characters of the atmosphere, which give rise to epidemics.

PHYSIOLOGICAL CAUSES, (F) *Causes Physiologiques*, those, which act only on living matter;—narcotics, e. g.

PHYSICAL CAUSES, (F) *Causes Physiques*,—those, which act by virtue of their physical properties; as form, hardness, &c. All vulnerating bodies belong to this class.

PREDISPO-NENT OR REMOTE CAUSES, *Causæ prædisponentes*, *Causæ abditæ*, (F) *Causes predisponantes*, *Causes éloignées*, *Causæ remotæ*;—those, which render the body liable to disease. These may be *general*, affecting a number of people, or they may be *particular*, affecting only one.

PRINCIPAL CAUSES, (F) *Causes principales*;—those which exert the chief influence on the production of disease, as distinguished from the *accessory causes*.

PROCATARCTIC CAUSES, *Causæ procatarticae*, *Causæ præincipientes*, from *προκαταρκτητικός*;—the origin or beginning of a thing, from *καταρχω*, 'I begin,' and *πρὸ*, 'before.' These words have been used, in different significations. Some have employed them synonymously with *predisponent* or *remote causes*; others, with *occasional* or *exciting causes*.

SPECIFIC CAUSES, ESSENTIAL CAUSES, &c. (F) *Causes spécifiques*, *C. essentielles*, *Causes déterminantes*; those, which always produce a determinate disease; contagion, for example.

CAUSTIC, *Caus'ticus*, *Cauteret'icus*, *Diæret'icus*, *Ero'dens*, *Pyrot'icus*, from *καίω*, 'I burn,' (F) *Caustique*. Bodies, which have the property of causticity; and which, consequently, burn or disorganize animal substances. The word is also used substantively. The most active are called *Escharotics*. Caustics are also called 'corrosives.'

CAUSTIC'ITY, *Caustic'itas*, from *καυστικός*, 'that which burns.' The impression, which caustic bodies make on the organ of taste; or, more commonly, the property which distinguishes those bodies.

The CAUSTICUM COMMUNE, *Poten'tial Cautery*, *Common Caustic*, *Cauter'ium potentialē*, *Lapis sep'ticus*, *Caus'ticum commu'nē mil'ius*, consists of quicklime and black soap, aa equal parts.

CAUSUS from *καίω*, 'I burn.' A highly ardent fever, *Deu'rens*. Pinel regards it as a complication of bilious and inflammatory fever; Broussais, as an intense gastritis, accompanied with bilious symptoms. See Synocha.

CAUTERETS, MINERAL WATERS OF. C. is a *bourg* seven leagues from Baréges (*Hautes-Pyrénées*), France. The waters are hydrosulphurous and thermal. They are used in the same cases as the Baréges water.

CAUTER'IIUM, *Cautery*, *Inusto'rium*, *Rupto'rium*, from *καίω*, 'I burn,' (F) *Cautère*, *Feu actuel*. A substance, used for burning or disorganizing the parts to which it is applied. Cauteries were divided, by the ancients, into *actual* and *potential*. The word is now restricted to the red-hot iron; or to positive burning. It was, formerly, much used for preventing hemorrhage from divided arteries; and also, with the same views, as a blister. The term, *Potential Cautery*, (F) *Feu potentiel*, was generally applied to the *causticum commune*, but is now used synonymously with Caustic in general.

Cautère also means an issue.

CAUTERIZA'TION *Cauterisa'tio*, *Exus'tio*, *Inus'tio*, *Caus'tica Adus'tio*. The effect of a cautery.

The French, amongst whom cauterization is much used, distinguish five kinds: 1. *Cautérisation inhérente*, which consists in applying the actual cautery freely, and with a certain degree of force, so as to disorganize deeply. 2. *Cautérisation transcurrente*, which consists in passing the edge of the *Cautère cutellaire*, or the point of the *Cautère conique* lightly, so as not to disorganize deeply. 3. *Cautérisation par pointes*, which consists in applying on the skin, here and there, the hot point of the conical cautery with sufficient force to cauterize the whole thickness of the skin. 4. *Cautérisation lente*, *slow cauterization*, by means of the moxa. 5. *Cautérisation objective*, which consists in holding the cautery at some distance from the part to be acted upon by it.

To CAUTERIZE. *Caus'tico adu'rerē*, (F) *Cauteriser*. To apply the cautery. To burn with a cautery.

CAVA, VENA. The hollow or deep-seated vein, (F) *Veine cave*. A name given to the two great veins of the body, which meet at the right auricle of the heart. The *vena cava superior*, *thorac'ica* vel *descen'dens*, is formed by the union of the subclavians; and receives, successively, before its termination at the upper part of the right auricle, the *inferior thyroid*, *right internal mammary*, *superior diaphragmatic*, *azygos*, &c. The *vena cava inferior*, *abdomina'lis* vel *ascen'dens*, arises from the union of the two *primary iliacs*, opposite the fourth or fifth lumbar vertebra, receives the *middle sacral*, the *lumbar*, *right spermatic*, *hepatic*, and *inferior diaphragmatics*, and opens at the posterior and inferior part of the right auricle.

CAVER'NA, *αντρον*, *Antrum*. A *Cavern*. This term has been used for the female organs of generation.

CAVERNOUS, *Caverno'sus*, (F) *Caverneux*. Filled with small cavities or caverns, as a sponge.

CAVERNOUS RESPIRATION, (F.) When a cavity exists in the lungs, and one or more ramifications of the bronchi terminate in it, a loud tubal noise is emitted, provided the

cavity is not filled with fluid, which is called *cavernous respiration*. In this condition the cough is *cavernous* likewise, (F) *Toux Caverneuse*. When the capacity of the cavern is very great, the sound of respiration is like that produced by blowing into a decanter, keeping the mouth at a little distance from the neck. This kind of cavernous respiration has been called *amphoric* from *amphora*, 'a flask,' (F) *Respiration amphorique*.

CAVERNOUS TEXTURE or TISSUE, (F) *Tissu caverneux*. The spongy substance which forms the greater part of the penis and clitoris. It seems to consist of a very complicated lace-work of arteries and veins; and, probably, of nervous filaments, with small fibrous plates, which form, by their decussation, numerous cells, communicating with each other. This spongy texture produces erection, by dilating and swelling on the influx of blood; and probably, also, by virtue of some property inherent in it.

CORPORA CAVERNO'SA of the Penis, *Corpora nervosa*, *C. Ner'vo-spongiosa Penis*, (F) *Corps caverneux*. The corpus cavernosum is a kind of cylindrical sac, separated, through its whole extent, by a vertical, incomplete septum; and forming nearly two-thirds of the Penis. The *corpus cavernosum*, on each side, arises from the ascending portion of the ischium, and terminates obtusely behind the glans. The arteries of the corpora cavernosa come from the internal pudic. See *Helicine Arteries*. Nerves are found on the surface of the outer membrane, but they do not appear to penetrate into the substance.

Müller's researches have led him to infer, that both in man and the horse, the nerves of the corpora cavernosa are made up of branches proceeding from the organic as well as the animal system, whilst the nerves of animal life alone provide the nerves of sensation of the Penis.

The CORPORA CAVERNO'SA CLITOR'IDIS, are two hollow crura, forming the clitoris.

The CORPUS CAVERNO'SUM VAGI'NÆ, *Plexus retiformis*, is a substance, composed of blood-vessels and cells, similar to those of the penis and clitoris, which covers the outer extremity of the vagina, on each side. It serves to contract the entrance to the vagina, during coition.

SINUS CAVERNO'SUS, *Sinus polymorphus*, *seu Receptaculum*, *S. sphenoidalis*, (F) *Sinus caverneux*. The *Cavernous Sinuses* are venous cavities of the dura mater, filled with a multitude of reddish, soft filaments, intersecting each other; and, as it were reticulated. They commence behind the inner part of the sphenoidal fissure, pass backwards, on the sides of the fossa pituitaria, and terminate by opening into a cavity, common to the superior and inferior petrosal sinuses. They receive some meningeal veins, the ophthalmic veins, &c.

CAVIARE, *Kaviac*. A culinary preparation, much used by certain people, and made

on the shores of the Black and Caspian Sea, from the roe of the sturgeon, mixed with salt and other condiments.

CAVIC'ULA or CAVIL'LA, from *cavus*, 'hollow.' The *Ankle*, or space between the malleoli. Some have given this name to the os cuneiforme.

CAVITAS ELLIP'TICA, *Ampul'la*. A dilatation at one end of the semicircular canals of the ear.

CAV'ITY, *Cav'itas*, *Cavum*, *Cœlotes*, *Cœlon*, *Cavea*, *Caver'na*, *Cava'tio*, *κοίλοτης*, *κοίλον*, (F) *Cavité*. Every thing hollow, as the cranium, mouth, nasal fossæ, &c.

The SPLANCH'NIC CAVITIES, (F) *Cavités splanchniques*, are those, which contain the viscera. They are three in number;—the cranium, chest, and abdomen. The cavities of bones, connected with joints or otherwise, are described under their particular denominations.

CAVUM CRANII, *Venter Supre'mus*. The cavity formed by the proper bones of the cranium.

CEBI GALLINÆ. The liver of the fowl, bruised.—Castelli.

CEBIP'ARA. A large Brazilian tree, whose bitter and astringent bark is used in making anti-rheumatic baths and fomentations.

CED'MATA, *κεδματα*. Rheumatic pains of the joints, especially of the hips. A form of gout or rheumatism.

CEDRELE'UM, from *κεδρος*, 'the cedar,' and *ελαιον*, 'oil.' The oil of the cedar.—Pliny.

CE'DRIA, *Ce'drium*, *Cedrinum*, *Cedri lachryma*, *Alkitran*. The oil or resin, which flows from the Cedar of Lebanon. It was supposed to possess great virtues.—Hippocr., Foësius, Scribonius Largus, Dioscorides. It has been supposed to be the same as the pyroligneous acid.

CE'DRINUM VINUM, *Cedar Wine*. A wine, prepared by steeping half a pound of bruised cedar berries in six French pints of sweet wine. It is diuretic and subastringent.

CEDRI'TES, from *κεδρος*, 'the cedar.' A wine, prepared from the resin of cedar and sweet wine. It was formerly employed as a vermifuge, &c.

CELAS'TRUS, *Celas'tus*, *Ceano'thus America'nus*, *New Jersey Tea*. Used by the American Indians, in the same manner as the Lobelia, for the cure of syphilis. It is slightly bitter and somewhat astringent.

CELA'TION (F). *Concealment*. A word used by French medico-legal writers for cases where there has been concealment of pregnancy or delivery.

CE'LE, *κηλη*, a 'tumour, protrusion, or rupture;' a very common suffix, as in Hydrocele, Bubonocèle, &c.

CEL'ERY, (F) *Celeri*. The English name for a variety of the *Apium graveolens*. (q. v.)

CE'LIS, *κηλεις*, 'a spot, a stain.' A *macula* or spot on the skin.

CEL'LULAR, *Cellula'ris*, (F) *Cellulaire*.

Composed of cells or cellules, from *cella* or *cellula*, 'a cell.'

The **CEL'LULAR TISSUE**, *Tela cellularis*, *T. cellulosa*; *reticulated*, *filamentous*, *laminated*, *cribriform*, *porous*, *areolar*, and *mucous Tissue*, *Reticular* or *cellular substance*, *Contextus cellulosis*, (F) *Tissue cellulaire*, *réticulé*, *lamineux*, *cribleux*, *poreux*, *aréolaire*, *muqueux*, &c., is the most common of all the organic tissues. Anatomists do not agree, regarding its intimate structure. It seems to contain cellules or irregular areolæ between the fibres and plates; as well as serum, fat, and the adipous tissue. The cellular tissue or texture unites every part of the body;—the shape of which it determines: and, by its elasticity and contractility, and by the fluid, which it contains in its cells, facilitates the motion of parts on each other.

The cellular tissue has been divided by anatomists into the external, general or common cellular tissue—*textus cellularis intermedius* seu *laxus*, which does not penetrate the organs,—the cellular texture which forms the envelopes of organs—*textus cellularis strictus*, and that which penetrates into the organs, accompanying and enveloping all their parts,—the *textus cellularis stipatus*.

Constituting the basis of all the organs, it has likewise been termed *Textus organicus* seu *parenchymalis*.

The **CEL'LULAR SYSTEM**, is the whole of the cellular tissue of the human body.

The **CEL'LULAR MEMBRANE**, *Membra'na cellulosa*, *M. Cellularis*, *Pannic'ulus adiposus*,—*M. adiposa*, *pinguedinosus*, of some,—is membrane formed of cellular tissue, (F) *Membrane cellulaire*. Generally it is used for the tissue itself.

CEL'LULE, *Cel'lula*, diminutive of *cella*, 'a cavity.' A small cavity, (F) *Cellule*. *Cellules* are the small cavities between the laminae of the cellular tissue, *corpora cavernosa*, &c.

The term **BRONCHIC CELLS**, *Cellulae Bronchicae*, has been given to the *air-cells* of the lungs,—the *vesiculae pulmonales*.

CELOTO'MIA, *Keloto'mia*, from *κηλη*, 'a tumour,' and *τεμνειν*, 'to cut.' An operation, formerly employed for the radical cure of inguinal hernia; and which consisted, principally, in passing a ligature round the hernial sac and spermatic vessels. It necessarily occasioned atrophy and loss of the testicle; and did not secure the patient against the return of the disease. The intestines were of course not included in the ligature.

CELSA. A term, used by Paracelsus for a cutaneous disease, dependant, according to him, on a false or heterogeneous spirit or vapour, concealed under the integuments, and endeavouring to escape. Perhaps the disease was the *Urticaria*. (?)

CENEANGIA, from *κενος*, 'empty,' and *αγγειον*, 'a vessel.' Inanition. Empty state of vessels.—Galen.

CENEMBATE'SIS, from *κενος*, 'empty,' and *εμβαινω*, 'I enter.' Paracentesis. Also, the act of *probing* a wound or cavity, *Melosis*.

CENIPLAM, *Cenigdam*, *Cenigotam*, *Cenipolam*. The name of an instrument, anciently used for opening the head in epilepsy.—Paracel.

CENO'SIS, from *κενος*, 'empty.' *Ine'sis*, *Inethmos*. *Evacuation*. It is sometimes employed synonymously with inanition, and opposed to repletion. *Exinanition*.

CENOTICA, from *κενωσις*, 'evacuation.' Diseases affecting the fluids. Morbid discharges or excess, deficiency or irregularity of such as are natural. The first order, class *Genetica*, of Good.

CENTAUREA BEHEN, *Behen abiad*, *Behen album* or *White Behen*. *Ord. Gentianæ*. *Astringent*.

CENTAUREA BENEDICTA, *Car'duus benedictus*, *Cnicus sylvestris*, *Cnicus benedictus*, *Cardiobot'anum*, *Blessed* or *Holy Thistle*, (F) *Chardon bénit*. *Fam. Cynarocephalæ*. *Sex. Syst. Syngenesia Polygamia frustranea*. A strong decoction of the herb is emetic:—a strong infusion, diaphoretic (?); a light infusion, tonic and stomachic. Dose, gr. xv to 3j of powder.

CENTAUREA CALCITRA'PA, *Calcitra'pa*, *Calcatrep'pola*, *Car'duus solstitia'lis*, *Car'duus stella'tus*, *Jacea ramosis'sima*, *Cacotrib'ulus*, *Calcitrap'pa stella'ta*, *Stella'ta rupi'na*, *Centaurea stella'ta*, *Common Star-Thistle*, *Star-Knapweed*, (F) *Centauree étoilée*, *Chardon étoilé*, *Chausse-trappe*, *Pignerole*. It is possessed of tonic properties, and has been given in intermittents, dyspepsia, &c. It is now not much used.

CENTAUREA CENTAURIUM, *Rhapon'ticum vulga'rè*, *Centaurium magnum*, *Centaurium majus*, *Greater Centaury*, *Centaurium officinale* (F) *Centauree grande*. It is a bitter; and was formerly used as a tonic, especially the root.

CENTAUREA CY'ANUS, *Cy'anus*, *Blue-bottle*, *Corn-flower*, (F) *Blavelle*, *Blavéole*, *Blavérolle*. The flowers were once much used as cordial, tonic, &c. They are now forgotten.

CENTIGRAMME (F), from *centum*, 'a hundred,' and *γραμμα*, 'gramme.' *Centigram'ma*. The hundredth part of a gramme. A centigramme is equal to about the 5th part of a grain (F).

CENTILITRE, *Centili'trum*, from *centum*, 'a hundred,' and *λιτρα*, 'litre,' an ancient Greek measure for liquids:—the hundredth part of a litre—equal to nearly ten grammes or a spoonful. Two and a half drachms. French.

CENTIMETRE, *Centim'etrum*. The hundredth part of a metre—equal to about four lines.

CENTRAL ARTERY OF THE RETINA, *Artéria Centra'lis Ret'inæ*. *Central Artery of Zinn*. This artery is given off

from the arteria ophthalmica, and penetrates the optic nerve a little behind the ball of the eye; running in the axis of the nerve, and spreading out into many small branches upon the inside of the retina. When the nerve is cut across, near the eye, the orifice of the divided artery is observable, which was formerly called *Porus opticus*.

CENTRE OF ACTION. The viscus in which the whole or a great part of any function is executed, and to which several other organs contribute. Thus the vital activity seems to be wholly centred in the stomach, during chymification; in the duodenum, during chylification. In like manner, the uterus becomes a centre of action during gestation.

CENTRE OF FLUXION. The part towards which fluids are particularly attracted. An irritated organ is said to be a centre of fluxion.

CENTRE OF SYMPATHETIC IRRADIATIONS. (F) *Centre d'irradiations sympathiques*. Any organ, which excites, sympathetically, the action of other organs, more or less distant from it; and with which it seems to have no immediate communication.—Marjolin.

CENTRE, EPIGASTRIC. The ganglions and nervous plexuses, formed by the great sympathetic and pneumogastric nerves, in the epigastrium, around the celiac artery; where the impressions received from various parts of the body seem to be centred.

CENTRE, NERVOUS or Nervous Centres. (F) *Centres nerveux*. The organs, whence the nerves originate; as the brain and spinal marrow.

CENTRE, OVAL. *Centrum ova'le*, *C. O. Vieussenii*, *Tegmen'tum ventriculo'rum cer'e'br*. When the two hemispheres of the brain are sliced away, till on a level with the corpus callosum, the medullary part is of an oval shape: hence called *centrum ovalē*. Vieussens supposed all the medullary fibres to issue from that point, and that it was the great dispensatory of the animal spirits.

CENTRE, PHRENIC, or Tendinous Centre of the Diaphragm. *Centrum Phrenicum*, *C. Nerveum*, or *C. Tendinosum*, (F) *Centre phrénique* ou *C. tendineux du Diaphragme*. The central aponeurosis of the diaphragm.

CEPHALÆA, Headache. (F) *Céphalée*. Some use the term synonymously with Cephalalgia. Others, for a periodical headache:—others, again, for a more violent headache than Cephalalgia implies; and others for a chronic headache.

The *Cephalæa spasmodica*, *Cephalalgia spasmodica* or *Sick-headache*, is characterized by partial, spasmodic pain; often shifting from one part of the head to another: chiefly commencing in the morning, with

sickness and faintness. It is extremely apt to recur, notwithstanding every care.

CEPHALÆMATO'MA, from κεφαλη, 'head,' and αἷμα, 'blood.' *Absces'sus Cap'itis sanguineus neonato'rum*, *Cephalophy'ma*. A sanguineous tumour, sometimes developed between the pericranium and the bones of the head of new-born children. Similar tumours are met with occasionally above other bones, and at all periods of existence.

CEPHALAGRA, from κεφαλη, 'the head,' and ἀγρᾶ, 'seizure.' Gout in the head.

CEPHALAGRA'PHIA, from κεφαλη, 'the head,' and γραφή, 'a description.' An anatomical description of the head.

CEPHALAL'GIA, *Cephalop'nia*, *Homonopa'gia*, from κεφαλη, 'the head,' and ἀλγος, 'pain,' *Encephalal'gia*, *Pain in the head*; *headache*, (F) *Cephalalgie*, *Mal à tête*. Every kind of headache, whether symptomatic or idiopathic, is a *cephalalgia*. It is ordinarily symptomatic, and has to be treated accordingly.

CEPHALALO'GIA, from κεφαλη, 'the head,' and λογος, 'a discourse.' An anatomical dissertation on the head.

CEPHALATO'MIA, *Cephalotomia*, from κεφαλη, 'the head,' and τέμνειν, 'to cut.' Anatomy or dissection or opening of the head.

CEPHAL'IC, *Cephal'icus*, *Capita'lis*, from κεφαλη, 'the head.' (F) *Cephalique*. Relating to the head.

The **CEPHAL'IC VEIN**, *Vena Cephal'ica*, *Vena Cap'itis*, (F) *Veine céphalique*, *Veine radiale cutanée* of Chaussier. The great superficial vein at the outer part of the arm and forearm. It begins on the back of the hand, by a number of radicles, which unite into a single trunk, called the *Cephalic of the Thumb*, *Cephal'ica Pol'licis*, (F) *Veine céphalique du pouce*. It ascends along the anterior and outer part of the forearm, where it forms the *superficial radial*. At the fold of the elbow it receives the *median cephalic*, ascends along the outer edge of the biceps, and opens into the axillary vein.

The name, *Cephalic*, was given to it by the ancients, because they thought it had some connexion with the head, and that blood-letting must be performed in this vein, in head affections.

Chaussier calls the internal jugular, *Veine céphalique*, and the primary or common carotid, *Artère céphalique*.

CEPHAL'IC REM'EDIES, *Cephal'ica* vel *Capita'lia reme'dia*, are remedies capable of relieving affections of the head, especially headache:—*Cephalar'tica*.

CEPHALI'NE, κεφαλίνη. The base or root of the tongue.—Gorræus.

CEPHALOM'ETER, *Cephalom'etrum*, from κεφαλη, 'the head,' and μέτρον, 'measure.' An instrument for measuring the different dimensions of the foetal head, during

the process of accouchement. A kind of forceps.

CEPHALON'OSUS, from κεφαλη, 'the head,' and νοσος, 'disease.' This term has been applied to the *Febris Hungarica*, in which the head was much affected. Others have so called,—any cerebral disease or fever.

CEPH'ALO-PHARYNGÆ'US, from κεφαλη, 'the head,' and φάρυγξ, 'the pharynx.' belonging to the head and pharynx. Winslow has given this name to the portion of the *constrictor pharyngis superior*, which is attached, above, to the inferior surface of the basilar process of the os occipitis. The *Cephalo-pharyngeal Aponeurosis* is a thin, fibrous membrane, which is attached to the basilar process, and gives insertion to fibres of the *constrictor superior pharyngis*.

CEPH'ALO-SPINAL, *Ceph'alo-spina'lis*. Belonging to the head and spine.

The **CEPH'ALO-SPINAL FLUID**, is an exhaled fluid, which is found to exist between the encephalon and pia mater; and which seems to have a protecting office, and to keep up a certain degree of pressure on the organ,—at least in the spinal canal.

CEPHALOTRIBE, (F). An instrument invented by Baudelocque, the nephew, for crushing the head of the fœtus in utero, from κεφαλη, 'the head,' and τριβω, 'I bruise.' It consists of a strong forceps, the blades of which are solid: 16 lines broad, and 3 thick. The handles are perforated at their extremity to receive a screw with three threads, the direction of which is very oblique, so as to allow great rapidity of rotation, and the screw is moved by a winch 6 inches long, to increase the force of the pressure. The bones of the head are easily crushed by it.

CERA FLAVA et ALBA, κηρος, *Yellow and White Wax*, (F) *Cire Jaune et Blanche*. An animal substance, prepared by the bee, and by some plants, as the *Ceroxylon* and *Myrica cerifera*. Its colour is yellow, and smell like that of honey, but both are lost by bleaching. It is a demulcent and emollient: is sometimes given in the form of emulsion, in diarrhœa and dysentery, but is chiefly used in cerates and ointments.

CERÆÆ, from κερως, 'a horn,' κεραται. The Cor'nea of the U'terus.—Rufus of Ephesus.

CERAM'ICĒ, CERAMITIS. A sort of earth, used as a Cataplasm in peripneumony.—Hippocr.

CERAS, κερως, 'genitive,' κερως, 'horn,' also, the Cor'nea. Hence *Ceratomyia, Ceratocèle*, &c.

CERASMA, κερασμα, from κεραννυμι, 'to mix:' something mixed. A mixture of hot and cold water. *Metacerasma*.—Gorræus.

CE'RATE, *Cera'tum*, from κηρος, 'wax.' *Cerelæum, Cero'ma, Cero'nium, Cero'tum, Ceratomalag'ma*, (F) *Cérat*. A composition

of wax, oil, or lard, with or without other ingredients.

CERATE, SIMPLE CERATE, *Cera'tum, Cera'tum simplex*, P. L. (F) *Cérat simple*. (Yellow wax 3iv, olive oil 3iv.) It is applied as an emollient to excoriations, &c.

CERATE OR POMMA'TUM FOR THE LIPS, *Cera'tum labia'le rubrum, Pomma'tum ad labia demulcen'da*. Ph. P. (F) *Cérat ou pommade pour les lèvres*, (Wax 9 parts; oil 16 parts;—coloured with alkanet.)

CERATE OF CALAMINE, *Cera'tum Calami'næ, C. Carbona'tis zinci impu'ri, Cera'tum lap'idis Calamina'ris, Cera'tum epulot'icum, Turner's Cérate, Healing Salve*, (F) *Cérat de Pierre Calaminaire, C. de Calamine*. (Olive oil ℥j, yellow wax ℥ss; melt, cool, and, when it begins to set, stir in calamine ℥ss.)

CERATE OF CANTHARIDES, *Cera'tum Canthar'idis, Blister Ointment, Ointment of Spanish Flies, Unguen'tum ad vesicato'ria, Unguen'tum Pul'veris Mel'oes vesicato'rii, Ung. epispas'ticum fortius, Cera'tum Lyttæ*, (F) *Cérat de Cantharides*. (Spermaceti cerate 3vj, cantharides in powder 3j. The cerate being softened by heat, stir in the flies.) It is used to keep open blisters, issues, &c. See Unguentum Lyttæ.

CERA'TUM CETA'CEI, *Cera'tum spermaceti, Cera'tum album, Cera'tum simplex, C. Ceti, Unguen'tum adipoc'e'ræ cet'o'rum, Linimen'tum album, Emplas'trum Sperm'atis Ceti, Spermaceti Cerate*, (F) *Cérat de blanc de baleine*. (Spermaceti 3iv, white wax 3ij, olive oil 3iv.) A good emollient to ulcers, &c.

CERA'TUM GALE'NI, *Cera'tum album, C. refrige'rans Galeni, Unguen'tum cera'tum, U. amygdali'num, U. simplex, Emplas'trum ad fontic'ulos, Oleo-ceratum aquâ subactum, Cold Cream*, (F) *Cérat blanc ou de GALIEN*. (White wax 4 parts; oil of sweet almonds 16 parts; add, when melted, water or rose-water 12 parts. Ph. P.) A mild application to chaps, &c.

CERA'TUM CONI'I, *Cera'tum Cicu'tæ*. (Ung. conii ℥j, cetacei 3ij, ceræ albæ 3iij.) A formula in Bartholomew's Hospital: occasionally applied to cancerous, scrophulous sores, &c.

CERATE, KIRKLAND'S NEUTRAL. (*Diachyl.* 3viiij, olive oil 3iv, prepared chalk 3iv: when nearly cool, add Acet. dist. 3iv, plumb. superacet. 3iij.) A cooling emollient.

CERATE, MARSHALL'S. (Palm oil 3vi, calomel 3j, sugar of lead 3ss, ointment of nitrate of mercury 3ij.)

CERA'TUM PLUMBI SUPERACETA'TIS, *Unguen'tum Cerus'sæ Aceta'tæ, Cerate of superacetate or Sugar of Lead, Ceratum Plumbi Acetatis, Unguen'tum Aceta'tis Plumbi*, (F) *Cérat de suracétate de Plomb*. (Acetate of lead 3ij, white wax 3ij, olive oil ℥ss.) Cooling and astringent.

CERATUM PLUMBI COMPOS'ITUM, *Cera'tum*

Lithar'gyri Aceta'ti Compos'itum, Goulard's Ointment, *Cera'tum subaceta'ti plumbi medica'tum*, *Cera'tum Saturni*, Compound Lead Cerate, (F) *Cérat de Goulard*, *C. de Plomb. composé.* (*Liq. plumb. acet.* ʒiiss, *cera flavæ*, ʒiv, *ol. oliv.* ʒix, *camphoræ* ʒss.) Its virtues are the same as the last.

CERA'TUM RESI'NÆ, *C. Resi'næ flavæ*, *C. cit'rinum*, *Unguen'tum basil'icon flavum*, *Ung. Resi'næ flavæ*, *Ung. Resino'sum*, *Resin Cerate* or *Ointment*, *Yellow Basilicon.* (*Resin. flav.*, *Cera flav.*, aa ʒj, *ol. oliv.* ʒj.) A stimulating application to old ulcers, &c. Digestive.

DR. SMELLOME'S Ointment for the Eyes, consists of finely powdered *verdigris* ʒss, rubbed with oil, and then mixed with an ounce of *ceratum resinæ*.

CERA'TUM SABI'NÆ, *Unguent. Sabinæ*, *Savine Cérate*, (F) *Cérat de Sabine.* (*Fresh Savine leaves*, bruised, ʒj, *yellow wax* ʒss, *hog's lard* ʒij.) Irritative, 'drawing.' Used in the same cases as the Cerate of *Cantharides*.

CERATUM SAPONIS. *Soap Cerate*, (F) *Cérat de Savon.* (*Hard Soap* ʒviiij, *yellow wax* ʒx, *semivitreous oxide of lead* ʒj, *olive oil* ʒj, *vinegar* 1 gallon. Boil together the vinegar and oxide of lead, over a slow fire, stirring constantly till they combine: add the soap, and boil again until the water be evaporated: then mix in the oil and wax previously melted.) It is applied in cases of sprains or fractures.

CERATECTO'MIA, from *κερας*, 'the cornea,' and *εκτομος*, 'cut out.' An incision through the cornea.

CERATI'TIS, from *κερας*, 'the cornea,' and *itis*, 'inflammation.' Inflammation of the cornea, *Ceratodei'tis*, *Ceratomeningi'tis*.

CER'ATO, in composition, in the names of muscles, is used for the cornua of the os hyoides;—as *Cerato-glossus*.

CER'ATOCELE, *Aquila*, *Uva'tio*, *Hernia Cor'neæ*, *Ceratodeoce'le*, from *κερας*, 'horn,' and *κωλη*, 'tumour.' A protrusion of the transparent cornea, or rather of the membrane of the aqueous humour through an opening in the cornea.

CERATOGLOS'SUS or *KERATOGLOS'SUS*, from *κερας*, 'horn,' and *γλωσσα*, 'the tongue.' A muscle, extending from the great cornu of the os hyoides to the base of the tongue. It is a part of the hyoglossus.

CER'ATO-PHARYNGE'US or *KER'ATOPHARYNGE'US*, from *κερας*, a 'horn,' and *φαρυγξ*, 'the pharynx.' The great and small *Cer'ato-pharynge'i* are small fleshy bundles, forming part of the *Hypopharyngeus* of Winslow.

CER'ATO-STAPHYLINUS or *KER'ATO-STAPHYLINUS*, from *κερας*, 'horn,' and *σταφυλη*, 'the uvula.' Some fleshy fibres of the *Thyro-Staphylinus* of Winslow.

CERATO'NIA SIL'IQUA. The *Carob Tree.* *Cera'tium*, *Cera'tia*, *Sil'iqua dulcis*,

Caro'ba Alnabati, the *Sweetpod*, (F) *Caroubier* (*Fruit, Carouge*). This—the fruit of the *Ceratonis siliqua*—is mucilaginous, and employed where mucilages are indicated, in decoction.

CERATONYX'IS or *KERATONYX'IS*, from *κερας*, 'the cornea,' and *νυσσω*, 'I puncture.' An operation by which the crystalline is depressed by means of a needle introduced into the eye through the cornea. Some divide the crystalline into fragments with the needle, and leave them to the action of the absorbents. The operation is as old as the 17th century.

CERATOPLAS'TICE, from *κερας*, 'the cornea,' and *πλαστικός*, 'forming, formative.' The operation for the formation of an artificial cornea. It has not been practised on man.

CERATOTO'MIA, *Ceratectomia*, from *κερας*, 'horn,' 'cornea,' and *τεμνειν*, 'to cut.' *Section of the transparent cornea.* This incision is used in the operation for cataract: to give exit to pus effused in the eye, in case of hypopyon, &c.

CERATOT'OMUS, *Keratot'omus*, *Kerat'omus*, from *κερας*, 'cornea,' and *τεμνειν*, 'to cut.' A name given by Wenzel to his knife for dividing the transparent cornea, in the operation for cataract. Many modifications of the instrument have been made since Wenzel's time.

CERAU'NION, from *κεραυνος*, 'thunder,' 'a thunderbolt.' *Lapis fulmineus.* A kind of stone, which was believed to be formed during thunder; and to be possessed of the power of inducing sleep, and numerous other prophylactic virtues. It was rubbed on the knee, breast, &c. in swellings of those parts.—A. Chiocci.

CERCA'RIA. A genus of agastric, infusory animalcules, one of the most curious of which inhabits the tartar of the teeth. The spermatozoa are presumed by some to belong to this genus.

CER'CHNOS, from *κερχνω*, 'I render hoarse.' A rough voice produced by hoarseness.

CER'CIS, *κερκις*. A sort of pestle for reducing substances to powder. Also, the radius or small bone of the arm.

CERCO'SIS, from *κερκος*, 'a tail.' *Men'tula mulie'bris*, the *Clit'oris*. Some authors have employed the word synonymously with Nymphomania and elongation of the clitoris, and with *Polypus Uteri*, the *Sarco'ma Cerco'sis* of Sauvages.

CEREA'LIA, from *CERES*, 'goddess of corn,' (F) *Céréales* (*Plantes*). The cerealia are gramineous plants, the seed of which serve for the nourishment of man;—as wheat, barley, rye, &c. At times the same term is applied to some of the leguminous plants.

CEREBEL'LA URINA. Urine of a whitish appearance, of the colour of the brain,

from which Paracelsus thought he could distinguish diseases of that organ.

CEREBELLITIS. Inflammation of the cerebellum: a variety of Phrenitis or Encephalitis.

CEREBELLOUS, *Cerebello'sus*, from *cerebellum*, 'the little brain.' (F) *Cérébelleux*. Chaussier has given this name to the vessels of the cerebellum. These are three in number: two of which are *inferior*: the larger, *Inferior Cerebelli*, which arises from the posterior cerebral or vertebral; and the smaller, whose existence is not constant, from the meso-cephalic or basilar:—the third, called, *A. cérébelleuse supérieure* (*superior cerebelli*), is also a branch of the basilar.

CEREBELLOUS AP'OPLEXY, *Apoplex'ia cerebello'sa*: apoplexy of the cerebellum. It is often accompanied with irritation of the genital organs, as erection, &c.

CEREBELLUM. Diminutive of *Cerebrum*, *C. parvum*, *Appen'dix ad cerebrum*, *Cerebrum poste'rius*, *Encran'ion*, *Encra'nis*, *Epenkra'nis*, *Parenceph'alis*, the *Little brain*. (F) *Cervelet*. A portion of the medullary mass, contained in the cavity of the cranium. It fills the lower occipital fossæ, below the tentorium, and embraces the tuber annulare and medulla. It is composed, like the brain, of cortical and medullary substance, arranged in laminæ, as it were, so that, when a section is made of it, it has an arborescent appearance, called *Arbor vitæ*. The cerebellum is divided into two *lobes* or *hemispheres*, or *lateral masses*, and each lobe is again subdivided into *Monticuli* or *Lobules*. In the cerebellum are to be observed the *Crura cerebelli*, the *fourth ventricle*, the *valvula magna cerebri*, the *processus vermiculares*, superior and inferior, &c.

CEREBRAL, *Cerebra'lis*, from *cerebrum*, 'the brain.' Belonging to the brain, and similar to the brain. (F) *Cérébral*.

The **CEREBRAL ARTERIES** are three on each side: the *anterior* or *artery of the corpus callosum*, and the *middle*, *Arte'ria Sylviana*, are furnished by the internal carotid: the *posterior* or *posterior and inferior artery of the brain*, *A. profunda cerebri*, arises from the vertebral. Chaussier calls these arteries *lobaires*, because they correspond with the anterior, middle, and posterior lobes, whilst he calls the trunks, whence they originate, *cerebral*.

The **CEREBRAL NERVES** are those which arise within the cranium, all of which, perhaps, with the exception of the olfactory, arise from the medulla oblongata. See *Nerves*.

In *Pathology*, an affection is called *cerebral*, which specially occupies the brain. *Fièvre cérébrale*, *Cerebral fever*, is a variety in which the head is much affected.

CEREBRUM. The brain. (F) *Cerveau*, *Cervelle*. This term is sometimes applied to the whole of the contents of the cranium: at

others, to the upper portion;—the posterior and inferior being called *cerebellum*. The *brain*, properly so called, extends from the os frontis to the superior occipital fossæ. Anteriorly, it rests on the orbital vaults; behind this, on the middle fossæ of the base of the cranium; and, posteriorly, on the *tentorium cerebello superextensum*. The *upper surface* is divided by a deep median cleft (*Scissure interlobaire*,—Ch.) into two halves, called *hemispheres*, which are united at the base by the *corpus callosum*. At its surface are numerous *convolutions*. The *inferior surface* exhibits, from before to behind, three *lobes*, distinguished into *anterior*, *middle*, and *posterior*. The middle is separated from the anterior, by the *fissure of SYLVIVS*; and from the posterior, by a shallow furrow which corresponds to the upper portion of the *pars petrosa*. Internally, the brain has, on the median line, the *corpus callosum*, *septum lucidum*, *fornix*, *pineal gland*, and *third ventricle*:—and, laterally, the *lateral ventricles*, in which are the *corpora striata*, *optic thalami*, &c.

The brain is contained in a triple envelope. (See *Meninges*). Its texture is pulpy, and varies according to age. Two substances may be distinguished in it—the *medullary*, and *cortical* or *cineritious*. The former is white; and occupies all the interior and base of the brain. The latter is grayish and softer. It is situate particularly at the surface of the organ.

The brain receives several arterial vessels, furnished by the internal carotid and vertebral. Its veins end in the sinuses. It is the material organ of thought:—of the mental and moral manifestations.

According to M. Gall, each part is the special seat of one of those faculties, and the brain and cerebellum, inclusive, are called by him "*the nervous system of the mental faculties*."

The following Table, from Haller and Cuvier, exhibits the proportion between the mass of the brain and that of the body in man and in animals.

A child of 6 years (HALLER)	1-22
lb. ij, 28 1-2 dr.	
Adult (HALLER)	1-35
(From lb. 2, 3 1-2 oz. to lb. 3, 3 3-4 oz. SOEMMERING.)	
Gibbon (<i>Simia</i>)	1-48
Sapagou	from 1-41 to 1-22
Ape	from 1-48 to 1-24
Baboon	from 1-104 to 1-86
Lemur	from 1-84 to 1-61
Bat (<i>Vespertilio Noctula</i>)	1-96
Mole	1-36
Bear	1-265
Hedgehog	1-168
Fox	1-205
Wolf	1-230
Beaver	1-290
Hare	1-228
Rabbit	1-140 to 1-152
Rat	1-76
Mouse	1-43
Wild Boar	1-672

Domestic, Do.	1-512 to 1-412
Elephant (7 or lb. 10)	1-500
Stag	1-290
Roebuck (young)	1-94
Sheep	1-351 to 1-192
Ox	1-750 to 1-860
Calf	1-219
Horse	1-700 to 1-400
Ass	1-154
Dolphin	1-25, 1-36, 1-60, 1-102
Eagle	1-260
Goose	1-360
Cock	1-25
Canary-bird	1-14
Humming-bird	1-11
Turtle	1-5688
Tortoise	1-2240
Frog	1-172
Shark	1-2496
Pike	1-1305
Carp	1-560

The substance of the nervous system has been analyzed by Vauquelin and found to contain, water 80.00; white fatty matter 4.53; red fatty matter, called *cerebrine*, 0.70; osmazome, 1.12; albumen, 7.00; phosphorus, 1.50; sulphur, acid phosphates of potassa, lime, and magnesia, 5.15.

CEREVISIA, *Zythos*, ζυθος, *Liquor Cerevis*, *Vinum hordea'ceum*, *Barley Wine*, *Bira*, *Bryton*, βρυτον, from CERES, 'corn;' whence it is made. *Ale*, *Beer*, *Porter*, (F) *Bière*, *Cervoise*. These fluids are drunk by the inhabitants of many countries, habitually, and in Great Britain more than in others. They are nourishing, but not very easy of digestion. The old dispensaries contain numerous medicated Ales, which are no longer in use.

CERNIN, SAINT, WATERS OF. St. C. is a parish in the diocese of St. Flour, Upper Auvergne, France. The water is a chalybeate. It is called *Eau du Cambon*.

CEROENE, CEROUNE, or CIROUE'NE, *Ceroe'num*, from κηρος, 'wax,' and οινος, 'wine.' A plaster, composed of *yellow wax*, *mutton suet*, *pitch*, *Burgundy pitch*, *Bole Armeniac*, *thus*, and *wine*. It was used as a strengthening plaster. Sometimes it contained neither wax nor wine.

CEROMANTI'A, from κηρος, 'wax,' and μαντεια, 'divination.' The art of foretelling the future, from the figures which melted wax assumes, when suffered to drop on the surface of water.

CEROPIS'SUS, from κηρος, 'wax,' and τισσα, 'pitch.' A depilatory plaster, composed of pitch and wax.

CERUMEN, from cera, 'wax.' *Ceru'men Au'rium*, *Ce'rea*, *Au'rium Sordes*, *Marmora'ta Au'rium*, *Cyp'selē*, *Ceru'minous Humor*, *Cyp'selis*, *Fu'gile*, (F) *Cire des Oreilles*. A name given to the unctuous humour, similar to wax in its physical properties, which is met with in the *meatus auditorius externus*. It is secreted by follicles, situate beneath the membrane lining the meatus. It lubricates the meatus, preserves the suppleness of the lining membrane, prevents the introduction of bodies floating in the atmosphere, and by its

bitterness and unctuousness prevents insects from penetrating.

CERUMINOUS, *Cerumino'sus*, (F) *Cerumineux*. Relating to cerumen.

CERUMINOUS GLANDS OR FOLLICLES, (F) *Glandes cérumineuses ou Follicules Cérumineuses*. Glands or follicles, which secrete the cerumen.

CERUSSEA URINA. Terms used, by Paracelsus, for the urine, when of a dull colour, like cerusse.

CERVICAL, *Cervica'lis*, from *cervix*, 'the back of the neck.' *Trache'lian*. Every thing which concerns the neck, especially the back part.

The **CERVICAL ARTERIES** are three in number: 1. The *ascending, anterior, or superficial*, a branch of the inferior thyroid, distributed to the *scaleni* muscles and integuments. 2. The *transverse* (*Cervico-scapulaire*—Ch.), a branch of the axillary artery, or of the subclavian: distributed to the *levator scapulae*, *trapezius*, &c. 3. The *posterior or profound*, *A. transversa'lis colli* (*Trachelo-cervicale*—Ch.), a branch of the subclavian, distributed to the deep-seated muscles on the anterior and posterior parts of the neck.

The **CERVICAL VEINS** have nearly the same distribution as the arteries.

The **CERVICAL NERVES** are eight in number, on each side; and form the *eight cervical pairs*, which are the first given off from the spinal marrow.

The **CERVICAL PLEXUS**, (*Plexus Trachélosouscutané* Ch.). The nervous net-work, formed by the anterior branches of the three first cervical nerves, above the posterior *scalenus* muscle, and at the outer side of the *pneumogastric* nerve, *carotid* artery, and *jugular* vein.

CERVICAL GANGLIONS. The three ganglions of the great sympathetic. The *cervical glands* or lymphatic glands of the neck are, also, so called.

CERVICAL VERTEBRÆ. The seven first vertebræ of the spine.

CERVICAL LIGAMENTS. These are two in number. 1. The *anterior*, extending from the basilar process of the occipital bone to the anterior part of the first cervical vertebra. 2. The *posterior or supraspinous*, *Ligamentum Nu'chæ*, which extends from the outer occipital protuberance to the spinous process of the seventh cervical vertebra. In animals with large heads it is very strong.

CERVIX, The neck. A neck.

CERVIX U'TERI. The neck of the uterus; also the vagina. The term *cervix* is applied to other parts, as the *cervix* of a bone, or the part between the head and body, &c. See *Collum*.

CERVUS, CERVA, The horn of the *Cervus El'aphus*, called *Cornu*, *Cervi El'aphi Cornu*, *Cornu Cervi'num*, *Hartshorn*, (F) *Corne de cerf*, contains 27 parts of gelatine in the 100. A jelly made from the shavings is emollient and nutritive.

The STAG'S PIZZLE, *Pria'pus Cervi*, was once considered to be aphrodisiac. Dose, ʒj to ʒj in powder.

CERVUS AL'CES, The Elk, (F) *Elan*. The hoof of this animal was anciently used as an anti-epileptic. The animal, it was asserted, was subject to attacks of epilepsy, and always cured them by putting its hoof into the ear. The hoof was also worn as an amulet.

The Cornu Ustum or Burnt Hartshorn has been used as an antacid, but it consists of 57 parts of phosphate, and but one of carbonate, of lime. It is, therefore, not of much use.

CESTRITES, A wine prepared from betony, (κεστρον, 'betony.')

CETA'CEUM, from κητος, 'a whale.' *Album Ceti*, *Adipoc'ra cetosa*, *Spermaceti*, (F) *blanc de Baleine*, *Cétine*, *Adipocire de Baleine*. An inodorous, insipid, white, crystallized, friable, unctuous substance, obtained from the brain of the *Physe'ter Macroceph'alus* or *Spermaceti Whale*, and other varieties of whale. S. g. .9433: melts at 112°. It is demulcent and emollient; has been given in coughs and dysentery, but is mostly used in ointments. Dose, ʒss to ʒiiss rubbed up with sugar or egg.

CHÆROPHYL'LUM, from χαῖρα, 'I rejoice,' and φύλλον, 'a leaf.'

CHÆROPHYL'LUM SYLVES'TRE, *Cicuta'ria*, *Chærophyl'lum Tem'ulum*, *Cerefo'lium sylvestrē*, *Bastard Hemlock*, *Wild Chervil* or *Cow-weed*, (F) *Cerfeuil sauvage*, *Persil d'Ane*. It is a slightly fetid aromatic; but is not used.

CHÆROPHYL'LUM ODORA'TUM, *Scandix Odora'ta*, *Myrrhis Odora'ta*, *Cerefo'lium Hispan'icum*, *Sweet Cic'ely*, (F) *Cerfeuil musqué* ou *d'Espagne*, has the smell of aniseed, and is cultivated on account of its aromatic properties.

CHÆROPHYL'LUM SATI'VUM, *Scandix Cerefo'lium*, *Chærophyl'lum*, *Chærefo'lium*, *Cerefo'lium*, *Garden Chervil*, *Chervil*, (F) *Cerfeuil*, *C. des Jardins*, *C. cultivé*. The juice has been considered aperient and diuretic. It is used only as a pot herb.

CHAFING, *Erythe'ma Intertri'go*, *Paratrim'ma*, from échauffer, 'to heat.' Fret, erosions of the skin, *Attri'ta*, (F) *Echauffemens*, *Ecorchures*. The red excoriations, which occur, in consequence of the friction of parts, or between the folds of the skin, especially in fat or neglected children. Washing with cold water and dusting with hair powder is the best preventive.

CHALAS'TICUS, from χαλασ, 'I relax.' A medicine proper for removing rigidity of the fibres.—Galen. An emollient or relaxant. (q. v.)

CHALA'ZA, CHALA'ZION, CHALA-ZO'SIS, *Porosis*, *Grando*, *Hail*, (F) *Grêle*, *Gravelle*. Certain hard, round, transparent tumours, developed in different parts of the body, more especially in the substance of the eyelids.

CHALYB'EATE, *Chalybeatus*, *Ferrugin'eus*, *Ferrugino'sus*, *Martia'lis*, (F) *Ferrugineux*; from chalybs, 'iron or steel.' Of, or belonging to iron. Any medicine, into which iron enters; as, a *chalybeate mixture*, pills, waters, &c. See Waters, Mineral.

CHALYBS, from Chal'ybes; a people of Pontus who dug iron out of the earth; *A'cies*, *Steel*. The *Protocarburet of Iron*, (F) *Acier*. As a medicine, steel does not differ from iron.

CHAMÆDRY'TES. A wine, in which the *Teu'crium Chamæ'drys* has been infused.

CHAMÆLAI'TES. A wine, impregnated with the *Chamæ'lea* or *Daphne Alpina*.

CHAMÆPITU'NUM VINUM. A wine, in which the leaves of the *Chamæ'pitys*, the *Teu'crium Chamæ'pitys*, have been infused.

CHAMÆRAPH'ANUM, from χαμαί, 'on the ground,' and ραφανος, 'the radish.' So Paulus of Ægina calls the upper part of the root of the *Apium*.

CHAMBER, *Camera*. This term is used in speaking of the eye; in which there are two chambers:—an *anterior* and a *posterior*. (F) *Chambre antérieure et postérieure*. The *anterior* is the space between the cornea and the anterior part of the iris:—the *posterior*, the space between the iris and anterior surface of the crystalline. They are filled with the aqueous humour, and communicate by the opening in the pupil.

CHAMBERLAIN'S RESTOR'ATIVE PILLS. This nostrum, recommended in scrophula, and all impurities of the blood, has been analysed by Dr. Paris, and found to consist of *cinnabar*, *sulphur*, *sulphate of lime*, and a little vegetable matter. Each pill weighs 3 grains.

CHANCER (F). *Ulcus cancro'sum*, *Ulcus'culum cancro'sum*. A sore, which arises from the direct application of the venereal virus; hence it is almost always seated, in men, on the penis. The French use the word *Chancre*, in popular language, for cancerous ulcers, the malignant aphthæ of children, &c. Formerly, the terms *Caroli* and *Caries Pudendo'rum* were used for venereal pustules or sores on the parts of generation.

CHANCREUSE (F). *Cancro'sus*, *Carcino'des*. Having the nature of chancre, or of cancer.

BOUTON CHANCREUX is a small tumour of a cancerous nature, which makes its appearance on the countenance—most frequently on the upper lip—*Noli me tangere*.

CHAOMANTIA. The Alchymists meant, by this word, the art of predicting the future from observation of the air. The word *Chaos* was used by Paracelsus for the air.

CHAPPETONADE (F). *Vomitus rabio'sus*. Vomiting, accompanied with furious delirium, attacking strangers in hot countries.

CHAR'ACTER, χαράκτηρ. (F) *Caractère*. A mark or impression. In Pathology, it is used synonymously with stamp or appearance. We say, "A disease is of an unfavour-

able character." "The prevailing epidemic has a bilious character," &c. In *Mental Philosophy* it means—that which distinguishes one individual from another, as regards his understanding and passions.

CHARA'DRIUS, *χαράδριος*. Ælian thus calls a bird, which was reputed to cure jaundice. The word now means the plover.

CHAR'LATAN, *Circula'tor*, *Circumfor'a'tus*, *Periodeu'tes*, *Pseudomed'icus*, *Agyrta*, *Anacyc'leon*. A Quack, an Empirical Pretender, Empiric. Probably, one who goes from place to place to sell any medicine, to which he attributes marvellous properties. By extension—any individual, who endeavours to deceive the public by passing himself off as more skilful than he really is. According to Ménage, the word comes from *circulatanus*, a corruption of *circulator*.

CHAR'LATANRY, *Agyrtia*, *Banau'sia*, the conduct or action of a charlatan. (F) *Charlatanerie*, *Charlatanisme*. Quackery, Empiricism.

CHARM, *Carmen*, *Canta'tio*, *Incantamentum*. Trick. (F) *Charme*. A sort of magic, or superstitious practice, by which it was believed, that individuals might be struck with sickness or death, or be restored to health.

CHAS (F). *Acūs foramen*. The eye of a needle. Sometimes, this opening is near the point of the instrument, as in the ligature needle.

CHASSE (F). *Manu'brium*. A kind of handle, composed of two movable laminæ of horn, shell, or ivory, united only at the extremity, which holds the blade of the instrument,—as in the common bleeding lancet.

CHASSIE (F). *Lema*, *Lippa*, *Glama*, *Gramia*; the gum of the eye. A sebaceous humour, secreted by the follicles of MEIBOMIUS, which sometimes glues the eyes together.

CHASSIEUX (F). *Lippus*; covered with Chassie—as *Paupières chassieuses*.

CHATEAU-LONDON, WATERS OF. A town, three leagues from Nemours, in France. The waters contain alum and iron.

CHATEAU-SALINS; a town in the department of La Meurthe, France. The waters contain carbonate of lime, sulphates of lime and magnesia, and muriates of magnesia, and soda.

CHATEL-GUYON, MINERAL WATERS OF. A village in France, in the department of Puy-de-Dôme, near which there are five thermal and acidulous springs. Temperature, 86° Fahrenheit.

CHATON (F), 'a husk.' In Pathology, it means a *funda*, or cavity formed by the irregular or *hourglass contraction* of the uterus, in which the placenta is often retained or *enchatonné* after the birth of the child. It is detected by passing the fingers along the cord as far as the part which is contracted, when the placenta will not be discoverable.

The treatment consists in relaxing by a

large dose of an opiate, then passing the fingers along the cord, and gradually dilating the opening through which it passes, until it permits the hand to go through. The placenta must then be grasped and gently withdrawn.

CALCUL CHATONNÉ (F). *Calculus incarcerationatus*, *Encysted Calculus*, *Calcul enkysté*. A urinary calculus, adherent to the inner surface of the bladder, so that it is immovable, and cannot pass to the different parts of that organ. This happens when calculi form in some natural or accidental cavity of the bladder; or when the organ by ulceration, gives rise to fungi, which surround the calculus; or when it is lodged in the orifice of the ureter or urethra.

PLACENTA CHATONNÉ (F). The placenta when retained as above described. See Chaton.

CHATONNEMENT (F). *Incarceratio*, *Chatonnement du placenta*, *Enkystement*. Hourglass contraction of the uterus. See Chaton.

CHATOUILLEMENT (F). This word sometimes means the action of tickling or titillation (*Titillatio*), and, at others, the sensation which gives rise to the action (*Pruritus*), *Itching*.

CHAUDEBOURG, MINERAL WATERS OF. C. is three quarters of a league from Thionville in France. The waters contain iron, sulphate of lime, sulphate of magnesia, and carbonate of lime.

CHAUDÉS-AIGUES, MINERAL WATERS OF. A small town in the department of Cantal, France, where there is a number of saline springs. Temp. 190° Fahrenheit.

CHAUFFOIR (F). *Linteum Calefactorium*. According to the *Académie*, a warmed cloth, used either for the purpose of warming a patient, or to apply to a female recently delivered.

CHAUSSÉ (F). *Chausse d'Hippocrate*, *Manche d'Hippocrate*, *Man'ica Hippoc'ratis*, *Man'ica*, *Hippocrates' Sleeve*. A conical bag, made of flannel, for straining liquids.

CHEESE, *Ca'seus*, *Tyros*, *τυρός*, (F) *Fromage*. An aliment, prepared from the caseous and oleaginous parts of milk. Fresh cheeses owe their chief medical properties to the immediate principle, essentially cheesy, to which the name *ca'seum* or *caseine* has been applied. Those, which have been recently salted, are digested with comparative facility. The flavour of cheese is owing to an ammoniacal caseate. On the whole, cheese itself is not easy of digestion, although it may stimulate the stomach to greater exertion, and thus aid in the digestion of other substances.

CHEE'SY, *Casea'rius*, *Caseo'sus*, *Tyro'des*, (F) *Caseux* ou *Caséux*. Having the nature of cheese.

CHEILI'TIS or CHILI'TIS, from *χαιλος*, 'a lip.' Inflammation of the lip.

CHEILOC'ACE, from *χειλος*, 'a lip,' and *κακος*, 'evil.' *Labrisul'cium*. A disease, characterized, it is said, by swelling, induration, and slight redness of the lips without inflammation, reputed, but without any authority, to be common in England and Scotland, amongst children; the thickness of the upper lip of scrofulous children.

CHEILOCARCINO'MA, from *χειλος*, 'a lip,' and *καρκινωμα*, 'cancer.' Cancer of the lip.

CHEILOPLASTICE, *Chiloplastice*, from *χειλος*, 'a lip,' and *πλαστικός*, 'forming.' The operation for an artificial lip.

CHEIRAN'THUS CHEIRI. The systematic name of the *Common Yellow Wall-flower*, *Vi'ola lu'tea*, *Leucoi'um lu'teum*; *Keyri Cheiri*, (F) *Geroflée ou Violier jaune*. The flowers have been esteemed nervine, narcotic, and deobstruent.

CHEIRAP'SIA. The action of rubbing or scratching, from *χειρ*, 'the hand,' and *απτω*, 'I touch.' A troublesome symptom in the itch.

CHEIRIS'MA, *Cheiris'mus*. The act of touching;—handling. Any manual operation.

CHEIRONO'MIA, *Chirono'mia*, from *χειρονομια*, 'I exercise with the hands.' An exercise, referred to by Hippocrates, which consisted in using the hands, as in our exercise of the dumb-bells.

CHELA, *χελη*. This word has several significations. *Chela*, a forked probe, used for extracting polypi from the nose. *Chelæ*—chaps or cracks on the feet, organs of generation, &c. *Chelæ* likewise means claws, especially those of the crab. See *Cancrorum Chelæ*.

CHELI'DON, *χελιδων*; the hollow at the bend of the arm. *Hirun'do*.

CHELIDO'NIUM MAJUS, *Papa'ver Cornicula'tum*, *P. lu'teum*, *Common Celandine*, *Tetterwort*, (F) *Chélidoine grande*, *L'Eclairé*. Family, *Papaveraceæ*. Sex. Syst. *Polyandria Monogynia*. The root and recent plant have been considered aperient and diuretic. Externally, the juice has been employed in some cutaneous diseases.

CHELIDO'NIUS LAPIS. A name given to stones, which, it was pretended, existed in the stomach of young swallows. They were formerly believed capable of curing epilepsy.

CHELO'NE, *χελωνη*, 'a tortoise.' An instrument for extending a limb; so called because, in its slow motions, it resembled a tortoise.—Oribasius.

CHELO'NION, *Chelo'nium*, from *χελωνη*, 'a tortoise,' from its resembling in shape the shell of that animal. The upper, gibbous part of the back.—Gorræus.

CHELONOPH'AGI, from *χελωνη*, 'the tortoise,' and *φαγω*, 'I eat.' An ancient name for certain tribes, who dwelt on the coasts of the Red Sea, and who lived only on tortoises.—Pliny, Diodorus of Sicily.

CHEL'SEA PEN'SIONER. An empirical remedy for rheumatism is sold under this name. (*Gum guaiac*, 3j, *powdered rhubarb* 3ij, *cream of tartar* 3j, *flowers of sulphur* 3j, *one nutmeg*, finely powdered: made into an electuary with a pound of *clarified honey*.) Dose, two spoonfuls.

CHELTENHAM, MINERAL WATERS OF. C. is a town in Gloucestershire. England, nine miles from Gloucester, and 94 W. of London. Its water is one of the most celebrated natural purgatives in England. It is a saline, acidulous chalybeate, and is much frequented.

ARTIFICIAL CHELTENHAM WATER may be made from *Epsom salt*, gr. xij, *iron filings*, gr. j: *Glauber's salt*, 3iv: *water*, 4 gallons: impregnated with the gas from *marble powder* and *sulphuric acid*, aa 3ij.

CHELTENHAM SALTS. These are sometimes made from the waters; at others, factitiously. The following is a formula. *Sodæ muriat.*, *magnes. sulphat.*, *sodæ sulph.*, aa ʒij: dissolve, filter, evaporate to dryness: then add *Ferri sulph.* 3ss.

CHELYS'CION, *χελυσκιν*, from *χελυς*, 'the chest.' A short, dry cough.—Galen, Hippocr., Foësius.

CHE'ME, CHA'MA, CHE'RAMIS. An ancient measure, equivalent to about two teaspoonfuls.

CHEMO'SIS, from *χημη*, 'an aperture,' or from *χυμος*, 'an humour.' A name given to ophthalmia, when the conjunctiva, surrounding the cornea, forms a high ring, making the cornea seem as it were at the bottom of a well. By some, it is used synonymously with *ophthalmia membranaram*.

CHENAY, MINERAL WATERS OF. C. is a town in France, two leagues from Rheims. The waters are chalybeate.

CHENOC'OPRUS, from *χην*, 'a goose,' and *κοπρος*, 'dung.' The *dung of the goose* is so designated in some old Pharmacopœias. It was formerly employed as a febrifuge and diuretic.

CHENOPO'DIUM AMBROSIOÏ'DES, from *χην*, 'a goose,' and *πους*, 'a foot.' *Botrys Mexica'na*, *Chenopo'dium Mexica'num*, *Botrys Ambrosioï'des Mexica'na*, *Botrys America'na*, *Mexico Tea*, *Spanish Tea*, *Artemis'ia Botrys*, (F) *Anserine*, *Thé du Mexique*. *Ambrosie du Mexique*. The infusion was once drunk as tea. It has been used in paralytic cases.

CHENOPO'DIUM ANTHELMIN'TICUM, *Chenopo'dium*, *Wormseed*, *Wormgoosefoot*, *Jerusalem Oak of America*, (F) *Anserine anthelmin-tique*, *A. vermifuge*. This plant grows plentifully in the United States. It is much used in cases of worms. Dose of the powder, from a tea-spoonful to a table-spoonful or more. The oil, from 8 to 10 drops, is more frequently exhibited. It is as much used in America as the *Semen Santon'ici* with the English.

CHENOPO'DIUM BONUS HENRI'CUS, *Chrysolach'anum*, *Mercuria'lis*, *Bonus Henri'cus*, *Tota bona*, *Lap'athum unctuo'sum*, *Chenopo'dium*, *English Mercury*, *Allgood*, *Angular-leaved goosefoot*, (F) *Ansérine Bon Henri*, *Épinard sauvage*. The leaves are emollient, and have been applied to ulcers, &c. It has also been considered refrigerant and eccoprotic.

CHENOPO'DIUM BOTRYS, *Botrys*, *Botrys vulga'ris*, *Ambro'sia*, *Artemis'ia Chenopo'dium*, *At'riplex odora'ta*, *At'riplex suav'eolens*; the *Jerusalem Oak* (Eng.) (F) *Ansérine Botrys*. It was once given in diseases of the chest, palsy, &c. It is useless.

CHENOPO'DIUM VULVA'RIA, *At'riplex fœt'ida*, *At'riplex ol'ida*, *Vulva'ria*, *Garos'mum*, *Raphex*, *Chenopo'dium Fœt'idum*, *Stinking Orach* or *Goosefoot*, (F) *Vulvaire*, *Arroche puant*, *Anserine fétide*. The fœtid smell has occasioned it to be used as an antispasmodic and nervine.

CHEVAUCHEMENT (F), *Os'sium superposi'tio*, *vel equita'tio*, *Parallax'is*, *Parallagma*. The riding of one bone over another after fracture; giving rise to shortening of the limb.

CHEVESTRE or **CHEVETRE**, *Capis'trum*, from *caput*, 'the head.' A bandage, applied round the head in cases of fracture or luxation of the lower jaw. According to the mode in which it is made, it is called *simple*, *double*, *oblique*, &c.

CHEZANAN'CE, from *χέζω*, 'I go to stool,' and *αναγκη*, 'necessity.' An ointment, composed of honey and alum, and rubbed on the anus to occasion evacuations.—Paulus of Ægina.

CHIA, *Chia terra*, from *Chios*, an island where it was found. A kind of white earth, formerly used in burns.—Galen.

CHIACUM COLLYR'IUM. A collyrium consisting of several drugs and Chian wine.—Paulus of Ægina.

CHIAS'MOS, *Chias'ma*, from *χίαζω*; to form like the letter *χ*. The crucial union of parts,—as the decussation of the optic nerves.

CHIAS'TOS. Same etymon. A bandage, so called because it resembles the letter *χ*.—Oribasius.

CHI'CA. A drink made in Peru with Indian meal, dried in the sun, and fermented with water. Its taste is that of bad cider.

CHIL'BLAIN, *Per'nio*, *Bugan'tia*, *Eryth'e'ma Per'nio*, *Eryth'e'ma à Frig'oré*, *Cheimeth'lon*, from *chill*, 'cold,' and *blain*, 'a pustule,' (F) *Engelure*. An erythematous inflammation of the feet, hands, &c., occasioned by cold. It is very common in youth, not so in the adult or advanced age. It is apt to degenerate into painful, indolent ulcerations, called *Kibes*. Chilblains are prevented by accustoming the parts to exposure; and are treated by stimulant, terebinthinate and balsamic washes, ointments, and liniments.

CHIL'I, MINERAL WATERS OF. The

most celebrated mineral springs of Chili, in South America, are those of Peldehues and Cauquenes. The former are not far from St. Jago. They consist of two springs, one thermal, the other cold. The hot spring is clear, inodorous, and contains soda and carbonic acid. The cold spring contains iron and sulphate of soda. Cauquenes is much resorted to by invalids during the summer. Mineral waters are very common in Chili.

CHI'LON, *Chei'lon*, *Cheili'tis*, from *χαιλος*, 'a lip.' Inflammation of the lips.—Vogel. One who has a thick lip.

CHINESE, MEDICINE OF THE, *Medici'na Sin'ica*. Medicine has been long, but most imperfectly, practised by the Chinese. From their therapeutics we have obtained the old operations of Acupuncture and Moxibustion.

CHIQUE (F). *Pulex pen'etrans*, *Tick*. A small insect in America, which gets under the epidermis, and excites great irritation.

CHIR, or **CHEIR**, *χειρ*, 'the hand,' hence:

CHIRAGRA, from *χειρ*, 'hand,' and *αγγρα*, 'a seizure.' Gout in the hand.

CHI'ROMANCY, *Chiromanti'a*, from *χειρ*, 'the hand,' and *μαντεια*, 'divination,' (F) *Chiromancie*. Art of divining by inspection of the hand.

CHIRO'NIA (from *Chiron*, *Χειρων*, the Centaur, who is said to have discovered its use.) A genus of plants. *Fam. Gentianæ*.

CHIRO'NIA ANGULA'RIS, *American Centaury*, *Sabba'tia Angula'ris*. Every part of this plant is a pure and strong bitter, which property is communicated alike to alcohol and to water. It is used as a tonic and stomachic.

CHIRO'NIA CHILEN'SIS, *Gentia'na Cachenlahuen*, *Cachen-laguen*, *Erythræ'a Chilensis*, *Gentiana Peruviana*. A very bitter plant, indigenous in Chili. It possesses the virtues of the *Chironeæ*. Given in infusion—(3 j, to water O j.)

CHIRO'NIA CENTAU'RIMUM, *Centau'rium minus vulga'rē*, *Centau'rium parvum*, *Gentia'na centau'rium*, *Centau'rium minus*, *Erythræ'a Centau'rium*, *Smaller Centaury*, *Lesser Centaury*, (F) *Centaurée petite*. The tops of the Lesser Centaury, *Centaurii Cacumina*, are aromatic and tonic, and are sometimes employed as such.

CHIRONI'UM, from *χειρων*, 'bad, malignant.' An ulcer difficult of cure:—of a swollen, hard, and callous nature.—Galen. Some have supposed the word to come from *Chiron*, the Centaur; who was unable to cure such ulcers.

CHIROP'ODIST, (F) *Pédicure*. One who treats diseases of the hands and feet, or rather whose profession it is to remove corns and bunions, from *χειρ*, 'the hand,' and *πους*, 'the foot.'

CHIROTHE'CA, from *χειρ*, 'the hand,' and *θηκη*, 'a sheath.' A bandage for the hand; a kind of bandage in which the fingers and hand are enveloped in spiral turns. When

the whole hand and fingers are covered, it is called the *double* or *complete Chirotheca*, *Ch. comple'ta*, *Vinctu'ra omnibus dig'itis*; and when only a finger is covered, the *half* or *incomplete*, *Ch. incomple'ta*, *Vinctu'ra pro uno dig'ito*.

CHIROTRI'BIA, from *χερ*, 'the hand,' and *τριβω*, 'I rub.' Friction with the hand. According to others, dexterity in an art.—Hippocrates, Galen.

CHIRRHEU'MA, *Chirorrheu'ma*, *Rheumatis'mus manus*, from *χερ*, 'the hand,' and *ρευμα*, 'flux.' Rheumatism of the hand.

CHIST; an Arabic word, which signifies the 6th part. The sixth part of the *Congius* or gallon.

CHIUM VINUM, from *Chios*, the island where it was produced; *Chian wine*, used by the physicians of antiquity in cases of defluxions and ophthalmiæ.—Scribonius Largus.

CHLI'AROS, *χλιαρος*, 'tepid.' A name given to slight fevers, in which the heat is not great.—Galen.

CHLIAS'MA, *χλιασμα*, same etymon. A tepid and moist fomentation.—Hippocr.

CHLOAS'MA, *Pityri'asis versic'olor*, *P. nigra*, *Ephelide scorbutique*, *Mucula hepatica*, *Liverspot*, from *χλωος*, 'a greenish-yellow colour.' A cutaneous affection, characterized by one or more broad, irregular shaped patches, of a yellow or yellowish-brown colour, and occurring most frequently on the front of the neck, breast, abdomen, groins, &c. The patches do not generally rise above the surface. There is usually some degree of itching.

The causes are not very evident. Sulphur externally—in any and every form—generally removes it speedily. Should there be difficulty, the external use of the remedy by baths or fumigations may succeed.

CHLO'RINE, from *χλωρος*, 'green.' *Chloro*, *Oxymuriatic Acid Gas*, *Oxygenated Muriatic Acid Gas*, *Dephlogisticated Marine Acid*, *Hal'ogene*, *Mu'rigene*, *Chlorum*. So far as we know, this is an elementary substance. It is a greenish, yellow gas, of a strong suffocating smell, and disagreeable taste: incapable of maintaining combustion and respiration, and very soluble in water. One of its characteristics is, that of destroying, almost immediately, all vegetable and animal colours. It is employed in fumigations, as a powerful disinfecting agent. A very dilute solution has been administered internally, in certain cases of diarrhœa and chronic dysentery. Immersion of the hands and arms in it has often removed itch and other cutaneous affections. It has also been inhaled in a dilute state in the early stage of phthisis, but it is of doubtful efficacy, and is better adapted for chronic bronchitis.

CHLORO'SIS, from *χλωρος*, 'green.' *Pal'lidus Morbus*, *Fædus Vir'ginum color*, *Pal'lidus color virgin'eus*, *Icteri'tia alba*, *Ic'terus albus*, *Morbus virgin'eus*, *Morbus Parthenius*, *Dyspep'sia chloro'sis*,

Icteri'tia alba, *Febris amato'ria*, *Cachex'ia vir'ginum*, *Febris alba*, *Anepithym'ia chloro'sis*, *Green-sickness*, *Chloras'ma*, *Citto'sis*. (F) *Chlorose*, *Pâles-couleurs*. A disease, which affects young females, more particularly those who have not menstruated. It is characterized by a pale, lurid complexion, languor, listlessness, depraved appetite and digestion, palpitation, &c. The disease generally goes off on the occurrence of the menstrual flux: but sometimes it is long before this is established.

On auscultation, a *bellows' sound* has been almost invariably detected over the heart, and a continuous blowing sound in the larger arteries, (especially the carotids and subclavians) reinforced by each systole of the ventricle, and resembling the buzzing of a humming-top, the cooing of doves, whistling of air through a key-hole, &c. (see *Bruit*.) Very similar sounds are heard in the arteries after copious hemorrhage: they seem therefore to coincide with enfeebled circulation.

Tonics are usually required in the treatment: the disease most commonly occurring in those in whom there is considerable torpor of the system.

CHLOROT'IC, *Chlorot'icus*, (F) *Chlorotique*. Affected with chlorosis, or pertaining to chlorosis;—as a *chlorotic female*, *chlorotic symptoms*, &c.

CHOA'CUM EMPLAS'TRUM NIGRUM. A black plaster, mentioned by Celsus, and composed of equal parts of litharge and resin. The litharge was first boiled in oil.

CHOC'OLATE, *Chocola'ta*, *Succola'ta*. Dr. Alston says, that this word is compounded of two Indian words;—*choco*, 'sound,' and *atle*, 'water,' because of the noise made in its preparation. *Chocolatum*. An alimentary paste prepared from the kernels of the *Theobro'ma cacao* or *Cacao*, with sugar, and often aromatics. (See *Cacao*.) The chocolate, thus simply prepared,—as it is met with, indeed, in commerce,—is called in France, *Chocolat de santé*. It is not very easy of digestion.

The *chocolat à la vanille* contains 3 ounces of *vanilla* and 2 of *cinnamon* to 20 pounds of *common chocolate*. The addition of the aromatic renders it somewhat more digestible. Chocolates may likewise be medicated.

CHOL'AGOGUE, *Cholago'gus*, *Chole'gon*, from *χολη*, 'bile,' and *αγα*, 'I expel.' The ancients gave this name to cathartics, which were reputed to cause the flow of bile.—Galen.

CHOLAS, *χολας*, Plur. *χολαδες*. The cavity of the hypocondres; *Cholago*. The intestines.—Homer.

CHOLE and **CHOLOS**, *χολη*, and *χολος*, 'bile,' in composition.—Hence:

CHOLEC'CHYSIS, from *χολη*, 'bile,' and *εκχυσις*, 'effusion.' Effusion of bile.

CHOLECYSTI'TIS, from *χολη*, 'bile,' and *κυστις*, 'bladder.' Inflammation of the gall-bladder.

CHOL'EDOCH, *Chole'dochus*, from *χολη*, 'bile,' and *δοχος*, 'containing or receiving.' The *Ductus choledochus*, *Ductus communis chole'dochus*, (F) *Conduit ou Canal Cholédoque*, is the duct, formed by the union of the hepatic and cystic ducts, and which pours the hepatic and cystic bile into the duodenum.

CHOLEDOG'RAPHY, *Choledogra'phia*, from *χολη*, 'bile,' and *γραφειν*, 'to describe.' A description of what relates to the bile.

CHOLEDOL'OGY, *Choledolo'gia*, from *χολη*, 'bile,' and *λογος*, 'a discourse.' A treatise on the bile.

CHOL'ERA and **CHOL'ERA-MORBUS**, *χολερα*, *Cholerrh'gia*, *Passio choleric*, *Felliflua passio*, *Holera*, from *χολη*, 'bile,' and *ρεω*, 'I flow.' According to others, from *χολαδες*, 'intestines,' or from *χολερα*, 'the gutter of a house to carry off the rain.' A disease, characterized by anxiety, gripings, spasms in the legs and arms, and by vomiting and purging (generally bilious): vomiting and purging are, indeed, the essential symptoms. The disease is most common in hot climates and in temperate climates, during summer. In India, the *spasmodic cholera*, *Asiatic cholera*, *Malignant ch.*, *Cholera asphyxia*, *Trisplanchnia*, *morbus oryzeus*, *Rice disease*, (because supposed by Tytler to be caused by damaged rice,) (F) *Mort de Chien*, is frightful in the rapidity of its progress, the patient sometimes dying in a few hours from the first onset. In temperate climates, common cholera is not usually a disease of much consequence. It requires that the stomach and bowels should be cleared, and afterwards the irritation be allayed by full doses of opium. In the *malignant cholera* of India, bleeding at the outset, without regard to the signs of apparent depression, and large doses of calomel, with opiates, form the great reliance of the practitioner.

CHOLERA INFANTUM. The *Cholera of Children*. A disease, so termed by American physicians. It occurs generally in the middle states of the Union, in June or July, and continues during the hot weather, hence called the 'summer complaint.' The chief symptoms are vomiting, purging of green or yellow matter, slime, or blood, attended with pain or uneasiness: swelling of the abdomen, with some pyrexia, generally. The heat of the weather seems to be the predisposing, if not the exciting, cause. It is a fatal disease in towns; differing little, if at all, from what is vulgarly called the *Watery Gripes* in England. Clearing, gently, the alimentary canal, so as to remove the offending matter, and then exhibiting chalk mixture and laudanum, with counter-irritants, as sinapisms to the abdomen, is the most satisfactory plan of treatment.

CHOL'ERIC, *Choler'icus*. Belonging to cholera morbus or to the bile. The French use the term *Fièvre cholérique* for the fever accompanying cholera.

CHOLERIC TEMPERAMENT is the same as *Bilious Temperament*.

CHOLERINE. A diminutive of cholera. The first stage of epidemic cholera; also, the precursory symptoms of cholera.

CHOLERRH'ANIA, *Cholerrh'o'bia*, from *cholera* and *mania*. A dread of cholera to such an extent that the individual fancies himself affected or threatened by it.

CHOLESTERINE, **CHOLOSTERINA**, from *χολη*, 'bile,' and *στερεος*, 'solid.' An inodorous, insipid substance, in white, shining scales; fusible and crystallizing in radiated fibres, on cooling. Soluble in alcohol. It forms the crystalline part of certain biliary calculi.

CHOL'ICEE, from *χολη*, 'bile,' and *κηλη*, 'tumour.' A swelling, formed by the bile morbidly accumulated in the gall-bladder.

CHOLO'MA, from *χαλος*, 'lame, maimed.' Distortion of a limb: incapacity of moving it. Also, the act of limping.

CHOLO'SIS, from *χαλος*, 'lame.' *Cholotes*, *Cholas'ma*, *Claudica'tion*. Hippocrates employs this word particularly for a lameness of the hand, which renders a person one-handed or *manchot*, (F).

CHOLO'SIS, from *χολη*, 'bile.' M. Alibert includes, under this head, every morbid affection of the liver and spleen.

CHONDROCE'NE'SIA, *Chondrogen'esis*, from *χονδρος*, 'a cartilage,' and *γενεσις*, 'formation.' Formation of cartilage. A morbid conversion of parts into cartilage.

CHONDROGLOS'SUS, from *χονδρος*, 'a cartilage,' and *γλωσσα*, 'the tongue.' A fasciculus of fleshy fibres, passing from the lesser cornu of the os hyoides to the tongue. It forms part of the *HYOGLOSSUS*.

CHONDROG'RAPHY, *Chondrogra'phia*, from *χονδρος*, 'cartilage,' and *γραφειν*, 'description.' A description of cartilages.

CHONDROL'OGY, *Chondrolo'gia*, from *χονδρος*, 'a cartilage,' and *λογος*, 'a discourse.' A treatise on cartilages.

CHONDRO-PHARYNGE'US, from *χονδρος*, 'a cartilage,' and *φαρυγξ*, 'the pharynx.' Fibres of the muscular coat of the pharynx, which arise from the lesser cornua of the os hyoides, and form part of the *Constrictor medius*.

CHONDROS, *χονδρος*, 'a cartilage.' The *Xiphoid cartilage*, in particular.

CHONDROSYNDES'MUS, *χονδροσυνδισμος*, from *χονδρος*, 'a cartilage,' and *συνδισμος*, 'a ligament.' Union of bones, by means of fibro-cartilage.—Galen.

CHONDROT'OMY, *Chondroto'mia*, from *χονδρος*, 'a cartilage,' and *τεμνειν*, 'to cut.' Dissection of cartilages.

CHOPINE, **CHOPINO**, **CHEOPI'NA**. A measure, which contains 16 ounces. A pint measure.

CHORA, *χωρα*, 'region.' Any void space. Also, the orbit of the eye.

CHORDA or **CORDA**. A string of an instrument. It has several meanings. A *tendon*;—the *intestines* (*Chordæ*). Paracelsus calls the *genital organs*, *chordæ*. *Chorda* or *Funiculus Tympani*; a branch of the 7th pair of nerves, which passes through the tympanum, *Nerf Tympanique*—(Ch.) *Corde du Tambour ou du Tympan*. *Chordæ Willis'ii*, *Trabeculæ Willis'ii*, the small fibres, which cross the sinuses of the dura mater: so called from their first describer, Willis. *Chordæ Tendinæ*; the tendinous and cord-like substances, which connect the *columnæ carneæ* of the ventricles of the heart to the valves, &c.

CHORDÆ LONGITUDINÆ LES LANCISII. Two or three longitudinal elevations and lines on the upper surface of the corpus callosum.

CHORDAP'SUS, from *χορδή*, 'intestine,' and *απτειν*, 'to tie.' Constriction or twisting of the intestines.—Celsus. The Colica Ileus.

CHORDEE' or **CORDEE'**, *Chorda Ven'eri*, *Chordæ*, *Chorda'ta Gonorrhœa*. A painful affection of the penis, attending gonorrhœa, and happening chiefly at night. It occurs when the violence of the inflammation is such, that the urethra cannot expand as much as the corpora cavernosa, during erection, and consequently the glans seems painfully drawn downwards. The application of cold water topically and the administration of opium internally palliate it.

CHORE'A, *Chorea Sancti Viti*, from *χορεία*, 'a dance.' Sometimes called *Scelotyr'bē*, *Viti Saltus*, *Salta'tio SANCTI VITI*, *Ballis'mus*, *Convulsio habitua'lis*, *Siph'ita prava*, *Syn'clonus Chorea*, *Myotyr'bē*, and *Choreo'ma'nia*, because the movements resemble dancing. (F) *Chorée*, *Danse de SAINT-WITT*, *Danse de St. GUY*. The characteristics are:—irregular and involuntary motions of one or more limbs, and of the face and trunk. It is a disease, which usually occurs before puberty; and is generally connected with torpor of the system, and of the digestive system in particular. Its duration is long, but it is devoid of danger; although frequently but little under the control of medicine. The spasms do not continue during sleep. The indications of treatment are:—to strengthen the general system, and stimulate the intestinal canal. Purgatives, once or twice a week, and chalybeates,—with appropriate regimen—will fulfil these.

CHORE'GIA, from *χορος*, 'a troop of dancers and singers,' and *αγω*, 'I lead.' Hippocrates uses this term for the whole of the apparatus, necessary for a physician or surgeon.

CHORIOIDEI'TIS, *Chorioidei'tis*, *Chorioidi'tis*, from *χοριοειδης*, 'the choroid,' and *itis*. Inflammation of the choroid coat of the eye.

CHORION, *χοριον*, 'skin,' from *χραειν*, 'to contain,' 'include.' *Camis'ia Fœtus*, the *chemise* or shirt of the fœtus in utero. A thin, transparent membrane, which surrounds the

fœtus in utero on every side. It is exterior to the amnion.

CHORION also means the true skin. See **CUTIS**.

CHOROID, *Chorioideus*, *Choroï'des*, from *χοριον*, 'the chorion,' and *ειδος*, 'shape,' 'resemblance.' Several parts are so called, which resemble the chorion, in the multitude of their vessels.

MEMBRANA or **TUNICA CHOROIDEA**, or simply the *Choroid*. (F) *Membrane choroïde*, *Choroïde*. A thin membrane, of a very dark colour, which lines the sclerotica, internally. The part, behind the iris, is called *Uvea*. It is situate between the sclerotica and retine, has an opening, posteriorly, for the passage of the optic nerve; and terminates, anteriorly, at the great circumference of the iris, where it is continuous with the ciliary processes. The internal surface of the membrane is covered with a dark pigment, called *Pigmentum nigrum*, *Æthiops animal*, (F) *Enduit choroïdien*. Its use seems to be, to absorb the rays of light after they have traversed the retina.

PLEXUS CHOROÏDES, *Plexus chorioideus*, *Choroid Plexus*. Two membranous and vascular duplicatures of the pia mater, situate in the lateral ventricles. They are fixed to the *Tela choroïdea* by one edge, and are loose and floating at the other.

TELA CHOROIDEA, (F) *Toile choroïdienne*. A kind of vasculo-membranous prolongation of the pia mater, which lines the lower surface of the fornix, united with the corpus callosum. It is stretched above the third ventricle, and covers the posterior commissure and corpora quadrigemina. Anteriorly, the tela choroïdea is continuous with the plexus choroides.

VENÆ CHOROIDEÆ, *Venæ Gale'ni*, (F) *Veinès choroïdiennes*. Two veins, which creep along the tela choroïdea; and into which almost all those of the lateral ventricles, of the upper part of the cerebellum, of the pineal gland, and the corpora quadrigemina open. The Venæ Galeni open into the *sinus quartus* or *fourth sinus*.

CHRISIS, *χρῖσις*, from *χρίω*, 'I anoint.' The action of anointing.

CHRISTI MANUS. Troches, prepared from refined sugar boiled in rose-water, with or without prepared pearls.

CHRISTOS, *χριστος*, from *χρίω*, 'I anoint.' Any medicine applied under the form of liniment or ointment.

CHROMATOG'ENOUS; from *χρῶμα*, 'colour,' and *γενναω*, 'I make.'

CHROMATOG'ENOUS APPA'RATUS. A particular apparatus for producing the colouring matter of the skin, composed of a glandular or secreting parenchyma, situate a little below the papillæ, and presenting special excretory ducts, which pour out the colouring matter on the surface of the true skin.—Breschet.

CHROMOP'SIA, *Chromopia*, *visus colora'*.

tus, from *χρῶμα*, 'colour,' and *οψις*, 'vision.' A state of vision in which a coloured impression is made on the retina. Said to be occasionally observed in jaundice.

CHRONIC, *Chron'icus*, *Chro'nus*, *Poly-chro'nus*, from *χρῶνος*, 'time.' Of long duration.

CHRONIC DISEASES, *Morbi chronici*, (F) *Maladies Chroniques*, *Macronos'ia*, *Macro'sia*, are those whose duration is long, and whose symptoms proceed slowly. The antithesis to *chronic* is *Acute*. (q. v.)

CHRYSAN'THEMUM LEUCAN'THEMUM, from *χρυσος*, 'gold,' and *ανθος*, 'a flower.' The *Ox-eye daisy*, *Maudlin-Wort*, *Bellis major*, *Bupthal'mum majus*, *Leucan'themum vulga're*, *Bellidior'des*, *Consolida media*, *Oculus Bovis*, (F) *Chrysanthème*, *Chrysène*, *Grande Marguerite des prés*. The flowers and herb are slightly acrid; and were once used in pulmonary diseases.

CHRYSE, from *χρυσος*, 'gold.' The name of a yellow plaster, described by Paulus of Ægina, and composed of thus, alum, lead, colophany, resin, oil, and orpiment, boiled in vinegar.

CHRYSOL'ITHUS, *Chrys'olite*, from *χρυσος*, 'gold,' and *λιθος*, 'stone.' A precious stone, of a golden colour, regarded, by the ancients as cardiac, cephalic, &c.

CHRYSOPHYLLUM CAÏNITO, *Caï'nito*, *Siderox'ylon*, *Broad-leaved Star-apple*. A tree of the Antilles, which produces one of the best fruits of the country. There are several varieties of it.

CHU, *Choa* or *Chus*, *χυσ*, *Chocus*. A liquid measure amongst the Greeks, answering to the *Congius* of the Romans, and containing six sextarii, or 12 Attic cotylæ, or nine pints.—Galen.

CHYLE, *Chylus*, *χυλος*, *Succus nutritius*, from *χυναι*, 'I flow.' The word, in Hippocrates, means *Tisane* or *Decoction of Barley*, *Chyla'rion*, *χυλαριον*. Galen first used it in its present sense;—i. e. for a nutritive fluid, extracted from the food by intestinal absorption; after the food had been subjected to the action of the digestive organs. It is of a whitish appearance;—is separated from the chyme in the duodenum, and the rest of the small intestines: and is absorbed by the chyloferous vessels, which arise at the mucous surface of the intestine. Along these it passes through the mesenteric glands to the thoracic duct, and is finally poured into the left subclavian. It is composed, like the blood, of a coagulable part and of serum.

CHYLIFEROUS VESSELS, *Vasa chylifera*, *Venæ lacteæ*, *Vasa lactea*. The *Lacteals*, (F) *Vaisseaux chylifères*, *V. lactés*. Vessels which convey the chyle from the intestines to the thoracic duct.

CHYLIFICA'TION, *Chylifica'tio*, *Chylo'sis*, *Chylopoie'sis*, from *chylus*, 'chyle,' and *facere*, 'to make.' Formation of chyle by the digestive processes.

CHYLOG'RAPHY, from *χυλος*, 'chyle,' and *γραφη*, 'a description.' A description of the anatomy, &c. of the chyloferous vessels, &c.

CHYLOPOIET'IC, *Chylopoiet'icus*, from *χυλος*, 'chyle,' and *ποιω*, 'I make.' Any thing connected with the formation of chyle. Chiefly applied to the organs immediately concerned in it; as the stomach, intestines, omenta, and mesentery. *Assistant Chylopoietic*:—those viscera which aid in the formation of chyle, as the liver and pancreas.

CHYLOSTAG'MA DIAPHORET'ICUM MINDERER'II. A compound prepared by distilling the *theriaca* of Andromachus, the *mithridate* of Damocrates, and other alexipharmics, &c. It is nearly the same preparation as the *Aqua Theriaca'lis Bezoar'dica*.

CHYLOTHO'RAX, *Pleurorrhœ'a chylo'sa*, *Chylorrhœ'a Pectoris*, *Hydrothorax chylosus*; from *χυλος*, 'chyle,' and *θωραξ*, 'the chest.' Effusion of chyle into the chest, owing to the rupture of a chyloferous vessel.

CHYLOUS or **CHYLAR**, *Chylo'sus* vel *Chyla'ris*, (F) *Chyleux*, *Chylaire*. Relating to the chyle; or having some analogy with that fluid.

CHYLUR'IA, *Galactu'ria*, *Diab'etes lactea*, *Pyu'ria lactea*, *P. Chylo'sa*, *Cœ'liaca urinā'lis*, *C. rena'lis*, *Chylorrhœ'a urinā'lis*, *Ch. rena'lis*, from *χυλος*, 'chyle,' and *ουρον*, 'urine.' A discharge of milky urine, without any apparent lesion of the kidneys or bladder.

CHYME, *Chymus*, *χυμος*, 'juice,' from *χυναι*, 'I flow.' A kind of grayish or homogeneous pulp, formed by the food, after it has been, for some time, in the stomach. It continues in the state of chyme as far as the biliary and pancreatic ducts, which open into the duodenum; where the conversion into chyle occurs, which is absorbed by the chyloferous vessels:—the excrementitious portion of the food traversing the large intestine to be evacuated *per anum*. Castelli asserts, that *Chyme* and *Chyle* were used in an inverse sense, by the ancients, from that accepted at present.

CHYMIA'TER or **CHIMIA'TER**, from *χυμια*, 'chymistry,' and *ιατρος*, 'a physician.' *Iatro-chymicus*. A chemical physician.

CHYMIATRI'A or **CHIMIATRI'A**, *Iatro-chym'ia*, *Ars Chymiat'rica*, from *χυμια*, 'chymistry,' and *ιατρεια*, 'cure.' The art of curing by chemical means.

CHYM'ICAL. A medicine, formed by the aid of chymistry, in contradistinction to *Galenical*.

CHYMIFICA'TION, *Chymifica'tio*, from *χυμος*, 'juice,' and *facere*, 'to make.' Formation of chyme. *Chymo'sis*.

CHYM'IST or **CHEM'IST**, *Chymicophan'ta*, *Chym'icus*, (F) *Chimiste* or *Chymiste*. One acquainted with chymistry. In Great Britain it has, also, the signification of "one who sells chemicals."

CHYM'ISTRY or **CHEM'ISTRY**, *Chy-*

mia, *Chimia*, *Chemeuticē*, *Philosoph'ia per ignem*, *Spagyr'ia*, *Pyrotech'nia*, *Pyroso'phia*, *Ars hermetica*, *Archima'gia* *Ars magorum*, *Ars separato'ria*, *Ars spagir'ica*; from *χυμος*, 'juice,' or from Arab. *chema*, 'a secret,' (F) *Chimie* or *Chymie*. A branch of the natural sciences, whose object is to investigate the principles of bodies;—to examine the properties, enjoyed by the different compounds, produced by the union of those principles; and to study the force or power, by virtue of which every combination is effected. It investigates the action between the integrant molecules or atoms of bodies.

ANIMAL CHYM'ISTRY is the chymistry of substances, afforded by the dead or living animal body. This branch of chymistry has been farther subdivided into *physiological*, when it considers the changes produced in animal substances by the action of life:—*pathological*, when it regards those produced by organic or other diseases. *Anthropochymy* is the chymistry of the human body.

Chymistry is called THERAPEUTICAL or PHARMACEUTICAL, when it is engaged in the analysis of simple medicines; in improving the prescribing and preparing of chemical and galenical medicines; in the means of preparing them, and detecting adulterations, &c. HYGIEN'IC CHYM'ISTRY is that, which is applied to the means of rendering habitations healthy, of analyzing the air we breathe, preventing the occurrence of disease, pointing out healthy aliments, and appreciating the influence of professions, &c. on the health of man. All these different subdivisions, with vegetable chymistry, are, at times, included under the head of MEDICAL CHYM'ISTRY: at others, the term comprehends only the *Animal Vegetable*, and *Pharmaceutical* subdivisions.

A knowledge of chymistry is of great importance to the physician. Many of the functions are of a chemical nature: many diseases require a chemical mode of treatment: and without an acquaintance with it, two or more substances might be given in combination, which, by forming a chemical union, might give rise to other compounds, possessing very different virtues from the components taken singly, and thus the prescriber be disappointed in the results.

CHYTLEN, RADIX. A cylindrical root, bitter and inodorous, brought from China. It is held by the Chinese to be stomachic.—Murray.

CHYT'LON, *χυτλον*, from *χαιω*, 'I pour out.' A liquid formerly used for rubbing the body after bathing.

CIBA'RUS PANIS. 'Coarse Bread.' Bread, made of second flour.—Celsus.

CIBA'TIO. The taking of food, *Trophe*, *τροφή*. In Pharmacy, it is the same as *Incorporation*.

CICATRIC'ULA. Diminutive of *Cicat'rix*. A small cicatrix. The term is, also, applied to a small white spot, called the

tread, observable at the surface of a fecundated egg.

CICATRISAN'TIA, *Epulotica*, *Synulot'ica*, *Apulot'ica*, *Ulot'ica*. Remedies formerly considered to be capable of producing cicatrization.

CICA'TRIX, *Cæca'trix*, *ulē*, *ελλή*, from *cæcare*, 'to conceal,' because it conceals the wound, (F) *Cicatrice*. The union of parts, which have been divided. A scar or formation, of a reddish colour, afterwards whitish, and more or less thick, which takes place at the surface of wounds or ulcers after their cure. A cicatrix may vary much in shape, consistence, and thickness. The cicatrix of a bone is called *Callus*. A *vic'ious cicat'rix* (F) *Cicatrice vicieuse*, is one which interferes with the action of the parts on which it occurs.

The scars, which occur after small-pox, are called *Pits* or *Pockmarks*, (F) *Coutures par la petite vérole*.

CICATRIZA'TION, *Cicatriza'tio*, *Epulo'sis*. The process by which a cicatrix is formed. Every tissue, except the nails, epidermis, hair, and enamel, is probably, capable of cicatrization.

CICER ARIETINUM. The *Cicer* plant. *Erebin'thus*, (F) *Cicerole*, *Pois Chiche*. The seeds are ground into flour, and used as bread in some countries.

CICERA TAR'TARI. Small pills of turpentine and cream of tartar—of the size of a vetch or *cicer*.

CICHORIUM ENDIV'IA The systematic name of the *Endive*. *Endiv'ia*, *Endi'va*, *In'tubum*, *In'tybum* (*Antiq*), *Scariola*, *In'tybus hortens'is*, (F) *Chicorée des Jardins*, *Scariole*. Family, *Cichoraceæ*. Sex. Syst. Syngenesia Polygamia æqualis. It is a common pot herb, and is eaten as salad.

CICHORIUM IN'TYBUS, *Seris*, *In'tubum erraticum*. The systematic name of the *Wild Succory*, *Wild Cich'ory*, *Cich'ory*, *Wild Endive*, *Ambuleia*, *Heliotrop'ion*, *Catanan'cē*, *Cichoreum*, (F) *Chicorée sauvage*. It is bitter, and was once used as a tonic. The root, roasted and ground, is often used instead of, or mixed with, coffee.

CICINDE'LA, *Lampyrus*, *λαμπυρίς*, *Noctilu'ca*, *Nited'ula*. The *Glow-worm*, (F) *Verluisant*. This insect was once thought anodyne and lithontriptic.

CICON'GIUS; an ancient measure, containing 12 pints.

CICUTA AQUATICA, *Cicu'ta viro'sa*, *Cicuta'ria aquat'ica*, *Water Hemlock*, *Cowbane*, (F) *Cigue aquatique ou vireuse*. Family *Umbelliferae*. Sex. Syst. Pentandria Digynia. A violent poison, often eaten by mistake for the *Wild Smallage*, *Apium Graveolens*. It produces tremors, vertigo, burning at the stomach, and all the symptoms occasioned by the *Narcotico-Acid* class of poisons.

CIDER, *Poma'ceum*, (F) *Cidre*. This

word is said to have been, formerly, written *sidre*, and to have come from *Sicera*, σικερα, which signifies any kind of fermented liquor other than wine. It is made from the juice of apples, and, when good, is a wholesome drink.

CIGNUS; an ancient measure, which contained about two drachms.

CILIA, βλεφαριδαι. The *eyelashes*. The *hairs on each eyelid*, (F) *Cils*. Their use seems to be, to prevent the entrance into the eye of light bodies flying in the atmosphere; and to diminish, in certain cases, the intensity of light. Also the *tarsi*, ταρσοι. Also a peculiar sort of moving organs, resembling small hairs, which are visible with the microscope in many animals. These organs are found on parts of the body, which are habitually in contact with water, or other more or less fluid matters, and produce motion in these fluids, impelling them along the surface of the parts.

Cilia have been found to exist in all vertebrated animals except fishes, having been discovered on the respiratory and uterine mucous membranes of mammalia, birds, and reptiles.

The terms "vibratory motion" and "ciliary motion" have been used to express the appearance produced by the moving cilia; and it is probable, that this motion is concerned in the progression of fluids along the mucous membranes.

As yet, the motion has been observed only in the direction of the outlets of canals.

CIL'IARY, *Cilia'ris*. Relating to the eyelashes, or to *cilia*, (F) *Ciliaire*. This epithet has, also, been applied to different parts, which enter into the structure of the eye; from the resemblance between some of them (*the ciliary processes*) and the eyelashes.

CORPUS CILIA'RE, *Cil'iary Body*, (F) *Corps ciliaire*. A ring, surrounding the crystalline in the manner of a crown; placed behind the iris and the ciliary circle. It resembles the disk of a radiated flower, and is formed by the union of the ciliary processes.

CIL'IARY PROC'ESSES, *Proces'sus cilia' res*, *Rad'ii cilia' res*, *Rayons sous-iriens*—(Ch.), (F) *Proces ciliaires*. Triangular folds, sixty or eighty in number, placed at the side of each other, and radiating, so as to resemble the disk of a radiated flower. They are lodged in depressions at the anterior part of the vitreous humour. The uses of these processes are not known.

CIL'IARY LIGAMENT, or *C. Circle*, *Ligamentum cilia're*, *Ann'ulus cilia'ris*, *A. cellulo'sus*, *Com'missure of the Uvea*, *Commissure de la Choroide*,—(Ch.), (F) *Ligament ou Cercle ciliaire*, *Cercle de la Choroide*, *Ceinture blanche de la Choroide*. A species of grayish ring, of a pulpy consistence, situate between the choroid, iris, and sclerotica. It seems to be nothing more than cellular tissue.

CIL'IARY AR'TERIES, *Arte'riæ cilia' res*, (F) *Artères ciliaires*. These are furnished by the ophthalmic artery. They are distinguished

into 1. *Short or posterior* (*Art. uvæales*,—Chauss.), 30 or 40 in number, which are distributed to the ciliary processes. 2. *Long* (*Art. Iriennes* of Chauss.), two in number, which, by the anastomoses of their branches, form two arterial circles at the anterior surface of the iris: and, 3. The *anterior*, *Arte'riæ cilia' res anterio' res* of Haller, the number of which is variable. These pierce the sclerotic a few lines from its union with the cornea; and are principally distributed to the iris.

The **CIL'IARY STRIÆ** are numerous, pale, radiated striæ, in the posterior portion of the *Corpus ciliare*, but so covered by the *Pigmentum nigrum*, as not to be distinctly seen till the paint is removed. The ciliary processes are formed by these striæ.

ZO'NULA CILIA'RIS vel *Membran'ula Córónæ Cilia'ris*. Under the corpus ciliare, the capsule of the vitreous humour sends off an external lamina, which accompanies the retina, and is inserted, with it, into the forepart of the capsule of the lens, a little before its anterior edge. This is the *Zonula ciliaris*. It is of a striated appearance and circular form, and assists in fixing the lens to the vitreous humour.

The **CIL'IARY VEINS**, (F) *Veines ciliaires*, follow nearly the same course as the arteries. In the choroid they are so tortuous, that they have received the name *Vasa vortico'sa*. They open into the ophthalmic vein.

CIL'IARY NERVES (*Nerfs Iriens*,—Chauss.) (F) *Nerfs ciliaires*. These are 12 or 16 in number. They arise from the nasal nerve, and particularly from the anterior part of the ophthalmic ganglion. They unite in two fasciculi, which pass around the optic nerve, and pierce the sclerotica near the entrance of that nerve into the eye. They are lost in the ciliary ligament.

CIL'IARY OR TARSAL MARGIN of the eyelids; (F) *Bord ciliaire*, the edge in which the cilia or eyelashes are situate.

CIL'IARY MOTION. See **CIL'IA**.

CIL'IARY MUSCLE, *Mus'culus cilia'ris*. The part of the orbicularis palpebrarum in the vicinity of the ciliary margin.

CILLO. A name given by some authors to those, whose upper eyelid is perpetually tremulous. A trembling, which in some cases is called *Life's blood*. "To have life's blood in the eye," in other words, is to have this affection. Vogel calls it *Cillo'sis*.

CIMEX, *Koris*, *xogis*, *Cimex lectula'rius*. The *Wall* or *House* or *Bed Bug* or *Chinche*. (F) *Punaise*. Six or seven of these, given internally, are said to have prevented ague! There is scarcely any thing, which is sufficiently disgusting, that has not been exhibited for this purpose, and with more or less success. The bug has also been esteemed emmenagogue.

CIMO'LIA PURPURES'CENS, *Terra Saponaria*, *Terra Fullo'nica*. *Fuller's Earth*. A compact, bolar earth, employed in the

arts. Used at times as a cooling application to inflamed breasts, legs, &c.

CIMO'LIA TERRA, *Cimo'lia alba*, *Smectis*, *Smectris*, *Cimo'los*, from *Κίμωλος*, an island in the Cretan Sea, where it is procured. It was formerly used as an astringent, &c.—Scribonius Largus, Pliny. Probably the same as the last.

CINCHO'NA. So called from the Spanish Viceroy's Lady, the Countess de Cinchon, who was cured of fever by it at Lima, about 1638. Called also *Cortex* or *Pulvis Jesuiticus*, *Jesuit's Bark* or *Powder*, *Cortex Patrum*, because it was introduced into Europe by the Jesuits; and also *Pulvis Comitissæ* or the *Countess's Powder*, and *Cardinal del Lugo's Powder*, *Cortex Cardina'lis de Lugo*, because he introduced it at Rome. It is the pharmacopœial name of several kinds of barks from various species of the *Cinchona*. *Nat. Order*, *Cinchonaceæ*. *Sex. Syst.* *Pentandria Monogynia*. Called, also, *Cortex*, *Bark*, *Peru'vian Bark*, *English Remedy*, *Cortex Chinæ*, *Cortex Chinæ Regius*, *China*, *Chinchi'na*, *Palos de Calentura*, *Kina Kina* (*Bark of Barks*), *Kinki'na*, *Cina Cina*, *Quina Quina*, *Quinqu'na*, *Magnum Dei donum*. (F) *Quinquina*.

CINCHONÆ LANCIFO'LIÆ CORTEX, *Cortex Peruvia'nus*, *Cortex pal'idus*, *Cinchona officina'lis*, *Cortex commu'nis*, *Cinchona pal'lida*. —*Pale Bark*, *Loxa Bark*, *Crown Bark*. (F) *Quinquina gris de Loxa*, *Quinquina Orangé*. Its odour is aromatic; taste pleasant, bitter, and astringent. The pieces are rolled in double or single quills. Epidermis brown, cracked; fracture resinous. Internally of a cinnamon colour. Its active principle is the *Cinchonine*.

CINCHONÆ CORDIFO'LIÆ CORTEX, *Cortex flavus*, *Cinchonæ officina'lis cortex flavus*, *Yellow Bark*, *Calisaya Bark*. (F) *Quinquina jaune ou jaune royal*, *Calasaya*. Odour aromatic; taste strong, bitter, astringent. Not rolled; often without the epidermis, which is very thick and inert: light, friable; fracture fibrous. Active principle *Quinine*.

CINCHONÆ OBLONGIFO'LIÆ CORTEX, *Cortex ruber*, *Cinchonæ officina'lis*, *Cortex ruber*. *Red Bark*, (F) *Quinquina rouge*. Odour and taste the same as the pale, but more intense: in large flat pieces, solid, heavy, dry: fracture short and smooth; of a deep brownish-red colour. Although this variety of bark is assigned to the *Cinchona oblongifolia* by some, it would seem, that nothing is certainly known as to its source. Active principles, *Cinchonine* and *Quinine*.

CINCHO'NÆ CARIBÆÆ CORTEX, *Exoste'ma Caribæ'a*, *C. Caribæan Bark*; the *Saint Lucia Bark*, (F) *Ecorce de Saint Lucie*, *Quinquina Piton*, and the *Pitaya Bark*, *Quinquina bicolor*, from an *exostema* (?) or from the *Strychnos pseudoquina* (?), are useful substitutes for the *cinchona* of Peru.

All these barks are bitter, astringent, tonic,

and eminently febrifuge. The yellow bark, is, at least, equal to any of the others, although the red contains more active principle. The discovery of their active principles is one of the most important gifts of modern chymistry. Still, in pernicious intermittents, the bark, in substance, is often demanded. It is employed in every disease in which there is deficient tone: but in cases where the stomach is much debilitated, the powder had better be avoided, in consequence of the woody fibre, which might disagree. Externally it is used in enemata, gargles, &c., and in gangrenous ulcerations. When it excites nausea, an aromatic may be added to it: if purging, opium; if costiveness, rhubarb, &c. Dose, 3ss to 3j or more.

The **ESSENTIAL SALT OF BARK**, as it is called, is an extract, prepared by macerating the bruised substance of bark in cold water, and submitting the infusion to a very slow evaporation.

CINCH'ONINE, *Cinchoni'na*, *Cinchonin*, *Cincho'nia*. The active principle of the *Cincho'na lancifo'lia*. An organic, crystalline alkali; of a white colour, and bitter, slightly astringent taste: very soluble in alcohol and ether, but almost insoluble in water.

The *sulphate of Cinchonine*, which is formed directly from the cinchonine, is soluble in water and alcohol. The action of the sulphate of cinchonine is similar to that of the sulphate of quinine; but it is less energetic, and consequently requires to be given in a stronger dose.

CINC'LISIS, *κίγκλισις*, *Cinclis'mus*, agitation; rapid and frequent motion. The movement of the thorax in dyspnœa.—Hippocr. It has been used, also, synonymously with *Nictation*, (q. v.)

CINE'MA, *Cine'sis*, from *κινέω*, 'I move.' Motion.

CINERI'TIOUS, *Cinereus*, from *ci'neres*, 'ashes;' (F) *Cendré*, of the colour of ashes. The *cortical substance* of the brain has, by some, been so called.

CINETH'MICS, from *κινέω*, 'I move.' The science of movements in general.

CINET'ICA. Same etymon. Diseases affecting the muscles, and characterized by irregular action of the muscles or muscular fibres, commonly denominated *Spasm*. The 3d order in the class *Neurotica* of Good.

CINGULUM, *Zone*, *ζώνη*, from *Cingo*, 'I bind.' (F) *Ceinture*. The part of the body, situate below the ribs, to which the girdle is applied. The *waist*.

CINGULUM HILDA'NI, *Zo'nula Hilda'ni*. (F) *Ceinture de Hildane*. A leathern girdle formerly used for the reduction of luxations and fractures of the extremities.

CINGULUM MERCURIA'LE, *C. Sapien'tiæ*, *C. Stulti'tiæ*. A woollen girdle, containing mercurial ointment. It was used as an antisypilitic, and in diseases of the skin. (F) *Ceinture de vis argent*.

CINONOSI, from *κινεω*, 'I move,' and *νοσος*, 'a disease.' Diseases of motion.

CINOPLANE'SIS, from *κινεω*, 'I move,' and *πλανησις*, 'a wandering about.' Irregularity of motion.

C'IONIS. The *Uvula*, *κλονις*. Also, tumefaction, or elongation of the uvula. *Staphylodialysis*.

CIONI'TIS, from *κλονις*, 'the uvula,' and *itis*, 'inflammation.' Inflammation of the uvula.

CIRCA'E A LUTETIA'NA, *Enchant'er's Nightshade*, (F) *Herbe de Saint-Etienne*, *Herbe aux Sorciers*. This plant, common in the vicinity of Paris, was formerly considered to be resolvent and vulnerary. It was also supposed to possess wonderful magical and enchanting properties.

CIRCUIT, *Circuitus*, in Pathological language, generally means 'period,' 'course.'

CIR'CLAR, *Circula'ris*, from *cir'culus*, 'a circle.' (F) *Circulaire*. Having the form or figure of a circle. As *Circular Amputation*, &c.

The French use the expression "*Une circulaire*," for a turn of a bandage around any part.

CIRCULA'TION, *Circula'tio*, *Cyclopho'ria*, from *cir'culus*, 'a circle;' or rather, from *circum*, 'around,' and *ferre, latum*, 'to carry.' (F) *Circulation*. Physiologists give this name to the motion of the blood through the different vessels of the body:—to that function, by which the blood, setting out from the left ventricle of the heart, is distributed to every part of the body by the arteries;—proceeds into the veins, returns to the heart, enters the right auricle, and passes into the corresponding ventricle, which sends it into the pulmonary artery to be distributed to the lungs, whence it issues by the pulmonary veins, and passes into the left auricle. From this it is sent into the left ventricle, and is again distributed by means of the arteries.

The **PULMON'IC** or **LESSER CIRCULATION**, is the circle from the right to the left side of the heart, by the lungs.—The **GREATER** or **SYSTEMAT'IC** or **SYSTEM'IC**, that through the rest of the system.

The **CAP'ILLARY CIRCULA'TION**, *C. des Parenchymes*, is that, which takes place in the capillary vessels; and which is, in some measure, independent of the action of the heart. It is in this capillary circulation, that the various secretions are effected; and that animal heat is evolved. It is the seat of nutrition.

CIR'CLUS. A circle or ring; *Cyclus*, *Cirios*, (F) *Cercle*. Any part of the body which is round or annular, as *Cir'culus Oculi*—the *globe, bulb, or orb of the eye*.—*Hippocr.*, *Galen*. It is, also, applied to objects, which, by no means, form a circle,—as to the *Circle of Willis*, an *Anastomotie circle* at the base of the brain, formed by the carotid and basilar arteries.

CIRCULUS ARTERIO'SUS I'RIDIS. The artery, which runs round the iris, and forms a circle.

CIRCULUS QUAD'RUPLEX; a kind of bandage used by the ancients.

CIRCUMCIS'ION, *Circumcis'io*, *Præcis'io*, *Abscis'sio Præpu'tii*, *Circumcisu'ra*, *Circumsec'tio*, *Perit'ome*, from *Circum*, 'around,' and *cædere*, 'to cut.' (F) *Circoncision*. An ancient operation, performed by some nations as a religious ceremony. It consists in removing, circularly, a portion of the prepuce of infants:—a custom, which was probably suggested, with a view to cleanliness. In cases of extraordinary length of prepuce, or when affected with disease, the operation is, sometimes, undertaken by surgeons. A similar operation is performed on the female, by removing a portion of the nymphæ, amongst the *Ægyptians*, *Arabians*, and *Persians*.

CIRCUMFLEX'US, from *circum*, 'around,' and *flexus*, 'bent.' (F) *Circonflexe*. Curved circularly. A name given to several organs.

CIRCUMFLEXUS MUS'culus, *Tensor Pala'ti*, *Peristaphyli'nus exter'nus vel infe'rior*, *Circumflex'us Pala'ti Mollis*, *Spheno-salpin'go-staphyli'nus seu staphyli'nus exter'nus*, *Mus'culus tubæ novæ*, *Pala'to-salpingeus*, *Pter'ygo-staphyli'nus*, *Petro-salpin'go-staphylinus*, *Spheno-pterygo-palati'nus*, (F) *Palato-salpingien*. A muscle, which arises from the spinous process of the sphenoid bone, and is inserted into the *velum pendulum palati*. Its use is to stretch the velum.

The **CIRCUMFLEX** OF **ARTIC'ULAR ARTERIES** of the arm are distinguished into;—*anterior* and *posterior*. They arise from the axillary, and are distributed around the shoulder.

The **CIRCUMFLEX ARTERIES** OF THE THIGH are distinguished into *external* and *internal* (*A. Sous-Trochantériennes*—Ch.) They are given off from the *Profunda*, and surround the head of the thigh bone.

The **CIRCUMFLEX VEINS** follow the arteries.

CIRCUMFU'SA. Hallé has thus designated the first class of subjects, that belong to Hygiène—as the atmosphere, climate, residence, &c.; in short, every thing, which acts constantly on man externally and generally.

CIRCUMLI'TIO, *Perichrasis*, *Perichrison*. A term formerly used for liniments, but especially for those to be applied to the eyelids; from *Circumlino*, 'I anoint all over.'

CIR'CUMSCRIBED, *Circumscrip'tus*, (F) *Circonscri't*. A term, applied, in Pathology, to tumours, which are distinct at their base from the surrounding parts.

CIRRONO'SIS, from *κίρρος*, 'yellow.' The yellow colouring matter, sometimes secreted in the tissues owing to a morbid process. Also called *cirrho'sis*. It is not uncommon in the liver.

CIR'SIUM ARVEN'SE, *Car'duus hemorhoida'lis*, *Ceano'thos*, (F) *Chardon hemor-*

rhoidal. A common plant in France, used in the form of cataplasm in hemorrhoids, and worn as an amulet.

CIRSOCE'LE, *Cir'cocelē*, from *κίρσος*, 'varix,' and *κηλη*, 'hernia.' *Varicose Hernia*. The greater part of authors have employed the term synonymously with *Varicocele*. Pott gives it a different signification. *Varicocele*, he calls the tumour formed by the veins of the scrotum; *Circoccele*, *Funiculus varicosus*, the varicose dilatation of the spermatic veins. The scrotum feels as if it contained earthworms. It is commonly an affection of no consequence, demanding merely the use of a suspensory bandage.

CIRSOI'DES, from *κίρσος*, 'varix,' and *ειδος*, 'resemblance.' Varicose, or resembling a varix. Rufus of Ephesus, according to James, applies this term to the upper part of the brain, as well as to the spermatic vessels. (?)

CIRSOM'PHALUS, from *κίρσος*, 'varix,' and *ομφαλος*, 'navel.' Varicose dilatation of the veins, surrounding the navel. The term has, likewise, been applied to the aneurismal dilatation of the arteries of that region, called also *Varicomphalus*, (F) *Hargne anévrys-male*, *Aneurismal Hernia*.

CIRSOPHTHAL'MIA, from *κίρσος*, 'varix,' and *οφθαλμος*, 'the eye.' *Varicose ophthalmia*, *Ophthalmia varicosa*, *Varicositas conjunctivæ*. A high degree of ophthalmia, in which the vessels of the conjunctiva are considerably injected.

CIRSOT'OMY, *Cirsotomia*, from *κίρσος*, 'a varix,' and *τομή*, 'an incision.' Any operation for the removal of varices by incision.

CISSI'NUM, *κισσινον*. Name of a plaster of ivy, used in wounds of the nerves or tendons.—Paulus of Ægina:—from *κισσος*, 'ivy.'

CISTER'NA, from *κιστή*, 'a chest.' (F) *Citerne*. This term has been applied to various parts of the body, which serve as reservoirs for different fluids. The fourth ventricle of the brain has, also, been so called.—Arantius.

The **LUMBAR CISTERN**, *Cister'na lumbaris* or *Reservoir of Pecquet*, consists of a dilatation, which the thoracic duct presents in the lumbar region. See *Receptaculum Chyli*.

CISTUS CRETICUS, *Cistus Ladanifera*, *Cis'thorus*, *Cis'sarus*, *Dorycin'ium*, *Gum Cistus*. *Sex. Syst.* Polyandria Monogynia. The systematic name of the plant, whence the *Lad'anum* is obtained—*Gum'mi Lad'anum*. *Lad'anum* is a gum-resinous substance, of a very agreeable smell, found in the shops in great masses. Its colour is blackish-green; taste warm and bitter. It is but little used now. Formerly, it was a component of warm plasters, and was prescribed internally as a stomachic.

CITRIC ACID, *Acidum cit'ricum*. The *Acid of Lemons*, *Ac'idum Limon'orum*. (F) *Acide Citrique*. This acid is found in the lemon, orange, &c. It is in rhomboidal prisms, which slightly effloresce on expo-

sure to the air. It dissolves in a twelfth part of its weight of boiling water, and has an extremely acid but agreeable taste. It is employed in medicine as antiseptic, refrigerant, and diuretic. Rubbed up with sugar and with a little of the essence of lemon, it forms the *dry Lemonade*, (F) *Limonade sèche*.

CITRUS AURAN'TIUM. The systematic name of the *Orange Tree*, *Auran'tium*, *A. Hispalen'se*, *Malus Auran'tia Major*, *Malus Auran'tia*, *Auran'tium vulga're*, *Malus Auran'tia vulga'ris*. *Nat. Ord.* Aurantiaceæ. *Sex. Syst.* Polyadelphia Icosandria. The fruit are called *Mala Aurea*, *Chrysomelia*, *Neran'tia*, *Martia'na Poma*, *Poma Auran'tia*, *Auran'tia Curassavica*, *Oranges*, *Poma Chinen'sia*. The *Flowers of the Orange*, *Flores Naphæ*, are highly odoriferous, and used as a perfume. On distillation, they yield a small quantity of essential oil—the *Oleum vel Essen'tia Nero'li*. They were once used in convulsive and epileptic cases. The leaves, *Folia Auran'tii*, have a bitterish taste, and furnish an essential oil. They have been used for the same purposes as the flowers. The yellow rind of the fruit, *Cortex Auran'tii*, *Orange Peel*, is an aromatic bitter, and is used in dyspepsia, and where that class of remedies is required. The *Juice*, *Succus Aurantii*, *Orange juice*, is a grateful acid, and used as a beverage in febrile and scorbutic affections.

CITRUS MED'ICA. The systematic name of the *Lemon Tree*.

The *Lemon*, *Limo'nium malum*, *Limonum Bacca*, *Malus Med'ica*, *Malus Limo'nia Ac'ida*, *Limon*, *Cit'rea Malus*, *Citrus*, (F) *Citron*, has a fragrant odour, depending upon the essential oil, *O'leum Limo'nis*, of the rind. The juice, *Succus Limo'nis* is sharp but gratefully acid, the acidity depending upon the citric acid it contains. The outer rind, *Cortex Limo'num*, *Lemon Peel*, *Zest*, *Flave'do Corticum Citri*, is used in the same cases as the *Cortex Auran'tii*. The juice is given as a refrigerant beverage, in febrile affections. Alone or combined with wine, it is prescribed in scurvy, putrid sore throat, &c. Its general properties are refrigerant and antiseptic. Sweetened and diluted, it forms a *Lemonade*.

The **CITRON TREE** is likewise considered to belong to the same species—the *Citrus Med'ica*. Its fruit is called *cedrome'la*. It is larger and less succulent than the lemon. *Citron juice*, when sweetened with sugar, is called by the Italians *Agro di Cedro*.

The **CITRUS MELLA ROSA** of De Lamarck, another variety of the *Citrus Medica*, affords the *Bergamote*, (which see.)

CITTARA, **MINERAL WATERS OF**. These springs are in the Isle of Ischia, near the sea. They contain carbonate and sulphate of lime, and muriate of soda. Their temperature is 100° Fahrenheit.

CIVET'TA, *Zib'ethum*, *Civ'et*. (F) *Civette*. An unctuous perfume, of a very penetrating odour, obtained from different mammalia of the *Viver'ra* kind, particularly from the *Viver'ra civet'ta*. It is contained in a fold of the skin, situate between the anus and the organs of generation.

CLADO'NIA RANGIFERRI'NA, The ancients regarded this European plant as pectoral and stomachic. It enters into the composition of the *Poudre de Chypre*.

CLAIRVOYANCE, (F) 'Clearseeing.' A clearness of sight, said to be communicated by animal magnetism, which not only enables the *magnetized* person to see in the dark, through stone walls, &c., but even to observe prospects, whilst he fancies he is flying in the air, which he has never seen previously. It need hardly be said, that the possession of such powers is fabulous.

CLAPIER (F). A clapper, *Latib'ulum*. A purulent focus of disease: concealed in the flesh or under the skin—from *κλεπτειν*, 'to conceal.' See *Sinus*.

CLAR'ET, *Clare'tum*, *Vin de Bordeaux*. (F) *Claret*. A pleasant French wine, which may be used, whenever wine is required. Also a wine impregnated with spices and sugar, called likewise *Vinum Hippocrat'icum*, or *Potus Hippocrat'icus*, *Hip'pocras*, *Hyp'pocras*. Schröder speaks of a *Clare'tum al'terans* and a *C. purgans*.

CLARIFICA'TION, *Clarifica'tio*, *Depu-ration*, from *clarus*, 'clear,' and *facio*, 'I make.' A pharmaceutical operation, which consists in separating from a liquid every insoluble substance held in suspension by it, and which affects its transparency. *Decanting* and *filtering* are the operations necessary for this purpose.

CLASS, *Clas'sis*, (F) *Classe*. An assemblage of a certain number of objects. In *Natural History* and in *Medicine*, a *class* is a group of objects or individuals having one or more common characters. The *classes* are divided into *orders*, the *orders* into *genera*, the *genera* into *species*, and these last into *varieties*.

CLASSIFICA'TION, *Classifica'tio*, from *clas'sis*, 'a class,' and *facio*, 'I make.' The formation of classes. A methodical distribution of beings, or any objects whatever into classes, orders, genera, species, and varieties. See *Nosography* and *Nosology*.

CLASSY, **MINERAL WATERS OF**. Classy is near Laon in Picardy, France. The waters are chalybeate.

CLAUDICATION, *Claudica'tio*, from *Claudica're*, 'to be lame.' The act of halting or limping. *Lameness*, *Clau'ditas*, *Cholo'sis*, *Cholei'a*, *Cholo'ma*. (F) *Claudication*, *Boitement*. This condition is not any particular disease, but is produced by different causes or affections. It may be the effect of the shortening or elongation of one of the

lower limbs, of ankylosis of the joints, palsy of the muscles, pain, &c.

CLAUSU'RA, from *clau'dere*, 'to shut.' An imperforation of any canal or cavity.

CLAUSU'RA UTERI, preternatural imperforation of the uterus.

CLAVA'RIA CORALLOÏ'DES, *Coralloï-des Fungus*, *Coralwort*. Said to be corroborant and astringent. A kind of clavaria, called *Digital blanc*, *Digital humain*, *champion de l'appareil des fractures*, formed of digitations, grouped together, and two or three inches in length, is said to have been often found, formerly at the *Hôtel Dieu* of Paris, on the splints of white wood used in the treatment of fractures, in autumn.—H. Cloquet.

CLAV'ICLE, *Clavic'ula*, *Clavis*, *Clavic'u-lus*, *Lig'ula*, *Fur'cula*, *Os Jug'uli*, *Cleis*, *Clei'dion*, from *clavis*, 'a key,' (F) *Clavicule*. The *collar-bone*. The clavicle is shaped like the letter S, and is placed transversely at the upper part of the thorax. It is articulated, at one extremity with the sternum, at the other, with the acromion process of the scapula. It gives attachment, *above*, to the *Sterno-cleido-mastoideus*; *below*, to the *Sub-clavius*; *before*, to the *Pectoralis Major* and *Deltoides*; and *behind*, to the *Trapezius*. It serves as a point of support for the muscles of the arm, and protects the vessels and nerves passing to that extremity.

The fibres, connecting the lamellæ or plates of bones, have, also, been called *Clavic'uli* or *Nails*.

CLAVUS. A nail, *Helos*, *ἥλος*, *Gomphos*, *γομφος*, (F) *Clou*. This word is employed in Medicine in various senses. It means, 1. *Corns*, from their resemblance to the head of a nail. 2. Certain condylomatous excrescences of the uterus. 3. A callous tumour, which forms on the white of the eye, and resembles a nail, the *Clavus Oc'uli* (F) *Clou de l'œil*. This last, by some, is considered to be synonymous with staphyloma; by others, with staphyloma of the cornea.

CLAVUS HYSTER'ICUS, *Monopa'gia*, (F) *Clou hystérique*. An acute pain, confined to a small point of the head, described by the sick as resembling that which would be produced by a nail, driven into the head. It has been particularly noticed in hysterical females, hence its name. It is called *Ovum hyster'icum*, when the pain occupies a greater extent.

CLEI'DO-MASTOÏDEUS. Albinus thus designates the posterior portion of the sternocleido-mastoideus, which he considers a separate muscle. It has been corrupted into *clino-mastoideus*.

CLEIS'AGRA, *Cleid'agra*, from *κλεις*, 'the clavicle,' and *αγγρα*, 'a seizure.' Gout in the clavicle.—A. Paré.

CLEM'ATIS RECTA, *Flam'mula Jovis*, *Upright Virgin's Bower*, (F) *Clematite droite*.

Family Ranunculaceæ. Sex. Syst. Polyandria Polygynia. The leaves contain an acrid principle. They have been esteemed anti-venereal; and, in the form of powder, have been used as escharotic.

CLEMATIS VITAL'BA, *Vital'ba*, *Vi-or'na*, *Atragene*, the *Trav'eller's Joy*, *Common Virgin's Bower*, (F) *Clematite*, *Herbe aux gueux*, *Aube-vigne*. It has been used in the same cases as the former. In infusion it has been applied in cases of itch. The leaves of the *Clematis crispa* have similar properties.

CLEO'NIS COLLYR'IUM. A collyrium, described by Celsus, composed of equal parts of Samian earth, myrrh, and thus, mixed with white of egg.

CLEO'NIS GLUTEN. An astringent formula of myrrh, frankincense, and white of egg.

CLEP'SYDRA, from *κλειπτα*, 'I conceal,' and *υδαρ*, 'water.' An instrument contrived by Paracelsus to convey fumigations to the uterus.

CLEVES, MINERAL WATERS OF. This spring is a quarter of a league from Cleves in Westphalia. It contains carbonate and sulphate of iron.

CLIMACTER'IC, *Climacter'icus* or *Climater'icus*, from *κλιμακτης*, 'a step,' (F) *Climactérique* ou *Climatérique*. A word, which properly signifies, by degrees. It has been applied to certain periods of life, regarded to be critical.

ANNI CLIMACTER'ICI. *Climacter'ic Years*, are, according to some, all those in the life of man, which are multiples of the number 7, *Septenniads*. Others have applied the term to years, resulting from the multiplication of 7 by an odd number. Some have admitted only three *climacterics*; others, again, have extended them to multiples of 9. Most, however, have considered the 63d year as the *Grand Climacteric*;—63 being the product of the multiplication of 7 by 9; and all have thought that the period of three, seven, or nine, which they respectively adopted, was necessary to the entire renewal of the body; so that there was, at these times, in the economy, none of the parts of which it had previously consisted. The climacteric years have also been called, *hebdomad'ici*, *scala'res*, *grada'rii*, *scan'siles*, *genethliaci*, *natali'tii*, *fata'les*, *crit'ici*, *decreto'rii*, *hero'ici*, &c. The whole of the notions on the subject are essentially allied to the doctrine of numbers of Pythagoras.

At present, the word *Climacteric* is chiefly applied to certain periods of life, at which great changes occur, independently of any numerical estimate of years. Such are the period of puberty, in both sexes, that of the cessation of the menses in women, &c.

CLIMATE, *Clima*, *κλιμα*, (F) *Climat*. In Geography, the word *climate* is applied to

a space of the terrestrial globe, comprised between two circles parallel to the equator, and arbitrarily measured according to the length of the days. In a Hygienic point of view, we understand by *climate*, since Hippocrates, a country or region, which may differ from another in respect to season, qualities of the soil, heat of atmosphere, &c. Climate, indeed, embraces, in a general manner, all the physical circumstances belonging to each district: circumstances which exert considerable influence on living beings. The dark complexion, e. g. of the inhabitants of the torrid zone is easily distinguishable from the paleness of those of the frigid,—so are the diseases. They are all modified, more or less, by climate or locality. Hot climates predispose to abdominal complications in febrile affections, cold climates to thoracic, &c.

One of the most important considerations with regard to climates, is their comparative fitness for the residence of invalids, and especially of those who are liable to, or suffering under catarrhal or consumptive affections.

The great object, in such cases, is to select a climate which will admit of regular and daily exercise in the open air, so that the invalid may derive every advantage, which this form of revulsion is capable of effecting.

To an inhabitant of the northern and middle portions of the United States—and the same applies to Great Britain, France, and the northern parts of the old world—a more southern climate alone affords these advantages in an eminent degree.

During the summer months, there are few, if any, diseases, which require a milder climate than that of the United States, or of the milder districts of Europe. The temperature of the winter months is, consequently the most important object of attention.

Equability of temperature is essential, inasmuch as all sudden changes interfere with the great desideratum—exercise in the open air. In the whole continent of North America the changes are very sudden and extensive. It is not uncommon for the range to be 40°, between two successive days. So far, therefore, as this applies, the American climate is not well adapted to the invalid. In the southern portions, however, of the Union, this objection is counterbalanced by many advantages.

The following Tables exhibit the mean temperature of the year, and of the different seasons—with the mean temperature of the warmest and coldest months of different places in America, Europe, Africa, &c., as deduced from the excellent paper of Von Humboldt on Isothermal Lines, the Meteorological Registers kept by the Surgeons of the United States Army, the work of Sir James Clarke on Climate, &c.

1. AMERICA, &c.

PLACES.	Latitude.	Mean temperature of several years.	Mean temperature of different seasons.				Mean temperature of	
			Winter.	Spring.	Summer.	Autumn.	warmest month.	coldest month.

‡ Perpignan, Mean temperature 59.054.

§ Nismes, Mean temperature 60.026.

The following tabular views show the mean monthly temperature, maximum, minimum, and range, as well as the greatest daily, and mean daily range, during the corresponding months—but of different years—at some of the prominent retreats for the valetudinarian, in Great Britain, on the continent of Europe, and in the African islands. It is proper, however, to remark, that in no situations, except in those to which an asterisk is affixed, was the register thermometer used. In the others, the observations were made during the *day* only, and consequently the numbers given are far below the real range throughout the twenty-four hours.

The places are ranged in the order of their mean temperature.

In the United States, the most favourable region for the phthisical invalid is that of Florida,—especially of Pensacola. St. Augustine is frequently chosen, but it is liable to north-east storms, which interfere with the movements of the valetudinarian, and are the source of much discomfort. Still, great benefit has often been derived from it as a winter retreat.

Of the Atlantic Islands, Madeira appears to be best adapted for the consumptive : and

those affected with chronic bronchitis. In Italy, Rome and Pisa,—and in England, Torquay and Undercliff, are to be preferred.

Chronic Rheumatism and Gout are benefited by a warm climate. This, again, is unfavourable to those who are predisposed to cerebral diseases, especially to diseases that are characterized by debility and mobility of the nervous system—as paralysis, epilepsy, mania, &c. Hypochondriasis and Dyspepsia require rather change of climate and

travelling exercise than a sojourn in any one. (See the Author's Elements of Hygiene, Philad. 1835.)

For the different mortality of different countries and cities, see Mortality.

CLIMATIC, *Climaticus*. Belonging to, or dependent upon climate.

CLIMATIC DISEASES, *Morbi climat'ici*, are such as are caused by climate.

CLINE, *κλινη*, 'a bed.' Hence:

CLINICAL, *Clinicus*, (F) *Clinique*. Relating to a bed.

CLINICAL LECTURE, (F) *Leçon clinique*. One given at the bedside, or on a particular case or cases.

CLINICAL MEDICINE, (F) *Médecine clinique*, that which is occupied with the management of diseases, taken at the bedside or individually.

Clinique, in French, is occasionally used, substantively, for *École clinique*, or *Clinical School*;—a school in which Medicine is taught, by examining diseases on the patients themselves. Thus, the French say,—*La Clinique de la Charité*; "The Clinical School of the Hospital *La Charité*."

CLINOID, *Clinoides*, from *κλινη*, 'a bed,' and *ειδος*, 'form.' Resembling a bed.

The CLINOID PROCESSES, (F) *Apophyses clinoides*, are four processes at the upper surface of the sphenoid bone, which have been compared to the posts of a bed. On them the pituitary gland rests. They are divided into *anterior* and *posterior*. Each of the anterior terminates in a point called *Transverse Spinous Process*.

CLINOPO'DIUM VULGARE, from *κλινη*, 'a bed,' and *πους*, 'foot,' so called from the shape of its flowers. *Wild Basil*. (F) *Grand Basilic sauvage*. A European plant, which was formerly considered to be an antidote to the bites of venomous animals, to facilitate labour, relieve strangury, stop diarrhœa, &c.

CLISEOM'ETER, *Cliseom'etrum*, from *κλινσις*, 'inclination,' and *μετρον*, 'measure.' An instrument, intended to measure the degree of inclination of the pelvis, and to determine the relation between the axis of the pelvis and that of the body.—Osiander, Stein.

CLITORIS, from *κλητωρ*, 'a servant who invites guests.' (?) *Dulce' do Amoris*, *Myrton*, *Æstrum*, *Penis mulie'bris*, *Mentula mulie'bris*, *Membrum mulie'brē*, *Superla'bia*, *Cercosis*. A small, round, organ, situate at the upper part of the vulva, and separated by a small space from the anterior commissure of the labia. Its base is surrounded by a slight fold, similar to the prepuce; and it is, internally, of the same structure as the *corpora cavernosa penis*. The artery of the Clitoris, (F) *Clitorienne*, is a branch of the internal pudic. The vein communicates with the internal pudic; and the nerve with the pudic.

CLITORISM; a word, invented to express the abuse made of the clitoris. Also, an unusually large clitoris, *Cercosis externa*.

CLOACA, (F) *Cloaque*, from *cluere*, 'to purge itself;' from *κλυζω*, 'I wash.' The pouch at the extremity of the intestinal canal, on which the solid and liquid excretions are commingled in birds, fish and reptiles. In the male it gives exit to the excrements, sperm and urine: in the female to the eggs, fœcal matters, and urine.

CLOCHE (F). A popular expression in France, for a blister or other vesicle.

CLONIC, *Clon'icus*, from *κλονος*, 'agitation,' 'motion.' (F) *Clonique*. Irregular convulsive motions. Convulsion with alternate relaxation: in contradistinction to *tonic*, which signifies a constant rigidity. *Clonus*, *Clonici partia'les*.

CLONISM, *Clonis'mus*; same etymon. Clonic spasm.—Baumes.

CLONO'DES, from *κλονος*, 'agitation,' and *ειδος*, 'resemblance.' Convulsive. Galen applies this term to the pulse, when convulsive, as it were, and unequal. He compares the sensation it communicates to the finger to that produced by a bundle of sticks or rods in vibration.

CLUNE'SIA, from *Clunes*, 'the nates.' *Proctal'gia*. An inflammation of the buttocks.—Vogel.

CLUPEA THRYSSA. The *Yellow-billed Sprat*; a very poisonous fish of the West Indies.

CLYSOIRE (F). An apparatus consisting of a long funnel-shaped tube of elastic gum, furnished with a pipe at the apex; for administering enemata.

CLYSTER, *Clyste'rium*, *Clysmā*, *Enclys'ma*, *Clysmus*, *Enema*, from *κλυζειν*, 'to wash.' (F) *Clystère*, *Lavement*, *Remède*. A liquid, thrown into the large intestine by means of a syringe, or bladder and pipe properly prepared, &c.; the nozzle of the syringe or pipe being introduced into the anus. See *Enema*.

CNEORUM TRICOC'CUM, *Almeze' rion*, *Acnes'tos*, *Chamæ'lea*, *Widow-wail*, *Spurge-Olive*. (F) *Camelée*. This plant, a native of Southern Europe, contains a very irritating, acrid principle. The ancients employed its leaves as a powerful purgative. It is now sometimes used for deterring ulcers.

CNESIS, *κνησις*, *Cnesmos*, *κνησμος*. A painful itching.—Galen.

CNICELÆ'UM, from *κνικος*, 'carthamus,' and *ελαιον*, 'oil.' Oil of Carthamus.—Dioscorides.

CNIDELÆON, *Cnidelæ'um*, from *κνιδεις*, 'cnidia,' and *ελαιον*, 'oil.' Oil made from the Grana Cnidia or Mezereon Berries.—Dioscorides.

CNIDIA GRANA, *Cnid'ii Cocci*, *Coc'cognid'ia*, *Æto' lion*, *Coccum*. The berries of the Daphne Cnidium.—Fœsius.

CNIDO'SIS. A pungent itching, compared to that produced by the *Urtica urens* or *Nettle*. (*κνιδη*.)—Hippoc.

CNIP'OTES, *Pruri'tus*. Itching. The dry ophthalmia, *Xerophthal'mia*.

CNISSOREG'MIA, from *κνισσα*, 'the

smell of burnt fat,' and *οπερῶ*, 'I put forth.' A nidorous eructation.

CNYMA, *κνυμα*. A slight itching. Also, a puncture or vellication.—Galen.

COAG'ULANTS, *Coagulan'tia*. Remedies or poisons, supposed to possess the power of coagulating the blood, or to give consistency to animal fluids. The word, and the absurd notions connected with it, are equally abandoned.

COAGULA'TION, *Coagula'tio*. The conversion of a liquid into a more or less soft and tremulous mass. Many animal and vegetable fluids are capable of coagulation.

COAG'ULUM, *Grumus*, (F) *Caillot*. A soft mass, formed in a coagulable liquid. The *Clot of the Blood* is particularly so called—the *Cruor*, *Insula*, *Placen'ta*, *Hepar San'guinis*, *Crassamen'tum*:—the red mass, composed of fibrine, serum, and colouring matter, which separates when the blood is left to itself.

The word is also applied, in *Pathology*, to the sanguineous concretions, which form in different natural and accidental cavities; and which, when they occur at the mouth of a divided artery, sometimes suspend the flow of blood. This is, indeed, one of the means by which hemorrhage is arrested.

COAG'ULUM ALU'MINIS, *Coag'ulum Alumi-no'sum*. This is made by beating the white of eggs with a little alum, until a coagulum is formed. It is applied in cases of ophthalmia, where an astringent is necessary.

COALES'CENCE, *Coalescen'tia*, from *coales'cere*, 'to run together,' (from *cum*, 'with,' and *alere*, 'to nourish,') *Sym'physis*. The adhesion or union of parts previously separated, as in case of wounds and preternatural adhesions.

COALI'TION. The same etymon as coalescence. It has been used in the same cases as coalescence; as well as to express the action of several parts of the frame, which have the same nutrition.

COALTER'NÆ FEBRES. A name, given to two intermittents, which attack a person at the same time, but whose paroxysms are distinct: so that the attack of one supervenes when the other has ceased. The term *Double Intermittent* expresses the same meaning.

COAPTA'TION, *Coapta'tio*, from *cum*, 'with,' and *apta're*, 'to adjust,' 'adapt,' *Para'gō'gē*. The act of adapting the two extremities of a fractured bone to each other; or of restoring a luxated bone to its place. Coaptation must be effected gently. Usually, extension and counter-extension are, in the first place, necessary.

COARCTA'TION, *Coarcta'tio*, from *coarctare*, 'to straiten.' Stricture. Avicenna speaks of *Coarctation of the Pulse*.

COBHAM, MINERAL WATERS OF. Cobham is seven miles from Kingston, in Surrey, England. The waters are weak saline purgatives.

COCCA'R'IUM. A very small pill.

COCCINEL'LA SEPTEMPUNCTA'TA. *Lady-bird*, *Lady-cow*, *Lady-bug*. This insect, bruised upon an aching tooth, has long been regarded antiodontalgic!

COC'CION, *κοκκιον*. A weight, mentioned by Myrepsus; the same as the *Siliqua*.

COCCUS CACTI. The systematic name of the *Coch'ineal Insect*. *Coccinell'a*, *Cochinil'la*, *Coccionel'la*, *Coccinil'la*, *Ficus India grana*, *Coccus Polon'icus*, *Scarabæ'olus hemisphæ'ricus*, *Cochinelif'era cochinil'la*, *Coccus America'nus*, *Coccus Indicus Tincto'rius*, *Cochinelle*, *Coccus*. The *Coch'ineal Animal*, (F) *Cochenille*, *Graine de l'Ecarlate*. The cochineal insects have a faint, heavy odour; their taste is acrid, bitterish, and astringent: colour blackish-red externally,—purple-red within. They are used chiefly for giving a red colour to tinctures, &c. They were, at one time, esteemed astringent, stimulant, diuretic, and anodyne.

COCCYCEPH'ALUS, from *coccyx* (q. v.) and *κεφαλη*, 'the head.' A monster whose head has the shape of the os coccygis.

COCCYGEUS, from *κοκκυξ*, because it is inserted into the coccyx. *Ischio-Coccygeus*, (F) *Ischio-coccygien*. Belonging both to the ischium and coccyx. The muscle *Ischio-coccygeus*, *Levator Coccy'gis*, *Triangularis Coccy'gis*. It arises from the spinous process of the ischium, and is inserted into the extremity of the sacrum; and into nearly the whole length of the os coccygis laterally. It retains the coccyx in place, and prevents it from being forced backwards during the evacuation of the fæces.

COCCYX, *Os Coccy'gis*, 'a cuckoo;' whose bill it is said to resemble. *Cauda*, *Ossis sacri acu'men*, *Os Al'agas*, *Rump Bone*, *Cu'culus*, *Uropygion*. An assemblage of small bones, suspended at the lower part of the sacrum; the curvature of which it prolongs, and of which it seems to be an appendage. Generally, it consists of four bones. Behind the base of the coccyx are two small tubercular eminences. These are called *Cor-nua of the Coccyx*.

COCHIA, CÔCCHIA, COCHE'RIA, from *κοκκος*, 'berry,' 'seed,' or from *κοχυα*, 'to flow profusely.' An ancient name for several officinal purgative pills; thus called, either because they produced copious evacuations, or because they were shaped like a seed.

COCHLEA. A *Snail's shell*, (F) *Limaçon*, *Coquille*. Anatomists have given this name to the most anterior of the three cavities, which constitute the labyrinth of the ear, the *Pelvis Au'rium*—or *Concha auris inter-na*;—*Cav'itas cochlea'ta*, *C. buccina'ta*, *Antrum buccino'sum*, *Concha Labyrin'thi*, and that of *Scala of the Cochlea*, (F) *Rampes du limaçon*, to two spiral cavities in the interior of the cochlea. One of these scalæ terminates at the *Fenes'tra rotun'da*, and is called *Scala Tympani*: the other opens at the ante-

rior and inferior part of the vestibule. It is called the *Scala vestibuli*.

COCHLEA'RE, from *cochlea*; its bowl resembling a shell:—a *spoonful*; (F) *Cuillerée*, abbreviated in prescriptions usually to *Coch*. See Abbreviation.

COCHLEA'RE MAGNUM is a table-spoonful; *C. Me'dium*, a dessert or pap-spoonful; and *C. Min'imum*, a tea-spoonful.

COCHLEA'RIA, from *cochlea'rē*, 'a spoon,' so called from its resemblance.

COCHLEA'RIA ARMORA'CIA, *Raph'anus rusticanus*, *Armora'cia*, *Raph'anus mar'inus*, *Raph'anus sylves'tris*, *Horseradish*. Family, *Cruciferae*. *Sex. Syst.* *Tetradynamia Siliculosa*. (F) *Raifort sauvage*, *Le Cran*. The root of horseradish is frequently used at table; and has long been in the *Materia Medica*. It is stimulant and diuretic. Externally it is rubefacient.

COCHLEA'RIA CORON'OPUS, *Coron'opus*, *Wild Scurvy Grass*, *Swine's Cress*. This European plant is considered to be diuretic and antiscorbutic. (F) *Corne de Cerf*, *Cron'opus Ruel'lii*. The term *Coron'opus* was given, by the ancients, to various plants.

COCHLEA'RIA OFFICINA'LIS, *C. horten'sis*, *Lemon Scurvy Grass*, *Common Scurvy Grass*, (F) *Cranson*, *Herbe aux cuillers*. It has been considered a powerful antiscorbutic. It is sometimes eaten in salad.

COCHLEARIFORMIS, from *cochlea'rē*, 'a spoon,' and *forma*, 'shape.' (F) *Bec de Cuiller*.

PROCES'SUS COCHLEARIFORMIS:—a small, very thin plate, which separates the bony portion of the eustachian tube from the canal for the passage of the tensor tympani.

COCHONE, *κοχων*. The junction of the ischium, near the seat or breech.—*Foësius*. The breech properly from the hip bones to the anus.

COCIL'IO; a weight of eleven ounces.

COCOS NUCIF'ERA, (F) *Cocotier*. Order, *Palmæ*. The systematic name of the plant whose fruit is the Cocoa nut, (F) *Coco*. It is an agreeable kernel, but not easy of digestion. *Emulsions*, *orgeat*, &c. are made from it. The juice of the cocoa, when fermented, forms wine, and arrack is distilled from it.

COCOS BUTYRA'CEA. The name of the plant, which affords the palm oil, *O'leum Palmæ*, obtained chiefly from the fruit, by bruising and mixing the kernels with water, without the aid of heat, by which the oil is separated and rises to the surface. It is of the consistence of an ointment, with little taste, and a strong, though not disagreeable, smell. It is applied to sprains, &c.; but has no advantages over other oils. It has been called, also, *O'leum Palmæ seba'ceum*, *O. fixum nucum cocos butyra'ceæ* and *Mackaw fat*. It is procured, likewise, from the *Ela'is guineen'sis*, and *Ela'is Occidentalis*, two species of palms.

COCO OF THE MALDIVES, *Cocos de Maldi'vâ*. The fruit of a palm, called *Lodoice'a* by Commerson. It was formerly termed, in the shops, *Nux Med'ica* and enjoyed great reputation.

COCTION, *Coctio*, *Pepsis*, *Pepansis*, *Pepas'mos*, *Concoct'ion*, from *coquere*, 'to boil.' This word has been employed in various senses. 1. With the ancients, *coction* meant the particular kind of alteration, which the food experiences in the digestive organs, particularly in the stomach. It meant a preparation from its *crude* state. 2. It expressed the *maturation* or change, which the Humoral Pathologists believed morbid matter to experience before elimination. It was considered, that *coction* was produced during the violence of the disease; and hence this was called the *Period of Coction*. See *Humorism*.

CODEINE, From *κωδix*, 'a poppy head.' An alkaloid, discovered, by Robiquet, in opium, in 1832. It is soluble in water, alcohol and ether, and unites readily with acids. As a hypnotic, Magendie thinks one grain of Codeine equal to half a grain of Morphine. The muriate of Codeine appears to be stronger than the pure Codeine.

CODEX, A collection of laws. (F) *Code*. By extension, a collection of approved medical formulæ, with the processes necessary for forming the compounds, referred to in it. The Parisian Pharmacopœia is styled *Codex Medicamenta'rius*.

CÆLIA, *κοιλια*, *κοιλη*, 'a hollow place.' This word generally meant a cavity in the body:—the abdomen, in particular. It has, also been used for the alimentary canal, &c.:—*ανω κοιλια* 'the stomach,' *κατω κοιλια*, the abdomen. Also, an alvine evacuation.

CÆLIAC, *Cæliacus*. (F) *Cæliaque* ou *Célique*, from *κοιλια*, 'the abdomen,' 'intestine.' Relating to the abdomen or intestine.

CÆLIAC ARTERY, *A. Cæliaca*, (*A. opistogastrique* Ch.), *A. Cæliaque*, *Tronc cæliaque*, *Trépied de la cæliaque*, is situate above the pancreas, and behind the upper part of the stomach. It arises from the anterior part of the abdominal aorta, where it passes between the pillars of the diaphragm, and soon divides into the *coronaria ventriculi*, *hepatic*, and *splenic* arteries.

CÆLIAC OR SOLAR PLEXUS, *Plexus mesenterii proprius et maximus*, *P. gangliformis semiluna'ris*, (*Plexus median* ou *opistogastrique* Ch.), (F) *Pl. Cæliaque* ou *solaire*, *Ganglion de VIEUSSENS*, is formed of numerous nervous filaments, which proceed from the semilunar ganglia of the great sympathetic. It is strengthened by several branches of the right and left pneumogastric nerves; is seated around the trunk of the cæliac artery, behind the stomach, and furnishes the secondary plexuses—the *diaphragmatic*, *coronary of the stomach*, *splenic* and *hepatic*, which accompany the arteries of the same name.

CÆLIAC FLUX OR PASSION, *Cæliaca chylo'sa*, *Diarrhœa chylo'sa*, *D. chymo'sa*, *Fluxus cæliacus*, *Passio cæliaca*, *P. Ventriculo'sa*, *Chymoche'zia*, *Fluor albus intestino'rum*, *Chylorrhœa*, *Chymorrhœa*, *Cæliaca lac'tea*, *Morbus cæliacus*. (F) *Flux cæliaque*. A species of diarrhœa, in which the food is discharged by the bowels in an undigested condition. By some, defined to be diarrhœa attended with discharges of chyle or chyme. It is, in general, symptomatic of tubercular disease of the mesenteric glands. See Lientery.

CÆLIACA, from *καίλιακος*, 'cæliac,' (q. v.) Diseases of the digestive organs; the 1st class in Good's *Nosology*. It comprises two orders, *Enterica* and *Splanchnica*.

CÆLIOPYOSIS, from *καίλια*, 'the abdomen,' and *πυώσις*, 'suppuration.' Suppuration in the abdomen or its parietes.

CÆLO'MA, from *καίλος*, 'hollow.' A round ulcer of the cornea, broader and deeper than that described under the name *Bothrion*.

CÆLOPHTHAL'MUS, from *καίλος*, 'hollow,' and *οφθαλμός*, 'eye.' One who is hollow-eyed.

CÆLOSTOM'IA, from *καίλος*, 'hollow,' and *στόμα*, 'mouth.' A defect in speaking, when the voice seems as if it came from a cavern;—that is, obscure, and as if at a distance.

CÆLOS'TOMUS, same etymon. One who has a hollow voice.

CÆNÆSTHE'SIS, from *κοινός*, 'common,' and *αἴσθησις*, 'feeling.' *Conæsthesis*. Common feeling. Some German writers mean, by this, a sixth sense. It is the feeling of self-existence or individuality, and is manifested by the sense of buoyancy or depression, which we experience without any known cause;—by involuntary shuddering, feeling of chill or glow, &c.

CÆNOTES, *κοινότης*, 'commonness,' from *κοινός*, 'common.' The physicians of the Methodic Sect asserted that all diseases arise from *relaxation*, *stricture*, or a mixture of both. These were called *Cænotes*: or what diseases have in common.

COFFEA ARAB'ICA, (F) *Cafier* and *Cafeyer*. Family, Rubiaceæ. Sex. Syst. Pentandria Monogynia. The plant, which affords the coffee. *Jasminum Arab'icum*, *Choava*, *Bon*. Originally from Yemen. *Buna*. (F) *Café*.

The infusion of coffee is an agreeable and wholesome article of diet. It is, to a certain extent, tonic, and is employed as such in convalescence, especially from fevers, &c. In cases of poisoning by opium, and in old asthmas, its use has been extolled. For this purpose the *Moka* is the best. It ought to be newly torrefied, but not too much burnt; should be strong, and drunk soon after grinding. *Facitious Coffees* have been, from time to time, recommended, but they are infinitely inferior to the genuine. Various *substitutes* have been proposed;—*wheat*, *barley*, *hollyberries*,

acorns, *sunflower-seeds*, *beechmast*, *peas*, *beans*, *succory-root*, *seeds of gooseberries* and *currants* left in making wine, and washed:—*sliced turnips*, &c. These have been roasted with the addition of a little butter or oil: but they have not the aroma of coffee. The best substitute is said to be the seeds of the *Yellow water flag*—*Gladiolus luteus* or *Iris pseudacorus*.

HUNT'S ŒCONOMICAL BREAKFAST POWDER consists of rye, roasted with a little butter. It is a good substitute for coffee.

COHABITA'TION, *Cohabita'tio*, from *cum*, 'with,' and *habita're*, 'to dwell.' The act of dwelling together. In Legal Medicine, it means the consummation of marriage. *Copulation*.

COHE'SION, *Cohæ'sio*, from *cum* 'with,' and *hæ'rere*, 'to stick.' *Vis cohæsiō'nis*, *Vis adhæsiō'nis*, *Vis attractiō'nis*, *Force of cohesion*, *Attraction of cohesion*, *A. of aggregation*. That force, in the particles of matter, whereby they are connected in such a way as to resist any attempt towards their removal or separation. This force has to be attended to, in the management of disease. Emollients, rubbed into a part, act by diminishing the cohesion.

COHOB'A'TION, *Cohoba'tio*, *Coho'bium*, *Co'hob*, *Co'hoph*. Distillation of a liquid,—already distilled—on the same substances. When this was repeated three or four times, it was called *Recohobation*.

COHOL. Synonyme of Alcohol. Also, a dry collyrium.—Avicenna.

COÏNCIDEN'TIA. Some authors have translated, by this term, the word *παρεμπτωσις*, used by Galen to designate the occlusion of the foramen opticum by a humour, proceeding from the base of the brain, and occasioning blindness.—Castelli.

COÏN'DICANT, *Coïn'dicans*, from *con*, 'with,' and *indico*, 'I indicate.'

COIN'DICANT SIGNS are those, which furnish the same indications; or which confirm the indication afforded by another sign:—*συγγενεικνυμένα*.

COIT'TION, *Coitus*, from *coeo*, 'to go together.' *Copula'tio*, *Copula'tion*, *Copula carnalis*, *Aphrodis'ia*, *Aphrodisiasm'us*, *Acces'sus*, *Basia'tio*, *Amplexa'tio*, *Complex'io*, *Conju'gium*, *Lagneia*, *Syndyas'mus*, *Concu'bitus*, *Congres'sus*, *Cohabita'tio*, *Venus*, *Res venerea*, *Venery*, *Sexual intercourse*. (F) *Coit*, *Approche*. The carnal union of the sexes.

COLATO'RIUM. A strainer of any kind. (F) *Couloir*. A term, by which the ancient physicians described every canal or conduit, through which the excrementitious humours of the body are evacuated. Ulcers, fistulæ, setons, caustics, &c., have been called *artificial* or *accidental Calatoria*, because they were considered to be passages by which the animal economy is freed from some morbid matter.

COLATURA, from *colare*, 'to strain.' A filtered or strained liquor. It likewise means, straining a liquid. (F) *Colature*.

COL'CHESTER, MINERAL WATERS OF. *Aqua Colcestren'sis*. The waters of Colchester are of the bitter purging kind, similar to that of Epsom.

COL'CHICUM AUTUMNALE. The Meadow Saffron. *Col'chicum*, *Coum*, (F) *Colchique*, *Tue-chien*, *Mort aux chiens*, *Safran des prés*, *Safran bâtard*. Family, Colchicaceæ. Class, Hexandria. Order, Monogynia. The bulb or root (*Bulbus* vel *Radix*), and the seeds are the parts used in medicine. The taste is acrid, excoriating the mouth; but the acrimony is lost by drying. It is narcotic, diuretic, and cathartic: and has been given in dropsy, gout, and rheumatism. Dose, from gr. j to vj of the fresh bulb. It is supposed to be the active ingredient of the *Eau medicinale d'Husson*. The active principle is called *Veratrine*. The Colchicum, in an overdose, is an acro-narcotic poison.

Dr. Wilson's Tincture for the Gout, is merely an infusion of Colchicum.—Paris.

COL'COTHAR, *Col'cothar Vitrioli*, *Henricus rubens*, *Chalcitis*, *Brown red*, *Rouge*, *Crocus*, *Oxidum Ferri rubrum*, *Tritox'ydum Ferri*, (F) *Safran de Mars astringent*, *Sulphas Ferri calcinat'um*, *Ferrum vitriola'tum ustum*, *Terra vitrioli dulcis*, *Crocus martis vitriola'tus seu adstrin'gens*. (F) *Rouge d'Angleterre*. The red oxide of iron, obtained by calcining sulphate of iron to redness, with or without the contact of air. It possesses the general properties of the preparations of iron, and has been applied to stanch blood, &c.

COLD, *Frigus*, *Psychos*, $\psi\chi\sigma\varsigma$, (F) *Froid*. The sensation produced by the abstraction of caloric from our organs. See Heat.

Three degrees of cold are generally distinguished in disease. 1. The simple feeling of cold (*Algor*), 2. *Chilliness* (*horror*), and 3. *Shivering* (*Rigor*). *Cheima*, *Chimon*, $\chi\epsilon\iota\mu\alpha$, $\chi\epsilon\iota\mu\omega\upsilon$. Cold is employed in medicine, chiefly, as a refrigerant and sedative.

COLIC, *Colicus*, from $\kappa\omicron\lambda\omicron\nu$, 'the colon.' (F) *Colique*. Relating to the colon.

COLIC AR'TERIES, *Arte'riæ colicæ*. (F) *Arteries coliques*, are six in number, three of which, given off by the superior mesenteric, are called *Colicæ dextræ*; and three, proceeding from the inferior mesenteric, *Colicæ sinis'træ*. All proceed towards the colon, passing between the two laminæ of the peritoneum, which form the meso-colon, where they ramify and anastomose with each other. The first *Colica dextra*, *Ramus colica dexter*, is called *C. dextra superior* (*Meso-colique*,—(Ch.) The second, *C. dextra media*, *Colica media*, *Ramus colicus medius*, *Arteria media anastomot'ica*, (*C. droite*,—Ch.), and the third, *C. dextra inf'erior*, or *Ileo-colica* (*A. cæcale*,—Ch.) Of the three *Colicæ sinis'træ*, the first or superior is called by Chaussier, *Colica*

magna sinistra; the second or *media*, is not distinguished from the preceding, as they often arise from a common trunk; and the third is called by Chaussier, *Colica parva sinistra*. To these arteries as many veins correspond, which open into the great, and little mesenteric.

The COLIC LOBE of the liver is the great lobe of that organ.

COLICA, *Colica Passio*, *Colic*, *Bellyache*, *Col'ice*, *Colicodyn'ia*, *Enteral'gia*. In its etymological acceptation, this word signifies an affection or pain in the colon. But it is employed in a more extensive signification. It includes every acute pain of the abdomen, aggravated at intervals. The word, has, however, epithets affixed to it, which render it more or less precise. See Tormina.

COLICA BILIO'SA, *Bilious Colic*, (F) *Colique bilieuse*. Colic, occasioned by an accumulation of bile in the intestines or in its own passages. The treatment required resembles that proper for the next variety.

COLICA CONVULSI'VA, *C. spasmod'ica*, *C. pituito'sa*, *C. nervo'sa*, *C. idiopath'ica*. Colic, not the symptom of any other affection. It is characterized by griping pain in the bowels, chiefly about the navel, with vomiting and costiveness,—the pain increasing at intervals. The indications are to clear the intestines, and allay spasm. Calomel and opium—castor oil and opium—emollient and cathartic enemata, with fomentations, wet or dry, to the abdomen usually succeed.

COLICA CRAPULO'SA, *C. accidenta'lis*, *C. Helluo'num*, *Surfeit*, *Colique d'Indigestion*. A colic, arising from eating indigestible aliments, or digestible aliments in too great abundance. The remedy is obvious.

COLICA CALLO'SA. Colic, attended with sense of stricture in some part of the intestinal canal: often of flatulency and pain: the flatulency gradually passing off by the stricture: the bowels tardy: at length discharging small, liquid stools.

COLICA FLATULEN'TA, *Inflatio*, *Gastrodyn'ia flatulen'ta*, *Physospas'mus*, (F) *Colique flatulente*, *C. flatueuse*, *C. venteuse*. Colic, arising from an accumulation of air in the intestines. It is very common in infants, and may be relieved by aromatics, especially when combined with antacids—e. g. oil of aniseed with magnesia.

COLICA HEMORRHOIDA'LIS, *Hemorrhoi'dal Colic*, (F) *Colique hemorrhoidale*. A kind of colic, supposed to precede hæmorrhoids or to supervene on their suppression.

COLICA HEPAT'ICA, *Hepatic colic*. Pain in the region of the liver, chiefly about the gall-bladder, occasioned by the passing of a biliary calculus through the cystic and choledoch ducts.

COLICA INFLAMMATO'RIA, *C. phlogis'tica*, *C. plethor'ica*, *C. febrico'sa*, *C. pulsat'ilis*, *Inflam'matory colic*. The same as enteritis, (q. v.)

COLIC OF MADRID, Madrid' Colic. A species of colic, endemic in several provinces of Spain, whose nature is not clear. Its symptoms resemble those occasioned by lead.

COLICA MENSTRU'ALIS, Men'strual Colic, (F) *Colique menstruelle.* Colic, which precedes or accompanies the menstrual evacuation, or which is owing to the suppression of that evacuation.

COLIC METAL'LIC, Painter's Colic, Colica Pic'tonum, Colic of Poitou, Colic of Surinam', Bellon, Devonshire Colic, Dry Belly-ache, Saturnine Colic, Lead Colic, Plumber's Colic, Rachial'gia Pic'tonum, R. Pictavien'sium, Morbus Metallicus, Colicople'gia, Col'ica Rachial'gia, Rachial'gia, Col'ica Damnonio'rum, C. Plumbario'rum, Paral'y-sis rachial'gia, Col'ica nervosa, Col'ica Pic-to'rum, Palmus Plumba'rius, (F) *Colique de Poitou, Colique végétale (?)*, *Colique des peintres,* (F) *Colique de Plomb.* There is not much to distinguish this variety of colic from others. The same violent pain about the navel is present, with retraction of the abdomen towards the spine. It is apt also to occasion palsy. The only difference of treatment is, the necessity of employing more opium along with the purgative. The paralytic sequelæ must be treated by change of air, rubbing the spine, exercise, &c. Treating the disease upon general principles is infinitely more philosophical, and more successful than the empirical management at *la Charité*, Paris, which it is unnecessary to detail.

COLICA NEPHRET'ICA, Nephret'ic Colic, (F) *Colique Néphrétique.* Acute pains, which accompany nephritis, and especially calculous nephritis, or the passage of a calculus into the ureters.

COLICA STERCO'REA, Stercora'ceous Colic, Col'ica Stipa'ta, (F) *Colique stercorale.* A species of colic, ascribed to the retention of fecal matters in the intestines. The retention is itself, however, an effect, that may be caused in the same manner as the colic pains themselves.

COLICA UTERI'NA, Uterine Colic, (F) *Colique utérine.* Pain seated in the uterus, sometimes called *Hyster'al'gia.*

COLICA VERMINO'SA, Worm Colic, (F) *Colique vermineuse.* Abdominal pain, occasioned by the presence of worms in the intestines.

COLI'TIS, from *κωλον*, 'the colon,' and *itis*, 'denoting inflammation.' Inflammation of the mucous membrane of the colon.

COLLAP'SUS, Collapse, Conciden'tia. A sudden and complete prostration of strength, either at the commencement or in the progress of a disease.

COLLAT'ERAL, Collatera'lis, from *cum*, 'with,' and *latus*, 'side.' That which accompanies or proceeds by the side of another.

ARTE'RIÆ COLLATERA'LES BRACHII, Collat'e-ral Arte'ries of the Arm, (F) *Artères collaté-*

rales du bras. They are given off by the brachial. They are distinguished into, 1. The collateral—superior or external (*Grande musculaire du bras—Ch.*) They arise from the inner part of the brachial, and extend as far as the inferior and external part of the arm. 2. The collateral—inferior or internal (*Collaterales du Coude—Ch.*) They arise from the brachial near the elbow-joint, and descend towards the upper part of the forearm.

The vessels which pass to the fingers and toes, are also called collateral.

Speaking generally, collateral branches are those which follow nearly the same course as the vessel, whence they emanate.

COLLEC'TION, Collec'tio, from *colligere*, 'to collect.' This word is often united to the epithet *purulent, serous, &c.*, to express a gathering of pus, serum, &c.

COLLI'CIÆ. Drains to collect and convey away water. Union of the ducts passing from the puncta lachrymalia.

COLLIER (F). *A collar.* A name given to certain eruptions which surround the neck like a collar.

COLLINSONIA CANADENSIS. This indigenous plant is possessed of diuretic properties, which seem to reside in a volatile oil. Infusion is the best form of administration. The leaves are, in domestic practice, applied to wounds and bruises.

COLLIQUAMEN'TUM, from *colli'queo*, 'I melt.' The first rudiments of an embryo.—Harvey.

COLLIQUA'TION, Colliqua'tio, Eliqua'tio, Syntex'is, Ectex'is, Solu'tion, Dissolu'tion. The ancients meant, by this term, the progressive diminution of the solid parts, with copious excretion of liquids by one or more passages. They thought, that all the solids melted; and that the liquids, and particularly the blood, lost a portion of their density.

COLLIQU'UATIVE, Colliquati'vus, Colliques'cens, from *colliques'cere*, 'to grow liquid.' (F) *Colliquatif.* An epithet, given to various discharges, which produce rapid exhaustion. Hence we say, *Colliquative sweats, Colliquative diarrhæa, &c.*

COLLOID, from *κολλα*, 'glue,' and *ειδος*, 'resemblance.' An epithet applied to a product of morbid secretion, resembling glue.

COLLUM, Cervix, Trache'los, Auchen, (F) *Col, Cou.* The part of the body situate between the head and chest. Also, a part of an organ resembling the neck, as in the following cases.

COLLUM OF CERVIX ASTRAG'ALI, Neck of the Astragalus, (F) *Col de l'astragale.* A depression, which separates the anterior extremity of the astragalus from its body.

COLLUM OF CERVIX COSTARUM, Neck of the Ribs, (F) *Col des Côtes.* The narrow part of the ribs, between the head and tubercle.

COLLUM OF CERVIX DENTIIUM. Neck of the

Teeth, (F) *Col* ou *Collet des Dents*. The part of the teeth between the corona and fang, which is embraced by the gum.

COLLUM OF CERVIX FEM'ORIS. *Neck of the Thighbone*, (F) *Col du Femur*. The long, narrow, and oblique portion of the os femoris, which separates the head from the two trochanters.

COLLUM OF CERVIX OSSIS MAGNI vel CAPITATI. *Neck of the Os Magnum*, (F) *Col du grand Os*. A circular depression beneath the head of this bone of the carpus.

COLLUM OF CERVIX HU'MERI. *Neck of the Hu'merus*. A circular, depressed portion, which separates the head of the os humeri from its two tuberosities. Some surgeons place the neck below the tuberosities, no precise line of demarcation indicating its extent.

COLLUM OF CERVIX U'TERI. *Neck of the Uterus*, (F) *Col de la Matrice*. A narrow, cylindrical, and flattened portion of the uterus, which terminates it inferiorly, and opens into the vagina by the *Os Uteri* or *Os Tincæ*. This neck is perceptible on examination *per vaginam*, until near the end of utero-gestation. As the uterus enlarges, however, it becomes shorter and wider, so that a manifest difference exists between its condition at 7 and 9 months.

COLLUM OF CERVIX MANDIB'ULÆ vel MAXILLÆ INFERIO'RI. *Neck of the lower jaw*, (F) *Col de l'os maxillaire inférieure*. A depression observable on each side of the lower jaw, immediately below the condyles.

COLLUM OF CERVIX SCAP'ULÆ. *Neck of the Scapula*, (F) *Col de l'Omoplate*. A narrow portion, observable below the glenoid cavity of the scapula, which seems to separate it, as it were, from the rest of the bone.

COLLUM OF CERVIX FIB'ULÆ. *Neck of the Fibula*, (F) *Col du Perone*. A slight narrowness, seated below the head or upper extremity of the fibula.

COLLUM OF CERVIX RADII. *Neck of the Radius*, (F) *Col du Radius*. A narrow portion of the radius, which supports the head of the bone.

COLLUM OF CERVIX VESI'CÆ. *Neck of the Bladder*, (F) *Col de la Vessie*. The anterior part of the base of the bladder, which resembles the neck of a bottle, and is continuous with the urethra.

COLLUVIES, from *colluo*, 'I cleanse.' Filth, excrement. Discharge from an old ulcer.

COLLYR'IUM, *Collu'rium*, *κολλυριον*, *κολλυριον*, from *καλυω*, 'I check,' and *ρευω*, 'I flow,' or from *κολλα*, 'glue,' and *ουρα*, 'tail.' (F) *Collyre*. The ancients designated, by this term, a solid medicine, of a long, cylindrical shape; proper to be introduced into the vagina, anus, or nostrils. They are said to have given it this name because it was shaped like a *Rat's Tail*, and because there entered, into its composition, powders and glutinous mat-

ters.—Celsus, Oribasius, Scribonius Largus. At the present day, Collyrium means an application to the eye. Some are *pulverulent and dry*, but the greatest part are *liquid*; when they receive different epithets, as *astringent*, *emollient*, &c. The term is now little more than synonymous with *Eyewater*. Collyria are generally extemporaneous formulæ.

COLOBO'MA, *Colobo'sis*, 'Mutilation.'

COLON, *καλον*, *Colum*, *Intesti'num majus*, *I. cellula'tum*, *I. crassum et plenum*, *I. grande*, *I. laxum*. That portion of the large intestines, which extends from the cæcum to the rectum. It is said to have been so called from *κοιλον*, 'hollow,' or from *καλυω*, 'I arrest,' because the excrements are arrested, for a considerable time, in its sacs. The Colon is usually divided into four portions. 1. The *right lumbar or ascending, Colon dextrum*, situate in the right lumbar region, and commencing at the cæcum. 2. *Transverse colon, Colon transver'sum*, or *transverse arch of the colon*, the portion of the colon, which crosses from the right to the left side, at the upper part of the abdomen. 3. The *left lumbar or descending, Colon sinis'trum*, extending from the left part of the transverse arch, opposite the outer portion of the left kidney, to the corresponding iliac fossa. 4. The *Iliac colon* or *Sigmoid flexure of the colon*, (F) *Colon iliaque* ou *S. du colon*, the portion of the intestine, which makes a double curvature in the left iliac fossa, and ends in the rectum.

COLOPHO'NIA, so called from *COLOPHON*, a city of Ionia; *Phrycte*, *Fric'ta*, *Pix Græca*, *Resina nigra*, *Black Rosin*, *Pitch*, *Brown Rosin*. (F) *Colophone*, *Colophane*, *Arcanson*, *Brai sec*. The black resin, which remains in the retort, after the distillation, by means of a strong fire, of common turpentine. It is used like the turpentines in general, and in some pharmaceutical preparations.

COLOSTRA'TION, *Colostratio*. The diseases of new-born children, attributable to the colostrum.

COLOS'TRUM, *Colos'tra*, *Collostrum*, *Colus'trum*, *Trophalis*, *Protog'ala*, *Neog'ala*, (*Biestings* or *Beastings* in the cow, &c.) from *καλον*, 'food,' (?). (F) *Béton*. The first milk after accouchement. It contains more serum and butter, and less caseum than common milk; and seems to possess an evacuant property, which renders it fit to aid in the expulsion of the meconium. *Colostrum* formerly meant an emulsion prepared of turpentine and yolk of egg.

COLOURS, ACCIDENTAL. *Opposite colours*, *Complementary* and *Harmonic colours*. If the eye has been for some time regarding a particular colour, the retina becomes insensible to this colour; and if, afterwards, it be turned to a sheet of white paper, the paper will not seem to be white, but will be of the colour, that arises from the union of all the rays of the solar spectrum, except the one to which

the retina has become insensible. Thus, if the eye be directed for some time, to a *red* wafer, the sheet of paper will seem to be of a *bluish-green*, in a circular spot of the same dimensions as the wafer. This bluish-green image is called an *ocular spectrum*, because it is impressed upon the eye and may be retained for a short time; and the colour *bluish-green* is said to be the *accidental colour* of the *red*. If this experiment be made with wafers of different colours, other accidental colours will be observed, varying with the colour of the wafer employed, as in the following table:—

Colour of the Wafer.	Accidental colour, or colour of the ocular spectrum.
<i>Red</i>	Bluish-green.
<i>Orange</i>	Blue.
<i>Yellow</i>	Indigo.
<i>Green</i>	Violet, with a little red.
<i>Blue</i>	Orange-red.
<i>Indigo</i>	Orange-yellow.
<i>Violet</i>	Yellow-green.
<i>Black</i>	White.
<i>White</i>	Black.

If all the colours of the spectrum be ranged in a circle, in the proportions they hold in the spectrum itself,—the accidental colour of any particular colour will be found directly opposite. Hence the two colours have been termed *opposite colours*.

It will follow, from what has been said, that if the primary colour, or that to which the eye has been first directed, be added to the accidental colour, the result must be the same impression as that produced by the union of all the rays of the spectrum—that of *white* light. The accidental colour, in other words, is what the primitive colour requires to make it white light. The primitive and accidental colours are, therefore, *complements* of each other; and hence accidental colours have also been called *complementary colours*. They have likewise been termed *harmonic*, because the primitive and its accidental colour *harmonize* with each other in painting.

COLPOPTOSIS, from *κολπος*, 'the vagina,' and *πτωσις*, 'fall.' Prolapsus of the vagina.

COLPORRHA'GIA, from *κολπος*, 'vagina,' and *εργυμι*, 'I break forth.' Discharge of blood from the vagina.

COLPOSIS. Inflammation of the vagina. Synonymous with *Elytroitis*, *Elytri'tis*, *Colei'tis*, *Colpi'tis*.

COLPOSTEGNOSIS, from *κολπος*, 'vagina,' and *στεγνω*, 'I close.' Atresia or obliteration of the vagina.

COL'UBER BERUS. The systematic name of the viper, *Vipera*, (F) *Couleuvre*, *Vipère*. A poisonous reptile—the poison lying in small sacs near its teeth. The flesh is innocent, and has been often taken in scrophula, and in cutaneous disorders in general, but it is inefficacious.

COLUM'NA, *Column*, (F) *Colonne*. Anat-

omists use this word for parts, which resemble a column or pillar.

COLUM'NÆ CAR'NÆ, *Colum'næ Cordis*, *Lacerti vel Lacertuli vel Funes vel Fasciculi teretes Cordis*, *Trabes Cordis*, (F) *Colonnes charnues du cœur*. Small, fleshy columns, which project, more or less, into the auricles and ventricles of the heart, whose use appears to be to prevent too great dilatation of those cavities.

COLUM'NÆ NASI. The cartilaginous part of the septum of the nostrils.

COLUTEA ARBORESCENS, *Bladder Senna*, (F) *Baguenaudier*, *Faux Séné*. Fam. Leguminosæ. Sex. Syst. Diadelphia Decandria. The leaves are slightly purgative, and are often mixed with those of the cassia senna.

COLYM'BADES, *Pickled Olives*. These, when bruised and applied to a burnt part, were supposed to be able to prevent vesication.—Dioscorides.

COMA, *καμα*. A profound state of sleep, from which it is extremely difficult to rouse the individual. It is a symptom, which occurs in many diseases. Two varieties are distinguished, 1. The *Coma vigil*, *Coma agrypno'des*, *Pervigil'ium*, *Vigiliæ nim'ia*, *Typho'nia*, *Veter'nus*, *Agrypnoco'ma*, *Carus lethar'gus vigil*, *Typhoma'nia* (q. v.), which is accompanied with delirium. The patient has his eyes closed, but opens them, when called; and closes them again immediately. This state is accompanied with considerable restlessness. 2. *Coma Somnolen'tum*, *C. Comato'des*;—in which the patient speaks when roused, but remains silent and immovable in the intervals. Coma is a deeper sleep than *sopor*, but less so than *lethargy* and *carus*.

CO'MATA, from *καμα*. A diminution of the powers of voluntary motion, with sleep or impaired state of the senses.—Cullen.

COM'ATOSE, *Comato'des*, (F) *Comateux*. Relating to or resembling coma;—as *comatose sleep*, *comatose fever*, &c.

COMBUS'TION, HUMAN, or SPONTANEOUS COMBUSTION, or PRETERNATURAL COMBUSTIBILITY, *Catacau'sis*, *Incen'dium sponta'neum*, *Catacau'sis ebrio'sa*, *Combustion humaine*, *C. spontanée*. These terms have been applied to the extraordinary phenomenon of a rapid destruction of the human body (being reduced to ashes), either spontaneously or by the contact of an ignited substance. It is said to have always occurred in the aged, and in those that were fat and hard drinkers. In such, Dr. Trail has found a considerable quantity of oil in the serum of the blood. Vicq d'Azyr, Lair, and Dupuytren think it necessary, that the body should be placed in contact with an ignited substance. Le Cat, Kopp, and Marc are of opinion, that this is not necessary. The former appears to be the true view.

COMESTIBLE (F), *Edu'lis*, from *comedere*, 'to eat.' *Eatable*. When this word is

used substantively, in French as in English, it means solid food.

COMEZ. Half a drop. Ruland.

COMMEMORATIVE. *Commemorativus*, from *commemora're*, 'to cause to remember.' That which recalls, or rather which is recalled.

COMMEMORATIVE SIGNS, (F) *Signes commemoratifs* are those, deduced from circumstances which have gone before: or rather, according to others, those which point out the preceding condition of the patient. They are also called *Anamnes'tic signs*.

COMMINUTED, *Comminutus*, from *comminu'ere*, 'to break to pieces.' (F) *Comminutif*. A comminuted fracture is one in which the bone is broken into a number of pieces.

COMMINUTION, *Comminutio*, *Thrypsis*, *Leiosis*, *θρυψις*, *λειωσις*. Fracture of a bone into a number of pieces.

COMMISSURE, *Commissura*, *Compages*, *Compagina'tio*, *Sym'physis*, *Sym'bole*, from *commit'to*, 'I join together.' A point of union between two parts: thus, the commissures of the eyelids, lips, &c., are the angles, which they form at the place of union.

COMMISSURE, ANTERIOR, OF THE BRAIN, *Commissura anterior cerebri*, (F) *Commissure antérieure du cerveau*. A small medullary fasciculus, situate transversely at the anterior part of the third ventricle, and uniting the two hemispheres.

COMMISSURE, POSTERIOR, OF THE BRAIN. A similar medullary band, situate at the posterior part of the third or middle ventricle.

The GREAT COMMISSURE OF THE BRAIN, *Commissura Magna Cerebri*, (F) *Grande commissure du cerveau*, which unites the two hemispheres for some extent, is the *Corpus callo'sum*.

COMMO'SIS, *κομμοσις*, from *κομμοω*, 'I adorn.' The art of concealing natural deformities, as by painting the face.

COMMO'TICE, *κομμοτική*, in the older writers, meant the art of communicating fictitious beauty to a person.—*Painting the face*,—*Comoporia*.

COMMUNICANS, *Conjun'gens*. That which communicates or establishes a communication. *Communicant*. There are two *Arte'riae Communican'tes*; both within the cranium; the one anterior, very short, and extending transversely from one anterior cerebral artery to the other,—the other, posterior, called also *Communicans Willis'ii*, which passes from the internal carotid to the posterior cerebral artery. It is a branch of the basillary.

COMPACT, *Compactus*. Solid, close, (F) *Compacte*. The term *Compact Tissue* is given to the hardest and closest parts of bone.

COMPER'NIS. One who has his knees turned inwards. A case of distortion of the legs.

COMPLEX, *Complexus*. Embracing several distinct things. Chaussier uses this term in his anatomical descriptions for complicated.

COMPLEX'ION, *Complexio*. This is often employed, in English, for the colour of the face: as, "He has a good complexion,"—a "sallow complexion," &c. It formerly had a more extensive signification, and still has in France. It signifies the aggregate of physical characters, presented by any individual; considered with respect to his external arrangement or condition. It means more than constitution, for which it is used synonymously in many cases, and differs from temperament, which is less the external condition of the body than the state or disposition of the organs in health.—H. Cloquet.

COMPLEX'US. 'Complicated, complex,' from *complec'tor*, 'to comprise,' 'embrace.'

COMPLEXUS MUS'culus, *Biven'ter Cervicis*, *Complexus Major*, *Dorsotrachelon-occipital*, *Trachelo-occipital* (CH.) (F) *Muscle grand complexus*. A muscle, situate at the hind part of the neck, where it extends from the interval, that separates the two prominent ridges on the posterior surface of the os occipitis, to the transverse and articular processes of the six last cervical vertebræ, as well as to those of the five first dorsal. It serves to straighten, incline, and turn the head.

COMPLEXUS MINOR, *Mastoideus lateralis*, *Trachelo-mastoidien*, *Trachelo-mastoideus*, (F) *Muscle petit Complexus*. It arises from the transverse processes of the four last cervical vertebræ, and is inserted into the mastoid process.

COMPLICATION, *Complicatio*. In Medicine it means the presence of several diseases, or of several adventitious circumstances, foreign to the primary disease.

COMPOSITION, *Compositio*, from *componere*, 'to place together.' *Syn'thesis*. The act of composing or compounding. Also, the Compound, *Compositum*, or thing compounded. Likewise, a combination.

TO COMPOUND. Same etymology; to mix medicines. To mingle different ingredients into one whole. Used adjectively, it signifies the result of the union of several medicinal agents, as "a compound medicine."

COM'PRESS, *Compres'sa*, *Sple'nium*, *Plagula*, *Penicil'lum*, *Penic'ulum*, from *comprimere*, 'to press together.' (F) *Compresse*. Folded pieces of lint or rag, so contrived as, by the aid of a bandage, to make due pressure upon any part. According to their shape, direction, and use, compresses have been called long (F) *longuettes*, square (*carrées*), triangular, prismatic, graduated (*graduées*), split (*fendues*), fenestrated, *fenêtrées*, criblées, *Croix de Malte*, oblique, circular, dividing (*divisives*), uniting (*unisantes*), &c.

COMPRES'SION, *Compres'sio*, *Enereisis*. Same etymology. Pressure, Methodical Com-

pression. This is an agent, frequently had recourse to in Surgery. We compress a limb, affected with *œdema*, *varices*, *hydrops articuli*, *callous ulcer*, &c. The abdomen is compressed after delivery, after *paracentesis abdominis*, &c. The compression is produced by means of the roller, laced stocking, &c. according to the part and to the particular case. *Moderate pressure* aids the contractility of parts, and excites the action of the absorbents; so that large tumours will sometimes disappear after it has been for some time used. A greater degree of pressure occasions, still more, the emaciation of the part, but it is apt to impede the circulation. *Pressure* is often used to stop or moderate the flow of blood in cases of aneurism or wounds of arteries and veins. In such cases the compression may be *immediate*, when applied upon the artery itself, or it may be *mediate*, when applied through the integuments and soft parts. The French use the term—*Compression immédiate latérale*—for that which is exerted perpendicularly to the axis of a vessel, so as to flatten its sides. It is practised with the finger, forceps, tourniquet, compresses, &c.

COMPRESION OF THE BRAIN. This may arise either from coagula of blood, a soft tumour, a bony excrescence, a depressed portion of the skull, or the presence of some foreign body. The effects vary, according as the compression takes place *suddenly* or *gradually*. When *suddenly*, the symptoms are of the comatose or apoplectic character. When *gradually*, mania, convulsions, &c. are more likely to occur. Compression, arising from a depressed portion of skull, requires the use of the trephine.

COMPRESSIVE, *Compressivus*. That which compresses. A *compressive bandage* is one that compresses the parts to which it is applied.

COMPRESSOR OF DUPUYTREN, (F) *Compresseur de Dupuytren*. An instrument for compressing the femoral artery, invented by Dupuytren. It is constructed on the same principles as the tourniquet of J. L. Petit, from which it only differs in this respect;—that, instead of being maintained in its place by a strap, which always compresses more or less the circumference of the limb, the two pads are placed at the extremities of a semi-circle of steel, which, by passing from one to the other without touching the parts, limits the pressure to two opposite points of the thigh, and permits the collateral circulation to go on.

COMPRESSOR OR CONSTRICTOR OF NUCK. An instrument for compressing the urethra, to obviate incontinence of urine. It consists of a girdle of iron, which surrounds the pelvis, to which is fixed a plate of the same metal, that compresses the urethra in *Perinæo*.

COMPRESSOR NARIS, *Rinæus*, *Nasa'lis*,

Transversa'lis Nasi, *Myrtifor'mis*, *Dilato'res ala'rum nasi*, *Maxillo-narinal*, *Constrictor Nasi*, *C. Narium*, *C. Naris*, *Triangula'ris Nasi*, *Sus-maxillo-nasal*.—(Ch.), (F) *Compresseur du nez*, *Transversal du nez*. A muscle, situate at the sides of the nose; flat and triangular. It arises from the inner part of the fossa canina, and passes to the dorsum of the nose; where it is confounded with that of the opposite side.

COMPRESSOR PROSTATÆ, *Prostat'icus superior*, *Pubio-prostat'icus*, *Sub-pubio-prostat'icus*, (F) *Compresseur de la prostate*. A muscle, admitted by ALBINUS, which is formed of the anterior fibres of the *Levator ani*, that embrace the prostate. It is the *Prostat'icus superior* of WINSLOW.

CONCASSER (F), from *conquassa're* 'to break to pieces;' 'to comminute.' To reduce roots, woods, &c. into small fragments, in order that their active principles may be more readily separated from them.

CONCAU'SA or **CONCAUS'SA**, *συναπτιον*, *Synæ'tion*. A cause which coöperates, with another, in the production of disease.

CONCENTRANTIA, from *concentra're*, 'to concentrate.' A name once given to acids and absorbents.

CONCENTRATION, *Concentra'tio*, from *cum*, 'with,' and *centrum*, 'a centre.' A word sometimes used, in medical theories, to express an afflux of fluids, or an accumulation of sensibility or of vital force, towards an organ. It is applied, also, to the pulsation of arteries, when not easily felt under the finger.

POULS CONCENTRÉ (F), is a term applied, by the French, to a pulse of this character.

CONCEPTION, *Concep'tio*, *Cye'sis*, *κυνησις*, from *concip'io*, 'I conceive.' The impregnation of the ovum in the ovarium, by the positive contact of the male sperm, whence results a new being. In order that conception may take place, it is necessary, that there should be a uterus, and that the female should be capable of menstruating in a healthy manner. There is every reason, also, to believe, that, occasionally, the male sperm is not fecundating; but of this we know little. The whole subject of conception is a most mysterious one. It seems to occur as follows. During the sexual union, the male sperm passes along the uterus and fallopian tubes: the fimbriated extremities of the latter seize hold of the ovarium: the sperm, in this manner, comes in contact with an ovum, and impregnates it. The fecundated ovum remains some time in the ovarium; but, at length, bursts its covering, is laid hold of by the fimbriated extremity of the fallopian tube, and passes along the tube into the cavity of the uterus, where it remains the full period of utero-gestation.

FALSE CONCEPTION, *Falsus Concep'tus*, *Spu'rium germen*, (F) *Fausse conception*

Faux germe. An irregular, preternatural conception, the result of which is a mole or some similar production, instead of a properly organized fœtus. See MOLE.

CONCEPTUS. The first rudiments of the fœtus, after conception.

CONCHA, κογχη. A liquid measure, amongst the Athenians, equal to half an ounce. Anatomists apply this term to several hollow parts of the body;—as the *Concha of the Ear*, (F) *Conque*,—*Concha Auris*, *Concha auriculæ*; the hollow part of the cartilage of the external ear. It has, also, been applied to the genital organs of the female; to the patella, &c.

CONCHARUM ANTIFEBRILE. A febrifuge and sudorific preparation in Bates's *Pharmacopœia*. It was composed of vinegar, mussel-shells, and water of the *Carduus benedictus*.

CONCHO-HELIX. A small, fleshy fasciculus, attached to the concha of the ear and helix. It is also called the *small muscle of the helix*.

CONCHUS, κογχος. The cranium. The orbital cavities.—Castelli.

CONCIL'IUM. A milky plant, referred to, by Pliny, as aphrodisiac and antiphthisical. Adanson considers it to be a *Campanula*.

CONCOM'ITANT, *Concom'itans*. That which accompanies. A symptom which accompanies others.

CONCRE'TION, *Concretio*, from *concre'scere*, 'to condense, thicken, become solid:' *Pexis*, *Sympex'is*, πηξίς, συμπηξίς. The act of becoming thick or solid. It was once used synonymously with adhesion or growing together,—as "*concretion of the toes*." Most commonly, it is applied to extraneous and inorganic bodies, of a solid character, met with in different textures, after certain chronic inflammations; or which make their appearance in the joints or in the reservoirs for excrementitious fluids. *Concretion* is, therefore, frequently synonymous with *Calculus*, and is then rendered, in Latin, by the word *concrementum*. But *Concretion* has a more extensive signification than *Calculus*; thus, accidental ossifications or deposits of phosphate of lime, in certain organs and especially in the liver and lungs, are properly called *osseous concretions*. They could not well be called *osseous calculi*.

CONCUR'SUS, from *concur'rere*, 'to meet together,' *Syn'drome*, συνδρομή. The congeries or collection of symptoms, which constitute and distinguish a particular disease.

CONCUS'SION or COMMOT'ION, from *concu'tio*, 'I shake together.' *Concus'sio*, *Thlasma Concus'sio*, (F) *Commotion*. In *Surgery*, it is used for the agitation often communicated to an organ by a fall upon another organ; as to the brain from a fall on the breech, &c.

CONCUSSION OF THE BRAIN, *Encephalosis*.

mus, (F) *Commotion du Cerveau*, sometimes gives rise to alarming symptoms, even to abolition of the functions of the brain, yet without any sensible organic disease. Slight concussion of the brain, called *stunning*, consists in vertigo, tinnitus aurium, loss of memory, and stupefaction; all these being temporary. When more severe, there is instant loss of sensation and volition, vomiting, the patient being as if in a sound sleep, but there is no stertorous breathing. Pulse variable, generally more rapid and feeble than in compression; extremities cold. Little can be done here, till reaction has occurred; after this, the case must be treated according to general principles,—by bleeding, blisters, cold applied to the head, &c. After severe concussion, a patient, although apparently well, is not safe till some time after the accident.

CONDENSAN'TIA. Medicines once esteemed proper for inspissating the humours.

CONDENSA'TION, *Condensa'tio*, *inspissat'io*. Increase in density of the blood and other liquids, or of the solids, which enter into the composition of the human body.

CONDIMENT, ἀρτυμα, *Condimentum*, *Ar'tyma*, *Hedys'ma*, ἡδυσμα, *Conditura*, from *condi'rē*, 'to season,' (F) *Assaisonnement*. Some substances are called, at times, *aliments*, and, at others, *condiments*, according as they may constitute the basis or the accessory to any dish: such are cream, butter, mushrooms, olives, &c. Others are always *condiments*, as they are only used to improve the savour of food, and contain but little nutritive matter. Such are pepper, salt, cinnamon, &c. Almost all condiments are possessed of stimulant properties.

CONDI'TUM, same etymon. A pharmaceutical compound of wine, honey, and some aromatics, especially pepper. Also, a confection.

CONDOM, *Armour*. (F) *Baudruches*, *Redingotes Anglaises*, *Gants des Dames*. The intestina cæca of sheep, soaked for some hours in water, turned inside out, macerated again in weak, alkaline ley—changed every twelve hours,—and scraped carefully to abstract the mucous membrane, leaving the peritoneal and muscular coats; then exposed to the vapour of burning brimstone, and afterwards washed with soap and water. They are then blown up, dried, cut to the length of 7 or 8 inches, and bordered at the open end with a riband. They are drawn over the penis prior to coition, to prevent venereal infection and pregnancy.

CONDUCTOR, *Director*, *Itinera'rium*, (F) *Conducteur*. That which conducts. The *Conductor* was an instrument, formerly used in the high operation for the stone, for directing the forceps into the bladder.

COND'YLE, *Cond'yle*, *Con'dylus*, *Capit'ulum*, 'a knot, eminence.' An articular emi-

nence, round in one direction, flat in the other. A kind of process, met with, more particularly, in the ginglymoid joints;—such are the condyles of the occipital, inferior maxillary bone, &c. Some Anatomists have applied the term, however, to eminences, that are not articular; as to the lateral tuberosities at the inferior extremity of the *os humeri*, and even to certain depressions; as to the concave, articular surfaces or *faces* at the upper extremity of the tibia. Chaussier calls the transverse root of the zygomatic process, *Condyle of the Temporal Bone*.

CONDYLOID, *Condylodeus*, *Condulodes*, from *κονδυλος*, a 'condyle,' and *ειδος*, 'shape.' Having the shape of a condyle.

FORAMINA CONDYLOIDEA, (F) *Trous condyloïdiens*. (F) *Fosses condyloïdiennes*. These are distinguished into *anterior* and *posterior*. They are four in number, seated in the occipital bone; two anterior, and two posterior, to the *condyles* or *condyloid processes* of the same bone, and to depressions, which are called *Fossæ Condyloideæ*.

As the word *Condyloidien* means—"that which has the shape of a condyle," it has been judiciously proposed, by some French Anatomists, that *condylien* should be used in preference, in the case of the foramina and fossæ.

CONDYLOMA, *Con'dylus*, from *κονδυλος* 'a knot,' 'an eminence.' A soft, fleshy excrescence, of an indolent character, which appears near the orifice of the genital organs and rectum, and occasionally on the fingers and toes. It is the consequence of the syphilitic virus. Such tumours are also called *Dermophymata venerea*.

CONFECTIO, from *conficio*, 'I make up.' *Alig'ulus*. (F) *Confiture*, *Condit*. In general, it means any thing made up or preserved with sugar. In the late London Pharmacopœias, it includes the articles before called electuaries and conserves. *Confectio* or *Confectum* also means *Confectionary*.

CONFECTIO AMYGDALARUM, *Almond Confection*, *Almond Paste*, *Pasta regia*, *P. Amygdali'na*, *Pasta Emulsi'va*, *Butyrum Amygdala'rum Dulcium*. (F) *Confection d'Amandes*. (Sweet almonds 3j, gum acacia 3j, white sugar 3iv. Blanch the almonds, and beat into a paste.) A good mode of keeping almonds in a state fit for making emulsions.

CONFECTIO ARCHIG'ENI, *C. Pauli'na*. (*Castor*, long pepper, black pepper, storax, galbanum, costus, opium, of each 3ss, saffron 3ij, syrup of wormwood 3ij.) It was much recommended as a stimulant in nervous affections.

CONFECTIO AROMATICA, *Electua'rium Aromaticum*, *C. Cardiaca*, *C. Raleigha'na*, *Aromatic Confection*, *Sir Walter Raleigh's Cordial*. The following is the London formula. (Cinnamon, nutmeg, of each 3ij, cloves 3j, cardamom seed 3ss, saffron 3ij, prepared shells 3 xvi, rectified sugar ʒij, water ʒj.

Rub the dry substances to a powder, adding the water gradually till the whole be incorporated.) Dose, ʒj, to 3j.

CONFECTIO AURANTIORUM, *Conser'va Cor'ticum Aurantiorum*, *C. Cor'ticis Exterio'ris Aurantii Hispalen'sis*, *C. Flaved'inis Corticum Aurantiorum Hispalen'sium*, *Conser'va Aurantii*, *C. Citri Aurantii*, *Confection of the Orange*, *Conserve of Orange Peel*. (Yellow part of the peel of the orange ʒj, rectified sugar ʒiij, beat into a conserve.) It is stomachic, and an agreeable vehicle, corrigent, and adjuvant for other remedies. Dose, 3ss.

CONFECTIO CAS'SIÆ, *Electua'rium Cassiæ Fis'tulæ*, *E. Cassiæ*, *E. e Cassiâ*, *E. laxati'vum*, *Conserva Cassiæ*, *Electuarium Cassiæ tamarinda'tum seu leniti'vum*, *Electa'rium e Cassiâ*, *Diacas'sia cum Manna*, *Cassia Confection*. (Cassia pulp ʒss, manna 3ij, tamarind pulp 3j, syrup of roses ʒss. Bruise the manna, dissolve by heat, mix the pulp, and evaporate.) It is gently laxative. Dose, 3ss.

CONFECTIO HAMEC;—so called from an Arabian physician,—was composed of the bark of the yellow myrobalans, black myrobalans, violets, pulp of colocynth, the polypodium of the oak, leaves of wormwood, thyme, aniseed, fennel, red roses, pulps of prunes, raisins, sugar, honey, senna, rhubarb, &c. It was used as a purgative in glysters.

CONFECTIO HYACIN'THI, *Hyacinth Confection*, *Electuarium seu Confectio de Croco emenda'ta*, *olim dicta de hyacin'this* (P.) A tonic and slightly astringent confection, composed, according to Baumé, of terra sigillata, crab's stones, cinnamon, leaves of the dittany of Crete, myrrh, saffron, syrup of lemon, camphor, Narbonne honey, oil of lemon, &c.; and formerly the Hyacinth was added, whence its name.

CONFECTIO OPII, *Electuarium Opiatum*, *Confectio Opiata*, *Philo'nium Londinen'se*, *The'riaca Edinen'sis*, *Philo'nium Romanum*, *Opium Confection*, *Electuarium Theba'icum*. (Hard opium 3vj, long pepper 3j, ginger root 3ij, carraway seeds 3iij, syrup ʒj: one grain of opium in 36. Ph. L.) It is narcotic and stimulant. Dose, gr. x to ʒj.

CONFECTIO PIP'ERIS NIGRI, *Ward's Paste for Fistula*. (Black pepper, elecampane root, each ʒj, fennel seed ʒiij, white sugar ʒij.) Dose, size of a nutmeg three or four times a day.

CONFECTIO ROSÆ CANINÆ (L). *Conserva Rosæ Caninæ*, *Conserva Cynos'bati*, *C. Cynorrhodi*, *Rob Cynosbato*, *Confection or Conserve of Dog Rose*. (Pulp of dog rose ʒj, sugar 3 xx. Incorporate.) It is chiefly used as a vehicle for other remedies.

CONFECTIO ROSÆ GAL'LICÆ, (L). *Conserva Rosæ Gal'licæ*, *Conserva Rosæ*, *C. Florum Rosa'rum Rubra'rum*, *C. Florum Rosæ Rubræ*, *Rhodosac'charum*, *C. Rosæ Rubræ*, *Confection of the Red Rose*. (Petals ʒj, sugar ʒiij.) It is astringent, but chiefly used as a vehicle for other remedies.

CONFECTIO RUTÆ, *Confection of Rue*. (*Rue leaves dried, carraway seeds, bay berries*, of each 3 iss, *sagapenum* 3 iv, *black pepper* 3 ij, *honey* 3 xvj. Mix.) It is given in clysters, as an antispasmodic and carminative.

CONFECTIO DE SANTALIS, *Confection of the Saunders*, (F) *Confection de Sandaux*. (*Sandal wood, red coral, bole armeniac, terra sigillata, kermes berries, tormentil root, dittany, saffron, myrtle, red roses, calcined hartshorn, cloves*.) It was formerly used as an astringent.

CONFECTIO SCAMMO'NIÆ, *Electuarium Scammonii*, *Electuarium e Scammonio*, *Caryocostinum*, *Confection of Scammony*. (*Powdered scammony* 3 iss, *bruised cloves, powdered ginger*, aa 3 vj, *oil of carraway* 3 ss, *syrup of roses*, q. s.) A stimulating cathartic. Dose, 3 ss to 3 j.

CONFECTIO SENNÆ, *Electuarium Cassiæ Sennæ*, *E. Sennæ cum Pulpis*, *E. Sennæ compositum*, *Benedictum Laxativum*, *Electuarium aperiens*, *E. catholicum commune*, *E. diaphanum*, *E. eccoproticum*, *Elect. Sennæ*, *E. e Sennâ*, *E. lenitivum*, *Confection of Senna*, &c. (*Senna leaves* 3 viij, *figs* 3 j, *tamarind pulp, cassia pulp, pulp of French prunes*, each 3 ss, *coriander seed* 3 iv, *liquorice root* 3 iij, *sugar* 3 iiss.) It is a laxative, and is used in habitual constipation, and in constipation during pregnancy. Dose, 3 ss to 3 ss.

CONFECTIO DE THURE, *Frankincense Confection*, (F) *Confection d'Encens*. A compound of the *coriander seeds, nutmeg, thus, liquorice, mastich, cubebs, prepared hartshorn, conserve of red roses, sugar*, &c.

CONFERVA RIVALIS. This species of *River Weed* has been recommended in cases of spasmodic asthma, phthisis, &c.

CONFLUENT, *Confluens*, from *fluere*, 'to flow,' and *cum*, 'together.' An epithet for certain exanthematous affections, in which the pimples, pustules, &c. run together. It is particularly applied to small-pox, under such circumstances. Some authors have called *Scarlatina* or *Scarlet Fever*—*Confluent Measles*, *Morbilli Confluentes*.

CONFLUENTIA, *Confoederatio*; same etymon. A term, employed by Paracelsus to express the concordance between a disease and its remedies.

CONFORMATION, *Conformatio*, *Diapylasis*, from *conforma're*, 'to arrange,' 'dispose.' The natural disposition or arrangement of the body. *Faulty conformation*, (F) *Vice de conformation*, is vice of original formation;—existing, of course, from birth. In French Surgery, *Conformation* is used synonymously with *Coaptation*, and both it, *Diapylasis*, and *anapylasis*, mean, also, restoration to the original form,—as in fractures, &c.

CONFORTER (F), *Confirma're*, *Conforta're*, *Corroborare*. To make stronger, to give energy. *Conforter l'estomac*, 'to strengthen the stomach.'

CONFRICATION, *Confricatio*, from *confricare*, 'to rub against.' The action of reducing a friable substance to powder, by rubbing it between the fingers; and of expressing the juice of a plant with the hand.

CONFUSÆ FEBRES. Intermittents, whose paroxysms are irregular and confused.—Bellini.

CONFUSIO, from *confundo*, 'I mix together;' *Synchysis*. A disease of the eye, which consists in the mixture of the humours.—Galen. It has, also, been used synonymously with *Complexio*.

CONGELATION, *Congelatio*, *Conglaciatio*, *Gelatio*, from *con'gelo*, 'I congeal,' 'I freeze.' The action of congealing, of passing to the solid state by the abstraction of heat; as *congelation of water, mercury*, &c.

The term had once other acceptations. 1. It was synonymous with *concretion*. 2. With *coagulation*, in which sense it is still occasionally employed. 3. The ancients called all diseases, produced by cold, *congelations*, as well as those in which there was a kind of stupor or torpor—particularly catalepsy.

CONGELATIVA MEDICAMENTA, *Conglutinantia*, *Congelan'tia*. Medicines, considered capable of uniting, or consolidating wounds, &c.

CONGENER, *Congen'erous*, from *cum*, 'with,' and *genus*, 'kind,' (F) *Congénère*. Of the same kind or species. Resembling each other in some manner. When applied to muscles it means that they concur in the same action; in opposition to the word *antagonist*, or that which acts in an opposite direction.

In France *Congénères* is applied to those, who join in the dissection of the same subject.

CONGENITAL, **CON'GENITE**, *Congenitalis*, *Congen'itus*, from *gen'itus*, 'begotten,' and *cum*, 'with,' (F) *Congénial* ou *Congénital*. Diseases which infants have at birth; hence, *congenital affections* are those, that depend on faulty conformation; as *congenital hernia, congenital cataract*, &c.

CONGESTION, *Conges'tio*, from *congerere*, 'to amass,' 'accumulate,' &c. *Symphorema*, *Synathroism'us*, *Engorgement*. Accumulation of blood or other fluid in an organ. It is an important symptom in febrile and other disorders. It may arise,—either from an extraordinary flow of blood by the arteries, or from a difficulty in the return of blood to the heart by the veins. More often, perhaps, it is owing to the latter cause, and is termed *venous congestion, stasis* or *stagnation*:—being not unusually attended with symptoms of oppression and collapse.

CONGLOBATE, *Conglobatus*, from *congloba're*, 'to collect,' 'to gather into a ball,' (F) *Conglobé*.

CONGLOBATE GLAND, *Glan'dula conglobata*, *Glan'dula Mucosa*, *Conglobate gland*, *Globate gland*, *Lymphatic ganglion*, (F) *Glandes*

conglobées, Ganglions lymphatiques. A round body, formed of lymphatic vessels, connected together by cellular structure, but having neither a cavity nor excretory duct. The mesenteric, inguinal and axillary glands are of this class.

CONGLOMERATE, *Conglomera'tus*, *Glom'erate*, *Glomera'tus*, (F) *Congloméré*. Heaped together.

CONGLOMERATE GLANDS, *Glan'dulæ conglomeratæ*, *Glandulæ vasculosæ*, are those, whose lobules are united under the same membrane; as the liver, kidney, testicle, &c.

CONGRÈS (F), *Congress*, *Congres'sus*. This term, which has often been used synonymously with *Coition*, means, also, the ocular proof, formerly ordered by the Judicial Authority, in the presence of surgeons and matrons, to test the impotence or capabilities of the parties;—a most unsatisfactory and indecent exhibition. It was forbidden by the Parliament of Paris in the year 1667.

CONI VASCULO'SI. Conical bundles, formed by the vasa efferentia of the testis: having their base towards the epididymis.

CONIA, *κονία*. A wine, prepared by fermenting the must of the grape on tar previously washed in sea-water.—Orfila.

CONIUM MACULA'TUM, *κωνίσιον*, *Coni'um*, *Cicu'ta*, *Cicu'ta major*, *Abiotos*, *Cicuta terres'tris*, *Cicuta major fœ'tida*, *C. vulga'ris*, *Common Hemlock*, *Hemlock*, (F) *Cigue ordinaire*, *C. grande*. *Nat. Ord.* Umbelliferae. *Sex. Syst.* Pentandria Digynia. The leaves and seeds are narcotic and poisonous in an overdose. Light destroys the virtues of the leaves; and, therefore, the powder should be kept in opaque bottles, well corked. It has been used as a palliative in cancer, and other painful affections, but is not equal to opium. Externally, it has been applied in fomentation to cancerous and scrophulous ulcers. Dose, gr. ij to xx.

DA'VIDSON'S REMEDY FOR CANCER is said to consist of powdered hemlock and arsenious acid.

CONJUGA'TION, *Conjuga'tio*, (F) *Conjugaison*. Assemblage, union, *Conju'gium*.

FORAM'INA CONJUGATIO'NIS, (F) *Trous de conjugaison*. The apertures at the sides of the spine, formed by the union of the notches of the vertebræ. They give passage to the nerves of the spinal marrow, and to the vessels, which enter, or issue from, the vertebral canal.

CONJUNCTI MORBI. Diseases joined together. Authors have distinguished two kinds of these;—one, in which the diseases go on simultaneously—*morbi connex'i*:—the other, in which they succeed each other—*morbi consequen'tes*.

CONJUNCTIVA MEMBRA'NA, *Circumcaula'lis*, *Epipheph'ycos*, *Tu'nica agna'ta*, *Tu'nica adna'ta*, *T. conjuncti'va*, (F) *Conjunctive*, *Membrane adnée*. A mucous membrane, so called because it unites the globe of

the eye with the eyelids. It covers the anterior surface of the eye, the inner surface of the eyelids, and the *caruncula lachrymalis*. It possesses great general sensibility, communicated to it by the fifth pair.

CONNATE, from *cum natus*, 'born with.'

CONNATE DISEASES, (F) *Maladies connées*, *Morbi connati*, are such as an individual is born with:—*Connate* having the same signification as *congenital*. A difference has been made by some, however: those diseases or conditions, which are dependant upon original conformation, being called *congenital*;—whilst the diseases or affections, that may have supervened during gestation or delivery are termed *connate*.

CONNEC'TICUT, MINERAL WATERS OF. There is a mineral spring at Stafford in this state, 24 miles from Hartford, which has obtained more celebrity than any one in New England. Its principal ingredients are iron and carbonic acid. It, consequently, belongs to the class of acidulous chalybeates. There are other springs in the state, of which, however, little that is accurate is known.

CONNUTRI'TUS, *Syn'trophos*, *συντροφεος*, from *cum*, 'with,' and *nutrior*, 'I am nourished.' A disease is so called, which has grown up, as it were, with an individual, or has been connate with him.—Hippocr., Galen.

CONOID, *Conoideus*, *Conoi'des*, from *κωνος*, 'a cone,' and *ειδος*, 'shape,' (F) *Conoïde*. Resembling a cone.

CONOID LIG'AMENT. A ligament, passing from the coracoid process to the scapula, and forming part of the *coraco-clavicular* ligament of some anatomists.

CONQUASSANT (F). *Conquassans*, from *cum*, 'with,' 'together;' and *quassa're*, 'to shake.' *Douleurs conquassantes* are the pains of parturition, at the time of their greatest intensity, when the head is engaged in the pelvis.

CONQUASSA'TION. Same etymon. A pharmaceutical operation, which consists in dividing, with a pestle, fresh vegetables, fruits, &c. See *Confrication*.

CONSEC'UTIVE, *Consecuti'vus*, from *cum*, 'with,' and *sequi*, 'to follow.'

CONSECUTIVE PHENOM'ENA OR SYMPTOMS, (F) *Phénomènes ou accidens consécutifs*, are such as appear after the cessation of a disease, or, according to others, during its decline; but without having any direct connexion with it.

CONSENT OF PARTS, *Consen'sus*, *Consen'sus partium*, *Sympathi'a*, from *cum*, 'with,' and *senti're*, 'to feel.' (F) *Consentement des Parties*. That relation of different parts of the body with each other, which is more commonly denominated sympathy, (q v.)

CONSERVA'TION, *Conserva'tio*, *Phylax'is*, *φυλαξίς*, from *conserva're*, 'to preserve.' (F) *Conservation des Drogues*, *Asservation*.

The art of preserving any object of pharmacy; any remedial agent, &c. from decay.

CONSERVE, *Conser'va*, from *conserva're*, 'to preserve.' A pharmaceutical preparation, composed of a vegetable substance and a sufficient quantity of sugar. The London and American pharmacopœias prefer the term CONFECTION, (q. v.)

CONSERVA ABSIN'THII, *C. Absin'thii marit'imi*, *Conserve of Wormwood*. (Leaves ℥j, sugar ℥iij.) It has been employed as a tonic, stomachic, and vermifuge.

CONSERVA DE ANGEL'ICA (P), *Conserve d'Angélique*, *C. of Angel'ica*. (Pulp of root 250 parts; white sugar, boiled in a decoction of the root, and reduced to the consistence of a solid electuary, 1000 parts.) It is tonic, aromatic, and stomachic.

CONSERVA DE APIO GRAVEOLEN'TE (P), *Conserve d'Ache*, *Conserve of Smallage*. Prepared like the preceding. Reputed to have the same properties.

CONSERVA ARI, *Conserve of Arum*. (Fresh root ℥ss, sugar ℥iiss.) Esteemed diuretic and stimulant.

CONSERVA COCHLEA'RIÆ HORTEN'SIS, *Conserve of Lemon Scurvy Grass*. (Leaves ℥j, sugar ℥iij.) Reputed to be stimulant and antiscorbutic.

CONSERVA LU'JULÆ, *C. Folio'rum lu'julæ*, *Conserve of Woodsorrel*. (Leaves ℥j, sugar ℥iij.) Gratefully acid and refrigerant.

CONSERVA MENTHÆ, *C. Menthæ folio'rum*, *C. Menthæ sati'væ*, *Conserve of Mint*. (Leaves ℥j, sugar ℥iij.) Stomachic in nausea and vomiting.

CONSERVA PRUNI SYLVES'TRIS, *Pulpa prunorum sylvestrium condi'ta*, *C. Prunæ sylvestris*, *Conserve of Sloes*. (Pulp 1 part, sugar 3 parts.) Possessed of astringent properties.

CONSERVA SCILLÆ, *Conserve of Squill*. (Fresh squills 3j, sugar 3x.) Possesses the diuretic and other virtues of the squill.

CONSIDENTIA. This word has two acceptations. 1. It is synonymous with *Apo-catastasis*; and, 2. It signifies contraction of any cavity or canal:—συνζησις.

CONSISTEN'TIA. A Latin term, employed in two senses. 1. When joined to the word *Morbi* or *Ætatis*, it expresses the acme of a disease, or the age at which the constitution has acquired its full strength. 2. By *Consisten'tia humo'ris* is meant the density of a humour.

CONSOLIDAN'TIA, *Consolidati'va Medicamen'ta*. Substances, formerly given for the purpose of consolidating wounds, or strengthening cicatrices.

CONSOMMÉ, *Consumma'tum*, *Zomos*, ζωμος. Soup, strongly charged with gelatine, and consequently very nutritious, although not proportionably easy of digestion.

CONSTELLA'TUM UNGUEN'TUM. An ointment, composed of cleansed earthworms! dried and pulverized; and of the fat of the

bear or wild boar. It was formerly employed in toothache, and to hasten the cicatrization of wounds.

CONSTIPATION, *Constipa'tio*, from *constipa're*, 'to cram close.' *Obstipa'tio*, *Adstric'tio*, *Obstipa'tio alvi'na*, *Ischoco'i'lia*, *Alvus adstric'ta*, *Stypsis*, *Constipa'tio alvi*, *Copros'tasis*, (F) *Echauffement*, *Ventre resserré*. Costiveness. A state of the bowels, in which the evacuations do not take place as frequently as usual; or are inordinately hard, and expelled with difficulty. It may be owing, either to diminished action of the muscular coat of the intestines, or to diminished secretion from the mucous membrane, or to both. Cathartics will usually remove it; after which its exciting and predisponent causes must be inquired into and obviated, to render the cure permanent.

CONSTITUTION, *Constitu'tio*, *Catas'tasis*, *Status*, from cum, 'with,' and *sta're*, 'to stand.' A collection of several parts, forming a whole. In Medicine, *Constitution* means the state of all the organs of the human body, considered in regard to their particular and respective arrangement, order, or activity. A good constitution is one in which every organ is well developed, and endowed with due energy, so that all perform their functions with equal facility. Any want of equilibrium in their developement and energy, forms a difference in the constitution. We say that a man is of a good or robust, a delicate or weak constitution, when he is commonly healthy, or commonly labouring under, or unusually susceptible of, disease.

CONSTITUTION OF THE ATMOSPHERE, *Constitu'tio A'eris*, (F) *Constitution Atmosphérique*. The different conditions of the atmosphere, as regards dryness and humidity, temperature, heaviness, direction of the winds, &c., considered as respects their influence on the animal economy.

EPIDEMIC CONSTITUTION OR MEDICAL CONSTITUTION, (F) *Constitution médicale*, *C. épidémique*. The aggregate of meteorological conditions, so far as they are appreciable, during which diseases prevail epidemically.

CONSTITUTIONAL, (F) *Constitutionnel*. Belonging to the constitution of an individual; to his manner of being; as, *constitutional phthisis*, *C. gout*, &c. By some, this epithet has been given to diseases, produced by the constitution of the atmosphere, but this acceptance is not common.

CONSTRIC'TOR, from *constrin'gere*, 'to bind.' (F) *Constricteur*. That which binds in a circular direction. Different muscles are so called.

CONSTRIC'TO'RES LARYN'GIS. Lieutaud describes under the name, *Grand constricteur du larynx*, the muscle *Crico-arytenoideus lateralis* with the *Thyro-arytenoideus*.

CONSTRUCTOR ŒSOPH'AGI, *Constrictor of the Œsoph'agus*, (F) *Constricteur de l'Œsophage*, *Muscle œsophagien*. A fasciculus of fleshy,

circular fibres, at the upper part of the œsophagus.

CONSTRICTO'RES PHARYN'GIS, *Constrictors of the Pharynx, Sphincter Gulæ*. Muscular expansions, which assist in forming the parietes of the pharynx. Three of these are generally admitted. 1. The *Constrictor Pharyngis inferior, Crico-pharyngeus* and *Thyro-pharyngeus, Crico-thyro-pharyngien*. It is broad very thin, quadrilateral, and seated superficially, extending from the thyroid and cricoid cartilages as far as the middle of the pharynx, and uniting, on the median line, with that of the opposite side. 2. The *Constrictor Pharyngis Medius, Hyo-pharyngeus* and *Chondro-pharyngeus, Syndes'mo-pharyngeus, Hyo-glosso-basi-pharyngien*, occupies the middle part of the pharynx. It is triangular, and attached, anteriorly, to the great and little cornu of the os hyoides; to the stylo-hyoid ligament; and terminates, posteriorly, by joining its fellow of the opposite side. 3. The *Constrictor Pharyngis superior, Ceph'alo-pharyngeus, Glosso-pharyngeus, Mylo-pharyngeus, Pter'ygo-pharyngeus, Pterigo-syndesmo-staphili-pharyngien*, is quadrilateral, and extends from the internal ala of the pterygoid process, from the inter-maxillary ligament, from the internal oblique line of the jaw, and from the base of the tongue to the posterior part of the pharynx.

The constrictors of the pharynx contract it. They can likewise approximate the ends to each other. Chaussier considers those and the *stylo-pharyngeus* as but one muscle, and includes all under this last name.

CONSTRICTORES CUNNI, *Clitor'idis inferioris lati et plani mus'culi, Sphincter Vagi'næ* (F) *Constricteurs du Vagin, C. de la Vulve*. Small muscles, which originate beneath the clitoris, descend along the sides of the vagina, and terminate by becoming confounded with the *transversus perinæi* and *external sphincter ani* muscles. Their use is to contract the entrance of the vagina.

CONSULTA'TION, *Consulta'tio, Delibera'tio, Cœnolo'gia, Conten'tio, Symboleu'sis*. This word has several acceptations. In English, it means, almost always, the meeting of two or more practitioners, to deliberate on any particular case of disease. In France, it signifies the written result of such deliberations, as well as the opinion of a physician, given to a patient, who consults him, either personally or by writing.

CONSULTING PHYSICIAN or SURGEON. One, who consults with the attending practitioner, regarding any case of disease. Some physicians, surgeons, and accoucheurs confine themselves to consulting practice.

CONSUMP'TION, from *consu'mere*, 'to waste away.' *Consump'tio, Syntex'is, σνυτῆξις*. (F) *Consumption*. Progressive emaciation or wasting away. This condition precedes death, in the greater part of chronic

diseases, and particularly in *phthisis pulmonalis*:—on this account it is, that phthisis has received the name *consumption*.—See Phthisis. *Fièvre de Consommation, Consumptive fever*, is the same as *Hectic fever*, (q. v.)

CONSUMPTI'VA. Same etymology. Caustics, used for the destruction of fungi; as *burnt alum, lunar caustic, &c.*, were formerly so called.

CONTABESCEN'TIA, from *contabescere*, 'to grow lean.' Consumption, marasmus, atrophy, &c.

CONTACT, *Contac'tus*. The state of two bodies that touch each other. In the theory of contagious diseases, we distinguish *immediate* or *direct contact*, as when we touch a patient labouring under one of those diseases, and *mediate* or *indirect contact*, when we touch, not the patient himself, but objects that have touched, or emanated from him. The air is, most commonly, the medium by which this last kind of contact is effected.

CONTA'GION, *Conta'gio, Conta'ges, Conta'gium, Aporrhœa, apoc'risis*, from *contin'gere*, 'to meet or touch.' The transmission of a disease from one person to another, by direct or indirect contact. The term has, also, been applied, by some, to the action of miasmata arising from dead animal or vegetable matter, bogs, fens, &c., but in this sense it is now abandoned. Contagious diseases are produced, either by a virus, capable of causing them by inoculation, as in small-pox, cow-pox, hydrophobia, syphilis, &c., or by miasmata, proceeding from a sick individual, as in plague, typhus gravior, and in measles and scarlatina. Scrophula, phthisis pulmonalis, and cancer have, by some, been esteemed contagious, but apparently without foundation. Physicians are, indeed, by no means unanimous in deciding what diseases are contagious, and what not. The contagion of the plague and typhus, especially of the latter, is denied by many. It seems probable, that a disease may be contagious under certain circumstances, and not under others. A case of common fever, arising from *common causes*, as from cold, may, if the patient be kept in a close, foul condition, be converted into a disease, capable of producing emanations, which will excite a similar disease in those exposed to them.

Contagion and *infection* are generally esteemed synonymous. Frequently, however, the former is applied to diseases, not produced by contact; as measles, scarlet fever, &c., whilst *infection* is used for those that require positive contact; as itch, syphilis, &c., and conversely.

Diseases, which cannot be produced in any other way than by contagion, are said to have their origin in *specific contagion*; as small-pox, cow-pox, measles, hydrophobia, syphilis, &c. Those, which are produced by contagion, and yet are sometimes owing to other causes, are said to arise from *common con-*

tagion; as typhus, cynanche parotidæa, &c.

CONTA'GIOUS, *Contagio'sus*. Capable of being transmitted by mediate or immediate contact; as a *contagious disease*, *contagious fever*, *contagious effluvia*, &c.

CONTEMPLATIF (F), *Contemplati'vus*. Appertaining to contemplation. The predominant idea of the melancholic—of the monomaniac—is, sometimes, called *contemplative*.

CONTEXTURE, *Contextu'ra*, *Contex'tus*, from *cum*, 'with,' and *texere*, 'to weave,' 'to make a web.' Arrangement of parts;—texture. A name given, metaphorically, to the structure of organized bodies; as *the texture of muscles, fibres*, &c. See Tissue and Texture.

CONTINENCE, *Continen'tia*, from *contine're*, 'to contain oneself;' 'to restrain.' Abstinence from the pleasures of physical love.

CONTINENT, *Continens*. This word is synonymous with *Continued*. (F) *Continu*.

CONTINENT CAUSE, *Causa conjuncta*, is a cause, real or presumed, which, having given rise to a disease, continues to act during the whole of its duration. It may be considered synonymous with proximate cause. A *continent fever*, *Febris continens*, is one, which preserves, during its whole course, the same degree of intensity, without any remission or sensible exacerbation. A disease, which continues uninterruptedly, has been, also, called *Æiipatheî'a* or *Acipatheî'a*, *αἰπάθεια*.

CONTINUED FEVER, *Febris contin'ua*, *F. continens*, *F. anabat'ica*, *F. assid'ua*. A fever, which presents no interruption in its course. Continued fevers form a division in the class *Pyrexia* of Cullen, and include three genera, —*Synocha*, *Synochus*, and *Typhus*.

CONTINUITY, *Continu'itas*. An adhesion of two things between each other, so that they cannot be separated without fracture or laceration.

DIARTHRO'SES OF CONTINUITY, (F) *Diarthroses de Continuité*, are movable joints, in which the bones are continuous, but do not touch immediately: there being, between them, a ligamentous substance, whose flexibility permits motion. The vertebral articulations are examples of this. **DIARTHROSES OF CONTIGUITY**, *Diarthroses de Contiguité*, on the other hand, are movable articulations, in which the bones are not continuous, but touch by surfaces covered with a cartilaginous layer, which is always moistened by synovia.

SOLUTION OF CONTINUITY is any division of parts, previously continuous. Wounds and fractures are *solutions of continuity*.

The word *Continuity* is opposed to *Contiguity*; the latter meaning the condition of two things, which are near each other, or touch without uniting. There is *contiguity* between the head of the humerus and the glenoid cavity of the scapula, but not *continuity*.

CONTOR'SION, *Contor'sio*, from *contor'queo*, 'I twist about.' Violent movement of a part, accompanied with a kind of torsion; as *contortion of the face*.

CONTRA-APERTU'RA, from *contra*, 'against,' and *aperio*, 'I open.' A counter-opening. *Contra-incis'io*, *Incis'io priori oppos'ita*, (F) *Contre-ouverture*. An incision, made in the most depending part of a wound or abscess, when the first opening is not situate in a manner favourable for the discharge of the pus.

CONTRACTILE, *Contractilis*, from *contra'here*, 'to draw together.' Capable of contracting. The fibre of muscles is *contractile*.

CONTRACTILITY, *Contractil'itas*; same etymon. (F) *Contractilité*. That vital property, which gives, to certain parts, the power of contracting. The muscles of locomotion are endowed with a power of *voluntary contractility*, or one dependent immediately on the action of the brain: the muscles of the viscera of digestion, and other internal organs, enjoy an *involuntary contractility*. *Contractility* and *irritability* are frequently used synonymously to signify the property possessed by any tissue of *contracting* on the application of an appropriate stimulus.

CONTRACTION. Same etymon. *Sys'tolē*. Action of contracting. When we speak of the *contraction of a muscle*, we mean the phenomena it exhibits during the time it is in action.

CONTRACTU'RA. Same etymon. *Acamp'sia*, *Enta'sia articula'ris*, *Mus'cular Stiff-joint*. A state of permanent rigidity and progressive atrophy of the flexor muscles, which prevents the motions of extension, beyond a certain limit. The affected muscles form hard cords beneath the skin. On dissection, they are found converted into tendinous fibres, the fleshy fibres having almost disappeared, when the disease has been of any duration. It succeeds, frequently, other diseases, particularly rheumatism, neuralgiæ, convulsions, syphilis, colica pictonum, &c. The warm bath, vapour bath or thermal waters, oleaginous embrocations, mechanical extension of the limbs, &c., are the chief means of treatment.

CONTRA-FISSU'RA, from *contra*, 'against,' and *findo*, 'I cleave.' *Repercus'sio*, *Reson'itus*, *Catag'ma*, *Fissura contrajacens*, *Apeche'ma*, (F) *Contre-coup*, *Contre-fente*, *Contre-fracture*. A fracture, contusion, or injury, produced by a blow in a part distant from that which is struck. Five species of *contra-fissura* or *contre-coups* may occur in the skull. 1. When the internal table yields and fractures. 2. When the bone breaks in any other part than the one struck. 3. When a bone, which has been struck, remains uninjured, and its neighbour is fractured. 4. When a bone is fractured in a place diametrically opposite to that struck, as in fractures at the base of the cranium, from a fall on the vertex: and lastly, when the violence

of the blow produces a separation of the neighbouring or distant sutures. These fractures of the skull are also called *Fractures par résonnance*.

CONTRA-LUNA'RIS, from *contra*, 'against,' and *luna*, 'the moon.' An epithet for a woman, who conceives during the menstrual discharge.—Dieterich.

CONTREXEVILLE, MINERAL WATERS OF. C. is a town in France, in the department of Vosges, four leagues from Neufchâteau. The waters contain carbonate of iron, muriate and carbonate of lime, a bituminous substance, and free carbonic acid. They are frequented by those labouring under cutaneous, scrophulous, and calculous affections.

CONTRI'TIO, from *con'tero*, 'I bruise or make small:—*Syntrimma*, *Syntrip'sis*, *Tritu'ra*, *Tritus*, *Tritura'tion*, *Tri'tio*, *Communi'tion*.

CONTRO-STIM'ULANT, *Contrastim'ulans*, from *contra*, 'against,' and *stimulus*, 'that which excites.' A substance, that possesses a particular, debilitating property, acting upon the excitability in a manner opposite to stimulus. A name, given to therapeutical agents, which, according to the Italian theory of *Contro-stimulus*, are endowed with the property of diminishing excitement by a specific action. These agents are, by no means, clearly defined.

CONTRO-STIM'ULUS. Same etymon. The name, given by Rasori, about thirty years ago, to a new medical doctrine of which he was the originator—*La nuova Dottrina Medica Italiana*. It is founded on the contro-stimulant property, attributed to a certain number of medicines. In this doctrine, as in that of Brown, under the name, *excitability*, a fundamental principle of physiology is admitted, by virtue of which living beings are endowed with an aptitude for feeling the action of external agents or exciting influences, and of reacting on these same influences. When this excitability is too great, there is excess of stimulus or *Hyperstheni'a*: when too little, there is deficiency or *Hypostheni'a*. Diseases, *general* and *local*, are divided into three great classes, or into, 1. *Hypersthenic*; 2. *Hyposthenic*; 3. *Irritative*. The contro-stimulant physicians admit only two classes of medicines,—*stimulants* and *contro-stimulants*.

CONTUNDING, *Contu'sing*, (F), *Contondant*, *Contundens*, from *contun'dere*, 'to bruise.' That which causes contusions. An epithet given to round, blunt, vulnerating projectiles, which bruise or lacerate parts, without cutting them.

CONTU'SED. Same etymon. (F) *Contus*. Affected with contusion. Thus we say—a *contused wound*.

CONTUSION, *Contu'sio*. A Bruise; *Col-lis'io*, *Phlasma*, *Thlasis*, *Thlas'ma*, *Th. Con-tu'sio*, (F) *Meurtrissure*. Same etymon. An injury or lesion—arising from the shock of a

body with a large surface,—which presents no loss of substance, and no apparent wound. If the skin be divided, the injury takes the name of *contused wound*. The differences of contusion, as to extent, are of course infinite. When slight, the blood stagnates in the capillaries of the skin, or is effused into the subcutaneous cellular tissue. Time and cold applications remove it. When the texture of the parts has been lacerated, there is effusion of blood, with more or less torpor in the part. Cooling applications, general or topical V. S., emollients, poultices, compression, &c., are here necessary, according to circumstances. In the severest kinds of contusion, all the soft and solid parts, except the skin, are bruised, and, at times, reduced to a kind of pap. When the disorganization is to this extent, there is no hope except in amputation. A deep contusion of the soft parts has been called *Sarcothla'sis*, and *Sarcothlas'ma*.

CONVALES'CENCE, *Convalescen'tia*, from *convales'cere*, 'to grow well.' *Exanas'trophe*. Recovery of health, after disease. The time which elapses between the termination of a disease, and complete restoration of strength.

CONVALLA'RIA MAIA'LIS, *Lil'ium Conval'lum*, *Convalla'ria*, *Maian'themum*, *Lily of the Valley*, *May Lily*, (F) *Muguet*, *Muguet de Mai*. The recent flowers are reputed to be aromatic, cephalic, errhine, cathartic. They are not used.

CONVALLA'RIA POLYGONA'TUM. The systematic name of *Solomon's Seal*. *Sig'il'lum Salamo'nis*, *Polygona'tum*. The root was once used as an astringent and tonic. It is, also, a reputed cosmetic.

CONVER'SION, *Conver'sio*. Change from one state into another.

CONVERSION OF DISEASES, (F) *Conversion des maladies*, is—the change or transformation of one disease into another.

CONVOLUTION, *Convolu'tio*, from *con-vol'vere*, 'to entwine.' *Epispha'riion*, *Gyrus*, (F) *Circonvolution*.

The **INTESTINAL CONVOLUTIONS** are the turns made by the intestines in the abdomen.

The **CEREBRAL CONVOLUTIONS** are the round, undulating, tortuous projections, observed at the surface of the brain. In them, Gall's organs, of course, terminate.

CONVOLVULUS BATA'TAS, from *con-vol'vere*, 'to roll together.' The *Sweet Potato*, *Spanish Potato*. This is the only esculent root, of the genus *convolvulus*. It is much eaten in the United States.

CONVOLVULUS CANTAB'RICA, *Cantab'rica*, *Lavender-leaved Bindweed*. It has been considered anthelmintic and actively cathartic.

CONVOLVULUS JALA'PA. The systematic name of the Jalap plant. *Jala'pium*, *Mechoaca'na nigra*, *Jalappa*, *Jalapa*, *Jalap Root*, *Gialappa*, *Xalappa*, *Bryo'nia Mechoachan'na nigricans*, *Bryonia Peruviana*, *Chela'pa*, *Rhabar'barum Nigrum*, *Gelappium*, (F) *Jalap*, is pro-

cured from South America. Its odour is nauseous; taste sweetish and slightly pungent. It is solid, hard, heavy, brittle;—fracture resinous; internally, light gray; externally, covered with a deep brown, wrinkled bark. Its operation is cathartic—the resinous part griping violently. Dose, 10 gr. to 3 ss. A drop or two of any essential oil will prevent it from griping. An active principle has been separated from Jalap, to which the names *Jalapine* and *Cathartine* have been given.

CONVOLVULUS MECHOACHAN, *Mechoaca'næ Radix*, *Jalappa alba*, *Rhabar'barum album*, *Mechoacan*, (F) *Rhabarbe blanche*. A Mexican convolvulus, the root of which possesses aperient properties, and was once extensively used instead of jalap.

CONVOLVULUS PANDURA'TUS, *Wild Potato*, *Mech'ameek*, *Wild Rhubarb*, *Wild Potato-Vine*, *Kassander*, *Kassader*. In Virginia, and some other parts of the United States, the root of this plant has been much recommended in cases of gravel. It is used, either in powder or decoction.

CONVOLVULUS PES CA'PRIÆ, *Bargada*. A plant used in India in cataplasm, in arthritic cases.

CONVOLVULUS SCAMMO'NIA. The systematic name of the *Scam'mony Plant*. *Scammo'nia*, *Scammonia Gummi-Resi'na*, *Convolvulus Syriacus*, *Scammonium Syriacum*, *Diagryd'ium*, *Dacrydion*, *Scammony*, *Mahmoudy*, (F) *Scammonée d'Alep*. A Syrian and Mexican plant; the concrete gummi-resinous juice of which comes to us in blackish-gray fragments, becoming whitish-yellow when touched with wet fingers. It is a drastic, hydrogogue cathartic. Dose, gr. iij to gr. xv, triturated with sugar.

CONVOLVULUS SEPIUM, *Convolvulus major albus*. *Great Bindweed*, (F) *Liseron des Haies*, *Grand Liseron*. The juice of this plant is violently purgative, and is given in dropsical affections.

CONVOLVULUS SOLDANEL'LA. The systematic name of the *Sea Convolvulus*. *Bras'sica Mari'na*, *Calystegia Soldanella*, *Sea Bindweed*, *Convolvulus Marit'imus*, *Soldanella*, (F) *Chou Marin*. The leaves of this plant are said to be drastic cathartic; but they are not much, if at all, used.

CONVOLVULUS TURPE'THUM, *Turpethum*. The systematic name of the *Turbith plant*, (F) *Racine de Turbith*. The cortical part of the root of this species of convolvulus is brought from the East Indies. It is a cathartic, but not used.

CONVULSION, *Spasmus*, *Convul'sio*, from *convellere*, 'to pull together.' *Conduc'tio*, *Hieran'osus*, *Disten'tio nervo'rum*, *Clonic Spasm*, *Convul'sio clon'ica*, *Eclamp'sia*. This word has several acceptations. It means any violent perversion of the animal movements. The word *Convul'sions* generally, however, signifies alternate contractions, violent and

involuntary, of muscles, which habitually contract only under the influence of the will. This alternate contraction, when slight, is called *Tremor*; when strong and permanent, *tetanus*, *trismus*, &c. *Spasms*, *Cramp*, *Risus Sardonicus*, *St. Vitus's Dance* are *convulsions*.

CONVULSIO CEREALIS, *Convulsio ab Ustilag'inè*, *Cereal Convulsion*, (F) *Convulsion céréale*, *Ergotisme convulsif*, *Convulsion de Salogne*. A singular disorder, of the convulsive kind, attended with a peculiar tingling and formication in the arms and legs. It is said to be endemic in some parts of Germany, and to arise often from the use of spoiled corn.

CONVULSIONNAIRE (F). A name given, during the last century, to individuals, who had, or affected to have, convulsions, produced by religious ideas.

CONVULSIVE, *Convulsi'vus*, *Spasmo'des*, *Agitato'rius*, (F) *Convulsif*. That which is accompanied by, or is analogous to, convulsions, as *convulsive cough*, *convulsive disease*.

CONY'ZA SQUARROSA, *Brephoc'tonon*, *Great Fleabane* or *Spikenard*, (F) *Herbe aux Mouches*. A European plant, whose strong and disagreeable odour was formerly considered to be destructive to flies, fleas, &c. Its infusion in wine was once used as an emmenagogue and anti-icteric: in vinegar as an anti-epileptic.

COOSTRUM. The middle part of the diaphragm.—Ruland.

COPA'IBA. The resinous juice of the *Copaifera officina'lis*. Family, Leguminosæ. Sex. Syst. Decandria Monogynia. It is the *Copaifera officina'lis Resina*, *Bal'samum Copaibæ*, *B. Brazilien'se*, *B. de Copaiba*, *B. Capi'vi*. The *Balsam of Copaiba* or *Copaiva*. (F) *Copahu*, *Baume de Copahu*, *B. du Brésil*, *Terébinthe de Copahu*. Its odour is peculiar, but not unpleasant. Taste pungent, bitter; consistence, syrupy; colour yellowish, and transparent. It is soluble in alcohol, ether, and the expressed oils. S. g. 0.950. Its properties are stimulant and diuretic; in large doses it is purgative. It acts on the lining membrane of the urethra, and on mucous membranes, in general. It is given in gonorrhœa, gleet, leucorrhœa, &c.: in the dose of gtt x to 3j, twice or thrice a day. Should symptoms of urticaria or diarrhœa arise, the dose is too large, and must be diminished. It can be inspissated by means of magnesia so as to be made into pills, and recently a plan has been devised for enveloping it in gelatine, so that its taste is entirely concealed. See Capsules, gelatinous.

COPAL' or COPALE, *Resina Copal*. The resin, which flows, spontaneously, from the *Elæocar'pus Copalifera*, a Guinea plant. It is a stimulant, like all the resins; and, dissolved in rectified spirit of wine, has been

used in cases of spongy gums and looseness of the teeth; but it is now only employed in varnish.

COPHO'SIS, *Sur'ditas*, *Epicopho'sis*, *Paracu'sis*, *Dysæsthe'sia audito'ria*, from *κωφος*, 'deaf.' (F) *Surdité*. Diminution or loss of hearing. Cullen uses the word synonymously with *Dysecæa*, and Pinel with *Paracou'sia* or *Parac'oë*. According to Sauvages, *Cophosis* differs from both: from *Dysecæa*, because, in it the sonorous rays cannot reach the labyrinth: and from *Paracousia*, which consists in a confused state of hearing.

Cophosis seems, usually, to be synonymous with deafness;—*Paracu'sis Sur'ditas*.

COPOS, *κοπος*, *Lassitu'do*, *Fatiga'tio*, *Lassitude*, *Fatigue*. A state of the body, in which the greater part of the animal functions are exerted with less promptitude and vigour than common.

The ancients admitted three species: 1. That arising from plethora, *Lassitu'do tensi'va*, *Tono'des*, *τονωδης*, 2. From plethora and increased heat combined, *Lassitu'do phlegmono'sa*, *æstuo'sa*, *φλεγμονωδης*, *Phlegmono'des*, and, 3. Owing to a morbid condition of the humours, *Lassitu'do ulcero'sa*, *ελκωδης*, *Helco'des*.

COPRAGO'GUM, from *κοπρος*, 'fæces,' and *αγω*, 'I bring away.' *Stercus e primis viis educens*, a cathartic. The name of a laxative electuary, mentioned by Ruland.

COPREM'ETOS, *Coproë'm'etos*, from *κοπρος*, 'excrement,' and *εμειω*, 'I vomit.' One who vomits fæces.—Hippocr.

COPROCRIT'ICUS, *Coprocrit'icus*, from *κοπρος*, 'excrement,' and *κρηνω*, 'I separate.' A mild cathartic;—an eccoprotic.

COPROSCLERO'SIS, from *κοπρος*, 'excrement,' and *σκληρωω*, 'I harden.' Induration of fæcal matters.

COPE or **COPTON**, from *κοπτω*, 'I beat or pound.' A sort of cake, composed of vegetable substances, which the ancients administered internally, and applied to the epigastric region in the form of cataplasm.

COPTIS, *Gold Thread*, *Coptis Trifo'lia*, *Nigella*. The root of this is much used in Massachusetts, in aphthous and other ulcerations of the mouth, as a local application. It is a pure bitter, and can be used, wherever such is indicated.

COPTIS TEETA, *Mishme Teeta*, (Upper Assam) *Honglane* (Chinese.) The root of this plant is considered to be a powerful tonic and stomachic.

COQUEN'TIA MEDICAMEN'TA, from *co'quere*, 'to digest.' Medicines, which were formerly believed to be proper for favouring the coction or digestion of food.

COR'ACO-BRA'CHIAL, *Cor'aco-brachia'lis*. Belonging both to the coracoid process and arm.

The **CORACO-BRACHIALIS** (Muscle,) *Coraco-humeral*—(Ch.), *Perfora'tus* CASSE'RII, *Perforatus*, *Coraco-brachia'us*, is situate at the

inner and upper part of the arm. It arises from the coracoid process of the scapula, and is inserted at the middle part of the inner side of the humerus. It carries the arm forwards and inwards, raising the humerus a little. It can, also, by acting inversely, depress the shoulder.

CORACO-CLAVIC'ULAR, *Coraco-clavicularis*. Belonging to the coracoid process and clavicle.

The **CORACO-CLAVICULAR LIGAMENT**, called also, *Omo-clavicular*, serves to unite the clavicle to the coracoid process. It is very irregular, and formed of two fasciculi, which the greater part of anatomists have described as particular ligaments, under the names *Conoid* and *Trapezoid*.

COR'ACOID, *Coracoïdeus*, *Coracoïdes*, *C. Proces'sus*, *Cornicula'ris Processus*, *Crow's-beak-like Process*, *Proces'sus anchora'lis*, *rostriformis*, *ancyroides*, from *κοραξ*, 'a crow,' and *ειδος*, 'resemblance.' (F) *Coracoïde*. Resembling the beak of a crow. A name given by Galen, (and still retained,) to the short, thick process, situate at the anterior part of the upper margin of the scapula; and which has some resemblance to the beak of a crow. This process gives attachment to the *Coraco-clavicular* and *Coraco-acro'mial* ligaments, and to the *Coraco-brachia'lis*, *Pectora'lis minor*, and *Biceps* muscles.

The **CORACOID LIGAMENT**, *Ligamen'tum coracoïdeum*, (F) *L. Coracoïdien*. This name is given to the small fibrous fasciculus, which converts the notch, at the superior margin of the scapula, into a foramen.

CORAL, *Coral'lium*, *Coral'lus*, *Arbor Maris*, *Azur*, *Bolesia*, from *κορσσω*, 'I adorn,' and *αλς*, 'the sea.' (F) *Corail*. One of the most beautiful productions of the deep. It is fixed to submarine rocks, in the form of a shrub; and is of a bright red colour. It is the habitation of a multitude of animals, of the Zoophyta order, and is formed of a calcareous substance, secreted by these animals themselves. It is in very hard, concentric layers; covered, externally, by a species of porous bark, full of cellules, each of which contains one of these animals. Linnæus calls the red coral, *Isis nob'ilis*, and M. de Lamarck, *Coral'lium rubrum*. It is much fished for, on the coasts of Barbary and Sicily. Coral was formerly esteemed tonic, absorbent, astringent, &c., but analysis has shown, that it contains only carbonate of lime and a little gelatine.—Dioscorides, Pliny, Oribasius, the *Geoponica*, &c. The *Corallium album* is a hard, white, calcareous, brittle substance, the nidus of the *Madrep'ora oculata*. It has been exhibited as an absorbent.

CORALLINA. Diminutive of *Corallium*; *Musculus marit'imus*, *Corallina officina'lis*, *Brion*, *Corallina alba*, *Sea Cor'alline*, *White Worm-weed*. The production of an animal, which belongs to the genus *Pol'ypi*, and which is found in all the seas of Europe;—

particularly in the Mediterranean. It has the appearance of a plant, is homogeneous, an inch or two in height, of a white, reddish, or greenish colour, salt taste, and marine smell. It contains gelatine, albumen, muriate of soda, phosphate, carbonate and sulphate of lime, carbonate of magnesia, silica, oxide of iron, and a colouring principle. It was once much used as a vermifuge: but is not now employed. Dose, ʒss to ʒj in powder.

CORALLINA CORSICA'NA, *Helmintho-corton*, *Elmintho-corton*, *Musculus helmintho-cortos*, *Melitho-corton*, *Musculus coralli'nus*, *M. Mari'nus*, *Confer'va Helmintho-cortos*, *Coralli'na rubra*, *Coralli'na melito-corton*, *Lemi'tho-corton*, *Fucus Helmintho-corton*, *Corsican Worm-weed*. (F) *Coralline de Corse*, *Mousse de Corse*. It is a mixture of several marine plants and zoophytes, of the *fucus*, *ceramium*, *ulva*, *coralline*, *confervæ*, &c., and has gained great reputation, for destroying all kinds of intestinal worms, given in the form of strong decoction. The Geneva Pharmacopœia directs an officinal syrup—the *Sirap de Coralline*.

CORD, *Funis*, *Funiculus*, *Chænos*, *Chæ'nion*, *χοινος*, *χοινιον*; from the Latin *Chorda*, which is itself derived from *χορδη*, 'intestine'; and, afterwards, was applied to musical cords or strings, which are made of the intestines of animals. See *Chorda*.

CORDS, VOCAL. *Cords of Ferrein*, *Chordæ vocales*, *Ch. Ferre'nii*. A name, given to the ligaments of the glottis, which Ferrein compared to stretched cords, and to which he attributed the production of voice.

CORDIAL, *Cordia'lis*, *Cardiacus*, from *cor*, 'the heart.' Tonic or excitant medicines, which were judged proper for exciting the heart.

CORDINE'MA, from *κεφα*, 'the head,' and *δινω*, 'I move about.' Headache, accompanied with vertigo.

CORDON (F). *Funiculus*, diminutive of *funis*, 'a cord.' A term applied to many parts, which resemble a small cord.

CORDON NERVEUX; *Ramus nervosus*. A principal division of a nerve or the nervous trunk itself.

CORE'MATA, from *κορεω*, 'I cleanse.' Remedies, proper for cleansing the skin.—Paulus of Ægina.

COREON'CION, *Coron'cion*, from *κορη*, 'the pupil,' and *ογκιον*, 'a hook.' An instrument, used for the formation of artificial pupil by Langenbeck. It is hooked at its extremity. A *double-hooked forceps*, used by Graefe, is similarly named.

CORETO'MIA, from *κορη*, 'the pupil,' and *τεμνω*, 'to cut.' *Coroto'mia*, *Coretoto'mia*, *Iridoto'mia*, *Corecto'mia*, *Coretonecto'mia*, *Iridecto'mia*, *Coredial'ysis*, *Corodial'ysis*, *Coretodial'ysis*, *Iridodial'ysis*. Various operations, for the formation of artificial pupil are so termed. The three last signify the separation or tearing asunder of the iris from the

ciliary ligament; the three preceding the incision of the iris, *with* loss of substance; and the remainder signify a simple incision of the iris, *without* loss of substance.

CORIAN'DRUM SATIVUM, *Corian'der*, *Corian'non*, (F) *Coriandre*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. The systematic name of the *Corian'drum* of the pharmacopœias, *Coria'non*. The seeds of the coriander have an aromatic odour, and grateful, pungent taste. They are carminative; but are chiefly used to cover the taste of other medicines.

CORIUM, *Corion*, (F) *Cuir*. The skin of several animals is so called, especially when tanned. The *cutis vera* or the thickest part of the human skin.

CORIUM PHLOGIS'TICUM, *Crusta pleuret'ica*, *C. inflammato'ria*, *C. phlogis'tica*, *Inflammatory Crust* or *Buff*. (F) *Couenné*, *C. Pleuretique*, *C. inflammatoire*. The grayish crust or buff, varying in thickness, observed in blood drawn from a vein during the existence of violent inflammation, and during pregnancy. It is particularly manifest in pleurisy; and hence one of its names. The reason of it is by no means easy of appreciation. When the blood presents this appearance, it is said to be *buffy*.

CORN, (G) *Korn*. In England, this word means the *Cerealia*, or those seeds, which grow in ears, not in pods. In the U. States, *Corn* always means *Indian Corn*. Its English sense corresponds to the French *Blé*, or *Bled*.

CORN. *Clavus*, *Clavus Pedis*, *Ecphy'ma*, *Clavus*, *Gemur'sa*, (F) *Cor*, *Ognon*. A small, hard, *corneous* tumour, which forms upon the foot, generally on the toes; and which is commonly produced on the most projecting parts, by the pressure of too tight shoes. A part of the corn is raised above the skin, and forms a round tumour, like the head of a nail: the other portion, which serves as its base, is buried more or less deeply in the integuments, and occasionally extends as far as the tendons and periosteum. Corns may, sometimes, be removed, by immersing the feet in warm water, but commonly they return. They can, likewise, be destroyed by the knife or caustics; but these operations are not as simple as they seem. In the way of palliation,—they must be constantly pared; and any soft plaster, spread upon linen or leather, may be applied with a hole in the centre, to receive the corn; and layer after layer of plaster be added, until they attain the level of the corn,—for the purpose of preventing pressure. When very irritable, the lunar caustic, merely rubbed over the surface, will generally diminish irritability in a surprising manner, and in one not easy of explanation.

CORNEA, *Cornea transpa'rens*, *C. pellu'cida*, *C. lucida*, *Ceras*, *Sclerot'ica cerato'i'des*, *Cerato'i'des*, *Membra'na cornea*. The *trans-*

parent cornea. (F) *Cornée.* One of the coats of the eye, so called, because it has some resemblance to horn. It is termed *transparent*, to distinguish it from the *opaque*—*Cornea opa'ca* or *Sclerotic*. It is convex, anteriorly; concave, posteriorly; forming nearly one-fifth of the anterior part of the eye, and representing a segment of a sphere about seven lines and a half, or in. 0.625 in diameter. It seems to be constituted of laminae in superposition, but of the precise number anatomists are not agreed.

CORNEITIS, *Cerati'tis* from *Cornea*, and *itis*, 'inflammation.' Inflammation of the cornea.

CORNE'LIAN, *Carne'lian*, *Chalcedo'nus*, *Carneolus*, *Lapis Carneolus*, *Cornelus*, *Corneolus*, *Lapis Sardius*. (F) *Cornaline*. A precious, semi-transparent stone, found in Sardinia. The ancients ascribed to it a number of absurd properties.

COR'NEOUS, *Corneus*, (F) *Corné*. Having the nature or appearance of horn.

The **CORNEOUS TISSUE** is that, which forms the nails. The *corneous membrane* is the *cornea*.

CORNES DE LIMACON (F). *Snail's Horns*. A name given, by Anel, to the lachrymal puncta and ducts.

CORNIC'ULA. A species of cupping instrument, shaped like a trumpet, having a hole at the top for sucking the air out, to diminish the pressure in its interior.—Sculetus, Hildanus.

CORNICULUM LARYN'GIS, *Capit'ulum Santorini*, *Supra-arytenoid Cartilages*, *Capit'ulum Cartilag'inis arytenoidæ*. A small very movable, cartilaginous tubercle, found on the arytenoid cartilages.

CORNU, *Ceras*, *κερας*, *Horn*. (F) *Corne*. A conical, hard, epidermeous projection, which grows on the heads of certain animals, serving them as a weapon of offence and defence. Anatomists have given this name to parts of the human body, which have nearly the same shape as the horns of animals.

CORNU. A *horny excrescence*. A *Corneous Wart*, which occasionally forms on the skin, and requires the use of the knife. (F) *Corne de la Peau*.

CORNU ANTERIUS VENTRIC'ULI LATERA'LIS; *Anterior Cornu of the Lat'eral Ven'tricle*. The portion of the lateral ventricle of the brain, which is lodged in the middle of the lobe, and forms the commencement of that cavity.

CORNU AMMON'IS, *Cornu Arietis*, *Hippocampus major*, *Protuberantia cylindrica*, *Vermis Bombyc'inus*, *Processus cer'ebr'i latera'lis*. (F) *Corne d'Ammon*, *Corne de Belier*, *Grande Hippocampe*, *pied de cheval marin*, *Protubérance cylindroïde* (Ch.), *Bourrèlet roulé*. A broad, considerable eminence, curved on itself, and situate at the posterior part of the lateral ventricle. Its surface presents two or

three tubercles separated from each other by shallow grooves.

The *Accesso'rius Pedis Hippocam'pi*, (F) *Accessoire du pied d'hippocampe*, is a prominence, usually formed by the base of the inferior cornu of the lateral ventricle of the brain. It is merely a fold of the hemisphere, and was by Malacarne called *Cuissart ou Armure des Jambes*.

CORNU CERVI, *Cornu*, *Hartshorn*, *Cornu Cervi'num*, *Cervi El'aphi Cornu*. (F) *Corne de cerf*. The horns of various species of the stag. They contain about 27 per cent. of gelatine. The *shavings*, *Raspatu'ra* seu *Rasu'ra Cornu Cervi*, *C. C. raspa'tum*, boiled in water, have, consequently, been used as emollient and nutritive.

When burnt, they constitute the *Cornu cervi calcina'tum* or *Cornu ustum*, *Phosphas Calcis*, *Calca'ria phosphorica*, (F) *Corne de cerf calcinée*, which consists of 57.5 per cent. of phosphate of lime. It has been used as an antacid, but is wholly inert, as its composition would indicate. It contains only 1 per cent. of carbonate of lime.

Hartshorn was once supposed to possess a bezoardic power.—J. Vesti.

CORNU DESCEN'DENS VENTRIC'ULI LATERA'LIS, *Dig'ital Cav'ity*, *Descending or inferior cornu of the lateral ventricle*. The termination of the lateral ventricle in the middle lobe of the brain, behind the *Fissure of SYLVII*.

CORNU RUPICA'PRÆ, (F) *Corne de Chamois*. The horn of the Chamois. It has the same properties as the *Cornu Cervi*.

CORNUA CARTILAG'INIS THYROIDÆ. Eminences on the thyroid cartilage, distinguished into *great* or *superior*;—which are articulated with the great cornu of the os hyoides;—and into *small* or *inferior*, united with the cricoid cartilage.

CORNUA COCCYGEA, *Cornua of the Coccyx*. Two small, tubercular eminences at the base of the coccyx, which are articulated with those of the sacrum.

CORNUA HYOIDEI OSSIS, *Cornua of the Hyoid Bone*. Four fragments of the os hyoides, situate above the body of the bone, and distinguished into the *small* or *superior*, and the *great* or *lateral*.

CORNUA U'TERI, *Cornua of the Uterus*, *Cerææ*, *κεραιæ*, *Plectanæ*, (F) *Cornes de la Matrice*. The angles of the uterus, where the fallopian tubes arise. Sometimes applied to the fallopian tubes themselves.

CORNU POSTE'RIOUS VENTRIC'ULI LATERA'LIS, *Posterior Cornu of the Lateral Ven'tricle*. The triangular prolongation of the lateral ventricle of the brain into the substance of the occipital lobe.

CORNUA SACRA'LIA, *Cornua of the Sacrum*. Two tubercles, situate at the posterior and inferior surface of the sacrum, which are sometimes united.

CORNUS FLOR'IDA, *Dogwood*, *Boxwood*, (*New England*), (F) *Cornouiller*, *Cornier*, *C.*

à grandes fleurs. The bark of this beautiful tree, which grows every where in the United States, has been long employed as a substitute for the cinchona. Dose, from ʒss to ʒj. Its active principle has been separated from it, and received the name *Cornine*.

CORNUS SERI'CEA, *Swamp Dogwood*, *Red Willow*, *Rose Willow*, (F) *Cornouiller soyeux*. The bark, it is said, has been found little inferior to the *Cincho'na Pal'lida* in intermittents.—Barton.

CORNUS CIRCINATA, *Round-leaved Dogwood*, (F) *Cornouiller à feuilles arrondies*. The bark of this variety has been used for similar purposes.

CORONAL, *Corona'lis*, *Corona'rius*. Relating to the *crown*; from *corona*, 'a crown.' A name, formerly given to the frontal bone, because on it partly reposes the crown of kings, &c.

The *CORONAL SUTURE*, *Sutu'ra corona'lis*, *S. Fronto-parieta'lis*, *Puppis Sutura*, *S. Arcua'lis*. The suture of the head, which extends from one temporal bone to the other, over the *crown* of the head, and unites the parietal bones with the frontal. The *SUTURE CORONALE*, of the French Anatomists, is the suture, which unites the two halves of the *os frontis* at the early period of life. It is a prolongation of the sagittal.

CORONALE, *MINERAL WATERS OF*. These waters are found near Lucca in Italy. They received their name from an erroneous notion, that they are particularly adapted for curing diseases of the *os frontis*. Their temperature is 95° Fahrenheit. They contain free carbonic acid, sulphates of lime and magnesia, muriates of soda and magnesia, &c., and some iron.

CORONARY, *Corona'rius*, (F) *Coronaire*, from *coro'na*, 'a crown.' Resembling a crown.

The *ARTE'RIA CORONA'RIA VENTRIC'ULI*, *Gas'trica supe'rior*, (F) *Artère coronaire, stomachique*, *A. Stomogastrique* (Ch.), is one of the branches of the *cœliac*, which passes towards the superior orifice of the stomach, extends along its lesser curvature and ends by anastomosing with the pyloric branch of the hepatic. This artery furnishes branches to the inferior part of the *œsophagus*, the cardiac orifice, the great *cul-de-sac*, the middle part of the stomach, the lesser omentum, and anastomoses with the other arteries of those organs.

The *VENA CORONARIA VENTRIC'ULI* accompanies the artery and terminates in the *vena porta*. Sommering and some other anatomists call all the four arteries of the stomach *Coronariæ stomachicæ*.

The *CORONARY LIGAMENT* of the liver is a reflection of the peritoneum, which surrounds the posterior margin of the liver. The same term is likewise applied to ligaments, which unite the radius and ulna.

CORO'NE, from *κροων*, 'a crow.' The coronoid process of the lower jaw.

COR'ONOID, *Coronoï'des*, from *κροων*, 'a crow,' and *ειδος*, 'shape,' 'resemblance.' Resembling the beak of a crow. This name has been given to two *processes*. One, situate at the anterior and superior part of the ramus of the *os maxillare inferius*, and affording attachment to the temporal muscle: the other, called, also, *sharp process*, situate at the superior part of the ulna, anterior to the great sigmoid fossa, and forming a part of the hinge of the elbow-joint.

COR'PORA FIMBRIA'TA, *Tenia Hippocam'pi*. *Fimbriated* or *fringed bodies*. (F) *Corps frangés*, *C. Bordés*, *Bandelettes des Cornes d'Ammon*, *Bandelette de l'Hippocampe*. The thin, flattened, and very delicate band, situate along the concave edge of the cornu ammonis, and which is a continuation of the posterior crura of the fornix.

CORPORA GENICULA'TA, (F) *Corps geniculés*. Two tubercles, situate at the lower and outer part of the optic thalami, which furnish several filaments to the optic nerves.

CORPORA OLIVA'RIA, *C. ova'ta*, *Eminen'tiæ Olivares*, (*Eminences latérales* Ch.) Oblong, whitish eminences, situate at the occipital surface of the medulla oblongata, exterior to the corpora pyramidalia.

CORPORA PYRAMIDA'LIA, *Eminen'tiæ pyramida'les*, (F) *Corps pyramidaux*, *Pyramides antérieures* (Gall), *Eminences pyramidales* (Ch.) Two small, medullary eminences, placed alongside each other, at the occipital surface of the medulla oblongata, between the corpora olivaria.

These bodies have also been called *Corpora Pyramidalia anti'ca*, to distinguish them from the *C. olivaria*, which have been called *Corpora Pyramidalia latera'lia*.

CORPORA RESTIFOR'MIA, *Crura medul'læ oblonga'tæ*, *Pedun'culi medullæ oblongatæ*, *Corpora pyramidalia posterio'ra*: *Peduncles of the medul'la oblonga'ta*. (F) *Corps restiformes*, *Cuisses postérieures*, *Pyramides postérieures du cervelet*, *Racines*, *Bras ou Jambes du cervelet*—*Petites branches de la moëlle allongée*, *Pédoncules du cervelet*. Two medullary projections, oblong, and of a whitish appearance, which proceed from each side of the upper extremity of the medulla oblongata, and contribute to the formation of the cerebellum.

CORPORA STRIA'TA, *Grand ganglion supérieur du cerveau* (Gall), *Couches des nerfs ethmoïdaux*, *Corps cannelés*, *Eminen'tiæ Lenticula'res*, (Ch.), *Collic'uli Nervi Ethmoïda'lis*, *Ap'ices Crurum medul'læ oblonga'tæ*, (F) *Corps striés*. Pyriform eminences, of a slightly brownish-gray colour, which form part of the floor of the lateral ventricles of the brain. When cut, a mixture of gray and white substance is seen, arranged alternately, to which they owe their name. All the white bands are continuous with the primary fasciculi of the corpora olivaria. Willis considered the soul resided here.

CORPS FIBREUX, *Corpora fibrosa*. Bayle has given this name to adventitious, fibrous productions, of a round form,—more or less adherent, and sometimes having a pedicle,—which form in certain parts of the body, particularly in the substance of the uterus.

CORPULENTIA, *Corpulence*, from *corpus*, 'the body,' and *lentus*, 'thick,' is synonymous with *Obesity* and *Polysarcia*, (q. v.)

CORPUS, *Soma*, *σῶμα*. A *Body*. Any object, which strikes one or more of our senses. Gases, liquids, metals, vegetables, animals, are so many bodies. Natural bodies have been divided into *animal*, *vegetable*, and *mineral*; or into *inorganic*, including the mineral kingdom;—and *organized*, including the animal and vegetable.

The chief differences between organized and inorganic bodies consists in the former having an *origin by generation*, *growth by nutrition*, and *termination by death*:—the latter, a *fortuitous origin*, *external growth*, and a *termination by chemical or mechanical force*.

Many parts of the frame have, also, been distinguished by this name, as *Corpus Callosum*, *C. Mucosum*, &c.—See *Body*.

CORPUS CALLO'SUM, *Commissura Magna cer'ebr'i*, (F) *Corps calleux*, *Voûte médullaire*, *Plafond des ventricules du cerveau*, *Mésolobe* (Ch.), *Trabes Medulla'ris*, *Trabec'ula*. A white, medullary band, perceived on separating the two hemispheres of the brain, which it connects with each other. La Peyronie regarded it as the seat of the soul.

CORPUS DENTA'TUM vel denticula'tum, *C. Cilia'rè*, (F) *Corps Dentelé*, *Corps festonné*. A central, oval nucleus, of cineritious substance, met with in the cerebellum; the circumference of which exhibits a number of indentations, surrounded by medullary substance.—Vicq d'Azyr. It is seen by dividing the cerebellum vertically into two equal parts.—Vieussens gave to the same body the name *Corps cendré ou Rhomboïde*, *Corpus Cine'reum*, *C. Rhomboïdeum*, *Ganglion du cer'v'et*, *Noyau central des Pédoncules du cer'v'et*.

CORPUS GLANDULO'SUM MULIERUM, *Gland'ulæ Pros'tatæ Mulierum*. A vascular, spongy eminence, which surrounds the orifice of the urethra, and projects at its under part.

CORPUS HIGHMO'RI, *C. Highmor'ianum*, *Meatus semina'rius*, (F) *Corps d'Hygmore* ou *d'Highmore*, *Sinus des vaisseaux séminifères*, (Ch.) An oblong eminence, along the superior edge of the testicle, which seems formed of a reflection of the tunica albuginea, through which the principal trunks of the seminiferous vessels pass before they reach the epididymis.

CORPUS LU'TEUM, (F) *Corps jaune*. A small, yellowish body, perceived in the ovary, owing to the rupture of one of the vesicles. It was, for a long time, considered an

evidence of previous impregnation: but it is now maintained, that *Corpora lutea* may be met with in unquestionable virgins.

CORPUS MUCO'SUM, *C. reticula'rè*, *Retè muco'sum*, *Mucus Malpig'hii*, *Retè Malpig'hii mucous web*. (F) *Corps muqueux*. The second layer of the skin has been so called. It is situate between the *cutis vera* and *cuticle*, and gives colour to the body. In the white varieties of our species it is colourless; in the Negro, black.

CORPUS PAMPINIFOR'ME, *C. varico'sum*, from *pam'pinus*, 'a tendril.' *Corpus pyramida'lè*, *Hedera'ceus plexus*, (F) *Corps pampiniforme*, *C. variqueux*. The plexus or retiform arrangement of the spermatic arteries and veins, in the cavity of the abdomen, anterior to the psoas muscle.

CORPUS PAPILLA'RE. The nervous and vascular papillæ, situate beneath the epidermis, called by Breschet *Neurothelic apparatus*.

CORPUS SPONGIO'SUM URE'THRAE, *Substantia spongio'sa ure'thræ*. This substance arises before the prostate gland, surrounds the urethra, and forms the bulb. It then proceeds to the end of the corpora cavernosa, and terminates in the glans penis, which it forms.

CORPUS VIT'REUM, *Humor Vitreus*, *H. hyaloides*, *Glacia'lis humor*, *Vitreous humor*. (F) *Corps vitré*, *C. hyaloïde*, *Humeur hyaloïde*. The transparent mass, of a gelatinous consistence, which fills the eye, behind the crystalline. It is contained in cells, formed by the *tunica hyaloïdea*.

CORPUS WOLFFIA'NUM, *Corpus Okense*. At a very early period of fœtal formation, bodies are perceptible, which were first described, as existing in the fowl, by Wolff, and in the mammalia, by Oken. According to Müller, they disappear in man very early, so that but slight remains of them are perceptible after the 9th or 10th week of pregnancy. They cover the region of the kidneys and renal capsules, which are formed afterwards; and they are presumed to be the organs of urinary secretion during the first periods of fœtal existence.

CORRE, **CORSE**, *κορρη*, *κορση*, from *κορῶ*, 'I shave.' (?) The temples or the part of the jaws, which it is usual to shave.—Gorræus.

CORREC'TION, *Correc'tio*, from *corrigere*, 'to correct.' The act of correcting medicines; that is, of diminishing their energy or obviating unpleasant effects, by mixing them with substances, which mitigate their operation.

COR'RIGENT, *Cor'rigens*, *Correcto'rius*, *Casti'gans*, *Infrin'gens*, *Emen'dans*; same etymon. (F) *Correctif*. That which corrects. A corrigent, in a pharmaceutical formula, is a substance added to a medicine to mollify or modify its action. In the following formula, the aloes, if not corrected, might induce tormina. The *Oleum Menthae* is added as a corrigent.

R

Aloes, 3j
Olei Menthæ, gtt. v
Syrup. q. s. ut fiant Pilulæ xvj.

CORRI'GIA. A leathern strap. By extension, the term has been applied to the tendons and ligaments.

CORROBORANT, *Corrob'orans, Rob'orans, Bracing,* from *corrobora're*, 'to strengthen.' (F) *Corroborant, Corroboratif, Fortifiant.* Any substance, which strengthens, and gives tone. Wine, e. g., is a corroborant. See Tonic.

CORRO'SION, *Corro'sio, Diabro'sis, Anabro'sis, Ero'sio.* The action or effect of corrosive substances.

CORRO'SIVE, *Corro'dens, Diabrot'icus, Corrosivus,* from *corro'dere*, 'to eat away;' same etymon. (F) *Corrosif, Corrodant.* Corrosives are substances, which, when placed in contact with living parts, gradually disorganize them. *Caustic alkalies, Mineral acids, Corrosive sublimate,* are *corrosives.* They act either *directly*, by chymically destroying the part, or *indirectly*, by causing inflammation and gangrene.

CORRUGA'TION, *Corrugatio.* Wrinkling, Frowning. (F) *Frncement;* the contraction of the *Corrugato'res Supercil'ii* muscles. Corrugation of the skin is often owing to the application of styptic medicines: it is rendered by them unequal and rugous.

CORRUGA'TOR SUPERCIL'II, from *corruga're*, 'to wrinkle;' same etymon. *Musculus supercil'ii, Supercilia'ris, Musculus fronta'lis verus seu Corrugator Coite'rii;*—*Cutaneo-sourcilier, Muscle Sourcilier ou Supercilier, M. Fronto-sourcilier.* A muscle, situate in the eyebrows. It is attached, by its inner extremity, to the superciliary ridge, and is confounded, externally, with the occipito-frontalis and orbicularis palpebrarum. It carries the eyebrow inwards, and wrinkles the skin of the forehead.

CORRUPT'ION, *Corruptio, Phthora, Diaph'thora.* Act of corrupting. State of being corrupted. Reaction of the particles of a body upon each other. It is probable, that something like corruption may take place even in the living body.

CORSET, *Stethodes'mium, Tu'nica Tho'ra'cis, Thorax.* An article of dress, which closely embraces the trunk, and is much used by females in civilized countries. When corsets or stays are worn very tight, many serious evils result from the unnatural compression.

Different bandages, more or less complicated, which embrace the greater part of the trunk, are likewise so called.

CORSET DE BRASDOR. The name of a bandage, invented by one Brasdor, to keep *in situ* the fragments of a fractured clavicle.

CORTEX, *Phloios, Phloos, Phlous, φλοιος, φλωος, φλους, Bark.* (F) *Ecorce.* This word

has often been applied, exclusively, to *Cinchona*; thus we say *Bark*—the *cortex* or *bark* κατ' ἐξοχην. It means, also, any bark.

COR'TICAL, *Cortica'lis,* from *cortex*, 'bark.' Belonging to bark.

CORTEX CER'EBRI, the *Cortical* or *Cineritious substance of the Brain.* The gray portion observed at the exterior of the cerebrum and cerebellum; so called, because it forms a kind of bark to the medullary substance. Gall considers, that this substance forms the nerves; and, therefore, calls it *Substance matrice des nerfs.*

The name *cortical* is likewise given to the external substance of the kidney, because it is of a deeper colour than the inner part of the organ, and forms a kind of envelope to it.

CORTEX OVI, *Cortical Membrane.* This membrane, so called by Boer and Granville, is usually regarded as a uterine production and designated *Decidua reflexa.* They consider it to surround the ovule when it descends into the uterus, and to enclose the shaggy chorion. It is absorbed during the first months of utero-gestation, so as to expose the next membrane to the contact of the decidua, with which a connexion takes place at the part where the placenta is to be formed. In that part, Boer and Granville consider, that the Cortex Ovi is never altogether obliterated, but only made thinner, and in process of time is converted into a mere pellicle or envelope, which not only serves to divide the filiform vessels of the chorion into groups or cotyledons, in order to form the placenta, but also covers those cotyledons. This, Granville calls the *membra'na propria.* See *Decidua Membrana.*

CORU. An Indian tree, the bark of whose root furnishes a milky juice, which is employed in diarrhœa and dysentery. It is also called *Coru Canar'ica.*

CORYBAN'TIASM, *Corybantias'mus,* from Κορυβας, one of the CORYBANTES. A name, formerly given to a kind of phrensy, in which the sick were tormented by fantastic visions, and perpetual want of sleep.

COR'YLUS AVELLA'NA, *Bundurh, Cor'yylus.* The *Hazel-nut Tree.* (F) *Coudrier, Noisetier.* Family, Amentacæ. Sex. Syst. Monœcia Polyandria. The nut of this tree is much eaten in many countries. Like all nuts, it is by no means easy of digestion. It is the—*Nux avella'na, καρυον ποντικον,* of the ancients. (F) (the nut) *Aveline, Noisette.*

CORY'ZA, *Grave'do, Catastag'mos, Catatalag'mos, Stillicid'ium Narium, Phlegmatorrha'gia, Blennorrhœ'a nasalis, Destilla'tio, Catar'rhus ad Nares.* Vulgarly, 'Running at the nose,' 'A cold in the head.' In French, *Rhume de cerveau, Enchifrenement;* in old English, *Pose* or *Mur;* whence *Murren* and *Murrain.* *Blennorrhin'ia,* from κορυς, or καρυς, 'the head,' and ζωω, 'I boil.' Inflammation

(attended with increased discharge) of the Schneiderian membrane lining the nose, and the sinuses communicating with it. The affection generally subsides without any medical treatment.

COSMETICS, *Ars cosmetica*, *Callipistria*, *Cosmésis*, (F) *Cosmetique*, from *κοσμεῖν* 'to adorn,' 'to embellish.' The art of preserving the beauty.

Cosmetic, *Stilbo'ma*, is, also, used for the different means employed for that purpose; as the compounds into which enter the oxides of lead, bismuth, mercury, arsenic, &c. All of these, however, injure the skin, and often give rise to unpleasant cutaneous affections.

Frequent ablution with cold water and bathing are the best cosmetics. Essences, soaps, and all the preparations intended for the toilet, fall, also, under this head.

COSMOS, from *κοσμος*, 'the world,' 'order,' &c. The *order*, which was supposed to preside over critical days. Hippocrates and others have so termed *bracelets*, employed not only as ornaments (*κοσμεῖν* 'to adorn,') but as therapeutical agents.

COSSUM. A malignant ulcer of the nose, often of a syphilitic character.—Paracelsus.

COSSUS or **COSSIS**. A sort of white, short, thick worm or larve, found in trees, logs of wood, &c., and used by the Romans as a great article of gourmandise. They were, also, applied to ulcers.—Pliny.

The term has, likewise, been given to those small, vermiform pimples on the face, which arise from inflammation of the sebaceous follicles.

COSTA. A *Rib*, from *custodi're*, 'to guard,' 'defend : ' (F) *Côte*. The ribs are 24 in number;—12 on each side. They are irregular, long, bony, curves; slightly flattened, and situate obliquely at the sides of the chest. The intervals, between them, are called *Intercostal spaces*, (F) *Espaces intercostaux*, and they are numbered *first*, *second*, *third*, &c., reckoning from above to below.

They have been distinguished into *Costæ veræ*, *True ribs*, (F) *Vraies Côtes*, *Côtes sternales*, *Côtes vertébrosternal* (Ch); and into *Costæ spu'riæ*, *Mendo'sæ Costæ*, *False ribs*, *Côtes asternales*, (Ch.), *Fausses Côtes*. The *true* or *sternal ribs*, as they have also been called, are the first 7; which are articulated, at one extremity, to the spine, and at the other, by means of their cartilages, to the sternum. The *false ribs* are the remaining 5: the uppermost three being united, by means of their cartilages, to the cartilage of the last true rib. The others are free at their external extremity, and, hence, have been called *Floating ribs*, *Côtes flottantes*. The vertebral extremity of each rib is slightly expanded. It is called the head of the rib—*Capitulum Costæ*: the space between this and the *tubercle* is the *collum* or *neck*. Anterior to the tubercle is the *angle*. The *angle* is the part

where the bone bends to form the lateral part of the thorax.

COSTO-CLAVICULAR, *Costo-clavicularis*. Belonging to the ribs and clavicle.

The **COSTO CLAVICULAR LIGAMENT**, *Cleido-costal L.*, is a fibrous, flattened fascia, which extends, obliquely, from the cartilage of the first rib to the inferior surface of the clavicle.

COSTO-STERNAL, *Costo-Sterna'lis*. Relating to the ribs and sternum. The articulation of the sternum with the anterior extremity of the seven first ribs.

COSTO-TRACHELIANUS. Relating to the ribs and to the *trachelian* or transverse processes of the neck. Under the name *Costo-trachelian*,—Chaussier designates the *anterior* and *posterior scaleni*.

COSTO-TRANSVERSARIUS. Relating to the ribs, and to the transverse processes.—Bichat gave this name to the articulation of the tuberosities of the ribs with the transverse processes of the spine.

COSTO-VERTEBRAL, *Costo-vertebra'lis*. Belonging to the ribs and vertebræ.—Bichat gave this name to the articulation of the head of the ribs with the vertebræ, and to the ligaments connected with it.

COSTO-XYPHOID, *Costo-xyphoideus*. The name of a ligament, which unites the cartilage of the seventh rib to the xiphoid or ensiform cartilage.

COSTUS. The ancients seem to have given this name to several plants. One has borne the appellation, since the time of Dioscorides, the *Costus Arabicus*, *Costus Indicus*, *C. amarus*, *dulcis*, *orientalis*, *Tsia'na*, *Canne Congo*, *Canne de Rivière*: *Family*, *Amoniæ*, *Sex. Syst.* *Monandria Monogynia*; the root of which is aromatic, and has been considered tonic, carminative, diuretic, emmenagogue, &c. The virtues of the ancient *costus* are highly extolled.—Theophrastus, Dioscorides, Pliny, Galen.

COTARONIUM; an obscure term, used by Paracelsus, for a universal solvent: such a thing as does not exist.

COTIGNAC. A kind of conserve or preserve, prepared from quinces, not entirely ripe, and sugar. It is esteemed stomachic and astringent.

COTUNNIUS, LIQUOR OF. *Liquor Cotun'ni*, *L. of Cotugno*, *Aquila acus'tica*, *Aqua auditoria*, *Perilymph*, (F) *Lympe de Cotugno*. A transparent, slightly viscid fluid, which fills all the cavities of the internal ear, and of which Cotugno made mention. It is also called *Aqua Labyrinthi*.

COTYLE, *Cot'yla*, *Cotyle'don*, *Costyle*; the same as *Acetabulum*. A hollow cavity in a bone, which receives the head of another bone: particularly the *cotylod* cavity. *Κοτυλη*, signified a drinking cup, and, indeed, any thing hollow, as the hollow of the hand.—Athenæus.

COTYLEDONS, *Κοτυληδων* 'a cavity.'

Acetab'ula arteri'na. The lobes which, by their union, form the placenta.

COT'YLOID, *Cotyloï'des*, *Cotyloï'deus*, *Cotylo'des*, from *κοτυλη*, 'a drinking cup,' and *ειδος*, 'form.' Resembling the ancient *κοτυλη*. The name of an hemispherical cavity, situate in the os innominatum, which receives the head of the os femoris. *Fossa cotyloïdea*, *Sinus Coxæ*, *Acetab'ulum*, *Pyxis*.

The **COT'YLOID LIG'AMENT**, *Ligamen'tum Cotyloïdeum*, (F) *Ligament cotyloïdien*, is a very thick, fibro-cartilaginous ring, surrounding the cotyloid cavity, the depth of which it increases.

COUCHE ou **COUCHES** (F), from *coucher*, 'to lie down.' This word is used, 1. For *accouchement* or *delivery* (*puerpe'rium*, *parturi'tio*): hence *une couche heureuse*, 'A happy delivery;' *une fausse couche*, 'A premature delivery:' and, 2. For the time during which a female remains in bed on account of delivery,—*Tempus Puerpe'rii*, the *childbed state*. The *Lochia* have been termed *Suites de couches*.

COUENNE (F). *Cutis suilla*. A term given to various parts of the human skin, which are prominent, hard, brownish, and often covered with rough hairs, so as to form patches not very unlike the skin of the hog. It is a malformation, occurring during intra-uterine existence and remaining for life. See *Nævus*, also, *Corium Phlogisticum*.

COULISSE (F). 'A groove, a gutter.' Anatomists designate, by this name, every deep groove or channel in a bone, in which a tendon plays;—such as the *Coulisse Bicipitale* or *Bicipital Groove* of the Humerus.

COUNTER-EXTEN'SION, *Contra-exten'sio*, *Antit'asis*, (F) *Contre-extension*, from *contra-exten'dere*, 'to extend in a contrary direction.' It consists in retaining firmly and immovably the upper part of a limb, whilst extension is practised on the lower, in cases of fracture or luxation.

COUNTER-INDICATION, *Contra-Indica'tio*, *Antendeix'is*. An indication contrary to another, (F) *Contre-indication*. Any circumstance, which acts as an obstacle to the employment of such therapeutical means as seem to be indicated by other circumstances.

COUNTER-IRRITA'TION, *Contra-irrita'tio*. An irritation, excited in a part of the body, with the view of relieving one existing in another part. The remedies used for this purpose are called *Counter-ir'ritants*, and form a most valuable class of remedial agents. See *Derivation* and *Revulsion*.

COUP DE MAITRE ou **TOUR DE MAITRE** (F). A masterly stroke or performance. A mode of introducing the sound or catheter into the bladder, which consists in first passing it with its convexity towards the abdomen of the patient, and afterwards giving it a half turn towards the right groin, when its extremity has reached the root of the penis

under the symphysis pubis. There is no advantage in this mode of introduction.

COUP DE SANG (F). A common term, used by some physicians in France, to designate the loss of sensation and motion, which result from hemorrhage in the brain, or from simple congestion in the vessels of that organ. Some authors have comprehended, under the same denomination, different hemorrhages, which occur in the cellular texture of the face, lungs, skin, &c.

COUP DE SOLEIL (F). *Siriasis*, *Seiriasis*, *σουλιασις*, *Ictus solis*, *Ictus sola'ris*, *Inso-la'tion*;—a stroke of the sun. Any affection produced by the action of the sun on some region of the body;—head, hands, arms, &c.

A very common effect of exposing the naked head to the sun is inflammation of the brain or its meninges, which Sauvages calls *Carus ab Inso-la'tione*.

COURAP. A distemper, very common in India, in which there is a perpetual itching of the surface, and eruption. It is of an herpetic character, and appears chiefly on the axilla, groins, breast, and face.

COURBATURE (F), *Acer'ba lassitu'do*. *Violent lassitude*, *fatigue*. An indisposition, characterized by a sensation, as if the limbs were bruised; general feeling of debility, extreme lassitude; and, sometimes, slight fever. It appears immediately after severe exercise, but sometimes not till the next day. Rest removes it.

COURMI or **CURMI**, *κουρμι*, *κουργμι*. A fermented liquor, made from barley. A kind of ale or beer.—*Dioscorides*.

COURON'DI, *Couron'do*. An evergreen tree of India, the juice of which, mixed with warm whey, is said to cure the dysentery.—*Ray*.

COURONNE RAYONNANTE (F). A term given by Reil to the fan-shaped terminations of the crura cerebri in the brain.

COURONNEMENT (F), *Coro'na*. A vulgar expression, sometimes used to designate the circular ring, which the os uteri forms around the head of the child at a certain period of accouchement:—the head seeming to be surrounded, as it were, by a crown. The head is then said to be *au couronnement*.

COUROU-MOELLI. An Indian tree, the bark of which is said to be anti-venomous.

COUTOU'BEA ALBA, *Ex'acum spica'tum*, *Pic'rium spica'tum*. A plant of Guiana, which is very bitter, and is considered, in the country, to be emmenagogue, anthelmintic, and anti-dyspeptic.

COUVRECHEF (F), *Cucul'lus*, *Fascia'tio cuculla'ta*. A bandage, applied to the head for retaining certain dressings, &c. *in situ*. The French surgeons distinguish two kinds. 1. The *Grand Couvrecchef* ou *Serviette en carré* (*Cucul'lus major*), which is formed of a napkin or large square compress: and, 2. The *Petit Couvrecchef* ou *Mouchoir en triangle* (*Cucul'lus minor*), formed of a nap-

kin or other square compress, folded from one angle to the other diagonally opposite to it.

COVOLAM, *Cratæva Marmelos*. The bark of this tree is tonic: the unripe fruit is astringent; but, when ripe, is delicious.

COWPER'S GLANDS, *Accessory glands*, (F) *Glandes accessoires*, *G. de Cowper*, *Prostates inférieures* ou *petites prostates*. Two small ovoid groups of mucous, reddish follicles, situate behind the bulb of the urethra, before the prostate; the excretory ducts of which open into the bulbous portion of the urethra.

They are also called *Glandulæ antepros-tatæ*, and *G. pros'tatæ inferio' res*.

COXAL'GIA, *Osphyal'gia*. A word of hybrid origin, from *coxa*, 'hip,' and *αλγος*, 'pain.' Pain in the hip. A sign of rheumatic or other inflammation, or of some disease about the hip-joint.

COXA'RUM or COXEN'DICUS or COX-A'RIUS (Morbus). *Hip disease*. A scrophulous and spontaneous luxation and disease of the os femoris is generally understood by this term.

COXEN'DIX. This word has been used synonymously with ischium. Anatomists, too, have called the ilia, *Ossa Coxendicis*.

COXO-FEM'ORAL, *Coxo-femora'lis*. Belonging to the coxal bone or ilium, and to the os femoris. *Il'iofem'oral* has the same signification.

The COXO-FEM'ORAL or IL'IOFEM'ORAL ARTICULA'TION, (F) *Articulation de la Hanche*, is the *Hip-joint*. The head of the femur and articular cavity are covered by a *diarthrodial cartilage* and *synovial capsule*; and by a very strong capsular or articular ligament attached to the circumference of the cotyloid cavity, and to the neck of the femur. There is, also, a *round* or *interarticular ligament*, passing from the inferior notch of the cotyloid cavity to the rough depression at the top of the caput femoris; and a *cotyloid ligament*,—a sort of thick, cartilaginous ring, situate on the edge of the cotyloid cavity, and converting the inferior notch into a foramen. These are the great means of union in this extensive articulation.

CRAB, *As'tacus fluviat'ilis*, *Cancer*, *Gam'marus*, *Cam'marus*. (F) *Crabbe*, *Ecrevisse*, *Escreveice*. A shell-fish much used as an article of diet. Like other shell-fish it is apt to disagree, and excite urticaria, &c.

CRABLOUSE; a species of *Pedic'ulus*, *P. Pubis*, which infests the pudendum and axilla. (F) *Morpion*. It is easily destroyed by the white precipitate of mercury, or by mercurial ointment.

CRABYAWS. (F) *Crabe*. A name, in the West Indies, for a kind of ulcer on the soles of the feet, with edges so hard, that they are difficult to cut.

CRADLE, *Ar'culus*, *Solen*, (F) *Arceau* ou *Archet*. A semicircle of thin wood, or strips of wood, used for preventing the contact of

the bed-clothes in wounds, &c. An ordinance of the Grand Duke of Tuscany forbade mothers and nurses to sleep with a child near them, unless it was placed under a solid cradle of this kind, in order that no accident might arise from *overlaying*.

CRÆP'ALĒ, from *κραίπαλη*, *Crap'ula*, 'drunkenness, surfeit.' A derangement of the functions of the brain, &c., produced by wine or any other fermented liquor.—Galen.

CRAMA, *κραμα*, from *κραταια*, 'I mix.' A mixture of any kind. Dilute wine.

CRAM'BION, from *κραμβη*, 'cabbage.' A decoction of cabbage.—Hippocr.

CRAMP, from (G) *k r a m p f e n*, 'to contract,' *Crampus*, *Enta'sia systrem'ma*, *Tet'a-nus dolorificus*. A sudden, involuntary, and highly painful contraction of a muscle or muscles. It is most frequently experienced in the lower extremities, and is a common symptom of certain affections;—as of *Colica Pictonum* and *Cholera Morbus*. Friction and compression of the limb, by means of a ligature applied round it above the muscles affected, will usually remove the spasm.

CRAMP OF THE STOMACH, (F) *Crampe de l'Estomac*. A sudden, violent, and most painful affection of the stomach, with sense of constriction in the epigastrium. It seems to be the effect of the spasmodic contraction of the muscular coat of the stomach, and requires the use of the most powerful stimulants and antispasmodics, of which opium is the best.

CRANIOLOGY or CRANIOS'COPY, *Craniolo'gia*, *Phrenolo'gy*, *Cranioscopia*, *C. Gallia'na*, *Encephaloscop'ia*, *Doctri'na Galli-a'na*. Words, introduced since Gall into medical language. The two first terms are respectively derived from *κρανιον*, 'cranium,' *λογος*, 'a discourse,' and *σκοπειν*, 'to examine.' They signify the description, or, simply, the examination of the different parts of the external surface of the cranium, in order to deduce from thence a knowledge of the different intellectual and moral dispositions. Strictly speaking, it is by *Cranioscopy* that we acquire a knowledge of *Craniology* or of *Organology* or *Cranology*, as it has, also, been termed. These words are generally, however, used in the same sense. The cranium being exactly moulded to the brain, there are as many prominences on the bone as there are projections at the surface of the brain. According to Gall, each projection, which he calls an *organ*, is the seat of a particular intellectual or moral faculty, and all persons endowed with the same faculty, have, at the same part of the brain, a prominence, which is indicated, externally, by a bump or projection in the bony case.

The *System* of Gall is made to comprise 27 prominences, which answer to 27 faculties. The following Table exhibits these supposed organs and their seat.

CEREBRAL ORGANS, AND THEIR SEAT, ACCORDING TO GALL.

- | | | |
|--|---|--|
| <p>1. <i>Instinct of generation, of reproduction; amateness. Instinct of propagation; venereal instinct.</i>
(German.) Zeugungstrieb, Fortpflanzungstrieb, Geschlechtstrieb.</p> | } | <p>Seated in the cerebellum. It is manifested at the surface of the cranium by two round protuberances, one on each side of the nape of the neck.</p> |
| <p>2. <i>Love of progeny; philoprogenitiveness.</i>
(G.) Jungenliebe, Kinderliebe.</p> | } | <p>Indicated at the external occipital protuberance.</p> |
| <p>3. <i>Attachment; friendship.</i>
(G.) Freundschaftsinn.</p> | } | <p>About the middle of the posterior margin of the parietal bone; anterior to the last.</p> |
| <p>4. <i>Instinct of defending self and property; love of strife and combat; combativeness; courage.</i>
(G.) Muth, Raufsin, Zanksin.</p> | } | <p>Seated a little above the ears; in front of the last, and towards the mastoid angle of the parietal bone.</p> |
| <p>5. <i>Carnivorous instinct; inclination to murder; destructiveness; cruelty.</i>
(G.) Wurgsin, Mordsin.</p> | } | <p>Greatly developed in all the carnivorous animals; forms a prominence at the posterior and superior part of the squamous surface of the temporal bone, above the mastoid process.</p> |
| <p>6. <i>Cunning; finesse; address; secretiveness.</i>
(G.) List, Schlaueit, Klugheit.</p> | } | <p>Above the meatus auditorius externus, upon the sphenoidal angle of the parietal bones.</p> |
| <p>7. <i>Desire of property; provident instinct; cupidity; inclination to robbery; acquisitiveness.</i>
(G.) Eigenthumssin, Hang zu Stehlen, Einsammlungssin, Diebsin.</p> | } | <p>Anterior to that of cunning, of which it seems to be a prolongation, and above that of mechanics, with which it contributes to widen the cranium, by the projection, which they form at the side of the frontal bone.</p> |
| <p>8. <i>Pride; haughtiness; love of authority; elevation.</i>
(G.) Stolz, Hochmuth, Hohen-sin, Herrschsucht.</p> | } | <p>Behind the top of the head, at the extremity of the sagittal suture, and on the parietal bones.</p> |
| <p>9. <i>Vanity; ambition; love of glory.</i>
(G.) Eitelkeit, Ruhmsucht, Ehrgeiz.</p> | } | <p>Situate at the side of the last, near the posterior internal angle of the parietal bones.</p> |
| <p>10. <i>Circumspection; foresight.</i>
(G.) Behutsamkeit, Vorsicht, Vorsichtigkeit.</p> | } | <p>Corresponds to the parietal protuberances.</p> |
| <p>11. <i>Memory of things; memory of facts; sense of things; educability; perfectibility; docility.</i>
(G.) Sachgedächtniss, Erziehungsfähigkeit, Sachsin.</p> | } | <p>Situate at the root of the nose, between the two eyebrows, and a little above them.</p> |
| <p>12. <i>Sense of locality; sense of the relation of space; memory of places.</i>
(G.) Ortsin, Raumsin.</p> | } | <p>Answers to the frontal sinuses, and is indicated externally by two prominences at the inner edge of the eyebrows, near the root of the nose, and outside of the organ of memory of things.</p> |
| <p>13. <i>Memory of persons; sense of persons.</i>
(G.) Personensin.</p> | } | <p>At the inner angle of the orbit.</p> |
| <p>14. <i>Sense of words; sense of names; verbal memory.</i>
(G.) Wordgedächtniss, Namensin.</p> | } | <p>Situate at the posterior part of the base of the two anterior lobes of the brain, on the frontal part of the bottom of the orbit, so as to make the eye prominent.</p> |
| <p>15. <i>Sense of spoken language; talent of philology; study of languages.</i>
(G.) Sprachforschungssin, Wortsin, Sprachsin.</p> | } | <p>Also at the top of the orbit, between the preceding and that of the knowledge of colour.</p> |
| <p>16. <i>Sense of the relations of colour; talent of painting.</i>
(G.) Farbensin.</p> | } | <p>The middle part of the eyebrows; encroaching a little on the forehead.</p> |

- | | | |
|--|---|---|
| 17. Sense of the relations of tones; musical talent.
(G.) T o n s i n n. | { | A little above and to one side of the last; above the outer third of the orbital arch. |
| 18. Sense of the relations of numbers; mathematics.
(G.) Z a h l e n s i n n. | | On the outside of the organ of the sense of the relations of colour, and below the last. |
| 19. Sense of mechanics; sense of construction; talent of architecture; industry.
(G.) K u n s t s i n n, B a u s i n n. | { | A round protuberance at the lateral base of the frontal bone, towards the temple, and behind the organs of music and numbers. |
| 20. Comparative sagacity.
(G.) V e r g l e i c h e n d e r S c h a r f s i n n. | | At the middle and anterior part of the frontal bone, above that of the memory of things. |
| 21. Metaphysical penetration; depth of mind.
(G.) M e t a p h y s i s c h e r T i e f s i n n. | { | In part, confounded with the preceding. Indicated, at the outer side of this last, by two protuberances, which give to the forehead a peculiar hemispherical shape. |
| 22. Wit.
(G.) W i t z. | | At the lateral and outer part of the last; and giving greater width to the frontal prominences. |
| 23. Poetical talent.
(G.) D i c h t e r g e i s t. | { | On the outer side of the last; divided into two halves by the coronal suture. |
| 24. Goodness; benevolence; mildness; compassion; sensibility; moral sense; conscience; bonhomie.
(G.) G u t m ü t h i g k e i t, M i t l e i d e n, m o r a l i s c h e r S i n n, G e w i s s e n. | | Indicated by an oblong prominence above the organ of comparative sagacity; almost at the frontal suture. |
| 25. Imitation; mimicry.
(G.) N a c h a h m u n g s s i n n. | { | At the outside of the last. |
| 26. God and religion; theosophy.
(G.) T h e o s o p h i s c h e s S i n n. | | At the top of the frontal bone and at the superior angles of the parietal bones. |
| 27. Firmness; constancy; perseverance; obstinacy.
(G.) S t e t i g k e i t, F e s t e r S i n n. | { | The top of the head; at the anterior and most elevated part of the parietal bones. |

The first nineteen of these, according to Gall, are common to man and animals; the remaining eight, man possesses exclusively. They are, consequently, the attributes of humanity.

ORGANS ACCORDING TO SPURZHEIM.

- | | |
|-----------------------------------|----------------------------|
| 1. Amativeness. | 18. Marvellousness. |
| 2. Philoprogenitiveness. | 19. Wit. |
| 3. Inhabitiveness. | 20. Ideality. |
| 4. Adhesiveness or Attachment. | 21. Imitation. |
| 5. Combaticiveness. | 22. Individuality. |
| 6. Destructiveness. | 23. Form. |
| 7. Constructiveness. | 24. Size. |
| 8. Acquisitiveness. | 25. Weight and Resistance. |
| 9. Secretiveness. | 26. Colour. |
| 10. Self-esteem. | 27. Locality. |
| 11. Love of Approbation. | 28. Numeration. |
| 12. Cautiousness. | 29. Order. |
| 13. Benevolence. | 30. Eventuality. |
| 14. Veneration. | 31. Time. |
| 15. Firmness. | 32. Melody or Tune. |
| 16. Conscientiousness or Justice. | 33. Language. |
| 17. Hope. | 34. Comparison. |
| | 35. Causality. |

A fundamental principle with the *Craniologists* or *Phrenologists*, is,—that the brain does not act as a single organ, but that it consists of a plurality of organs: but even admitting this, it is probable that the assignment of the seat of different faculties, is premature.

CRA'NIUM, *Cra'nion*, *Calva'ria*, *Sca'phion*, *Conchus*, *Calva*; the skull; from *κεφαλον*, 'a

helmet,' or from *κεφαλον*, 'head.' (F) *Crane*. The collection of bones, which form the case for lodging the brain and its membranes, as well as their vessels, and some of the nerves. These bones are eight in number—the *frontal*, *occipital*, two *parietal*, two *temporal*, the *sphenoid*, and *ethmoid*. Besides these, there might be considered, as belonging to the cranium, the *cornua sphenoidalia*, the bones of the ear, and the *ossa wormiana*.

Dr. Prichard has characterized the primitive forms of the skull according to the width of the *Bregma*, or space between the parietal bones: 1. The *Stenobregmate*, (*στενός*, 'narrow,') or Ethiopian variety. 2. The *Mesobregmate*, (*μέσος*, 'middle,') or Caucasian variety; and 3. The *Platybregmate*, (*πλατύς*, 'broad,') or Mongolian variety.

CRANIUM HUMA'NUM, *Human Cra'nium*, (F) *Crane humain*. This was anciently much used in prescriptions, and was considered anti-epileptic, alexipharmic, antiloimic, &c.

CRA'NOMANCY, from *κεφαλον*, 'the head,' and *μαντεια*, 'divination,' (F) *Cranomancie*. The art of divining—from the inspection of the head or cranium,—the moral dispositions and inclinations of individuals.

CRANSSAC, MINERAL WATERS OF. C. is a village in the department of Aveyron, six leagues from Rhodéz, which possesses

acidulous chalybeate springs, that have been known for a long time.

CRANTER, from *κραίνω*, 'to finish,' 'render perfect.' The *Dens Sapien'tiæ* has been so called.

CRAQUEMENT DE CUIR (F), 'Crackling of leather.' A sound like the crackling of new leather, sometimes heard on examining the heart with the stethoscope. It has been supposed to be symptomatic of pericarditis.

CRASIS, from *κραίνωμι*, 'I mix.' A mixture of the constituents of a fluid;—as, the *crasis of the blood, of the humours, &c.* The word has, also, been employed in a more extensive signification, as synonymous with *Constitution, Temperament, &c.*

CRASSAMENTUM, from *crassus*, 'thick.' The thick part or deposit of any fluid. It is particularly applied to the clot of the blood.

CRASSE (F). Dirt or impurity. A sort of layer or *enduit*, which covers the skin, where cleanliness is not attended to; and which is, sometimes, the result of the cutaneous exhalation, at others, of extraneous matter adhering to the surface of the body.

CRASSE'NA. A term, by which Paracelsus designated the saline, putrescent, and corrosive principles, which, he thought, gave rise to ulcers and tumours of different kinds.

CRATÆ'GUS A'RIA, *Mes'pilus, Aria* seu *Sorbus, White Beam Tree*, (F) *Alisier blanc; Alouche, Alouchier*. The fruit, which is of the size of a small pear, is slightly astringent, and somewhat agreeable to the taste. It has been employed in diarrhœa.

CRAUTE, MINERAL WATERS OF. C. is a village, five leagues from Autun, in France; where are mineral springs containing hydrosulphate of magnesia, muriate of soda, muriate of lime, sulphate of lime, and carbonate of magnesia.

CREAM, *Cremor*, (F) *Crème*. A thick, unctuous matter, of a yellowish white colour, and sweet, agreeable taste, which rises to the surface of milk, if kept at rest. It is composed of butter, serum, and caseum.

Crème is a name given in France to *bouillies* prepared with farina of different kinds; as the *Cream of Rice, Crème de Riz, C. d'orge* (C. of Barley), &c.

CREMAS'TER, *Suspendic'ulum, Elevator Testic'uli, Mus'culus Testis, M. Testicon'dus*. That which suspends; from *κρεμάω*, 'I suspend.' The Greeks designated, by this term, the spermatic chord, or all the parts by which the testicle is, as it were, suspended; but, since Vesalius, it has received its present limited meaning. The Cremaster is a very thin, muscular fascia,—sometimes hardly perceptible,—which detaches itself from the internal oblique muscle; passes through the abdominal ring, and vanishes around the tunica vaginalis: serving to draw up the testi-

cle, and to move it slightly. It has been, also called *Tu'nica Erythroïdes* and *Suspensorium Testis*.

CREMER. The common name for a disease frequent in Hungary, which is produced by excess in eating and drinking.—Chomel.

CREMNOS, *κρημνος*, 'a steep bank.' The lips of an ulcer. The *Labia Pudendi*.—Hippocrates, Foësius. Hence:

CREMNON'CUS, from *κρημνος*, 'the labia pudendi,' and *ογκος*, 'a tumour.' A swelling of the labia pudendi.

CRENA, *Crenatu'ra, Dentic'ulus*, (F) *Crénélure*. In the plural, the small teeth or projections in the bones of the cranium, by means of which an accurate junction is formed at the sutures.

Crénélure has also been used, in *Surgery*, for the gutter or groove in certain instruments, which is generally intended to secure the passage of cutting instruments;—the groove, for example, of a director.

CREOSOTE, *Creoso'tum, Kreoso'ton, Creosoton*; from *κρεας*, 'flesh,' and *σωτος*, 'a preserver.' A substance discovered a few years ago by Reichenbach. It is obtained from Tar, by distillation, and appears to be the active antiseptic and medicinal agent in tar-water and crude pyroligneous acid. It is a colourless transparent fluid, of a penetrating and disagreeable odour. Its taste is bitter. S. g. 1.037. It coagulates albumen, whence its hæmostatic power. It is a most powerful antiseptic.

It has been largely administered in hæmorrhages, both internally and externally. As an external application, it has been used in burns, ulcers, especially those of a sloughing character, chronic cutaneous affections, applied to tapeworm when protruded, &c.

Internally, it has been administered in phthisis, vomiting, diabetes mellitus, nervous diseases, chronic glanders, &c.

The dose internally is one or two drops. Externally, it is sometimes applied pure, at others diluted, and commonly with water (3ss to 3vj;) or in the form of ointment (g^{tt}. xv to 3j of cerate.)

CREPAT'IO, *Crepatu'ra*. The action of bursting any seed by ebullition.—*Coque ad crepatu'ram*, 'Boil till it bursts.'

CREPITA'TION, *Crep'itus*, from *crepita're*, 'to make a noise.' *Crackling*. Crepitation or *crepitus*, (F) *Cliquetis*, has been used, in *Surgery*, to designate the noise occasioned by the friction of fractured bones, when the surgeon moves them in certain directions. When it cannot be heard at a distance, it may be detected by the immediate application of the ear, or by the use of the stethoscope.

Crepitus or *crackling* is, likewise, met with in cases of gangrene,—when air is effused into the cellular membrane,—provided the part be carefully examined with the fin-

gers. The same term is used for the crackling of the joints in health or disease.

Crep'itus, φυσα, φυση, *Physa*, *Physe*, πορδη, *Porde*, *Flatus*, also means a discharge of wind per anum. See *Fart*.

By *RALE CRÉPITANT SEC*, *LAENNEC* means the *crepitant rattle*, heard, during respiration, in severe pneumonia and in œdema of the lung; so termed, on account of the analogy between the sound and that occasioned by pressing a healthy lung between the fingers.

The *RALE CRÉPITANT SEC À GROSSES BULLES*, 'dry crackling noise with formation of large bubbles,' is heard in pulmonary emphysema, when the distention becomes greater and greater, and is followed by rupture of the vesicles. The air forcing itself a passage in the interlobular cellular tissue gives rise to this *Râle* during inspiration.

CRESCENTIA CUJETE, *Cujete*, *Narrow-leaved Calabash Tree*. The pulp of the fruit of this West India plant is acidulous. It is used in diarrhœa and headache; and, in syrup, for diseases of the chest.

CRETA, *Car'bonas calcis*, *Car'bonas calca'reus*, *Glisomargo*, *Melia Terra*, *Chalk*, *Carbonate of Lime*. (F) *Craie*.

CRETA PRÆPARA'TA, *Car'bonas Calcis præpara'tus*, *Testæ præpara'tæ*, *Prepared Chalk*. Used, externally, as an absorbent; internally, as an antacid. Dose, gr. x to 3j or more.

CRETIN. One affected with cretinism. The word is said to come from *Chrétien*, *Christian*, because the Cretin, being in a state of idiocy, is incapable of committing any sin.

CRETINISM or *CRETINAGE*, *Cyrto'sis Cretinis'mus*, *Cretinis'mus*. An endemic affection in the low, deep, narrow situations of the Valais; in the valley of Aost, *Maurienne*, a part of Switzerland, the *Pyre'nces*, *Tyrol*, &c. It is a state of idiocy, commonly accompanied by an enormous goitre, and is often hereditary. The unfortunate Cretin is little better than the animals around him. He rarely attains an advanced age. Like idiocy, cretinism has been divided into *complete* and *incomplete*.

CREUZOT, *MINERAL WATERS OF*. C. is a mountain, to the northeast of Mount *Cenis*. Near it is a saline chalybeate spring.

CREVASSE (F). *Rima*, from *crever*, 'to break or crack.' A *Crack*, a *Cleft*. The words *crevasse*, *gerçure*, *fissure*, and *rhagade* are often used synonymously for small longitudinal cracks or chaps of a more or less painful character. Sometimes, *crevasse* is employed to designate the solutions of continuity or ruptures, which supervene in distended parts, in the urinary passages, uterus, &c.; it is then synonymous with rupture.

CRIBLÉ, (F) *Cribratus*, from *cribrum*, 'a sieve.' Having holes like a sieve. *Lame criblée*, *Crib'riform plate*,—is the horizontal lamina of the ethmoid bone, so called because

it is perforated like a sieve. Through the perforations the olfactory nerves pass.

The term *La'mina Cribrô'sa* of *Albinus* is a circular spot, perforated with small holes, seen when the optic nerve is regarded from the inside, after removing the retina and choroid. From these holes the medullary matter may be expressed.

CRIBRA'TION, *Cribratio*, *Sifting*, *Coscinismus*. A pharmaceutical operation, which consists in separating the finest parts of drugs from the coarser. Sieves are used for this purpose. These were formerly called *Cribræ*; *Coscinoi*, κοσκίνοι. A sieve, for separating the bran from meal, was termed *Cresera*, κρηστέρα, *Aleurote'sis*, *Cribrum Polina'rium*.

CRIB'RIFORM, *Cribriforme*, from *cribrum*, 'a sieve,' and *form'a*, 'form.' The ethmoid bone was formerly so called:—*Os cribriforme*.

CRICO-ARYTENOID, *Cri'coarytenoïdæ'us*. Relating to the cricoid and arytenoid cartilages.

CRICO-ARYTENOID MUSCLE, *Crico-arytenoïdæ'us latera'lis*, *Crico-lateri-arithénoidien*. A muscle, which proceeds from the lateral part of the superior edge of the cricoid cartilage to the outer and anterior part of the base of the arytenoid cartilage. It carries the arytenoid cartilage outwards and forwards.

CRICO-ARYTENOID, POSTERIOR; *Crico-arytenoïdæ'us posticus*, *Crico-creti-arithénoidien*, *Dilatateur postérieur du Larynx*. A small, triangular muscle, seated at the back part of the larynx. It extends from the prominent line, at the middle of the posterior surface of the cricoid cartilage, to the outer and posterior part of the base of the arytenoid cartilage.

The *CRICO-ARYTENOIDÆ'US SUPERIOR*, of *Winslow*, forms part of the *Arytenoïdæ'us* of modern anatomists.

CRICO-PHARYNGEAL, *Crico-pharyngæ'us*. Belonging to the cricoid cartilage and pharynx. The *CRICO-PHARYNGÆ'US* muscle of *Winslow* is a fleshy bundle, which forms part of the *Constrictor Pharyngis inferior*. He calls the other part *Thyro-pharyngæ'us*, and proposes to call the whole *Thyro-crico-pharyngæ'us*.

CRICO-THYROIDEAN, *Crico-Thyroid*. Belonging to the cricoid and thyroid cartilages.

The *CRICO-THYROID MEMBRANE* is of a fibrous nature; and extends from the upper edge of the cricoid cartilage to the inferior edge of the thyroid.

The *CRICO-THYROID MUSCLE*, *Crico-Thyroïdæ'us*, *Dilatateur antérieur du larynx*, is a small, fleshy bundle, of a triangular shape, at the anterior and inferior part of the larynx. It extends from the outer surface of the cricoid cartilage to the lateral parts of the inferior margin of the thyroid cartilage; and its use is, to approximate, anteriorly, the cor-

responding margins of the cricoid and thyroid cartilages; and thus to stretch the ligaments of the glottis, which it contracts by separating the thyroid cartilage from the arytenoid.

CRICOID, *Cricoideus*, *Cricoides*, *Annulla'ris*, *Cymbala'ris*, *Cartila'go innomina'ta*, from *κρίκος*, 'a ring,' and *ειδος*, 'form.' Having the form of a ring, (F) *Cartilage anonyme*. A name given to one of the cartilages of the larynx, which is situate at its lower part, between the thyroid and first ring of the trachea. It is much higher behind than before.

CRIMNO'DES, *Crimnoi'des*, from *κρίμνον*, 'coarse meal,' and *ειδος*, 'resemblance.' Resembling meal.

URI'NA CRIMNO'DES. Urine that deposits a sediment like meal.

CRINA'LE, from *crinis*, 'hair.' An instrument, formerly used to compress, in cases of fistula lachrymalis. It has its name from the circumstance of its having at one end a small cushion stuffed with hair.—Sculetus.

CRINATUM. A species of fumigation, used by Paulus of Ægina. The roots of lilies entered into the process; hence its name, from *κρίνον*, 'the lily.'

CRINOM'YRON, from *κρίνον*, 'the lily,' and *μύρον*, 'ointment.' *Unguentum lilia'ceum*, *U. Ægyptium album*, *U. Susinum*. An ointment, composed of lilies and some aromatic plants.—Gorræus.

CRIOMYX'OS, *κρίομυξος*. One, who has much mucus flowing from his nasal fossæ, like a ram: from *κρίος*, 'a ram,' and *μύξος*, 'mucus.'

CRISIS, *Diacrisis*, Judgment; from *κρίνω*, 'I judge.' This word has been used in various acceptations. Some mean by *crisis* of a disease, when it augments or diminishes considerably, becomes transformed into another, or ceases entirely. Some have used the word to signify only the favourable changes, which supervene in disease; others, for the change going on in the acme or violence of the disease. Others, again, have given this name only to a rapid and favourable change; joined to some copious evacuation or eruption; whilst others have applied the term to the symptoms, that accompany such change, and not to the change itself;—thus including, under the same denomination, the *critical* phenomena and the *crisis*.

CRISPA'TION, *Crispatu'ra*, from *crispa're*, 'to wrinkle.' A contraction, or spasmodic constriction, which supervenes in certain parts, either spontaneously or by the influence of some morbid cause or therapeutical agent. The capillary vessels of a wound are, by the French, termed *crispés*; when, immediately after an operation, the blood does not flow from them. The skin is said to be *crispée*, when contracted, and the bulbs of the hair become more prominent. *Crispation* of the nerves is a slight convulsive motion of external or internal

parts, much less than that which occurs in convulsion.

CRISTA. A crest, (F) *Crête*. A name given to several bony projections.

CRISTA GALLI; two Latin words, signifying the comb of a cock, (F) *Crête de l'ethmoïde*, *C. de Coq*. A flat, triangular process, rising above the cribriform plate of the ethmoid bone, and resembling a cock's comb. It gives attachment to the anterior part of the falx cerebri.

The **CRISTA OF THE IL'IUM** is the superior margin of the ilium:—the *Crista of the Tibia*, the anterior edge; the *shin*. Winslow calls the nymphæ, *Cristæ of the Clit'oris*; and Chaussier, the verumontanum, *Crista Urethra'lis*.

The word **CRETES**, (F) *Cristæ*, is used, in France, for fimbriated excrescences, which form at the anus, and near the genital organs; and are commonly owing to the syphilitic virus.

CRETES DE COQ are syphilitic excrescences, resembling, in form, the crest of the cock.

CRITHMUM MARITIMUM, *Crithmum*, *Samphire*, (F) *Passe-pierre*, *Perce-pierre*, *Fenouil marin*, *Bacile*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. A plant which grows on the sea-coasts, has a spicy, aromatic flavour, and is used, pickled, as a condiment.

The *Caaponga* of Brazil is a kind of *Crithmum*.

CRITI'CAL, *Crit'icus*. Belonging to a crisis.

CRITICAL DAYS, *Dies critici*, *D. judicatorii*, *D. Decretorii*, *D. Principes*, *D. Radicales*, (F) *Jours critiques*, are those on which a crisis, it was imagined, would be likely to happen. According to Hippocrates and Galen, the greatest number of fevers terminate, favourably, on the 7th day, and many on the 14th;—these two days being the most propitious. Next to these come, in order of efficiency, the 9th, 11th, 20th or 21st, 17th, 5th, 4th, 3d, 18th, 27th, and 28th. The sixth day was called by Galen, the *Tyrant*, *τυραννος*, because the crises, that happened then, were generally unfavourable. After this, the most unfavourable were the 8th, 10th, 12th, 16th, and 19th. The 13th was a sort of neutral day, the crises, which happened on it, being neither favourable nor unfavourable.

Days were, also, divided into *Intercal'ary*, in which the crises happened less frequently, and were less complete than on the *critical* or *indicatory*;—and into *vacant* and *non-decretory*, in which a crisis hardly ever occurred.

According to this division, they were enumerated as follows.

<i>Critical days</i> ,	7th, 14th, 20th, 27th, 34th, 40th, 60th, &c.
<i>Indicatory days</i> ,	4th, 11th, 17th, 24th, &c.
<i>Intercalary days</i> ,	3d, 5th, 6th, 9th, &c.
<i>Non-decretory days</i> ,	2d, 8th, 10th, 12th, 13th, &c.

Fortunate crises were considered to be in-

dictated by favourable signs appearing three days before.

CROCINUM, from *κροκος*, 'saffron.' Made with saffron; coloured with saffron.

CROCO'DES, from *κροκος*, 'saffron,' and *ειδος*, 'resemblance.' Certain trochs into which saffron entered as an ingredient.—Paulus of Ægina.

CROCODI'LEA, *Stercus Lacer'tæ*. The excrements of the crocodile, which the Arabists extolled as a remedy for cutaneous diseases, and which was long used as a cosmetic.

CROCOMAG'MA, from *κροκος*, 'saffron,' and *μαγμα*, 'a kneaded or squeezed mass.' A kind of troch, composed of saffron and spices.—Galen, Dioscorides, Paulus of Ægina, Scribonius Largus.

CROCUS, *C. sativus*, *C. Austriacus*, *Medici'na Tristi'tiæ*, *Panac'ea vegetabilis*, *Zafferan*, *An'ima Pulmo'num*, *C. Orienta'lis Saffron*. Order, Iridæ. (F) *Safran*. The stigmata are the parts used in medicine. They are brought from the East. The odour is aromatic, and the taste aromatic, pungent, and bitter:—the colour deep orange red. Its virtues are yielded to alcohol, wine, vinegar, and water. Its operation has been considered stimulant, exhilarating, and diaphoretic. It is not much used.

There is a *Cake Saffron* sometimes met with. It consists of one part of saffron and nine of marigold, made into a cake with oil; and pressed.

CROISÉ (F), *Crossed*. An epithet given to paralysis, when it attacks the arm of one side, and the leg of another.

CROMMYOXYREG'MIA, from *κρομμυον*, 'an onion,' *οξυς*, 'acid,' and *γρυμι*, 'to break out.' Sour, fetid eructations, exhaling a smell similar to that of onions.

CROTALUS HOR'RIDUS, *Crotaloph'orus*. The *Rattlesnake*, *Cobra de Capello*, (F) *Crotale*. A venomous reptile of North America. Its poison is virulent. It is so called from the rattle in its tail. (*Κροταλον*, 'a rattle,' 'a small bell.')

CROTAPHĒ or **CROTA'PHIUM**, from *κροταφος*, 'temple.' *Cephalal'gia Pulsat'ilis*. *Cephalæ'a Pulsat'ilis*, *Sphygmoceph'alus*. A pulsatory pain, chiefly at the temples, with drumming in the ears.

CROTCHET, *Hamus*. A small hook or crook. (F) *Crochet*. An obstetrical instrument, whose name indicates its shape; and which is used in the extraction of the fœtus, when it becomes necessary to destroy it to expedite delivery. Crotchets are differently formed; some are sharp, others blunt; some contained in a sheath, others naked.

CROTON CASCARIL'LA, *Cortex Eleuth'riæ*, *Croton Eleuth'ria*, *Thus Judæo'rum*, *Chacaril'læ cortex*, *Cascaril'la*, *Elute'ria*, *Gascaril'la*. Order, Euphorbiacæ. Sex. Syst. Monœcia Monadelphia. (F) *Quinquina aromatique*, *Cascarille*. The bark of the

Croton Cascarilla of the Bahamas, *Cortex Thuris*, has a slightly aromatic odour, and bitterish, aromatic taste. The smoke has the odour of musk. The active parts are an essential oil and bitter extractive. They are completely extracted by proof spirit. It is tonic and stomachic. Dose, gr. xv to 3ss or more in powder.

CROTON RACEMOSUM, *Beenel*. A small Malabar tree, whose aromatic root, boiled in oil of sesame, is employed, by the Orientals, as a liniment in headache and rheumatism.

CROTON TIG'LIIUM, *Cadel-Avanacu*. A Ceylonese plant, every part of which is endowed with medicinal power. The root is a drastic cathartic: the wood, (*Lignum Pavana*,) *Pavana wood*, and the seeds, have like virtues. The seeds have been long known under the names, *Grana Moluc'cæ*, *Tilii Grana*, and *Grana Tiglii*. From these seeds the *Croton Oil*, *O'leum Tiglii* is expressed. It is of a pale, brownish-yellow colour, and hot, biting taste; and is a most powerful drastic cathartic. Dose, from half a drop to three drops, made into pills with crumb of bread. It is also applied externally as a rubefacient, 3 or 5 drops being rubbed on the part; or one part of the oil and three parts of olive oil may be added together, and a little of this be rubbed on.

CROTONĒ, *κροταων*. A fungus, which grows on trees. By extension, applied to a fungous tumour developed on the periosteum.

CROUPION (F) *Uropyg'ium*, the *Rump*. The region of the coccyx. The *crupper*.

CROWN, *Coro'na*, *Steph'ane*. In Anatomy, this name is given to parts of a circular form, which surmount other portions of the same body. Thus, the *Crown of a Tooth*, *Coro'na Dentis*, (F) *Couronne du Dent*, is the portion of the tooth, which projects above the gum.

CROWN OF THE GLANS, *Coro'na glandis*, (F) *Couronne du gland*, is the round, almost circular, ring, which circumscribes the base of the glans.

THE CROWN OF THE TREPAN, *Modiolus*, (F) *Couronne de Trépan*, is a species of saw, in form of a crown, or rather of a portion of a cylinder, having grooves on its external surface; and teeth at its lower extremity: the other being fitted to the handle of the trepan.

CROWN OF VENUS, *Coro'na Ven'ëris*, *Gutta Rosa'cea Syphilit'ica*, (F) *Couronne de Venus*. Red, rosy pustules, dry or moist, on the face; but particularly on the forehead and temples, owing to constitutional syphilis.

CRUCIAL, *Crucia'lis*. Having the shape of a cross.

A CRUCIAL INCISION, (F) *Incision cruciale*. An incision, made in the form of a cross. Often employed for exposing the cranium, for the purpose of applying the trepan.

CRUCIAL LIG'AMENTS, (F) *Ligaments croisés*, *L. cruciformes*. Two strong ligaments within the knee-joint. The *anterior* passes

obliquely, from a depression anterior to the spine of the tibia to the posterior and inner part of the external condyle of the femur:—the *other*, the *posterior*, extends from the posterior part of the spine of the tibia to the anterior and outer part of the internal condyle.

CRUCIBLE, *Crucibulum*, *Cat'nus fuso'rius*, *Tigil'lum*, *Albot*, *Cemente'rium*. (F) *Creuset*. A vessel of earth, silver, platina, gold, black-lead, &c., for receiving substances, which have to be exposed to a strong heat. It is sometimes covered with a *top* or *lid*, (F) *Couvercle*.

CRUCIFORM, *Crucifor'mis*, *Cross-shaped*. A name given to the ligaments, which close the articulations of the phalanges; and likewise to the *crucial* ligaments.

CRUDITY, *Cru'ditas*, from *crudus*, 'crude,' 'unprepared.' *Rawness*, *crudeness*. This word has received several acceptations. 1. It expresses the quality of certain aliments, which have not experienced the action of fire. 2. The condition of matters in the digestive tube, which have not undergone the digestive changes: and, 3. In the language of the Humorists, it means the condition of the morbid matter in a sick individual, when it has not yet been prepared or concocted by the action of the organs.

The word is used in the plural, *Crudities*, synonymously with *crude matters*. It is applied to those, when contained in the stomach and intestines.

CRUOR. The signification of this word is very vague. It has been used to designate blood in general, venous blood, extravasated or coagulated blood, and the colouring matter.

CRURA. The plural of *Crus*, 'a leg.' (F) *Cuisse*. Applied to some parts of the body, from their resemblance to a leg or root; as the *Crura cerebri*, *Crura cerebelli*, &c.

CRURAL, *Crura'lis*, from *crus*, 'the thigh and the lower limb.' What belongs to the thigh or lower limb.

CRURAL OF INGUINAL ARCH, (F) *Arcade crurale*, *A. inguinale* (Ch.),—*POUPART'S Ligament*, *L. of Fallo'pius*. This arch is formed by the internal portion of the inferior edge of the aponeurosis of the obliquus externus muscle, which is attached, at one end, to the pubis; at the other, to the anterior and superior spinous process of the ilium. At its posterior and inner part, the aponeurosis, forming the arch, sends off a falciform reflection, which is attached along the crest of the pubis, and is known under the name of *GIMBERNAT'S Ligament*. Beneath this arch the vessels, nerves, and muscles make their exit from the pelvis to the thigh.

CRURAL OF FEMORAL CANAL OR RING. *M. Jules Cloquet* has described this canal with minuteness; and given it the name *Anneau crural*, *Anneau femoral*. It is nearly an inch long, is triangular, more spacious above than below, and shorter and broader in the female

than in the male. Its upper orifice is bounded, anteriorly, by the crural arch, posteriorly, by the crista of the pubis; on the outer side by the psoas and iliacus muscles, covered by the iliac aponeurosis; and, at the inner, by *GIMBERNAT'S* ligament. This orifice is covered by the peritoneum, and, according to *M. Cloquet*, is closed by a more or less resisting septum, which he has named, *Septum crurale*. In its course, the crural canal has its anterior paries formed by the superficial expansion of the fascia lata; the posterior by the pectineus, covered by the deep-seated expansion of the fascia; and more externally by the psoas and iliacus muscles, covered by an expansion of the *fascia iliaca*. Its inferior orifice is formed by the foramen of the fascia lata, which gives passage to the vena saphæna. It is at the upper orifice of this canal, that *Femo'ral* or *Crural Hernia*, the *Hernie inguinale* of *Chaussier*, occurs; which would be more common, were it not for the fibrous cellular septum there situated.

The **CRURAL OF FEMORAL ARTERY**, (F) *Artère crurale*, *A. Pelvi-crutale*,—(Ch.), is the continuation of the external iliac. It extends from the crural arch to the aperture in the triceps, or to the ham. *Chaussier* applies the name *Artère crurale* to the trunk, which extends from the primitive or common iliac to the tibial arteries; embracing, of course, the external iliac, femoral, and popliteal.

The **FEMORAL OF CRURAL VEIN** has the same arrangement as the artery. It receives only one great branch, the saphæna.

The **CRURAL NERVE** proceeds from the lumbar plexus, and is situate at the outer side of the psoas muscle and crural artery. After it has passed under the crural arch, it divides into cutaneous and muscular branches. One of the branches, which is larger than the rest, is called the *Saphæ'na nerve*. It gives off filaments to the integuments of the knee, to the inner part of the leg, and to the dorsal surface of the foot. The remainder of the branches of the *crural* are distributed to the anterior and inner part of the thigh.

ACCESSORY OF THE CRURAL NERVE, is a term given to the 4th and 5th pairs of lumbar nerves.

The **CRURAL PLEXUS** of *Chaussier* is the union of the anterior branches of the four last pairs of lumbar nerves, and the four first sacral;—forming the *lumbar* and *sacral* plexuses of most Anatomists.

CRURA'LIS or **CRURÆ'US**. A part of the *Triceps crural* of the French, or of the *Trifémoro-rotulien* of *Chaussier*. The *Cruralis* is situate at the anterior, outer, and inner part of the thigh. It arises, fleshy, from between the two trochanters, adheres firmly to most of the fore part of the os femoris; and is inserted, tendinous, into the upper part of the patella, behind the rectus. Its use is to assist the vasti and rectus in the extension of the leg. Under *Muscle Triceps Cru-*

ral, the French describe the *cruralis* and the two *vasti*. Some small muscular slips, sometimes found under the *cruræus* muscle, and inserted into the capsular ligament of the knee-joint, have been called *Sub-cruræi*.

CRUSTA. A crust or scab, (F) *Croute*. An assemblage of small flakes, formed by the drying up of a fluid secreted by the skin.

The lining membrane of the stomach and intestines has been called *Crusta villosa*.

CRUSTA GENU EQUINÆ, *Sweat, or Knee Scab, Mock or Encircled Hoof Knees, Hangers, Dew Claws, Night Eyes, Horse Crust.* This morbid secretion from the horse has been advised in cases of epilepsy. It is used in the form of powder, (gr. ij to gr. xx); and of tincture.

CRUSTACÉ (F). Alibert has substituted this word, in his *Nosology*, for *croûteux*, 'crusty.' Having crusts or scabs; as *Dartre crustacée*.

CRUS'TULA. A small shell or scab. An ecchymosis of the conjunctiva.

CRUSTUMINATUM. A rob, prepared from the *Pyra Crustumi'na* or *Crustumeri'na* (so called from *Crustumi'num*, a town in Italy, where they grew,) boiled with honey or in rain-water.—Aëtius.

CRUX CERVI. An ancient appellation for the bone in the heart of the stag. It was once considered useful in diseases of the heart.

CRY, Clamour, (F) *Cri*. The sound of the unarticulated voice. The native voice, which the idiot and deaf possess equally with the man of genius and hearing. The cry of the new-born child has been called *Vagitus*, (F) *Vagissement*. We say, "A cry of joy, of pleasure, of pain," &c., according to the expression, which it may convey to the hearer.

CRYMO'DES, from *κρυμος*, 'cold.' A continued fever, in which the internal parts feel hot, and the external cold; and which was attributed to an erysipelatous inflammation of the lungs.—Aëtius, Gorræus.

CRYMODIN'IA, from *κρυμος*, 'cold,' and *οδυνη*, 'pain.' Chronic rheumatism, and all its modifications.—Baumes.

CRYMO'SIS, from *κρυμος*, 'cold.' Diseases caused by the action of cold.—Baumes.

CRYP'SOR'CHIS, from *κρυπτα*, 'I conceal,' and *ορχις*, 'a testicle,' *Criptor'chis, Testicondus*. One in whom the testes have not descended into the scrotum. The state is called *Cryptorchidis'mus, Parorchid'ium*.

CRYPTA, from *κρυπτος*, 'concealed.' *Folliculose gland. Lacu'na follic'ulus*, (F) *Crypte, Follicule*. A *crypt* or *follicle* is a small, roundish, hollow body, situate in the substance of the skin or mucous membranes, and constantly pouring the fluid, which it secretes, on their surfaces.

The use of the cryptal or follicular secretion, is to keep the parts, on which it is poured, supple and moist, and to preserve them

from the action of irritating bodies, with which they have to come in contact.

The little rounded appearances at the ends of the small arteries, in the cortical substance of the kidney, are also called *Cryptæ*.

CRYPTOCEPH'ALUS, from *κρυπτος*, 'concealed,' and *κεφαλη*, 'head.' A monster whose head is excessively small, and does not appear externally.—G. St. Hilaire.

CRYPTOPY'IC, *Cryptophy'icus*, from *κρυπτα*, 'I conceal,' and *πυον*, 'pus.' A state of disease, kept up by an occult abscess.

CRYSTAL'LI. Vesicles, filled with a watery fluid. They are also called *crystal'linæ*. Probably the pemphigus of modern writers.

CRYS'TALLINE, *Crystal'linus*. Having the appearance of crystal.

The **CRYS'TALLINE,** *Crys'talline humour, C. Lens, Crys'talline body, Crystallinus, Lens crystal'lina, Lens crystalloï'des vel Corpus crystal'linum, C. Discoï'des, C. Crystalloï'des, C. Phacoï'des, Humor crystal'linus, H. glaci'al'is, Gemma Oculi*, (F) *Cristallin ou Crystal'lin, Humeur crystalline, Corps crystallin, Lentille crystalline*. A lenticular, transparent body, situate between the vitreous and aqueous humours of the eye, at the union of the anterior third with the two posterior thirds of this organ. It is composed of a soft, exterior substance; and an interior, forming a solid nucleus, in which a number of elliptical layers are perceptible. It is contained in a *capsule*, called *Tunica aranea vel crystal'lina*, and receives, at its posterior surface, a small branch of the central artery of the retina, which is always readily distinguishable in the fœtus, prior to the 7th month of utero-gestation.

The use of the crystalline is to refract the rays of light, and to serve as an achromatic glass: for which its laminæ or layers, composed of substances of different refractive powers, admirably adapt it.

CRYSTAL'LINA, from *κρυσταλλος*, 'crystal.' A vesicle or phlyctæna, filled with serum, and appearing on the prepuce or in the vicinity of the anus, surrounded by a reddish extravasated aureola. It may be syphilitic or not. See *Crystalli*.

CRYS'TALLOID, *Crystalloï'des*, from *κρυσταλλος*, 'crystal,' and *ειδος*, 'form,' 'resemblance.' Resembling crystal or the crystalline. The *capsule* or *membrane of the crystalline*; also, the crystalline itself.

CTESIPHON'TIS MALAG'MA. A plaster, employed and described by Celsus.

CUBITAL, *Cubita'lis*. Connected with, or relating to the cubitus, or to the inner and posterior part of the forearm.

The **CUBITAL ARTERY,** *Arte'ria cubita'lis, A. ulna'ris*, arises from the humeral a little below the bend of the elbow; proceeds along the anterior and inner part of the forearm; passes anterior to the ligamentum annulare

of the carpus, and goes to form, in the palm of the hand, the superficial palmar arch. Besides the numerous muscular branches, which it gives off in its course, it sends, posteriorly, the common trunk of the *interosseous arteries*, and internally, the two *cubital recurrensts*, *anterior* and *posterior*,—articular branches, which anastomose on the inside of the elbow with the divisions of the humeral artery.

The DEEP-SEATED CUBITAL VEINS and the *recurrent cubital veins* accompany the corresponding arteries.

The SUPERFICIAL CUBITAL VEINS belong to the basilic. Chaussier calls them *cutaneus cubital*.

The CUBITAL MUSCLES are two in number. 1. The *Cubitalis anterior*, *C. internus*, *Flexor carpi ulnaris*, *Ulnaris internus*, *Epitrochli-cubito-carpiei*, *Cubito-carpiei*—(Ch.), is a long muscle, situate at the anterior and inner part of the forearm. It arises from the inner condyle of the os humeri, at the inner side of the olecranon, and from the posterior edge of the ulna, and is inserted, by a tendon, into the os pisiforme. Its use is to bend the hand on the forearm by directing it slightly inwards. 2. The *cubitalis posterior* or *externus*, *Extensor Carpi ulnaris*, *Ulnaris externus*, *Cubitus externus*, *Cubito-sus metacarpi*—(Ch.), is situate at the posterior part of the forearm. It arises from the external condyle of the os humeri, and is inserted into the superior extremity of the fifth bone of the metacarpus. Its use is to extend the hand, inclining it a little inwards.

The CUBITAL NERVE, *Ulnar nerve*, *Cubito-digital*—(Ch.), is furnished by the two or three last nerves of the brachial plexus, and is distributed to the inner and anterior side of the forearm; to the inner part of the palm and of the back of the hand, and to the two or three last fingers.

CUBITO-SUPRA-PALMARIS. Belonging to the cubitus and to the supra-palmar or dorsal surface of the hand. Chaussier gives this name, 1. To a small artery, which is given off by the cubital or ulnar, a little above the wrist. 2. To a vein, which accompanies this artery.

CUBITUS, *κυβίτον*, *Cybiton*. The Elbow. Also, one of the bones of the forearm. See Ulna, and the forearm itself.

CUBITUS, (F) *Coudée*; the ancient name of a measure 18 inches long.

CUBOID, *Cuboides*, *Cubiformis*, *Cyboïdes*, *Cyrtoïdes*, *Grandinosum Os*, *Tessara*, *Tesseræ os*, *Os varium*, from *κύβος*, 'a cube,' and *ἴδος*, 'form.' Having the form of a cube. This name was given, by Galen, to one of the bones of the tarsus, and is still retained. It is situate at the anterior and outer part of the tarsus; and is articulated, *behind*, with the calcaneum; *before*, with the two last metatarsal bones, and *within*, with the third os cuneiforme, and sometimes with the scaph-

oides. Its inferior surface has an oblique groove for the tendon of the *peroneus longus*.

CUCU'BALUS BEHEN, *Behen officinarum*. This plant was once considered alexipharmic and cordial. It is the *Spatling Poppy*.

CUCULA'TUM MAJUS. A barbarous term, used by Ruland for brandy and spirit of wine.

CU'CUMIS COLOCYN'THIS. The official name of the *Colocynth* or *Bitter Apple*. *Colocynthis*, *Coloquin'tida*, *Bitter Gourd*, *Bitter Cucumber*, (F) *Coloquinte*. Family, Cucurbitaceæ. Sex. Syst. Monœcia Monadelphia. A Turkey and Cape of Good Hope plant. The spongy part or medulla of the fruit, *Colocynthis Pulpa*, *Cucumeris Colocynthis Pulpa*, has a bitter, nauseous, and acrimonious taste; and is a strong cathartic, acting chiefly on the upper part of the intestines. It is scarcely ever used, except in combination.

CUCUMIS MELO. The systematic name of the *Melon Plant*, *Melo*, *Common Melon*. (F) *Melon*. The fruit is an agreeable article of diet, but not very digestible, unless when ripe. The seeds possess mucilaginous properties.

CUCUMIS SATIVUS. The systematic name of the *Cucumber plant*, *Cucumis*, *Angourion*, *Citreolus*, *Cucumer*, (F) *Concombre ordinaire*. The cucumber is used, when young, as a pickle, when it is called a *Gherkin*. (F) *Cornichon*. It is not a fruit easy of digestion. The seeds are mucilaginous.

CUCUPHA, *Cucullus*, *Pileus*, *Sacculus cephalicus*. A sort of coif or cap, with a double bottom, between which is inclosed a mixture of aromatic powders, having cotton for an excipient. It was formerly used as a powerful cephalic.

CUCURBITA CITRUL'LUS. The systematic name of the *Water-melon plant*. *Citrullus*, *Anguria*, *Tetrangu'ria*, *Sicilian Citrul*, *Water-melon*. Family, Cucurbitaceæ; Sex. Syst. Monœcia Monadelphia. (F) *Melon d'eau*, *Pastèque*. The juice of this fruit is very abundant, whence its name. The *Water-Melon* is extremely refreshing and agreeable, when made very cool, and is eaten like the common melon. It is very much used in the United States.

CUCURBITA PEPO. The systematic name of the *Common Pompion*. *Cucurbita*. The seeds of this plant, as well as those of the *Cucurbita lagena'ria* or *Bottle-gourd*, contain a large proportion of oil, capable of forming emulsions: but they are not used.

Both the fruit of the *Cucurbita lagena'ria*, (F) *Calebasses*, and that of the *Cucurbita Pepo*, (F) *Potiron*, *Courge*, are eaten.

CUCURBITINUS, (F) *Cucurbitain*. This name was formerly given to the *Tenia solium*, because composed of rings which resemble the seeds of the gourd, *cucurbita*.

The ancients believed that the rings, which

are sometimes discharged, were so many separate worms.—See *Tænia*.

CUISSON (F). A smarting, burning pain.

CUIVREUX (F). *Copper-coloured*. *Teint cuivreux*; a copper-coloured complexion, such as is observed in cancerous affections. Syphilitic ulcers of the throat, &c. are often copper-coloured.

CULBIC'IO. A Latin word, employed by old writers, as synonymous with *ardor urinæ* and *gonorrhœa*.

CULBUTE (F). A movement, which the fœtus has been supposed to execute, at the end of the 7th month of utero-gestation; and by means of which, it was presumed, the head presented towards the orifice of the uterus.—A change of situation, which is impracticable in ordinary circumstances.

CU'LEUS; a measure, containing 20 barrels or 40 urns, equal to 180 gallons.—Pliny, *Goræus*.

CULEX, (F) *Cousin*. A genus of insects, unhappily too well known in almost every part of the world, on account of their bites, which give rise to painful, local inflammation. The *gnats* and *mosquitoes*, belong to this genus.

CU'LINARY ART. *Cookery*, *Res culinaria*, *Res coqua'ria*, *Ars culinaria*, *A. coquina'ria*, *Magice*, *μαγειρικη*. The art of preparing meats for the table. In judging of the dietetic properties of various kinds of aliment, the culinary process to which they have been subjected will always have to be considered. Many of the writers on the culinary art have been physicians.

CUTELLAIRE (F), from *Cutel'lus*, a 'little knife.' *Le cautère cutellaire*, known also under the name *Couteau de feu*, *Fire-knife*, is used for what the French term the *Cautère transcurrente*. (See *Cauterization*.) It is shaped like a small hatchet.

CULTER, *Cutel'lus*, from *colo*, 'I cultivate.' A *coulter*, a *knife*, *machæra*, *machæron*, *machæris*. Also, the third lobe of the liver, so called, from some fancied resemblance.—Theophilus Protospatarius.

CULTRIV'OROUS, *Cultrivorus*, from *culter*, 'a knife,' and *vora're*, 'to devour.' Individuals, who have seemed to swallow knives with impunity, have been so called;—*Knife-Eaters*.

CUMI'NUM CYMI'NUM. The systematic name of the *Cummin plant*. *Cumi'num*, *Carnaba'dium*. *Family*, *Umbelliferae*. *Sex. Syst.* Pentandria Digynia. (F) *Cumin*, *Anis aigre*. The seeds of the Cummin, which is a native of Egypt, have a warm, bitterish, disagreeable taste. Water extracts their odour, and spirit takes up both odour and taste. They are not used, except in a plaster, which bears their name.

When drunk in wine, the ancients believed they produced paleness; hence Horace calls the Cummin, *exsangue*; and Juvenal, *palens*.—Dioscorides, Pliny.

CUNEA'LIS SUTU'RA. The suture, formed between the great and little alæ of the sphenoid bone and the os frontis.—Blasius.

CUNÉEN (F), *Cuneanus*. Relating to the cuneiform bones.

ARTICULATIONS CUNÉENNES;—the joints between the cuneiform bones as well as between them and other parts.

LIGAMENTS CUNÉENS; the ligaments, which hold the cuneiform bones together.

CU'NEIFORM, *Cuneifor'mis*, *Sphenoides*, from *cu'neus*, 'a wedge,' and *forma*, 'shape.'

Wedge-shaped. This name has been given to several bones. 1. To the sphenoid. 2. To a bone of the carpus, situate between the os lunare and os orbiculare. It is, also, called *Os Pyramidale*, *Os Triquetrum*, and *Os Cubitale*. 3. To the basilar process of the occipital bone: and, 4. To three of the bones of the tarsus, which are distinguished, according to *situation*, reckoning from within outwards, into *first*, *second*, and *third*, or *internal*, *middle*, and *external*; and according to *size*, reckoning in the same order, into *great*, *small*, and *middle-sized*. The posterior surface of these bones is united to the anterior face of the scaphoides; the anterior surface with the corresponding metatarsal bones; and, in addition, the external surface of the third is articulated, behind, with the cuboides. They are also called *Chalchoidea* or *Calcoidea ossic'ula*.

CUNEO-CUBOID, *Cuneo-cuboides*. Belonging to the cuneiform bones and cuboides.

The **CUNEO-CUBOID ARTICULATION** is formed by the third cuneiform bone and cuboides. It is furnished with a synovial capsule, and two *cuneo-cuboid ligaments*,—a *dorsal* and a *plantar*.

CUNEO-SCAPHOID, *Cuneo-scaphoideus*. Belonging to the cuneiform bones and scaphoid.

The **CUNEO-SCAPHOID ARTICULATION**, is formed by the posterior surfaces of the three ossa cuneiformia, and the anterior surface of the scaphoid. It is furnished with a synovial capsule and ligaments; some of which are *dorsal*, others *plantar*.

CUP, *Scutel'la*, *Catil'lus*, *Patel'la*, *Excip'ula*, (F) *Palette*, *Poëlette*, *Poilette*, *Vase à saigner*. A small vessel, of a determinate size, for receiving the blood during venæsection. It generally contains about four ounces. A bleeding of two cups is, consequently, one of eight ounces.

CUPPING. A species of blood-letting, performed by a *scarificator* and glass, called a *cupping-glass*; *Cucurbit'ula*, *Cucur'bita*, *σικυα*, *Sicua*, (F) *Ventouse*. The lancets are placed in such a manner, in the scarificator, that, when it is applied upon the affected part, the whole are, by means of a spring, pushed suddenly into it. After scarification, the cupping-glass, which has been previously ex-

hausted by heat, or by an exhausting syringe, is applied. The pressure of the air within the glass being thus diminished, the necessary quantity of blood may be drawn. See Bdelometer.

Dry cupping, *Cucurbitulæ siccæ*, is the application of the glasses, without previous scarification, (F) *Ventouses sèches*. It is used to prevent the activity of absorption from any wounded part; occasionally, to excite suppuration in indolent abscesses; and to remove the pus when an abscess is opened. *Cupping*,—taken without any epithet—means the abstraction of blood by means of the scaricator and cups;—(F) *Ventouses scarifiées*, (L) *Cucurbitulæ cruentæ*, *C. cum Ferro*. The verb 'to cup,' signifies to draw blood by cupping.

CUPRESSUS SEMPERVIRENS. The systematic name of the *Cupressus*, *Cyparissus*, *Cypress*, (F) *Cyprés*. The berries, leaves, and wood have been considered astringent, and useful in intermittents. The whole plant abounds with a bitter, aromatic, and terebinthinate fluid.

CUPRI SUBACETAS, *Æru'go*, *Ver'digris*, *Hispanicum viridē*, *Prasinum viridē*, *Cupri Rubi'go*, *Crystals of Venus*, *Viridē Æris*, *Æruca*, *Calcithos*. *Subacetate of Copper*. (F) *Sous-acétate de Cuivre*, *Vert-de-gris*, *Cristaux de Venus*, *Verdet*. This, as usually met with, is in masses, difficult to break; not deliquescent; foliaceous; of a fine bluish-green colour, and salt taste. It is tonic, emetic, escharotic, and detergent, but scarcely ever employed internally. Chiefly used in detergent ointments. Dose, as a tonic, under $\frac{1}{2}$ gr.: emetic, from gr. j to gr. ij.

CUPRI SULPHAS, *Vitriolum Cupri*, *Vitriolum Ven'eri*, *V. Cyprium*, *V. Cyprium*, *V. Cæruleum*, *V. Roma'num*, *Cuprum Vitriola'tum*, *Lapis Cæruleus*, *Sulphate of Copper*, *Blue Stone*, *Blue Vitriol*, *Roman Vitriol*, *Mortooth*, (F) *Sulfate de Cuivre*, is in rhomboidal, rich blue, semitransparent, efflorescing crystals. The taste is harsh, styptic, and corrosive. It is soluble in 4 parts of water at 60°, and is tonic, emetic, astringent, and escharotic. As a tonic, it has been used in epilepsy, intermittents, &c.

Dose, as a tonic, gr. $\frac{1}{4}$ to ij in pill;—as an emetic, gr. ij to x in water. A very weak solution is sometimes used in ophthalmia and in gleet; and it forms the basis of *BATES's Aqua camphora'ta*, which has been recommended in the purulent ophthalmia of children, diluted with 16 parts of water.

CUPRUM, *Chalcos*, *Æs*, *Venus* of the Alchymists: *Copper*, *Cyprium*. (F) *Cuivre*. Its odour is peculiar and sensible, when rubbed; taste disagreeable and metallic; colour red-yellow. S. g. 7.87: ductile, very malleable: less hard than iron: easily oxidized. In its metallic state, it exerts no action on the system. When swallowed, it undergoes no deleterious change. Copper cannot be dis-

solved, whilst tin is in the mixture, and hence the utility of tinning copper vessels. Copper culinary vessels are harmless, under ordinary cleanliness, provided the substances be not suffered to remain in them till cold. The salts of copper are very deleterious.

The **FILINGS OF COPPER**, *Cupri Limatu'ra*, (F) *Limailles de Cuivre*, have been used in hydrophobia. It has been remarked under *Cuprum*, that they are inert.

CUPRUM AMMONIATUM, *C. Ammoniacalē*, *C. Ammoniacum*, *C. Ammoniacosulphuricum*, *Ammoniated Copper*, *Ammoniacal Sulphate of Copper*, *Ammoniuretum Cupri*, *Sal anti-epilepticus* of WEISSMAN, *Sulfas Cupri ammoniacalis*, *S. ammoniacæ cupra'tus*, *Subsulfas Ammonio-cupricus*, *Sulfas Cupri et Ammoniacæ*, *Deuto-Sulfas Cupri et Ammoniacæ*, (F) *Sulfate de cuivre et d'ammoniaque*. A crystalline powder, of a rich violet colour, and hot, styptic taste. By exposure to air, it becomes partly converted into carbonate of copper. It is tonic and astringent; and has been chiefly employed in epilepsy, and other obstinate spasmodic diseases. Dose, gr. $\frac{1}{4}$ gradually increased to gr. iv, in pill.

CUPULAIRE (F). *Cupula'ris*; from *cupula*, 'a small cup.'

The **CUPULAR CAUTERY**, *Cautère cupulaire*, is an iron in the shape of a cupula, formerly used to cauterize the skin of the cranium in certain diseases, as epilepsy, chronic headache, &c.

CURA, CURATIO. Attention to, or treatment or cure of, a disease. R. Keuchen defines *Cura*, 'medicine,' and *Curator*, 'the physician.' *Curatio*, also, sometimes means purification;—as, *Adeps suilla curata*.—Scribonius Largus.

CURA AVENA'CEA. A decoction of oats and succory roots, in which a little nitre and sugar are dissolved. Used as a refrigerant.

CURABLE, *Sanabilis*, *Acestos*, *Iasimos*, (F) *Guérissable*. That which is susceptible of cure. An epithet applied to both patients and diseases.

CURARE. A very energetic, vegetable poison, employed by the South American Indians to poison their arrows. It is obtained from the bark of a species of convolvulus, called *Vejuco de Maracure*.

CURATIVE, *Sanative*. Relating to the cure of a disease. *Curative Indications* are those, which point out the treatment to be employed. *Curative Treatment*, that employed in the cure of the disease, in opposition to *preservative* or *prophylactic treatment*. We say, also, *Curative Process*, *Curative Means*, &c.

CURATION (F). *Cura'tio*, *Mede'la*, *Sanat'io*, *Ac'esis*, *Althex'is*, *Althax'is*, *Therapei'a*, *Iasis*, &c. The aggregate of means employed for the cure of a disease. See *Therapeutics*.

CUR'CUMA LONGA, *Cur'cuma*, *Borri*, *Bor'riborri*, *Bober'ri* (*Hindusthan*), *Crocus*

In'dicus, Terra Merita, Cannac'orus radi'ce croceo, Family, Amomæ. Sex. Syst. Monandria Monogynia. Mayel'la, Kua Kaha, Turmeric, (F) Racine de Safran, Safran des Indes, Souchet des Indes. Turmeric root is brought from the East Indies, but is possessed of very little, if any medicinal efficacy. It is one of the ingredients in the *Curry Powder*.

CURDS. *Curds of Milk, (F) Caillebotte, Lait caillé.* Milk, decomposed by some agent.

CURE, from *cura*, 'care.'—*Cura'tio felix, Sana'tio, Sanitas, (F) Guérison.* A restoration to health. Also, a remedy. A restorative.

CURE-LANGUE (F). *Lingæ scal'pium.* A *Tongue-scraper.* An instrument of ivory, tortoise-shell, &c., shaped like a knife or rasp, for removing the mucous coating, which covers the tongue after sleep, &c.

CURRY or CURRIE POWDER. A condiment, formed of various spices; and eaten with rice, particularly in India. The following is one of the forms for its preparation. *Sem. coriand. 3xviii, pip. nigr. 3ij, cayen. 3j, rad. curcumæ, sem. cumini, aa 3iij, sem. fenugr. 3iv: mix.*

CURVA'TOR COCCY'GIS. Sommering gives this name to a small bundle of fleshy fibres, which descends on the middle of the coccyx, uniting on each side with the ischio-coccygei muscles. It is a part of those muscles.

CUR'VATURE, *Curvatu'ra, Curva'men,* from *curvus*, 'crooked,' *Cyrto'ma, (F) Courbure.* The condition of a line or surface, which approximates more or less to the form of an arc:—as the curvatures of the spine, duodenum, stomach, &c. Accidental curvatures of bones are the effect of rickets, or *Mollities ossium.* The Greeks called the curvature of the spine, *ὕβος, σκολιός, or λοξός,* according as the deviation was backwards, laterally, or forwards.

CURVED LINES, (F) Courbes Lignes. Two crooked lines or projections on the posterior surface of the occipital bone. They are distinguished into *superior* and *inferior.* Some lines on the os innominatum are also so called.

CUSCU'TA EPITH'YMUM. The systematic name of the *Dodder of Thyme.* *Epith'ymum Cuscu'ta.* It is a parasitical plant, possessed of a strong, disagreeable smell; and a pungent taste, very durable in the mouth. It was once used as a cathartic in melancholia.

The **CUSCU'TA EUROPE'A** was conceived to possess similar properties.

CUSPA'RIA FEBRIF'UGA, *Bonplan'dia trifolia'ta, Angustura, Galipæ'a febrif'uga, Order, Rutaceæ.* The South American tree, which furnishes the *Cuspa'ria* or *Angustu'ra Bark, (F) Angusture vraie, Quinquina faux de Virginie.* Its odour is peculiar; taste intensely bitter, and slightly aromatic; pieces thin; externally, gray and wrinkled;

internally, yellowish-fawn: fracture, short and resinous. It yields its virtues to water and proof spirit. It is tonic, stimulant, and aromatic. Dose, gr. v to xx or more in powder.

CUS'PIS. A spear. This name has been given to the glans penis.—Rolfink. It meant, also, a kind of bandage.

CUT, from (F) *couteau*, 'a knife,' or from West Gothic *kota*, 'to cut;' or from *κοπτα*, 'I cut.' *Cæsu'ra, Tomē, Incis'io, Vulnus simplex, Tressis vulnus simplex, Co'pe, (F) Coupure.* A common expression for the division or solution of continuity, made by a sharp instrument.

CUTAM'BULUS, from *cutis*, 'skin,' and *ambulo*, 'I walk.' *Walking in the skin.* An epithet given to certain parasitical animals, which creep under the skin; such as the Guinea-worm; and to certain pains felt between the skin and flesh, as it were.

CUTA'NEOUS, *Cuta'neus,* from *cu'tis*, 'the skin.' Belonging to the skin.

The **CUTANEOUS or CUTANEAL NERVES,** so called, are two in number, and belong to the upper extremity. They are given off from the brachial plexus. The *internal cutaneous, Cubito-cutané*—(Ch.), descends along the inner part of the arm, and divides, above the elbow, into two branches; the outermost of which follows the outer edge of the biceps, and spreads over the anterior and inner part of the forearm; and the innermost accompanies the basilic vein; passing to the corresponding side of the hand and little finger. The *external cutaneous, Radio-cutané*—(Ch.), *Mus'culo-Cutaneus, Perforans CASSERII,* passes outwards, perforates the coraco-brachialis; descends along the anterior and outer part of the arm; passes as far as the middle of the fold of the elbow, under the median cephalic; and descends along the anterior and outer edge of the forearm. At some distance above the wrist, it divides into two branches, an *outer*, which is distributed on the back of the hand, the thumb, and index finger; and an *inner*, which descends on the muscles of the thumb, into the palm of the hand, and divides into fine filaments, which may be traced to the fingers.

Chaussier calls the *cephalic* and *basilic veins*, the *Radial* and *Cubital Cutaneous.*

The **NERVUS CUTANEUS MINOR,** of Wrisberg, also takes its origin from the axillary plexus, but is more particularly connected with the ulnar nerve. It soon separates from the ulnar nerve, running afterwards between it and the inner side of the arm. A little below the axilla it divides into two branches, which are distributed to the arm.

CUTANEOUS EXHALATION AND ABSORPTION, are those which take place from the skin.

CUTANEOUS DISEASES, Eruptions, Epiphy'mata, are the numerous affections of a morbid character, to which the skin is liable.

CUTIS, *Pellis, Co'rium, Derma, Deris, Anthró'pē, Anthró'pen, Skin*, (F) *Peau*. A dense, resisting membrane, of a flexible and extensible nature, which forms the general envelope of the body; and is continuous with the mucous membranes, through the different natural apertures. It is formed of three distinct layers—the *epidermis, rete mucosum*, and *chorium*. Some Anatomists, however, separate it into several others. Its outer surface is covered by a number of small eminences, called *papillæ*, which are generally regarded as eminently nervous and vascular.

The skin is our medium of communication with external bodies. It protects the subjacent parts; is the seat of touch, and, through it, are exhaled the watery parts of the blood, which are not needed in the nutrition of the body.

The state of the skin, as regards heat and dryness, affords us useful information in our pathological investigations. Its colour, too, requires attention: the paleness of disease is as characteristic as the rosy complexion of health. The colour of the skin varies according to the age, sex, &c. As a general principle, it is finer in the female and child than in the male and adult. In old age it becomes light-coloured, thin, and dry. It likewise varies according to the races, &c.

CUTUBUTH. The Arabian physicians have given the name to a species of melancholy, accompanied with so much agitation, that the patients cannot remain tranquil for the space of an hour.

CYANOP'ATHY, *Cyanopathi'a, Cyano'sis, Morbus cæru'leus, Cæru'lo'sis neonato'rum*, from *κυανος*, 'blue,' and *παθος*, 'affection,' (F) *Maladie bleue, Ictère bleu*. A disease, in which the whole of the surface of the body is coloured blue. It is always symptomatic and commonly depends on a direct communication between the cavities of the right and left side of the heart. Such communication does not, however, always occasion the *blue disease*, but it is generally thought that the disease never exists without this state of parts; or without some obstacle to the circulation in the right side of the heart.

CY'ANUS SEG'ETUM, *Bluebottle*, (F) *Bluet des Moissons, Barbeau, Aubifoin, Casse-Lunettes*. The flowers of this European plant, when distilled with water, have been used in ophthalmia.

CYAR, *κυαρ*. 'The eye of a needle,' 'a small hole.' The *Meatus audit'orius internus*.

CYATHIS'CUS, *κυαθισκος*, diminutive of *κυαθος*, 'a bowl.' The concave part of a Sound, made like a small spoon, as in the case of the earpick.

CY'ATHUS, *κυαθος*, 'a bowl.' A measure, both of the liquid and dry kind, equal to about an ounce, or to the 12th part of a

pint. According to Pliny and Galen, about 10 drachms.

CYC'EON, *κυκεων*, from *κυκαω*, 'I mix together.' The ancient name of a medicine of the consistence of pap, composed of wine, water, honey, flour, barley meal, and cheese.—Hippocr.

CYC'LAMEN EUROPÆ'UM, *Arthani'ta Cyc'lamen, Cyclaminus, Cyssan'themon, Cys-sophyl'lon, Panis porci'nus, Cas'amum, Chyli'nē*, 'sow-bread.' *Fam. Primulacæ. Sex. Syst. Pentandria Monogynia*. (F) *Pain de Pourceau*. The fresh root is said to be acrid, bitter, drastic, and anthelmintic. Dose, 3j. For external use, see *Arthanita*.

CYCLE, *Cyclus*, from *κυκλος*, 'a circle.' A period or revolution of a certain number of years. The Methodists gave this name to an aggregate of curative means, continued during a certain number of days. Nine was the usual number.

CYCLIS'MOS. A *troch*. The name was also given to a circular kind of rasp; as well as *Cyclis'cus*. They have the same etymon as cycle.

CYCLOPHO'RIA, from *κυκλος*, 'a circle,' and *φωρα*, 'I bear.' The circulation of the blood or other fluids.

CYCLO'PIA. Same etymon. as *Cyclops*. State of a monster that has both eyes united into one. Called, also, *Monopsia* and *Rhinen-cephalia*.

CYCLOPS, *κυκλωψ*, from *κυκλος*, 'an orb or circle,' and *ωψ*, 'an eye.' *Monoculus, Monops, Monophthal'mus, Monom'matos, Unioc'ulus, Unoc'ulus*. A monster having but one eye, and that placed in the middle of the forehead, like the fabulous Cyclops.

CYC'LOTOME, *Cyclotomus*, from *κυκλος*, 'a circle,' and *τεμνειν*, 'to cut.' An instrument, composed of a ring of gold and a cutting blade, by means of which the ball of the eye can be fixed, whilst the cornea is cut. It was invented by a surgeon of Bordeaux, named Guerin, for extracting the cataract. It is not used.

CYDONIA'TUM, *Cydo'natum, Diacydo-ni'tes*. A composition of the *Cydonia mala* or quinces, with the addition of spices.—Paulus of Ægina.

CYE'MA, *κυημα*, from *κυω*, 'I conceive.' *Conception*. Likewise the product of conception.

CYESIOL'OGY, *Cyesiolog'ia*, from *κυησις*, 'pregnancy,' and *λογος*, 'a description.' The doctrine of Gestation.

CYLICH'NĒ, *Cylich'nis*. A pill-box or earthenware pot, or small cup; from *κυλιξ*, 'a cup.'—Galen, Foësius.

CYL'INDROID, *Cylindroi'des*, from *κυλινδρος*, 'cylinder,' and *ειδος*, 'form.' Having the form of a cylinder. Chaussier calls the *Cornu Ammonis*,—*Protuberance cylindroïde*.

CYLLO'SIS, *κυλλασις*. 'Lameness, mutilation, or vicious conformation.'—Hippocrates, Galen. See *Kyllosis*.

CYMATODES, *Undo'sus*, from *κυμα*, 'a wave,' and *εidos*, 'resemblance.' The vacillating, undulatory character of the pulse in weak individuals.

CYNANCHE, *Angi'na*, from *κυων*, 'a dog,' and *αγγω*, 'I suffocate,' (?) *Sore Throat*, *Paracynan'chē*, *Paristh'mia*, *Synan'chē*, *Prunel'la*, *Squinan'thia*, *Empres'ma Paristhmi'tis*, *Cauma Paristhmi'tis*, *Isthmi'tis*, *Paristhmi'tis*, 'Dog choak.' Inflammation of the mucous membrane of the supradiaphragmatic portion of the alimentary canal, and of the lining membrane of the upper part of the air-passages. (F) *Angine*, *Esquinancie*, *Mal de Gorge*, *Synancie*, *Squinancie*, *Kinancie*. It comprises the following chief varieties.

CYNANCHE MALIGNA, *C. gangræno'sa*, *Angi'na ulcero'sa*, *Febris epidem'ica cum Angi'nâ*, *Empres'ma Paristhmi'tis*, *Tonsilla'ris maligna*, *Tonsilla'rum gangræ'na*, *Cynan'chē epidem'ica*, *C. pur'puro-parotidæa*, *Cynan'chē ulcero'sa*, *Epidem'ica gutturis lues*, *Pesti'lens fau'cium affec'tus*, *Pædan'chonē*, (?) *Ulcus syr'iacum*, *Garrotil'lo*, *Carbun'culus angino'sus*, *C. Ulcusculo'sa*, *Angina epidem'ica*, *A. gangræno'sa*, *A. maligna*, *Putrid*, *Ulcerous Sore Throat*, (F) *Angine gangréneuse*, *A. Maligne*. It is characterized by crimson redness of the mucous membrane of the fauces and tonsils; ulcerations, covered with mucous, and spreading, sloughs, of an ash or whitish hue; the accompanying fever typhus. It is often epidemic, and generally contagious; and is frequently found accompanying scarlet fever, giving rise to the variety, *Scarlatina maligna*.

The general treatment is the same as in typhus; and stimulant antiseptic gargles must be used, consisting, for example, of the decoction of bark and muriatic acid.

CYNANCHE PAROTIDÆA, *Empres'ma Paroti'tis*, *Parotitis*, *Cyman'chē Parotides*, *Angina Maxilla'ris*, *Gissa*, *Angina externa*, *Angi'na parotidæ'a exter'na*, *Parotis epidem'ica*, *P. contagio'sa*, *P. spu'ria*, *Parotis sero'so glu'tinē tu'mens*, *Cynan'chē maxilla'ris*, *Inflam'ma'tio parot'idum*, *Infla'tio parot'idum*, *Catar'rhus Bellinsula'nus*, *Branks* (Scotch), *Mumps*, (F) *Oreillons*. The characteristic symptoms are:—a painful tumour of the parotid gland, not of the suppurative kind; and frequently extending to the maxillary gland. It is very conspicuous externally, and is often accompanied with swelling of the testes in the male, and of the mammæ in the female; the testes being sometimes absorbed afterwards. It is epidemic, and apparently contagious. The treatment is very simple; the adoption merely of the antiphlogistic plan, under which it usually soon disappears. When inflammation of the mammæ or testes supervenes, it must be treated as if idiopathic.

CYNANCHE PHARYNGEA, *Empres'ma Paristhmi'tis Pharyngea*, *Pharyngi'tis*, *Parasy-nan'chē*, *Anginæ inflammatoriæ*, Sp. iv.—

(Boerhaave). (F) *Angine Pharyngée*, *Catarrhe pharyngien*.

This disease can hardly be said to differ, in pathology or treatment, from the Cynanche tonsillaris. The same may be remarked of the Cynanche Œsophagea, Œsophagi'tis.

CYNANCHE TONSILLA'RIIS, *Empres'ma Paristhmi'tis Tonsilla'ris*, *Synan'chē*, *Cynan'chē fau'cium*, *Amygdali'tis*, *Tonsilli'tis*, *Cynan'chē Prunel'la*, *Dyspha'gia inflammato'ria*, *Antiaditis*, *Angina inflammato'ria*, *Common Squinancy*, *Squinsy* or *Quinsy*, (F) *Amygdalite*, *Angine tonsillaire*, *Esquinancie*, *Squinancie*, *Catarrhe guttural*, *Angine gutturale*. The characteristic symptoms of this affection are, swelling and florid redness of the mucous membrane of the fauces, and especially of the tonsils; painful and impeded deglutition, accompanied with inflammatory fever. It is generally ascribed to cold, and is one of the most common affections of cold and temperate climates. It usually goes off by resolution, but frequently ends in suppuration.

Common sore throat is an affection of no consequence. It requires merely rest, and the observance of the antiphlogistic regimen. When more violent, in addition to those;—purgatives, inhalation of the steam of warm water, acid, or emollient gargles; rubefacients externally, or sinapisms or blisters. When suppuration must inevitably occur, the continued use of the inhaler must be advised, and an opening be made into the abscess as soon as it shall have formed. If the patient is likely to be suffocated by the tumefaction, bronchotomy may be necessary.

CYNANCHE TRACHEA'LIS; the Cynanche larynge'a of some. *Suffoca'tio strid'ula*, *Angina pernicio'sa*, *Asthma Infan'tum*, *Cynan'che stridula*, *Catar'rhus suffocati'vus Barba-den'sis*, *Angina polypo'sa sive membrana'cea sive pulpo'sa*, *Empres'ma Bronchi'tis*, *Angina inflammato'ria*, *A. suffocato'ria*, *A. exsudato'ria*, *Orthopnœ'a cynan'chica*, *Pædan'chonē*, (?) *A. Trachea'lis*, *Morbus Strangulato'rius*, *Trachi'tis*, *Trachei'tis*, *Trache-li'tis*, *Expectora'tio Solida*, *Cauma Bronchi'tis*, *Angina canina*, *Croup*, *Hives*. A disease characterized by sonorous and suffocative breathing; harsh voice; cough, ringing or like the barking of a dog: fever, highly inflammatory. It is apt to be speedily attended with the formation of a false membrane, which lines the trachea beneath the glottis and occasions violent dyspnœa and suffocation, but is sometimes expectorated. The dyspnœa, as in all other affections of the air-passages, has evident exacerbations. It differs in its character in different situations; being infinitely more inflammatory in some places than in others, and hence the success obtained by different modes of treatment. It chiefly affects children, and is apt to recur, but the subsequent attacks are usually less and less severe.

As a general principle, it requires the

most active treatment; bleeding from the arm or neck, so as to induce paleness; leeches applied to the neck, &c. according to the age, —the warm bath, blisters to the neck or chest, and purgatives. Formidable as the disease may be, if this plan be followed *early*, it will generally be successful. Many specifics have been recommended for it, but the search has been idle and fruitless.

CYNANCHICA. Medicines used in cases of quinsy were formerly so called.

CYNANCHUM. Same etymon. A genus of plants, of which the following are used in medicine.

CYNANCHUM VOMITORIUM, *Ipecacuan'ha* of the Isle of France. As its name imports, this plant resembles the ipecacuanha in properties. It is emetic, in the dose of from 12 to 24 grains in powder.

CYNANCHUM MONSPELIACUM, *Scam'mony* of Montpellier. The plant furnishes a blackish kind of gum resin, which is purgative, and but little used.

CYNANTHROPIA, from *κυων*, 'dog,' and *ανθρωπος*, 'a man.' A variety of melancholia, in which the patient believes himself changed into a dog; and imitates the voice and habits of that animal.

CYN'ARA or **CIN'ARA SCOL'YMUS.** The systematic name of the *Artichoke*, *Alcoc'alum*, *Articoc'alus*, *Artiscoc'cus laevis*, *Costus nigra*, *Car'duus sati'vus non spino'sus*, *Cinara hortens'is*, *Scolymus sati'vus*, *Car'duus domes'ticus capit'e major'e*, *Car'duus al'tilis*, (F) *Artichaut*. Family, *Carduaceæ*. Sex. Syst. Syngenesia Polygamia æqualis. Indigenous in the southern parts of Europe; much used as an agreeable article of diet. The juice of the leaves, mixed with white wine, has been given in dropsies.

CYN'ICUS, from *κυων*, 'a dog.' *Cynic*. Relating to, or resembling, a dog. *Cynic spasm* is a convulsive contraction of the muscles of one side of the face—dragging the eye, cheek, mouth, nose, &c. to one side.

CYNODECTOS, from *κυων*, 'a dog,' and *δενειν*, *δενειναι*, 'I bite.' One, who has been bitten by a dog.—Dioscorides.

CYNOGLOS'SUM, from *κυων*, 'a dog,' and *γλωσσα*, 'a tongue.' *Cynoglos'sum officinal'e*, *Lingua cani'na*, *Hound's tongue*, *Caballation*, (F) *Langue de Chien*. Family, *Boraginæ*. Sex. Syst. Pentandria Monogynia. It is aromatic and mucilaginous, and has been supposed to be possessed of narcotic properties.

CYNOMORIUM COCCIN'EUM, from *κυων*, 'a dog,' and *μαγειον*, 'the penis.' (F) *Champignon de Malte*. Improperly called *Fungus Meliten'sis* or the *Fungus of Malta*, as it is not a fungus. The powder has been given as an astringent in hemorrhage, dysentery, &c.

CYON, *κυων*. This word sometimes signifies the frænum of the prepuce; at others, the penis.

CYPERUS LONGUS, from *κυπερος*, 'a round vessel,' which its roots have been said to resemble. *Galangale*, (F) *Souchet odorant*. It possesses aromatic and bitter properties, but is not used.

CYPERUS ROTUN'DUS; the *Round Cyperus*, (F) *Souchet rond*. It is a more gratefully aromatic bitter than the *C. longus*.

CYPHO'MA, *Cyphos*, *Cypho'sis*, *Cyrto'ma*, *Cyrto'sis*, *Opisthocypho'sis*, from *κυφος*, 'gibbous.' Gibbosity of the spine. See *Vertebral Column*, &c. *Cyrto'sis* forms a genus in the order *Dysthet'ica* and class *Hæmat'ica* of Good, and is defined: 'head bulky, especially anteriorly; stature short and incurvated; flesh flabby, tabid, and wrinkled.' It includes *Cretinism* and *Rickets*.

CYP'RINUM O'LEUM, *Oil of Cypress*; prepared of olive oil, cypress flowers, calamus, myrrh, cardamom, inula, bitumen of Judæa, &c. It was formerly employed in certain diseases of the uterus, pleurisies, &c. and was regarded to be both stimulant and emollient.

CYSSO'TIS, from *κυσος*, 'the anus.' Inflammation of the lower part of the rectum: tenesmus.

CRYSTAL'GIA, from *κυστις*, 'the bladder,' and *αλγος*, 'pain.' Pain in the bladder.

CYSTAUCHENOTO'MIA, *Cystotracheloto'mia*, from *κυστις*, 'a bladder,' *αυχνη*, 'the neck,' and *τομη*, 'incision.' An incision into the neck of the bladder.

CYSTENCEPH'ALUS, from *κυστις*, 'bladder,' and *κεφαλη*, 'head.' A monster having a head with a vesicular brain.—G. St. Hilaire.

CYSTEOL'ITHOS, from *κυστις*, 'the bladder,' and *λιθος*, 'a stone.' Stone in the bladder. Also, a medicine, employed to dissolve or break stone.

CYSTHEPAT'ICUS, from *κυστις*, 'the bladder,' and *ηπαρ*, 'the liver.' Belonging to the gall-bladder and liver. This name was given, formerly, to imaginary excretory ducts for the bile, which were supposed to pass directly from the liver to the gall-bladder.

CYSTHEPATOLITHI'ASIS, from *κυστις*, 'the bladder,' *ηπαρ*, 'the liver,' and *λιθιασις*, 'pain, caused by a calculus.' It has been proposed to call thus, the symptoms caused by the presence of biliary calculi.

CYSTIC, *Cys'ticus*, from *κυστις*, 'a bladder.' Belonging to the gall-bladder.

CYSTIC BILE. Bile contained in the gall-bladder.

ARTERIA CYS'TICA; the *Cystic Artery* is given off from the right branch of the hepatic, and divides into two branches, which proceed to the gall-bladder. It is accompanied by two *cystic veins*, which open into the *vena porta abdominalis*.

CYSTIC CALCULI. Calculi formed in the gall-bladder.

CYSTIC DUCT, *Ductus cys'ticus*, *Meat'us cys'ticus*, the duct proceeding from the gall-bladder, which, by its union with the

hepatic, forms the *ductus communis choledochus*.

CYSTIC SARCO'MA, of AB'ERNETHY, *Emphy'ma Sarcoma cellulo'sum*. Tumour, cellulose or cystose; cells oval, currant-sized or grape-sized, containing serous fluid: sometimes caseous. Found in the thyroid gland (forming bronchocele), testis, ovarium, &c.

CYS'TICA, *Cystic Remedies*. Such medicines as were formerly believed proper for combating diseases of the bladder.

CYSTI'CERCUS, from *κυστις*, 'a bladder,' and *κερκος*, 'a tail.' A genus of Entozoa of the Family of the Hydatids, distinguished by the caudal vesicle in which the cylindrical or slightly depressed body of the animal terminates. The *Cysticercus cellulosus* has been often found in the cellular membrane.

CYSTIRRHA'GIA, from *κυστις*, 'the bladder,' and *εργυνω*, 'I break forth.' *Hæmorrhage from the bladder*. (F) *Hémorrhagie de la Vessie*. By some used synonymously with *Cystirrhœa*.

CYSTIRRHŒ'A, from *κυστις*, 'the bladder,' and *ρεω*, 'I flow.' *Paru'ria Stillati'tia Mucosa*, *Blennu'ria*, *Blennorrhœa urinæ*, *B. vesicæ*, *Cysto-blennorrhœa*, *Cystorrhœa*, *Urina mucosa*, *Cystocatar'rhus*, *Dysu'ria Mucosa*, *Pyu'ria Mucosa*, *P. vis'cida*, *P. serosa*, *Morbus cystophlegmaticus*, *Catar'rhus vesicæ*, (F) *Flux muqueux de la vessie*. *Catarrhe vésical*. A copious discharge of mucus from the bladder, passing out with the urine, and generally attended with dysuria. It is commonly dependent upon an inflammatory or subinflammatory condition of the lining membrane. The treatment must be regulated by the cause. If it be not produced by an extraneous body: the antiphlogistic plan,—the exhibition of warm diluents, and keeping the surface in a perspirable state, by wearing flannels. Some of the turpentine may, at times, be given with advantage; and astringent or other appropriate injections be thrown into the bladder.

CYSTI'TIS, from *κυστις*, 'the bladder.' *Inflamma'tio Vesicæ*, *Cystiphlo'gia*, *Cystophlo'gia*, *Inflammation of the bladder*. (F) *Inflammation de la vessie*; characterized by pain and swelling in the hypogastric region; discharge of urine, painful or obstructed, and tenesmus. It may affect one or all of the membranes; but commonly it is confined to the mucous coat. In the chronic condition, it appears in the form of cystirrhœa. It must be treated upon the same energetic principles, that are required in other cases of internal inflammation. V. S. general and local, the warm bath, and warm fomentations, warm, soothing enemata, diluents, &c. Cantharides must be avoided, even in the way of blisters, unless with precautions, as the disease is often occasioned by them.

CYS'TITOME, *Cystit'omus*, *Kibis'titome*, from *κυστις*, 'the bladder,' and *τεμνω*, 'to

cut.' An instrument, invented by Lafaye, for dividing the anterior part of the capsule of the crystalline in the operation of extracting the cataract. It was formed like the *Pharyngotome*.

CYSTO-BU'BONOCE'LE, from *κυστις*, 'the bladder,' *βουβων*, 'the groin,' and *κηλη*, 'a tumour.' Hernia of the bladder through the abdominal ring.

CYSTOCE'LE, *Cystocel'ia*, from *κυστις*, 'the bladder,' and *κηλη*, 'a tumour.' *Hernia of the Bladder*. (F) *Hernie de la Vessie*. It is not common. It occurs, most frequently, at the abdominal ring, less so at the crural arch, perinæum, vagina, and foramen thyroideum. It may exist alone, or be accompanied by a sac, containing some abdominal viscus. The tumour is soft, fluctuating; disappears on pressure, and increases in size, when the urine is retained. It must be reduced and kept in position by a truss. The *Vaginal cystocele* is kept in place by a pessary.

BIL'IARY CYS'TOCELE, is an imaginary hernia of the gall-bladder.

CYSTODY'NIA, from *κυστις*, 'the bladder,' and *οδυνη*, 'pain.' Pain of the bladder; particularly rheumatic pain.

CYSTO-LITHIC, *Cystolith'icus*, from *κυστις*, 'the bladder,' and *λιθος*, 'a stone.' Relating to stone in the bladder.

CYSTO-MEROCE'LE, from *κυστις*, 'the bladder,' *μερος*, 'the thigh,' and *κηλη*, 'hernia.' Femoral hernia, formed by the bladder's protruding beneath the crural arch.

CYSTON'CUS, from *κυστις*, 'the bladder,' and *ογκος*, 'a tumour.' Swelling of the bladder.

CYSTO-PHLEGMATIC, *Cystophlegmat'icus*, from *κυστις*, 'the bladder,' and *φλεγμα*, 'mucus, phlegm.' Belonging to the vesical mucus. *Morbus cystophlegmaticus*, *Cystirrhœa*.

CYSTOPLEG'IC, *Cystopleg'icus*. Belonging to paralysis of the bladder; from *κυστις*, 'the bladder,' and *πλησσω*, 'I strike.'

CYSTOPLEX'IA, same etymon. Paralysis of the bladder.

CYSTOPTO'SIS, from *κυστις*, 'the bladder,' and *πιπτειν*, 'to fall.' Relaxation of the inner membrane of the bladder, which projects into the canal of the urethra.

CYSTOPY'IC, *Cystopy'icus*, from *κυστις*, 'the bladder,' and *πυον*, 'pus.' Relating to suppuration of the bladder.

CYSTOSOMATOM'IA, *Cystosomatotom'ia*, from *κυστις*, 'the bladder,' *σωμα*, 'body,' and *τομη*, 'incision.' An incision into the body of the bladder.

CYSTOSPAS'TIC, *Cystospas'ticus*, from *κυστις*, 'the bladder,' and *σπασω*, 'I contract.' Relating to spasm of the bladder, and particularly of its sphincter.

CYSTOTHROM'BOID, *Cystothromboi'des*, from *κυστις*, 'the bladder,' and *θρομβος*,

'a clot.' Relating to the presence of clots in the bladder.

CYSTOTOME, *Cystotomus*, from *κυστις*, 'the bladder,' and *τεμνειν*, 'to cut.' An instrument, intended for cutting the bladder. Instruments of this kind have been more frequently, although very improperly, called *Lithotomes*.

CYSTOTOMIA, same etymon. Incision of the bladder, *Sectio vesicæ*. *Cystotomia* means cutting into the bladder for any purpose. (F) *Incision de la vessie*. Commonly, it is applied to the puncturing of the bladder, for the purpose of removing the urine; whilst *Lithotomy* has been employed for the incisions, made with the view of extracting calculi from the bladder.

CYTINUS, *Cytinus Hypocistis*, *Hypocistus*. A small, parasitical plant, which grows in the South of France and in Greece,

on the roots of the woody cistus. The juice of its fruit is acid and very astringent. It is extracted by expression, and converted into an extract, which was called *Succus Hypocistis*, and was formerly much used in hemorrhages, diarrhœa, &c.

CYTISINA, *Cytisine*. An immediate vegetable principle, discovered by Chevalier and Lassaigne, in the seeds of the *Cytisus Laburnum* or *Bean-Trefoil tree*. Family, Leguminosæ. Sex. Syst. Diadelphia Decandria. Cytisine has analogous properties to emetine. In the dose of one or two grains, it produces vomiting and purging; and, in a stronger dose, acts as an acrid poison. The seeds of the *Cytisus Laburnum*, (F) *Aubours*, have been long known to produce vomiting and purging.

CYTITIS, *Scytlitis*, *Dermatitis*, from *κυτος*, 'the skin,' and *itis*, 'denoting inflammation.' Inflammation of the skin.

D

THE figure of the Greek Δ, according to Galen, was the sign for the quartan fever.

DACNE'RON, *δακνηρον*, from *δακνεν*, 'to bite.' An ancient name for a 'collyrium,' composed of oxide of copper, pepper, cadmia, myrrh, saffron, gum arabic, and opium.

DACRY, *Dacryon*, *δακρυ*, *δακρυον*, 'a tear.' Hence:

DACRYADENAL'GIA, *Dacryoadenal'gia*, from *δακρυα*, 'I weep,' *αδην*, 'a gland,' and *αλγος*, 'pain.' Disease or pain in the lachrymal gland.

DACRYADENITIS, *Dacryoadenitis*; from *δακρυα*, 'I weep,' *αδην*, 'a gland,' and *itis*. Inflammation of the lachrymal gland.

DACRYGELO'SIS, from *δακρυα*, 'I weep,' and *γελαα*, 'I laugh.' A kind of insanity, in which the patient weeps and laughs at the same time.

DACRYOBLENNORRHŒA, from *δακρυα*, 'I weep,' *βλεννα*, 'mucus,' and *ρεω*, 'I flow.' Discharge of tears mixed with mucus.

DACRYOCYSTAL'GIA, from *δακρυα*, 'I weep,' *κυστις*, 'a sac,' and *αλγος*, 'pain.' Disease or pain in the lachrymal sac.

DACRYOCYSTITIS, from *δακρυον*, 'a tear,' and *κυστις*, 'bladder.' Inflammation of the lachrymal sac.

DACRYO'DES, *δακρυαδης*, *lachrymo'sus*, from *δακρυα*, 'I weep.' A sanious ulcer, a weeping sore.

DACRYO'MA. Same etymon. The effu-

sion of tears, occasioned by an occlusion of the puncta lachrymalia.—Vogel.

DACRYOPCE'US, from *δακρυα*, 'I weep,' and *ποιω*, 'I make.' A substance, which excites the secretion of tears, as the *onion*, *horseradish*, *garlic*, &c.

DACRYOPS, from *δακρυα*, 'I weep,' and *ωψ*, 'the eye.' A tumefaction of the lachrymal passages.

DACTYLE'THRA, DACTYLI'THRA, *δακτυληθρα*, *δακτυλιθρα*, from *δακτυλος*, 'a finger.' A name given by the ancients, to different topical applications, having the form of a finger; and proper for being introduced into the throat to excite vomiting.

DACTYL'ION, *Dactyl'ium*, from *δακτυλος*, 'a finger.' The union of the fingers with each other. This affection is generally congenital. But it may be owing to burns, ulcerations, inflammation of the fingers, &c.

DACTY'LIOS, from *δακτυλος*, 'a finger,' a troch or lozenge, when shaped like a finger.

DACTYLOS; *δακτυλος*, 'a finger.' The smallest measure of the Greeks, the sixth part of a foot.

DACTYLOTHE'KE, *δακτυλοθηκη*, from *δακτυλος*, 'a finger,' and *θηκη*, 'a case or sheath.' An instrument for keeping the fingers extended, when wounded.—Ambrose Paré.

DÆDA'LEA SUAVEOLENS, *Boletus Sali'cis*. (F) *Bolet odorant*. A Champignon which grows on the trunks of old willows. It

has a smell of anise, which is penetrating and agreeable: and has been recommended in phthisis pulmonalis in the dose of a scruple four times a day.

DALBY'S CARMINATIVE. A celebrated empirical remedy, much used as a carminative for children. The following is a form for its preparation. (*Magnesiae alb.* ℥ij, *ol. menthæ piper.* g^{tt}. j, *ol. nuc. moschat.* g^{tt}. iij, *ol. anisi,* g^{tt}. iij, *tinct. castor.* g^{tt}. xxx, *tinct. asafætid.* g^{tt}. xv, *tinct. opii,* g^{tt}. v, *sp. pulegii,* g^{tt}. xv, *tinct. cardam. c.* g^{tt}. xxx, *aquæ menthæ pip.* ℥ij. M.) A Committee of the Philadelphia College of Pharmacy recommend the following form.—(*Aquæ O.* x, *Sacchar. alb.* ℥ xxxij, *Carbon. Potass.* ℥ ss, *Carb. Mag.* ℥ xij, *Tinct. Opii f.* ℥ vj, *Ol. menth. piper.* Ol. Carui, Ol. Anethi Fœnicul. aa f. ℥ ij. M.)

DANCING, Salta'tio, (F) Danse. A kind of exercise and amusement, composed of a succession of motions, gestures, and attitudes, executed by measured steps to the sound of the voice or musical instrument. It is a healthy exercise.

DANEVERT, MINERAL WATERS OF. A spring, a league and a half from Upsal, in Sweden. The water contains carbonic acid, holding in solution carbonate of iron, sulphate of iron, sulphate of soda and lime, muriate of soda, and silica. It is frequently employed in medicine.

DANICH; an Arabic word, signifying the weight of 8 grains.

DAPHNĒ ALPINA, Chamæle'a, Chamælæ'a, Widow-wail. Family, Thymelææ. Sex. Syst. Octandria Monogynia. A sort of dwarf-olive. An acrid, volatile, alkaline principle has been separated from the bark of this plant by M. Vauquelin, to which he has given the name *Daphnine*. The plants of this genus owe their vesicating property to this principle.

DAPHNE GNID'IUM, Thymelæ'a, Cneo'ron, Spurge Flax, Flaxleaved Daphnē. The plant which furnishes the *Garou bark*. (F) *Daphné Garou, Sain-bois.* It is chiefly used, when used at all, for exciting irritation on the skin. The *Grana Gnid'ia*, (see *Cnid'ia grana*) are acrid poisons like all the plants of this genus, when taken in quantity. According to others, the garou bark and grana gnidia are obtained from the *daphne laureola*.

DAPHNE LAUREOLA. The systematic name of the *Spurge Laurel, Laureola*. The bark of this plant has similar properties to the last.

DAPHNE MEZE'REUM, the systematic name of the *Meze'reon, Meze'reum, Spurge olive.* (F) *Daphné Boisgentil.* The bark of the meze'reon possesses analogous properties to the other varieties of Daphne. It is considered stimulant and diaphoretic; and, in large doses, is emetic. It has been employed in syphilitic cases, but its efficacy is doubtful. Soaked in vinegar, like the other varieties of

Daphne, it has been employed to irritate the skin, and especially for keeping open issues.

DAPHNELÆON, O'leum Lauri'num, from *δαφνη*, 'the laurel or bay tree,' and *ελαιον*, 'oil.' *Oil of Bay.*

DARSIS, from *δερσω*, 'I excoriate,' 'I skin.' The Greek physicians seem to have used this word to designate the anatomical preparation, which consists in removing the skin for exposing the organs covered by it.

DARTOS. Same derivation; *Membræna carno'sa, Tu'nica muscula'ris, T. rubicu'nda scroti, Marsu'pium musculo'sum*; from *δαρτος*, 'skinned.' A name, given to the second covering of the testicle, which the ancient Anatomists conceived to be muscular, but which is merely cellular. Its external surface is towards the scrotum: the internal, towards the tunica vaginalis. Frederick Lobstein and Breschet consider, that it proceeds from an expansion of the cellular cord, known by the name, *Gubernaculum Testis*.

DARTREUX (F). Participating in the characters of *Dartre* or *Herpes*. Also, one affected with dartre. *Dartre* has been used, at one time or other, for almost every disease of the skin.—See *Herpes*.

DASYM'MA, from *δαρυς*, 'rough,' 'hairy.' A disease of the eye—the same as *Trachoma*, but less in degree.—Aëtius, Gorraeus.

DAS'YTES. Same etymon. Roughness, particularly of the tongue and voice.

DATE, Pal'mula, Dactylus, Bal'anos Phœ'nicos, the fruit of the *Phœnix Dactylifera*. (F) *Datte.* The unripe date is astringent. When ripe, it resembles the fig. The juice of the tree is refrigerant.

DATU'RA STRAMONIUM, Stramo'ni-um, Barycoc'calon, Sola'num maniacum, Strammo'ni-um spino'sum, Solanum fœl'idum, Strammo'ni-um majus album, Thorn Apple, James-town Weed, Jimston Weed. (F) *Stramoine, Pomme épineuse.* The herbaceous part of the plant and the seeds are the parts used in medicine. They are narcotic and poisonous;—are given internally as narcotics and antispasmodics, and applied externally as sedatives, in the form of fomentation. The seeds are smoked like tobacco, in asthma. The dose of the powder is gr. j to gr. viii.

DA'TURINE, Daturi'na, Datu'ria, Datu'rium. The active principle of the *Datura Stramonium*, separated by Brandes, a German chemist. It has not been rendered available in medicine.

DAUCI'TES VINUM. Wine of which the *Daucus* or *Wild Carrot* was an ingredient. The seeds were steeped in must. It was formerly used in coughs, convulsions, hypochondriasis, diseases of the uterus, &c.

DAUCUS CARO'TA. The systematic name of the *Carrot Plant*—*Daucus, Daucus sylvestris, Pastina'ca sylvestris tenuifo'lia officinarum, Ado'rion.* Order, *Umbelliferae*, (F) *Carotte.* The root and seed have been used in medicine. The root is sweet and mucila-

ginous; and the seeds have an aromatic odour, and moderately warm, pungent taste. The *root* has been used, as an emollient, to fetid and ill-conditioned sores. The *seeds* have been regarded as stomachic, carminative, and diuretic. But they have little efficacy. The seeds of the *wild* plant are, by some, preferred to those of the *garden*.

DAX, MINERAL WATERS OF. Dax is a city, two leagues from Bordeaux, where there are four springs, that are almost purely thermal: containing only a very small quantity of muriate and sulphate of lime. Temperature 158° Fahrenheit.

DAZZLING, *Caligatio*, (F) *Eblouissement*. A momentary disturbance of sight, occasioned either by the sudden impression of too powerful a light, or by some internal cause; as plethora.

DEAFNESS, from Anglo-Saxon *deaf*. *Sur'ditas*, *Cophosis*, *Dysecoia*, *Dysecoia organica*, *Barycoia*, *Hardness of hearing*, *Hypocophosis*, *Subsur'ditas*, *Surdité*. *Durété de l'ouïe*. Considerable diminution or total loss of hearing. It may be the effect of acute or chronic inflammation of the internal ear, paralysis of the auditory nerve or its pulpy extremity, or of some mechanical obstruction to the sonorous rays. In most cases, however, the cause of the deafness is not appreciable, and the treatment has to be purely empirical. Syringing the ear, dropping in slightly stimulating oils; fumigations, &c., are the most likely means to afford relief.

DEATH, *Apobiosis*, *Le'thum*, *Le'tum*, *Mors*, *Death*, *θάνατος*, (F) *Mort*. Definitive cessation of all the functions, the aggregate of which constitute life. *Real Death* is distinguished from asphyxia or *apparent death*:—the latter being merely a suspension of those same functions. But it is often difficult to judge of such suspension, and the only certain sign of real death is the commencement of putrefaction. At times, therefore, great caution is requisite to avoid mistakes. Death is commonly preceded by some distressing symptoms, which depend on lesion of respiration, circulation, or of the cerebral function, and which constitute the *agony*. That which occurs suddenly, and without any, or with few, precursory signs, is called *sudden death*. It is ordinarily caused by disease of the heart; apoplexy; the rupture of an aneurism, or by some other organic affection. Death is *natural*, when it occurs as the result of disease: *violent*, when produced by some forcible agency.

All sudden deaths must begin by the interruption of circulation, of the action of the brain, or of respiration. One of these functions stops first; and the others terminate successively;—the series of phenomena ceasing nearly as follows.

DEATH BEGINNING IN THE HEART.

1. Impulse received by the brain.
2. Action of the brain.

3. Action of the voluntary muscles.
4. Action of the mixed muscles.
5. The mechanical phenomena of respiration.
6. The chymical phenomena of respiration.
7. The phenomena of nutrition.

DEATH BEGINNING IN THE BRAIN.

1. Interruption of the brain's action.
2. That of voluntary and mixed muscles.
3. Mechanical phenomena of respiration.
4. Chymical phenomena of respiration.
5. Cessation of heart's action.
6. Cessation of general circulation.
7. Functions of nutrition.

DEATH BEGINNING IN THE LUNGS.

I. When the Mechanical Phenomena are interrupted, as in Suffocation.

1. Mechanical phenomena.
2. Chymical phenomena.
3. Action of the brain.
4. Extinction of animal life.
5. Cessation of the general circulation.
6. Of the functions of nutrition.

II. When the Chymical Phenomena are interrupted.

1. Interruption of chymical phenomena.
2. Action of the heart.
3. Action of the brain.
4. Sensation, locomotion, voice, and mechanical phenomena of respiration.
5. Functions of nutrition, generally.

DEBILITANTS, *Debilitantia*, from *debilitare*, 'to weaken.' Remedies exhibited for the purpose of reducing excitement. Antiphlogistics are, hence, debilitants.

DEBILITY, *Debil'itas*, *Asthenia*. Weakness, (F) *Faiblesse*. A condition, which may be induced by a number of causes. It must not be confounded with *fatigue*, which is temporary, whilst debility is generally more permanent.

Debility may be *real*, or it may be *apparent*; and, in the management of disease, it is important to attend to this. At the commencement of fever, for example, there is often a degree of apparent debility, which prevents the use of appropriate means, and is the cause of much evil. Excitement is more dangerous than debility.

DÉBORDEMENT (F). from *déborder*, 'to overflow.' A popular term for one or more sudden and copious evacuations from the bowels. It is chiefly applied to bilious evacuations of this kind—*Débordement de Bile*.

DÉBRIDEMENT (F). *Fræno'rum solutio*, from (F) *débrider*, 'to unbridle.' The removal of filaments, &c. in a wound or abscess, which prevent the discharge of pus. In a more general acceptation, it means the cutting of a soft, membranous or aponeurotic part, which interferes with the exercise of any organ whatever: thus, in paraphymosis, *débridement* of the prepuce is practised to put an end to the inflammation of the glans: in strangulated hernia, *débridement* of the

abdominal ring is had recourse to, to remove the stricture of the intestine, &c.

DEC'AGRAMME, from *δεκα*, 'ten,' and *γραμμα*, 'a gramme.' The weight of ten grammes.

DECAM'YRON, from *δεκα*, 'ten,' and *μυρον*, 'ointment.' An ancient cataplasm, composed of *malabathrum*, *mastich*, *euphorbium*, *spikenard*, *styrax calamita*, *carbonate of lime*, *common pepper*, *unguentum nardi*, *opobalsamum*, and *wax*.

DECANTA'TION, *Decanta'tio*, *Defu'sio*, *Elutria'tio*, *Metangismos*, *Catachysis*. A pharmaceutical operation, which consists in pouring off, gently, by inclining the vessel, any fluid, which has left a deposit.

DÉCHAUSSEMENT (F). The state, in which the gums have fallen away from the teeth, as in those affected by mercury, in old persons, &c. Also, the operation of lancing the gums.

DECID'UA MEMBRA'NA, *Decid'ua*. The outermost membrane of the fœtus in utero. Chaussier calls it *Epicho'riion*: by others, it has been called *membra'na cadu'ca Hunt'e'ri*, *m. flocculen'ta*, *m. cellulô'sa*, *m. sinuo'sa*, *m. commu'nis*, *m. præexistans*, *Decidua externa*, *Tu'nica exterior ovi*, *T. cadu'ca*, *T. crassa*, *membra'na cribro'sa*, *membra'na ovi mater'na*, *m. mucô'sa*, *Decidua spongio'sa*, *Epione*, *Perione*, *membra'na u'teri inter'na evolu'ta*, *nidamen'tum*, *anhis'tous membrane*, *Cho'riox spongio'sum*, *C. tomento'sum*, *fungo'sum*, *reticula'tum*, &c. *Tu'nica filamentô'sa*, *Shaggy Chorion*, *Spongy Chorion*, &c. Great diversity has prevailed, regarding this membrane and its reflected portion. It has been conceived by some that it exists before the germ arrives in the uterus,—as it has been met with in tubal and ovarial pregnancies; and that it is occasioned by a new action, assumed by the uterine vessels at the moment of conception. Chaussier, Lobstein, Gardien, Velpeau and others consider the decidua to be a sac, completely lining the uterus, and without apertures, and that when the ovum descends through the tube, it pushes the decidua before it, and becomes enveloped in it, except in the part destined to form the placenta. That portion of the membrane, which covers the ovum, forms the *Membra'na decid'ua reflex'a*, according to them;—the part lining the uterus being the *Decidua U'teri*. Towards the end of the fourth month, the decidua reflexa disappears. The very existence of a *Tunica decidua reflexa* has, however, been denied. This membrane has received various names. Dr. Granville, regarding it as the external membrane of the ovum, has termed it *Cortex ovi*, (q. v.) It has also been termed *Involucrum membrana'ceum*, *membra'na retifor'mis cho'rii*, *membra'na filamentô'sa*, *m. adventitia* and *m. crassa*, *ovuline* and *Decidua protrusa*.

The decidua becomes thinner and thinner, until the end of gestation. Its use seems to

be, to fix the ovum to the uterus, and to fulfil some important purposes in the nutrition of the fœtus. To the membrane which is situate between the placenta and the uterus, according to Bojanus, and which he considers to be produced at a later period than the decidua vera, he gives the name *membra'na decid'ua serotina*.

(F) *Membrane caduque et M. caduque réfléchie*.

DEC'IGRAMME, *Decigram'ma*, from *dec'imus*, 'the tenth part,' and *γραμμα*, 'gramme.' The tenth part of the gramme in weight: equal to a little less than two grains, French.

DECIMANA FEBRIS, from *decem*, 'ten.' An intermittent, whose paroxysms return every 10th day or every 9 days. It is supposititious.

DECLAMA'TION, *Declama'tio*. The art of depicting the sentiments, by inflections of the voice, accompanied with gestures, which render the meaning of the speaker more evident, and infuse into the minds of the auditors the emotions with which he is impressed.

Declamation may become the cause of disease: the modification, produced in the pulmonary circulation,—accompanied with the great excitement, sometimes experienced,—is the cause of many morbid affections: particularly of pneumonia, hæmoptysis, and apoplexy. In moderation, it gives a healthy excitement to the frame.

DECLINE, *Declina'tio*, *Inclina'tio*, *Decrementum*, *Remis'sio*, *Parac'mê*, (F) *Déclin*. That period of a disorder or paroxysm, at which the symptoms begin to abate in violence. We speak, also, of the decline of life, (F) *Déclin de l'age*, *L'age de déclin*, when the physical and moral faculties lose a little of their activity and energy.

DÉCLIVE (F), *Decliv'is*, from *de*, 'from,' and *clivus*, 'declivity.' Inclining downwards. This epithet is applied to the most depending part of a tumour or abscess.

DECOCTION, *Decoc'tio*, from *decoquere*, 'to boil:' *Epse'sis*, *Aphepsis*. The operation of boiling certain ingredients in a fluid, for the purpose of extracting the parts soluble at that temperature.

Decoction, likewise, means the product of this operation, to which the terms *Decoctum*, *Zema*, *Aphepse'ma*, *Ap'ozem*, and *Epse'ma*, have been applied according to ancient custom, in order to avoid any confusion between the operation and its product;—as *præparatio* is used for the act of preparing; *præparatum*, for the thing prepared.

DECOCTUM AL'OEES COMPOS'ITUM, *Balsam of Life*, *Compound Decoction of Aloes*. (*Ext. glyc.* 3 iv, *potass. subcarb.* ʒ ij, *aloes spicat. ext.*: *myrrhæ contrit.*: *croci stigmat.* aa 3 j, *aquæ* ℥ j. Boil to 3 xij: strain, and add *inct. card. c.* 3 iv. *Pharm. L.*) The gum and extractive are dissolved in this prepara-

tion. The alkali is added to take up a little of the resin. The tincture prevents it from spoiling. It is gently cathartic. Dose, 3 ss to 3 ij.

DECOCTUM ALTHÆÆ, *D. Althææ officinalis*; *Decoction of Marsh-mallows*, (F) *Décotion de Guimauve*. (*Rad. althææ sicc.* 3 iv, *ubar. passar.* 3 ij, *aquæ* ℥ vij. Boil to ℥ v. Pour off the clear liquor. *Pharm. E.*) It is used as a demulcent.

DECOCTUM AMA'RUM; *Bitter Decoction*. (*Rad. gent.* 3 j, *aquæ* ℥ ijss; boil for a quarter of an hour: add *species amaræ* 3 ij. Infuse for two hours and filter, without expressing. *Pharm. P.*) It is tonic. Dose, 3 ss to 3 ij.

DECOCTUM ANTHEMIDIS NOBILIS, *D. Chamæmeli*; *Decoction of Chamomile*. (*Flor. anthemid. nobil.* 3 j, *sem. carui* 3 iv, *aquæ* ℥ v. Boil for 15 minutes, and strain. *Pharm. E.*) It contains bitter extractive and essential oil, dissolved in water. It is used, occasionally, as a vehicle for tonic powders, pills, &c., and in fomentations and glysters; but, for the last purpose, warm water is equally efficacious. The Dublin College has a compound decoction.

DECOCTUM ARA'LIÆ NUDICAULIS; *Decoction of False Sarsaparilla*. (*Araliæ nudicaul.* 3 vj, *aquæ* ℥ viij. Digest for four hours, and then boil to 4 pints: press out, and strain the decoction. *Pharm. U. S.*) It is used as a stomachic, but it is an unnecessary and laborious preparation.

DECOCTUM CAS'SIÆ; *Decoction of Cassia*. (*Cassia pulp.* 3 ij, *aquæ* ℥ ij. Boil for a few minutes, filter without expression, and add *syrup. violar.* 3 j, or *mannæ pur.* 3 ij. *Pharm. P.*) It is a laxative, in the dose of 3 vj.

DECOCTUM CINCHONÆ, *Decoction Cinchonæ lancifoliæ*, *D. Corticis Cinchonæ*; *Decoction of Cinchona*, *D. of Bark*. *Decoction Kinæ Kinæ*. (*Cinchon. lancifol. cort. contus.* 3 j, *aquæ* ℥ j. Boil for ten minutes, in a slightly covered vessel, and strain, while hot. *Pharm. L.*) It contains cinchonine and resinous extractive, dissolved in water. Long coction oxygenates and precipitates the extractive. It can be given, where the powder does not sit easy, &c. Dose, 3 j to 3 iv. The Parisian Codex has a

DECOCTUM KINÆ KINÆ COMPOSITUM ET LAXANS, *Décotion de quinquina composée et laxative*; *Compound laxative decoction of Cinchona*. (*Cort. cinchon.* 3 j, *aquæ* ℥ ij. Boil for a quarter of an hour, remove it from the fire; then infuse in it for half an hour, *fol. sennæ, sodæ sulph.* aa 3 ij; add *syrup. de sennâ* 3 j.) Its title indicates its properties.

DECOCTUM COLOMBÆ COMPOSITUM; *Compound Decoction of Colombo*. (*Colomb. contus., quassia,* aa 3 ij, *cort. aurant.* 3 j, *pulv. rhej.* 3 j, *potassæ carbonat.* 3 ss, *aquæ* 3 xx. Boil to a pint, and add *tinct. lavand.* 3 ss. *Pharm. U. S.*) Given as a tonic, but not worthy of an officinal station.

DECOCTUM CYDONIÆ, *Mucilago Sem'inis*

Cydonii Mali, *M. Sem'inum Cydoniorum*; *Decoction or Mucilage of Quince Seeds*. (*Cydoniæ sem.* 3 ij, *aquæ* ℥ j. Boil for ten minutes over a gentle fire, and strain. *Pharm. L.*) It is merely a solution of mucilage in water, and is used as a demulcent.

DECOCTUM DAPHNES MEZE'REI, *Decoction Meze'rei*; *Decoction of Mezereon*. (*Cort. rad. daphn. mezerei*, 3 ij, *rad. glycyrrh. cont.* 3 ss, *aquæ* ℥ iij. Boil over a gentle fire to ℥ ij, and strain.) The acrimony of the mezereon and the saccharine mucilage of the liquorice root are imparted to the water. It is somewhat stimulant, and has been used in secondary syphilis, but is devoid of power. Dose, 3 iij to 3 vj.

DECOCTUM DIGITA'LIS, *Decoction of Foxglove*. (*Fol. digit. sicc.* 3 j, *aquæ* q. s. ut colentur 3 viij. Let the liquor begin to boil over a slow fire, and then remove it. Digest for fifteen minutes, and strain. *Pharm. D.*) It possesses the properties of the plant. Dose, 3 ij to 3 iij.

DECOCTUM DULCAMA'RÆ; *Decoction of Woody Nightshade*. (*Dulcamaræ caul. concis.* 3 j, *aquæ* ℥ iss. Boil to ℥ j, and strain. *L.*) This decoction has been considered diuretic and diaphoretic, and has been administered extensively in skin diseases. It is probably devoid of efficacy.

DECOCTUM GEOFRÆÆ INERMIS; *Decoction of Cabbage-Tree Bark*. (*Cort. geoffr. inermis, in pulv.* 3 j, *aquæ* ℥ ij. Boil over a slow fire to a pint, and strain. *Pharm. E.*) It is possessed of anthelmintic, purgative, and narcotic properties, and has been chiefly used for the first of these purposes. Dose, to children, 3 ij—to adults, 3 ss to 3 ij.

DECOCTUM GUA'IACI COMPOSITUM, *D. Guaiaci officinalis compositum*, *Decoction Lignorum*, *D. de Guyaco compositum*, *D. sudorificum*, *D. diaphoreticum*; *Compound Decoction of Guaiacum*, *Decoction of the Woods*. (*Lign. guaiac. rasur.* 3 iij, *fruct. sicc. vitis vinifer.* 3 ij, *rad. lauri sassafr. concis., rad. glycyrrh.* aa 3 j, *aquæ* ℥ x. Boil the guaiacum and raisins over a slow fire to ℥ v; adding the roots towards the end, then strain. *Pharm. E.*) It is possessed of stimulant properties, and has been given in syphilitic, cutaneous, and rheumatic affections. The resin of the guaiacum is, however, insoluble in water, so that the Guaiac wood in it cannot be supposed to possess much, if any, effect. The Parisian Codex has a

DECOCTUM DE GUYACO COMPOSITUM ET PURGANS, (F) *Décotion de Gayac Composée et purgative*; *Compound purgative Decoction of Guaiacum*. (*Lign. guaiac. rasp., rad. sarsap.* aa 3 j, *potass. carbonat.* gr. xxv. Macerate for 12 hours, agitating occasionally, in *aquæ* ℥ iv, until there remain ℥ iij. Then infuse in it *fol. sennæ* 3 ij, *rhej.* 3 j, *lign. sassafr., glycyrrh. rad.* aa 3 ij, *sem. coriand.* 3 j. Strain gently, suffer it to settle, and pour off the clear supernatant liquor.) The title suf-

ficiently indicates the properties of the composition.

DECOCTUM HORDEI, *Decoction Hordei Dis-tichi*, *Ptisa'na Hippocratica*, *Tipsa'ria* or *Tapsa'ria*, *Aqua Hordea'ta*, *Barley Water*, *Decoc'tion of Barley*, (F) *Décoction d'Orge*, *Tisane Commune*. (*Hord. semin.* 3 ij, *aquæ* ℥ ivss. Wash the barley well, boil for a few minutes in *aquæ* ℥ ss: strain this, and throw it away, and add the remainder, boiling. Boil to ℥ ij, and strain. *Pharm. L.*) It is nutritive and demulcent, and is chiefly used as a common drink and in glysters.

DECOCTUM HORDEI COMPOSITUM, *Decoction pectora'le*, *Ptisana commu'nis*; *Compound Decoction of Barley*, (F) *Décoction d'Orge composée*. (*Decoct. hord.* ℥ ij, *caricæ fruct. concis.* 3 ij, *glycyrrh. rad. concis. et contus.* 3 ss, *uvarum pass. demptis acinis* 3 ij, *aquæ* ℥ j. Boil to ℥ ij, and strain. *Pharm. L.*) It has similar properties to the last.

DECOCTUM LICHENIS, *Decoction Liche'nis Islan'dici*; *Decoction of Liv'erwort*. (*Lichen* 3 j, *aquæ* ℥ iss. Boil to a pint, and strain. *Pharm. L.*) It consists of bitter extractive and fecula, dissolved in water, and its operation is tonic and demulcent. Dose, 3 j to 3 iv. It is also nutrient, but hardly worthy of the rank of an officinal preparation.

DECOCTUM MALVÆ COMPOSITUM, *Decoction pro Enem'ate*, *Decoction commu'ne pro clystère*; *Compound Decoction of Mallow*, (F) *Décoction de Mauve composée*. (*Malvæ exsicc.* 3 j, *anthemid. flor. exsicc.* 3 ss, *aquæ* ℥ j. Boil for 15 minutes, and strain.) It consists of bitter extractive, and mucilage in water, and is chiefly used for clysters and fomentations. It is unworthy a place in the pharmacopœia.

DECOCTUM PAPAVERIS, *Decoction pro Fomen'to*, *Fotus communis*; *Decoction of Poppy*. (*Papav. somnif. capsul. concis.* 3 iv, *aquæ* ℥ iv. Boil for 15 minutes, and strain. *Pharm. L.*) It contains the narcotic principle of the poppy, and mucilage in water: is anodyne and emollient, and employed as such in fomentation, in painful swellings, ulcers, &c.

DECOCTUM QUERCUS, *D. Quercûs Ro'boris*; *Decoction of Oak Bark*. (*Quercûs cort.* 3 j, *aquæ* ℥ ij. Boil to a pint, and strain. *Pharm. L.*) It is astringent, and used as such, in injections, in leucorrhœa, uterine hemorrhage, &c., as well as in the form of fomentation to unhealthy ulcers.

DECOCTUM SARSAPARILLÆ, *D. Smilacis Sarsaparillæ*; *Decoction of Sarsaparilla*. (*Sarsaparill. rad. concis.* 3 iv, *aq. fervent.* ℥ iv. Macerate for four hours, near the fire, in a lightly covered vessel: then bruise the root; macerate again for two hours; then boil to 3 ij, and strain. *Pharm. L.*) It contains bitter extractive, and mucilage in water; is demulcent, and has been used, although it is doubtful with what efficacy, in the sequelæ of syphilis. Dose, 3 iv to ℥ ss.

DECOCTUM SARSAPARILLÆ COMPOSITUM;

Compound Decoction of Sarsaparilla, (F) *Décoction de Salsapareille Composée*. (*Decoct. sarsap. fervent.* ℥ iv, *sassafras rad. concis.*; *guaiac. lign. ras.*; *glycyrrh. rad. cont.* aa 3 j, *mezerei rad.* 3 iij. Boil 15 minutes, and strain. *Pharm. L.*) This is considered to be possessed of analogous properties with the celebrated *Lisbon Diet-Drink*, *Decoctum Lusitan'icum*, which it resembles in composition.

DECOCTUM SCILLÆ; *Decoction of Squill*. (*Scillæ* 3 iij, *juniper* 3 iv, *senega snake-root* 3 iij, *water* ℥ iv. Boil till one half the liquor is consumed, strain, and add *spirit of nitrous ether* 3 iv. *Pharm. A.*) Dose, 3 ss.

DECOCTUM SENEGÆ, *D. Polygalæ senegæ*; *Decoction of Senega*. (*Rad. seneg.* 3 i *aquæ* ℥ ij. Boil to ℥ j, and strain. *Pharm. L.*) It is reputed to be diuretic, purgative, and stimulant, and has been given in dropsy, rheumatism, &c.

DECOCTUM ULMI, *D. Ulmi Campes'tris*; *Decoction of Elm Bark*. (*Ulm. cort. recent.* 3 iv, *aquæ* ℥ iv. Boil to ℥ ij, and strain. *Pharm. L.*) It is reputed to be diuretic; and has been used in lepra and herpes; but, probably, has no efficacy. Dose, 3 iv to ℥ ss.

DECOCTUM VERA'TRI, *Decoction Helleb'oralli*; *Decoction of White Hellebore*. (*Veratri rad. cont.* 3 j, *aquæ* ℥ ij, *spir. rect.* 3 ij. Boil the watery decoction to ℥ j, and when it is cold, add the spirit. *Pharm. L.*) It is stimulant, acrid, and cathartic; but is used only externally. It is a useful wash in *tinea capitis*, *psora*, &c. Should it excite intense pain, on being applied, it must be diluted.

DÉCOLLEMENT, (F). *Deglutina'tio*, *Reglutina'tio*. The state of an organ, that is separated from the surrounding parts, owing to destruction of the cellular membrane, which united them: the skin is *decollée*, i. e. separated from the subjacent parts by a burn, subcutaneous abscess, &c.

DÉCOLLEMENT DU PLACENTA is the separation or detachment of the whole or a part of the placenta from the inner surface of the uterus. *Décollement*, from *de*, 'from,' and *collum*, 'the neck,' *obtruncatio*, also means the separation of the head of the fœtus from the trunk, the latter remaining in the uterus.

DECOLORATION, *Decolora'tio*, *Discolora'tio*, from *de*, 'from,' and *colora're*, 'to colour.' Loss of the natural colour.

DÉCOMPOSÉE (F), from *de*, 'from,' and *compon'ere*, 'to compose.' *Decomposed*, *Dissolutus*. An epithet, applied to the face, when extensively changed in its expression and colour; as in the moribund.

DECORTICATION, from *de*, 'from,' and *cortex*, 'bark.' An operation, which consists in separating the bark from roots, stalks, &c.

DECOSTIS, *Apleu'ros*, from *de*, priv., and *costa*, 'a rib.' One who has no ribs.

DECREPITUDE, *Decrepitu'do*, *Ætas*

decrep'ita, *Ultima senec'tus*, from *decrep'itus*, 'very old.' The last period of old age, and of human life; which ordinarily occurs about the 80th year. It may, however, be accelerated or protracted. Its character consists in the progressive series of phenomena, which announce the approaching extinction of life.

DECUBITUS, from *decum'berè*, 'to lie down.' Lying down. Assuming the horizontal posture. (F) *Coucher*. *Horâ decubit'us*, 'at bed time.' The French say—*Decubitus horizontal*, *sur le dos*, *sur le côté*, for, lying in the horizontal posture, on the back or side.

DECURTATUS, *μειωμένος*, or *μειωγίζων*, 'shortened, curtailed,' 'running to a point.' When applied to the pulse, it signifies, a progressive diminution in the strength of the arterial pulsations, which, at last, cease. If the pulsations return and gradually acquire all their strength, it is called *Pulsus decurtatus recip'ocus*.—Galen.

DECUSSATION, *Decussatio*. *Chias'mos*, *Incrucia'tio*, from *decu'tio*, 'I divide.' Union in the shape of an X or cross. Anatomists use this term chiefly in the case of the nerves,—as for the *decussation of the optic nerves*, which cross each other within the cranium.

DECUSSORIUM, from *decu'tio*, 'I depress.' An instrument used, by the ancients, for depressing the dura mater, and facilitating the exit of substances, effused on or under that membrane. It is described by Scultetus, Paré, &c. See Meningophylax.

DEDOLA'TION, from *dedola're*, 'to cut and hew with an axe.' This word has been used by surgeons, to express the action, by which a cutting instrument divides, obliquely, any part of the body and produces a wound with loss of substance. It is commonly on the head, that wounds by dedolation are observed. When there was a complete separation of a portion of the bone of the cranium, the ancients called it *Aposceparnis'mos*.

DEFECA'TION, *Defecatio*, from *de* and *fæces*, 'excrements.' The act, by which the excrement is extruded from the body. *Caca'tion*, *Excre'tio alvi*, *E. alvi'na*, *E. fæcum alvina'rum*, *Dejectio alvi*, *Secessio*, *Expulsio vel Ejectio fæcum*. The fæces generally accumulate in the colon, being prevented by the annulus at the top of the rectum from descending freely into that intestine. In producing evacuations in obstinate constipation, it is well, therefore, by means of a long tube, to throw the injection up into the colon, as suggested by Dr. O'Beirne.

In *Pharmacy*, defecation means the separation of any substance from a liquid in which it may be suspended. See Clarification.

DEFENSIVUM, from *defen'dere*, 'to defend.' A preservative or defence. The old surgeons gave this name to different local

applications, made to diseased parts, for the purpose of guarding them from the impression of extraneous bodies, and particularly from the contact of air.

DEFERENS, from *def'ero*, 'I bear away,' 'I transport.'

The VAS DEFERENS or *ductus deferens*, (F) *Conduit spermatique*, *Conduit déférent*, is the excretory canal of the sperm, which arises from the epididymis, describes numerous convolutions, and with the vessels and nerves of the testicle concurs in the formation of the spermatic chord, enters the abdominal ring and terminates in the ejaculatory duct.

DEFLORA'TION, *Deflorat'io*, *Devirgina'tio*, from *deflorescere*, 'to shed its flowers.' The act of depriving a female of her virginity. Inspection of the parts is the chief criterion of defloration having been forcibly accomplished; yet inquiry must be made whether the injury may not have been caused by another body than the male organ. *Recent defloration* is infinitely more easy of detection than where some time has elapsed.

DEFLUX'ION, *Defluxio*, *Defluxus*, *Catar'rhyis*, *Catar'rhus*. A falling down of humours from a superior to an inferior part. It is sometimes used synonymously with inflammation.

DEFORMA'TION, *Deformatio*, *Cacomor'phia*, *Deformitas*, *Disfigura'tion*, *Deformity*. (F) *Difformité*. Morbid alteration in the form of some part of the body, as of the head, pelvis, spine, &c. A deformity may be natural or accidental.

DEFRU'TUM, *vin cuit*, from *defruta're*, 'to boil new wine.' Grape must, boiled down to one half and used as a sweetmeat.—Plin. Columell. Isidor.

DEGENERA'TION, *νοθέωσις*, *νοθέωσις*, *Notheusis*, *Nothia*, from *deg'ener*, 'unlike one's ancestors,' *Degen'eracy*. A change for the worse in the intimate composition of the solids or fluids of the body. In Pathological Anatomy, *degeneration* means the change which occurs in the structure of an organ, when transformed into a matter, essentially morbid; as a *cancerous*, or *tubercular*, degeneration.

Dégénérescence is, by the French pathologists, employed synonymously with Degeneration.

DEGLUTI'TION, *Degluti'tio*, *catap'osis*, from *degluti're*, 'to swallow.' The act, by which substances are passed from the mouth into the stomach, through the pharynx and œsophagus. It is one of a complicated character, and requires the aid of a considerable number of muscles; the first steps being voluntary, the remainder executed under spinal and involuntary nervous influence.

DEGMOS, *δγμος*, *Degmos*, *Morsus*;—a bite in general, from *δαχνα*, 'I bite.' A gnawing sensation about the upper orifice of the

stomach, which was once attributed to acrimony of the liquids, contained in that viscus.

DEGREE, from *degré*, originally from *gradus*. Galen used this expression to indicate the qualities of certain drugs. Both he and his school admitted *cold*, *warm*, *moist*, and *dry* medicines, and four different degrees of each of those qualities. Thus *Apium* was warm in the *first* degree, *Agrimony* in the *second*, *Roche Alum* in the *third*, and *Garlic* in the *fourth*. *Bedegar* was cold in the *first*, the flower of the Pomegranate in the *second*, the *Sempervivum* in the *third*, *Opium* in the *fourth*, &c. The French use the term *degré* to indicate 1. The intensity of an affection: as a burn of the *first*, *second*, *third degree*, &c. 2. The particular stage of an incurable disease, as the *third degree* of phthisis, cancer of the stomach, &c.

DEGUSTA'TION, *Degusta'tio*, from *gustare*, 'to taste.' *Gustation*. The appreciation of sapid qualities by the gustatory organs.

DEJECTION, *Dejectio*, *Subduc'tio*, *Hypog'ge*, *Hypochore'sis*. The expulsion of the feces. Also, a fecal discharge:—generally, however, with *alvine* prefixed,—as an *alvine Dejection*, *Dejectio alvi'na*, *Ejec'tio*, *Eges'tio*.

DELETE'RIOUS, *Pernicio'sus*, from *δηλεω*, 'I injure.' That, which produces destructive disorder in the exercise and harmony of the functions.

DELIGA'TION, *Deliga'tio*, *Epidei'sis*, *Deligatu'ra*, *Vul'nerum deliga'tio*, *Fascia'rum Applica'tio*, *Plaga'rum Vincu'ra*, *Fascia'tio*, from *de* and *ligo*, 'I tie.' The deligation of wounds formerly embraced the application of apparatus, dressings, &c.,—the denomination *Deliga'tor Plaga'rum* being synonymous with *Medicus Vulnere'rius*, and in derivation, with the *Wundarzt*, 'wound physician,' or surgeon, of the Germans. Deligation is hardly ever used now as an English word. In France it is confined to the regular and methodical application of bandages.

DELIQUES'CENT, from *de* and *liquescere*, 'to melt,' 'to dissolve.' Any salt, which becomes liquid by attracting moisture from the air.

The deliquescent salts require to be kept in bottles, well stopped. The muriate of lime, the acetate of potassa and subcarbonate of potassa are examples of such salts. The ancient chemists expressed the condition of a body, which had become liquid in this manner, by the word *Deliquium*.

DELIR'IOUS, *Delir'ans*, *Excerebra'tus*, *Allochoos*, *alie'nus*, raving, (F) *Délirant*. One who is in a state of delirium. That which is attended by delirium.

The French use the term *Fièvre pernici'euse délirante* for a febrile intermittent, in which delirium is the predominant symptom.

DELIR'IUM, from *de*, 'from,' and *lira*, 'a ridge between two furrows,' *Paracopè*,

Phreni'tis, *Phledoni'a*, *Desipien'tia*, *Paraphros'yne*, *Emo'tio*, *Leros*, λῆρος. Straying from the rules of reason, wandering of the mind; *Paranæa*, *Alloph'asis*, (F) *Déline*, *Egarement d'esprit*, &c. *Transport*. Hippocrates used the word *μανία*, *mania*, for the *delirium sine febre*, and the Greek words given above for the *delirium cum febre*. In different authors, also, we find the words, *Paraph'ora*, *Paraph'otes*, *Paraphrene'sis*, *Paraphren'ia*, *Phrene'sis*, *Phrenetiasis*, &c., for different kinds of delirium. Delirium is usually symptomatic.

DELIRIUM TREMENS, *Ma'nia a Potu*, *Æno-ma'nia*, *Ma'nia e temulentia*, *D. potatorum*, *D. ebriosita'tis*, *Erethis'mus ebriosorum*, *Encephalopathie crapuleuse*. Not unfrequently a state of delirium and agitation, peculiar to those addicted to spirituous liquors, with great sleeplessness. It is preceded by indisposition, lassitude, watchfulness, headache, and anorexia, the delirium and tremors most commonly recurring in paroxysms. It is caused by the habitual and intemperate use of ardent spirits or opium: or rather by abandoning those excitants after prolonged use. The treatment is various. Many have regarded stimulants with large doses of opium to induce rest to be indispensable. It is certain, however, that the expectant system will often, if not generally, be successful, and it is probable, a cure effected in this manner will be more permanent than when produced by excitants.

DÉLIVRANCE (F). An expression, which, in common language, signifies the action of delivering, *libera'tio*, but, in the practice of obstetrics, means the extrusion of the secundines, either spontaneously or by the efforts of art. This completion of delivery—*partus secunda'rius*, *secundina'rum expul'sio vel extrac'tio*, is produced by the same laws as the expulsion of the fœtus. Sometimes, the after-birth follows the child immediately; at others, it is retained; and requires manual interference to remove it. The following are the chief cases in which this becomes necessary. 1. Intimate adhesion between the placenta and parietes of the uterus. 2. Spasmodic contraction of the orifice of the uterus. 3. Hour-glass contraction. 4. Torpor or hemorrhage after the expulsion of the child, and,—5. Insertion of the placenta at the orifice of the uterus.

DELPHINIUM CONSOL'IDA, *Calci-trap'pa*, *Consol'ida Regalis*, the branching Larkspur. Family, Ranunculaceæ. Sex. Syst. Polyandria Trigynia. (F) *Pied d'alouette des champs*. It has been employed as a vermifuge. The flowers have been used in ophthalmia, and the seeds have the same property as those of the *Stavesacre*.

DELPHINIUM STAPHISA'GRIA. The systematic name of the *Staves'acre*, *Staphisagria*, *Phtheirot'num*, *Phthei'rium*, *Staphis*, *Pedicularia*, (F) *Staphisaigre*, *Herbe aux Poux*,

Dauphinelle. The seeds have a disagreeable smell; a nauseous, bitterish, hot taste; and are cathartic, emetic, and vermifuge; owing, however, to the violence of their operation, they are seldom given internally, and are chiefly used in powder, mixed with hair powder to destroy lice.

The active principle of this plant has been separated and received the name *Delphinine*. It is extremely acrid, and has been recently used, like the veratrine, in *Tic douloureux*, paralysis and rheumatism. It is used in the form of ointment or in solution in alcohol (gr. x to xxx or more, to 3j), applied externally.

DELTOID, *Deltoï'des*, *Delto'des*, *Deltiformis*, from the Greek capital letter Δ, δέλτα, and εἶδος, 'resemblance.' *Sous-acromio-clavico-huméral* of Dumas; *sus-acromio-huméral* of Chaussier. A triangular muscle, forming the fleshy part of the shoulder, and covering the shoulder joint. It extends from the outer third of the clavicle, from the acromion and spine of the scapula, to near the middle and outer part of the os humeri, where it is inserted by means of a strong tendon. This muscle raises the arm directly upwards, when the shoulder is fixed, and carries it anteriorly or posteriorly, according to the direction of the fibres, which are thrown into action. If the arm is rendered immovable the deltoid acts inversely and depresses the shoulder.

DEM EL MUCA. A name given by Prosper Alpinus to a cerebral disease, which he says is proper to Egypt. He considers it to be inflammation of the brain; but others describe it as a pernicious intermittent.

DEMEN'TIA, *Amen'tia*, *Fatu'itas*, *anō'a*, *Paranō'a*, from *de*, 'from,' or 'out of,' and *mens*, 'mind,' or 'reason.' (F) *Démence*, *Bétise*. In common parlance, and even in legal language, this word is synonymous with insanity. Physicians, however, have applied it to those cases of unsound mind, which are characterized by a total loss of the faculty of thought, or by such an imbecility of intellect, that the ideas are extremely incoherent; there being at the same time, a total loss of the power of reasoning. Mania and melancholia are apt to end in this, if possible, more deplorable state. *Dotage* is the *Dementia* of the aged—*Mo'ria demens lere'ma*, *Lere'ma*, *Anil'itas*.

DEMONOMA'NIA, *Dæmonoma'nia*, from δαίμων, 'demon,' a spirit of good or evil, and μανία, 'madness.' Religious Insanity. A variety of madness, in which the person conceives himself possessed of devils, and is in continual dread of malignant spirits, the pains of hell, &c.

DEM'ONSTRATOR, from *demonstra're*, 'to show;' 'exhibit.' One who exhibits.

DEM'ONSTRATOR OF ANAT'OMY, one who exhibits the parts of the human body. A teacher of practical anatomy.

DEMOTIVUS LAPSUS, *Repenti'na mors*, from *démov'e're*, 'to move off,' 'remove,' and *lapsus*, 'a fall.' Sudden death.

DEMUL'CENTS, *Demulcen'tia*, *Involven'tia*, *Obvolventia*, from *demulcere*, 'to soothe,' 'to assuage.' (F) *Adoucissant*. Medicines, supposed to be capable of correcting certain acrid conditions imagined to exist in the humours. Substances of a mucilaginous or saccharine nature belong to this class. Demulcents may act *directly* on the parts with which they come in contact; but in other cases, as in catarrh, their effect is produced by contiguous sympathy;—the top of the larynx being soothed by them first, and *indirectly* the inflamed portion of the air-passages. In diseases of the urinary organs, they have no advantage over simple diluents.—See Diluents and Emollients. The following are the chief Demulcents:—

Acaciæ Gummi,	Hordeum,
Althææ Folia et Radix,	Lichen,
Amygdalæ	Linum,
Amylum,	Olivæ Oleum,
Avenæ Farina,	Sassafras Medulla,
Cera,	Sesamum,
Cetaceum,	Sevum,
Cydoniæ Semina,	Tragacantha,
Fucus Crispus.	Ulmus.
Glycyrrhiza,	

DEMUSCULATUS, (F) *Décharné*. Emaciated, devoid of flesh.

DENA'RIOUS; a Roman coin, equal in value to about 10 cents or 8 pence English. It was marked with the letter X to signify 10 asses. Also, the 7th part of the Roman ounce.

DENGUE, *Dingee*, *Danga*, *Dandy*, *Bouquet* and *Bucket Fever*. A disease, which appeared, in the years 1827 and 1828, in the West Indies, and in the Southern States of North America. It was extremely violent in its symptoms, but not often fatal. It usually commenced with great languor, chilliness, and pain in the tendons about the smaller joints. To these symptoms succeeded burning heat and redness of the skin, pains in the muscles of the limbs or in the forehead, with vomiting or nausea. The fever continued for one, two, or three days and usually terminated by copious perspiration. In different places, it put on different appearances; but seems in all to have been a singular variety of rheumatic fever. The usual antiphlogistic treatment was adopted and successfully.

DENIACH, MINERAL WATERS OF. D. is a village in Swabia, at the entrance of the Black Forest. The waters contain carbonic acid, carbonate of iron, carbonate of lime, sulphate of magnesia, and subcarbonate of soda.

DENIGRA'TIO, from *denigra're*, 'to become black.' The act of becoming black, as in cases of sphacelus, sugillation, &c.

DEN'TAGRA, *Den'ticeps*, *Dentar'paga*, *Dentiducum*, *Denta'lis forfex*, *Forfex denta'ria*, *Odon'tagra*, *odontago'gon*, from *dens*, 'a tooth,' and *αγχα*, 'a seizure.' (F) *Davies*. A tooth-forceps.

DENTAL, *Denta'lis*, *Denta'rius*, from *dens*, 'a tooth.' That which concerns the teeth.

The **DENTAL ARTERIES** are those arteries, which nourish the teeth. They proceed from several sources. The teeth of the upper jaw, e. g., receive their arteries from the *infra-orbital* and *superior alveolar*,—themselves branches of the *internal maxillary*. The teeth of the lower jaw receive their branches from the *inferior dental* or *inferior maxillary*, which is given off by the internal maxillary and runs through the dental canal, issuing at the mental foramen, after having given numerous ramifications to the teeth and jaw.

The **DENTAL VEINS** have a similar distribution with the arteries.

The **DENTAL ARCHES**, (F) *Arcades dentaires* are the arches, formed by the range of alveoli in each jaw.

DENTAL CAVITY, (F) *Cavité dentaire*, a cavity in the interior of the teeth, in which is situated the *dental pulp*.

DENTAL CANALS, (F) *Conduits dentaires*, *Maxillary canals*. The bony canals, through which the vessels and nerves pass to the interior of the teeth.

DENTAL CAR'TILAGE, *Cartila'go denta'lis*. The cartilaginous elevation, divided by slight fissures, on the biting margins of the gums in infants, prior to dentition. It is a substitute for the teeth.

DENTAL FOL'LICLE, (F) *Follicule dentaire*. A membranous follicle, formed of a double lamina in which the teeth are contained before they issue from the alveoli, and which, consequently, aids in the formation of the alveolo-dental periosteum, and of the membrane that envelopes the pulp of the teeth. The dental follicles are lodged in the substance of the jaws.

DENTAL GANGRENE, *Caries Den'tium*, *Odontalg'ia cario'sa*, *Necro'sis Den'tium*. Gangrene or caries of the teeth. See *Caries*.

DENTAL NERVES. (F) *Nerfs dentaires*. Nerves which pass to the teeth. Those of the upper incisors and canine are furnished by the infra-orbital nerve, a branch of the superior maxillary; and those of the molares by the trunk of the same nerve. The teeth of the lower jaw receive their nerves from the inferior maxillary, which, as well as the superior maxillary, arises from the 5th pair.

DENTAL PULP. (F) *Pulpe dentaire*. A pulaceous substance, of a reddish-gray colour, very soft and sensible, which fills the cavity of the teeth. It is well supplied with capillary vessels.

DENTA'LIIUM, from *dens*, 'a tooth,' the *dog-like tooth shell*. A genus of shells in the shape of a tooth. They formerly entered into several pharmaceutical preparations, but were useless ingredients; consisting—like

shells in general—of carbonate of lime and gelatine.

DENTICULA'TUM (*Ligamentum*), diminutive of *dens*, 'a tooth.' A slender cord, situate between the anterior and posterior fasciculi of the spinal nerves, and between the tunica arachnoidea and pia mater. It is attached to the dura mater, where that membrane issues from the cranium, and accompanies the spinal marrow to its inferior extremity. It sends off, from its outer edge, about 20 slender processes, in the form of *denticuli*, each of which is fixed by minute fibres to the dura mater in the interstices of the *fasciculi*.

DENTIER (F), from *dens*, 'a tooth,' *Denture*. A set or row of teeth, mounted on metal or ivory, to be adjusted to the alveolar margin. *Dentiers* are simple or double. To the latter the name *Râteliers* is given, i. e. to the full set.

DEN'TIFORM, *Dentiform'is*, from *dens*, 'a tooth,' and *forma*, 'form.' Resembling a tooth in shape.

DEN'TIFRICE, *Dentifri'cium*, *Tooth powder*, *odontotrim'ma*, *Odontosmeg'ma*, from *dens*, 'a tooth,' and *frica're*, 'to rub;' a name, given to different powders and pastes proper for cleansing the enamel of the teeth, and removing the tartar, which covers them. Powdered bark, and charcoal, united to any acidulous salt—as cream of tartar—form one of the most common *dentifrices*.

The **POUDRE DENTIFRICE** of the Parisian Codex is composed of *Bole Armeniac*, *red coral*, [prepared,] and *cuttlefish bones*, aa ʒvj, *dragon's blood* ʒiij, *cochineal* ʒj, *cream of tartar* ʒix, *cinnamon* ʒij, *cloves*, gr. xij, well mixed.

The **ELECTUAIRE OU OPIAT DENTIFRICE**, of the Codex, consists of *coral* ʒiv, *cuttlefish bones* and *cinnamon* aa ʒij, *cochineal* ʒss, *honey* ʒx, *alum* gr. iv or v.

Charcoal, finely powdered and mixed with chalk, forms as good a dentifrice as any.

DENTISCAL'PIUM, from *dens*, 'a tooth,' and *scal'pere*, 'to scrape,' *odontogly'phum*. This word has been applied to the instrument used for scaling the teeth; to the *tooth-pick*, (F) *Cure-dent*; and to the *gum lancet*—the *déchaussoir* of the French.

DENT'IST, *Denta'rius*, *Dental Surgeon*, *Surgeon-Dentist*. One, who devotes himself to the study of the diseases of the teeth, and their treatment.

DEN'TISTRY, *Dental Surgery*, *Odontotech'ny*. The art of the dentist.

DENTITION, *Denti'tio*, *Odontophy'ia*, *teething*, *odonti'asis*, from *denti're*, 'to breed teeth.' The exit of the teeth from the alveoli and gums; or rather, the phenomena which characterize the different periods of their existence. The germs of the first teeth, *dentes lactei* or *milkteeth*, (F) *dents de lait*, are visible in the fœtus about the end of the second month; and they begin to be ossified

from the end of the third to that of the sixth month. At birth, the corona of the incisors is formed, but that of the canine is not completed; and the tubercles of the molares are not yet all united. Gradually, the fang becomes developed; and at about 6 or 8 months begins, what is commonly called, the *first dentition*, *Odon'tia dentitio'nis lactan'tium*. The two middle incisors of the lower jaw commonly appear first; and, some time afterwards, those of the upper jaw; afterwards, the two lateral incisors of the lower jaw; and then, those of the upper; followed by the four anterior molares; the *canine* or *eye teeth*, at first, those of the lower, and afterwards, those of the upper jaw next appear; and, subsequently and successively, the 4 first molares—2 above and 2 below, 1 on each side. The whole number of the *primary, temporary, deciduous, shedding, or milk teeth*, (*dentes tempora'rii*), (F) *Dents de lait*, is now 20.

The *second dentition* or *shedding of the teeth*, *odon'tia dentitio'nis puerilis*, begins about the age of 6 or 7. The germs or membranous follicles of these second teeth—to the number of 32—as well as the rudiments of the teeth themselves, are visible, even in the fœtus, with the exception of those of the small molares which do not appear till after birth. They are contained in alveoli of the same shape as those of the first dentition. Their ossification commences at from 3 to 6 months after birth, in the incisors and first molares; at 8 or nine months in the canine; about 3 years, in the molares; $3\frac{1}{2}$ in the second great molaris, and about 10 years in the last. As the alveolus of a new tooth becomes gradually augmented, the septum between it and that of the corresponding milk tooth is absorbed, and disappears. The root of the milk tooth is likewise absorbed; its corona becomes loose and falls out, and all the first teeth are gradually replaced by the *permanent teeth*, *Dentes serot'ini*. This second dentition becomes necessary in consequence of the increased size of the jaws. The new teeth have neither the same direction nor the same shape as the old; and they are more numerous; amounting, till the age of 25 (sooner or later), to 28. About this period, a small molaris appears at the extremity of each jaw, which is called the *Dens sapien'tiæ* or *wisdom tooth*, *Dens serot'inus*, *Dens sophroret'icus*, (F) *Arrière dent*, *Dent de sagesse*, making the whole number of permanent teeth 32. During the period of dentition, i. e. of the first dentition, the infant is especially liable to disease. The irritation, produced by the pressure of the tooth on the superincumbent gum, sometimes occasioning pyrexia, convulsions, diarrhœa, &c., which symptoms are often strikingly relieved by a free division of the distended gum. This disordered condition is called *teething*,

Odon'tia dentitio'nis, *Odonti'asis*, *Odontal'gia dentitio'nis*, *Odaxis'mus*.

DENUDA'TION, *Denuda'tio*, *Gymno'sis*, from *denuda're*, 'to lay bare.' Condition of a part, deprived of its natural coverings, whether by wounds, gangrene, or abscess. It is particularly applied to the bones, when deprived of their periosteum.

DEOB'STRUENTS, *Deobstruen'tia*, *Dephrac'tica*, *Deoppilan'tia*, *Deoppilat'i'va*, from *de* and *obstru'ere*, 'to obstruct.' (F) *Désobstruant*, *Désobstructif*, *Désopilatif*, *Désopilant*. Medicines, given with the view of removing any obstruction. The word corresponds to *aperient*, in its *general*, not in its *particular*, sense. It is now almost abandoned, and, when used, conveys by no means definite ideas.

DEPILA'TION, *Depila'tio*, *Dropacis'mus*, *Made'sis*, *Madi'sis*, *Psilo'sis*, from *de* and *pilus*, 'hair.' Loss of hair, either spontaneously or by art.

DEPIL'ATORY, *Depilato'rium*, *Dropax*, *Psilo'thron*, *Ectillot'icus*, *Epilato'rium*. (F) *Depilatoire*, *Depilatif*. Any thing, which causes the loss of the hair. Depilatories are, usually, caustic applications, in which quicklime, or some other alkaline substance, sulphuret of iron, &c., enters.

COLLEY'S DEPILATORY seems to consist of quicklime and a portion of sulphuret of potass. A pitch plaster is sometimes used as a *depilatory*. It, of course, pulls the hair out by the roots.

DEPLE'TION, *Deple'tio*, from *depleo*, 'I unload.' The act of unloading the vessels, by blood-letting, and the different evacuants. Also, inordinate evacuation.

DEPLUMA'TIO, *Ptilo'sis*, from *deplu'mis*, 'without feathers.' A disease of the eyelids, in which they are swollen, and the eyelashes fall out.

DEPRAVA'TION, *Deprava'tio*, from *prævus*, 'bad,' perversion, corruption;—as depravation of the taste, &c.

DEPRES'SION, *Depressio*, from *depri'mere*, 'to depress;' *Esphlasis*. In *Anatomy*, it means an excavation, hollow, or fossa. In *Surgery*, it is applied to a fracture of the cranium, in which the portions of fractured bone are forced inwards; (F) *Subgrondation*, *Entablement*; called, also, *Campsis Depres'sio*, *Thlasis Depres'sio*. Depression also means Couching.—See Cataract.

DEPRES'SOR, (F) *Abaisseur*. Same etymon. Several muscles have been so termed, because they depress the parts on which they act.

DEPRESSOR ALÆ NASI, *D. labii superio'ris alæque nasi*, *Incisi'vus me'dius*, *Myrtisor'mis*, *Depressor Labii superio'ris proprius*, *Constricto'res ala'rum nasi ac depresso'res la'bii superio'ris*—*Maxillo-alveoli-nasal*,—part of the *labialis* (Ch.), (F) *Abaisseur de l'aile du nez*. It arises from the superior maxillary bone, immediately above the junction of the

gums with the two incisor and canine teeth; and passes upwards to be inserted into the upper lip and root of the ala nasi, which it pulls downwards.

DEPRESSOR AN'GULI ORIS, *Triangula'ris*, *Depressor labio'rum commu'nis*, *Depressor labio'rum*,—*Sousmaxillo-labial*, *Maxillo-labial* (Ch.), (F) *Abaisseur de l'angle des lèvres* ou *Muscle Triangulaire*. A muscle, situate at the lower part of the face. Its form is triangular. It arises from the outer, oblique line on the lower jaw-bone, and terminates in a point at the commissure of the lips, which it pulls downwards.

DEPRESSOR LA'BII INFERIO'RI; *Quadra'tus*, *Quadra'tus menti*, *Depres'sor labii infe'rio'ris proprius*,—*Mentonier-labial*, *Mento-labial*, (Ch.) (F) *Carré du Menton*, *Houppé du Menton*, *Abaisseur de la lèvre inférieure*. A small, thin, and quadrilateral muscle, which arises from the external oblique line of the lower jaw, and ascends to the lower lip, where it becomes confounded with the orbicularis oris. It pulls the lower lip downwards and outwards.

DEPRESSOR PAL'PEBRÆ INFERIO'RI. A fleshy bundle, which forms part of the palpebralis muscle. Heister describes it separately, but it is not admitted now.

DEPURAN'TIA, from *depura're*, 'to purify.' (F) *Dépuratif*. Medicines were formerly so called, which were supposed to possess the property of removing, from the mass of blood or humours, those principles, which disturbed their purity; and of directing them towards some one of the natural emunctories. The juices of what were called antiscorbutic herbs, sulphur, and many other medicines were ranked under this class.

DEPURA'TION. Same etymon. *Catharis'mos*, *Munda'tio*. In *Pathology*, depuration has been used for the process by which nature purifies the animal economy, either by the agency of some eruptive disease, or some spontaneous evacuation, or by the assistance of medicine.

DEPURATORY, Same etymon. *Depurato'rius*. That which causes depuration, as the *urinary* and *cutaneous depurations*. Applied, also, to diseases, which have been considered capable of modifying the constitution advantageously, by acting on the composition of the fluids—such as certain eruptions, intermittents, &c. The word is, also, appropriated to medicines and diet, by which the same effect is sought to be induced.

DERENCEPH'ALUS, from *δε'ρη*, 'the neck,' and *κεφαλη*, 'head.' A monster whose head with the brain is in the neck.—G. St. Hilaire.

DERIVA'TION, *Derivatio*, *Deflec'tio*, *Pa-rocheteu'sis*, *Epocheteu'sis*, *Revulsion*. When a 'centre of fluxion' is established in a part, for the purpose of abstracting the excited vital manifestations from some other, a *derivation* is operated.

The term DERIVATION has likewise been applied to the *suction power* of the heart,—an important agency in the circulation of the blood.

DERIV'ATIVE, *Deflec'tens*, from *deri-va're*, 'to drain off.' *Antispas'tic*, *Revellent*, *Revulsive*. Same etymon. (F) *Dérivatif*. A remedy, which by producing a modified action in some organ or texture *derives* from the morbid condition of some other organ or texture. Revellents are amongst the most important of remedies: they include, indeed, every physical and moral agent which is capable of modifying the function of innervation, and therefore almost every article of the *materia medica*.

The following is a list of the chief local Derivatives.

1. EPISPASTICS.	Cantharis,
Acidum Aceticum,	Mezereum,
—— Nitricum,	Pix Abietis,
—— Sulphuricum,	Sabina,
Allium Sativum,	Tiglii Oleum.
Ammonia,	Fonticulus,
Ammoniacum,	Setaceum.
Asafœtida,	4. ESCHAROTICS.
Capsicum,	a. <i>Erodents</i> ,
Galbanum,	Acidum Aceticum,
Olea Essentialia,	Acida Mineralia,
Pix Abietis,	Alumen Exsiccatum,
Sinapis,	Argenti Nitras,
Caloric,	Cupri Acetas,
Friction.	—— Sulphas,
2. VESICANTS.	Sabina,
Ammonia,	Saccharum Purissimum,
Argenti Nitras,	b. <i>Actual Cauterants</i> ,
Cantharis,	Caloric { White Hot Iron,
—— Vittata,	—— Moxa,
Hydrargyri Deuto-	c. <i>Potential Cauterants</i> ,
ioduretum,	Acidum Arseniosum,
Ranunculus,	—— Nitricum,
Sinapis,	—— Sulphuricum,
Caloric.	Antimonii Murias,
3. SUPPURANTS.	Argenti Nitras,
Acida Mineralia,	Calx,
Antimonii et Potassæ	Potassa,
Tartras,	—— cum Calce.

DERMATOID, *Dermatoi'des*, from *δε'ρη*, 'the skin,' and *ειδος*, 'form.' That which is similar to the skin. This name is given to different tissues, which resemble the skin. The dura mater has been so called by some.

DERMATOL'OGY, *Dermol'ogy*, from *δε'ρη*, 'the skin,' and *λογος*, 'a discourse.' A discourse or treatise of the skin.

DERMOG'RAPHY, *Dermogra'phia*, from *δε'ρη*, 'the skin,' and *γραφω*, 'I describe.' An anatomical description of the skin.

DERMOID, *Dermoides*, *Dermo'des*, from *δε'ρη*, 'the skin,' and *ειδος*, 'form.' Resembling, in consistence, texture, and configuration, the skin:—as *dermoid texture*, applied to mucous membranes, &c.

DERMOT'OMY, *Dermoto'mia*; from *δε'ρη*, 'the skin,' and *τεμνειν*, 'to cut.' The part of anatomy, which treats of the structure of the skin.

DERTRON, *δε'τερων*. This word, which is used by Hippocrates, signified, according to some, the omentum or peritoneum; but, according to others, the small intestine.

DÉSARTICULATION (F), from *de*, and *artic'ulus*, 'a joint.' *Disjointing*. A word used to express the part of the operation, in amputation at an articulation, which consists in dividing the ligaments, and separating the articular surfaces. The word has, also, been used for that kind of anatomical preparation, the object of which is, to separate the different bones of the skeleton, and especially those of the head.

DESCALORINÈSES. A name, given by Baumes to diseases, which are characterized by diminished heat: from *de*, 'from,' and *calor*, 'heat.'

DESICCATI'VA, *Siccan'tia*, *Exsiccati'va*, from *desicca're*, 'to dry up.' (F) *Dessiccatifs*. Remedies, which, when applied externally, dry up the humours or moisture from a wound.

DES'MA, *Des'mē*, *Desmos*, *δεσμα*, *δεσμη*, *δεσμος*, 'a ligament.' Hence:

DESMOCHAUNO'SIS, from *δεσμος*, 'ligament,' and *χαυνωσις*, 'relaxation.' Relaxation of an articular ligament.

DESMOG'RAPHY, *Desmogra'phia*, from *δεσμος*, 'a ligament,' and *γραφη*, 'a description.' An anatomical description of the ligaments.

DESMOID TISSUE, *Ligamen'tous Tissue*, *Textus desmō'sus*. This tissue is very generally diffused over the human body; has a very close connexion with the cellular tissue, and is continuous with it, in divers places. It constitutes the ligaments, aponeuroses, &c.

DESMOL'OGY, *Desmolog'ia*, from *δεσμος*, 'a ligament,' and *λογος*, 'a discourse,' 'treatise.' That part of anatomy, which describes the ligaments.

DESMOPHLOGY, *Desmophlog'ia*; from *δεσμος*, 'a ligament,' and *φλογος*, 'inflamed.' Inflammation of the ligaments.

DESMORRHÆX'IS, from *δεσμος*, 'a ligament,' and *ρῆξις*, 'rupture.' Rupture of an articular ligament.

DESMOT'OMY, *Desmoto'mia*; from *δεσμος*, 'a ligament,' and *τεμνειν*, 'to cut.' The part of anatomy, which teaches the mode of dissecting the ligaments.

DESOXYGENÈSES. M. Baumes includes, under this title, an order of diseases, which he considers dependent upon a diminution in the quantity of the oxygen necessary for the Animal Economy.

DESPOTAT (F). *Mil'ites despotati*. Infirm soldiers, formerly charged with the office of removing the wounded from the field of battle: perhaps from *desporta'tor*, 'one who bears away.' The class of *Despotats* was introduced by Leo VI., at the commencement of the 9th century.

DESPUMA'TION, *Despuma'tio*, *Apaphris'mos*, *Epaphris'mos*, from *despuma're*, 'to skim,' 'to remove the froth.' The separation of the froth and other impurities, which rise,

by the action of fire, to the surface of any fluid.

DESKUAMA'TION, *Desquama'tio Cutis*, *Ecclipsis*, *Aposyr'ma*, from *desquama're*, 'to scale off.' Exfoliation or separation of the epidermis, in the form of scales, of a greater or less size. This affection is a common consequence of exanthematous diseases.

DESUDA'TIO, *Ephidro'sis*, *sudam'ina*, *Hidro'a*. *Desudation* means a profuse and inordinate sweating; but, most commonly, the term is applied to an eruption of small pimples, similar to millet seed, which appears chiefly on children, and is owing to want of cleanliness.

DETER'GENTS, from *deter'gere*, 'to cleanse.' *Detergen'tia*, *Abstergen'tia*, *Smec'tica*, *Emundan'tia*, *Mundificati'va*, *Rhyp'tica*, (F) *Détersifs*, *Mondificatifs*. Medicines, which possess the power to deterge or cleanse wounds, ulcers, &c. They belong to the class of stimulants, or to that of emollients.

DETRI'TUS, from *deter'ere*, 'to bruise or wear out.' The inorganic residuum, occupying the place of the organic texture of parts which have undergone disorganization.

DETRUNCA'TION, *Detrunca'tio*, (F) *Détroncation*. Separation of the trunk from the head of the fœtus, the latter remaining in the uterus.

DETRU'SOR URINÆ, from *detru'dere*, 'to thrust out.' The muscular coat of the urinary bladder was formerly so called. It was, also, named, *Constrictor Vesicæ Urinariæ*.

DETUMESCENCE (F), *Detumescen'tia*, from *detu'mere*, 'to cease to swell.' A diminution of swelling. This word has nearly the same signification as the French word *Désenflure*. The latter, is, however, more particularly applied to the diminution of œdema or anasarca: the other, to the resolution of a tumour, properly so called.

DEUNX. The ancient name of a weight of 11 ounces, supposing the pound to consist of 12.

DEUTERI'A, from *δευτερος*, 'the second.' Vogel has used this term for the symptoms produced by retention of the secundines. The word was also applied, by the Greeks, to a second or inferior wine.

DEUTEROPATHI'A, *Mor'bus secunda'rius*, from *δευτερος*, 'the second,' and *παθος*, 'disease.' A secondary disease. One produced by another, and of which it is only, in some measure, symptomatic, or the sympathetic effect.

DEUTO, *δευτερος*, 'second.' A prefix denoting two or double, as *deutoxide*, having two degrees of oxidation.

DEVEL'OPEMENT, from (F) *développer*, 'to unfold.' In *Physiology*, it means growth or increase; and in *Pathology*, its signification is similar. By developement of the pulse, e. g. is understood an increase in its strength and fulness.

DEVIA'TION, *Devia'tio*, from *de*, 'from,' and *via*, 'the way.' Out of the way. By this word is meant—a vicious curvature of the spine or other bones;—faulty direction of the teeth or other part:—the passage of blood, bile, urine, milk, &c. into vessels not natural to them, &c.

DEX'TANS. A weight of 10 ounces, supposing the pound to consist of 12.

DI, *δι*, *δ्व*, 'bis, twice, double.' Hence, *Dicrotus*, *Digastricus*, &c.

DIA, *δια*, in composition, 'through, asunder, out of, separated.' When prefixed to any therapeutical agent, it meant, in ancient pharmacy, a preparation into which that agent entered.

DIABE'TES, from *δια*, 'through,' and *βαινω*, 'I pass.' *Urinæ proflu'vium*, *Sipho urinæ*. *Urorrhag'ia*, *Phthisu'ria*, *Polyu'ria*, *Hydrops ad mat'ulam*, *H. Matel'læ*, *Dip'sacos*, *Diarrhæ'a in Urina*, (F) *Flux d'Urine*. A disease, characterized by great augmentation and manifest alteration in the secretion of urine; with excessive thirst, and progressive emaciation. Cullen has described two species:—*Diabetes insip'idus* and *D. Mellitus*, (F) *Diabète faux ou insipide, et Diabète*; the former being, simply, a superabundant discharge of limpid urine, of its usual, urinary taste: the latter:—the *D. Mellitus*, called, also, *Paru'ria Mellita*, *Diabetes Anglicus*, *Apoceno'sis Diabetes Mellitus*,—falls under the definition given above. The quantity of urine, discharged in the 24 hours, is sometimes excessive, amounting to 30 pints and upwards: and each pint containing sometimes 2½ oz. of saccharine matter. The saccharine matter replaces the urea; which is not found in the urine of those labouring under diabetes. Where the disease is situate is not clear. The whole system of nutrition, however, seems to be morbidly implicated. A part of the urine must be formed at the expense of the system, as the egesta frequently far exceed the solid and liquid ingesta. On dissection, no morbid appearance is met with, sufficient to enable us to fix on the seat of this distressing affection.

All the remedies, that have been tried, have usually been found insufficient in the *D. Mellitus*. The *D. insip'idus*, *Hyperure'sis aquo'sa*, which occurs in hysterical habits, and has, hence, been called, *D. hyster'icus*, is of comparatively trifling moment. Exclusive diet, and attention to the state of the cutaneous transpiration, which have sometimes produced good effects in *D. Mellitus*, have most commonly failed.

DIABOT'ANUM, from *δια* and *βοτανη*, 'an herb.' A medicine, prepared with herbs.—Galen.

DIABROTICUS, from *δια*, 'through,' and *βρωσκω*, 'I eat or corrode.' A substance, capable of causing erosion of the part to which it is applied. It ordinarily means a medi-

cine, whose activity places it between escharotics and caustics.

DIACAR'YON, from *δια* and *καρυον*, 'a nut.' *Rob nucum*. The rob of nuts or of walnuts.

DIACATHOL'ICON, *Diacathol'icum*, from *δια* and *καθολικος*, 'universal.' The name of a purge, so called from its general usefulness. It was an electuary, and composed of the pulp of cassia, tamarinds, leaves of senna, root of polypody, flowers of the violet, rhubarb root, aniseed, sugar, liquorice, and fennel.

DIACAU'SIS, from *διακαυω*, 'I burn.' Excessive heat. Overheating.

DIACAUS'TIC. Same etymon. *Dia-caus'ticus*. That which is caustic by refraction; as a double, convex lens, which has been sometimes used for cauterizing an ulcer by directing the sun's rays upon it.

DIACHALA'SIS, from *διαχαλαω*, 'to be open or relaxed.' Hippocrates uses this word for fracture of the bones of the skull; or for relaxation and separation at the sutures, in consequence of a wound of the head.—Hippocrates.

DIACHALCIT'EOS, from *δια* and *χαλκίτις*, 'chalcitis or colcothar.' A plaster, whose composition is the same as that of the diapalma, except that, in place of the sulphate of zinc, a mixture of oil and colcothar is substituted.

DIACHEIRIS'MOS, *Tracta'tio manual'ria*; from *δια* and *χειρ*, 'the hand.' The preparation, administration, and dispensing of medicines.—Hippocr.

DIACHORE'MA, *Diachore'sis*, from *διαχαρσσω*, 'I separate from.' Every kind of excreted matter and excretion; but more particularly the fæces and alvine excretion.—Foësius, Goræus.

DIACHRISTA, from *δια* and *χρίω*, 'I anoint.' Medicines, applied as abstergents to the velum palati, the palate itself, the tongue, &c. Probably gargles. Paulus of Ægina.

DIACH'YLON or **DIACH'YLUM**, from *δια* and *χυλος*, 'juice;' i. e. composed of juices. The plaster of this name was formerly made of certain juices. The term is now confined to the **EMPLASTRUM PLUMBI** or **Lead Plaster**.

DIACHYTICA, from *δια* and *χυω*, 'I pour out.' Medicines, which discuss tumours.

DIACINE'MA, from *δια* and *κινω*, 'I move.' A slight dislocation.—Celsus, Galen. A subluxation.

DIACODIUM, *Confec'tio ex Capit'ibus Papav'ris*; from *δια* and *κωδία*, 'a poppy-head.' (F) *Diacode*. The ancients had various forms for preparing it. The *Syrup of Poppies*—*Syrupus Papav'ris*—is, now, substituted for it.

DIAC'OPE, *En'copē*, from *δια* and *κοπτειν*, 'to cut.' A cut, incision, fissure, or longitu-

dinal fracture. When used, since Galen, it generally signifies an oblique incision, made in the cranium by a sharp instrument, without the piece being removed. It is not now employed.

DIACOPRÆGIA, from *δια*, *κοπρος*, 'excrement,' and *αιξ*, *αιγος*, 'a goat.' A name, given in Blancard's Lexicon, to a medicine, composed of goat's dung, which the ancients praised in diseases of the spleen, parotids, &c.

DIADEMA, *Fascia capitis*, *Redimiculum* from *διαδω*, 'I surround.' A sort of bandage:—advised in headache, in which relaxation of the sutures was apprehended.—Forestus.

DIADERMIATRIA, from *δια*, *δερμα*, 'the skin,' and *ιατρευ*, healing. Treatment by the skin, as by the endermic and iatralaptic methods.

DIADEX'IS, *Diad'ochē*, *Metatoptosis*, from *διαδεχομαι*, 'I transfer,' 'I succeed to.' A transformation of a disease into another, differing from the former both in its nature and seat.

DIAD'OSIS, from *διαδιδωμι*, 'to distribute.' In some authors, it means the distribution of nutritive matter over the whole body; in other words, *nutrition*; whilst in others it is synonymous with the remission or cessation of a disease.

DIÆ'RESIS, from *διαίρεω*, 'I divide,' 'I separate.' A division or solution of continuity. A surgical operation, which consists in dividing any part of the body.

DIÆTE'MA. It has the same signification as Diet, with most authors. Galen gives it a more extensive meaning; comprising, under it, what constitutes *Hygiène*.

DIAGNO'SIS, *Dignō'tio*, *Diagnosticē*, *Deprehen'sio*, from *δια* and *γνωσκα*, 'I know.' *Discrimination*, (F) *Diagnose*, *Diagnostic*. That part of Medicine, whose object is the discrimination of disease—the knowledge of the pathognomonic signs of each. It is one of the most important branches of general Pathology.

DIAGNOS'TIC, *Discretivus*, *Diagnos'ticus*; same etymon. A symptom, which is characteristic of any disease.

DIAGRYD'IUM CYDONIA'TUM, from *diagrydium*, 'scammony,' and *cydonium*, 'quince.' A pharmaceutical preparation, obtained by inspissating and drying, by means of heat, two parts of *scammony* and one of *quince juice*. It was formerly used as an energetic purgative.

DIAGRYD'IUM GLYCYRRHIZA'TUM. An analogous preparation, containing extract of liquorice in place of quince juice.

DIAGRYD'IUM SULPHURA'TUM. Scammony, which has been exposed to the vapour of burning sulphur. These *diagrydia* are not now used.

DIALEP'SIS, *Intercept'io*, *Diar'ochæ*, from *διαλαμβάνω*, 'I intercept.'—Hippocrates em-

ploys this word for the interstices or intervals, left between the turns of a bandage.

DIAL'YSIS, *Dissolu'tio*. A dissolution or loss of strength. Weakness of the limbs. Also, a solution of continuity.

DIAM'BRÆ SPEC'IES. A name, given by the ancients, to powders, one of which bore the name—*Species diambrae sine odoratis*: the other, that of—*Species diambrae cum odoratis*. The former was composed of *cinnamon*, *angelica root*, *cloves*, *mace*, *nutmeg*, *galanga*, *cardamom*, and numerous other substances; the latter, besides, had *ambergris* and *musk*. These powders were used as tonics, in cases of debility of the stomach, and in certain nervous affections.

DI'AMOND, *Ad'amas*, from *α* privative, and *δαμαω*, 'I conquer,' (F) *Diamant*. Invincible—so called from its hardness. It is the most precious of all stones, and was formerly conceived to possess extraordinary cordial virtues.

DIAMO'RUM, *Rob ex moris*, from *δια* and *μαγον*, 'a mulberry.' An ancient syrup, prepared with honey and mulberry juice. It was employed as a gargle in sore-throat.—Galen.

DIAMOTO'SIS, from *μότης*, 'charpie,' 'lint.' The introduction of lint into an ulcer or wound.

DIANANCAS'MOS, *Dianancas'mus*, *Coac'tio*, from *δια* and *αναγκάζω*, 'I force.' Coaptation, reduction of a fractured or luxated limb.

DIAN'THUS CARYOPHYLL'LUS, from *Δις*, 'Jove,' (?) *ανθος*, 'flower,' and *caryophyllum*, 'the clove.' *Clove Pink*. Also called *caryophyllum rubrum*, *Tu'nica*, *Tu'nica hortensis*, *T. rubra*, *Caryophyllus hortensis*, *Clove July flower*, *Gilliflower*. Order, *Caryophyllæ*. (F) *Œillet giroflée*. The flowers were, once, much used; but are now only employed in syrup, as a useful and pleasant vehicle for other medicines.

DIAPAL'MA, *Phænic'ium Emplas'trum*. A plaster composed of equal parts of *litharge*, *olive oil*, *axunge*, *water*, a certain quantity of *sulphate of zinc* dissolved in water, and *white wax*. It is classed amongst the topical, desiccative, emollient, resolvent, deterrent, and cicatrizing medicines. Mixed with a quarter of its weight of *olive oil*, it acquires the consistence of an ointment, and forms the *Cerate of Diapalma*.

DIAPAS'MA, from *διαπασσιν*, 'to sprinkle.' A medicine, reduced to powder, and sprinkled over the body or some part of it.

DIAPEDESIS, *Transuda'tio*, *Persuda'tio*, from *διαπνδω*, 'I leap through.' Exhalation of blood, in the form of dew, at the surface of the skin, or of any membrane. *Sweating of blood*. (F) *Sueur de Sang*. *Hæmorrhagia per diapedesin*, *Hæmatopede'sis*, *Hæmidro'sis*.

DIAPENT'ES or DIAPENTE, from *δια*

and *πεντη*, 'five.' A medicine, composed of five ingredients. See *Diatessaron*.

DIAPHŒNICON, *Diaphœ'nix*, *Medicamentum ex Pal'mulis*, from *δια* and *φαινίζ*, 'a date.' A drastic electuary, of which the *date* was the chief excipient.

DIAPHORE'SIS, from *διαφωρεω*, 'I dissipate.' A greater degree of perspiration than natural, but less than in *sweating*. Every kind of cutaneous evacuation.

DIAPHORET'IC. Same etymon; *Diapno'icus*, *Diaphoret'icus*. Medicines, which excite diaphoresis. They are very uncertain, as a class.

The following is a list of the chief reputed Diaphoretics:

Ammoniae Acetatis Li-	Ipecacuanha.
quor,	Mezereum.
Carbonas.	Opium—and its active
Antimonialis pulvis.	principle Morphine.
Antimonii et Potassæ	Sarsaparilla.
Tartras.	Sassafras.
Sulphuretum	Serpentaria.
præcipitatum.	Spiritus Ætheris Nitrici.
Asclepias tuberosa.	Sulphur.
Camphora.	Xanthoxylum.
Contrayerva.	
Dulcamara.	Caloric.
Eupatorium perfoliatum.	Exercise (active.)
Guaiaci Lignum.	Friction.
Guaiacum.	

The epithet *Diaphoretic* has, also, been given, by some, to continued fever, accompanied with constant perspiration.

DIAPHRAGM, *Diaphrag'ma*, *διαφραγμα*, *Discretorium*, *Phrenes*, *Septum transversum*, *Discrimen Thora'cis et Ventris*, *Disceptum*, *Cinetus*, *Diazo'ma*, *Disseptum*, *Præcordia*; the *Midriff*, *Succin'gens membr'na vel Mus'culus*; from *δια*, 'between,' and *φρασσαω*, 'I close.' A large, azygous muscle; stretched, transversely, between the thoracic and abdominal cavities, which it separates from each other: tendinous in the centre; thin, almost circular, and unequally convex, upwards. It is fleshy at its circumference, which is attached to the cartilago ensiformis, to the six last ribs, to the aponeurosis stretched from the last rib to the transverse process of the first lumbar vertebra; and, lastly, to the bodies of the three or four first lumbar vertebræ. When it contracts, its fibres become straight; the chest is enlarged, and the abdomen diminished. It is then an inspiratory muscle. It may, also, diminish the capacity of the chest; and be an expiratory muscle. This muscle plays an important part in sighing, yawning, coughing, sneezing, laughing, sobbing, crying, hic-coughing, singing, vomiting, the excretion of the fæces and urine, the expulsion of the fœtus, &c.

DIAPHRAGMAL'GIA, from *διαφραγμα*, the 'diaphragm,' and *αλγος*, 'pain.' Pain in the diaphragm.

DIAPHRAGMAT'IC, *Diaphragmat'icus*. Belonging to the diaphragm. A name given to several vessels and nerves.

DIAPHRAGMAT'IC OF PHRENIC AR'TERIES. These are distinguished into *superior* and *inferior*. The *former*, called, also, *supradiaphragmatic*, are two in number, one on each side. They arise from the internal mammary, and descend along the phrenic nerve, to be distributed on the upper surface of the diaphragm. The latter, or *infradiaphragmatic*, are also two in number. They arise from the upper part of the abdominal aorta or from the cœliac artery, and divide into two principal branches, which are distributed on the lower surface of the diaphragm and in its substance.

The *superior diaphragmatic veins* follow the same course as the arteries; and empty themselves—the *right*, into the vena cava superior;—the *left*, into the corresponding subclavian vein. The two *inferior diaphragmatic veins* open into the vena cava inferior.

The **DIAPHRAGMAT'IC OF PHRENIC NERVES** are two in number; one on the left side, the other on the right. They arise from the second and third nerves of the cervical plexus, about the middle of the neck. They receive two or three filaments from the brachial plexus, after which they descend into the chest at the sides of the pericardium, and are distributed on the diaphragm.

The **DIAPHRAGMAT'IC PLEX'USES** are two in number; one right, and the other left. They arise from the upper part of the solar plexus, by a small number of branches, which are distributed to the diaphragm, following exactly the branches of the inferior diaphragmatic arteries.

DIAPHRAGMAT'IC HERNIA, *Phrenic Hernia*, *Diaphragmatocele*. The abdominal viscera are occasionally protruded through the diaphragm, either through some of the natural apertures in the muscle, or through deficiencies, or wounds, or lacerations in it.

The **DIAPHRAGMAT'IC RING**, (F) *Anneau diaphragmatique* of Chaussier, is a name given to the irregularly quadrilateral aperture, by which the vena cava inferior passes through the diaphragm.

DIAPHRAGMITIS, from *διαφραγμα*, 'the diaphragm.' *Diaphragmatitis*, *Inflammat'io septi transvers'i*, *Paraphrenitis*, *Empres'ma Pleuri'tis Diaphragmat'ica*, *Paraphrene'sis Diaphragmat'ica*, *Inflammation of the Diaphragm*. The terms, *Paraphrenitis* and *Paraphrene'sis* have been obtained from the Peripatetic Philosophy, which supposed the seat of the *φενν* or soul to be the præcordia. The essential symptoms of diaphragmitis are:—painful constriction around the præcordia, with small, quick, laborious breathing. It is a rare disease.

DIAPH'THORA, from *δια*, and *φθαινω*, 'to corrupt.' Corruption in general; more especially corruption of the fœtus in utero.—Hippocr. Also, corruption of the blood in the stomach.—Galen.

DIAPHYSIS, from *διαφύω*, 'I rise between.' *Interstitium*, *Discriminatio*; an interstice, interval, division. Any thing which separates two bodies. Also, the middle part or body of a long bone, *Corpus Ossis*. One of the ligaments of the knee.—Hippocrates, *Paré*.

DIAPIA. Some lexicographers use this word synonymously with *DIAPYESIS*, or *SUPPURATION*; others have employed it, in opposition to *MYOPIA*.

DIAPOREMA. Anxiety, jactitation; from *διαπορέω*, 'I doubt.'

DIAPRUNUM, *Diacoccyme'lon*. A purgative electuary, of which the pulp of prunes and *rhubarb* form the base. By adding to the *diaprunum simplex* a 24th part of powdered scammony, the *Diaprunum resolutivum* or *compositum* is formed. It is more active than the former.

DIAPYETICA, *Dyapye'mata*, from *διαπύμα*, *διαπύσις*, 'suppuration.' Medicines, which promote suppuration.

DIARRHŒA, from *δια*, 'through,' and *ρεω*, 'I flow.' *Alvi proflu'vium*, *A. fluxus aquo'sus*, *Ventris proflu'vium*, *Cæliorrhœa*, *Cacato'ria*, *Coprorrhœa*, *Catar'rhæus intestinalis*, *Alvi fluxus*, *Deflux'io*, *Lax*, *Looseness*, (F) *Diarrhée*, *Dévoient*, *Catarrhe intestinal*, *Flux de Ventre*, *Courante*. A disease, characterized by frequent, liquid, alvine evacuations, and which is generally owing to inflammation or irritation of the mucous membrane of the intestines. It is commonly caused by errors in regimen, the use of food noxious by its quality or quantity, &c. It may be acute or chronic. Many varieties have been made by some Nosologists—e. g. *mucous*, *bilious*, *serous*; dependant upon the matters evacuated.

Diarrhœa requires different treatment, according to its nature. If caused, as it often is, by improper matters in the intestinal canal, these must be evacuated; and the astringent plan of treatment must not be adopted, unless the discharges seem kept up by irritability of the intestines, or unless they are colliquative. The indiscriminate use of astringents is to be deprecated.

A very fatal *diarrhœa* prevails amongst the native inhabitants of India, to which Mr. Tytler has given the name *Diarrhœa hectica*, because, like hectic fever, it seems to obtain habitual possession of the constitution, to operate upon it with scarcely any perceptible intermission, and, in general, to defy the most powerful remedies.

DIARTHRODIAL, *Diarthrodia'lis*. Relating to diarthroses or movable articulations, as *diarthro'dial articulation*. *Diarthro'dial cartilage* or *incrusting cartilage* is the cartilage which invests the articular extremity of a bone.

DIARTHROSIS, from *διαρθρῶ*, 'I articulate.' *Dearticulatio*, *Proarthro'sis*, *Aparthro'sis*, *Abarticulatio*, *Coarticulatio*. (F)

Emboiture. A movable articulation. One which permits the bones to move freely on each other in every direction, as in the case of the shoulder-joint.

DIASATYRION, from *δια*, and *σατυριον*, 'the orchis mas'cula.' An electuary, of which this plant formed the base. (?)—Myrepsus. The ancients attributed to it the faculty of exciting the organs of generation.

DIASCORDIUM, from *δια* and *σκορδιον*, 'the water germander.' An electuary, so called because this plant enters into its composition. The Parisian Codex has a formula for its preparation, under the title, '*Electuarium opiatum astrin'gens vel diascor'dium*. (*R. fol. scord. 3 iss, rosar. rubr., bistort. rad., gentianæ, tormentillæ, sem. berber. aa 3 ss. zingib., piper. long. aa 3 ij, cassiæ lignæ, cinnamom., dictamn. cretens., styrac. calamit., galban., gum. acaciæ aa 3 ss, bol. oriental. præpar. 3 ij, extract. vinos opii 3 ij, mel. rosat. præp. 1b ij, vin. hispan. 1b ss: fiat electuarium.*) In place of the *styrax calamita*, the balsam of tolu or benjamin may be used. The opium is, in this preparation, in the proportion of 1 to 184. The diascordium is employed in *diarrhœa* and *dysentery*, as a tonic, stomachic, and astringent. The common dose is from a scruple to a drachm and a half.

DIASPERMATON. The ancient name of two cataplasms, composed of seeds.—Galen, Paulus.

DIAS'TASIS, 'separation,' *Diaste'ma*, *Dissiden'tia*, 'distance.' A separation of bones from each other, and particularly of the bones of the cranium; of the radius from the ulna, and the fibula from the tibia. The ancients used this word to designate the three dimensions of the body,—length, breadth, and thickness; for the interval separating the patient from the physician; the swelling of varicose veins; the time at which some change occurred in disease, &c.

DIAS'TOLE, from *διαστέλλω*, 'I dilate,' 'I open.' Dilatation of the heart and arteries, when the blood enters their cavities. It is the opposite movement to *systole*, in which the heart and arteries contract to send forth the blood. *Diastole* and *systole* are, consequently, successive movements. *Diastole* occurs simultaneously in the two ventricles. The almost inappreciable time, which elapses between the diastole and systole has been called *perisystole*. When we speak of the contraction or *systole* of the heart, as well as its *diastole* or dilatation, we mean that of the ventricles. This dilatation is active.

DIASTOMOTRIS, from *διαστομοω*, 'I dilate.' Dilating instruments, such as the different kinds of specula for the mouth, anus, vagina, &c.

DIATASIS, *Disten'sio*, from *διατείνω*, 'I distend.' The reduction of a fracture, by extension and counter-extension.

DIATESSARON, from *δια* and *τισσαρις*,

'four.' An electuary, into the composition of which entered four medicines; viz. the roots of *gentian* and *aristolochia rotunda*, and bay berries, each 3 ij, honey ℥ ij. The whole was incorporated with extract of juniper. The *diapentes* is nothing more than this electuary, mixed with two ounces of ivory shavings. The *diatessaron* is tonic, and it was formerly employed in cases of stings and bites of venomous animals. It was regarded as emmenagogue, alexiterial, and alexipharmic.

DIATHESIS, from διατιθημι, 'I dispose.' Disposition, constitution, affection of the body: predisposition to certain diseases rather than to others. The principal diatheses, mentioned by authors, are, the cancerous, scrophulous, scorbutic, rheumatic, gouty, and calculous.

DIATRAGACAN'THUS. A powder, composed of gum tragacanth. 3 ij, gum arabic 3 j and 3 ij, starch 3 ss, liquorice 3 iij, as much of the seed of the melon and white poppy; seeds of the water-melon, cucumber, and gourd, and sugar candy 3 iij. It was used as a demulcent.

DIATRI'ON or **DIATRI'UM**, from δια and τρεις, 'three.' A medicine, composed of three ingredients. There were formerly two kinds. The first was called *Diatri'um Pipe'reon species*, and was formed of black and long pepper, aniseed, thyme, and ginger. It was highly stimulating. The second species was known under the name, *Diatrinsan'talon*, *Diatri'um Santalo'rum pulvis*, or *Powder of the three Sanders*. They were considered diaphoretic.

DIATRITA'RII. The *Methodists* were so called, who pretended to cure all diseases by subjecting the patients for three days to a rigid diet.

DIATRITOS. Diet of three days. The means used by the *Methodists* to cure disease.

DIAZOS'TER, from διαζωννυμι, 'I surround.' The twelfth vertebra of the back, because it corresponds to the girdle, ζωστήρ.

DICHAL'CON. A weight, equal to a third part of an obolus.

DICLIDOSTO'SIS, from διπλς, 'a double door,' and οστώσις, 'ossification.' Ossification of valves—as of the heart.

DICHOPHY'IA, from διχα, 'double,' and φυω, 'I grow.' A disease of the hairs, in which they split and grow forked.

DIC'ROTUS, *Bisferiens*, from δις, 'twice,' and κρουω, 'I strike.' An epithet, given to the pulse, when it seems to beat twice as fast as usual. It is synonymous with the term, *rebounding pulse*,—the artery rebounding af-

ter striking, so as to convey the sensation of a double pulsation. It has been considered, and with truth, to frequently foretell hemorrhage. In bad cases of typhus, it certainly announces such a tendency.

DICTAM'NUS ALBUS, from Dictamnus, a town in Crete. *White Fraxinel'la* or *Bastard Dit'tany*, *Fraxinel'la*, (F) *Dictame*, *Fraxinelle*. The fresh root has been considered nervine, anthelmintic, and emmenagogue. It is not used.

DICTYI'TIS, *Inflamma'tio Ret'inæ*, from δικτυον, 'a net,' the retina, and itis, denoting inflammation. Inflammation of the Retina.

DIDYMAL'GIA, from διδυμοι, 'the testicles,' and αλγος, 'pain.' Pain in the testicles.

DIECBOL'ION, from δια and εκβαλλω, 'I cast out:' διεκβολιον. A name given, by the ancients, to a remedy, which they believed capable of producing abortion.

DIERENBACH, MINERAL WATERS OF. D. is a city in Bavaria, two leagues from which is a sulphurous spring.

DIES, *He'mera*, ημερα. A Day. The day is, properly, the period, during which the solar light illumines our horizon: but commonly, also, we designate by the word *day*, the period of 24 hours, or *Nycthe'meron*, which is frequently divided into four parts—morning, mid-day, evening, and midnight. In antiquity, great importance was attached to the observation of days in disease. The Medical day is usually reckoned at 24 hours; universally, in estimating the duration of a disease. In parts of the United States, it comprises only the time when the sun is above the horizon, as regards the administration of medicine. If a medicine be ordered to be taken four times a day, it is understood to mean during the 12 hours of day. (F) *Jour*.

DIET, *Diæ'ta*, *Ratio victus*. Originally, this word signified nearly the same thing as *Hygiène* and *Regimen*, i. e. Diet was the employment of every thing, necessary for the preservation of health and life. At the present day, it signifies a particular kind of food, and, at times, a privation of food and drink: abstinence. To put any one upon diet, (F) *Mettre quelqu'un à la diète*, means to deprive him of his usual nourishment:—*milk diet*, means a diet of milk, &c.

See Aliment, Dietetics, Hygiene, and Regimen.

DIET HOSPITAL. Every well regulated Hospital has certain dietetic regulations. The following *Table of Dietary* shows the particular regimen selected for the sick, in certain hospitals.

DIET-TABLE OF DIFFERENT HOSPITALS OF GREAT BRITAIN, IRELAND, AND THE UNITED STATES.

1. ENGLAND.		
HOSPITALS.	ORDINARY DIET.	LOW DIET.
LIVERPOOL.	<i>Breakfast.</i>—A pint of milk porridge, breaded every morning. <i>Dinner.</i>—(1, 5, 7*)—Boiled beef and vegetables.—(2)—Rice, milk, and bread.—(3)—Stewed beef and potatoes.—(4)—Pease soup and bread.—(6)—Ale, gruel, and bread. <i>Supper.</i>—A pint of broth and bread on Sunday and Thursday. A pint of milk and bread on the other days. <i>FULL DIET.</i>—The same as the ordinary diet.	Consists throughout the day of milk porridge, common batter, or rice pudding. The ale and beer are bought.
BRISTOL.	<i>Breakfast.</i>—On Sunday, Tuesday, Thursday, and Saturday, milk porridge; Monday, Wednesday, and Friday, meat broth; 12 oz. of bread on meat days; 14 oz. on the other days. <i>Dinner.</i>—(1, 3, 5)—Three-fourths of a pound of meat, with vegetables; two pints of beer daily.—(2, 4, 6, 7)—A pint of gruel or pap. <i>Supper.</i>—A wine pint of gruel of meal broth, on Sunday; 2 oz. of cheese for the men, one-fourth of an oz. of butter for the women, on Monday, Wednesday, Friday, and Saturday. <i>FULL DIET.</i>—The patients have meat every day.	<i>Breakfast.</i>—A wine quart of milk porridge or milk. <i>Dinner.</i>—A wine quart of weak broth. <i>Supper.</i>—The same as breakfast, 14 oz. of bread, and barley water for common drink. Twenty bushels of malt, 15 pounds of hops, to 14 gals. of strong ale; 21 bushels of malt, and 12 pounds of hops, to 360 gals. of ale; 11 bushels of malt, 7 pounds of hops, to 360 gals. of small beer.
BIRMINGHAM, Revised 1819.	<i>Breakfast.</i>—To each man a pint and a half of milk porridge, with 4 oz. of bread added to it. To each woman or child, one pint of milk porridge, without bread. To each patient 2 oz. of bread daily. <i>Dinner.</i>—(1, 3, 5)—To each man 8 oz. of baked or boiled meat; to each woman or child, 6 oz. To each patient, 6 oz. of vegetables, and one pint of beer daily.—(2)—To each man, a quart of rice or barley broth, made with a variety of vegetables; to each woman or child, one pint and a half.—(4)—Twelve ounces of boiled rice or bread pudding.—(6)—Four oz. of boiled or baked meat, a pint of rice or barley broth, made with a variety of vegetables.—(7)—Six oz. of baked rice or bread pudding, or a pint of rice or barley broth, made with a variety of vegetables. <i>Supper.</i>—A pint of broth, milk porridge, or gruel. <i>FULL DIET.</i>—Breakfast the same as in ordinary diet. Dinner, 6 oz. of boiled or baked meat, 6 oz. of vegetables, 6 oz. of baked rice or bread pudding. Supper, the same as ordinary diet.	<i>Breakfast.</i>—The same as ordinary diet. <i>Dinner.</i>—A pint of broth or rice milk, 6 oz. of baked rice or bread pudding, to each patient every day. <i>Supper.</i>—The same as ordinary diet.
2. SCOTLAND.		
EDINBURGH.	<i>Breakfast.</i>—One mutchkin of porridge, three gills of milk or beer; or five and one-fourth ounces of fine bread, milk or beer. <i>Dinner.</i>—(1, 4)—One choppin of broth, 8 ounces of butcher's meat boiled in the broth, or beef-steak; five and one-fourth ounces of bread.—(2, 5, 7)—A choppin of broth made of beef and bones, barley, groats, potatoes, and vegetables; five and a half ounces of bread.—(3, 6)—Potato soup, with beef and veal, or bones; bread as above. <i>Supper.</i>—As the breakfast each day. <i>FULL DIET.</i>—At discretion.	At discretion.
GLASGOW.	<i>Breakfast.</i>—Milk porridge, quantity not limited, with half a mutchkin of sweet milk, or one mutchkin of buttermilk or beer. <i>Dinner.</i>—(1)—Broth made of barley, vegetables, and the dripping of the meat roasted during the week, with a quartern loaf to a man, and half to a woman.—(2, 4)—Beef boiled; 8 oz. to the men, and 6 oz. to the women; a quartern loaf to a man, and half to a woman, or vegetables.—(3, 6)—Broth, made with beef, barley, and vegetables; a quartern loaf to men, and half to women.—(5)—Potato soup, with cow heels, bones, &c.—(7)—Six oz. of cheese to men, 4 oz. to women; bread as above. <i>Supper.</i>—As the breakfast each day. <i>FULL DIET.</i>—At discretion.	At discretion.

* The figures in parenthesis denote the days of the week.

3. IRELAND.		
HOSPITALS.	ORDINARY DIET.	LOW DIET.
5 HOSPITALS of House of Industry.	<i>Per Diem.</i> —Sixteen oz. of white bread, one quart of new milk, and one quart of buttermilk for whey. <i>FULL DIET.</i> —Two ounces of bread <i>per diem</i> , one quart of broth, one quart of new milk.	One pint of flummery <i>per diem</i> , one quart of new milk, and one quart of buttermilk for whey.
STEPHEN'S HOSPITAL.	<i>Breakfast.</i> —Half a pound of bread, one pint of milk. <i>Dinner.</i> —(1, 2, 3, 5, 7)—One quart of soup, half a pound of bread, or two pounds of potatoes; one pint of milk or beer.—(4, 6)—Twelve oz. of bread, one quart of sweetened gruel.	Daily, half a pound of bread, two quarts of new milk, and one quart of buttermilk.
ROYAL HOSPITAL, Phoenix Park.	<i>Breakfast.</i> —One pint of oatmeal or rice gruel. <i>Dinner.</i> —Half a pound of meat, three-fourths of a pound of bread; one pound of potatoes. <i>Supper.</i> —One pint of oatmeal or rice gruel. <i>FULL DIET.</i> —Three-fourths of a pound of meat, one pound of bread, half a pound of potatoes, one quart of beer.	<i>Breakfast.</i> —Tea. <i>Dinner.</i> —Half a pound of bread made into panada or pudding.
RICHMOND HOSPITAL.	<i>Breakfast.</i> —One quart of stirabout, one pint of new milk. <i>Dinner.</i> —Bread, 8 oz.; soup, one quart. <i>Supper.</i> —Bread, 4 oz.; new milk, one pint. <i>FULL DIET.</i> —Breakfast, bread, 8 oz.; new milk, one pint.—Dinner, bread, 8 oz.; mutton or beef, 8 oz.—Supper, bread, 4 oz.; new milk, one pint.	<i>Breakfast.</i> —Flummery, one pint; new milk, one pint. <i>Supper.</i> —Half a pound of bread, one pint of milk.
BELFAST HOSPITAL.	<i>Breakfast.</i> —One pint of stirabout, one pint of new milk. <i>Dinner.</i> —Half a pound of bread, one pint of new milk. <i>Supper.</i> —One pint of flummery, one pint of new milk. <i>FULL DIET.</i> —Breakfast, one quart of stirabout, one pint of new milk.—Dinner, 2 lbs. of potatoes, one pint of milk.—Supper, one pint of flummery, one pint of new milk.	<i>Per diem.</i> —Quarter of a pound of bread, one quart of gruel, three pints of new milk, half a pint of flummery. Barley-water at occasions.
CORK FEVER HOSPITAL.	<i>Breakfast.</i> —One half quartern loaf for every four, and one pint of new milk each. Under 12 years, half a quartern loaf for every eight. <i>Dinner.</i> —(1, 3, 5)—One pound of beef, and two pounds of potatoes. Under 12 years, half a pound of beef, and one pound of potatoes.—(2, 4, 6, 7)—Potatoes and milk. <i>Supper.</i> —One pint of milk and one of stirabout, for adults; half do. for children.	<i>Breakfast.</i> —One-fourth of a lb. of bread, with milk and water sweetened. <i>Dinner.</i> —Gruel, broth, wine, and porter, as ordered by the Physicians.
4. UNITED STATES.		
PENNSYLVANIA HOSPITAL, Philadelphia.	<i>Breakfast.</i> —Tea, coffee, or chocolate, with sugar or molasses and milk, and common baker's bread, at discretion. <i>Dinner.</i> —Soup, always;—meat of two kinds—mutton and beef, generally—pork frequently; vegetables, according to the season; potatoes and rice, always. <i>Supper.</i> —Tea and bread: no butter allowed either to breakfast or supper, unless prescribed.	Gruel, gum-water, barley-water; and other articles prescribed by the Physician.
PHILADELPHIA HOSPITAL, (Blockley.)	<i>HOUSE DIET.</i> —Arrow root, gruel, sago, tapioca, rice, beef tea, beef essence, chicken water, rice water, barley water, gum water, flaxseed tea, lemonade. (The diet on which the sick are placed on entering the house, until otherwise directed.) <i>MODERATE DIET.</i> —Tea, crackers, broth, rice, mush, milk, potatoes, &c. <i>FULL DIET.</i> —Bread, coffee, tea, white meat, mutton, beef, ham, eggs, butter, soup, potatoes, &c.	The kind and quantity left to the Physician. The House Diet may be regarded as low diet.

DIET DRINK, A decoction or potion, variously composed, and used in considerable quantity, for the purpose of purifying the blood. The *Decoctum Lusitanicum* or *Lisbon Diet-drink*, is one of the most celebrated. See *Decoctum Sarsaparillæ Compositum*.

DIETETICS, DIÆTETICE, DIÆTETICA, *Medici'na Dietet'ica*; same etymon, (F) *Diététique*. A branch of Medicine, comprising the rules to be followed for preventing, relieving, or curing diseases by

diet. Dietetics is diet administered according to principle. It is an important part of Hygiène, (which see.) A well regulated system of diet has great power in checking disease, and likewise in preventing it. A proper knowledge of dietetics is, indeed, as important as that of the *Materia Medica*, strictly so called.

Dietetics is used, also, synonymously with *Hygiène*.

DIETETISTS, *Dietetis'tæ*. Physicians

who apply only the rules of dietetics to their treatment of disease.

DIEU-LE-FILT, MINERAL WATERS OF. The waters of Dieu-le-filt, in France, are chalybeate, and much sought after.

DIEX'ODOS, from *διε* and *εξοδος*, 'an exit or way out.' *Di'odos*. Any opening, by which an excretion takes place.

DIFFUSIBLE, (stimulants) from *diffu'sus*, 'spread abroad.' Those stimulating medicines, which augment the action of the vascular and nervous systems in an acute but transitory manner.

DIGASTRICUS, from *δις*, 'twice,' and *γαστήρ*, 'a belly:' *Biven'ter*, *B. Maxill'æ*, *Dep'rimens Maxillæ Biven'ter*, *Bigaster*, *Mastoido-hyogénien*, *Mastoido-génien*—(Ch.), (F) *Digastrique*, *Abaisseur de la mâchoire inférieure*. The name, *Digastricus*, was formerly given to several muscles. It is now restricted to one of the muscles of the superior hyoid region. The digastricus is thick and fleshy at its extremities; thin and tendinous at its middle. It is attached to the mastoid groove of the temporal bone, and to a fossette at the side of the symphysis menti. Its tendon passes through an aponeurotic ring, which is attached to the os hyoides.

The use of the digastricus is, to depress the lower jaw, or to raise the os hyoides, and to carry it forwards or backwards, as in deglutition. The strong double-bellied muscle, which forms the gizzard of birds, is also called *Digastricus*.

DIGESTIBLE, *Concoc'tûs habilis*. Capable of being digested. All food is not equally digestible, and some of the most nourishing is the least so:—the fat of meat, for example. Certain substances again are entirely rebellious. The following table exhibits the time required for the stomachal digestion of different alimentary substances, in a well-known case, which fell under the care of Dr. Beaumont. The table is taken from the Author's *Elements of Hygiène*, Philadelphia, 1835, p. 505.

The most digestible substances are taken as the standard, which has been arbitrarily fixed at 1,000; and accordingly, *aponeurosis*, the first article in the table, requiring 3 hours, whilst *pig's feet soused*, *rice*, &c., require but one, its digestibility, compared with that of these aliments, is as 333 to 1000; and so of the others.

It need scarcely be said, that all these tabular results apply, in strictness, to the individual concerned only; yet they afford useful comparative views, which, with exceptions depending upon individual peculiarities, may be regarded as approximations, applicable to mankind in general.

ALIMENTS.	Form of preparation.	Time required for stomachal digestion.	Ratio of digestibility compared with the most digestible articles in the table.*
Aponeurosis	boiled	h. m.	333
Apples, mellow	raw	2	500
Do. sour, hard	do.	2 50	352
Do. sweet, mellow	do.	1 50	545
Barley	boiled	2	500
Bass, striped, fresh	broiled	3	333
Beans, pod	boiled	2 30	400
Do. and green corn	do.	3 45	266
Beef, fresh, lean, rare	roasted	3	333
Do. do. dry	do.	3 30	285
Do. do. steak	broiled	3	333
Do. with salt only	boiled	2 45	363
Do. with mustard, &c.	do.	3 30	285
Do.	fried	4	250
Do. old, hard salted	boiled	4 15	235
Beets	boiled	3 45	266
Brains, animal	boiled	1 45	571
Bread, corn	baked	3 15	302
Do. wheat, fresh	baked	3 30	285
Butter†	melted	3 30	285
Cabbage, head	raw	2 30	400
Do. with vinegar	do.	2	500
Do.	boiled	4 30	222
Cake, corn	baked	3	333
Do. sponge	do.	2 30	400
Carrot, orange	boiled	3 15	302
Cartilage	do.	4 15	235
Catfish, fresh	fried	3 30	285
Cheese, old, strong	raw	3 30	285
Chicken, full grown	fricasseed	2 45	363
Codfish, cured dry	boiled	2	500
Corn (green) and beans	do.	3 45	266
Custard	baked	2 45	363
Duck, domesticated	roasted	4	250
Do. wild	do.	4 30	222
Dumpling, apple	boiled	3	333
Eggs, fresh	hard boil'd	3 30	285
Do. do.	soft boiled	3	333
Do. do.	fried	3 30	285
Do. do.	roasted	2 15	444
Do. do.	raw	2	500
Do. do.	whipped	1 30	666
Flounder, fresh	fried	3 30	285
Fowls, domestic	boiled	4	250
Do. do.	roasted	4	250
Gelatine	boiled	2 30	400
Goose, wild	roasted	2 30	400
Heart, animal	fried	4	250
Lamb, fresh	boiled	2 30	400
Liver, beef's, fresh	do.	2	500
Marrow, animal, spinal,	do.	2 40	375
Meat and vegetables	hashed	2 30	400
Milk,	boiled	2	500
Do.	raw	2 15	444
Mutton, fresh	roasted	3 15	307
Do. do.	broiled	3	333
Do. do.	boiled	3	333
Oysters, fresh	raw	2 55	342
Do. do.	roasted	3 15	307
Do. do.	stewed	3 30	285
Parsnips	boiled	2 30	400

* Pigs' feet soused, rice, and tripe soused, being the most digestible articles in the table, are estimated at 1,000.

† In the case of oils, and other substances of similar nature, which undergo little digestion in the stomach, the time merely indicates the period that elapses before they are sent on into the duodenum.

ALIMENTS.	Form of preparation.	Time required for stomachal digestion.	Ratio of digestibility compared with the most digestible articles in the table.
Pig, sucking - -	roasted	<i>h. m.</i> 2 30	400
Pigs' feet, soused -	boiled	1	1000
Pork, fat and lean -	roasted	5 15	190
Do. recently salted -	boiled	4 30	222
Do. do. - -	fried	4 15	235
Do. do. - -	broiled	3 15	302
Do. do. - -	raw	3	333
Do. do. - -	stewed	3	333
Potatoes, Irish - -	boiled	3 30	285
Do. do. - -	roasted	2 30	400
Do. do. - -	baked	2 30	400
Rice - - - -	boiled	1	1000
Sago - - - -	do.	1 45	571
Salmon, salted - -	do.	4	250
Sausage, fresh - -	broiled	3 20	300
Soup, barley - -	boiled	1 30	666
Do. bean - -	do.	3	333
Do. beef, vegetables, and bread - -	do.	4	250
Do. chicken - -	do.	3	333
Do. marrow bones -	do.	4 15	235
Do. mutton - -	do.	3 30	285
Do. oyster - -	do.	3 30	285
Suet, beef, fresh -	do.	5 30	181
Do. mutton - -	do.	4 30	222
Tapioca - - -	do.	2	500
Tendon, boiled - -	do.	5 30	181
Tripe, soused - -	boiled	1	1000
Trout, salmon, fresh -	do.	1 30	666
Do. do. - -	fried	1 30	666
Turkey, domestic -	roasted	2 30	400
Do. do. - -	boiled	2 25	511
Do. wild - -	roasted	2 18	435
Turnips, flat - -	boiled	3 30	285
Veal, fresh - -	broiled	4	250
Do. do. - -	fried	4 30	222
Vegetables and meat, hashed - -	warmed	2 30	400
Venison, steak - -	broiled	1 35	631

DIGESTION, *Digestio*, from *diger'ere*, 'to dissolve.' *Coc'tio*, *Pep'sis*, $\pi\epsilon\psi\iota\varsigma$. Digestion is a function, exclusively belonging to the animal kingdom; by means of which alimentary substances, when introduced into the digestive canal, undergo different alterations. The object of this is to convert them into two parts; the one, a reparatory juice, destined to renew the perpetual waste occurring in the economy: the other, deprived of its nutritious properties, to be rejected from the body. This function is composed of a series of organic actions, differing according to the particular organization of the animal. In man they are eight in number, viz. 1. Prehension of food. 2. Mastication. 3. Insalivation. 4. Deglutition. 5. Action of the stomach. 6. Action of the small intestine. 7. Action of the large intestine. 8. Expulsion of the fæces.

DIGESTION is also a *pharmaceutical* operation, which consists in the solution of certain solid substances in water, alcohol, or other menstruum, at a slightly elevated temperature; for example, in a sand-bath, or by

leaving them exposed for some time to the sun.

DIGESTIVES, *Digesti'va*, *Digeren'tia*; same etymon. (F) *Digestifs*. A term given, by Surgeons, to those substances, which, when applied to a wound or ulcer, promote suppuration; such as the *Ceratum resinæ*, warm cataplasms, fomentations, &c.

Dr. Paris uses the term *Digestive Texture*, for the particular organic condition of substances, which affects their digestibility.

DIG'ITAL, *Digita'lis*; from *dig'itus*, 'a finger;' having the shape of a finger; *digitated*, or belonging to the fingers.

The *Appen'dix vermifor'mis cæ'ci* is sometimes called, DIG'ITAL APPEN'DIX.

The DIGITAL ARTERIES, VEINS, and NERVES are those distributed to the fingers.

DIGITAL IMPRESSIONS are the slight impressions observable on the inner surface of the bones of the cranium, which correspond to the cerebral convolutions.

DIGITA'LIS, from *dig'itus*, 'a finger;' because its flower represents a finger. The *Digita'lis purpu'rea*, *Fox-glove*, *Bac'charis*, *Bacchar*, *Baccar*. (?) *Family*, *Scrophularinæ*. *Sex. Syst.* *Didynamia Angiosperma*. (F) *Digitale*, *Gants de notre dame*. The leaves of this plant, which are indigenous in Great Britain, are powerfully sedative, (diminishing the velocity of the pulse,) diuretic, and sorbefacient. In overdoses, D. causes vomiting, purging, dimness of sight, vertigo, delirium, hiccough, convulsions, and death:—all the symptoms, in short, which characterize the *Acro-narcotic* class of poisons. Its active principle has been called *Dig'italine*.

The Digitalis has been administered in inflammatory diseases, phthisis, active hemorrhage, dropsy, &c.; and although it is a powerful remedy, it has not been as much employed, as it probably would have been in particular cases, owing to the overstrained eulogiums, which many have passed upon it in almost all diseases.

The dose is from one to three grains, in the form of pill, which may be repeated every six or eight hours.

DIGITA'TION, *Digita'tio*, *Produc'tio denta'ta*, *Inser'tio denticulata*, *I. digitata*, from *dig'itus*, 'a finger.' A division, in the form of a finger. Several muscles, as the *serrati*, exhibit digitations, similar to those which the fingers form, when held separate.

DIGI'TIUM, from *dig'itus*, 'a finger.' Desiccation or atrophy of the fingers.—*Lin-næus*. Sauvages calls the same affection, *Paronychia Digi'tium*.

DIG'ITUS, *Dac'tylos*, a *Finger*, (F) *Doigt*. A name, given to the prolongations, which form the extremity of the hand. There are five on each hand: the first, or the thumb, *Anticheir*, *Pollex*, *Manus parva majo'ri adjutrix*, *Dig'itus primus*, *D. magnus*, *Promanos*, (F) *Pouce*; the second, the *index* or *indicator*, $\lambda\iota\chi\alpha\nu\omicron\varsigma$, *Lichanos*; the third, the

me'dius, μέσος, (F) *Doigt du milieu*, middle finger or long finger; the fourth, the ring finger, *annula'ris*, παραμέσος, *Param'esos*, (F) *Annulaire*; and the little finger, *Oti'tes*, ὠτίτης, *Dig'itus auricula'ris*, (F) *Auriculaire*, *petit doigt*. All of these have three phalanges, except the first, which has only two.

DIG'ITUS PEDIS. A Toe. (F) *Orteil*. The toes are five in number, and distinguished numerically, reckoning from within to without. The first is, also, called *great toe*, (F) *gros orteil*; the fifth, the *little toe*, *petit orteil*. They have nearly the same organization as the fingers.

DIHYSTERIA, *Dime'tra*; from δι, 'double,' and ὑστέρα, 'uterus.' The state in which there is a double uterus.

DILATA'TION, *Dilata'tio*, from *dilata're*, 'to enlarge;' *Eurys'mus*, *Aneurys'mus*, *Dieurys'mus*. Augmentation of the bulk of a body, occasioned by a separation of some of its molecules. Caloric has the property of dilating all bodies. In *Surgery*, it means the accidental or preternatural augmentation of a canal or opening; as in aneurisms, varices, &c., or the process of enlarging any aperture or canal, where such may have been contracted:—this surgical acceptation has received, also, the name *Dioptrismos*.

DILA'TING AGENTS, *Dilatan'tia*, (F) *Dilatants*. Certain substances used in *Surgery*, either to keep parts separate, which have a tendency to unite—as after opening an abscess, to prevent the edges of the incision from uniting;—or to increase and dilate openings or canals, either when natural, or formed accidentally or artificially. These agents differ from each other: the chief are, —*prepared sponge tents*, *gentian root*, *bougies*, *sounds*, *dried peas* for issues, &c.

DILA'TOR, *Dilato'rius*, (F) *Dilatateur*, or *Dilatatoire*. A muscle, whose office it is to dilate certain parts; such as the inspiratory muscles, which dilate the chest.

DILA'TOR, *Dilatato'rium*, *Spec'ulum*, *Diop'tra*, *Diop'tron*, (F) *Dilatateur*. An instrument, used for dilating a wound, excretory canal, or other natural or artificial opening. There are several instruments of this kind, each taking its name from the part to which it is applied; as the *Speculum Oris*, *S. Nasi*, *S. Uteri*, &c.

DILATOR, ARNOTT'S. A modification of the old dilators for strictures of the urethra. It consists of a tube of oiled silk; lined with the thin gut of some small animal to make it air tight: and fixed on the extremity of a small canula, by which it is distended with air or water, from a bag or syringe at the outer-end, whilst a stop-cock or valve serves to keep the air or water in, when received. As soon as the bag is passed within the stricture or strictures, as much air is to be injected into it as the patient can easily bear. The instrument is not much used. See Arnot on *Strictures*, Lond. 1819.

DILUEN'TIA, from *diluo*, 'I wash away.' (F) *Délayants*. Medicines, which have been conceived proper for augmenting the fluidity of the blood and other animal liquids. All aqueous drinks are diluents. They are administered, with great advantage, in various diseases. In fever, water, which is the most familiar diluent, may be freely allowed; the only precaution being to give it *hot* in the cold stage, *cold* in the hot, and *tepid* in the sweating. In diseases, where it is considered necessary to abstract blood largely diluents should not be given too freely. The abstraction of blood occasions activity of absorption, and the mass is speedily restored. In cases of inflammation of the mammæ, in nurses, it is also obvious, that diluents should not be freely allowed, as they increase the secretion of milk, and add to the irritation. When *demulcents* are exhibited in cases of urinary disease, they act simply as diluents, for their mucilaginous portion is digested in the stomach and small intestine: the watery portion alone being separated by the kidney.

DINANT, MINERAL WATERS OF. D. is a small town, six leagues from St. Malo, in France, where are mineral waters, containing carbonate of iron, muriate of soda, &c. They are much esteemed.

DIN'ICA, from *διναω*, 'I turn round.' Medicines, which relieve vertigo.

DIONCO'SIS, from *δια* and *ογκος*, 'a tumour.' The Methodists applied this name to a sort of tumefaction or plethora, occurring, either directly from too great a quantity of fluid circulating in the system, or owing to the retention of substances, which ought to be excreted. It is the antithesis to *symptom'sis*.

DIORTHO'SIS, from *διόρθω*, 'I make straight.' The reduction of a fractured or luxated limb.

DIOS'MA CRENA'TA, *Baros'ma crena'ta*, *Agathos'ma crena'tum*, *Buchu Leaves*, *Buckho*. A South African plant, the powder of whose leaves is used by the Hottentots to perfume their bodies. It has been employed in chronic affections of the bladder and urinary organs in general. It has also been given in cholera.

DIOS'PYROS LOTUS, *Faba Græca*. The *Indian Date Plum*. (F) *Plaqueminier d'Europe*. This tree grows in some of the southern parts of Europe. Its fruit is very astringent, and has been recommended in dysentery and hemorrhages.

DIOS'PYROS VIRGINIA'NA, *Dios'pyros*, Ph. U. S. *Lotus Virginia'na*, *Persim'mon*. A common tree in the middle parts of the United States. The fruit, which is only eatable after frost (when it is tolerable) is, sometimes, made into cakes with bran. These, being dried in an oven, are kept to make beer. When bruised in water, fermentation takes place. The unripe fruit

is distressingly acerb and astringent. The inner bark of the tree is extremely bitter; and may be used where bitters are indicated.

DIOTA or DYOTA. A wooden cup, lined with a composition of *resin, cinnamon, cloves, and ginger*, to give more flavour to beer. It was formerly, much used in the North of Europe.

DIPHRYGES. The oxide of copper, more or less pure. The ancients reckoned three kinds of diphryges, which they used as astringents.

DIP'LOË from διπλω, 'I double,' διπλον, *Diplo'sis, Meditullium, Medium Calvariae Discrimen.* The cellular structure, which separates the two tables of the skull from each other. The ancients applied the term, also, to the proper coat of the uterus. (?) Rol-fink, in Castelli.

The Diploë has the same use as the cellular structure of bones in general. See Cancelli.

DIPLO'MA. A letter or writing conferring some privilege. Usually applied to the document, certifying that a person has obtained the title of Doctor. It was so called because formerly written on waxed tables, folded together. Diploma is also used in pharmacy for sand-bath.

DIPLO'PIA, from διπλος, 'double,' and οπτομαι, 'I see.' *Visus Duplicatus, Dittopia, Dittop'sia, Amphamphoterodiopsia, Amphodiplopia, Double Vision.* (F) *Bêvue.* An affection of the sight, in which two distinct sensations are produced by the same object, which consequently seems double. Sometimes more than two are seen; but still the disease is termed *Diplo'pia* and *Suffusio Multiplicans.*

This affection arises from some derangement in the visual axes; in consequence of which, the images are not impressed on corresponding parts of the retina of each eye.

DIPNOOS, from δις, and πνον, 'breath.' Having two vent holes. *Bispirus.* An epithet, applied to wounds, which pass through any part, and admit the air at both ends.—Galen.

DIP'SACUS SYLVES'TRIS, *Cultivated Teasel,* (F) *Cardere.* The roots of the European plant are diuretic and sudorific. The water, which collects at the base of the leaves, has been recommended as an eye-water.

The **DIP'SACUS FULLO'NUM,** *Herba Cardui veneris;* (F) *Cardere cultivé, Chardon à foulon, Chardon à bonnetier,* has had similar properties ascribed to it. Both have been also regarded as stomachic.

DIPSET'ICOS, from διψα, 'thirst.' A remedy, believed to be capable of exciting thirst.

DIPSO'SIS. *Morbid thirst;* same etymon. The desire, for drinking, excessive or im-

paired. A genus in the class *Celiaca*, order *Enterica*, of Good.

DIPYRE'NON, from δις, 'twice,' and πυρην, 'a kernel.' A *specil'lum* or probe with two buttons.

DIRECTOR, *Itinera'rium,* from dirigere, 'to direct.' A *Conductor.* A grooved sound for guiding a knife, in dividing any part. (F) *Sonde Cannélée.*

DISCHARGE, *Ec'roë, Fluxus, Proflu'vium.* (F) *Ecoulement.* In *Pathology*, an increased discharge from any part, that naturally secretes a fluid.

DISCREET, *Discre'tus, Intertinc'tus, Separated,* (F) *Discret.* This epithet is given to certain exanthemata, in which the spots or pustules are separated from each other. It is opposed to confluent.

DISCRE'TA PURGA'TIO. The purgation or expulsion of some particular matter.

DISCRI'MEN, *Separation, Division.* A bandage, used in bleeding from the frontal vein; so called, because, in passing along the sagittal suture, it divides the head into two equal parts.

DISCRIMEN NA'SI; a bandage, in the form of the letter X, intended to support the nose, in transverse wounds of the organ.

DISCU'TIENTS, *Discussien'tia, Resolven'tia, Discussi'va, Discusso'ria,* from discutere, 'to dissolve,' 'dissipate.' (F) *Discussifs.* Substances, which possess the power of repelling or resolving tumours.

DISEASE, from old French *désaise*, *dis* and *ease*: *Morbus, Nosos, Nosé'ma, Pathos, Pathema, Ægritu'do, Arrhos'tia, αρρωστια, Arrhoste'ma, αρρωστημα, Arrhoste'nia.* (F) *Maladie.* An opposite state to that of health, which consists in a change, either in the position and structure of parts, or in the exercise of one or more of their functions.

DISGORGE'MENT, (F) *Dégorgement,* from *de* and *gorge*, 'the throat.' An opposite condition to that of *Engorgement.* The discharge or abstraction of a certain quantity of fluid, which had previously collected in a part; as *Disgorgement of bile.* It also, means, particularly, a vomit.

DISGUST, from *de* and *gusta're* 'to taste.' *Cibi fastid'ium, Aposi'tia, Abominatio, Sicha'sia, Loathing.* An aversion for food. (F) *Dégout.* *Disgust* is not the same as *Anorexia.* The latter is only a want of appetite; the former consists in real repugnance for food.

DISINFECTION, from *dis* and *infect.* The act of destroying miasmata, with which the air, clothing, &c., may be infected. Various means have been proposed for this purpose. Those, most commonly employed, are:—*chlorine, sulphurous and muriatic acid gases, vapours of vinegar, nitrous acid;* and, what is, perhaps, the most manageable of any, and the most efficacious,—the *chloride of lime*, or any of the chlorides of the alkalies.

It is probable, that a true chemical action occurs between these agents and the miasmata; whence results a compound, which is harmless.

The NITROUS FUMIGATION, *Alexiterium Nitricum*, *Fumigatio Smithiana*, may be formed by placing nitrate of potass $\mathfrak{Z}\text{iv}$, and sulphuric acid $\mathfrak{Z}\text{ij}$, in a saucer on hot sand.

The CHLORINE or OXYMURIATIC FUMIGATION, *Solutio alexiteria Gaubiana*, *Fumigatio antiloimica Gaubii*, *Alexiterium chloricum*, *Fumigatio Guytoniensis*, is made by adding common salt $\mathfrak{Z}\text{ij}$, to black oxide of manganese $\mathfrak{Z}\text{j}$, sulphuric acid $\mathfrak{Z}\text{j}$, and water $\mathfrak{Z}\text{ij}$. This may be carried through an apartment, or be shut up in it.

DISJUNCTI MORBI, *Disjoined diseases*. Fernelius has thus denominated diseases, which occupy different organs, and are not produced by each other.

DISORGANIZATION, *Organo'rum destructio*, (F) *Désorganisation*. A complete morbid change in the structure of an organ; or even total destruction of its texture. In sphacelus and sloughy ulcers we have examples of this change.

DISPENSARY, *Dispensarium*, from *dispen'dere*, 'to distribute.' The shop or place, in which medicines are prepared. Also, an institution in which the poor are furnished with advice and necessary medicines. (F) *Dispensaire*. This word is also used by the French synonymously with Dispensatory.

DISPENSATION, *Dispensatio*, *Diace'sis*. The composition and distribution of medicines, according to prescription. In France, it is more commonly applied to the weighing, measuring, and arranging the articles, which have to enter into a formula, prior to combining them.

DISPENSATORY, *Dispensatorium*; same etymon. *Antidotarium*, (F) *Dispensaire*. A book, which treats of the composition of medicines. A Dispensatory differs from a Pharmacopœia, in containing the physical and medical history of the various substances, whilst the Pharmacopœia is restricted to the mode of preparing them, &c. The Pharmacopœia, too, is published under the authority of, and by, the members of a college or association: whilst a dispensatory contains the whole of the Pharmacopœia or Pharmacopœias, with additions by the author, under whose authority, alone, it usually appears. The Pharmacopœia, in other words, is *official*; the Dispensatory, generally, *private*. Formerly, the words were used indiscriminately. See Formulary and Pharmacopœia.

DISPOSITION, *Dispositio*. A particular condition of the body, which renders it susceptible of altering, suddenly, to a state of health or disease;—of improving, or becoming changed for the worse. The *disposition*

to phthisis pulmonalis is sometimes so strong, owing to original conformation, that the disease will make its appearance notwithstanding every care. See Diathesis.

DISRUPTIO, from *disrum'pere*, 'to break off.' A puncture, which interests the deep-seated parts.

DISSECTION, *Dissec'tio*, from *disseca're*, 'to cut open;' *διαζωπν*, *Diac'ope*, *Practical Anatomy*, *Necroto'my*. An operation, by which the different parts of the dead body are exposed, for the purpose of studying their arrangement and structure. Dissection has received various names, according to the organ concerned;—as *Osteotomy*, *Syndesmotomy*, *Myotomy*, *Angiotomy*, *Neurotomy*, *Desmotomy*, &c.

DISSECTOR, *Prosec'tor*, *Prot'omus*, same etymon. (F) *Prosecteur*. A practical Anatomist. One, who prepares the parts for the Anatomical Lecture.

DISSOLUTION, *Dissolu'tio*, *Dial'ysis*, from *dissol'vere*, 'to loosen,' 'to melt.' This word is in frequent use, in the writings of the Humorists. It is employed, particularly, in speaking of the blood;—to designate, not its entire decomposition or putrefaction,—but a diminution in its consistence.

DISSOLVENTIA, *Solvents*, (F) *Dissolvants*. Medicines, believed to be capable of dissolving swellings, concretions, &c.

DISTICHIASIS, *Distich'ia*, *Districhiasis*, from *δις*, 'double,' and *στιχος*, 'a row.' An increased number of eyelashes; some turned towards the eye, and irritating the organ; whilst others preserve their natural direction.—Galen, Paulus of Ægina. See Entropion.

DISTILLATION, *Stalag'mos*, from *distilla're*, 'to drop, little by little.' *Catastalgmos*. An operation, by which—by the aid of heat and in close vessels—the volatile are separated from the fixed parts of bodies, with the view of collecting the former, when condensed, in appropriate receivers. The ancients distinguished distillation *per latus*, *per ascen'sum*, and *per descen'sum*, according to the direction, which the volatilized matters were made to take.

DIS'TOMA HEPATICUM, from *δις*, and *στομα*, 'mouth.' *Fasciola hepatica*, *Planaria latius'cula*, *Fasciola huma'na*, *F. lanceolata*, the Gourd-worm or Fluke. (F) *Douve*. An obovate, flat worm, an inch in length, and nearly an inch broad; sometimes found in the gall-bladder of man, whence it occasionally passes into the intestinal canal. It is one of the most common varieties of worms, infesting the livers of the sheep, goat, ox, stag, fallow-deer, horse, ass, hog, hare, &c. The treatment is like that required for other worms.

DISTORTION, *Distor'sio*, from *distorque're*, 'to wrest aside.' *Diastrem'ma*, *Dias'trophê*, *Ligys'ma*, (F) *Distorsion*. Usually applied to the preternatural curvature of a

bone; as *distortion of the spine, limbs, &c.* It signifies, also, a convulsive state of the muscles of the eye, constituting squinting or strabismus.

DISTRIX, from *dis*, 'double,' and *τριξ*, 'the hair.' *Tricho'sis distrix, Fissu'ra capillo-rum.* Hairs of the scalp, weak, slender, and splitting at their extremities.

DITRACHYC'EROS, from *dis*, 'two,' *τραχυς*, 'rough,' and *κερας*, 'horn.' A genus of intestinal worms; called, also, *Bicorne rude*. This Entozoon was first observed in the evacuations of a female by M. Sulzer of Strasburg. It is of a fawn colour, from 3 to 5 lines in length, with an oval head, flattened and terminating in a point posteriorly; contained in a membranous sac, and furnished, anteriorly, with a bifurcated, rugous, horn. M. Laennec considers it a vesicular worm or hydatid.

DIURE'SIS, from *dis*, 'through or by,' and *ουρεω*, 'I pass the urine.' An abundant excretion of urine.

DIURET'IC, *Diuret'icus*, same etymon; *Uret'icus*. A medicine, which has the property of increasing the secretion of urine.

Diuretics act by producing a discharge of the watery and other parts of the blood; and, by such discharge, indirectly promote absorption over the whole system. Hence they are employed in dropsy.

The following are the chief Diuretics:

Cantharis,	Potassæ Acetas,
——— Vittata,	——— Liquor,
Cahinca,	——— Nitræ,
Colchici Radix,	——— Supertartras,
——— Semen,	Scilla,
Digitalis,	Sodæ Sales,
Diosma Crenata,	Spiritus Ætheris Ni-
Juniperus,	trici.
Oleum Terebinthinæ,	

DIVERTIC'ULUM. 'A turning;' from *diver'tere*, 'to turn aside.' An organ, which is capable of receiving an unusual quantity of blood, when the circulation is obstructed or modified elsewhere, is said to act as a diverticulum. Also, a malformation or diseased appearance of a part, in which it goes out of its regular course. It is sometimes applied to such a condition of the alimentary canal. Also, a hole to get out at. A by-passage.

DIVERTIC'ULUM NUC'II is the opening through which the round ligaments of the uterus pass.—Parr.

DIVI'DING, *Div'idens*. That which divides or separates.

DIVIDING BANDAGE, *Fascia div'idens*, (F) *Bandage divisif*, is a bandage, employed for the purpose of keeping parts separated from each other. It is used particularly to prevent improper union; as in cases of burns of the neck or other parts.

DIVISION, *Divis'io, Diæ'resis*. The accidental separation of parts, naturally united; in other words, a wound or solution of continuity. Most frequently, however, it means

an operation, which consists in cutting certain parts, with the view of fulfilling some therapeutical indication.

DIVUL'SIO URI'NÆ, from *divel'lere*, 'to pull asunder.' *Cloudiness of urine*.—See Enæorema.

DIVUL'SIO, *Dias'pasis*, has, also, been used in *Surgery*, to express the rupture or laceration of organs by external violence.

DOCCIONE, MINERAL WATERS OF. This spring is at Lucca in Italy. It is a thermal saline.

DOCH'ME, *δοχμῆ*. A measure of the Greeks, equal to about four fingers' breadth. *Dactylodoch'mē*.

DŌCIMA'SIA, *Docimas'ticē*, from *δοκιμαζω*, 'I try or prove the quality of any thing.'

DŌCIMA'SIA PULMO'NUM, *Lung proof, Respiration proof*. Different proofs, to which the organs of respiration, of a new-born child, are subjected, for the purpose of detecting whether it has or has not respired, after birth; in other words, whether it was born alive or dead. These consist, chiefly; 1. In testing them with water, for the purpose of seeing whether the lungs are specifically heavier or lighter than that fluid. This is called the *Docimasia Pulmonum hydrostat'ica*. If lighter, it would be some evidence that the fœtus had respired: 2. In comparing the weight of the lungs with that of the whole body; the weight of lungs in which respiration has taken place, being nearly twice as great.—This is the *Docimasia Pulmo'num Stat'ica*, or Ploucquet's Test: and, 3. By measuring the circumference of the thorax and lungs; and comparing their dimensions with those of an infant, which has not respired. This is *Daniel's Test*. These tests, singly, afford only probable evidence; but, when united, the deductions may be more conclusive.

DŌCIMA'SIA MEDICAMENTO'RUM ET VENENO'RUM means the testing of medicines and poisons.

DOCNA SURA, MINERAL WATERS OF. This spring is in the Krapach mountains. The water contains sulphate of soda, carbonate and muriate of soda, carbonate of lime, silica, and iron.

DOCTOR, *Medicus*, from *doctus*, 'learned;' "*un homme qui devrait être docte*." A *Physician*. Frequently, applied to any one who practises Medicine: although, properly, confined to him who has received his degree of Doctor of Medicine.

DOCTRINE, MED'ICAL, *Doctri'na Med'ica*. The principles or positions of any medical sect or master. Medicine has been too full of doctrines. One of the first was that of Herodicus of Selivraea, who recommended gymnastic exercises in disease. The chief founders of doctrines have been Hippocrates, Serapion of Alexandria, Philinus of

Cos, Herophilus, Asclepiades, Themison of Laodicea, Thessalus of Tralles, Soranus of Ephesus, Leonides of Alexandria, Athenæus of Attalia, Archigenes of Apamæa, Agathinus of Sparta, Galenus, Paracelsus, John Baptist van Helmont, Sylvius de le Boe, Keill, Hamberger, Pitcarne, H. Boerhaave, J. E. Stahl, Frederick Hoffmann, George Baglivi, Cullen, Darwin, John Brown, Beddoes, Girtanner, Reil, Rush, Rasori, and Broussais.

DODECAPHARMACUM, from *δωδεκα*, 'twelve,' and *φάρμακον*, 'a medicine.' An ancient name, given to all medicines, which consisted of 12 ingredients.

DODECATH'EON, from *δωδεκα*, 'twelve,' and *τιθεμι*, 'I put.' An antidote, consisting of twelve simple substances.—Paulus of Ægina.

DOGDAYS, (F) *Jours caniculaires*. During these days, comprised between the 24th of July and the 23d of August, the temperature of the air, in Europe, is generally high and oppressive. They have received this name from the dogstar, *Canic'ula*, *Συριος*, *Sir'ius*,—a very brilliant star in the constellation of the *great dog*, which rises and sets, at this time, with the sun. It was formerly believed to be a period particularly unpropitious to health; that it was dangerous to purge during it; and other phantasies were indulged.

DOGMAT'IC, from the Greek *δωγμα*, from *δοκεω*, 'I think.' *Dogmat'icus*. The name of an ancient medical sect, so called, because its members endeavoured, by reasoning, to discover the essence of diseases and their occult causes; whilst the *Empirics*, their rivals, confined themselves strictly to experience,—i. e. to the observation of facts. The union of the two modes of investigation makes the rational physician. These sectarians are likewise called *Dog'matists*, and their doctrine *Dog'matism*. The founders of this sect were Hippocrates, Thessalus, Draco, and Polybus; and the most celebrated of its supporters were Diocles of Carysta, Praxagoras of Cos, Chrysippus of Soli, Herophilus, Erasistratus, &c.

DOL'ICHOS, from *δολιχος*, 'long.' A genus of plants of the leguminous family. It includes a number of species, generally indigenous in India or America. The *Dol'ichos Lablab*, or *Lablab*, is found in Egypt. (Prospero Alpini.) Its fruit is eaten there, like the Haricot with us. The *Dol'ichos Sinen'sis* is eaten in China, and is stored up as a provision for long voyages. The *Dol'ichos Tuberosus*, (F) *Pois patate*, of Martinique, has tuberous roots, of the size of both fists, and has the consistence and taste of the turnip. The *Dol'ichos Bulbosus*, of the West Indies, resembles the turnip; and from the *Dol'ichos Soja*, the Japanese prepare the well known sauce *Soy*, which they term *Sooja*. The most important, in medicine, is the

DOL'ICHOS PRU'RIENS, **DOL'ICHOS**, **STIZOLOBIUM**, *Cowhage*, *Cowitch*, *Adsaria Pala*. Order, Leguminosæ. (F) *Pois à gratter*. The stiff hairs of the *Dolichos Pods*, called *Dolichi Pubes*, *D. prurientis pubes*, *Dolichi Setæ Legu'minum*, *Lanu'go Sil'iquæ hirsu'tæ*, are the parts used in medicine. They excite an intolerable, prurient sensation, when applied to the skin; but do not irritate the mucous membrane over which they pass, when administered internally. The *Dolichos* is a mechanical anthelmintic, and is useful in the ascarides lumbricoides, and oxyures vermiculares. Dose, gr. v to x of the Pubes, in molasses.

DOLOIRE (F), *As'cia*, *Dola'bra*, 'a carpenter's axe.' A *Bandage en doloire* is one, in which the turns are so placed, that each one covers two-thirds of that which is immediately beneath it. It has received the name *Doloire* from its representing the obliquity of the edge of the instrument whose name it bears.

DOMES'TIC, *Domes'ticus*, from *domus*, 'a house.' This term has been given, as well as *Pop'ular Medicine*, to treatises, written for the purpose of enabling those, who are not of the profession, to treat the diseases, which may occur in their families, without the necessity of calling in the physician. The term, likewise, signifies—Medicine, when thus practised. It is probable, that such works have been attended with more mischievous, than advantageous, results.

DOMINA'RUM AQUA. A medicine, described by Myrepsus, which he considered emmenagogue.

DORON'ICUM PARDALIAN'CHES, *D. Rama'num*, *Roman Leop'ard's Bane*, (F) *Doronic*, *Mort aux Panthères*. The root of this plant resembles the *Arnica Montana*, in its properties.

DORSAL, *Dorsa'lis*; from *dorsum*, 'the back,' *Notiæ'us*. Relating to the back of the body, or of one of its parts; as the *Dorsal vertebræ*, *nerves*, &c.; *Dorsal artery of the tongue*, *penis*, &c.; *Dorsal region of the foot*, *hand*, &c.; *Dorsal consumption*, &c.

DORSTE'NIA CONTRAYER'VA, *Contrayer'va*, *Drake'na*, *Cyperus longus*, *o'dorus*, *perua'nus*, *Bezoar'dica Radix*, *Dorste'nia Housto'nii*, *Lisbon Contrayer'va*, (F) *Racine de Charcis*, *R. de Dracke*, *Racine des Philippines*. Family, Urticæ. Sex. Syst. Tetrandria Monogynia. A plant of South America, whose root is aromatic, bitter, and astringent. It has been given as a tonic, stimulant and sudorific. Dose, gr. xij to ʒss.

DORSUM, *Notos*, *Noton*. The back. *Metaph'renon*, *Tergum*, (F) *Dos*. The posterior part of the trunk, extending from the inferior and posterior region of the neck as far as the loins. The *back of the foot*, *Dorsum pedis*, is the upper part of that organ, opposite the sole: the *back of the hand*, *Dorsum manus*, the part opposed to the palm. In the

same sense we say *Dorsum penis*, *Dorsum nasi*, for the upper part of those organs.

DOSE, Dosis, Præbium. The quantity of any substance, which ought to form part of a compound medicine, or ought to be exhibited singly, to produce a desired effect. Many circumstances influence the doses of medicine. *Women* require smaller doses, as a general principle, than *men*. *Habit* has a great effect, as well as *climate*, *age*, *idiosyncrasy*: all these, and other circumstances, must be taken into account; and every general rule, on the subject, will be found to have numerous exceptions. Some of the mechanical physicians laid it down as a rule, that the doses of medicines must always be as the *squares of the constitution*! A matter not easy of calculation. (See Appendix to Cockburn on *Fluxes*.)

The following Tables will exhibit an approximation to the proper doses (according to age) of most substances.

TABLE OF DOSES ACCORDING TO AGE.

Age	Let the full dose be	1	1 drachm.
24	will require -	2-3ds.	2 scruples.
18	-	half	$\frac{1}{2}$ drachm.
14	-	1-3d.	1 scruple.
7	-	1-4th.	15 grains.
4	-	1-6th.	10 grains.
3	-	1-8th.	8 grains.
2	-	1-12th.	5 grains.
1	-		

The table of doses, recommended by Dr. Thomas Young, according to age, differs in some respects from the above. Either affords a sufficient general approximation. His rule is, that

For children, under 12 years of age, the doses of most medicines must be diminished in the proportion of the age to the age increased by 12:

thus, at 2 years, to 1-7th, i. e. $1-7 = \frac{2}{2+12}$

At 21 the full dose being given.

DOTHINENTERITIS, from $\delta\omicron\theta\epsilon\iota\nu$, 'a pustule,' and $\epsilon\upsilon\tau\epsilon\gamma\omicron\nu$, 'intestine.' *Follicular Gastroenteritis*. An inflammation of the glands or follicles of Peyer and Brunner, which Bretonneau considers to be the essence of a large class of fevers: particularly of those of the typhoid character. See Typhoid.

DOUBLE-HEARING, *Paracusis duplicata*, *P. imperfecta*. The action of the one ear inaccordant with that of the other: sounds heard doubly, and in different tones or keys.

DOUCHE (F). In Italian *doccia*; modern Latin, *ducia*. *Cataclysmus*. This term is applied to the shock of a column of fluid, of a determinate nature and temperature, let fall upon the body. *Pumping* is a variety of the *Douche*. In using this kind of bath, the fluid is directed upon the part on which we are desirous of acting. The *douches descendantes* are those, in which the fluid falls

from a height;—the *douches ascendantes*, those administered in diseases of the uterus;—*douches horizontales*, where the fluid is impelled horizontally, &c. They may be *cold* or *warm*, according to circumstances. The apparatus consists of a reservoir of water having a pipe or plug, by means of which the water can be directed as the practitioner may desire.

The *Douche* communicates a considerable and peculiar shock to the nervous system; and is one of the most successful means for taming the furious maniac. It is, also, useful in chronic rheumatism, stiff joints, &c.

DRACHM, Drachma, (F) *Gros*. The ancient name of a piece of money; weighing the 8th part of an ounce. At the present day it is used for this weight.

DRACOCEPH'ALUM CANARIEN'SE, *D. Moldavicum*, *Melis'sa Turcica*, *Turkey Balsam*, *Canary Balsam*, *Balm of Gil'ead Tree*, *Alpi'ni Balsamum*, (F) *Mélisse de Moldavie*. It is a Turkish and Siberian plant, and has an aromatic taste, joined with an agreeable flavour. It has been used as a tonic.

DRACON'TIUM FETIDUM, *Dracon'tium*, *Ictodes fœtidus*, *Symplocarpus fœtidus*, *Pothos fœtida*, *Skunk Cabbage*. *Nat. Ord. Aroideæ*. *Sex. Syst. Tetrandria Monogynia*. This indigenous plant, as some of its names import, is extremely fetid. The property, on which its medical virtues are dependent, resides in a volatile principle, which is impaired by long keeping, especially in powder. Dose, 10 to 20 grains. It resembles *asafœtida* and other fetid gums in its properties: in other words, belongs to the class of reputed antispasmodics.

DRACUN'CULUS, *Dracon'tium*, *Vena Medi'na A'rabum*, *Gordius Medinen'sis*, *Vermiculus Capilla'ris*, *Dracunculus Gordius*, *Fila'ria Medinen'sis*, *Malis dracunculus*, *Malis Gordii*, *Muscular Hairworm*, *Bichios*, *Bicho*. The *Guinea Worm*, (F) *Dragon-neau*, *Ver de Guinée*. A genus of worms, frequently met with in Indian and African climes. They are characterized by a filiform body, and are smooth and nearly of equal thickness throughout. The *Guinea worm*, when small, insinuates itself through the cutaneous pores, and penetrates into the cellular membrane, and between the muscles; especially, between those of the lower limbs, where it occasions a tumour like a boil, which subsequently suppurates, and the head of the worm appears and emerges gradually. The head must then be seized, and the worm be cautiously rolled round a small cylinder of linen or other substance. Care must be taken not to break it, as great pain and obstinate suppuration might be the consequence.

Considerable obscurity rests on this subject. Some, even, deny that the cases of *Dracunculus*, on record, are really those of worms.

DRAGÉES (F). Almonds or dried pre-

serves, covered with white sugar. *Sugar plums.*

DRAGÉES DE KEYSER; a pharmaceutical preparation, formerly much celebrated in syphilis. It was composed of *acetate of mercury, manna, starch, mucilage, and gum tragacanth.*

DRAGON (F). *Dragon.* Some authors have given this name to opaque spots on the cornea, and to cataract.

DRAINING, Desicca'tio, (F) Desséche-ment. The act of drawing off the water from marshes, for the purpose of destroying the unhealthy emanations, which proceed from them. It is a well known fact, that from marshes arise certain emanations or miasmata, with the nature of which we are, however, totally unacquainted; but which are the fertile source of intermittents and other diseases.

Draining the soil and converting it into arable land changes its character, and the malaria ceases to be given off. It has frequently, however, happened, that although, in such situations, intermittents have been got rid of, consumption has taken their place.

DRAPEAU (F). *Vexil'lum,* from *drap,* 'cloth.' A bandage, used in wounds, &c. of the nose, to keep the dressings *in situ.* It is composed of a small triangular compress, having two openings at its inferior part, corresponding to those of the nostrils. It is fixed by means of a bandage, passing from its superior angle over the head: and another passing round the head, under the orbits, so as to join the first at the nape of the neck.

DRASTIC, Dras'ticus, Cenot'ic, from *δραω,* 'I operate strongly.' An epithet, given to purgatives, which operate powerfully; as *elaterium, oil of croton, &c.*

DRESSER, from (F) *dresser,* 'to put right.' An hospital assistant, whose office it is, to dress wounds, ulcers, &c. He corresponds in function to the *Elève externe* of the French hospitals.

DRESSING, Cura, Curatio. (F) Panse-ment. The methodical application of any remedy or apparatus to a diseased part. Also, the remedy or apparatus itself.

DRIMYPHA'GIA, from *δριμυς,* 'acid,' 'aromatic,' and *φαγω,* 'I eat.' An aromatic and exciting diet.

DRINK, from Sax. *drincan, Potus, (F) Boisson.* Every liquid, introduced into the alimentary canal for the purpose of repairing the loss of the fluid parts of the body. The necessity for its use is indicated by the sensation of thirst. Fluid, taken during a meal, aids in the digestion of the food. Some drinks are exciting and tonic, as the different varieties of beer, wine, and spirit, which we use at table. In a therapeutical point of view, drinks are used to appease the thirst which prevails in febrile affections, or to act as di-
luents in those and other cases.

TABLE OF ORDINARY DRINKS, ACCORDING TO THEIR CHEMICAL COMPOSITION.

1. <i>Water.</i>	{ Spring water, River water, Well water, &c.
2. <i>Juices and infusions of Animals and Vegetables.</i>	{ Lemon juice, Currant juice, Whey, Tea, Coffee, Mattee, &c.
3. <i>Fermented Liquors.</i>	{ Wines, Ale, Beer, Cider, Perry.
4. <i>Spirituuous Liquors.</i>	{ Brandy, Alcohol, Ether, Kirschwasser, Rum, Arrac, Gin, Whiskey, Ratafies, Cordials, &c.

DROGUIER (F). Same etymon as *Drug.* A collection of different simple medicinal substances.

DROP. See *Gutta.*

DROSERA ROTUNDIFOLIA. The systematic name of the *Sundew, Ros solis, Drosiobot'anon, Dro'sium, Rorel'la, (F) Ros-solis.* This plant has a bitter, acrid, and caustic taste. It has been used as a rubefacient, and to destroy warts and corns. It has, also, been regarded as a pectoral.

DRUG, Medicamen'tum, (F) Drogue. A name, ordinarily applied to simple medicines, but, by extension, to every substance employed in the cure of disease. *Ménage* derives it from *droga*; and this from the Persian *droa,* 'odour;' because many drugs have a strong odour. It is from the Teutonic *trock-en, Sax. drizan,* 'to dry.'

DRUGGIST, DRUGGER, DRUGSTER. Same etymon. *Pharmacop'la, Materialis ta, (F) Droguiste.* One who sells drugs.

DRYING, Desicca'tion, Sicca'tio, Xeran'-sis, Desicca'tio, Exsicca'tio; same etymon as *Drug.* Evaporation or removal of the superfluous humidity in a body.

DESICCATION OF PLANTS. Those, which are very succulent, should be dried quickly. They must be spread upon lattice-work, covered from the light, and exposed to the heat of the sun or to that of a stove, not exceeding 110° Fahrenheit. The drying of less succulent plants can be effected at a lower temperature. *Flowers* must be dried very carefully, excluding the light. *Seeds* are dried in a place, where there is a free current of air. *Pulpy fruits* may be exposed to a gentle heat in a stove, which may be gradually elevated. *Roots* may also be dried in the stove: the tuberos require to be cut in slices.

DUCTUS BARTHOLINIA'NUS, Bar'-tholine's Duct, (F) Canal de BARTHOLIN. The excretory duct of the sublingual gland.

DUCTUS SALIVA'LIS INFERIOR, *Ductus Warthonia'nus*, (F) *Canal de WARTHON*. The excretory duct of the submaxillary gland.

DUCTUS SALIVA'LIS SUPERIOR, *Ductus Stenonia'nus*, STE'NO'S *Duct*, (F) *Canal de STENON*. The excretory duct of the parotid gland, which opens into the mouth opposite the second upper molar tooth.

DUELLA. The ancient name of a weight, which was equivalent to eight scruples.

DULECH or DU'ELECH. A term employed by Paracelsus and Van Helmont, to designate a pretended tartarized substance, which forms in the human body, and produces acute pain, accompanied with great danger.

DUODENI'TIS, *Dodecadactyli'tis*. A hybrid term, from *duodenum*, and *itis* denoting inflammation. Inflammation of the Duodenum, characterized by white tongue; bitter taste; anorexia; fulness and tenderness in the region of the duodenum; and often yellowness of skin: along with the ordinary signs of febrile irritation.

DUODE'NUM, *Ventric'ulus succenturia'tus*, *Ec'physis seu appen'dix seu Proces'sus Ventriculi*, *Portona'rium*, *Dodecadac'tylon*, from *δωδεκα*, 'twelve,' and *δακτυλος*, 'a finger.' The duodenum is the first part of the intestinal canal, commencing at the pyloric orifice of the stomach, and terminating in the jejunum. Its length is about 12 finger's breadth, and as it is only partially covered by the peritoneum, it is susceptible of considerable dilatation: hence its name, *Ventriculus succenturiatus*. In the duodenum, *chyli'fication* takes place by the admixture of the biliary and pancreatic fluids with the chyme.

DUO-STER'NAL. Béclard thus names the second osseous portion of the sternum, which corresponds to the second intercostal space.

DUPLICA'TION, *Duplica'tio*, *Duplic'itas*, *Diplasias'mus*, *Diplo'sis*. A species of malformation characterized by the parts concerned being doubled.—Meckel.

DU'PLICATURE, *Duplicatu'ra*, *Reflec'tion*, from *duplex*, 'double,' 'two-fold.' The folding or reflection of a membrane upon itself; as *Duplicature* or *reflection of the pleura*, *peritoneum*, &c.

DUPON'DIUM. A weight of four drachms.—Galen.

DURA MATER, *Crassa meninx*, *dura meninx*, *Meninx exte'rior*, *Meninx sclera*, *pachei'a* of Galen, *Dura membra'na cerebrum am'biens*, *Cuticula'ris membra'na*, *M. dermato'des*, *Meninge*,—(Ch.) It has been called *dura*, because of its great resistance; and, *mater*, because it was believed to give rise to every membrane of the body. (F) *Dure mère*. *Dure-Taye* (Paré.) It is a fibrous, semitransparent membrane, of a pearly-white colour, thick, and very resisting; lines the cavity of the cranium, and contains

the spinal marrow; protects the brain and marrow; and, by its various expansions—the *falx cerebri*, *tentorium*, &c.,—supports the different parts of the cerebral mass. The largest artery of the dura mater is the *A. meningæ'a me'dia*.

DYNAMIC. Same etymon. That which relates to the vital forces.

DYNAMOM'ETER, *Myodynamiom'eter*, *Myodynamometer*, from *δυναμις*, 'force,' 'vital power,' and *μετρον*, 'measure.' An instrument, contrived by M. Regnier, for measuring the comparative muscular strength of man and animals. It consists of a spring, which, when pressed upon, causes a needle to move upon a portion of a circle, furnished with a scale of kilogrammes and one of myriagrammes. To measure the strength of the hands, the two branches of the spring are firmly grasped, and brought as near together as the force can carry them. This effort makes the needle traverse, and indicates, on the scale of kilogrammes, the strength of the experimenter's hands. A man, 25 or 30 years of age, exerts a force commonly equal to 50 kilogrammes or 100 pounds.

The strength of the loins of a man, about 30 years of age, as indicated by this instrument, is usually about 13 myriagrammes, or 265 pounds, which shows the weight he is capable of raising.

From experiments made by Peron, in his voyage, on 12 individuals of Van Dieman's Land, 17 of New Holland, 56 of the Island of Timor, 17 Frenchmen belonging to the expedition, and 14 Englishmen in the colony of New South Wales, he found their comparative strength, indicated by the dynamometer, to be as follows:

TABLE.

NATIVES OF	STRENGTH			
	of the arm.		of the loins.	
	Kilogr.	lbs.	Myri.	lbs.
1. Van Dieman's Land - -	50.6	101.2		
2. New Holland	50.8	101.6	10.2	208.08
3. Timor - -	58.7	117.4	11.6	238.64
4. France - -	69.2	138.4	15.2	310.08
5. England - -	71.4	142.4	15.2	332.52

DYNAMOMETER or DYNAMETER, MEDICINAL. An instrument, invented by Dr. Paris, for the purpose of showing the quantity of active matter contained in a given weight or measure of any officinal compound, with the dose of any preparation, which will be equivalent, in strength, to a given quantity of any other of the same class. The instrument is more ingenious than useful.

DYS, *δυσ*, in composition, 'difficult, faulty:' sometimes privative; mostly answering to the particles *dis*, *in*, *mis*, or *un*. Hence:

DYSÆSTHESIA, from *δυσ*, 'with difficulty,' and *αἰσθάνομαι*, 'I feel.' Obscure, diminished, or even abolished sensation.

DYSÆSTHESIA VISUALIS, *Paropsis*. Sense of sight vitiated or lost.

DYSANAGO'GOS, from *δυσ*, 'with difficulty,' and *ἀναγα*, 'I bring up.' That which is expectorated with difficulty. An epithet given, by the Greek writers, to the sputa, when expectorated with difficulty on account of their viscosity.

DYSANNARRHOPHE'SIS, *Dysanarrhoph'ia*; from *δυσ*, 'with difficulty,' and *ἀναρροήσις*, 'absorption.' Diminished absorption from morbid causes.

DYSCATAPO'TIA, from *δυσ*, and *καταπίνω*, 'I drink.' Difficulty of swallowing liquids. This term is recommended by Dr. Mead as a substitute for hydrophobia, which means dread of liquids. The dread seems to be partly caused by the difficulty of deglutition.

DYSCRHE'A, from *δυσ*, 'with difficulty,' and *χρῶς* or *χρῶς*, 'colour.' Sickly or unhealthy colour of the skin. Used synonymously with the *maculæ* of Willan.

DYSCINE'SIA, from *δυσ*, 'with difficulty,' and *κίνησις*, 'I move.' Difficulty or utter incapability of moving.—Galen.

DYSCOPHO'SIS, from *δυσ*, 'with difficulty,' and *κοφῶ*, 'I am deaf.' A defect in the sense of hearing.—Hippocr.

DYSCRA'SIA, from *δυσ* and *κράσις*, 'temperament.' A bad habit of body.

DYSCRITOS, from *δυσ*, 'with difficulty,' and *κρίσις*, 'judgment.' That, which it is difficult to judge of.—Hippocr.

DYSELCIA, *Dysepulo'tus*, from *δυσ*, 'with difficulty,' and *ἔλκος*, 'an ulcer.' An ulcer, difficult to heal.—Hippocrates, Foësius.

DYSENTERY, *Difficul'tas intestino'rum*, from *δυσ* and *έντερον*, 'an intestine.' *Dissolutus morbus*, *Diarrhœ'a carnosâ*, *Colitis*, *Deflux'us Dysenter'icus*, *Febris Dysenter'ica*, *Flumen dysenter'icum*, *Fluxus dysenter'icus*, *F. cruentus cum Tenes'mo*, *Rheumatis'mus intestino'rum cum ul'cerē*, *Tor'mina Celsi*, *Tor'mina*, *Blennente'ria*. The *Bloody Flux*; the *Flux*, (F) *Flux dysentérique*, *Flux de sang*. Inflammation of the mucous membrane of the large intestine; the chief symptoms of which are:—fever, more or less inflammatory, with frequent mucous or bloody evacuations; violent tormina and tenesmus. When the evacuations do not contain blood, it has been called *Dysenter'ia alba* or *simple Dysentery*. The seat of the disease is, generally, in the colon and rectum. It occurs, particularly, during the summer and autumnal months, and in hot climates more than in cold: frequently, also, in camps and prisons, in consequence of impure air, and imperfect nourishment: and is often epidemic. Sporadic cases of dysentery are, generally, easily managed; but when the disease oc-

curs epidemically, it often exhibits great malignancy. Generally, it yields to mild laxatives, as castor oil, combined with diaphoretic narcotics, such as the *pulvis ipecacuanhæ compositus*: and counter-irritants to the abdomen; but, at times, the inflammation runs on so speedily to ulceration, that, unless a new action be rapidly excited, death will be the consequence. In such cases, mercury must be rapidly introduced into the system, and narcotics may be combined with it. The whole management in acute dysentery must, of course, be strictly antiphlogistic.

DYSHÆMORRHœ'A, from *δυσ*, 'with difficulty,' and *αἱμορρῆσις*, 'I pass blood.' Diminution or suppression of the hemorrhoidal flux. Also, symptoms occasioned by its diminution or suppression.—Sagar.

DYSIATOS, *δυσιατός*, from *δυσ*, 'with difficulty,' and *ιαμαί*, 'to heal.' *Cura'tu diffi'cilis*. Difficult of cure.—Hippocr.

DYSLOCHI'A, *Colica lochia'lis*, *Hyster'al'gia lochialis*, from *δυσ* and *λοχίος*; relating to parturition. Diminution or suppression of the lochial discharge.

DYSMASE'SIS, *Dysmasse'sis*, *Brady-mase'sis*, from *δυσ*, 'with difficulty,' and *μασσησις*, 'mastication.' Difficult or impeded mastication.

DYSMENORRHœ'A, *Dysme'nia*, *Parame'nia diffi'cilis*, *Menorrh'gia stillati'tia*, *Amenorrhœ'a diffi'cilis*, *Menses dolorif'icæ*, *Menorrrh'gia diffi'cilis*, *Labo'rious Menstruation*. Catamenia passed with great local pain, especially in the loins:—with sometimes a membranous discharge. D. is very difficult of removal, and prevents conception. In the married female, if she should be able to pass one period without pain, and subsequently become pregnant, the morbid action may be broken in upon, by gestation, and a perfect cure be obtained. Change of air, soon after marriage, will sometimes give occasion to this desirable result. The affection generally depends upon subinflammation of the interior of the uterus, called into action at each catamenial period. The violence of the pain requires the liberal use of narcotics.

DYSO'DIA, from *δυσωδία*, 'fætor,' from *δυσ*, 'badly,' and *ὀζα*, 'I smell.' (F) *Puanteur*. Sauvages has given this generic name to all diseases, characterized by fetid emanations, from whatever part proceeding;—from the mouth, nasal fossæ, bronchi, stomach, axillæ, groins, &c. Also, a *stench* or *stink*.

DYSODONTI'ASIS, from *δυσ*, 'with difficulty,' and *ὀδοντίασις*, 'dentition.' Difficult dentition.

DYSONEIRO'S, from *δυσ*, 'with difficulty,' and *ονειρος*, 'a dream.' Insomnia, with restlessness.

DYSO'PIA, from *δυσ*, 'with difficulty,' and *ὀπτομαι*, 'I see.' Difficulty of seeing: obscurity of vision.

DYSO'PIA LATERA'LIS, *Parop'sis latera'lis*,

Skue-sight, Sight askew. Vision only accurate when the object is placed obliquely. This state is generally caused by some opacity of the cornea.

DYSOREX'IA, from *δυσ*, 'with difficulty,' and *ορεξις*, 'appetite.' Diminution of appetite.

DYSOS'MIA, from *δυσ*, 'with difficulty,' and *οσμη*, 'smell.' Diminution of smell.

DYSPEPSIA, from *δυσ*, 'with difficulty,' and *πιπτα*, 'I concoct.' *Limo'sis Dyspepsia, Anorexia, Apepsia, Digestio depravata, D. difficilis, D. læsa, Indigestion, Difficulty of Digestion.* A state of the stomach, in which its functions are disturbed, without the presence of other diseases, or when, if other diseases be present, they are of but minor importance. The symptoms of dyspepsia are very various. Those affecting the stomach itself are:—loss of appetite; nausea; pain in the epigastrium or hypochondrium; heart-burn; sense of fulness, or weight in the stomach; acid or fetid eructations; pyrosis, and sense of fluttering or sinking at the pit of the stomach. The sympathetic affections are of the most diversified character. Dyspepsia, being generally of a functional nature, is devoid of danger. When arising from disease of the stomach itself, it is, of course, more serious.

It is usually dependent on irregularity of living; either in the quantity or quality of the food taken: and the most successful treatment is, to put the patient on a diet easy of digestion; to combat the causes, where such are apparent; and, by proper remedies and regimen, to strengthen the system in every practicable manner. A great error exists in regarding it as always a disease of debility. It is often connected with an inflammatory or subinflammatory condition of the mucous lining of the stomach, and of course a very different plan of treatment is required in the two cases.

DYSPERMA'SIA, *Dyspermatis'mus*, from *δυσ*, 'with difficulty,' and *σπερμα*, 'sperm.' Difficulty, sometimes incapacity of voiding the sperm.

DYSPHA'GIA, *Dyscatbro'sis, Dyscatap'osis, Deglutitio difficilis, D. læsa, D. impedita*, from *δυσ*, 'with difficulty,' and *φαγω*, 'I eat.' Difficulty of deglutition. Dysphagia is almost always symptomatic; either of inflammation or of other disease of the organs of deglutition, or of incomplete obstruc-

tion of the œsophagus, by some obstacle within it, or by a neighbouring tumour. At times, it is produced by spasm or paralysis of the œsophagus. The prognosis and treatment vary according to the cause.

DYSPHO'NIA, from *δυσ*, and *φωνη* 'the voice.' Difficulty of producing and articulating sounds; voice imperfect or depraved. *Aphonia* (of some.)

DYSPHOR'IA, *Inquietudo, Astasia*, Dissatisfaction, Restlessness, Suffering; from *δυσ*, and *φρα*, 'I bear.'

DYSPNŒ'A, from *δυσ* and *πναι*, 'I breathe,' *Pseudo-asthma, Anhelation, short breath, Brachypnœa, Difficulty of breathing, (F) Courte haleine.* Dyspnœa may be idiopathic or symptomatic; the latter accompanies almost all thoracic diseases. Urgent Dyspnœa has been called *amphipneuma, αμφιπνευμα*.—Hippocr.

DYSTHAN'ATOS, from *δυσ* and *θανατος*, 'death.' That which causes a slow and painful death. One who experiences this kind of death.—Hippocr.—Galen.

DYSTHERAPEU'TOS, *Difficiliter curabilis*; from *δυσ* and *θεραπεια*, medical treatment. That which is difficult of cure.

DYSTHE'SIA. Bad humour. Impatience in disease; from *δυσ*, 'badly,' and *τιθημαι*, 'I am situated.'—Erotian.

DYSTHET'ICA, *Cachexies*, same etymon. A morbid condition of the blood or blood-vessels; alone or connected with a morbid state of other fluids, producing a diseased habit. The 4th order in the class *Hæmatica* of Good, including *Plethora, Hæmorrhagia, &c.*

DYSTHYM'IA, from *δυσ* and *θυμος*, 'mind.' *Depression, Despondency.* A bad sign in acute diseases.

DYSTO'CIA, from *δυσ*, and *τοκος*, 'accouchement.' *A laborious accouchement, Parodynia, morbid labour, difficult labour. Partus difficilis.* See Laborious.

DYSTECIASIS, *Hispiditas*, from *δυσ*, 'bad,' and *στοιχος*, 'order.' Irregular position of the eye-lashes.—Forestus.

DYSU'RIA, *Uri'næ difficilis excretio*, from *δυσ*, 'with difficulty,' and *ουρον*, 'urine.' *Strangury* (of some.) Difficulty of passing the urine. In this affection the urine is voided with pain, and a sensation of heat in some part of the urethra. Dysuria is the first degree of retention of urine. It differs from strangury in which the urine can only be passed in drops and with great straining.

E

EAR, *Auris*, *Ous*, *ovs*, Saxon, *eare*, (F) *Oreille*. The organ of audition. It is composed of a series of more or less irregular cavities, in which the sonorous rays are successively received and reflected, until they agitate those nerves which are destined to convey the impression to the brain. The ear is contained partly in the substance of the temporal bones; and a part projects externally, behind the joint of the lower jaw. It may be divided into three portions;—the *outer* or *external ear*, formed by the auricle and meatus auditorius; the *middle ear*, comprising the cavity of the tympanum and its dependencies; and the *internal ear*, comprehending the three semicircular canals, the cochlea and the vestibule; which, together, constitute the *osseous labyrinth*. Within the cavity of this labyrinth are contained membranes having nearly the shape of the vestibule and semicircular canals, but not extending into the cochlea. These membranes form the *membranous labyrinth*. Between the osseous and the membranous labyrinth is situate the liquor of Cotunnus, and within the membranous labyrinth is a fluid termed by De Blainville *vitrine auditive*, from its supposed analogy to the vitreous humour of the eye. The form of the membranous vestibule is not an exact imitation of the osseous cavity, being composed of two distinct sacs, which open into each other,—the one termed the *Sacculus vestibuli*; the other the *Sacculus*, q. v. Each sac contains in its interior a small mass of white calcareous matter resembling powdered chalk, which seems to be suspended in the fluid of the sacs by means of a number of nervous filaments proceeding from the auditory nerve. These are the *otoconies* and *otolithes* of Breschet.

The auditory nerve is distributed to the cavities of the internal ear.

EAR-PICK, *Otoglyphis*, *Coch'lear auricula'rè* (F) *Cure-oreille*, *ωτογλυφίς*, *Auriscal'pium*. A species of small scoop, used for extracting hardened cerumen from the meatus auditorius externus; or to remove foreign bodies from the ear. If carelessly used, it is apt to excite inflammation of the tube.

EAR-TRUMPET, *Tubusacus'ticus*, *Acus'ticum Cornu*, (F) *Cornet acoustique*. An instrument for collecting sound and increasing its intensity, used by those who are hard of hearing. It is, commonly, a kind of cone, formed of silver, tin, or elastic gum, the base of which is turned towards the person, who is speaking, and the apex towards the entrance of the meatus auditorius externus.

EAU DE JAVELLE, *Bleaching liquid*, *Aqua alkali'na oxymuriat'ica*, (Common salt ℥ ij, black oxide of manganese ℥ j, water ℥ ij. Put into a retort, and add, gradually, oil of vitriol ℥ ij. Pass the vapour through a solu-

tion of subcarbonate of potass 3 iij in water 3 xxix, applying heat towards the last. S. G. 1.087.) It is stimulant, detergent, and antiseptic,—applied externally.

EBEAUPIN, MINERAL WATERS OF. An acidulous chalybeate, in the department of *Loire Inférieure*, near Nantes.

EBRIECA'SUM. A term employed by Paracelsus to denote a disturbance of the reason, similar to what occurs in drunkenness.

EBULLI'TION, *Ebullitio*, *Æstua'tio*, *Anaz'esis*, *Causis*, from *ebullire*, 'to bubble up.' *Boiling*. (F) *Bouillonnement*. The motion of a liquid, by which it gives off bubbles of vapour, by heat or fermentation. The boiling point of liquids varies, according to the pressure to which they are subjected. For the point of ebullition of different substances, see *Heat*.

EBULLI'TION is used in France, in a vague manner, for every kind of transient eruption of the skin, occurring without fever or with a slight febrile attack.

EC, (before a vowel *Ex*), *εκ*, *εξ*, 'out of, from, of.' Hence, *Ecchymoma*, *Eclectic*, &c.

ECBRAS'MATA, from *εκβραζω*, 'I boil up.' *Ecchym'ata*. Hippocrates uses this word for certain burning eruptions.

ECCHYMO'MA, *Ecchymo'sis*, *Pelidno'ma*, *Pelio'ma*, from *εκ*, 'out of,' and *χυμος*, 'juice,' 'humour.' *Effu'sio*, *Exsucca'tio*. A livid, black, or yellow spot, produced by blood effused into the cellular tissue from a contusion. Spontaneous effusions, occurring as the result of disease or after death, are called *sugillations*. It is important, at times, in a medico-legal point of view, to distinguish between *ecchymosis*, produced during life, and *sugillation*, occurring after death.

EC'COPE, from *εκ* and *κοπτειν*, 'to cut.' The act of cutting out: also, a perpendicular division of the cranium, by a cutting instrument.

ECCO'PEUS. Same etymon. A knife or instrument for cutting. An ancient instrument—the *raspatory*—used in trepanning.

ECCOPROT'IC, *Eccoprot'icus*, *Ectoprot'ic*, from *εξ*, 'out of,' and *κοπρος*, 'excrement.' Mild purgatives or laxatives, whose operation is confined to simply clearing out the intestinal canal.

ECCORTHAT'ICUS, from *εκ*, 'out of,' and *κορδαω*, 'I collect.' An ancient epithet for remedies to which was attributed the property of evacuating collections of humours.

ECCRINOL'OGY, *Eccrinolo'gia*, from *εκκρνω*, 'I separate,' and *λογος*, 'a discourse.' A treatise on the secretions.

EC'CRISIS, from *εκ* and *κρνω*, 'I separate.' *Excre'tio*. The *excretion* or *egestion*, either of an excrementitious, or morbid, matter, by any of the outlets.

ECCRITICA, from *εκκρινω*, 'I secrete.' Diseases of the excretory function. The 6th class in Good's Nosology.

EC'DORA, from *εκ*, and *δωω*, 'I flay.' *Anad'ora*, *Excoria'tio*. Excoriation in general, but more especially of the urethra.

ECHALOTTE, *Eschalotte*, *Allium Ascalon'icum*, *Cepa Ascalonica*. The shallot. A species of allium, employed in culinary preparations.

ÉCHANCRURE (F), *Emargina'tio*, *emarginatu'ra*. A French word, employed by anatomists to designate depressions and notches of various shapes, observed on the surface or edges of bones.

The **ÉCHANCRURE NASALE** belongs to the os frontis and is articulated with the bones of the nose.

The **É. ETHMOIDALE** is on the same bone, which it unites with the ethmoid bone.

The **É. PAROTIDIENNE** is a triangular space, comprised between the parotidian edge of the inferior maxillary bone and the mastoid process, so called because it lodges the parotid gland.

ÉCHAUBOULURES (F), *Sudam'ina*, *hidro'a*. A word whose meaning is not fixed. It is applied to any eruption on the surface of the body, accompanied with pricking and other uneasy sensations.

ÉCHAUFFEMENT (F), *Calefac'tio*, *Excalefac'tio*, from *échauffer*, *calefacere*, 'to make warm.' Augmentation of heat in the animal economy; the symptoms of which are a more than ordinary sensation of heat, disposition to perspiration, great thirst, general indisposition, flushed countenance, &c.

It goes off by the use of antiphlogistics and abstinence. In the vulgar language, it is often used synonymously with *constipation* and sometimes for simple gonorrhœa.

ECHECOL'LON, from *εχω*, 'I have,' and *κωλλα*, 'glue.' *Echecol'lum*. Any topical, glutinous remedy.—Gorræus, Galen.

ECHINOPHTHAL'MIA, from *εχινος*, 'a hedgehog,' and *οφθαλμια*, 'inflammation of the eye.' Ophthalmia of the eyelids in which the cilia project like the quills of the hedgehog.

ECHI'NOPS, from *εχινος*, 'hedgehog,' and *ωψ*, 'the appearance.' *Crocodil'ion*, *Acanthalzu'ca*, *Scabio'sa carduifo'lia*, *Sphæroceph'ala elatior*, *Echinopus*, *Echi'nops Sphæroceph'alus*. The globe thistle. The root and seeds are reputed to be moderately diuretic.

ECLACTIS'MA, *Eclamp'sis*, *Eclamp'sia*. *Epilamp'sis*, *Effulgescen'tia*, from *εκλακτιζω*, 'I kick.' Epilepsy is often accompanied with flashings of light; and hence Hippocrates has used the two last words for epilepsy. They have all been applied to the convulsions of children.

ECLECTIC (PHYSICIANS), *Eclect'ici Med'ici*, from *εκλεγω*, 'I choose.' A sect of physicians, who professed to choose, from other sects, all the opinions which appeared

to them best founded. Agathinus of Sparta, master of Archigenes of Apamœa in Syria, was its reputed founder; and Archigenes, and Aretæus, its greatest ornaments.

Every judicious physician must be an eclectic.

ECLEC'TOS, *Eclig'ma*, *Elig'ma*, *Elix'is*, *Lambiti'vum*, *Linctus*, *Linctua'rium*, from *εκλεχω*, 'I lick.' (F) *Looch*, (q. v.) A medicine, of a thick, syrupy consistence, chiefly used to allay cough; and consisting of pectoral remedies. It was formerly sucked from the end of a liquorice stick, made into a kind of pencil; hence its name *Linctus*, from *lin-gere*, 'to lick.' Although the linctus is usually exhibited in Thoracic affections it may have tonic virtues combined with it.

EC'LYSIS, *Exsolutio*, from *εκλυω*, 'I loose.' Resolution, prostration of strength, faintness.

ECON'OMY, *Æcono'mia*, from *οικια*, 'a house,' 'family,' and *νεμω*, 'I rule.' By the term *animal economy* is understood, the aggregate of the laws, which govern the organism of animals. The word *economy* is, also, used for the aggregate of parts, which constitute man or animals.

ECPHRAX'IS, from *εκφρασσω*, 'I remove obstruction.' The action of deobstruent remedies.

ECPHYSE'SIS, from *εκφυσω*, 'I breathe through,' *Exsuffla'tio*. A quick and forced expulsion of air from the lungs.

ECPIES'MA, from *εκπιζω*, 'I compress.' *Effractu'ra*, *Impac'tion*, *Deces'sio*. A fracture of the cranium, with depression of the fragments and compression of the brain.

ECPIES'MOS, *Expressio*, *Ex'itus*, *Ec-pies'mon*, same etymon. Celsus uses these words to signify the forcing of the eye from the orbital cavity, with apparent but not real augmentation of the organ. See *Exophthalmia*.

ECPLERO'MA, from *εκ*, and *πληρωω*, 'I fill,' *a cushion*, *a pad*. Hippocrates means, by this term, a small pad or ball of leather or other substance intended to fill the hollow of the arm-pit; used probably in reducing luxations of the shoulder.

ECPTO'MA, *Ecpto'sis*, *Exciden'tia*, from *εκπιπτω*, 'I fall out.' This word has been used in various senses. 1. Synonymously with *luxation*. 2. For the separation of gangrenous parts. 3. For the expulsion of the secundines. 4. For the prolapsus of the womb: and 5. For intestinal or omental hernia, &c.

ECREX'IS, *Ruptura*, from *εκρηγνυμι*, 'to break.' Rupture, laceration.

ECRHYTH'MOS, from *εκ* and *ρυθμος*, 'rhythm.' A term applied to the pulse, particularly, when irregular.—Galen.

EC'RYSIS, from *εκρυσω*, 'I run from.' A discharge.

ECSARCO'MA, from *εκ* and *σαρξ*, 'flesh.' A fleshy excrescence of various kinds.

EC'STASIS, from *εξισταμαι*, 'I am beside

myself.' An *ecstasy* or *trance*, *Carus ecstasis*, *Cat'ochus*, *Ex'tasis*, *Catalep'sia spu'ria*, (F) *Extase*. A state in which certain ideas so completely absorb the mind, that the external sensations are suspended, the voluntary movements arrested, and even the vital action retarded. In catalepsy there is in addition complete suspension of the intellectual faculties. This last condition is in general described as *trance*.

ECTASIS, 'extension,' 'expansion.'

ECTASIS IRIDIS, is the extension or expansion of the iris, which occasions diminution of the pupil.

ECTHLIM'MA, *Exulcera'tio*, from *εκθλιβα*, 'I express,' 'I bruise.' Chafings or excoriations, produced by external violence.—Hippocr.

ECTHY'MA, from *εκθυα*, 'I break out.' (F) *Dartre crustacée*. A cutaneous eruption, characterized by large round pustules always distinct and seated upon an indurated and highly inflamed base. In the course of a day or two the pustules generally break, and olive-brown incrustations are formed, which adhere firmly to the skin. These separate in about a fortnight. The disease requires the antiphlogistic treatment. Under the *Ecthy-mata*, Vogel has designated certain hard, unequal tumours, which appear transitorily on the skin.

ECTOPOCYS'TICUS, from *εκτοπος*, 'out of place,' and *κυστις*, 'bladder.' Diseases, dependent upon displacement of the bladder.

ECTRIM'MA, from *εκτριβα*, 'I rub off.' Ulceration of the skin; and, particularly, that which arises from the pressure of the bed on different parts of the body, after a protracted confinement.—Hippocr.

ECTROPE, *Divertic'ulum*, from *εκτρεπω*, 'I turn off,' 'divert.' Any duct by which peccant or morbid matter was supposed to be drawn off.—Hippocr.

ECTRO'PION, same etymon. *Ectro'pium*, *Ever'sio pal'pebræ*, *Blepharopto'sis Ectro'pium*, *Blepharoto'sis*, *Pal'pebra infe'rior extror'sum flexa*, *Divarica'tio*, (F) *Eraillage des Paupières*, *Renversement des Paupières*. Eversion of the eyelids, so that they do not completely cover the globe of the eye. It happens more commonly to the lower than to the upper eyelid. It may be owing to the retraction of the skin, after the cure of an ulcer, wound, or burn of the eyelid; or it may depend on tumefaction or relaxation of the conjunctiva. In the majority of cases, removal of a portion of the conjunctiva will operate a cure; but there are many which defy the efforts of art. The ancients called Ectropion of the upper eyelid, *lagophthalmia*.

EC'ZEMA, from *εκζειω*, 'I boil out.' *Eczes'ma*, *Pus'tula ardens*. Heat eruption. An eruption of small vesicles on various parts of the skin, usually set close or crowded together; with little or no inflammation around their bases and unattended by fever.

EC'ZEMA MERCURIA'LE, *Ec'zema rubrum*, *Erythe'ma mercuria'le*, *Hydrargyr'ia*, *Hydrargyro'sis*, *Hydrargyriasis*, *Morbus mercuria'lis*, *Mercur'ial lepra*. A variety of eczema, arising from the irritation of mercury. The treatment is chiefly palliative, consisting in ablution with mucilaginous infusions or decoctions; mild dressings, where the cuticle has exfoliated; avoiding all irritation; keeping the bowels open; with the use of the sulphuric acid and cinchona. The *Ec'zema Impetiginodes* or *Grocer's Itch* is produced by the irritation of sugar.

EDEN'TULUS, *Ano'dos*, *ανοδος*, *Carens den'tibus*, (F) *Édenté*. One without teeth. This defect can only be remedied by artificial means.

EDULCORA'TION, *Glycan'sis*, *Edulcora'tio*, from *edulcora're*, 'to sweeten,' 'to render mild.' An operation, the object of which is to deprive a substance of its acrid and disagreeable taste, or, at least, to disguise it. Also, the addition of a saccharine substance to a medicine, whose taste it is desirable to modify agreeably.

EF'FERENT, *Esferens*, from *es'fero*, 'I carry,' 'transport.' *Vasa esferen'tia* are those lymphatics, which issue from the lymphatic glands to convey their lymph to the thoracic duct; so called to distinguish them from those which pass to those glands, and which have been termed *vasa deferen'tia*.

EFFERVES'CENCE, *Effervescen'tia*, *ζεσις*, *εκζεσις*, *Zesis*, *Ec'zesis*, from *efferves'cere*, 'to grow hot.' That agitation, which is produced by the escape of gas through a liquid, independently of the heat of the mixture; such as, e. g. results from the mixture of the acetic acid and carbonate of potass.

In *Pathology* it has a similar signification. It expresses, in the language of the Humorists, a sort of ebullition in the fluids of the living body; produced either by elevation of temperature or by the reaction on each other of the principles contained in the fluids in circulation.

EFFICA'CIOUS, *Efficax*, from *effi'cere*, 'to accomplish.' That which produces a great effect, as an *efficacious remedy*.

Medici'na efficax, *La médecine efficace*, is a term, sometimes applied to surgery.

EFFLORES'CENCE, *Efflora'tio*, *Efflorescen'tia*, from *efflores'cere*, 'to blow as a flower.' *Stribili'go*, *Ecthyma*, *εκδυμα*. The conversion of a solid substance into a pulverulent state by exposure to the air. In salts this is generally owing to the loss of a part of their water of crystallization.

In *Pathology*, efflorescence has the same meaning as exanthema; and, in the nosology of Sauvages, the name is given to that order of diseases. Sometimes, it is confined to the *cutaneous blush*, the *exanthe'sis* of Good.

EFFORT, *Nisus*, *Conatus*, *Peira*, *πυρα*. A muscular contraction of greater or less strength, the object of which is, either to re-

sist an external force, or to accomplish a function, which has become naturally laborious; such are, the act of pushing away or of drawing a body towards us, and the more or less painful efforts used by the mother to cause the expulsion of the fœtus. In France, the word *effort* is often used synonymously with *hernia*; and signifies, likewise, the painful twitches of muscles, occasioned by over-exertion, or by the rupture of some of their fleshy fibres. Sauvages calls *Efforts des reins*, *Lumbago à nisu*, the pain in the loins occasioned by bearing too heavy a burden.

EFFRACTURA CRANII, *Enthla'sis Cra'nii*. Fracture of the cranium, with depression.—Paré.

EFFUSION, *Effu'sio*, from *effundere*, 'to pour out.' (F) *Epanchement*, (*Infiltration* is the term generally employed for effusion into the cellular membrane.) The pouring out of blood or of any other fluid into the cellular membrane, or into the cavities of the body. The *effusion of serum* or of *coagulable lymph*, e. g. is a common result of inflammation of serous membranes.

EGOPHONY, *Ægopho'nia*, from *αιξ*, 'a goat,' and *φωνη*, 'voice.' *Goat's Voice*, *Bleating Voice*, *Pectoriloquie chevrotante*. Laennec has designated, by this name, the kind of resonance of the voice through the stethoscope, when we examine the chest of one labouring under moderate effusion into one of the pleuræ. The voice, which strikes the ear through the cylinder, is more sharp and harsh than usual, and tremulous and broken like that of the goat. The patient himself is called *Ægophone*. Bouillaud affirms that the "bronchial and bleating voice" (*égobronchophonie*) is the principal symptom of pleuropneumonia.

EGREGOR'SIS, from *εγρεγορειω*, 'I watch.' *Vigil'ia*. A watchfulness. A morbid want of sleep.—Galen.

EIDOS, *ειδος*, 'form, resemblance.' The *ει* is often changed into *ω*, at the termination of a word. Thus, *Hæmatoï'des* or *Hæmatodes*.

EILE'MA, from *ειλεος*, *ileus*, 'a convulsion.' Vogel has given this name to a fixed pain, occupying some portion of the intestinal canal, which the patient compares to the sensation, that would be produced by a nail driven into the part.

EILOID (*Tumour*), *Eiloïdes*, from *ειλω*, 'I roll,' and *ειδος*, 'resemblance.' A morbid growth of the cutis, coiled or folded.—J. C. Warren.

EJACULATION, *Gonobolia*, *Gonobolis'mus*, *Ejaculatio Semi'nis*. The emission of sperm. The act, by which that fluid is darted out through the urethra.

EJACULA'TOR. Same etymon. *Ejac'ulans*, from *jaculare*, 'to dart,' 'to lance.'

The **EJACULATORY DUCTS OF CANALS**, (F)

Conduits ou Canaux éjaculateurs, are formed by the union of the vasa deferentia with the ducts of the vesiculæ seminales. They open at the lateral and anterior parts of the verumontanum, and convey into the urethra the sperm which is discharged from the vesiculæ, as well as that which comes directly from the testicle by the vas deferens.

EJECTION, *Ejec'tio* from *ejicere* 'to throw out or eject.' The excretion of the fæces, urine, sputa, &c.

ELABORATION, *Elabora'tio*; from *labora're*, 'to work.' This word is used, by physiologists, to signify the various changes, which substances, susceptible of assimilation, undergo through the action of living organs, before they are capable of serving for nutrition. The food is said to be *elaborated in the stomach* during the formation of chyme; the chyme is *elaborated* in the small intestine before it is chyle, &c.

ELÆOM'ELI, from *ελαιον*, 'oil,' and *μελι*, 'honey.' Dioscorides means, by this, an oil thicker than honey, and of a sweet taste, which flows from the trunk of a tree in Syria. It is acid and purgative; and sometimes occasions serious symptoms, according to that author.—Gorræus.

ELÆOPH'ANES, from *ελαιον*, 'oil,' and *φαινομαι*, 'I appear.' That which has the appearance of oil; as *Uri'na elæoph'anes*.

ELÆ'O-SAC'CHARUM, from *ελαιον*, 'oil,' and *σακχαρ*, 'sugar.' *O'leo-Sac'charum*, *Bal'samo-Sac'charum*. A medicine, composed of essential oil and sugar. It was made by pouring upon an ounce of sugar, reduced to an impalpable powder, 3ss or 3j of an essential oil; the mixture being triturated until the two substances were perfectly united.—Rolfink.

ELAS'MA, from *ελαυνω*, 'I drive up.' A *Clyster Pipe*.—Linden.

ELASTIC'ITY, *Elastic'itas*, *Elater*, *Elas'tes*, *El'ates*, *Vis elastica*, *Tone*, *Tonic'ity*, *Contractilité de Tissu*, *Contractilité par défaut d'extension*, from *ελαυνω*, 'I impel.' The property by which certain bodies return to their proper size and shape when these have been modified by pressure or otherwise. It is possessed by the dead as well as living solid.

ELBOW, *Cu'bitus*, *Ancon*, *Pechys*, (F) *Coude*. This word, abstractedly, means the angle, formed by the union of two straight bodies. It is particularly applied to the articulation of the arm with the forearm, and especially to the projection, formed by the olecranon process at the posterior part of the joint.

ELCO'SIS or **HELCO'SIS**, *Elco'ma* or *Helco'ma*, from *ελκος*, 'an ulcer.' *Ulceration*, in general. A deep ulceration of the cornea, in consequence of a blow or of violent inflammation.—Galen, Paré.

Sauvages applies the term to a state of the

body, in which there are numerous ulcerations, of an obstinate character, complicated with caries, putrescency, low fever, &c.

ELECTRICITY, *Electricitas*, from *ηλεκτρον*, 'amber:' the substance in which it was first noticed. Electricity is used, medically, as an excitant. It has been occasionally employed with success in paralysis, rheumatism, accidental deafness, amaurosis, amenorrhœa, &c., but it is uncertain, and not much used: and the cases are by no means clear in which it could be of service. It may be communicated by means of the *electric bath*—*Bain électrique*, as it has been called; which consists in placing the patient upon an isolated stool, and connecting him with the prime conductor, of which he thus becomes a part. The fluid may be communicated by points, sparks, or by shocks, according to the required intensity.

To **ELECTRIFY**, from *electric* and *facio*, 'I make.' (F) *Electriser*. To produce the electrical condition in a body, or to render it susceptible of producing electrical phenomena. It is often used to signify the act of communicating the electric fluid to man.

ELECTRODES, From *ηλεκτρον*, 'amber,' and *ειδος*, 'resemblance.' An epithet for evacuations, which shine like amber.—Hippoc., Foësius.

ELECTROPUNCTURE, *Electropuncture*, *Galvanopuncture*. The operation of inserting two or more wires, and then connecting them to the poles of the Galvanic apparatus.

ELECTUARIUM, *Electarium*, an *Electuary*, from *eligere*, 'to make choice.' (F) *Electuaire*. A pharmaceutical composition of a soft consistence, somewhat thicker than honey, and formed of powders, pulps, extracts, syrup, honey, &c. In the London and American Pharmacopœias, electuaries are called Confections, which see.

ELEMENT, *Elementum*, *Principium*, *P. primitivum*, *Stocheion*. A simple, ultimate constituent or principle in the human body, which forms the basis of a fibre or tissue. Also a constituent of a compound organ. The *inorganic elements* are simple principles. An *organic element*, *proximate principle* or *compound of organization* results from the union of certain inorganic elements. Oxygen, hydrogen, carbon and azote are inorganic elements; fibrine, albumen, osmazome, &c., organic elements.

ELEPHANTIASIS. *Elephantia*, *Elephantiasmus*, *El'ephas*, *Lazarus morbus* vel *malum*, *Phœnic'us morbus*, *Phymatosis* *Elephantiasis*, from *ελεφας*, 'an elephant.' Various affections have been described under this name, by adding an epithet. It is ordinarily and generically applied to a condition, in which the skin is thick, livid, rugous, tuberculate, and insensible to feeling.

In the **E. ARABICA**, *Maladie glandulaire*, *Ladrerie*, *Tyriasis*, *τυριασις*, *El'ephas*, *Ele-*

phantiasis, *E. Indica*, *Elephantia Arabum*, *Lepra Arabum* (of some.) The tubercles are chiefly on the face and joints. There is loss of hair, except on the scalp; voice hoarse and nasal; and the disease is said to be contagious and hereditary. It most frequently attacks the feet; and gives the lower extremity a fancied resemblance to the leg of the elephant, whence its name. The seat of the disease seems to be in the lymphatic vessels and glands, and in the subcutaneous cellular tissue; the inflammatory condition of which is accompanied with general morbid symptoms. Medicine has little or no effect on this loathsome complaint.

The **E. OF THE GREEKS**, *E. Græcorum*, is probably the same disease as *Lepra*, which see.

The **ELEPHANTIASIS OF CAYENNE**, *Mal rouge de Cayenne*, seems to be a variety of *Lepra*, characterized by red and yellow spots, occupying the forehead, ears, hands, loins, &c., afterwards extending and becoming scaly, with deformity of the parts where they are seated, particularly of the face; and ultimately producing cracks, ulcers, caries, and sometimes death.

The **ELEPHANTIASIS OF JAVA** is likewise a variety of *lepra*, characterized by large, white tumours on the toes and fingers, resembling scrophulous tumefactions. These tumours ulcerate, and the ulcerations spread from the extremities towards the trunk, destroying even the bones. Amputation can alone arrest its progress. The disease is often accompanied by alopecia, and by an eruption of red spots.

The **ELEPHANTIASIS OF INDIA** is characterized by red, livid, or yellowish spots, slightly prominent, to which succeed indolent tumours, formed in the cellular texture. At a more advanced period the phalanges swell, and become ulcerated: the bones of the nose carious, the lips thickened, and emaciation gradually carries off the patient. It belongs, likewise, to *lepra*.

The **BARBADOES LEG**, *Glandular disease of Barbadoes*, is the Elephantiasis of many writers, *Bucnemia*. It is characterized by the leg being enormously tumid and misshapen: skin thickened, livid, and rugose; often scaly: scrotum, arms, or other parts sometimes participating in the affection.

ELEPHANTINUM EMPLASTRUM, *ελεφαντινον*. An ancient plaster, composed of 30 parts of *ceruss*, 45 of *wax*, oil $\frac{1}{2}$ ss, *water* $\frac{1}{2}$ j.—Castelli. Oribasius and Celsus both mention a plaster of this name, but by no means similar in composition.

ELEVA'TOR, from *elevare*, 'to lift up.' (F) *Élévateur*. A muscle, whose function it is to raise the part into which it is inserted.—See *Levator*.

ELEVA'TOR, *Elevatorium*, *Vectis elevato'rius*. A name given to different surgical instruments, employed for raising portions of

bone, which have been depressed, or for raising and detaching the portion of bone, separated by the crown of the trepan.

The COMMON ELEVATOR is a mere lever; the end of which is somewhat bent and made rough, in order that it may less readily slip away from the portion of bone which is to be raised. The instrument is used, by forming a fulcrum for it, either on the hand which holds it, or upon the fingers of the other hand; or by making a fixed point for it on the edge of the opening made with the trephine.

The TRIPLOID ELEVATOR, *Vectis triploides*, was so called from its consisting of three branches, uniting above in one common trunk. The latter part was traversed by a long screw, having below a kind of hook, and above a handle for turning it. By turning the screw the hook was drawn up, and the bone thus elevated.

The ELEVATOR OF PETIT consists of a lever mounted on a handle, and straight throughout its whole length, except at its very end, which is slightly curved, in order that it may be more conveniently put under the portion of bone, intended to be elevated. The lever is pierced at various distances from its but-end with several holes, intended for the reception of a movable screw-peg, fixed on the top of a kind of bridge. This part of the instrument consists of an arch, the ends of which are long, and covered with small pads, and on its centre is the screw-peg already mentioned. By means of these holes the arm of the lever can be lengthened at pleasure.

The ELEVATOR OF LOUIS differed from the last only in the circumstance of the screw-peg being united to the bridge by a kind of pivot instead of hinge, so that greater extent of motion is permitted.

The simple lever is the only one now used, owing to the want of facility and advantages in the use of the others.

ÉLÉVURES (F) Efflorescentiæ. A generic name, including all the exanthemata, in which there is tumefaction of the tissue of the skin.

ELIXA'TIO, Epse'sis, ἐψῆσις, from *elix'us*, 'boiled,' 'sodden.' This word has been used synonymously with Decoction. The act of boiling.

ELIX'IR, Isir, Ixir, Quelles, Alex'ir. The etymology of this word is not clear. Lemery derives it from *ἐλξα*, 'I extract;' and also from *αλεξω*, 'I aid.' Others believe it to be from Arabic, *al-ecsir*, or *al-eksir*, 'chymistry.' An elixir is a medicine, composed of various substances held in solution in alcohol. The name has been used, however, for preparations, which contain no spirit of wine.

ELIXIR AC'IDUM HALLERI, seu DIPPE'LI, Elixir Antipodag'ricum, E. Antinephret'icum, E. Sulphu'rico-ac'idum, Guttæ ac'idæ ton'icæ, Aqua Rabe'lii, Liquor ac'idus Halleri, Mistu'ra sulphu'rico-ac'ida, Æther sul-

phu'ricus ac'idus, Ac'idum sulphu'ricum alcoolisa'tum, A. vitriol'icum vino'sum, Alcohol Sulphurica'tum, A. Sulphu'ricum, is a mixture of concentrated sulphuric acid and alcohol:—in the *Eau de Rabelle*, of one part of the former to three of the latter. It is employed as an astringent in hemorrhages, &c.

ELIXIR, ANTI-ASTHMATIC, OF BOERHAAVE. This elixir is composed of *alcohol, aniseed, camphor, orris, asarabacca root, calamus aromaticus, liquorice,* and *elecampane*. It is given in asthma, in the dose of 20 or 30 drops.

ELIXIR, ANTI-SCROPH'ULOUS, OF PEYRILHE; composed of weak *alcohol, subcarbonate of potass,* and *gentian root*. It is administered in scrophula.

ELIX'IR PECTORA'LE REGIS DANIÆ, Elix'ir Dano'rum, E. Ringelman'ni, E. ex succo Glycyrrhizæ, E. pectora'lè dulce, E. e succo liquiritiæ: (*succ-glycyrrhiz*, p. 1; *Aq. Fœnicul*, p. 2. *Alcohol ammoniat*, p. 6. A formula in many of the Pharmacopœias of continental Europe.) With the addition of opium it constitutes the *Elixir ammoniato-opia'tum, Extractum theba'icum ammoniacalè* of some Pharmacopœias.

ELIXIR VITÆ OF MATHI'OLUS; composed of *alcohol* and 22 aromatic and stimulating substances. It was formerly employed in epilepsy.

ELLYCHNIO'TOS, from *ἐλλυχνιον*, 'the wick of a lamp.' A sort of tent, used by the ancient surgeons; so called, because it was shaped like a wick, or because it was made of a similar material.

ELO'DES, Marshy. Febris Elodes, Helodes, Marsh fever, Helop'yra, Helopyretos, from *ἐλος*, 'a marsh,' and *εἶδος*, 'resemblance.' Also, a kind of fever, characterized by great moisture, or sweating.

ELONGA'TIO, Parathro'ma, from *elongare*, 'to lengthen,' 'extend.' An incomplete luxation, in which the ligaments of an articulation are stretched and the limb lengthened, without total luxation. The word has, also, been used for the extension required in the reduction of fractures and luxations.

ELU'VIES, from *eluo*, 'I wash out.' An inordinate discharge of any fluid, and also the fluid itself. In the works of some authors it is particularly applied to the mucus, which flows from the vagina in cases of leucorrhœa.

EL'YTROCE'LE, from *ελυτρον*, 'an envelope,' and *κίλη*, 'a tumour.' Vogel has given this name to vaginal hernia. *Colpoce'le*.

EL'YTRON, from *ελυω*, 'I involve.' A sheath. The vagina. The membranes, which envelope the spinal marrow are called *elytra*.

ELYTRON'CUS, Elytroph'y'ma, from *ελυτρον*, 'a vagina or sheath,' and *ογκος*, 'a tumour.' A swelling of the vagina.

ELYTROPTO'SIS, from *ελυτρον*, 'a sheath,'

and *πτωσις*, 'fall.' Callisen gives this name to inversion of the vagina.

EM and EN, *εν*, 'in, into, within.' Also, 'excess':—frequently used in this last sense by Dr. Good. A common prefix, generally answering to the prefixes *im* and *in*, in English. In composition, before *β*, *π*, *φ*, *ψ*, and *μ*, the *ν* is changed into *μ*; before *γ*, *κ*, *ξ*, and *χ*, into *γ*; before *λ*, into *λ*, and before *ρ* generally into *ρ*.

EMACIA'TION, *Emacia'tio*, from *emacia're*, 'to grow lean.' *Extenua'tio*, *Macies*, *Macritu'do*, *Macror*, *Marco'res*, *Skeleti'a*, *Lep-tysm'us*, *Pingued'inis diminutio*. (F) *Amaigrissement*, *Maigreur*. That condition of the body or of a part of the body in which it grows lean. The state of one who is lean. *Leanness*; *Isch'notes*.

EMANA'TION, *Emana'tio*, *Efflu'vium*, from *emana're*, 'to issue or flow from.' The term is applied to bodies, which proceed or draw their origin from other bodies; such as the light which *emanates* from the sun; the miasmata, which arise from the putrid decomposition of animal or vegetable substances, &c. See *Miasm*.

EMAN'SIO MEN'SIUM. This term has been applied to amenorrhœa or obstruction of the menses before they have been established. Some have used it for the retention which occurs even after they have been established. The former is the general acceptance.

EMASCULA'TION; *Emacula'tio*, from *emacula're*, 'to render impotent.' The act of removing or destroying the generative organs of a male animal.

EMBALM'ING, *Balsama'tio*, *Smyrnis'mos*, *Cedeia*, *Pollinctu'ra*, *Conditu'ra Cadav'erum*, from *Balsamum*, *Balsam*. (F) *Embaument*, *Imbalsamation*. An operation, which consists in impregnating the dead body with substances capable of preventing it from becoming putrid, and thus putting it in a condition to be preserved.

EMBAM'MA, from *εμβαπτα*, 'I immerse in.' A medicated pickle or sauce.—Gorræus.

EMBARRAS GASTRIQUE (F). *Gastric disorder or impediment*. *Collu'vies gastrica*. Irritation of the stomach, in which there is loss of appetite, bitterness and clamminess of mouth, white and yellow tongue, feeling of oppression in the epigastrium, and sometimes pain in that region, with nausea and bilious or bitter vomiting; this state being accompanied with headache, lassitude, and pain in the back and limbs.

EMBARRAS GASTRO-INTESTINAL. *Gastro-intestinal disorder*. Slight gastro-enteritis, according to the Broussaist, in which the symptoms of the *embarras gastrique* and *E. intestinal* are united.

EMBARRAS INTESTINAL, *Intes'tinal disorder*. The principal characters assigned to this are:—tension of the abdomen, colic, borborygmi, discharge of flatus *per anum*, constipation or diarrhœa, &c.

EMBOFLEMENT (F). 'Encasing,' from *em*, 'in,' and *boîte*, 'a box.'

This term has been applied to that theory of generation, which considers that the germs are encased in each other in the ovary of the female, in such sort that they are developed in succession after impregnation. It is the theory of *encasing of germs*.

EMBOLE, from *εμβαλλω*, 'I put in place.' Reduction of a luxated bone. *Repositio*.

EMBONPOINT (F). In *good point* or *plight*. *Bona corporis habitu'do*. The state of the animal body when in full health. Excessive *embonpoint* constitutes corpulence and obesity, and may become a morbid condition.

EMBROCA'TION, *Embroca'tio*, *Embreg'ma*, *Em'brochê*, *Implu'vium*, from *εμβρεχω*, 'I sprinkle.' A fluid application to be rubbed on any part of the body. It is often used synonymously with *liniment*. Originally, it was employed in the sense of *Fomentation*.

EMBRYO, *Em'bryon*, from *εν*, 'in,' and *βρωω*, 'I grow.' *Cyē'ma*. The fecundated germ, at the early stages of its development in utero. At a certain period of its increase, the name *fœtus* is given to it, but at what period is not determined. Generally, the *embryo state* is considered to extend to the period of quickening.

EMBRYOC'TONY. *Fœtus Trucida'tio*, from *εμβρυον*, 'the embryo,' and *κτονος*, 'destruction.' The act of destroying a fœtus in utero, when insurmountable obstacles—as certain deformities of the pelvis—oppose delivery.

EMBRYOG'RAPHY, *Embryogra'phia*, from *εμβρυον*, 'the embryo,' and *γραφη*, 'a description.' The part of anatomy, which describes the embryo.

EMBRYOTHLAS'TA, *Embryothlas'tes*, *Embryothlas'tum*, from *εμβρυον*, 'the embryo,' and *θλαω*, 'I break.' An instrument for dividing the fœtus piecemeal, in order to effect delivery.

EMBRYOTHLAS'TES, *Em'bryotome*, same etymon. A crotchet or other instrument used, in certain cases of laborious parturition, to break the bones of the fœtus, for the purpose of extracting them with greater facility.—Hippocr., Galen.

EMBRYOTOMY, *Embryoto'mia*, from *εμβρυον*, 'an embryo,' and *τεμνειν*, 'to cut.' A division of the fœtus into fragments, to extract it by piecemeal, when the narrowness of the pelvis or other faulty conformation opposes delivery.

EMBRYULCIA, *Embryusterulcia*, from *εμβρυον*, 'embryo, fœtus,' and *ελκω*, 'I extract,' 'I draw.' A surgical operation, by which the fœtus is extracted by means of appropriate instruments, when a faulty conformation or other circumstances prevent delivery by the natural efforts.

EMBRYUL'CUS, *Elcus'ter*, *ελκυστηρ*, same etymon. An iron hook or crotchet,

described by Fabricius ab Acquapendente, which was used to extract the fœtus in some cases of laborious labour.

EMETIC, *Emet'icum*, *Vomito'rium*. Every substance capable of producing vomiting. (F) *Emétique*. [This term is also restricted by the French to *tartarized antimony*—the *emetic*, as it were, *par excellence*.] *Vomitif*. The *tartarized antimony*, *emetine*, *ipécacuanha*, and *sulphate of zinc* are the chief emetics.

Emetics are valuable agents in disease. They may either act *primarily* on the stomach, or *secondarily* on other parts of the system:—the sympathy between the stomach and other parts of the body being very extensive, and an important object of study.

The following are the chief Emetics :

Antimonii et Potassæ	Hydrargyri Flavus,
Tartaras,	Ipecacuanha,
Cupri Acetas,	Lobelia,
—Sulphas,	Sanguinaria,
Emetina,	Scilla,
Gillenia,	Sinapis,
Hydrargyri Sulphas,	Zinci Sulphas.

EMETINE, *Emeti'na*, *Emetic*, from *εμεω*, 'I vomit.' *Vomitine*. A vegetable alkali, discovered by M. Pelletier in *ipécacuanha*, and to which *ipécacuanha* owes its emetic power. It is obtained from different *ipécacuanhas*, but chiefly from the *psychotria emetica*, *callicocca ipécacuanha*, and *viola emetica*. It is in transparent scales, of a reddish-brown colour, almost inodorous, of a bitter, slightly acrid taste; is unchangeable in the air, soluble in water and alcohol, and insoluble in ether.

Three grains of impure emetine and one grain of pure are equal to 18 of *ipécacuanha*.

EMETO-CATHARTIC, *Emeto-cathar'ticus*, from *εμετος*, 'vomiting,' and *καθαρτικός*, 'a purgative.' A remedy, which at the same time excites vomiting and purging.

EMETOL'OGY, *Emetolo'gia*, from *εμετος*, 'vomiting,' and *λογος*, 'a discourse.' A treatise on vomiting and on emetics.

EMINENCE, *Eminen'tia*, *Protuberan'tia*, *Ex'ochē*, *Exanthe'ma*. A projection at the surface of a healthy or diseased organ.

EMISSA'RIA SANTORI'NI. A name given to some small veins, which communicate with the sinuses of the dura mater, by apertures in the cranium. Such are the parietal, posterior condyloid, mastoid veins, &c.

EMIS'SION, *Emissio*, from *emit'tere*, 'to send out,' 'drive out.' The act by which any matter whatever is thrown from the body. Thus, we say *Emission of urine*, *Emission of semen*, &c.

EMMEN'AGOGUES, *Emmeniago'ga*, from *εμμηνα*, 'the menses,' and *αγω*, 'I drive,' or 'expel.' *Men'agogues*. A name given to medicines, believed to have the power of favouring the discharge of the menses. It is doubtful whether there is any substance,

which possesses this power directly. According to different conditions of the system, the most opposite remedies may act as emmenagogues. The *black hellebore*, *savin*, *madder*, *polygala senega*, and *ergot* (*secale cornutum*) are reputed to be specific emmenagogues.

The following list comprises the chief of them :

Cunila Pulegioides,	Sabina,
Helleborus Niger,	Secale Cornutum,
Mentha Pulegium,	Senega,
Rosmarinus,	Tanacetum.
Rubia,	

EMMENAGOLO'GIA, from *εμμηναγωγία*, and *λογος*, 'a discourse.' A treatise of emmenagogues.

EMMENOLO'GIA, from *εμμηνα*, 'menses,' and *λογος*, 'a discourse.' A treatise on menstruation.

EMOL'LIENTS, *Emollien'tia*, *Malthac'tica*, *Relaxan'tia*, *Epicerastica*, *Malactica*, from *emollire*, 'to soften.' Substances, which relax and soften parts that are inflamed, or too tense. They are used both internally and externally; the former, however, consisting of mucilaginous substances, being generally reckoned as demulcents; the latter or proper emollients consisting of oils, cataplasms, fomentations, &c. Oleaginous bodies, rubbed on a part, act by diminishing its cohesion. Fomentations, in cases of internal inflammation, act probably through contiguous sympathy.

The following are the chief emollients :—

Adeps,	Linum,
Amygdalæ Oleum,	Olivæ Oleum,
Avenæ Farina,	Sesamum,
Cera,	Tritici Farina,
Cetaceum,	Ulmus.

EMPATHE'MA, *Ma'nia a pathé'matē*, *Manie sans délire*, ungovernable passion, from *εμ* or *εν*, 'in,' and *παθος*, 'suffering.'—Good.

EMPHLYSIS, from *εμ* or *εν*, 'in,' and *φλυσις*, 'a vesicular tumour or eruption.' *Ich'orous Exan'them*. An eruption of vesicular pimples, filled progressively with an acrid and colourless or nearly colourless fluid; terminating in scurf or laminated scabs. A genus in the order *Exanthematica*, class *Hæmatica* of Good.

EMPHRAC'TICUS, from *εμφραττω*, 'I close,' 'I obstruct.' *Emplas'ticus*, *εμπλαστικός*, *Emplat'tom'enos*. Any substance, which closes the pores.

EMPHRAG'MA, same etymon. *Obtura'mentum*, *Impedimen'tum*. Any thing that obstructs. Hippocrates uses this term to designate the obstacle to delivery on the part of the fœtus, when the presentation is preternatural.

EMPHRAX'IS, *Obstruc'tio*, *Obtura'tio*, *Oppila'tio*. Same etymon. 'Obstruction.' An *Embarras* or repletion of canals or cavi-

ties by any substance, which is either morbid from quantity or quality.

EMPHYSEMA, *Inflatio*, *Empneumato'sis*, *Sarci'tes flatuo'sus*, *Emphyse'ma cellula're*, *Emphyse'ma pneumato'sis*, *Physon'cus*, *Tumor flatulentus*, from *εμφυσάω*, 'I inflate.' *Pneumato'sis*, *Inflatio*, *Wind-dropsy*. This term is commonly applied to any white, crepitant, shining, elastic, indolent, tumour, caused by the introduction of air into the cellular texture. Injuries of the larynx, trachea, or lungs; fractures of the ribs or wounds penetrating the chest are the most frequent causes of this affection, which is owing to the air escaping from the air-passages and insinuating itself into the cellular texture surrounding the wound. There are some cases of emphysema, which are owing to internal causes; and hence a division has been made into the *accidental* and *symptomatic*, and the *spontaneous* and *idiopathic*.

EMPHYSEMA OF THE LUNGS. *E. Pulmo'num*. A considerable pressure or contusion of the chest or any violent concussion of the lung may produce a laceration in that viscus, without injury being done to the parietes of the thorax, and may give place to the infiltration of air into the cellular texture. Laennec has described another species of emphysema of the lungs, consisting in excessive dilatation of the air-cells, some of which become as large as hempseed, ultimately break, and give rise to irregular vesicles at the surface of the lung, some of which are as large as a hazel nut. *Physical Signs*. The thorax externally, generally or locally, appears unnaturally convex and prominent. The intercostal spaces are widened but depressed. The inspiratory efforts are increased. The sound on percussion is morbidly clear, but not tympanitic. On auscultation the inspiratory murmur is feeble or suppressed. The expiration, which is more frequently audible, is prolonged, laborious and wheezing.

INTERLOBULAR EMPHYSEMA. There are no certain physical signs, which can distinguish this form from the vesicular.

EMPIRIC, *εμπειρος*, *Empiricus*, from *εμπειρα*, 'experience.' One who follows only experience. A sect of physicians, who rejected all theory and took for their guide experience alone. It was opposed to the dogmatic sect. The Empiric sect prevailed till near the time of Galen. Amongst its most eminent members, after Philinus and Serapion, were Apollonius, Glaucias, Bacchius of Tanagra, and Zeuxis,—both disciples of Herophilus,—Heraclides of Tarentum, Cleophrantus, master of Asclepiades, Menodotus of Nicomedia, and Theudas of Laodicea. They occupied themselves, chiefly, with discovering the properties of drugs and did important service, in this manner, to medicine.

At the present day, the word *Empiric* is only taken in a bad sense, being employed in

nearly the same signification, as *charlatan* or *quack*.

EMPIRICISM; same etymon. *Empirica Ars*, *Empiricē*, *εμπειρικη*. (F) *Empirisme*. Medicine, founded on experience. It generally, at the present day, signifies *quackery*.

EMPLASTRUM, from the Greek *εμ-πλαττω*, 'I spread upon.' (F) *Emplâtre*. A solid and tenacious compound, adhesive at the ordinary heat of the human body. Some of the plasters owe their consistence to wax and resin; and others to the chemical union, which takes place between the semivitreous oxide of lead and oil. Most of them become too consistent by age. When such is the case, they may be re-melted by a gentle heat, and oil be added to them.

EMPLASTRUM AMMONIACI, *Ammoniacum Plaster*, (*Ammoniac. pur. 3 v, acidi acetici ʒ ss*. After dissolving the ammoniacum, the plaster is formed by evaporating the mixture in an iron vessel in a water bath, constantly stirring. *Ph. L.*) It is used as a discutient plaster.

EMPLASTRUM AMMONIACI CUM HYDRARGYRO, *Ammoniacum plaster with mercury* (*Ammoniaci, pur ʒ j, hydrarg. pur. 3 iij, olei sulph. 3 j*. Rub the mercury with the oil until the globules disappear, then add the ammoniac, previously melted, and mix. *Ph. L.*)

EMPLASTRUM AROMATICUM, *Aromatic plaster*. (*Thuris 3 iij, ceræ flavæ 3 ss, pulv. cort. Cinnam. 3 vj, ol. ess. piment., ol. ess. Limon. aa 3 ij*. Melt the frankincense and wax together and strain; then add, as it cools, the cinnamon, previously rubbed with the oils, and form a plaster. *Ph. Dubl.*) Used as a stimulating plaster.

EMPLASTRUM ASSAFŒTIDÆ, *Assafœtida plaster*. *E. antihystericum*, (*Empl. oxid. plumb. semivitr., gum. resin Ferulæ assafœt. sing. partes duas, G. resin. bubonis galban., Ceræ flavæ aa 1 part*. *Ph. Ed.*) Used as an antispasmodic and anodyne plaster.

EMPLASTRUM CALEFACIENS, *Calefacient plaster*, *Warm plaster*. (F) *Emplâtre échauffant*. (*Emplastr. cantharid. p. i. Picis burgund. p. vii*. Melt together and form into a plaster. *Ph. Dubl.*) It is rubefacient and stimulant.

EMPLASTRUM CERÆ, *E. simplex*, *Wax plaster*, *E. attrahens*. (*Ceræ flavæ, Sevi præp. aa ʒ iij, resinæ flavæ ʒ j*. Melt them together and strain. *Ph. L.*) It has been considered drawing. It is stimulating.

EMPLASTRUM CICUTÆ, *E. de cicutâ*, *E. conii macula'ti*, *Unguentum solidum de cicutâ*. *Hemlock plaster*. (F) *Emplâtre de Cigue*. (*Resinæ abiet. 960 p. Ceræ flav. 640 p. Picis albæ, 448 p. Ol. cicutæ per decoct. præparat. 128 p. Fol. cicut. recent. 2000 p*. Melt the resins, wax and oil; add the cicuta leaves, and boil; strain and add, after having dissolved it in vinegar of squills and cicuta juice, *gum ammoniac*, 500 p. *Ph.*

Par.) It is used as a discutient, especially to scirrhus tumours.

EMPLASTRUM CUMINI, *Cummin plaster*. (Cumin. semin., carui sem., lauri bacc. sing. 3 iij, picis aridæ ʒ iij, ceræ flavæ 3 iij. Melt the pitch and wax together, then add the other ingredients. Ph. L.) It is used as a warm, discutient plaster.

EMPLASTRUM GALBANI, *Galbanum plaster*, (Empl. litharg. ʒ iij, gum. galban. ʒss. ceræ flavæ 3 iv. Melt the galbanum before adding the plaster and wax, then melt all together. Ph. D.) A stimulant and discutient.

EMPLASTRUM GALBANI COMPOSITUM, *E. lithargyri Compositum, Diachylon magnum cum gummi, Compound galbanum plaster*. (Galb. gum. resin. pur. 3 viij, emp. plumbi. ʒ iij, tereb. vulg. 3 x, abietis resin. contus. 3 iij. Melt the galbanum and turpentine together, then mix in the resin, and afterwards the plaster, previously melted. Ph. L.) It is stimulant and discutient.

EMPLASTRUM GUMMOSUM, *Gum plaster, Emplastrum lithargyri cum gummi, E. cum gummatis, E. e gummis resinosis, E. Oxidi Plumbi semivitreum gummosum, Yellow diachylon, Gum diachylon, Diachylon cum gummi*. (Emp. oxid. plumbi semivitr. p. viii, g. resin. ammoniac., g. resin. bubon. galbani, Ceræ flavæ, aa, p. i. Ph. E.) Properties and uses like the last.

EMPLASTRUM CUM GUMMI RESINIS, *Emplâtre de gomme résine, Diachylon gommé, Plaster of gum resins*. (Emplastr. simpl. p. 1600, ceræ flavæ, p. 96, picis albæ, p. 96, terebinth. p. 96. Melt by a gentle heat, and add gum ammoniac, p. 32, bdellium 32, galban 32, and sagapenum, p. 32. Dissolve in a sufficient quantity of alcohol, evaporate to the consistence of honey, and mix carefully all together. Ph. P.) A discutient.

EMPLASTRUM HYDRARGYRI, *Mercurial plaster, Emplastr. lithargyri cum hydrargyro*. (Hydrarg. purif. pond. 3 iij, ol. sulphurat. 3 j, emplastr. plumbi ʒ j. Rub the mercury with the oil until the globules disappear, then add the plaster. Ph. L.) It is stimulant, resolvent and discutient. Applied as a discutient to venereal and other tumours.

EMPLASTRUM HYDRARGYRI COMPOSITUM, *E. de hydrargyro compositum, E. de Vigo cum mercurio emendatum, Compound plaster of mercury*. (Empl. simpl. p. 1250, ceræ flavæ, p. 64, resinæ, p. 64. Melt, and before it congeals, add pulv. g. ammoniac, p. 20, bdellium, p. 20, oliban, p. 20, myrrh, p. 20, saffron, p. 12. Mix carefully. Take of mercury, p. 380, pure turpentine, p. 64, liquid and pure storax, p. 192. Triturate in an iron mortar till the globules disappear. Now melt all together, and before congealing add essential oil of lavender, p. 8. Pharm. P.) The same properties as the last.

EMPLASTRUM LYTTE, *E. cantharidis, E.*

cantharidis vesicatorii, Plaster of the Spanish or blistering fly, E. mel'oes vesicatorii, E. vesicatorium, E. e cantharidibus epispasticum solidius et tenacius haerens, E. irritans, E. rubefians. (Cantharides in powder, ʒ j. Emp. ceræ ʒss. Adipis præp. ʒ j. Melt the plaster and lard together, and as the mixture becomes thick on cooling, sprinkle in the flies, and mix. Pharm. L.) This is the common blistering plaster. Too much heat must not be used in its preparation. It requires to remain on 10 or 12 hours before its full effect is induced, and acts sufficiently well, provided even a piece of thin gauze or tissue paper be placed between it and the skin, whilst absorption of the flies is thus prevented.

EMPLASTRUM LYTTE COMPOSITUM, *E. cantharidis vesicatorii compositum, E. mel'oes vesicatorii compositum, Compound plaster of cantharides or Spanish flies*. (Resin. liq. pini laricis, p. 18, resinæ concret. pini abietis, meloës vesicat. aa p. 12, ceræ flavæ, p. 4, subacet. cupri, p. ij, semin. sinapis alb., fruct. pip. nigr. aa p. j. Melt the pitch and wax, then add the turpentine, and as these cool, sprinkle in the other substances in the form of powder, so as to make a plaster. Ph. E.) The same properties as the last, but more energetic and speedy in its action.

EMPLASTRUM NORIMBERGENSE, *E. ex oxido plumbi rubro camphoratum, Emplâtre de Nuremberg, Nuremberg plaster*. (Oxid. plumb. rubr. p. 300. ol. oliv. p. 600, aquæ q. s. Boil until the oxide is dissolved, and almost to dryness. Remove the vessel from the fire and add, yellow wax, p. 500. Put the vessel again on the fire, and after the wax is melted, add, before it congeals, camphor, p. 24, mix. Ph. P.) It is considered a desiccative, and has been employed in gangrene.

EMPLASTRUM OXIDI FERRI RUBRI, *E. Ferri rubri, E. Rob'orans, Plaster of red oxide of iron, Strengthening plaster*. (Empl. oxid. plumb. semivitr. p. xxiv, resinæ pin. p. vi, ceræ flavæ, olei olæ Europ. sing. p. iij, oxidi ferri rubr. p. viij. Rub the red oxide of iron with the oil, and add the other ingredients melted. Ph. E.) It is employed as a strengthening plaster.

EMPLASTRUM OPII, *Opium plaster*. (Opii duri contus. 3ss, abiet. resin. cont. 3 iij, emplastr. plumbi ʒ j. The plaster and resin being melted together, add the opium. Ph. L.) It is employed as an anodyne, and to give support.

EMPLASTRUM PICIS COMPOSITUM, *E. picis burgundicæ, E. cephalicum, Cephalic plaster, Compound pitch plaster*. (Picis arid. ʒ iij, abietis resinæ ʒ iij, resinæ flavæ, ceræ flavæ aa 3 iv, myrist. ol. 3 j. To the pitch, resin, and wax, melted together, add the other matters and mix. Ph. L.) It is stimulant and rubefacient. Sometimes used in headache (applied to the temples.)

EMPLASTRUM DE PICE ET RESINIS GLUTINANS, *E. Andreæ de Cruce, Emplâtre d'André de la Croix, E. collant de poix et de résines. Adhesive plaster of pitch and resins. (Picis albæ, p. 128, resin. eleme p. 32, terebinth. pur. p. 16, ol. laur. p. 16. Melt with a gentle heat, and pass through linen. Ph. P.)* Used in contusions and fractures as a support.

EMPLASTRUM PLUMBI, *E. lithargyri, E. commu'ne, E. diachylum, E. oxidi plumbi semivitreum. E. ex oxido plumbi semivitreo, Diachylon simplex, White diachylon, Lead plaster, Diachylon plaster. (Plumbi oxid. semivitr. in pulv. ℥v. olei oliv. congiūm, aquæ ℥ij. Boil together over a slow fire, stirring constantly until the oil and oxide of lead cohere. Ph. L.)*

EMPLASTRUM RESINÆ, *E. adhæsivum, E. lithargyri cum resinâ, E. resinosum, Resin plaster, Adhesive or sticking plaster. Emplastrum commu'ne cum resinâ, E. Polychrestum, E. lithargyr'icum cum resinâ pini. (Resin flav. ℥ss, emp. plumb. ℥iij. Melt the plaster, with a gentle heat, add the resin, and mix. Ph. L.)* Employed in wounds and ulcers.

EMPLASTRUM SAPO'NIS, *E. saponaceum, Soap plaster. (Saponis duri concis. ℥ss, emplastr. plumb. ℥iij. Mix the soap with the melted plaster, and boil to a proper consistence. Ph. L.)* It is a mild discutient. Applied to tumours, corns, &c.

EMPLASTRUM THURIS, *Frankincense plaster. (Emp. lithargyri, ℥ij, thuris, ℥ss. oxid. ferri. rubr. ℥iij. Ph. Dubl.)* Use:—the same as the plaster of red oxide of iron.

EMPORIUM, ἐμποριον, 'a market or depôt.' The brain was so called, of old, because there all the mental affairs are transacted.

EMPRES'MA, from ἐμπρησθαι, 'I burn internally.' *Phlegmat'icæ membranosæ et parenchymatosæ, Phlogis'tici, Febres continuæ inflammato'riæ, Inflamma'tio inter'na, Cau'ma, Inter'nal inflamma'tion, a genus in the class hæmatica, order phlogotica of Good.*

EM'PRION, from ἐν and πριον, 'a saw,' 'serrated.' Galen has given this name to the pulse, when the sensation, produced by the artery under the fingers is analogous to that, which would be caused by the unequal teeth of a saw.

EMPROSTHOTONOS, *Emprosthoton'ia, Enta'sia tet'anus anti'cus, Tetanus anticus, from ἐμπροσθεν, 'forwards,' and τενειν, 'I stretch,' 'I extend.' A variety of tetanus, in which the body is drawn forwards by the permanent contraction of the muscles.*

EMPSYCHOSIS, from ἐμψυχω, 'I animate,' 'I vivify.' A word formerly used for the act of animating, or the union of the soul with the body.

EMPYE'MA, *Empye'sis, Empyë, from ἐν, 'in,' and πυον, 'pus.' Aposte'ma empyema. A collection of blood or pus in some cavity of*

the body and particularly in that of the pleura. It is one of the terminations of inflammation of the pleura, and is called, also, *Pyotho'rax ve'rus, Pleurorrhœ'a purulen'ta, Diapye'ma, Empye'sis pectoris, Pyo'sis pectoris, Hydrotho'rax purulen'tus, Dyspnœ'a pyothorac'ica, Pneumo'nia suppurato'ria, Absces'sus pec'toris, A. Thora'cis, A. Pulmo-num.*

The operation for empyema properly means the making of an opening into the thorax, for the purpose of giving issue to the matter collected in the cavity of the pleura, although it has been used for the operation required for the evacuation of any fluid from the chest, or synonymously with *Paracentesis thoracis.*

EMPYE'SIS. Same etymon. Suppuration. An eruption of phlegmonous pimples, gradually filling with a purulent fluid, and terminating in thick scabs, frequently leaving pits or scabs. *Pus'tulous Exan'them.* A genus in the order *Exanthematica*, class *Hæmatica* of Good.

EM'PYOCE'LE, from ἐν, 'in,' πυον, 'pus,' and κηλη, 'tumour,' 'hernia.' A tumour, formed by an accumulation of pus in the scrotum. Different diseases have been described under this name, such as suppuration of the testicle, empyema of the tunica vaginalis, accumulation of pus in the cavity of a hernial sac, abscesses of different kinds formed in the cellular texture of the scrotum, &c.

EMPYOM'PHALUS, from ἐν, 'in,' πυον, 'pus,' and ομφαλος, 'the navel.' This word has been used to designate a suppurating tumour at the umbilicus; or, at times, umbilical hernia, the sac of which is filled with blood.

EMPYREU'MA, from ἐμπυρηναι, 'I kindle.' The burnt smell and acrid taste, which volatile products—gaseous and liquid—contract, when animal or vegetable substances are decomposed with a strong heat. The cause of this smell is seated in an oil, called *empyreumatic*, which does not exist in the substance subjected to the operation, but is the result of its decomposition. If the empyreuma occurs, when the organic substance is placed in a still with a liquid, it is owing to the solid matter touching the bottom of the vessel to which the fire is applied.

EM'PYROS, *Febric'itans*, from πυρ, 'fire or fever.' One who has fever.—Hippocr.

EMS, MINERAL WATERS OF. Celebrated springs on the river Lahn, duchy of Nassau. They are thermal (from 70° to 118° Fahr.), and carbonated salines; and are much used in gastric and intestinal affections, &c.

EMUL'GENT, *Emulgens*, from emulgere, 'to milk out,' 'to draw out.' A name given to the renal artery and vein, because the ancients imagined they milked, as it were, the urine through the kidneys.

EMULSION, *Emulsio*; same etymon. A pharmaceutical preparation, of a milky-white opaque appearance, which is composed of a fixed oil, divided and held in suspension in water by means of mucilage.

Emulsions have been divided into the *true* and *oily*, and into the *false* or *not oily*; the latter being composed of resinous substances, balsams, or camphor, rubbed up with dilute alcohol, mucilage, or yolk of egg.

EMULSIO AMYGDALÆ, *Lac amygdalæ*, *Emulsio simplex*, *Amygdala'tum*, *Mistu'ra amygdalæ*, *Emulsio sive Lac Amygdal'arum*. *Almond Emulsion*, *Almond Milk*, (F) *Lait d'amandes*. (*Confect. amygdal. 3j, aquæ distill. ℥j. Ph. L.*) It is used as a diluent and demulcent.

EMULSIO ACA'CIÆ ARAB'ICÆ, *Emulsio Arabica*; *Gum Arabic Emulsion*. (*Nucleor. amygd. comm. 3j, aquæ ℥ijss, mucilag. acac. 3ij, sacch. 3iv.* While beating the decorticated almonds with the sugar and water, add the mucilage. *Ph. E.*) Used in the same cases as the last.

EMULSIO CAMPHORÆ, *E. Camphora'ta*, *Mistu'ra Camphoræ*; *Camphor Emulsion*. (*Camphoræ ʒj, amygd. com. decortic., sacch. pur., aa 3iv, aquæ 3vj. Ph. E.*) A convenient form for giving camphor.

EMULSIO OLEI AMYGDALA'RUM; *Emulsion of Oil of Almonds*. (*Ol. amygd. 3j, gum acac. pulv. 3ij, syrup. 3j, aquæ distill. 3iv. Mix.*) A good pectoral or cough mixture.

EMULSIO OLEI RIC'INI; *Castor Oil Emulsion*. (*Ol. ricini 3ss, vitelli ovi q. s., aquæ distillat. 3j. —*). An aperient draught.

EMULSIO OLEI TEREBIN'THINÆ; *Emulsion of Oil of Turpentine*. (*Ol. tereb. rect. ʒij, sacch. alb. 3ss, vitell. ovi j, emuls. amygd. vel aquæ distillat. 3vj. Mix.*) In rheumatic and nephritic affections. Dose, 3 iss.

EMULSIO PURGANS CUM JALA'PÆ RESI'NA; *Purging Emulsion with Resin of Jalap*. (*Jalapæ resin. gr. xij, sacch. alb. 3ij.* Triturate for some time, and add gradually half the yolk of an egg: continue to triturate, adding by degrees *emuls. simpl. 3v, aq. flor. aurant. 3ij. Ph. P.*)

EMULSIO PURGANS CUM SCAMMO'NIO; *Purging Emulsion with Scammony*. It is prepared like the preceding, substituting only scammony for the jalap.

EMULSIVE, *Emulsi'vus*, same etymon. An epithet given to seeds whence oil may be extracted by expression; such as almonds, apricots, peaches, hemp, rape, melons, gourds; those of the nut kind and cucurbitaceous and cruciferous plants in general.

EMUNC'TORY, *Emuncto'rium*, from *emun'gere*, 'to drain off,' 'to cleanse.' *Emis-sa'rium*, (F) *Émonctoire*, *Émissaire*. Any organ, whose office it is to give issue to matters, which ought to be excreted. The ancients believed that some organs were more particularly destined to serve as emunctories

to others. The nasal fossæ, for example, they believed to be the emunctories of the brain.

ENÆORE'MA, from *ev*, 'in,' and *αιαγειν*, 'I lift up,' 'that which hangs or floats in.' The *Neph'elē*, *Nubes*, *Sublimamen'tum*, *Sus-pen'sum*, *Nebec'ula* or cloud, which is suspended in the urine, as it cools.

ENAMEL OF THE TEETH, *Den'tium* *Nitor*, *Cortex*, *Cortex stria'ta*, *Substantia vitrea*, *Crusta Den'tium adamantina*. The substance which covers the coronæ of the teeth, and which has, also, been called the *vitreous substance*, *Substance vitrée* ou *email-lée*, (F) *Email des Dents*. The enamel is of a milky-white colour, and sufficiently hard to strike fire with steel. Its surface is very smooth and polished: and it forms a thicker layer towards the part where the teeth come in contact, and becomes thinner towards the cervix. The fibres of the enamel are perpendicular to the surface of the teeth, on which they seem, as it were, planted. This gives them a velvety appearance, when examined by the microscope. The enamel has no blood-vessels, and is not renewed when removed. It is formed of phosphate of lime, and a very small portion of animal matter.

ENANTHE'SIS, from *ev*, 'in,' and *ανθισαι*, 'I flourish.' *Rash exan'them*. Eruption of red, level or nearly level patches, variously figured: irregularly diffused: often confluent: and terminating in cuticular exfoliations. A genus in the order *Exanthematica*, class *Hæ-matica* of Cullen, and including scarlet fever, measles, &c.

ENARTHRO'SIS, *Inarticula'tio*, *Ball and Socket Joint*, from *ev*, 'in,' and *αρθρωσις*, 'an articulation.' A kind of diarthrodial articulation, in which the head of a bone is received into the cavity of another, and can be moved in all directions. The joint of the os femoris with the os innominatum, is one of this character.

ENCAN'THIS, from *ev*, 'in,' and *κανθος*, 'the angle of the eye.' A tumour, formed by an increase in size, or a degeneration, of the caruncula lachrymalis.

The **ENCANTHIS BENIG'NA**, or simple excrescence of the caruncula, commonly yields to astringent collyria.

The **ENCANTHIS MALIG'NA** has often a cancerous character, and requires extirpation before it has attained any considerable size.

ENCAU'MA, from *ev*, 'in,' and *καίω*, 'I burn.' *Epicau'ma*, *Epicau'sis*, *Encau'sis*. A tumour, produced by a burn. A *Burn*. Also, an ulcer of the transparent cornea, occasioning the loss of the humours.—Aëtius, Gorræus.

ENCAUSSE, MINERAL WATERS OF. E. is a village in the department of the Haute-Garonne, which possesses several saline, acidulous springs.

ENCEPHAL'IC, *Encephal'icus*, from *ev*, 'in,' and *κεφαλη*, 'the head.' That, which is

situate in the head. A name given to several parts, which relate to the encephalon; as the *encephalic membranes, vessels, &c.*

ENCEPHALITIS. Same etymon. This term has been used, by some Nosologists, synonymously with *Cephalitis* and *Phrenitis*. By others, it has been appropriated to inflammation of the brain, in contradistinction to that of the membranes.

ENCEPHALOCÉLĒ, from *εγκεφαλον*, 'the brain,' and *κλη*, 'a tumour.' *Hernia Cerebri, Fungus Cerebri, Hernia of the Brain.* This may be a congenital or accidental affection. In the former case, it is dependent upon tardy ossification of the fontanelles or some faulty conformation. In the latter, it is owing to some considerable loss of substance in the parietes of the cranium, produced by fractures, wounds with a cutting instrument, caries, the application of the trephine, &c.

In slight congenital encephalocele, gentle pressure may be exerted upon the protruded portion. When the disease is of considerable extent, it is fatal. In the accidental encephalocele, similar means must be used for confining the tumour, and preserving it from the action of external bodies.

ENCEPHALOID, *Encephaloïdes*, from *εγκεφαλον*, 'the head,' and *ειδος*, 'resemblance.' Laennec has given the term *Encephaloid* or *Cerebriform* matter to one of the morbid substances, commonly formed by scirrhous or cancerous tumours. It is either encysted; in irregular masses without cysts; or infiltrated into the texture of the diseased organ. This name was given to it in consequence of its resemblance, when fully developed, to the medullary substance of the brain. It is also called *Fungus medullaris, F. cancrisus medullaris, Sarcoma medullare, spongoid inflammation, Fungus cerebri, Cancer cerebri, Cancer mollis, Tela accidentalis medullaris.*

ENCEPHALON, *Encephalum*, from *εν*, 'in,' and *κεφαλη*, 'the head.' That which is situate in the head. This name has generally been given to the *brain, cerebellum, and mesocephalon.* At times, it includes likewise the *medulla spinalis*, when it is also called the *Cerebro-spinal axis.*

ENCHEIRE'SIS, *Encheiria*, from *εν*, and *χειρ*, 'the hand.' Galen uses this term, as a part of the title to one of his works, which treats of dissection. It means the manual treatment of any subject.

ENCHYMO'MA, *Enchymosis*, from *εν* and *χυω*, 'I pour.' By the ancients, this word was used to designate the sudden effusion of blood into the cutaneous vessels, which arises from joy, anger, or shame; in the last instance constituting blushing. It differs from ecchymosis in there being, in the latter, extravasation of blood into the cellular texture, and its being produced by an exter-

nal cause; a contusion, for example.—Hippocrates.

ENCLYDAS'TICOS, *intus fluctuans*, from *εγκλυδαζομαι*, 'to float in.' Applied to liquids, e. g. to serum, pus, &c., contained in any cavity.

ENCŒLIA, from *εν*, 'in,' and *κοιλια*, 'the belly.' The abdominal viscera.—Linden.

ENCŒLITIS, *Encœlitis, Encœlialgia inflammatoria, Inflammatio abdominalis*, from *εγκοιλια*, the abdominal contents, and *itis*, inflammation. Inflammation of any of the abdominal viscera.

ENCYSTED, *Cystide obduc'tus.* Inclosed in a kyst or cyst; from *εν*, 'in,' and *κυστις*, 'bladder.' (F) *Enkysté.* An epithet given to certain tumours, or solid or fluid collections inclosed in a particular envelope or cyst. They are movable, and often elastic to the touch.

ENCYSTIS. *Tumor tunica'tus, T. cysticus, Emphy'ma encystis*, same etymon. *Lupia.* An encysted tumour.

ENDEM'IC, *Endem'ical, Regiona'lis morbus, Endem'icus*, from *εν*, 'in,' and *δημος*, 'the people.' *Encho'rios, Vernac'ulus morbus, Ende'mia.* A disease is said to be endemic, when it arises from some peculiarity in a situation or locality. Thus, ague is endemic in marshy countries; gôitre at the base of lofty mountains, &c. Some authors use the term in the same sense as epidemic.

We have no accurate knowledge of the emanations or other circumstances, which give occasion to endemic affections. We seem to know, that some emanation from marshy lands *does* produce intermittent; but we are ignorant of the nature of such emanation.

EN'DESIS, from *εν*, 'in,' and *δεω*, 'I bind.' A ligature, bandage, connexion. Hippocrates has so termed the ankle-joint.

ENDOCARDI'TIS, from *Endocardium*, the lining membrane of the heart, and *itis*, inflammation. Inflammation of the lining membrane of the heart.

In this disease, the heart's action is visibly increased, and very manifest to the touch; the hand is strongly repelled, and, at moments, is sensible of a trembling vibratory motion. Percussion gives a dull sound over a surface of several inches, owing, according to Bouillaud, to the inflammatory turgescence of the heart, and the engorged state of its cavities.

On auscultation, a *bruit de soufflet* is generally heard, masking one or both sounds of the heart: the ear is sensible of a metallic ringing with each systole of the ventricle. The pulsations are rapid as well as strong, and, with few exceptions, irregular, unequal and intermittent.

The pulse, by the way, does not always indicate the force or number of the heart's contractions.

ENDOCAR'DIUM, from *ενδον*, 'within,' and *καρδια*, 'the heart.' The membrane that lines the interior of the heart.

ENDOSMO'SE, *Imbibition*, from *ενδον*, 'within,' and *ωσμος*, 'impulse.' A term, used by Dutrochet, to express the action by which fluids pass through organic membranes.

This is done by the porosity of the tissue, in the same manner as it is effected through inorganic substances as through fissured glass. The rapidity with which it is accomplished, varies according to the nature of the penetrating body, and the penetrability of the tissue.

ENDUIT (F), from *indu'ere*, 'to put upon,' 'to put on.' A *Coat*; a *Fur*. This term is often applied to a layer of greater or less thickness, which covers the surface of certain organs, and particularly the tongue and interior of the mouth. The *enduit* is designated variously, according to its appearance,—*enduit bilieux, jaune, blanc, &c.*—a *bilious, yellow, white coat or fur, &c.* It is at times owing to the evaporation of the watery portions of a secretion; at others, to a morbid condition of the secretion: generally, to both causes combined.

EN'EMA, from *ενημι*, 'to inject.' An *Injection*, *Clyster*, (F) *Clystère*, *Lavement*. A well known form of conveying medicine into the body, under certain morbid circumstances. See *Clyster*.

ENEMA ANOD'YNUM, *Enema Opii*; *Anodyne Clyster*, *Starch and Opium Clyster*. (*Gelat. amyli* ℞ss, *tinct. opii* gr 40 vel 60.) Exhibited in cases of severe diarrhœa or dysentery.

ENEMA COMMU'NE; *Common Clyster*, *Domestic Clyster*. (*Water gruel or molasses and water* ℞ss or ℞j; *add a little oil or lard, and a spoonful of common salt*.) Given as a cathartic enema; and, without the common salt, as an emollient.

ENEMA CATHAR'TICUM; *Purging Clyster*. (*Mannæ* ʒj, *decoct. chamæm. comp.* ʒx, *olei oliv.* ʒj, *sulph. magnes.* ʒss. *Ph. D.*)

ENEMA FÆT'IDUM, *Fætid Clyster*; *Mistu'ra asæfæt'idæ pro clys'mate*, *Clysmaton'icum et antispasmod'icum seu in'citans et sedens*, (F) *Lavement antispasmodique*. (*The last with the addition of ʒij of the tincture of asæfætida. Ph. D.*) Given as an antispasmodic and anodyne.

ENEMA NICOTIA'NÆ; *Tobac'co Clyster*. This generally consists of from half a pint to a pint of the *Infusum Tabaci*. It is employed in cases of strangulated hernia, but occasionally acts as a fatal poison when given in this way. The smoke of tobacco is sometimes thrown up the rectum to produce the same medicinal effects as the infusion.

ENEMA TEREBIN'THINÆ; *Tur'pentine Clyster*. (*Ol. tereb.* ʒiij, *gruel* ℞ss, *one yolk of egg*. Incorporate the turpentine with the

yolk, then add the gruel.) To be administered in cases of ascarides (*oxyures*.)

EN'ERGY, *Energi'a*, from *ενεργα*, 'I act.' Action. Acting power. Also, *vigor*: as the "*muscular energy*;" the "*brain acts with energy*."

ENERVA'TION, *Enervatio*, from *e*, 'out of,' and *nervi*, 'strength.' The act of weakening:—the state of being weakened. See *Debility*.

ENGASTRIMY'THOS, *Englot'togastor*, *Gastril'oquist*, *Eu'rycles*, *Eurycli'tus*, from *εν*, 'in,' and *γαστηρ*, 'the belly,' and *μυθεσθαι*, 'I discourse.' A *Ventriloquist*. (F) *Ventriloque*. Individuals have been so denominated, who have possessed the art of modifying their natural voice, so that it seemed to come from a greater or less distance, and from different directions. It was formerly believed, that such persons spoke from their belly; hence their name. It is an imitative art, and is called *VENTRILLOQUISM*.

ENGHIEN, or **MONTMORENCY**, **MINERAL WATERS OF**. A hydrosulphurous water, four leagues from Paris, near Montmorency, which is possessed of some celebrity.

ENGISO'MA, *Engizo'ma*, from *εγγιζα*, 'I approximate.' (F) *Embarrure*. A species of fracture of the skull, in which a splinter passes beneath the sound portion of the bone, and compresses the brain.—Galen. Also, a kind of instrument used in fractures of the clavicle.

ENGORGEMENT, from *en*, 'in,' and *gorge*, 'the throat.' An obstruction occurring in the vessels of a part, and giving rise to augmentation of volume.

ENGOUEMENT (F). *Obstruc'tio, Iner'tia*, from *angere*, 'to choke.' Accumulation, in a hollow organ, of the matters secreted by it or carried to it. There is said to be *Engouement des bronches*, when the mucus accumulates there; and *Engouement des intestins*, when the matters, which ought to pass through them, are detained; as in a case of strangulated hernia. *Engouement des poulmons*, *E. of the lungs*, in *Pathological Anatomy*, signifies that state of the lungs, in which a mixture of air and thin fluid escapes from them when cut into.

ENNEAPHAR'MACOS, from *εννεα*, 'nine,' and *φαρμακον*, 'a medicine.' A medicine, composed of nine simple ingredients. A pessary, so formed.—Galen, Paulus. An *Antid'otus Heracli'dis*, described by Galen, and some plasters by Aëtius and Celsus are, likewise, termed *Enneapharmaca*.—Gorræus.

ENOR'MON, *ενορμον*, from *εν*, 'in,' and *ορμαα*, 'I rouse,' 'excite.' A word, used by Hippocrates in the same sense as *vital principle* is by modern Physiologists.

ENRHYTH'MOS, from *εν* and *ρυθμος*, 'number.' Having rhythm. An epithet, applied to the pulse when its pulsations occur with

some degree of order. It is opposed to *Arhyth'mos*. It differs from *Eurhyth'mos*, which signifies 'regular.'

ENS. A being. Paracelsus meant, by this term, the power exerted by certain beings on our body. He speaks of the *Ens Dei*, the *Ens Astro'rum*, the *Ens naturale*, the *Ens virtu'tis*, *Ens morbo'rum*, *Ens de poten'tibus spirit'ibus*, &c. These absurd denominations suggested to some of the ancient Chymists a name for certain chemical preparations. The muriate of ammonia and iron was called *Ens martis*; the muriate of ammonia and copper, *Ens veneris*; and *Ens primum* was, with the Alchymists, the name of a tincture, which they considered possessed of the power of transmuting metals.

ENSIFORM, *Ensifor'mis*, from *ensis*, 'a sword,' and *forma*, 'form.' Sword-like.

The **ENSIFORM APOPH'YSES** or **PROC'ESSES**, are the lesser alæ of the sphenoid bone.

The **ENSIFORM APPEN'DIX** or **CAR'TILAGE** is the xiphoid appendix of the sternum, &c. See Xiphoid.

ENSI-STERNAL. Relating to the ensiform process of the sternum. Béclard gave this name to the last osseous portion of the sternum. He also called it *l'os ultimi-sternal*.

ENSTALAX'IS, *Instilla'tio*, Instillation. The act of pouring by drops.

ENTAILLE (F), from *en*, 'in,' and *tailler*, 'to cut.' *Excis'io*, *Ec'cope*, *Ec'tomē*. A deep wound, made by a sharp instrument obliquely. *Entailles* and *Taillades* are, also, used to designate deep scarifications, made for the purpose of producing a speedy *dégorge-ment* of any tumefied part; such, e. g., as are made in the tongue in certain cases of glossitis.

ENTAT'ICOS, *Intensi'vus*, from *ενταίνω*, 'I make tense.' A medicine, which excites the venereal appetite.

ENTERADENES, from *εντερον*, 'an intestine,' and *αδην*, 'a gland.' The mucous glands of the intestines.

ENTERADENOG'RAPHY, *Enteradenogra'phia*, from *εντερον*, 'intestine,' *αδην*, 'gland,' and *γραφη*, 'a description.' A description of the intestinal glands.

ENTERADENOL'OGY, from *εντερον*, 'intestine,' *αδην*, 'gland,' and *λογος*, 'a treatise.' That part of Anatomy, which treats of the intestinal glands.

ENTERAL'GIA, from *εντερον*, 'intestine,' and *αλγος*, 'pain.' Pain in the intestines. Alibert, in his Nosology, has a genus of diseases under this name, in which he ranges the different kinds of colic. *Enteral'gia spasmod'ica* is his term for the *Ileus*.

ENTEREMPHRAX'IS, *Infarc'tus Intestin'orum*; from *εντερον*, 'intestine,' and *εμφραξις*, 'obstruction.' Accumulation of feces in the intestines.

ENTERANGIEMPHRAX'IS, from *εντε-*

ρον, 'intestine,' *αγγα*, 'I strangle,' and *εμφρασσα*, 'I obstruct.' Obstruction of the intestines by strangulation or otherwise.—Ploucquet.

ENTERELE'SIA. Pain, caused by invagination or strangulation of the intestines.—Alibert.

ENTEREN'CHYTA, from *εντερον*, 'an intestine,' *εν*, 'in,' and *χέω*, 'I pour.' Any surgical instrument for administering injections.—Sculletus.

ENTER'ICA, from *εντερον*, 'an intestine.' Diseases affecting the alimentary canal. Order I, Class I, (*Cæliaca*), of Good.

ENTERI'TIS, from *εντερον*, 'an intestine.' Inflammation of the intestines. *Empres'ma Enteritis*, *Intestino'rum inflamma'tio*, *Chor-dap'sus*, *Cauma Enteritis*, *Enterophlo'gia*, *Col'ica acuta*, *Enteral'gia acuta*, *E. inflammato'ria*, *Febris intestino'rum*, *F. iliaca inflammato'ria*, *Enteropyr'ia*. The essential symptoms of this disease are:—violent abdominal pain increased on pressure; with vomiting and inflammatory fever.

Enteritis may affect both the peritoneal and the mucous coat of the intestines; and, in violent cases, all the coats may be implicated. The structure of the mucous and peritoneal coats is different, so are their functions in health and disease. The inflammation of the serous coat, *Sero-enteritis*, resembles that of the cellular membrane: the inflammation of the mucous coat that of the skin. The former is usually, therefore, of a more active character. Inflammation of the mucous coat, *Esoenteri'tis*, *Endoenteri'tis*, is generally attended with diarrhœa, and its pathology is identical with that of *Dysentery*, which see. Inflammation of the peritoneal coat is, on the other hand, generally attended with constipation.

Enteritis of the peritoneal coat, for such is the meaning of the word in the abstract, requires the most active treatment. Copious bleeding followed up by a large dose of opium, and if the symptoms are not decidedly ameliorated, repeating the bleeding and opium,—warm fomentations, and blisters are the chief agents to be relied upon. Purgatives ought not to be exhibited until the inflammation and spasm are abated by the use of the bleeding and opium. When the physician is called early, this plan will usually succeed. Sometimes, Enteritis passes into a chronic state, requiring much careful management.

Broussais considers inflammation of the mucous coat of the stomach and intestines as the proximate cause of the phenomena of fever.

ENTEROCE'LE, *Hernia intestinalis*, from *εντερον*, 'an intestine,' and *κηλη*, 'a hernia,' 'tumour.' Abdominal herniæ are so called, which contain only a portion of intestine.

ENTEROCYSTOCE'LE, from *εντερον*, 'an intestine,' *κυστις*, 'a bladder,' and *κηλη*,

'a tumour.' Hernia formed by the bladder and a portion of intestine.

ENTERO-EPILOCE'LE, from *εντερον*, 'intestine,' *επιπλοον*, 'the omentum,' and *κηλη*, 'tumour.' Hernia, formed by intestine and omentum.

ENTERO-EPILOM'PHALUS, from *εντερον*, 'intestine,' *επιπλοον*, 'the omentum,' and *ομφαλος*, 'the umbilicus.' Umbilical hernia, containing intestine and omentum. Almost all umbilical herniæ are of this kind.

ENTEROGRAPHY, *Enterogra'phia*, from *εντερον*, 'intestine,' and *γραφη*, 'description.' The part of Anatomy, which describes the intestines.

ENTERO-HYDROCE'LE, from *εντερον*, 'intestine,' *υδωρ*, 'water,' and *κηλη*, 'tumour.' Intestinal hernia complicated with hydrocele.

ENTERO-HYDROM'PHALUS, from *εντερον*, 'intestine,' *υδωρ*, 'water,' and *ομφαλος*, 'the navel.' Umbilical hernia, in which the sac contains, along with a portion of intestine, a quantity of serum.

ENTERO-IS'CHIOCE'LE, from *εντερον*, 'intestine,' *ισχιον*, 'ischium,' and *κηλη*, 'tumour.' *Ischiatic hernia*, formed of intestine.

ENTEROLOG'Y, *Enterolo'gia*, from *εντερον*, 'intestine,' and *λογος*, 'a discourse.' The part of Anatomy, which treats of the intestines.

ENTERO-MEROCE'LE, from *εντερον*, 'intestine,' *μηρος*, 'the thigh,' and *κηλη*, 'tumour.' Crural hernia, formed of intestine.

ENTERO-MESENTERIC, *Febris entero-mesenter'ica*. Messrs. Petit and Serres have given this name to a species of adynamic fever or typhus, in which the intestines are ulcerated, with enlargement of the corresponding mesenteric glands.

ENTEROM'PHALUS, from *εντερον*, 'intestine,' and *ομφαλος*, 'umbilicus.' Umbilical hernia, formed of intestine.

ENTEROPERIS'TOLE, from *εντερον*, 'intestine,' and *περιστελλω*, 'I conceal,' 'I envelope.' Constriction or obstruction of the intestines from a cause, which acts either within the abdomen or without it, as in strangulated hernia.

ENTERORA'PHIA or **ENTERORA'PHE**, from *εντερον*, 'intestine,' and *ραφη*, 'a suture.' Suture of the intestines, for the relief of injuries done to them.

ENTEROSARCOCE'LE, from *εντερον*, 'intestine,' *σαρξ*, 'flesh,' and *κηλη*, 'a tumour.' Intestinal hernia, complicated with fleshy excrescence, or rather sarcocoele.

ENTEROSCHEOCE'LE, from *εντερον*, 'an intestine,' *σχεν*, 'the scrotum,' and *κηλη*, 'tumour.' Scrotal hernia consisting of intestine.

ENTERO'SIS, from *εντερον*, 'an intestine.' A class of diseases, comprehending all those that are seated in the intestines.—Alibert.

ENTEROTOME, *Enterot'omus*, from *εντερον*, 'intestine,' and *τεμνω*, 'I cut.' A name given by J. Cloquet, to an instrument for promptly opening the intestinal canal through its whole extent. It consists of a pair of scissors, one blade of which is much longer than the other and rounded at its extremity. This is passed into the intestine.

ENTEROTO'MIA, same etymon. In *anatomy*, it signifies dissection of the intestines. In *surgery*, it means an operation, little used, which consists in opening the intestine, in order to evacuate the faecal matters accumulated in it, e. g. in certain cases of hernia, accompanied with contraction of the intestinal canal; in operations for an artificial anus, performed on the new-born, where the rectum is imperforate or not existing, &c.

ENTH'LASIS, *Esphlasis*, from *ελαω*, 'I break.' A fracture of the cranium with comminution, in which the bone is depressed or has lost its level.

ENTRAILS, *Splanchna*, *Encælia*, *Vi'scera*, from *entera'lia*, a word of bad Latin, coming from *εντερον*, 'intestine.' It is used for the viscera inclosed in the splanchnic cavities, and especially for those in the abdomen. *Bowels*, *Guts*. (F) *Entrailles*, *Viscères*.

ENTRICH'O'MA, from *εν*, 'in,' and *τριχωμα*, 'hair.' The tarsal cartilage and the edge of the eyelids, in which the cilia are implanted.

ENTROP'ION, *Inver'sio palpebra'rum*, *Capilli'tium*, *Trichiasis*, *Introsuscep'tio entropium*, *Blepharelo'sis*, *Blepharopto'sis entropium*, *Trichia*, *Tricho'sis*, from *εν*, 'in,' and *τρεπω*, 'I turn.' A name given to the inversion or turning inwards of the eyelids, so that the eyelashes are directed towards the globe of the eye; irritate and inflame it, and give rise to the affection called *Trichiasis*.

The contact of the hair with the surface of the eye occasions considerable irritation of the conjunctiva, which is soon followed by chemosis, ulceration of the eye and other symptoms, such as fever, watchfulness, &c.

If the disease be *entropion*, as above defined, that is, dependent upon the inversion of the eyelids, it must be remedied, either by dispersing the œdema or swelling of the eyelids, or by cutting out a portion of the skin. When the disease is dependent upon a vicious direction of the cilia, they must be plucked out and the bulbs cauterised.

ENUCLEATION, *Enuclea'tio*, from *enuclea're*, 'to take out a kernel.' This term has been proposed for the operation of removing tumours, &c., without cutting into them.—Percy.

The word is used, in *Pharmacy*, for the operation of shelling or removing the kernels of the almond or of any nut.

ENU'LON, from εν, 'in,' and ουλον, 'the gum.' The inner part of the gums. The external part was called ουλον, and that between the teeth αρμος.—Pollux.

ENURE'SIS, from ενουρεω, 'I void the urine in bed.' *Paru'ria incon'tinens, Incon'tinen'tia uri'næ, Excre'tio Urinæ involunta'ria, Mic'tio involunta'ria, M. inopportuna, Uracra'sia, Urorrhœ'a, Perirrhœ'a, Strangu'ria* (Galen), *Hyperure'sis, Diam'nes, Involuntary discharge of the urine, Incontinence of urine.* This affection is most common in advanced life. It may depend on too great irritability of the bladder, or on distention, or injury of the fibres about its neck, paralysis of the organ, the presence of an irregularly shaped calculus, impacted in the urethra near its commencement; rupture of the bladder and urethra; renal disease; or on pressure exerted on the bladder by the distended womb or by some tumour. It often occurs after difficult labour, but generally yields, in the course of a week or ten days; the catheter being introduced twice a day in the mean time.

The treatment must of course vary, according to the cause; and when the affection, on which it is dependent, cannot be removed, the discharge of urine may be prevented by exerting a degree of compression on the urethra, by means of appropriate instruments; or a urinal may be employed to receive the urine as it passes off.

EP, *Eph, Epi*, επ, εφ, επι, 'upon, above;' in composition, generally means, 'augmentation, addition, increase, reciprocal action, repetition.' Hence:

EPACMAS'TICOS, from επι and ακμαζω, 'I increase.' An epithet applied to fevers, *Febres epacmas'ticæ*, whose symptoms go on augmenting in violence, from the commencement to the termination. Such fevers are, also, called *Epanadidontes*.

EPAPHÆ'RESIS, from επαφαιρω, 'I take away.' *Repeti'ta subla'tio, vel evacua'tio.* A repeated abstraction or evacuation. It was formerly used synonymously with *repeated bloodletting; Phlebotomia itera'ta*.—Galen.

EPHEBÆ'ON, from επι, 'upon,' and ἡβη, 'pubes.' The parts of generation: also, the region of the pubes, as well as the hair upon the pubes. It was likewise a part of the ancient gymnasium in which the rhetoricians, philosophers, &c., disputed.

EPHE'BIA, *Ephebi'a, Pubertas.* Same etymon. The age of puberty.

EPHE'BUS, *Ephe'bus.* One who has attained the age of puberty.

EPHEL'CIS, from επι, 'upon,' and ἔλκος, 'an ulcer.' The crust of an ulcer.

EPHEL'IDES, from επι, 'upon,' and ἥλιος, 'the sun.' *Epichro'sis, Mac'ula sola'ris, Ephe'lis lentic'ula, Lentic'ula, Lenti'go, Ephe'lis Lentigo, Ephe'lis a sole, Nigredo a solē, Spilo'sis ephe'lis, Æstates, Effila, Freckles,*

Sunburn. (F) *Taches de roussure, Hale.* This term includes, not only the yellow *lentigines*, which appear on persons of fair skin, and the larger brown patches, which also arise from exposure to the direct rays of the sun; but also those large dusky patches which are very similar in appearance but occur on other parts of the surface, that are constantly covered. See *Chloasma*. They do not extend farther than the skin. Many cosmetics have been recommended for their removal. Simple spirituous lotions or weak mineral acids, applied a few times in the day, are as effectual as any other means.

EPHEM'ERA, *Diaria*, from επι, 'during,' and ἡμερα, 'a day.' That which continues a day. This epithet is given to diseases and particularly to fevers, which last only a day. *Febris dia'ria, Ephemerop'ya, Febris simplex, F. Ephem'era.* The term *prolonged ephem'era* is sometimes used for fevers, which cease after two or three days' duration.

EPHIDRO'SIS, from επι, 'upon,' and ιδρω, 'I sweat.' A copious sweat. *Ephidrosis profu'sa, E. sponta'nea, E. idiopath'ica sudor, Hydropede'sis, Exsuda'tio, Exuda'tio, Hyperephidro'sis, Suda'tio,* (F) *Flux de Sueur.* An excessive sweating, inducing debility and emaciation. A colliquative sweat. Such copious perspirations are generally owing to debility of the exhalants, and require the use of tonics, especially of the mineral acids, opium, &c.

EPH'ODOS, from επι, 'upon,' and οδός, 'a way,' 'a road or avenue to a place.' Hippocrates uses this word in three senses. 1. For the vessels or canals, which give passage to the excrements of the body. 2. For a periodical attack or accession of fever; and 3. For the approach of similar or dissimilar things which may be useful or hurtful to the body.—Castelli.

EPIALOS, *Hepialos, ηπιαλος.* A name, given by the ancients to fever, when the hot stage was mingled with irregular chills.

EPICAR'PIUM, *Pericar'pium*, from επι, 'upon,' and καρπος, 'the wrist.' Applications made to the wrist or to the region of the pulse were formerly so called. These were plasters, ointments, febrifuge cataplasms, &c.

EPICHRO'SIS, *Spilo'sis*, from επι, and χρωμα, 'colour.' Simple discoloration of the surface.—Good.

EPICCE'MASIS, from επικοιμασμαι, 'I sleep.' *Decu'bitus ad dormien'dum, et Dormi'tio.* The position of sleeping, as well as sleeping itself.

EPICOL'IC, from επι, 'upon,' and κωλον, 'the colon.' The *epicolic regions, regio'nes epicol'icæ*, are those parts of the abdomen, which correspond to the colon.

EPICON'DYLE, *Epicon'dylus*; from επι, 'upon,' and κονδυλος, 'a condyle.' A name given, by Chaussier, to an eminence at the outer part of the inferior extremity of the os

humeri; so called, because it is seated above the condyle. The epicondyle gives attachment to the outer lateral ligament of the elbow joint, and to a very strong tendon to which several of the muscles of the posterior part of the forearm are attached.

EPICRÁNIUM, from *ἐπι*, 'upon,' and *κράνιον*, 'the cranium.' A name given to different parts seated on the cranium. The skin, aponeurosis between the occipital and frontal muscles, and the whole of the scalp have been so called. Portal includes under this name the occipito-frontalis muscle, pyramidalis nasi, and superior and anterior auricular muscles.

EPICRÁSIS, *Contempera'tio*, from *ἐπι* and *κραίνωμι*, 'I temper.' A term used by the Humorists for *an amelioration of the humours*. They called *Cure by Epicrasis, per epicrasin*, a mode of treatment by imagined alteratives, which they supposed to be possessed of the power of gradually correcting the vitiated humours.

EPIDEMY, *Epidem'ic*, *Epidem'ia*, *Epidem'ios*, *Epidem'os*, *Pancæ'nos*, *Pandem'ios*, *Morbus publicus*, *Morbus popula'ris*, from *ἐπι*, 'upon,' and *δῆμος*, 'the people.' A disease, which attacks, at the same time, a number of individuals, and which is depending upon some particular *constitutio aeris*, or condition of the atmosphere, with which we are utterly ignorant. It differs from *endemic*, the latter being owing to locality; but it is obvious, that should a particular epidemic constitution of the air exist along with a favourable endemic condition, these combined influences may act in the causation of several of those serious and fatal complaints, which at times visit a district and are never afterwards met with, or at least not until after the lapse of a considerable period.

EPID'ERIS, *Epider'rhis*, *Hypod'eris* or *Hypodermis*, from *ἐπι*, 'upon,' and *δέρμα*, 'the skin.' This word, with some, means the nymphæ; with others, the clitoris; with others, again, the prepuce of the clitoris.

EPIDER'MIS, *Epidermion*, *Cutic'ula*, *C. ex'tima*, *C. extre'ma*, *Cutis extima*, *C. summa*, *C. ultima*, *Pellis summa*, *Pellic'ula summa*, *P. sup'erior*, *Lam'ina prima cutis*, from *ἐπι*, 'upon,' and *δέρμα*, 'the true skin.' Scarf-skin, Cuticle. (F) *Surpeau*, *cuticule*. A transparent, dry, thin membrane; devoid of nerves and vessels, which covers all the surface of the body, except the parts that correspond to the nails. It appears to consist of minute scales, placed one above the other. Chaussier considers it to be formed and reproduced by an excretory action of the true skin; to act like a dry varnish, which prevents the immediate contact of bodies with the nervous papillæ, and consequently to deaden tactile impressions, which, without its intervention, might be painful. The *Epider'mic*, *Epider'meous*, or *Epider'moid* (as Bichat called it) *System* is a portion of general anatomy and comprises three parts. 1. External

Epidermis. 2. Epidermis spread over the mucous membranes. 3. The Nails and Hair.

EPIDES'MOS, from *ἐπι*, 'upon,' and *δέω*, 'I bind.' A bandage or ligature, by which dressings are secured.—Hippocr.

EPIDID'YMIS, from *ἐπι*, 'upon,' and *διδυμος*, 'a testicle.' *Epidid'ymus*, *Paras'tata*, *Testic'ulus accessó'rius*, *Caput testis*, *Corpus varico'sum seu varicifor'me testis*, *Corps variqueux ou variciforme*, *Supergemina'lis*: that which is placed upon the testicle. A small, oblong, vermiform, grayish body lying along the superior margin of the testicle. The Epididymis is a canal, formed by the union of all the seminiferous vessels, folded several times upon themselves, after having traversed the *Corpus Highmorianum*. Its lower portion or tail, *Cauda vel globus minor*, is curved upwards, and is continuous with the vas deferens; the opposite extremity is called the head, *globus major*. The length of this canal, folded as it is upon itself and describing numerous curvatures, is, according to Monro, 32 feet.

EPID'OSIS, from *ἐπι*, 'upon,' and *δίδωμι*, 'to give.' Augmentation, increase. A word applied to the natural increase of the body or to the increase of a disease.

EPID'ROME, from *ἐπι* and *δρῶμαι*, 'I run upon.' An afflux or congestion of humours.—Galen.

EPIGASTRAL'GIA, from *ἐπι* and *γαστήρ*, 'the epigastrium,' and *αλγος*, 'pain.' Pain at the epigastrium.

EPIGAS'TRIC, *Epigas'tricus*, from *ἐπι*, 'upon,' and *γαστήρ*, 'the stomach.' This name has been given to several parts.

The **EPIGASTRIC REGION**, *Regio epigas'trica*, *R. cardiaca*, *R. stomachica*, *R. stomachalis*, is the superior region of the abdomen, comprised between the false ribs on each side, and extending from the lower surface of the diaphragm to two fingers' breadth above the umbilicus. It is divided into three parts, one middle, the *epigas'trium*,—and two lateral, the *hypochon'dria*.

EPIGASTRIC AR'TERY. *Arte'ria epigas'trica*, *A. sus-pubienne* (Ch.) It arises from the *external iliac*, on a level with the crural arch; sometimes, by a trunk proper to it, at others by a trunk common to it and the *Obturator artery*. It ascends upwards and inwards, behind the spermatic cord, follows the outer edge of the rectus abdominis muscle, and anastomoses, towards the umbilicus, with the internal mammary. The epigastric artery anastomoses, also, with the obturator, spermatic, lumbar, and intercostal vessels.

The epigastric vein follows nearly the same course.

EPIGAS'TRIUM. Same etymon. The belly, the epigastric region.

EPIGASTROCE'LE, from *ἐπι*, 'upon,' *γαστήρ*, 'the stomach,' and *κῆλη*, 'a tumour.' Hernia, formed by the stomach, *Gas'troce'le*. This name has been given more especially to

hernias, which occur towards the upper part of the linea alba or in the epigastric region, whether formed or not by the stomach.

EPIGENESIS, from *ἐπι*, 'upon,' and *γενεσις*, 'generation.' A theory of conception according to which the *new being* is created entirely anew; and receives at once from *each* parent the materials necessary for its formation.

Epigenesis as well as *Epigene'ma*, is, also, applied to any symptom occurring during a disease, without changing its nature. An accessory symptom. *Epiginom'enos*, *Super-ve'niens*, has a similar acceptation.

EPIGLOTTIS, from *ἐπι*, 'upon,' and *γλωττις*, 'the glottis.' *Epiglot'tic car'tilage*, *Lig'ula*. A fibrocartilage, situate at the upper part of the larynx, behind the base of the tongue. Its form is oval; texture elastic; thickness greater below than above; and greater in the middle than at the sides. By its smaller extremity, which is the lower, it is attached to the thyroid cartilage; its two surfaces are covered by the mucous membrane of the pharynx and larynx. The special use of the epiglottis would seem to be to cover the glottis accurately at the moment of deglutition, and, thus, to assist in opposing the passage of alimentary substances into the air tubes.

EPIGLOTTIC, *Epiglot'ticus*, same etymon. Relating to the epiglottis.

EPIGLOTTIC GLAND, *Periglot'tis*, *Caro glandulo'sa*. A collection of small, glandular granula, situate in the adipose, cellular texture at the base of the anterior surface of the epiglottis, in a triangular space bounded, anteriorly, by the thyro-hyoid membrane and thyroid cartilage. It pours out an unctuous and mucous fluid, which lubricates the epiglottis, keeps it supple and movable, and prevents the larynx from being irritated by the constant passage of the air, in the act of respiration.

EPIGLOTTITIS, *Angi'na epiglottidea*. Inflammation of the epiglottis.

EPIGLOTTUM. An instrument, mentioned by Paracelsus, for raising the eyelids. It resembled the epiglottis in shape.

EPIGLOUTIS, from *ἐπι*, 'upon,' and *γλουτος*, 'the buttocks.' The superior region of the nates.—Gorræus.

EP'ILEPSY, *ἰσχη νοσος, σελήνια νοσος*, *Epilep'sia*, *Epilep'sis*, *Epilemp'sis*, *Epilen'tia*, *Syspa'sia*, *Epilep'sia*, *Catalen'tia*, *Morbus comi'tialis*, *M. cadu'cus*, *M. Herculeus*, *Heracl'eus morbus*, *M. sacer*, *M. pueri'lis*, *Deprehen'sio*, *Clonos epilep'sia*, *Hieran'osos*, *Prehen'sio*, *Morbus magnus*, *M. major*, *M. interlu'nus*, *M. divi'nus*, *M. dæmo'nus*, *M. son'ticus*, *M. Seleni'acus*, *M. lunaticus*, *M. mensa'lis*, *M. deif'icus*, *M. sceles'tus*, *M. vitriola'tus*, *M. viridellus*, *M. Sancti Valenti'ni*, *Analep'sia*, *Catapto'sis*, *The falling sickness*, (F) *Mal caduc*, *Mal divin*, *Mal Saint-Jean*, *Mal de Terre*, *Haut-mal*. The word is

derived from *ἐπιλαμβάνω*, 'I seize upon.' It is a disease of the brain, which may either be idiopathic or symptomatic, *spontaneous* or *accidental*, and which occurs in paroxysms, with uncertain intervals between. These paroxysms are characterized by loss of sensation and convulsive motions of the muscles. Frequently, the fit attacks suddenly; at other times, it is preceded by indisposition, vertigo, and stupor. At times, before the loss of consciousness occurs, a sensation of a cold vapour is felt, hence called *aura epilep'tica*. This appears to rise in some part of the body and proceed towards the head; and as soon as it has reached the brain the patient falls down. The ordinary duration of a fit is from 5 to 20 minutes. Sometimes it goes off in a few seconds; at others, it is protracted for hours. In all cases, there is loss of sensation, sudden falling down, distortion of the eyes and face; countenance of a red, purple or violet colour; grinding of the teeth; foaming at the mouth; convulsions of the limbs; difficult respiration, generally stertorous; and sometimes involuntary discharge of feces and urine. After the fit, the patient retains not the least recollection of what has passed, but remains, for some time, affected with headache, stupor, and lassitude.

The disease is in the brain and is generally organic; but it may be functional and symptomatic of irritation in other parts, as in the stomach, bowels, &c. The prognosis, as to ultimate recovery, is unfavourable. It does not, however, frequently destroy life, but is apt to lead to mental imbecility. Dissection has not thrown light on its pathology.

In the *treatment*, the cause must be sought after, and if possible removed. In the paroxysm, but little can be done; but as the tongue is liable to be injured by the teeth, the jaws may be kept open by putting a cork or piece of wood between them. If the fit has been brought on by indigestible food, the stomach must be cleared. It is between the paroxysms that the great effort must be made. Generally, there is considerable irritability and debility about the brain, and hence tonics have been found the best remedies. Of these, perhaps the most powerful, in epilepsy, is the *argenti nitras*, given regularly and continued for months, if necessary. Preparations of iron, copper, and zinc have, also, been used, and the general class of vegetable tonics and antispasmodics. Counter-irritants may be employed, if necessary, along with this course, as blisters, moxa, &c.

Unfortunately, in many cases, these means are found insufficient, and all that can be done is to palliate, removing carefully all exciting causes; such as the use of spirituous liquors, strong emotions, violent exercise, &c., and regulating the diet.

EPILEP'TIC, *Epilep'ticus*; same etymon. One attacked with epilepsy. Any thing relating to epilepsy. As an *epilep'tic*

individual, an epileptic symptom. Some authors, also, speak of epileptic remedies.

EPIM'ANES, a name, given to a maniac, when in a paroxysm.

EPIMELE'TAI, a name by which the ancient Persians called the curers of wounds, who followed their armies; from *ἐπιμελομαι*, 'I take care of.'

EPIMOR'IOS, 'unequal,' from *ἐπι* and *μοίρω*, 'I divide.' An epithet applied to the pulse when unequal.—Galen.

EPINEPH'ELOS, *Nubilosus*. Presenting a cloud. Applied to the urine.—Hippocr.

EPINYC'TIDES, from *ἐπι*, 'upon,' and *νύξ*, 'the night.' Eruptions, which appear on the skin in the night, and disappear in the day. *Pus'tula livens et noctibus inquitans*.—Pliny.

EPIPAROXYSMUS. A paroxysm, superadded to an ordinary paroxysm.

EPIPE'CHU, *ἐπιπῆχυ*, from *ἐπι*, 'upon,' and *πῆχυς*, 'the elbow.' The upper part of the elbow.—Gorræus.

EPIPHANI'A, from *ἐπι*, 'upon,' and *φανω*, 'I exhibit.' The external appearance of the body.—Castelli.

EPIPHENOM'ENON, *Post apparens*; same etymon. Any kind of adventitious symptom, which occurs during the progress of an affection; and which is not as intimately connected with the existence of the disease as the symptoms—properly so called.

EPIPH'LEBOS, from *ἐπι*, 'upon,' and *φλεψ*, 'a vein.' An epithet given to those whose veins are very apparent.—Hippocr., Aretæus.

EPIPHLOGIS'MA, from *ἐπι*, 'upon,' and *φλογίζω*, 'I inflame.' Violent inflammation or burning heat in any part.—Hippocr.

EPIPH'ORA, *Dacryno'ma*, *Lachryma'tio*, *Delachryma'tio*, *Illachryma'tio*, *Oculus lachrymans*, from *ἐπιφέρω*, 'I carry to.' Weeping, (F) *Larmolement*. The watery eye;—an involuntary and constant flow of tears, upon the cheek. It is almost always symptomatic of some disease of the lachrymal passages, and occurs, when the tears cannot pass into the *ductus ad nasum*. Occasionally, it is owing to the tears being secreted in too great quantity; as in certain cases of ophthalmia. The treatment must of course be directed to the removal of the cause.

EPIPH'YSIS, *Additamen'tum*, from *ἐπι*, 'upon,' and *φύω*, 'I arise.' Any portion of a bone, separated from the body of the bone by a cartilage, which becomes converted into bone by age. The *epiphysis* of the foetus becomes the *apophysis* of the adult.

EPIPLASM, from *ἐπι*, 'upon,' and *πλάσσω*, 'I spread.' A cataplasm. Galen uses it especially for an application of wheaten flour, boiled in *hydrelæum* and applied to wounds.

EPIPLERO'SIS, from *ἐπι*, 'augmentative,' and *πληρωσις*, 'repletion.' Excessive repletion, distention.

EPIPLOCE'LE, from *ἐπιπλοον*, 'omentum,' and *κῆλη*, 'tumour.' *Epiploic hernia*, *Zirba'lis hernia*, *Omental hernia*, (F) *Hernie*

de l'épiploon. Omental hernia is recognised, but at times with difficulty, by a soft, unequal, pasty tumour, in which no gurgling sound is heard, on pressing or reducing it. It is less dangerous than hernia of the intestines.

EPIPLO-ENTEROCE'LE, from *ἐπιπλοον*, 'the omentum,' *εντέρον*, 'intestine,' and *κῆλη*, 'tumour.' Hernia, formed by the epiploon and a portion of the intestines. It is more commonly called *Entero-epiplocele*.

EPIP'LOIC, *Epiploicus*. Relating to the epiploon.

EPIPLOIC AR'TERIES; *Arte'riæ Epiploicæ*. The arterial branches, which are distributed to the epiploon, and which are given off by the gastro-epiploicæ.

EPIPLOIC APPEN'DAGES; *Appendic'ulæ epiploicæ*, *A. pinguedino'sæ*, *Fim'briæ carno'sæ coli*. Prolongations of the peritoneum beyond the surface of the large intestine, which are analogous, in texture and arrangement, to the epiploon.

EPIPLO-ISCHIOCE'LE, from *ἐπιπλοον*, 'the epiploon,' *ισχίον*, 'the ischium,' and *κῆλη*, 'a tumour.' Hernia, formed by the epiploon through the ischiatic notch.

EPIPLOITIS, from *ἐπιπλοον*, 'the omentum,' and *itis*, denoting inflammation. Inflammation of the omentum. *Omenti'tis*, *Empresma peritoni'tis omenta'lis*, *Omenti in-flamma'tio*, *Enteri'tis epiplo'i'tis*, *Omente'sis*. A case of partial peritonitis.

EPIPLOMEROCE'LE, from *ἐπιπλοον*, 'the omentum,' *μηρός*, 'the thigh,' and *κῆλη*, 'a tumour.' Femoral hernia, formed by the epiploon.

EPIPLOM'PHALON, *Epiploom'phalon*, *Hernia umbilica'lis*, from *ἐπιπλοον*, 'the omentum,' and *ομφαλος*, 'the navel.' Umbilical hernia, formed by the epiploon.

EPIPLOM'PHRASIS, from *ἐπιπλοον*, 'the epiploon,' and *εμφρασσω*, 'I obstruct.' Induration of the epiploon.

EPIPLOOCOMISTES, from *ἐπιπλοον*, 'the epiploon,' and *κομίζω*, 'I carry.' One who has the omentum morbidly large. Also, one labouring under epiplocele.

EPIPLOON, from *ἐπι*, 'above,' and *πλέω*, 'I swim or float.' *Omen'tum*, *Rete*; *Retic'u-lum*; The *Caul*; *Dertron*. A prolongation of the peritoneum, which floats above a portion of the intestines; and is formed of two membranous layers, with vessels and fatty bands distributed through it. Anatomists have described several epiploons.

The GASTRO-HEPAT'IC EPIPLOON or LESSER EPIPLOON, or OMENTUM, *Omentum hep'atogast'ricum* or *Omentum minus*, *Membra'na macilen'tior*, is a duplicature of the peritoneum, which extends, transversely, from the right side of the cardia to the corresponding extremity of the fissure of the liver, and downwards from this fissure to the lesser curvature of the stomach, the pylorus and duodenum. Below it, is the *foramen* or *hiatus* of WINSLOW; and between its lami-

næ are lodged the biliary and hepatic vessels. It contains but little fat. If air be blown in at the foramen of Winslow, the cavity of the omentum will be rendered perceptible.

The GASTRO-COLIC OR GREAT EPIPLOON OR OMENTUM, *Omentum gastro-colicum*, *Omentum majus*, consists of an extensive duplicature, which is free and floating on the folds of the intestines. It is quadrilateral, and longer on the left side than on the right:—its base being fixed, anteriorly, to the great curvature of the stomach; and, posteriorly, to the arch of the colon. It is formed of two laminæ, each consisting of two others. In this epiploon a number of vessels are distributed, and there is much fat.

The COLIC EPIPLOON OR OMENTUM, *O. colicum*, *Third Epiploon* or *Omentum*, is a duplicature of the peritoneum, situate along the ascending portion of the colon, as far as its junction with the transverse portion. It is behind the great epiploon; and fills up the angle, formed by the junction of the ascending with the transverse colon. Its two laminæ are separated by colic arteries and veins.

The GASTRO-SPLENIC EPIPLOON OR OMENTUM, *O. Gastro-splenicum*. A reflection of the peritoneum, which passes between the concave surface of the spleen and the stomach, from the cardiac orifice to near its great curvature, and which lodges the vasa brevia and splenic vessels between its laminæ.

The uses of the omentum are but little known. The chief one seems to be, to retain the viscera *in situ*, and to give passage to vessels.

EPIPLOSARCOMPHALUS, from *επιπλοον*, 'the epiploon,' *σαρξ*, 'flesh,' and *ομφαλος*, 'the navel.' Umbilical hernia, formed of indurated omentum.

EPIPLOSCHOELE, from *επιπλοον*, 'the epiploon,' *σχον*, 'the scrotum,' and *πλην*, 'tumour.' Scrotal hernia, formed by a displacement of the epiploon.

EPIPOROMA, from *επιπαρρω*, 'I harden.' A tophaceous concretion, which forms in the joints. The callus or fracture.

EPIRHOE, from *επι*, 'upon,' and *ρην*, 'I flow.' Afflux or congestion of humours.—Hippocr.

EPISCHESIS. Retention; from *επισχω*, 'I restrain.' A suppression of excretions.

EPISEMASIA, from *επισημαινω*, 'I afford some sign.' *Semasia*. It has been used synonymously with *sign*, and also with the invasion of an attack of fever.

EPISIONCUS, from *epision* (modern) 'the labium pudendi,' and *ογκος*, 'a tumour.' *Tumor labio'rum*. A swelling or tumour of the labia pudendi.

EPISPADIAS, from *επι*, 'above,' and *σπαιω*, 'I divide.' The opposite to *Hypospadias*. *Epispadias* consists in a preternatural opening of the urethra, at the upper part of the penis.

EPISPASTICS, *Epispastica*, *Helc'tica*, from *επισπαιω*, 'I draw out.' An epithet, for every medicinal substance, which, when applied to the skin, excites pain, heat, and more or less redness, followed by separation of the epidermis, which is raised up by effused serum. Cantharides and mustard are epispastics. See Blister and Derivative.

EPISPHERIA, from *επι*, 'upon,' and *σφαिरα*, 'a sphere.' Some physiologists have applied this expression to the different convolutions and sinuosities, presented by the external surface of the brain.

EPISTASIS, *Insiden'tia*, from *επι*, 'upon,' and *σταω*, 'I rest.' A substance, which swims at the surface of urine. It is opposed to the *hypostasis* or sediment. *Epistasis* has also been employed synonymously with suppression.

EPISTAXIS, from *επι*, 'upon,' and *σταζω*, 'I flow, drop by drop.' *Hæmorrhagia activa na'rium*, *Epistaxis junio'rum*, *Epistaxis arterio'sq*, *Hæmorrhin'ia*, *Choanorrhag'ia*, *Rhinorrhag'ia*, *Hæmorrhage from the pituitary membrane*, *Bleeding at the nose*, (F) *Hæmorrhagie nasale*, *Saignement du nez*. This is one of the most common varieties of hæmorrhage: the organization of the Schneiderian membrane being favourable to it, as the blood-vessels are but slightly supported. It does not generally flow from both nostrils, and is very apt to recur. Puberty is the period, at which it is most common. Its *exciting causes* are:—any thing that will excite local congestions, such as running, coughing, blowing the nose, &c., provided there is a predisposition to it. A common case of epistaxis requires but little treatment, especially if in a young person. Light diet and a dose or two of the sulphate of magnesia will be sufficient. In more severe attacks, cold and astringent washes of alum, sulphate of zinc, weak sulphuric acid, or creosote may be used, and the nostrils be plugged anteriorly, but if the bleeding goes on posteriorly, the posterior nares must be plugged likewise:—the patient being kept with the head raised. To prevent the recurrence, strict diet must be inculcated.

EPISTHOTONOS, from *επισθεν*, 'forwards,' and *τεινω*, 'I extend.' A spasm of the muscles, drawing the body forwards. The word *emprosthotonos* is more commonly employed.

EPISYNANCHE, *Episynangi'na*. A Greek word, used by a modern writer for spasm of the pharynx, by which deglutition is prevented, and the solid and liquid food driven back towards the mouth or nasal fossæ.

EPISYNTHETIC, *Episyntheticus*, from *επισυντιθημι*, 'to collect, accumulate.' The name of a medical sect, whose object it was to reconcile the principles of the Methodists with those of the Empirics and Dogmatists. Leonides of Alexandria seems to have been

one of the first partisans of this sect; of which we know little.

EPITASIS, from *ἐπι*, and *ταίνειν*, 'to extend.' The period of violence of a fever, attack or paroxysm. Sometimes it is used in the same sense as *epistasis*, for '*suppression*.'

EPITHELIUM, *Epithe'lis*, from *ἐπι*, 'upon,' and *θήλη*, 'a nipple.' The thin layer of epidermis, which covers parts deprived of *dermis*, properly so called,—as the nipple, mucous membranes, lips, &c.

EPITHEM, *Epith'ema*, from *ἐπι*, 'upon,' and *τίθημι*, 'I put.' This term is applied to every topical application, which cannot be classed either under ointments or plasters. Three sorts of epithems have been usually distinguished,—the *liquid*, *dry*, and *soft*, which comprise *fomentations*, *bags filled with dry substances*, and *cataplasms*.

EPITHESIS, from *ἐπι*, 'upon,' and *τίθημι*, 'I place.' The rectification of crooked limbs by means of instruments.

EPITROCHLEA, from *ἐπι*, 'upon,' and *τροχλία*, 'a pulley.' That, which is situate above a pulley. Chaussier gives this name to the unequal, round protuberance, situate on the inside of the inferior extremity of the humerus above its articular trochlea. It is the part usually called the *inner condyle* or *lesser condyle* of the humerus. From it originate several muscles of the forearm, to which it has given part of their names, according to the system of Chaussier.

EPIZOOTIA, *Epizooty*, from *ἐπι*, 'upon,' and *ζῷον*, 'an animal.'—A disease, which reigns amongst animals. It corresponds, in the veterinary art, to *Epidemy*, in Medicine.

EP'OCHE. Doubt, suspension of judgment—*Suspensa sententia*. Sometimes employed in the same sense as *epischesis* or suppression.

EPO'MIS, *Su'perhumera'le*, from *ἐπι*, 'upon,' and *ἄμος*, 'the shoulder.' The upper part of the shoulder.—Hippocr., Galen.

EPOMPHA'LION, from *ἐπι*, 'upon,' and *ομφαλος*, 'the navel.' A medicine, which, when placed upon the umbilicus, moves the belly.—Paulus of Ægina.

EPSOM, MINERAL WATERS OF. Epsom is a town in Surrey, about 15 miles from London. The water is a simple saline;—consisting chiefly of sulphate of magnesia, which has consequently received the name of Epsom Salts, though no longer prepared from the Epsom water.

EPU'LIS, from *ἐπι*, 'upon,' and *ὄυλον*, 'the gum.' *Odon'tia excres'cens*, *Sarco'ma epu'lis*, *Excrescen'tia gingi'væ*. An excrescence on the gum, sometimes ending in cancer.

EQUAL, *Æqua'lis*. An epithet, applied particularly to the pulse and to respiration. The pulse and respiration are equal, when

the pulsations and inspirations, which succeed each other, are alike in every respect.

EQUILIBRIUM, from *æquus*, 'equal,' and *libra're*, 'to weigh.' In Medicine, this word is sometimes used to designate that state of organs, fluids, and forces, which constitutes health.

EQUITA'TION, *Equita'tio*, *Hippe'i'a*, *Hippa'sia*, *Hippeu'sis*, from *equus*, 'a horse.' *Horseback exercise*. A kind of exercise, advisable in many diseases, although improper in others—in uterine affections, for instance. It has been much recommended in phthisis pulmonalis. It is less fatiguing than walking, and consequently more available in disease. But to prevent disease, where exercise is required, the latter is preferable.

EQUIV'OCAL, *Æquiv'ocus*, from *æ'quus*, 'equal,' and *vox*, 'voice.' Those symptoms are occasionally so denominated, which belong to several diseases. Generation is said to be 'equivocal,' when it is, or seems to be, spontaneous.

EQUUS, *Hippos*, *Nicta'tio*. A perpetual motion of nictation, which some individuals have naturally, and others from disease.

ERADICA'TION, *Eradica'tio*, from *e*, 'from,' and *radix*, 'a root.' The act of rooting out, or completely removing a disease.

ERADICATIVE, *Eradicans*; same etymon. Any thing possessed of the power of completely rooting out a disease.

EREC'TILE TISSUE, from *erigere* 'to erect,' 'to become erect.' A tissue, whose principal character is:—to be susceptible of dilatation, i. e. of turgescence and increase of size. It is formed of a collection of arteries and veins, intermixed with nervous filaments; which form, by their numerous anastomoses, a spongy substance, whose areolæ communicate with each other. This tissue exists in the corpora cavernosa of the penis and clitoris, at the lower and inner surface of the vagina, in the spongy part of the urethra, the lips, nipples, iris, &c. Sometimes it is developed accidentally, and constitutes a kind of organic transformation.

EREC'TION, *Erec'tio*; same etymon. The state of a part, in which, from having been soft, it becomes stiff, hard, and swollen by the accumulation of blood in the areolæ of its tissue.

ER'ETHISM, *Erethis'mus*, *Erethis'ia*, from *ερεθίζω*, 'I irritate.' Irritation. Augmentation of the vital phenomena in any organ or tissue. *Orgasm*. Under this name, Mr. Pearson has described a state of the constitution, produced by mercury acting upon it as a poison. He calls it *Mercurial Erithismus*. It is characterized by great depression of strength; anxiety about the præcordia; irregular action of the heart; frequent sighing; tremors; small, quick, sometimes intermitting, pulse; occasional vomiting; pale, contracted countenance, and sense of

coldness: but the tongue is seldom furred, nor are the vital and natural functions much disturbed. In this state any sudden exertion may prove fatal.

ERGOT, (F), (pronounced *Ergo*.) 'A Spur.' The *Seca'lè cornu'tum*, *Clavis seca'lînus*, *Calcar*, *Seca'lis mater*, *Seca'lè luxu'rians*, *Ustila'go*, *Clavis silig'inis*, *Spurred or Horned Rye*. The *Spur*; *Ergot*, *Hornseed*. (F) *Seigle ergotée*, *Blé cornu*. The ergot is generally considered to be the result of a disease in rye, occurring most frequently, when a hot summer succeeds a rainy spring. Decandolle, however, regards it as a parasitic fungus, and calls it *Sclerotium clavus*; whilst Leveillé esteems it to be a fungus giving a coating to the diseased grain: the medical virtues residing in the coating. This parasitic fungus, he calls *Sphacelia segetum*. It is found projecting from among the leaves of the spike or ear; and is a long, crooked excrescence, resembling the spur of a cock; pointed at its extremities; of a dark-brown colour externally, and white within.

This substance has been long used in Germany to act on the uterus, as its names *Mutterkorn* and *Gebärpolver* (womb-grain, pulvis parturiens) testify. About 30 years ago, it was recommended in this country by Dr. John Stearns, of Saratoga County, New York, for accelerating parturition; and since that period, numerous testimonials have been offered in its favour. Half a drachm of the powder is gently boiled in half a pint of water, and one third part given, every 20 minutes, until proper pains begin. Dr. Hooker of New Haven recommends the clear watery infusion; others advise the powder. It is obvious, that in many cases the natural efforts would return in the period which would necessarily elapse in the administration of the ergot, so that several of the cases at least, of reputed efficacy, may not have been dependent upon the assigned agent.

The ergot also possesses—it is affirmed—narcotic virtues, which have rendered it useful in hemorrhage.

The Ergot is admitted into the secondary list of the Pharmacopœia of the United States.

Bread, made of spurred rye, has been attended with the effects described under Ergotism.

ER'GOTISM, *Ergot* or *Mildew Mortification*. An affection, produced by the use of the spurred rye. At times, the symptoms are limited to vertigo, spasms, convulsions. See *Convulsio Cerealis*. Most commonly, there is torpor and numbness of the hands and feet, which waste away; lose sensation and the power of motion, and separate from the body by dry gangrene. This is called—*Ergotisme gangréneux*, *Necrosis ustilaginea*, *Gangrène des Solonois*, *Convul'sio Solonien'sis*, *Gangræ'na ustilagin'ea*.

ERI'CA VULGARIS, *Callu'na vulga'ris*. *Common Heath*. (F) *Bruyère vulgaire*. This has been regarded as diuretic and diaphoretic.

ERIG'ERON PHILADEL'PHICUM, *Scabious*, *Skevisch*, *Philadelphia Flea-Bean*. (F) *Vergerette de Philadelphie*. The plant has been used in decoction or infusion for gouty and gravelly complaints, and it is said to operate powerfully as a diuretic and sudorific.

The **ERIGERON CANADEN'SE**, *Can'ada Flea-Bean*, is considered to be allied in properties to the above.

ERIX, $\epsilon\rho\iota\zeta$. This word signifies, in Galen, the upper part of the liver.

EROSION, *Ero'sio*, *Diabro'sis*, *Anabro'sis*, from *ero'dere*, 'to eat away.' The action of a corrosive substance, or the gradual destruction of a part by a substance of that kind. It is often employed in the same sense as ulceration, *spontaneous erosion*.

EROT'IC, *Erot'icus*, from $\epsilon\rho\omicron\varsigma$, 'love.' That, which is produced by love;—as *Erotic melancholy*, *E. delirium*, &c.

EROTOMA'NIA, *Eroma'nia*, from $\epsilon\rho\omicron\varsigma$, 'love,' and $\mu\alpha\nu\iota\alpha$ 'mania.' A species of mental alienation, caused by love. *Erotic melancholy* is *Love melancholy*. Some authors write it *Erot'ico-ma'nia*.

ERRAT'IC, *Errat'icus*, *Atac'tos*, *At'ypos*; from *errare*, 'to err.' *Wandering, irregular*. That, which disappears and recurs at irregular intervals. This name is given to intermittents, which observe no type. Most commonly, it is applied to pains or to any diseased manifestation, which is not fixed; but moves from one part to another, as in gout, rheumatism, &c.

ER'RHINE, *Errhi'num* or *Er'rhinum*, *Sternutato'rium*, *Ster'nutatory*, *Ptar'micum*, *apophlegmatisans per nares*, from $\epsilon\nu$, 'into,' and $\rho\eta\nu$, 'the nose.' A remedy, whose action is exerted on the Schneiderian membrane; exciting sneezing and increased discharge. Errhines have been chiefly used as local stimulants in head affections. The chief are: *Asari Folia*, *Euphorbiæ gummi resina*, *Hydrargyri sulphas flavus*, *Tabacum*, and *Veratrum album*.

ERROR LOCI, *Apoplane'sis*. (F) *Erreur de Lieu*. A term, frequently used by Boerhaave to express deviation of fluids, when they enter vessels not destined for them. Boerhaave admitted several orders of capillary vessels; the diameters of which went on decreasing. The largest received red blood: those which came next received only white: others only lymph; whilst the last of all were destined for yet more subtle fluids—for a kind of vapour. When the red globules entered vessels destined for the white, or the white those intended for the thinner fluids, there was, according to the theory of Boerhaave, an *error loci*:—the proximate cause of inflammation and other mischiefs.

ER'RHYSIS, from *er*, 'in,' and *ῥῆσις*, 'I flow.' With some,—a draining of blood. A trifling hemorrhage.

ERUCTA'TION, *Ructa'tio*, *Ereug'mos*, *Er'ygè*, *Eructa'tio*, *Ructus*, *Ereux'is*, *Ruft* (*N. of England*), from *eructa're*, 'to belch.' *Belching*. (F) *Rot*, *Rapport*. A sonorous emission, by the mouth, of flatus proceeding from the stomach.

ERUP'TION, *Eruptio*, from *erum'pere*, 'to issue with violence,' 'to break out.' This word has several meanings. 1. The sudden and copious evacuation of any fluid from a canal or cavity;—of serum, blood, pus, &c., for example. 2. The breaking out of an exanthem: and, 3. The exanthem itself; whether simply in the form of a rash or of pustules, vesicles, &c.—See Cutaneous Diseases.

ERUP'TIVE, *Eruptivus*. That which is accompanied by an eruption. Thus small-pox, measles, scarlet fever, miliaria, &c. are *eruptive fevers*. The term *eruptive disease*, is nearly synonymous with cutaneous disease.

ERVUM ERVIL'IA, *Or'obus*. (F) *Lentille Ers*, ou *Orobe*. In times of scarcity, the seeds have been made into bread, but it is said not to be wholesome. The meal was, once, much used in poultices: it was formerly called *Orobion*, *οροβιον*.

ERVUM LENS, *Lens*, *Phacos*, the *Lentil*. (F) *Lentille*. The seeds are eaten in many places like peas: they are flatulent and difficult of digestion.

ERYN'GIUM AQUAT'ICUM, *Water Eryn'go*, *Button Snake Root*. Order, *Umbelliferae*. This root is nearly allied to the contrayerva of the shops, and acts more especially as a sudorific. It is a secondary article in the Pharm. U. S.

ERYNGIUM MARIT'IMUM. The *Sea Holly* or *Eryn'go*, *Æthe'rea Herba*. (F) *Panicaut Maritime*. The *eryngo* root has a slightly aromatic odour, and sweetish and warm taste. It is considered to be diuretic and expectorant, but its powers are so weak, that it is scarcely ever used.

The ERYNGIUM CAMPES'TRE, (F) *Panicaut*, *Centum cap'ita*, *Lyrin'gium*, *Aster inquinat'is*, *Capit'ulum Martis*, *Acus Ven'eris*, *Chardon-Roland*, is sometimes used for the *E. maritimum*.

ERYS'IMUM, *Erys'imum officina'le*, *Chamæ'plion*, the *Hedge-mustard*. (F) *Velar*, *Tortelle*, *Herbe aux chantres*. This was, formerly, much used for its expectorant and diuretic qualities. The seeds greatly resemble mustard.

The ERYSIMUM BARBA'REA, *Barba'rea*, (F) *Herbe de Sainte Barbe*, has been ranked amongst the antiscorbutic plants. See *Alitaria*.

ERYSIPELAS, from *εγυω*, 'I draw in,' and *πρὸς*, 'near.' *Febris erysipelato'sa*, *Febris erysipela'cea*, *Emphlysis Erisip'elas*, *St.*

An'thony's fire, *Ignis sancti Antonii*, *Hieropyrus*, *Icteri'tia rubra*, *Ignis sacer*, *Rose*, *Rubea icteri'tia*, *Vicinitra'ha*, *Vicinitrac'tus*, *Brunus*, (F) *Erysipèle*, *Feu St. Antoine*, *Feu sacre*, *Mal Saint-Antoine*. A disease, so called because it generally extends, gradually, to the neighbouring parts. Superficial inflammation of the skin, with general fever, tension and swelling of the part; pain and heat more or less acrid and redness by no means circumscribed; disappearing when pressed upon by the finger, but returning as soon as the pressure is removed. Frequently, small vesicles appear upon the inflamed part, which dry up and fall off, under the form of branny scales. Erysipelas is, generally, an acute affection; its medium duration being from 10 to 14 days.

Erysipelas yields, commonly, to general refrigerant remedies. Topical applications are rarely serviceable. At times, when the disease approaches the phlegmonous character, copious bleeding and other evacuations may be required, as in many cases of erysipelas of the face; but this is not commonly necessary. In particular cases, indeed, the general action seems deficient and it becomes necessary to give tonics.

ERYSIPEL'ATOUS, *Erysipelato'sus*, belonging to erysipelas; as an *erysipel'atous affection*. *Erysipel'atous inflammation*, *Cutit'is*, *Dermatit'is*, is the character of inflammation, which distinguishes erysipelas, *Erythe'ma erysipelato'sum*.

ERYTHE'MA, *Er'ysos*, *Erythos*, *Erythros*, *ερυσος*, *ερυθος*, *ερυθρος*, 'red, rose-coloured;' from *ερυθρος*, 'red.' *Erythre'ma*. This name is, sometimes, given to erysipelas, especially when of a local character. It is, also, applied to the morbid redness on the cheeks of the hectic; and on the skin covering bubo, phlegmon, &c. It forms the 6th genus of the 3d order, *Exanthemata*, of Bateman's classification of cutaneous diseases; and is defined, "a nearly continuous redness of some portion of the skin, attended with disorder of the constitution, but not contagious."

ERYTHROID VESICLE, *Vesi'cula Erythroidea*. A vesicle of the fœtus described by Pockels and others. It is pyriform, and much longer than, although of the same breadth as, the umbilical vesicle. Velpeau, Weber and others doubt its being a physiological condition.

ERYTHRONIUM AMERICANUM, *Common Erythronium*. This plant is possessed of emetic properties, but is rarely, if ever, used. It is a secondary article in the Pharm. U. S.

ES'APHE, from *εσαφαω*, 'I touch with the fingers.' (F) *Le Toucher*. The introduction of a finger or fingers into the vagina, for the purpose of examining the condition of the uterus. It is employed to verify the existence or non-existence of pregnancy and its different stages; to detect certain af-

fections or faults of conformation in the genital organs and pelvis; and, during the process of accouchement, to examine into the progress of labour, &c.

ESCHAR, *Es'chara*, *Es'cara*, a slough, a crust or scab. The crust or disorganized portion, arising from the mortification of a part, and which is distinguishable from the living parts by its colour, consistence, and other physical properties. The inflammation, which it excites in the contiguous parts, gives occasion to a secretion of pus between the living and dead parts, which ultimately completely separates the latter.

ESCHAROTICS, *Escharot'ica*, from *εσχαρεα*, 'eschar.' Any substance, which, when applied upon a living part, gives rise to an eschar, such as *caustic potass*: the *concentrated mineral acids*, &c.

ESCHELLOHE, **MINERAL WATERS OF**. This water rises at the foot of a mountain near the convent of Etal in Bavaria. It is a sulphuro-saline.

ESCULENT, *Esculen'tus*, from *esca*, 'food,' (F) *Comestible*. Such plants or such parts of plants or animals as may be eaten for food.

ESO, *εσω*, 'within.' A prefix which signifies an affection of an internal part; as *Eso-ēteritis*, inflammation of the inner membrane of the intestines:—*Esogastri'tis*; inflammation of the inner membrane of the stomach, &c.

ESO'CHE, *εσωχη*. A tumour within the anus.

ES'PHLASIS, from *φλαω*, 'I break, bruise,' &c. A fracture of the skull by comminution, the fragments being depressed.

ESSENCE, *Essentia*. By some used synonymously with *volatile oil*; by others, with *simple tincture*. The *oil of peppermint* is the oil, obtained by distillation; the *essence*, the oil diluted with spirit.

ESSEN'TIAL, *Essentia'lis*. The word *essential* has been applied to the immediate or active principles of vegetables, which were believed to be endowed with the properties of the plants, from which they were extracted. *Essential oil* was so called because it was regarded as the only immediate principle which was *essential*. This expression is retained. *Essential salts* are true salts or extracts, which exist, ready formed, in vegetables; and which are obtained by distillation, incineration, or some other process.

An *essential disease* is synonymous with *idiopathic disease*; or one not depending on any other;—not symptomatic.

ES'SERA, **ES'SERE**, **SORA**, or **SAIRE**, *Sare*, *Morbus porci'nus*, *Rosa saltans*, *Urtica'ria porcellana*, (F) *Ampoules*, *Porcelaine*. A species of cutaneous eruption, consisting of small, reddish tubercles over the whole body, accompanied by a troublesome itching. It seems to be a variety of lichen or urticaria.

ESTHIOM'ENUS, *Estiom'enus*, *ex'edens*. That which devours or eats away. Certain ulcers and eruptions are so called.

ESTI'VAL, *Æsti'vus*, happening in summer, belonging to summer. This epithet is given to *summer diseases*, so called, because they reign at that season and appear to depend on the influence exerted by it on the economy. In the United States the term *summer disease*, or *complaint*, means disorder of the bowels, as *diarrhœa*, *cholera morbus*, &c.

ETH'MOID. The *ethmoid bone*, *Os ethmoidæum*, *Os multifor'me*, *Os spongio'sum*, *Os spongoi'des*, *Os cribro'sum*, *Os cribri-for'me*, *Os foraminulentum*, *Os coliforme*; from *ἔθμος*, 'a sieve,' and *μορς*, 'form.' (F) *Os Cribleux*. One of the 8 bones, which compose the cranium; so called, because its upper plate is pierced by a considerable number of holes. The ethmoid bone is situated at the anterior, inferior, and middle part of the base of the cranium. It seems to be composed of a multitude of thin, fragile, semi-transparent laminæ, which form more or less spacious cells, called the *Ethmoidal labyrinth* or *cells*, distinguished into *anterior* and *posterior*. These communicate with the nose, and are lined by a prolongation of the pituitary membrane.

The ethmoid bone is constituted of compact tissue, and is surrounded by the *Ethmoid suture*. It is articulated with the *frontal* and *sphenoidal bones*, the *cornua sphenoidal*, the *superior maxillary bones*, the *palate bones*, the *ossa turbinata inferiora*, the *vomer*, the *proper bones of the nose*, and the *lachrymal bones*.

ETHMOID'AL, *Ethmoida'lis*. Belonging to the ethmoid bone; as, *Ethmoidal cells*, *E. suture*, &c. The *Ethmoidal apoph'ysis* or *process* is the advanced part of the sphenoid bone, which articulates with the ethmoid. The *ethmoidal arteries* are two in number, the anterior of which arises from the ophthalmic artery. The origin of the other varies. The *Echancrure ethmoidale* of the *os frontis* receives the ethmoid bone. The *Ethmoidal veins* correspond to the arteries of the same name.

ETIOLA'TION, (F) *Étiollement*. That state of plants, which occurs in consequence of privation of light, when they become pale and watery. In *pathology*, it is sometimes used to denote the paleness produced in those persons, who have been kept long without light; or a similar paleness, the result of chronic disease.

ETRON'CUS, from *ἡτρόν*, 'the lower belly,' and *ὄγκος*, 'a tumour.' A tumour of the lower belly.

EU, *ευ*, 'good, proper,' when prefixed to words. Hence:

EUÆ'MIA, from *ευ*, 'well,' and *αἷμα*, 'blood.' Good condition of the blood.—Fernelius.

EUÆSTHETOS. One whose senses are

in full vigour, from *ευ*, 'well,' and *αισθανομαι*, 'I feel.'

EUCHYM'IA, from *ευ*, 'well,' and *χυμος*, 'juice.' A good state of the humours.

EUCRA'SIA, from *ευ*, 'well,' and *κρασις*, 'temperament.' A good temperament.

EUDIAPNEUS'TIA, from *ευδιαπνευστος*, 'one who breathes well.' Easy respiration.

EUELCEs, from *ευ*, 'well,' and *ελκος*, 'an ulcer,' *ευελκης*. One whose ulcers are readily healed.

EU'EMES, *Euem'etos*, from *ευ*, 'well,' and *εμεω*, 'I vomit.' That which readily excites vomiting. One who vomits with facility.

EUEX'IA, from *ευ*, 'well,' and *εξις*, 'constitution.' A good constitution.

EUGENIA CARYOPHYLLA'TA, *Garophyllus*, *Caryophyllus aromaticus*. The Indian tree, which affords the clove. Order, Myrtaceæ. The Clove or *Caryophyllus*, *C. aromaticus*, is the unexpanded bud, (F) *Girofle*, *Gérofle*, *Gyrophle*. Its odour is strong, aromatic, and peculiar; taste pungent and acrid. Like all substances, whose virtue depends upon essential oil, it is stimulant and carminative. It is generally used as a corrigent to other remedies; and, in cases where substances containing the essential oils are demanded. The oil (F) *Huile de Gérofle*, has the properties of the cloves.

EUNUCH, *Eunu'chus*, from *ευνη*, 'the bed,' and *εχω*, 'I keep.' *Castra'tus*, *Excastra'tus*, *Evira'tus*, *Emacula'tus*, *Spado*, *Exsec'tus*, *Extesticula'tus*, *Extom'ius*, *Sem'ivir*, *Semimacula'tus*. One, whose organs of generation have been removed or so disorganized, that he is rendered incapable of reproducing his species, or of exercising the act of venery. Eunuchs were common with the ancient Romans. In Italy, this horrible mutilation still takes place to improve the voice: and, in the East, Eunuchs have the *surveillance* of the seraglios.

EUPATHIA, *Euphoria*, from *ευ*, 'well,' and *παθος*, 'suffering.' A disposition for being affected by pain easily. Also a good state of health.

EUPATORIUM CANNAB'INUM, *Eupatorium*, *E. Arab'icum*, *Hemp agrimony*, *Eupatorium of Avicen'na*, *Herb of Saint Cunenegonde*, *Trifolium cervi'num*, *Orig'anum aquat'icum*, (F) *Eupatoire d'Avicenne*. Family, Synantheræ; Sex. Syst. Syngenesia æqualis. The juice of this plant proves violently emetic and purgative, if taken in sufficient quantity. It has been considered diuretic, cathartic, and emetic.

The EUPATORIUM PERFOLIA'TUM, *Boneset*, *Thoroughwort*, *Thor'oughstem*, *Thor'ough-wax*, *Vegetable antimony*, *Crosswort*, *Ague-weed*, *Feverwort*, *Indian sage*, is a plant which grows in low, wet meadows throughout the United States. It is considered to be stimulating, tonic, emetic, purgative, diuretic, and sudorific. Dose, gr. xv of the powder, as a gentle purgative.

The EUPATORIUM PURPU'REUM, *Mohawk tassel*, *Purple-stalked Eupato'rium*, *Trumpet weed*; is used in similar cases; as well as the

EUPA'TORIUM TEUCRIFO'LIUM, *Wild horehound*, or *Germander-leaved horehound*.

EUPEP'SIA, from *ευ*, 'well,' and *πεπτω*, 'I digest.' A good digestion. The antithesis to *dyspepsia*.

EUPHLO'GIA, from *ευ*, 'well,' and *φλεγω*, 'I burn.' Mild inflammation.

EU'PHONY, *Eupho'nia* from *ευ*, 'well,' and *φωνη*, 'voice.' An agreeable or regular voice.

EUPHOR'BIA CAPIT'ATA, *Caa-cica*. Ord. Euphorbiaceæ. A Brazilian plant, which is strongly astringent, and not poisonous. It is considered to be one of the best remedies for the bites of serpents. It is, also, called *Colubrina Lusitanica*.

EUPHORBIA CYPARIS'SIAS, *Es'ula minor*, *Tithym'alus Cyparis'sia*. The *Cypress spurge*, (F) *Euphorbe cyprès*. This, like most of the spurges, is very acrimonious. Amongst the rustics it was formerly called, *poor man's rhubarb*, and was, consequently, a laxative. It is not used.

EUPHORBIA HYPERICIFO'LIA. A native of the United States. It is astringent and tonic. Used in infusion,—3ss to ℥j of boiling water. Dose, a tablespoonful.

EUPHORBIA IPECACUANHA, *Ipecacuanha spurge*, (F) *Euphorbe vomitive*. This species of spurge is common in the Southern and Middle parts of the United States. The root is a powerful emetic, in the dose of from 5 to 15 grains; 20 grains act as a cathartic likewise. In large doses it acts as a narcotico-acrid.

The EUPHORBIA COROLLA'TA, or *Large flowering spurge*, *Milkweed*, *Snakes' milk*, *Ipecacuanha*, *Indian Physic*, has similar properties to the last. The dose of the root is the same.

EUPHORBIA LATH'YRIS. The systematic name of the plant, which affords the *lesser catapu'tia seeds*. *Catapu'tia minor*, *Caper spurge*. *Lath'yris*, *Gar'den spurge*, *Tithym'alus latifo'lius*. The seeds possess cathartic properties, and an expressed oil of the seeds has been given as a cathartic in the dose of 6 to 12 drops.

EUPHORBIA OFFICINA'RUM. The systematic name of the plant, which affords the *Euphorbium*, *Euphorbiæ gummi resi'na*, in greatest abundance. The euphorbium is an inodorous gum-resin, in yellow tears, which have the appearance of being wormeaten. It enters into the composition of some plasters and has been used as an errhine.

EUPHORBIA PALUSTRIS. The *greater spurge*. *Es'ula major*, *Tithym'alus*, *Marsh spurge*. (F) *Euphorbe des marais*. The juice is given, in Russia, as a common purge. It is used, too, as an irritant in tinea, warts, &c.

EUPHOREIA *PARALIAS*, *Tithym'alus para-*
lias, *Sea spurge*. This is violently cathartic
and irritating; and is seldom used.

☞ All the spurges are vesicant and rube-
facient, when applied externally.

EUPHRA'SIA *OFFICINA'LIS*, *Ocula-*
ria, *Euphra'gia*, *Ophthal'mica*, *Eyebright*,
(F) *Eufraise*, *Casse-Lunette*. It has been
recommended in diseases of the eye, but is
unworthy of notice.

EUPNE'A, from *eu*, 'well,' and *πνεω*, 'I
respire.' Freedom or facility of respiration.

EURHYTH'MIA, from *eu*, 'well,' and
ρυθμος, 'rhythm.' Regularity of the pulse.

EUROS, *υγρος*, 'mould, putrefaction,' *Mu-*
cor, *Caries*. Corruption of the humours.

EUSAR'COS, from *eu*, 'well,' and *σαρξ*,
'flesh.' One who is fleshy, robust.

EUSEM'IA, from *eu*, 'well,' and *σημειον*, 'a
sign.' A collection of good signs.

EUSTA'CHIAN TUBE, *Tuba Eusta-*
chia'na, *Meatus cæcus*, *Tuba Aristotel'ica*,
Ductus auris palati'nus, *Iter a Palato ad*
Aurem, *Trompe ou Conduit d'Eustache*, *Con-*
duit guttural de l'oreille—(Ch.) This tube
was so called from its discoverer, Eustachius.
It is partly bony and partly cartilaginous;
extending from the cavity of the tympanum
to the upper part of the pharynx. Its length
is about two inches; the bony portion, which
belongs to the temporal bone, is about 3-4ths
of an inch long. It is lined, internally, by a
prolongation of the lining membrane of the
pharynx. Its nerves are furnished by the
palatine branches of the ganglion of Meckel,
and its vessels proceed from those of the pha-
ryn timer and velum pendulum.

The use of the tube seems to be, to permit
the renewal of air in the cavity of the tympa-
num.

EUSTA'CHIAN VALVE, *Valve of Eusta-*
chius, *Valvule d'Eustachi ou d'Eustache*. A
membranous, semilunar fold, which corre-
sponds to the opening of the vena cava infe-
rior into the right auricle of the heart.

EUSTHEN'IA, *Vigor*, *Exuberan'tia*, from
eu, 'well,' and *σθεος*, 'strength.' Flourishing,
exuberant health.—Hippocr.

EUTAX'IA, from *eu*, 'well,' and *τασσω*,
'I arrange,' *Euthe'sia*. A well ordered con-
stitution, in which every part has its proper
relation.

EUTHANA'SIA, from *eu*, 'well,' and
θανατος, 'death.' An easy death.

EUTHYM'IA, *An'imi tranquil'litas*, from
eu, 'well,' and *θυμος*, 'mind.' Tranquillity
of mind. A good state of the mental facul-
ties.

EUTRO'PHIA, from *eu*, 'well,' and *τροφή*,
'nourishment.' A good state of nutrition.

EVACUANTS, *Evacuan'tia*, from *e* and
vacua're, 'to empty,' (F) *Evacuatifs*. Me-
dicines are so called, which occasion a dis-
charge by some emunctory; such as purga-
tives, emetics, &c.

EVACUA'TION. Same etymon. The dis-

charge, of any matter whatever, by the natu-
ral passages or by an artificial opening.

EVAPORA'TION, *Evapora'tio*, *Vapora'-*
tio, *Exhala'tio*. Transformation of a liquid
into vapour, in order to obtain the fixed mat-
ters, contained in it, dry and separate from
the liquid. When the vapour is received in
a proper vessel and condensed, the process
is called Distillation, which see. Evapora-
tion produces cold, and this is one of the pro-
cesses by which the body is cooled, through
the evaporation of the perspiratory fluid.

EVAUX, *MINERAL WATERS OF*. *E.*
is situate in Auvergne, in France. The wa-
ters are hydrosulphurous, and thermal.

EVENTRA'TION, *Eventra'tio*, *Hypogas-*
trorix'is, from *e*, 'out of,' and *venter*, 'the
belly.' A tumour, formed by a general re-
laxation of the parietes of the abdomen, and
containing a great part of the abdominal vis-
cera. Also, *ventral hernia*, or that, which
occurs in any other way, than through the
natural openings of the abdominal parietes.
Lastly, any very extensive wound of the ab-
dominal parietes, with issue of the greater
part of the intestines.

EVENTUS, *Apobainon*, *Apobesomenon*,
Ecbesomenon, *Termina'tio morbi*. The event
or issue of a disease, either favourable or un-
favourable.

EVERRIC'ULUM, *Specil'lum*. A sort of
sound or scoop, used for extracting sand or
fragments of stone or clots of blood from the
bladder, after or during the operation of lith-
otomy.

EVOLU'TION, *SPONTA'NEOUS*. A
term, applied, by Dr. Denman, to what he
considered to be a spontaneous turning of the
foetus in utero, in an arm presentation, in
consequence of powerful uterine contractions
forcing out the breech and feet, whilst the
arm recedes. It is now usually considered to
be a doubling of the foetus, so that the arm
changes its position but little, whilst the
breech is forcibly expelled before the upper
extremity;—the case becoming similar to a
breech presentation.

EVUL'SION, *Avulsion*, *Evul'sio*, from
evel'lere, 'to pluck out,' *Apotil'mos*, *Ectil'-*
mos, *Tilmos*. The action of plucking out;
forcible extraction. (F) *Arrachement*. This
word is oftener used by the French, than by
the English surgeons, for the act of extract-
ing certain parts, the presence of which is
injurious,—as the teeth, &c.

EXACERBA'TION, *Exacerba'tio*, *Exas-*
pera'tio, *Excrescen'tia*, from *exacerba're*, 'to
provoke,' (F) *Rédoublement*. An increase in
the symptoms of a disorder. Often used sy-
nonymously with paroxysm.

EXAL'MA, from *εξ*, 'out of,' and *αλλομαι*,
'I leap.' *Exalsis*. Hippocrates calls thus
the displacement of the vertebræ.

EXALTA'TION of the vital forces, *Exal-*
ta'tio virium. This word has been used, by
modern pathologists, to designate a morbid

increase in the action of organs, and partly that which occurs in an inflamed organ. Some use *exaltation of the vital forces*, and *inflammation* synonymously.

EXANGIA, from *εξαγγίζω*, 'I evacuate from a vessel.' *Exangeia*. An enlargement or rupture of a blood-vessel, without external opening. A genus, in the order *Dysthetica*, class *Hæmatica* of Good. It comprises *aneurism* and *varix*.

EXANGUIOUS, *Exæ'mos*, *Exsan'guis*, from *ex*, 'out of,' and *sanguis*, 'blood.' One who seems bloodless; as a female, who has suffered largely from uterine hemorrhage.

EXANIMA'TION, *exanima'tio*, from *ex*, 'out of,' and *anima*, 'the spirit.' This word has two acceptations. Sometimes, it means real death, corresponding with the Greek *θανάτος*, *mors*. At others, it signifies, apparent death, corresponding with the Greek *ἀψυχία*, *ἐκλυσις*, *An'imi deli'quium*.

EXAN'THEM, *Exanthe'ma*, *Anthe'ma erup'tio*, *Epanthe'ma*, *Efflorescen'tia*, *Exanthis'ma*, *Efflora'tio*, from *εξανθίζω*, 'I flourish.' A rash. (F) *Ele'vures*. Under this term is comprehended, by some, every kind of eruption, of which the skin is the seat. Others comprehend by it those eruptions, that are accompanied with fever, *Febres exanthemat'icæ*: including, under the head of the *Major Exanthemata*, those which attack a person but once in his life, and which are communicated by specific contagion; and, under the *minor exanthemata*, those, which are not marked by these characteristics. Small pox, measles, cow pox, &c., belong to the major:—Chicken pox, herpes, lichen, &c., to the minor.

EXANTHEMAT'ICA. Same etymon. *Eruptive fevers*. Cutaneous eruptions, essentially accompanied with fever;—the third order in the class *Hæmatica* of Good.

EXARAG'MA, from *εξαράσσω*, 'I tear away,' 'I break.' Collision, violent fracture or friction.

EXARCHIA'TER. Chief of the archiatri; or chief of the chief of physicians, a title like that of *Comes Archiatro'rum*, given to the chief physician of an emperor or king.

EXAR'MA, from *εξαισγομαι*, 'I am raised.' A prominent tumour.

EXAR'SIO. A burning heat.

EXCARNA'TION, *Excarna'tio*, from *ex*, and *caro*, 'flesh.' A mode of making anatomical preparations, which consists in separating injected vessels from the parts in which they are situate. This is done by means of corrosion by an acid or by putrefaction.

EXCIP'IENT, *Excip'iens*, from *excip'ere*, 'to receive.' (F) *Intermède*. A substance, which, in a medicinal prescription, gives form and consistence to it and serves as a *vehicle* or *medium* for the exhibition of the other ingredients.

EXCIS'ION, *Excis'io*, from *excid'ere*, 'to

cut off;' *εκτομή*, *Ectomē*. A surgical operation, by which parts of a small size are removed with a cutting instrument.

EXCITABIL'ITY, *Excitabil'itas*. The faculty, possessed by living beings, of being sensible to the action of excitants. The doctrine of excitability forms an important part of the Brunonian system.

EXCITA'TION or **EXCITE'MENT**. Same etymon., from *excita're*, 'to excite,' *Excita'tio*. Act of exciting or state of an organ or organs excited. Excitement is, sometimes, used synonymously with arterial action. The effect of the exciting powers acting on the excitability, according to Brown, constitutes *excitement*. Cullen used the term to express the restoration of the energy and action of the brain, which had been interrupted by sleep or some debilitating cause,—a state opposite to that of *collapse*.

EXCITO-MOTORY. An epithet applied by Dr. Marshall Hall to those nerves which are true spinal, and are concerned in certain reflex functions. See *Nerves*.

EXCORIA'TION, *Excoria'tio*, *Excoriatu'ra*, *Am'ychē*, from *ex*, and *corium*, 'skin.' (F) *Écorchure*. A slight wound, which removes only the skin.

EXCREA'TION, *Excrea'tio*, *Rasca'tio*, from *screare*, 'to spit.' Act of spitting. (F) *Crachement*. See *Exspuitio*.

EX'CREMENT, *Excremen'tum*, *Excre'tum*, *Excre'tio*, *Peritto'ma*, *Diachore'ma*, *Aph'odos*, *Apoch'o'reon*, *Apoc'risis*, *Ar'das*, *Ar'dalos*, from *excer'nere*, 'to separate,' 'cleanse.' Every thing, which is evacuated from the body of an animal as superfluous, by the natural emunctories: such as the fæcal matters, the urine, perspiration, nasal mucus, &c. Generally, however, the term is restricted to the fæcal evacuations;—the *Purgamenta*, *Hedra*, *Sedes*, *Fæces* (q. v.), *Stercus*, *Cacçē*, *Spat'ile* (especially when liquid), *Dejectio alvina*, *Onera alvi*, *Sordes ventris*, *Catarrhexis*, *Copros*, *Scor*.

EXCREMENTIT'IAL, *Excrementi'tious*, *Excrementi'tius*. (F) *Excrémenteux*, *Excrémentitiel*. That, which is similar to excrement, and forms part of it. *Excrementi'tial humours* or *parts* are those destined to be evacuated, as incapable of administering to the nutrition of the body.

EXCREMEN'TO-RECREMENTI'TI-AL, *Excremento-recrementitious*. Animal fluids, intended to be partly absorbed and partly rejected.

EXCRES'CENCE, *Excrescen'tia*, *Ecphy'ma*, *Phymato'sis*, *Hypersarco'sis*, *Sarcophyia*, *Caro excrescens*, from *excres'cere*, 'to grow outwards.' (F) *Excroissance*. A tumour, which forms at the surface of organs, and especially on the skin, mucous membranes, or ulcerated surfaces. Excrescences differ in size, shape, cause, &c., and each requires its own treatment. *Warts*, *condylomata*, *polypi*, *hemorrhoids* belong to this head.

EXCRETION, *Excre'tio*, *Evacua'tio*, *Ejec'tio*, *Expul'sio*, *Eges'tio*, *Diachore'sis*, from *excernere*, 'to separate.' The separation or throwing off of those matters from the body of an animal, which are supposed to be useless, as the urine, perspiration, and fæces.

EXCRETORY, *Excreto'rius*; same etymon. An *Excretory vessel* or *duct* is one, which transmits the fluid secreted by a gland, either externally or into the reservoirs in which it has to be deposited. The existence of an excretory duct is a distinctive character of the glands properly so called.

EXCRETORY ORGAN, means any one charged with the office of excreting: thus the skin is said to be an excretory organ, because through it the perspiration takes place.

EXCU'TIA VENTRIC'ULI, *Stomach Brush*. An instrument, composed of iron or brass wire, at one of the extremities of which is a pencil of bristles. Some ancient authors proposed this to extract foreign bodies from the œsophagus, as well as to cleanse the stomach of viscid and tenacious matters adhering to it.

EXELCYS'MOS, *ἐξελκυσμος*, from *ἐξ*, 'from,' and *ἐλκυω*, 'I draw.' Extraction. Also the act of breaking out into ulcers.

EXENTERIS'MUS, *Exenteri'sis*, *ἐξεντερισμος*, *ἐξεντεριστις*; from *ἐξ*, 'out of,' and *εντερον*, 'an intestine.' The operation of disemboweling or eviscerating.

EXERAM'A, from *ἐξέρω*, 'I throw out.' Any thing cast out. Vomiting; or the matter vomited.—Hippocr.

EXERCISE, *Exercita'tio*, *Exerci'tium*, *Asce'sis*, *Gymnasion*, from *exerce're*, 'to work.' Every motion of the body, arising from the contraction of muscles subjected to the will. Also, the action of any organ whatever. Exercise may be *active* or *passive*. The passive are referred to, under the head of Gestation. The chief active exercises are:—walking, running, dancing, hunting, fencing, playing at ball, cricket, racket, quoits, swimming, declamation, singing, &c.

Exercise is an important prophylactic, particularly in those disposed to be plethoric. It improves the digestion; augments the secretions; and, when used in moderation, gives strength to the body; but when carried to excess, produces debility and disease.

EXÆ'RESIS, from *ἐξ*, 'out of,' and *αἶρω*, 'I take away.' A surgical operation, which consists in drawing, extracting, or removing, from the human body, every thing that is useless, noxious, or extraneous. It is a generic term, which includes extraction, evulsion, evacuation, excision, ablation, amputation, &c.

EXERRHO'SIS, from *ἐξ*, 'out of,' and *ῥέω*, 'I flow.' The discharge, which takes place by insensible perspiration.

EXFOLIA'TION, *Exfolia'tio*, *Desquama'tio*, *Eclep'isis*, from *ex* and *fo'lium*, 'a leaf.' By this is meant the separation of the dead

portions of a bone, tendon, aponeurosis, or cartilage, under the form of lamellæ or small scales. Exfoliation is accomplished by the instinctive action of the parts, and its object is to detach the dead portion from those subjacent, and which are still alive. For this purpose, the latter throw out fleshy granulations; and a more or less abundant suppuration occurs, which tends to separate the exfoliated part,—now become an extraneous body. The ancients distinguished exfoliation into *sensible* and *insensible*, according as the dead portions of bone were detached in fragments of greater or less size, or in very thin pieces, and in an almost insensible manner. When the dead part embraces all or almost all the substance of a bone, it takes the name *Sequestrum*.

EXFO'LIATIVE, *Exfoliati'vus*, *Desquamato'rius*. That which takes away by leaves or scales. The term has been applied to certain medicines, which were regarded as proper to hasten exfoliation, such as alcohol, oil of turpentine, tincture of myrrh, &c.

The **EXFO'LIATIVE TREPAN**, *Eclep'isitrep'anum*, is an ancient raspatory or instrument for scraping exfoliating portions of bone.

EXHA'LANT, *Exha'lent*, *Exha'lans*, from *exhala're*, 'to exhale,' 'throw out.'

The **EXHALANT VESSELS** are very minute, and arise from the arterial capillary system. They are situate in every tissue of the body, and on the surfaces of the mucous and serous membranes and skin; on which each pours its particular fluid. Bichat distinguished three sets. 1. The *external*, terminating on the mucous and dermoid system, where they pour the matter of perspiration. 2. The *internal*, comprising those of the cellular and medullary tissues, and of synovial surfaces: and, 3. The *nutritive exhalants*, which vary in each organ where they are found; and preside over the phenomena of composition and increase of every part of the body. The exhalants are the antagonists of the absorbents. They are imaginary vessels, inasmuch as they cannot be detected.

EXHALA'TION, *Exhala'tio*; same etymon. *Anathymiasis*, (F) *Exhalaison*. A function, by virtue of which certain fluids, obtained from the blood, are spread, in the form of dew, in the areolæ of the different textures, or at the surface of membranes; either for the sake of being thrown out of the body, or to serve for certain purposes. The sweat is a *liquid, excrementitious exhalation*; the serous fluid of the pleura a *liquid, recrementitious exhalation*.

Exhalation is, also, applied to that which exhales from any body whatever, organic or inorganic, dead or living.

EXHAUS'TION, *Exar'ysis*, *Vires exhaus'tæ*, from *exhauri're*, 'to draw out.' (F) *Epuisement*. Loss of strength, occasioned by excessive evacuations, great fatigue or privation of food, or by disease.

EXHUMA'TION, *Exhuma'tio*, from *ex* and *humus*, 'the ground.' The disinterment of a corpse. The circumstances, which render this necessary, are:—1. Judicial investigations, relative to the body of the person inhumed. 2. The removal of a body from one cemetery to another: and, 3. The evacuation of cemeteries or sepulchral vaults. The operation is attended with much unpleasant smell and annoyance, and requires the use of disinfecting agents, of which the most powerful is the chloride of lime. See Disinfection. The putrid effluvia from animal substances are not, however, found to excite endemic disease.

EXISCHIOS, from *ἐξ*, 'out of,' and *ἰσχίον*, 'the ischium.' A luxation of the os femoris. All those with large nates, and prominent hips were called *Exischioi* and *Exeche-gluti*.

EXITU'RA. According to some, any abscess, which discharges. Paracelsus calls thus every kind of putrid excrement.

EXOCHAS, *Exochē*, from *ἐξω*, 'without,' and *ἔχω*, 'I have.' A soft tumour without the anus: outward piles.

EXOCYS'TE, *Exocys'tis*, from *ἐξ*, 'out of,' and *κύστις*, 'the bladder.' A prolapsus of the bladder into the urethra. Also called *Prolap'sus vesicæ*, *Ædopto'sis vesicæ*. (F) *Renversement de la vessie*.

EXOCYS'TE NOELIA'NA; when the inner membrane of the bladder is protruded. So called from M. Noel, who first accurately described it.

EXOCYS'TE SOLINGENIA'NA; when the neck of the bladder is protruded. Called after M. Solingen, who first accurately described it.

EXOINE or **EXOENE**, from *ex*, 'out of,' and *ἰδο'neus*, 'fit,' or rather from *exonera're*, 'to exonerate.' In France, a certificate of excuse, exemption, or dispensation, given to those summoned to appear before a court of justice, and who are unable to do so.

EXOM'PHALUS, *Exumbilica'tio*, *Exom'phalocē'lē*, *Om'phalocē'lē*, *Hernia umbilica'lis*, *Hernie ombilicale*, (F) *H. du nombril*, *Umbilical Hernia*, from *ἐξ*, 'out of,' and *ομφαλός*, 'the navel.' Hernia, occurring at the navel. This affection happens more frequently in infants, taking place by the umbilical ring itself. In adults, it occurs more commonly in females than in males; and, when it does so, the sac passes in the vicinity of the umbilicus. The organs, found in this kind of hernia, are, particularly,—the epiploon, the jejunum, the arch of the colon, and sometimes the stomach. The tumour is, in general, round, and presents all the characters of hernia. It is, commonly, readily reducible, and not subject to strangulation. It must be reduced, and retained by an elastic bandage, made in the form of a girdle, and furnished with a pad at its middle part. When strangulated, the stricture may

be divided upwards and towards the left side.

EXONCO'MA, from *ἐξ* and *ὄγκος*, 'a tumour.' A large, prominent tumour. Used, by Galen, for protuberance of the vertebræ after luxation.

EXOPHTHAL'MIA, *Ophthalmopto'sis*, *Pto'sis Bulbi Oculi*, *Exorbitis'mus*, *Ophthalmocē'lē*, *Ophthalmopto'sis*, *Oculi totius prominen'tia*, from *ἐξ*, 'out of,' and *ὀφθαλμός*, 'eye.' (F) *Providence de l'œil*. A protrusion of the eye from its orbit, occasioned by an abscess or tumour in the cellular texture of the orbit, by exostosis of the parietes of the orbit, &c.

In Exophthalmia, the eye is pressed forwards; the eyelids are raised and separated, so that they can no longer cover the eye, and defend it from the action of extraneous bodies: it becomes inflamed, and the sight is disturbed or destroyed. The treatment of course depends upon the cause.

EXOSMO'SE, *Exosmosis*, *Transudation*, from *ἐξ*, 'out of,' and *ωσμός*, 'impulse.' The opposite to Endosmose, or the act by which substances transude from within to without an animal or other membrane.

EXOSTO'SIS, *Hyperosto'sis*, *Emphy'ma Exosto'sis os'tea*, *Exossa'tio*, *Ossis eminen'tia*, from *ἐξ*, 'out of,' and *ὀστέον*, 'a bone.' An osseous tumour, which forms at the surface of bones, or in their cavities. Various kinds have been enumerated. The *Ivory Exosto'sis*, *Exostose eburnée*;—that which has the appearance and consistence of ivory. *Laminar Exosto'sis*, *E. Laminée*;—that which is formed of laminæ in superposition or of distinct filaments. The *Spongy Exosto'sis* is that, whose structure is analogous to the spongy tissue of bones.

Exostoses are sometimes distinguished into the *true*, which seem to be a projection of the osseous substance, and which have the same organization and hardness as that substance; and the *false*, or osteo-sarcoma. Exostosis may depend on syphilis, scrophula, rickets, gout, &c. In such cases, it is important to get rid of the primary disease.

Those exostoses, which occur within bones, have, by some, been called *enostoses*.

EXOT'IC, *Exo'ticus*, from *ἐξω*, 'without.' That, which comes from abroad. Plants or drugs, which are procured from abroad, are so called. It is opposed to indigenous.

EXOTICADE'NIA. Aversion for exotic drugs.

EXOTICOMA'NIA. The opposite to the preceding. Fondness for exotic remedies.

EXPAN'SION, *Expan'sio*, from *expan'dere*, 'to spread out.' A prolongation, or spreading out, presented by certain organs. Thus, we say an *aponeurotic expansion*, &c.

EXPECTANT, *Expec'tans*, from *expec-ta're*, 'to wait.' That which waits:—as *Expectant Medicine*,—*La Médecine expectante*. See Expectation.

EXPECTA'TION, *Expecta'tio*; same ety-

mon. The word *expectation* has, in Medicine, been applied to that method, which consists in observing the progress of diseases, and removing deranging influences, without prescribing active medicines, unless such shall be imperiously required. It consists, in fact, in leaving the disease, almost wholly, to the efforts of nature; and has been termed the *art of curing diseases by expectation or waiting*,—*Ars sanandi cum expectatone*.

EXPECTORANT, *Expectorans*, *Anacatharticus*, from *ex*, 'out of,' and *pectus*, 'the breast.' A medicine, capable of facilitating or provoking expectoration. There is probably no such thing as a *direct* expectorant. They all act through the system, or by impressions made on parts at a distance, which through the medium of general, continuous, or contiguous sympathy, excite the secretory vessels of the air-passages into action.

The following are the chief reputed expectorants:

Ammoniacum,	Ipecacuanha,
Assafœtida,	Myroxylon,
Galbanum,	Myrrha,
Inhalations,	Scilla,
(of Iodine, Stramonium, Tar, Burning Wool, Tobacco, &c.),	Senega,
	Tolutanum.

EXPECTORATION, *Expectoratio*, *Bexhu'mida*, *Anap'tysis*, *Anacathar'sis*, *Anabexis*, same etymon. The act of expelling from the chest, matters or secretions there collected or existing. It is, likewise, used for the expectorated matter.

EXPERIENCE, *Experientia*, *Peira*, *Empe'ria*, from *experi'ri*, 'to practise.' A knowledge of things, acquired by practice. In Medicine, this knowledge can be obtained both by the practitioner's own experience, and by that obtained from tradition and from books. To profit by experience requires a mind capable of appreciating the proper relations between cause and effect; and hence it happens, that *false experience*, *Experientia fallax*, is extremely common; and that a man had better, in many instances, trust to that which he has learned from others, than to his own fallacious observation.

The union of accurate observation by the physician with that handed down by medical writers constitutes perfect experience, so far as it is attainable in any individual case.

EXPERIMENT, *Experimentum*; same etymon. (F) *Expérience*. A trial, made on the bodies of men or animals, for the purpose of detecting the effect of a remedy, or of becoming better acquainted with their structure, functions, or peculiarities. In a more general sense, it means any trial, instituted with the intent of becoming better acquainted with any thing.

By experiments on living animals, we have obtained much valuable information in the

various departments of Medicine; but particularly in Physiology and Toxicology.

EXPERT (F), *Expertus*. Skillful, or of good experience. A physician, charged with the duty of making a report upon any case of legal medicine.

EXPIRATION, *Ec'pnoe*, *Ecpneumato'sis*, *Ecpneu'sis*, from *exspira're*, 'to breathe out.' The act of expelling, from the chest, the air received in during inspiration.

EXPIRATORY, *Expiratio'ni inser'viens*. The expiratory muscles are all those, which contribute to diminish the cavity of the chest, for the purpose of expelling the air contained in the lungs, or of producing expiration. These muscles are, chiefly, the intercostals, triangularis sterni, quadratus lumborum, serratus posticus inferior, the oblique and recti muscles of the abdomen, the sacro-lumbalis, &c.

EXPLORATION, *Explora'tio*, from *explora're*, 'to search into.' The act of observing and attentively examining or investigating every thing connected with a case of disease. The word is chiefly used, in this sense, by the French practitioners.

EXPRESSION, *Expres'sio*, *Ecpiesmos*, *Ecthlipsis*, from *ex*, 'out of,' and *prem'ere*, 'to press.' The act of compressing a substance, for the purpose of separating from it the fluids, which it contains. Also, the manner in which impressions, made upon us, are depicted; especially in the traits of the countenance.

SWEAT OF EXPRESSION, or *Sueur d'expression*, is a term given to the passive perspiration, observable in very debilitated individuals.

EXPULSIVE, *Expel'lens*, *Expulso'rius*, from *expel'lere*, 'to drive away.' An *expulsive bandage*, (F) *Bandage expulsif*, is one constructed with the view of compressing a part, from which we are desirous of expelling pus, serum, &c.

Certain medicines were, formerly, called *expulsives*, which were believed to have the power of driving the humours towards the skin;—as diaphoretics and sudorifics.

EXSPUITATION, *Expui'tio*, *Spu'i'tio*, *Sputa'tio*, *Pty'sma*, *Anachremp'sis*, *Apo-chremp'sis*, *Pty'sis*, from *ex*, 'out of,' and *spuo*, 'I spit.' Rejection of the matters accumulated in the pharynx and larynx; spitting.

EXSTROPHIA, from *εξ*, 'out of,' and *στροφη*, 'turning.' *Extrover'sio*, *Extrover'sion*. A term, used by M. Chaussier for certain displacements of organs, and especially of the urinary bladder.

EXSTROPHIA OF THE BLADDER, (F) *Renversement de Vessie*, is a faulty conformation, in which the organ opens above the pubes; so that in the hypogastric region there is a red, mucous surface, formed by the inner coat of the bladder; and on which two prominences are distinguishable, corresponding to the openings of the ureters.

EXSUCTIO, *Suctio*, *Ecmyze'sis*, from *ex*, 'out of,' and *succus*, 'a juice.' The action of sucking.

EXTEMPORANEOUS, *Extempora'neus*, *Extempora'lis*. Those prescriptions are called 'extemporaneous,' which are made on the spot, and composed according to the prescription of the physician.

EXTENSIBILITY, *Extensibilitas*. A property, possessed by certain bodies, of being capable of extension or elongation.

EXTENSION, *Extensio*, *Tasis*, *Ec'tasis*, *Catat'asis*, *Anat'asis*, from *exten'dere*, 'to stretch out.' It is, in Surgery, an operation, by which we draw strongly, either by the hands or by straps, a fractured or luxated limb, to restore it to its natural position. It is the opposite of *Counter-extension*.

EXTENSOR. Same etymon. (F) *Extenseur*. A muscle, whose office it is to extend certain parts.

EXTENSOR BREVIS DIGITO'RUM PEDIS, *Ped'icus*, *Calcaneo-phalangien commun* of DUMAS; *Muscle pédieux*, *Muscle petit extenseur des orteils*, *Calcaneo-sus-phalangettien commun*—(Ch.), *Carré du pied*; *Short Extensor of the Toes*. A muscle, situate on the dorsal region of the foot. It arises from the external surface of the calcaneum, and at the anterior edge of a ligament, which unites that bone to the astragalus. Anteriorly, each of its divisions terminates by a small tendon, which is fixed, successively, at the superior part of the posterior extremity of the first phalanx of the great toe, and to the second and last phalanges of the three next toes. Its use is to extend the four first toes, and to direct them a little outwards.

EXTENSOR DIGITORUM COMMUNIS, *Extensor digitorum communis manus, cum extenso're proprio auricula'ris*, *Digitorum tensor*; *Epi-condylo-sus-phalangettien commun*—(Ch.); *Common Extensor of the Fingers*. (F) *Extenseur commun des Doigts*. A long, flattened muscle; simple above, and divided into four portions inferiorly. It is situate at the posterior part of the forearm; arises from the external tuberosity of the humerus; from the aponeurosis of the forearm, and from the aponeurotic septa situate between it and the neighbouring muscles, and is inserted at the posterior surface of the second and third phalanges of the four last fingers. The muscle extends the phalanges of the four last fingers upon each other, and upon the metacarpal bone. It can, also, extend the hand on the forearm.

EXTENSOR PROPRIUS MIN'IMI DIG'ITI, *Epi-condylo-sus-phalangettien du petit doigt*,—(Ch.), (F) *Extenseur propre du petit doigt*. Situate on the inside of the *Extensor communis digitorum*. It arises from the external condyle of the os humeri and the aponeurotic septa seated between it, the extensor communis digitorum, and the extensor carpi ulnaris; and is inserted into the two last

phalanges of the little finger. Its use is to extend the little finger, and even the hand upon the forearm.

EXTENSOR POL'LICIS BREVIS, *Extensor minor pol'licis manus*, *E. primi interno'dii*, *E. pol'licis primus*, *E. secun'di interno'dii* (DOUGLAS), *E. secun'di interno'dii ossis pol'licis*; *Cubito-sus-phalangien du pouce*, *Cubito-sus-phalangien*,—(Ch.), (F) *Court extenseur du pouce*. Seated at the posterior and inferior part of the forearm. It is thin, long, and broader at its middle than at the extremities. It arises from the posterior surface of the ulna and the interosseous ligament, and is inserted behind the superior extremity of the first phalanx of the thumb. It extends the thumb, and aids in supination.

EXTENSOR LONGUS POL'LICIS; *Extensor major pol'licis manus*, *Extensor secundi interno'dii*, *Extensor pol'licis secun'dus*, *Extensor ter'tii interno'dii* (DOUGLAS), *Extensor interno'dii ossis pol'licis*, *Cubito-sus-phalangettien du pouce*,—(Ch.), (F) *Muscle long extenseur du pouce*. This muscle is long, flat, and fusiform; and is seated at the posterior part of the forearm. It arises from the posterior surface of the ulna and the interosseous ligament, and is inserted at the posterior part of the superior extremity of the first phalanx of the thumb. It extends the last phalanx of the thumb upon the first.

EXTENSOR PROPRIUS IN'DICIS; *E. proprius primi dig'iti manus*, *E. In'dicis*, *Indica'tor*, *Extensor secun'di interno'dii in'dicis proprius*, *Cubito-sus-phalangettien de l'Index*,—(Ch.), (F) *Extenseur propre de l'Index*. This muscle is long and thin; broader in the middle than at the extremities; and is situate at the posterior part of the forearm. It arises from the posterior surface of the ulna, and is inserted at the posterior part of the upper extremity of the second and third phalanx of the index finger. It extends the three phalanges of the index finger; and has, besides, the same uses as the other extensors of the fingers.

EXTENSOR PROPRIUS POL'LICIS PEDIS; *E. proprius Hall'ucis*, *E. longus* (DOUGLAS), *E. Pollicis longus*, *Peroneo-sus-phalangien du pouce*, *Peroneo-sus-phalangettien du pouce*,—(Ch.) This muscle is situate at the anterior part of the leg. It is fleshy, broad, flat, above; small and tendinous below. It arises from the anterior part of the middle third of the fibula; and is inserted into the posterior part of the superior extremity of the last phalanx of the great toe. It extends the last phalanx of the great toe upon the first; and the first upon the first metacarpal bone.

EXTENSOR COMMUNIS DIGITORUM PEDIS, *E. Longus Digitorum Pedis*, *E. Digitorum longus*, *Peroneo-tibi-sus-phalangettien commun*, *Cnemodactylæ'us*, *Peroneo-sus-phalangettien commun*. (F) *Extenseur commun des Orteils*. This muscle is, also, situate at the anterior part of the leg. It is long, thin, flat-

tened, simple, and fleshy above, and divided into four tendons below. It arises from the outer tuberosity of the tibia and the anterior surface of the fibula, and is inserted into the superior part of the posterior extremity of the second and third phalanges of the four last toes. It extends the three phalanges of these toes.

EXTENSOR TARSII MAGNUS; *E. Tarsi suralis*. A name given, by some Anatomists, to the gastrocnemius and soleus combined.

EXTERNAL DISEASES, *Extrin'sic Diseases, Morbi extrin'seci, Surgical Diseases, (F) Maladies externes*. Those diseases, which occupy the surface of the body, and which form the object of Surgical Pathology, requiring, generally, external means or surgical operations.

EXTINCTIO VOCIS, *Extinction de voix (F.)* The French use this term for cases in which the voice is not wholly suppressed, but produces only feeble sounds. *Incomplete aphonia*.

EXTINCTION OF MERCURY, *Extinctio Mercurii vel Hydrargyri*. Trituration of mercury with lard or other substance, until the metallic globules disappear. The mercury is then so divided, that it forms a black powder, generally considered to be a protoxide of mercury, but, Orfila says, erroneously.

EXTIRPATION, *Extirpatio, Ablatio, Aphæresis*, from *extirpare*, 'to root out.' The complete removal or destruction of any part, either by cutting instruments or the action of caustics. Thus, we speak of the extirpation of a cancer, polypus, encysted tumour, &c.

EXTRACT, *Extractum*, from *extrahere*, 'to draw out,' 'separate;' *Opos, ορος, Chylisma, Ecchylo'ma, (F) Extrait*. An extract is prepared by evaporating vegetable solutions, till a tenacious mass is obtained. When prepared from an infusion or decoction, it is called a *watery*; from a tincture, a *spirituous extract*. Both kinds contain all the principles of the vegetable, soluble in the menstrua with which they are prepared; but the volatile parts are dissipated and some of the fixed parts are decomposed; the proper extractive is oxygenized, and the virtues of the vegetable substance consequently altered or destroyed. Extracts are *hard* or *soft*; the consistence of the soft being such as to retain the pilular form without the addition of a powder. A patent was taken out some years ago by a Mr. Barry of London for preparing them in vacuo, and as the temperature is much lower than in the ordinary method, the virtues of the plant are less altered, and the extracts are generally green.

Extracts have, likewise, received different names according to their predominant principle. The *Gummy* or *mucous*, or *mucilaginous* are those, which are particularly composed of gum or mucilage. Gum tragacanth may be considered a pure gummy extract. *Gelati-*

nous extracts are those, composed especially of gelatine. *Resinous extracts*, those of a resinous character,—*extracto-resinous*, those composed of extractive or colouring matter and resin. *Gum-resinous*, those containing gum and resin; and *sapona'ceous* or *sapona'ceous saline*, those containing a notable quantity of saline substances and a resinous matter, so combined with mucous and other soluble substances, that it cannot be separated.

EXTRACTUM CACUMINUM ABSINTHII, *Extract of wormwood, (A decoction, defecated and evaporated.)* The flavour is dissipated along with the essential oil. It is a bitter tonic. Dose, gr. x to ʒj in pill.

EXTRACTUM ACONITI, *Extract of aconite. Succus spissatus aconiti napelli (the inspissated juice without defecation.)* It is esteemed to be narcotic and diuretic; and has been given in the cases referred to under aconitum. Dose, gr. j, gradually increasing it.

EXTRACTUM AL'OEES PURIFICATUM, *Purified extract of aloes. (The gummy part extracted by boiling water, defecated and inspissated.)* Dose, gr. v to gr. xv.

EXTRACTUM ANTHEMIDIS, *E. anthemidis nobilis, E. chamæmeli, E. florum chamæmeli, Extract of chamomile.* The volatile oil is dissipated in this preparation. It is a pure, grateful bitter, and is tonic and stomachic. Dose, gr. x to gr. xx, in pills.

EXTRACTUM BELLADON'NÆ, *Succus spissatus atropæ belladon'næ, Extract of Belladonna, (an expressed juice, inspissated.)* Properties, same as those of the plant. Dose, gr. ¼ gradually increased to gr. v. Dilates the pupil, when applied to the eye.

EXTRACTUM CATHOL'ICUM, *Extrait Catholique*. This epithet is given to pills composed of aloes, black hellebore, and colocynth, resin of jalap, and scammony.

EXTRACTUM CASCARIL'LÆ RESINOSUM, *Resinous extract of cascarrilla (Cort. cascarrilla in pulv. crass. ʒj, Sp. vini rect. ʒiv. Digest for four days, then decant and strain; boil the residuum in 10 pints of water to 2; filter and evaporate the decoction and distil the tincture in a retort, till both are thickened; then mix and evaporate to a pilular consistence.)* Dose, gr. x to gr. xx, in pills.

EXTRACTUM CINCHO'NÆ, *Extract of Cinchona, E. Corticis Peruvia'ni, E. Cincho'næ Molle, E. of Bark. (A decoction evaporated.)* The active principles are similar to those of the bark in substance; but it is not so effectual; owing to the chymical change induced in the drug, during the boiling. When reduced, by drying, to a state fit for being powdered, it is called the *Hard Extract of Bark, Extractum Corticis Peruvia'ni durum, E. Cincho'næ durum*. Dose, gr. x to ʒss.

EXTRACTUM CINCHONÆ RESINOSUM, *E. Cinchonæ lancifolia, E. Cinchonæ rubræ resinosum, Resinous Extract of Bark, E. Cincho'næ Resinæ*. The aqueo-spirituous extract

contains both the extractive and resin of the bark. Dose, gr. x to xxx.

EXTRACTUM COLOCYN'THIDIS, *Extract of Colocynth*. A cathartic, in the dose of from gr. v to ʒss.

EXTRACTUM COLOCYN'THIDIS COMPOSITUM, *Extractum Catharticum, E. Catholicum, E. Quercetani. Compound Extract of Colocynth (Colocynth. pulp. concis. ʒvj, Aloes spicat. ext. contrit. ʒiss, Scammon. Gum-Resin cont. ʒss. Cardamom. sem. contrit. ʒj, Sp. Vin. ten. ℥j. Macerate the pulp in the spirit, at a gentle heat, for four days; strain; add the aloes and scammony; then distil off the spirit and mix in the cardamom seeds. Lond. Ph.)* It is a powerful cathartic and is used in obstinate visceral obstructions, &c. Dose, gr. vj to ʒss.

EXTRACTUM CONII, *E. Cicuta, Succus cicuta spissatus, Extract of Hemlock, Succus spissatus conii maculati. (Expressed juice, inspissated, without defecation.)* Employed in the same cases as the Conium. Dose, gr. iij to ʒj.

EXTRACTUM ELATERII, *Elate'rium, Extract of Elaterium. (The fecula of the expressed juice.)* It is violently cathartic, hydragogue and sometimes emetic. Dose, gr. ss. every hour till it operates.

EXTRACTUM CACUMINUM GENIS'TÆ, *Extract of Broom Tops*. Diuretic and stomachic. Dose, ʒss to ʒj.

EXTRACTUM GENTIANÆ, *Ext. Gentianæ luteæ, Ext. Radicis Gentianæ, Extract of Gentian. (The evaporated decoction.)* Properties like the Gentian. Dose, gr. x to ʒss.

EXTRACTUM GLYCYRRHIZÆ; *Extract of Liquorice. (The evaporated decoction.)* It is demulcent. Dose, *ad libitum*.

Refined Liquorice, which is sold in the form of cylinders, is made by gently evaporating a solution of the pure extract of liquorice with half its weight of Gum Arabic, rolling the mass and cutting it into lengths, and then polishing, by rolling them together in a box.

EXTRACTUM HÆMATOXYLI, *E. Hæmatoxyli Campechia'ni, E. Scobis Hæmatoxyli, Extract of Logwood. (The evaporated decoction.)* It is astringent. Dose, gr. x to ʒj.

EXTRACTUM RADICIS HELLEBORI NIGRI, *Ext. of Black Hellebore root, E. Hellebori nigri. (The evaporated decoction.)* In large doses, this is cathartic; in smaller, diuretic, resolvent (?) and emmenagogue (?). Dose, as a cathartic, gr. x to ʒj; as an emmenagogue, &c. gr. iij to gr. x.

EXTRACTUM HUMULI, *Extract of hops, (the evaporated decoction.)* It is tonic, anodyne (?), diuretic (?). Dose, gr. v to ʒj.

EXTRACTUM HYOSCYAMI, *Extract of Henbane, Succus spissatus Hyoscyami nigri, Succ. Spiss. Hyoscyami. (The expressed juice, inspissated without defecation.)* Its virtues are narcotic. Dose, gr. v to ʒj.

EXTRACTUM JALAPÆ, *E. Convolvuli Jala-*

pæ, E. Jala'pii, Extract of Jalap, E. Jala'pi. (A spirituous tincture, distilled; and an aqueous decoction evaporated; the remains being mixed together: kept both soft and hard.) It is cathartic and hydragogue. Dose, gr. x to ʒj.

EXTRACTUM JALAPÆ RESINOSUM, *Resinous Extract of Jalap*. This is cathartic.

EXTRACTUM LACTUÆ, *Extract of Lettuce, Succus spissatus Lactucæ sati'væ. (Leaves of fresh lettuce ℥j; beat them in a stone mortar, sprinkling them with water; then express the juice and evaporate, without allowing it to subside, until it acquires a proper degree of consistence.)* It is said to be narcotic and diaphoretic. Dose, gr. iij to gr. x.

An extract is, sometimes, made from the juice of the *wild lettuce, Lactuca viro'sa*, which is regarded as diuretic.

EXTRACTUM OPII, *E. Opii aquosum, E. Thebaicum, Extract of Opium, E. Opii gummosum, Lau'danum opiatum seu simplex, Opium colatum seu depuratum. (A watery solution defecated and evaporated.)* Dose, gr. ss. to gr. v.

EXTRACTUM PAPAVERIS, *E. Papaveris somniferi, E. Papaveris albi, Extract of white poppy. (The decoction evaporated.)* It possesses nearly the same virtues as opium, but is weaker. Dose, gr. ij to ʒj.

EXTRACTUM PANCHYMAGO'GUM, A drastic medicine, composed of *colocynth, bruised with its seeds; senna bruised; black hellebore root, Agaric, Scammony in powder, Extract of Aloes and powder of Diarrhodon.*

EXTRACTUM CORTICIS QUERCUS, *Extract of oak bark. (The decoction, evaporated.)* It is astringent and tonic.

EXTRACTUM RHEI, *Extract of Rhubarb*. Uses, like those of the powdered root. Dose, gr. x to ʒss.

EXTRACTUM RU'DII, *Extract of Rudius, (F) Extrait de Rudius. Pills, made of Colocynth, agaric, scammony, Roots of black hellebore and jalap, socotrine aloes, cinnamon, mace, cloves, and alcohol.*

EXTRACTUM RUTÆ GRAVEOLENTIS, *E. foliorum Rutæ, Extract of Rue, Extractum Rutæ. (A decoction evaporated.)* Tonic, stomachic. The volatile oil being dissipated in the boiling; this is not a good preparation. Dose, gr. x to ʒj.

EXTRACTUM FOLIORUM SABI'NÆ, *Extract of Savine. (A decoction evaporated.)* Tonic. The same remarks may be made on this preparation as on the last. Dose, gr. x to ʒss.

EXTRACTUM SARSAPARILLÆ, *Extract of Sarsaparilla. (A strained decoction, evaporated.)* Virtues the same as those of the powdered root. Dose, gr. x to ʒj.

EXTRACTUM STRAMONII, *Extract of Stramonium. (Seeds of stramonium, ℥j, boiling water, one gallon. Macerate for four hours in a vessel slightly covered, near the fire;*

then take them out and bruise them in a stone mortar and return them again to the fluid when they are bruised. Boil the liquor down to 4 pints, and strain while it is hot. Finally, evaporate to a proper thickness. Ph. L.) Used as a narcotic in asthma and other spasmodic affections. Dose, gr. ij to gr. x.

EXTRACTUM TARAX'ACI, *Ext. Herbæ et Radicis Tarax'aci, Extract of Dandelion.* (A strained decoction evaporated.) It has been considered deobstruent, laxative, and diuretic. Dose, gr. x to 3j.

EXTRACTUM VALERIA'NÆ, *Extract of Valerian.* (An expressed decoction, evaporated.) The virtues of the valerian being dependent upon its essential oil, this is an objectionable preparation. Dose, gr. x to 3j.

There are some other extracts in the American and other Pharmacopœias, but they are prepared in the ordinary mode and possess merely the virtues of the plants. They are, besides, generally of an unimportant character.

EXTRACTION, *Extrac'tio, Exæ'resis, Exog'o'ge, Exolcē, Exelcys'mus, Enchylo'sis*, from *extra'here*, 'to draw out.' The act of removing an extraneous substance from any part of the body. Thus, a splinter is said to be extracted. It is, also, applied to the removal of certain parts. The cataract is said to be *extracted*: a tooth is *extracted*, when carious, &c.

EXTRAC'TIVE. Same etymon. A peculiar, immediate principle, which has been admitted in extracts. Thus, *bitter extractive* is the immediate principle of bitter vegetables, &c.

EXTRA'NEOUS BODY, *Corpus extra-neum, C. exter'num, C. alie'num*, (F) *Corps étranger*. Any solid, liquid, or gaseous substance, inanimate or animate, proceeding from without or formed in the body; and which constitutes no part of the body, but occupies, in the substance of the textures or some of the cavities, a place foreign to it.

Extraneous bodies may be grouped as in the following Table.

INANIMATE BODIES.	1. Proceeding from without.	{	These are numberless. They may be introduced by the natural ways or by accidental openings.
	2. Formed in the body.		
ANIMATED BODIES.	1. Participating in the life of the individual.	{	Calculi. Effusion of blood, pus, urine, or air, into parts not naturally containing them. Cysts, &c. of every kind developed in the different organs. Parasitic animals, as worms, &c.
	2. Having a separate existence.		

EXTRAVASA'TION, *Extravasa'tio*, from *extra*, 'out of,' and *vasa*, 'vessels.' Escape of fluids from the vessels containing them, and infiltration or effusion of those fluids into the surrounding textures.

EXTREM'ITY, *Extremitas*; the end or termination of a thing. The limbs have been so called,—as the *upper and lower extremities*. It has been, also, used to express the last moments of life; as when we say, a patient is in 'extremity,' (F) *le malade est à l'extrémité, à toute extrémité*.

EXTRIN'SIC, *Extrin'secus*. That which comes from without. This term has been used for muscles, which surround certain organs and attach them to the neighbouring parts; in order to distinguish them from other muscles, which enter into the intimate composition of these organs, and which have been named *intrinsic*. Thus, there are extrinsic and intrinsic muscles of the tongue, ear, &c.

EXTUS'SIO, from *ex* and *tussis*, 'a cough.' 'I cough with expectoration.'

EXU'BER, from *ex*, 'out of,' 'devoid of,' and *u'bera*, 'the breasts;' *Apogalac'tos*, 'a child, which has been weaned.'

EYE, Teuton. A u g e, ὄψις, *Oculus, Ops, Omma, Ophthal'mos, Illos, Op'tilos* (Doric), (F) *Œil*; ὤψις, ὀμμᾶ. The eye is the immediate organ of vision. It is seated in the orbit, whilst its dependencies, called, by Haller, *Tutam'ina Oc'uli*, occupy the circumference

of the cavity and are composed of the eyebrows, the eyelids, cilia, glands of Meibomius, &c. The *Ball, Globe, or Bulb* of the *Eye*, is covered anteriorly by the tunica conjunctiva; is moved by six muscles, four *straight* and two *oblique*, and is constituted of membranes as the *sclerotic, cornea, choroid, Tunica Jacobi, retina, iris, hyaloid*, and in the fœtus, the *membrana pupillaris*;—and of fluids called *Humours* or *Media*,—the *aqueous, crystalline*, and *vitreous*. The vessels of the eye proceed from the ophthalmic artery. The nerves, except the optic, are chiefly furnished from the ophthalmic ganglion. The following are the dimensions, &c. of the organ, on the authorities of Petit, Young, Gordon, and Brewster.

Length of the antero-posterior diameter of the eye,	0.91
Vertical chord of the cornea,	0.45
Versed sine of the cornea,	0.11
Horizontal chord of the cornea,	0.47
Size of pupil seen through the cornea,	0.27 to 0.13
Size of pupil diminished by magnifying power of cornea to,	0.25 to 0.12
Radius of the anterior surface of the crystalline,	0.30
Radius of posterior surface,	0.22
Principal focal distance of lens,	1.73
Distance of the centre of the optic nerve from the <i>foramen centrale</i> of Sömmerring,	0.11
Distance of the iris from the cornea,	0.10
Distance of the iris from the anterior surface of the crystalline,	0.02
Field of vision above a horizontal line, 50°	} 120°
Field of vision below a horizontal line, 70°	

Field of vision in a horizontal plane, 150°	
Diameter of the crystalline in a woman	
above fifty years of age,	0.378
Diameter of the cornea,	0.400
Thickness of the crystalline,	0.172
Thickness of the cornea,	0.042

EYESTONE. The shelly opercula of

small turbinidæ. Used at Guernsey to get things out of the eyes. Being put into the inner corner of the eye, under the eyelid, it will work its way out at the outward corner, and bring out any strange substance with it. —Gray.

F

FACE, *Facies*, *Vultus*, *Proso'pon*. The face is the anterior part of the head. It is formed of 13 bones, viz. the *two superior maxillary*, the *two malar*, the *two ossa nasi*, the *two ossa unguis*, the *vomer*, the *two ossa spongiosa inferiora*, the *two palate bones* and the *inferior maxillary*, without including the frontal portion of the *os frontis*, and the 32 teeth, which may be considered to form part of it. Its numerous muscles are chiefly destined for the organs of sight, hearing, taste, and smell. Its arteries proceed from the external carotid; its veins end in the jugular, and its nerves draw their origin immediately from the brain.

The face experiences alterations in disease, which it is important to attend to. It is yellow in jaundice, pale and puffy in dropsy; and its expression is very different according to the seat of irritation, so that, in infants, by an attention to *medical physiognomy*, we can often detect the seat of the disease.

Hippocrates has well depicted the change, which it experiences in one exhausted by long sickness, by great evacuations, excessive hunger, watchfulness, &c., threatening dissolution. Hence this state has been called the *Facies Hippocrat'ica*, or *Facies Cadaver'ica*, *F. Tortua'lis*. In this, the nose is pinched; the eyes are sunk; the temples hollow; the ears cold, and retracted; the skin of the forehead tense, and dry; the complexion livid; the lips pendent, relaxed, and cold, &c.

The term *Face* (F) is likewise given to one of the aspects of an organ; thus, we say, the *superior face of the stomach*.

FACETTE (F). Diminutive of *face*. A small face: a small, circumscribed portion of the surface of a bone, as the *articular facette of a bone*.

FACIAL, *Facia'lis*; belonging to, or connected with, the face.

FACIAL NERVE, *Portio dura of the 7th pair*, *Ramus durior sep'timæ conjuga'tionis*, *Sympathet'icus minor*, *Res'piratory nerve of the face*, *Par sep'timum sive facia'le*, *Commu'ni-*

cans faciei nervus. This nerve arises from the inferior and lateral part of the tuber annulare, in the groove which separates it from the medulla oblongata; external to the corpora olivaria, and by the side of the auditory nerve. It issues from the cranium by the *meatus auditorius internus*; enters the aqueduct of Fallopius, receives a branch of the vidian nerve, sends off filaments to the internal muscles of the malleus and stapes; furnishes that called *Corda Tympani*; makes its exit at the foramen stylo-mastoideum, and divides into two branches—the *temporo-facial*, and *cervico-facial*.

The **FACIAL ARTERY**, *Labial artery*, *Angular artery*, or *external maxillary*, *A. palato-labial*—(Ch.); is a branch of the external carotid, which rises beneath the digastricus, and is distributed to almost every part of the face. It furnishes the *inferior palatal*, *submental*, *superior labial*, *inferior labial*, and *dorsalis nasi*.

The **FACIAL VEIN**, *Pal'ato-labial*—(Ch.), arises between the skin and frontalis muscle, and bears the name *V. Fronta'lis*; (F) *Veine frontale* ou *V. préparate*. It then descends vertically, towards the greater angle of the eye, where it is called *Angula'ris*; and afterwards descends, obliquely, on the face, to open into the internal jugular, after having received branches, which correspond with those of the facial artery. It is only in the latter part of its course, that it is called *Facial Vein*. Chaussier calls the external carotid artery, *Facial Artery*.

FACIENT, (*faciens*), 'making,' from *facio*, 'I make.' A suffix, as in *Calefacient*, *Rubefacient*, &c. ('Warm making,' 'red making.')

FACTI'TIOUS, *Facti'tius*, (F) *Factice*. That which is made by art, in opposition to what is natural or found already existing in nature. Thus, we say *factitious mineral waters*, for artificial mineral waters.

FACULTY, *Facultas*, *Power*, *Virtue*. Power of executing any function or act. The collection of the *intellectual faculties* consti-

tutes the *understanding*. We say, also, *vital faculties* for *vital properties*, &c.

FÆCES. Plural of *Fæx*; *Chersæ*, 'the dregs of any thing.' The alvine evacuations are so called; (F) *Garde-robes*: the excrements: *Fæcal matter*. See Excrement.

FAGA'RA OCTAN'DRA, from *fagus*, 'the beech,' which it resembles. The systematic name of the plant, which affords *Tacamahaca*, a resinous substance, that exudes from the tree. *Tacamahaca*, which has a fragrant, delightful smell, was formerly in high estimation as an ingredient in warm, stimulating plasters, and was given internally like the balsams generally. The *East India Tacamahac*, *Bal'samum Vir'ide*, *O'leum Ma'riæ*, *Bal'samum Cal'aba*, *Balsamum mariæ*, *Baume vert*, is yielded by the *Calophyll'um inophyll'um*.

The FAGARA PIPERITA, (F) *Fagarier poiré*; a native of Japan, possesses the qualities of pepper, and is used, as such, by the Japanese. It is, also, employed as a rubefacient cataplasm.

FAGUS CASTA'NEA. The systematic name of the *Chestnut Tree*. *Casta'nea*, *C. vulgaris*, *Casta'nea vesca*, *Lo'pima*, *Mota*, *Glans Jovis* THEOPHRASTI, *Ju'piter's Acorn*, *Sardin'ian Acorn*; the Common Chestnut. (F) *Chataignier commun*. Family, Amentaceæ. *Sex. Syst.* Monœcia Polyandria. The Chestnut, *Casta'nea nux*, (F) *Chataigne*, is farinaceous and nutritious, but not easy of digestion.

FAGUS CASTANEA PU'MILA. The *Chin'capin*, *Castanea Pumila*, (F) *Chataignier nain*. The nut of this American tree is eaten like the chestnut. The bark has been used in intermittents.

FAGUS SYLVATICA. The systematic name of the *Beech*, *Fagus*, *Oxya*, *Balan'da*, *Valanida*; the *Beech Tree*, (F) *Hêtre*. The *Beech-nut* or *Beech-mast*, (F) *Faine*, affords an oil, by expression, which is of a palatable character, and is eaten in some places instead of butter. It has been supposed to be a good vermifuge, but it is no better than any mild oil.

FAIRBURN, MINERAL WATERS OF. The mineral waters at this place, which is

in the county of Ross, in Scotland, are sulphureous and frequented.

FAL'CIFORM, *Falcifor'mis*, *Drepanoides*, from *falx*, 'a scythe,' and *forma*, 'shape.' Having the shape of a scythe. This term has been applied to different parts. See *Falx* and *Sinus*.

The FALCIFORM EXPANSION OF THE FASCIA LATA is the scythe-shaped reflection of the fascia lata, which forms, outwards and upwards, the opening for the vena saphæna, and is attached to the crural arch by its superior extremity, forming the anterior paries of the canal of the same name.

FALLTRANCK or FALTRANCK (G), literally, *a drink against falls*. A vulnerary. It is a mixture of several aromatic, and slightly astringent plants, which grow chiefly in the Swiss Alps, and hence the name—*Vulnéraire Suisse*—given to such dried plants, cut into fragments. They are called, also, *Espèces Vulnéraires* and *Thé Suisse*.

The infusion of the *Falltranck* is aromatic, and slightly agreeable, but of no use in the cases for which it has been particularly recommended.

FALSE, *Falsus*, *Spurious*, *Bastard*, *Nothus*, *Pseudo*, (F) *Faux*. This epithet has been frequently added to peripneumony, pleurisy, &c., to designate a disease similar to these, but less severe. Most commonly, a severe catarrh or pleurodynia has received the name. See *Peripneumonia Notha*.

FALSE PASSAGE, *Falsa Via*, (F) *Fausse Route*. An accidental passage, made in surgical operations, and particularly in introducing the catheter. The catheter is, sometimes, passed through into the rectum.

We say, also, *False Ribs*, *False Rhubarb*, &c.

FALSE WATER, *False Deliv'ery*. Water, which sometimes collects between the amnion and chorion, and is commonly discharged before the birth of the child.

FALSIFICA'TION, *Adultera'tio*, from *falsus*, 'false,' and *facere*, 'to make.' A fraudulent imitation or alteration of an aliment or medicine by different admixtures. It is synonymous with *adulteration* and *sophistication*.

TABLE OF COMMON FALSIFICATIONS OF SOME OF THE MOST USEFUL DRUGS, &c.

MEDICINES.	ADULTERATIONS.	MODE OF DETECTION.
ACACIÆ GUMMI.	<i>Gum Senegal.</i>	{ G. S. is clammy and tenacious. The A. G. is perfectly soluble in water, and its solution limpid.
	<i>Sulphuric Acid.</i>	
ACETUM DISTILLATUM.	<i>Nitric Acid.</i>	{ By evaporating it, the residuum deflagrates, when thrown on burning charcoal.
	<i>Copper.</i>	
	<i>Lead.</i>	
ACIDUM HYDROCHLORICUM.	<i>Sulphuric Acid.</i>	{ Deposites by evaporation the salts it may contain; precipitates with solution of hydrochlorate of baryta if it contains sulphuric acid.
	<i>Muriatic and Sulphuric Acid.</i>	
— NITRICUM.		{ The presence of chlorine is indicated by a precipitate with nitrate of silver; that of sulphuric acid, by the same result with hydrochlorate of baryta.

MEDICINES.	ADULTERATIONS.	MODE OF DETECTION.
ACIDUM SULPHURICUM.	<i>Muriatic and Nitric Acids.</i>	The presence of muriatic and nitric acid is indicated by the smell, when the acid tested is strongly heated.
— CITRICUM.	<i>Tartaric and Oxalic Acids.</i>	Their presence is indicated by forming a granular sediment in a concentrated solution of a neutral salt of potassa.
ÆTHER RECTIFICATUS.	<i>Too dilute. - - - Sulphuric Acid. - - - Alcohol. - - -</i>	Its S. G. detects this. By acetate of barytes. Precipitate white. With phosphorus a milky instead of limpid solution is formed.
AQUA AMMONIÆ.	<i>Carbonic Acid. - - -</i>	A precipitation occurs on adding a solution of muriate of lime.
AMMONIÆ CARBONAS.	<i>- - - - -</i>	It should be capable of complete volatilization by heat.
AMMONIACUM. - - -	<i>- - - - -</i>	The <i>Gutta Ammoniaci</i> are white, clear, and dry. The lump <i>Ammoniacum</i> , <i>lapis Ammoniaci</i> , is often adulterated with common resin.
ANTIMONII SULPHURETUM.	<i>Lead. - - - Arsenic. - - - Manganese and Iron. - - - Copper. - - -</i>	It ought to be entirely volatilized by a red heat. Imparts a foliated texture, and is not vaporizable. A smell of garlic is emitted when thrown on live coals, &c. Are not vaporizable.
ARGENTI NITRAS.	<i>Nitrate of Potassa.</i>	The solution assumes a blue colour, when supersaturated with ammonia. It may be suspected when the salt deliquesces.
ARSENICUM ALBUM.	<i>Chalk, Sulphate of Lime, Sulphate of Barytes.</i>	The adulteration with nitrate of potassa is easily recognised by the fracture of a stick, which is radiated when pure and granular if adulterated; or by precipitating a solution of the salts with a sufficient quantity of muriatic acid, and evaporating the clear liquor: the nitrate of potassa or other salts will remain.
BALSAMUM PERUVIANUM.	<i>A mixture of Resin and some Volatile Oil, with Benzoin.</i>	Not volatilizable by heat.
CALUMBA.	<i>- - - - -</i>	Not easily detected.
CAPSICUM. Cayenne Pepper.	<i>Muriate of Soda. Red Lead. - - -</i>	The true is distinguishable from the false Calumba by adding to an infusion of the root, a few drops of solution of sulph. iron, which gives to the infusion of the false Calumba a greenish black colour; but produces no change in the other.
CASTOREUM. Castor.	<i>A mixture of dried blood, gum ammoniac, and a little real castor, stuffed into the scrotum of a goat. Earth or Peasemeal.</i>	This disposes it to deliquesce. Digest in acetic acid, and add a solution of sulphuret of ammonia—a dark-coloured precipitate will be produced.
CERA FLAVA. Yellow Wax.	<i>Resin. - - - Tallow. - - -</i>	Smell and taste will generally detect the fraud.
CERA ALBA. White Wax.	<i>White Lead. - - - Tallow. - - -</i>	May be suspected when the cake is brittle and colour grayish.
CINCHONA. Bark.	<i>This is variously adulterated. Pieces of dough formed in moulds, and coloured with cochineal.</i>	Put it in cold alcohol, which will dissolve the resin, without acting on the wax. Is known by the greater softness and unctuousity and its smell when melted. Turmeric is generally added in this case to obviate the paleness.
COCCUS. Cochineal.	<i>- - - - -</i>	Melt the wax, the oxide will subside.
COPAIBA. Balsam of Copaiva.	<i>Oil. - - -</i>	The cake has not its ordinary translucency.
CROCUS. Saffron.	<i>Fibres of smoked Beef. Petals of the Calendula officinalis, and Carthamus Tinctorius.</i>	Can only be detected by practice, and examining into the quantity of quinine or cinchonine it contains.
CUBEBA. Cubebs.	<i>Turkey Yellow Berries, or the dried fruit of the Rhamnus Catharticus.</i>	Throw it into water, the adulteration will appear.
		If it does not retain its spherical form when dropped into water, its adulteration may be inferred.
		Mix one part of strong liquid ammonia of 22°, with three parts of copaiba. If pure, the mixture will, in a few minutes, become transparent; if not, it will remain opaque.
		Affords an unpleasant odour when thrown on live coals.
		Infuse the specimen in hot water, and the difference will be perceptible.
		Detected by attentive examination.

MEDICINES.	ADULTERATIONS.	MODE OF DETECTION.
CUSPARIÆ CORTEX. <i>Angustura Bark.</i>	<i>False Angustura</i> <i>sometimes sold for</i> <i>it.</i>	The epidermis of the true Cusparia is characterized by being covered with a matter resembling the crust of iron.
GUAIACI RESINA. <i>Resin of Guaiacum.</i>	<i>Common Resin.</i>	Detected by the turpentine smell emitted when thrown upon hot coals.
	<i>Manchineel Gum.</i>	Add to the tincture a few drops of spirit of nitre, and dilute with water: the guaiacum is precipitated—the adulteration floats in white striæ.
HYDRARGYRI NITRI- CO-OXYDUM. <i>Red Precipitate.</i>	<i>Red Lead.</i>	Digest in acetic acid; add sulphuret of ammonia, which will produce a dark-coloured precipitate. It should be totally volatilized by heat.
HYDRARGYRI SUBMU- RIAS. <i>Calomel.</i>	<i>Corrosive Sublimate.</i>	A precipitation will be produced by the carbonate of potass, from a solution made by boiling the suspected sample with a small portion of muriate of ammonia in distilled water: or, the presence of deuto-chloride of mercury is indicated, by warming gently a small quantity of calomel in alcohol, filtering and adding to the clear liquor some lime-water, by which a reddish-yellow precipitate is afforded. When calomel is rubbed with a fixed alkali it ought to become intensely black, and not exhibit any orange hue.
HYDRARGYRI SUL- PHURETUM RUBRUM.	<i>Red Lead.</i>	Digest in acetic acid, and add sulphuret of ammonia—a black precipitate will be produced.
HYDRARGYRI SUL- PHURETUM NIGRUM.	<i>Ivory Black.</i>	Throw a suspected portion on hot coals—the residuum will detect the fraud.
IODINE.		The tests of its purity are—that it is perfectly soluble in ether. Heated on a piece of glass or porcelain, it sublimes without residuum.
JALAPÆ RADIX. <i>Jalap Root.</i>	<i>Bryony Root.</i>	B. root is of a paler colour and less compact texture, and does not easily burn at the flame of a candle.
MAGNESIA.	<i>Lime.</i>	Detected by the solution in dilute sulphuric acid, affording a precipitate with oxalate of ammonia.
	<i>Sulphuret of Lime.</i>	Gives off, when moistened, the smell of sulphuretted hydrogen.
MAGNESIÆ SUB-CAR- BONAS. <i>Carbonate of Magne-</i> <i>sia.</i>	<i>Chalk.</i>	Detected by adding dilute sulphuric acid to the suspected substance, when, if chalk be present, there will be a white insoluble precipitate.
	<i>Gypsum.</i>	Boil in distilled water, and test the solution by a barytic and oxalic reagent.
MANNA.		A factitious article, consisting of honey or sugar mixed with scammony, is sometimes sold for it; but the colour, weight, transparency, and taste detect it.
MORPHINA ET EJUS SALES. <i>Morphine and its</i> <i>Salts.</i>		Morphia and its salts, when placed in contact with nitric acid, are coloured red; with per salts of iron, blue. They are perfectly soluble in warm alcohol, and acidulated warm water. When morphine is mixed with narcotine, the adulteration is ascertained by mixing them with sulphuric ether, which dissolves the narcotine, without sensibly affecting the morphine.
		The bag must not appear to have been opened.
MOSCHUS. <i>Musk.</i>	<i>Dried blood.</i>	This may be suspected, if it emits a fetid smoke when inflamed.
	<i>Asphaltum.</i>	Discovered by its melting and running, before it inflames.
	<i>Fine particles of Lead.</i>	Rub with water. The metallic particles will subside.
OLEA DISTILLATA. <i>Essential Oils.</i>	<i>Fixed Oils.</i>	Touch writing paper with it, and hold it before the fire: fixed oil leaves a stain of grease.
	<i>Alcohol.</i>	Add water. A milkiness and increase of temperature occurs.
OPIUM.	<i>Extract of Liquorice,</i> <i>Bullets, and Stones</i> <i>sometimes in it:</i> <i>Extract of Poppy,</i> <i>of the Chelidonium</i> <i>majus, G. Arabic,</i> <i>G. Tragacanth,</i> <i>Linseed Oil, Cow's</i> <i>Dung.</i>	The best opium is covered with leaves and the reddish capsules of a species of <i>Rumex</i> . The inferior kinds have capsules adherent. It is bad when soft and friable, when intensely black or mixed with many impurities, and when sweet. The quantity of morphine affords the best test.
OLEUM RICINI. <i>Castor Oil.</i>	<i>Olive or Almond or</i> <i>Poppy Oil.</i>	Alcohol, S. G. .820, will mix with any proportion of castor oil, whilst it dissolves very little of the others.
POTASSII IODIDUM. <i>Iodide of Potassium.</i>		The adulteration is ascertained by precipitating a solution of the salt with nitrate of silver, and treating the precipitate with ammonia, which dissolves the chloride of silver, without acting upon the iodide of this metal.
POTASSÆ HYDRIODAS. <i>Hydriodate of Potassa.</i>	<i>Chloride of Potassium.</i>	Leaves no residue when submitted to calcination; is perfectly soluble in warm alcohol, and in water slightly acidulated with sulphuric acid.
QUININÆ SULPHAS. <i>Sulphate of Quinine.</i>		
STRYCHNINÆ ET EJUS SALES. <i>Strychnine and its</i> <i>Salts.</i>	<i>Brucine.</i>	They are free from brucine when no colour is produced by contact with nitric acid.
ZINCI OXYDUM. <i>Flowers of Zinc.</i>	<i>Chalk.</i>	Sulphuric acid excites an effervescence.
	<i>White lead.</i>	Sulphuric acid forms an insoluble sulphate of lead.

FALX. Anatomists have given this name to several membranous reflections having the shape of a falx or scythe.

1. The **FALX CEREBRI**, (F) *Faux de cerveau, Septum Cerebri, Falx major, Vertical superior longitudinal process, Mediastinum cerebri, Repli longitudinal de la méninge*, (Ch.)—*Processus falciformis duræ matris*. The greatest process of the dura mater. It extends from the fore to the hind part of the skull, on the median line; is broad behind and narrow before, and is lodged in the groove, which separates the hemispheres from each other—the *interlobar fissure*. At its superior part is seated the longitudinal sinus (*superior*), and at its lower, corresponding to the edge of the scythe, the inferior longitudinal sinus. Its anterior extremity is attached to the crista galli; its posterior is continuous with the tentorium cerebelli, and contains the straight sinus.

2. **FALX CEREBELLI**, (F) *Faux du cervelet, Falx minor, Septum Cerebelli, Septum median du cervelet*—(Ch.), *Processus falciformis Cerebelli, Septum parvum occipitale*, is a triangular process of the dura mater opposite the internal occipital protuberance. Its base is attached to the middle of the tentorium, and its top or apex bifurcates, to proceed to the sides of the foramen magnum. Its convex surface is towards the cranium, and its concave in the fissure or groove, which separates the two lobes of the cerebellum.

3. The **GREAT FALX OF THE PERITONEUM**, *Falx Peritonei maxima*, (F) *Grande faux du péritoine, Faux de la Veine Ombilicale, Falx of the umbilical vein*, is a reflection of the peritoneum, which ascends from the umbilicus to the anterior and inferior surface of the liver.

The **LESSER FALCES OF THE PERITONEUM**, *Falces Peritonei minime*, (F) *Petites faux du péritoine*, are the lateral ligaments of the liver and the reflections, which the peritoneum forms, raised up by the umbilical arteries.

FAMELICA FEBRIS, from *fames*, 'hunger.' Fever accompanied with insatiable hunger.—Sylvius.

FAMES LUPINA, *Lycorex'is, λυκορεξίς. Faim de Loup*. Authors have described, under this name, a kind of Bulimia, or depravation of the digestive function, in which the patient eats voraciously, and passes his food, almost immediately afterwards, *per anum*.

FAMIGERATISSIMUM EMPLASTRUM, from *fama*, 'fame,' and *gero*, 'I wear.' A plaster, extolled in ague, and made of aromatic, irritating substances. It was applied to the wrist.

FANON (F), from (G) *Fahne*, 'a banner,' 'ensign,' 'standard.' *Fer'ula, Lec'tulus, Thor'ulus stramineus*. A splint of a particular shape, employed in fractures of the thigh and leg to keep the bones in contact.

The *Fanons* were divided into *true* and *false*. The *true* consists of a cylinder of straw, strongly surrounded with a cord or riband, in the centre of which a stick is usually placed to ensure its solidity. The *false* consists of a thick piece of linen, made flat, like a compress, and folded at the extremities. It was placed between the fractured limb and the true *fanon*. The *Drap-fanon* is a large piece of common cloth placed beneath the fractured limb, and in which the fanons or lateral splints are rolled.

FANTOM or **PHANTOM**, from φαντασμα, 'a spectre.' (F) *Phantome, Fantome, Mannequin*. This word has two acceptations. It means the spectres and images, which the imagination presents to the sick, when asleep or awake; and, also, the figure on which surgeons practise the application of bandages, or the accoucheur the manual part of midwifery.

FARCTURA, FARTURA, from *farcire*, 'to stuff.' The operation of introducing medicinal substances into the cavities of animals, or of fruits, which have been previously emptied.

FARINA, *Alphiton, Crimnon, Al'eton, Aleu'ron Ale'ma*, from *far*, 'corn,' of which it is made. *Meal* or *flour*. The powder, obtained by grinding the seeds of the gramineous, leguminous, and cucurbitaceous plants in particular. It is highly nutritious, and is much used, dietetically as well as medicinally.

FARINA TRITICI, wheaten flour; *F. Secalis*, Rye flour or meal; *F. Hordei*, Barley meal; *F. Avena'cea*, Oat meal, &c.

FARINÆ RESOLVENTES, (F) *Farines resolutives*. This name was formerly given to a mixture of the farina of four different plants; the *lupine*, *lupinus albus*, the *Ervum Ervilia*, the *Vicia faba* and the *Barley, Hordeum distichum*. They were recommended to form cataplasms.

FARINACEOUS, Farina'ceus, Farino'sus, Mealy. Having the appearance or nature of farina. A term given to all articles of food, which contain farina. The term *Farinacea* includes all those substances, called *cerealia*, *legumina*, &c., which contain farina, and are employed as nutriment. In *Pathology*, the epithet *farinaceous*, (F) *farineux*, is applied to certain eruptions, in which the epidermis exfoliates in small particles similar to farina.

FART, Sax. *fart*, from Teut. *fahren*, 'to go:'—*fart*, 'a voyage.' (G) *Furz*, (L) *bdell'us, Crepitus* (q. v.), (F) *Pet*. A sonorous or other discharge of wind from behind. A low word, but of respectable parentage.

FASCIA, from *fascis*, 'a bundle.' *Liga'tio, Ligatu'ra, Alligatu'ra, Anades'mus, Vin'cula, Sparganon, Epidesmos*, a *bandage, fillet, roller*. The aponeurotic expansions of muscles, which bind parts together are, likewise, so termed:—*Aponeurosis, Perimys'ium*.

FASCIA ILIACA, *Iliac aponeurosis*. An aponeurosis, which proceeds from the tendon of the psoas minor, or which arises from the anterior surface of the psoas magnus, when the former muscle does not exist. It is attached, externally, to the inner edge of the crest of the ilium; below, and anteriorly—on one side, to the crural arch, sending an expansion to the fascia transversalis; and on the other, continuous with the deep-seated lamina of the fascia lata, which forms the posterior paries of the crural canal. Within and behind, the fascia iliaca is attached to the brim of the pelvis and is continuous with the aponeurosis, which M. Jules Cloquet has called *Pelvic*. The iliac aponeurosis covers the iliac and psoas muscles, which it separates from the peritoneum.

FASCIA LATA. A name, given by anatomists to an aponeurosis, and to a muscle.

The **FASCIA LATA APONEUROSIS**, *Fascia aponeurotica femoris*, *Crural* or *Femoral Aponeurosis*, is the most extensive in the body, and envelopes all the muscles of the thigh. *Above*, it is attached to the outer edge of the ilia; *before*, it arises from the crural arch by two distinct laminae, separated by the femoral vessels and becoming confounded a little below the part, where the great vena saphæna opens into the crural vein. Of these two laminae, the one is more anterior and thicker than the other, and may be considered as a prolongation of the aponeurosis of the external oblique. It is intimately united to Poupart's ligament. The other, which is thinner, is behind, and deeper seated; and, after its union with the former, proceeds to be inserted into the pubis. *Inferiorly*, the fascia lata becomes confounded with the tendon of the triceps, and is attached to the external tuberosity of the tibia. The use of the fascia lata is, like that of other aponeuroses, to strengthen the action of the muscles, &c.

The **MUSCLE FASCIA LATA**, *Tensor vaginæ femoris*, *Fascia lis*, *Membranosus*, *Ilio-aponeurosi-femoral*, *Musculus aponeurosis vel fasciæ latæ*, *Ilio-aponeuroti-femoral*—(Ch.) *Tenseur de l'aponévrose fémorale*. A muscle, situate at the upper and outer part of the thigh. It arises, *above*, from the outer part of the anterior and superior spine of the ilium; and is inserted, *below*, between the two laminae of the fascia lata, which it stretches and raises when it contracts.

FASCIA SUPERFICIALIS, *Superficial aponeurosis of the abdomen and thigh*. (F) *Aponévrose superficielle de l'abdomen et de la cuisse*. A very thin aponeurosis, which covers the muscles and aponeuroses of the abdomen; passes before the crural arch, to which it adheres with some degree of force; sends a membranous sheath, which surrounds the spermatic chord; and is continuous with the dartos, which it assists in forming. The fascia superficialis presents, beneath the crural arch, very distinct fibres, whose direction

is parallel to the fold of the thigh. It is applied over the fascia lata aponeurosis, and is attached, internally, to the ascending ramus of the ischium, near the root of the corpus cavernosum. Before the descent of the testicle from the abdomen, the fascia superficialis is very manifestly continuous with the *Gubernaculum testis*.

FASCIA TRANSVERSALIS, an aponeurosis, which separates the transversalis muscle from the peritoneum in the inguinal region. It arises about the posterior edge of the crural arch, where it seems to be continuous with the aponeurosis of the greater oblique muscle. *Above*, it is lost in the cellular tissue at the internal surface of the transversalis abdominis. *Within*, it is continuous with the outer edge of the tendon of the rectus muscle and Gimbernat's ligament; *below*, it is continuous with the aponeurosis of the greater oblique and receives an expansion from the *Fascia Iliaca*. Towards its middle and a little above the crural arch, the fascia transversalis has the wide orifice of a canal, which is occupied, in the female, by the round ligament of the uterus; and in man, furnishes an expansion, that serves as a sheath to the spermatic vessels.

FASCICULUS, from *fascis*, 'a bundle,' *Desmédion*, 'a small bundle.' In *Anatomy*, it is employed in this sense; as a *fasciculus of fibres*. (F) *Petit Faisceau*, *Trousseau*. In *Pharmacy*, it means *manipulus*, *Cheiroplethes*, *χειροπληθης*, 'a handful:'—Musa Brasavolus, says,—as much as can be held in two fingers.

FASTING, from Sax. *fæstan*, *Limo'sis* *expers protracta*, *Anorex'ia mirabilis*, *India*, *Jejunium*. Loss or want of appetite, without any other apparent affection of the stomach; so that the system can sustain almost total abstinence for a long time without faintness. Some wonderful cases of this kind are on record.

FATTY, *Adiposus*, Sax. *fæt*; past participle of *fædan*, to feed,—*adipous*. Relating to fat. The cellular system has been called *fatty* or *adipous*; from an opinion that, in its areolæ, the fat is deposited. The cellular membrane, however, merely lodges, between its lamellæ and filaments, the vesicles in which the fat is contained.

FATTY OR ADIPOUS VESICLES, *Sacculi adiposi*. This name is given to small bursæ or membranous vesicles, which inclose the fat and are found situate in the areolæ of the cellular tissue. These vesicles vary much in size. Generally, they are round and globular; and, in certain subjects, receive vessels which are very apparent. They form so many small sacs, without apertures, in the interior of which are filaments, arranged like septa. In fatty subjects, the adipous vesicles are very perceptible, being attached to the cellular tissue and neighbouring parts by a vascular pedicle. Raspail affirms that there is the most

striking analogy between the nature of the adipous granules and that of the amylaceous grains.

ADIPOUS or **FATTY** **LIG'AMENT**. This name has been given to a reflection of the synovial membrane of the knee joint, which passes from the ligamentum patellæ towards the cavity that separates the condyles of the femur.

FATTY or **ADIPOUS** **MEM'BRANE**, or *adipous tissue*. The subcutaneous cellular tissue, or that containing the fatty or adipous vesicles (q. v.)

FATTY or **ADIPOSE** **VESSELS**. The vessels connected with the fat. Some anatomists have called *Adipous canals*, (F) *Conduits adipeux*, the vessels to which they attribute the secretion of fat.

FATU'ITAS, *Moro'sis*, *Stulti'tia*, *Stupor mentis*, *Moro'sis*, *Amen'tia*; from *fat'uus*, 'foolish.' Mental imbecility, *Dementia*.

FAUNO'RUM **LUDIB'RIA**. The sports of the *Fauni*. Some authors have called thus the incubus; others, epilepsy.

FAUSSE COUCHE (F), *Vanum partu'rium*. Some authors have used this term for the expulsion of different bodies, constituting false conceptions; such as moles, hydatids, clots of blood, &c. The greater part of accoucheurs use the term synonymously with abortion.

FAUSSE POSITION (F), *False position*. The French use this term, in vulgar language, to indicate that torpor, and tingling, and loss of power over the motion, of a part, produced by too strong contraction or painful compression.

FAUSTINI **PASTIL'LI**. *Faustinus's Loz'enges*. These were once celebrated. They were composed of *burnt paper*, *quick lime*, *oxide of arsenic*, *sandarach*, *lentils*, &c.

FAVO'SUS. Similar to a honey-comb, *Faviform'is*, *Favous*, from *favus*, *Cérion*, 'a honey-comb,' (F) *Faveur*. An epithet given to a species of porrigo. *Cerion*, *Favus*, means also a state of ulceration, resembling a honey-comb.

FEBRICITANS, *Febriens*. One attacked with fever, from *febricitare*, 'to have a fever.'

FEBRIC'ULA. Diminutive of *febris*, fever. A term employed to express a slight degree of fever.

FEB'RIFUGE, *Lexipyret'icus*, *Pyret'icus*, *Alexipyret'icus*, *Antifebri'lis*, *Antipyret'ic*, *Febrifugus*, from *febris*, 'a fever,' and *fu-*

ga're, 'to drive away.' A medicine, which possesses the property of abating or driving away fever.

FE'BRILE, *febri'lis*. Relating to fever, as *febrile movement*, *febrile pulse*, &c.

FEC'ULA or **FÆC'ULA**, diminutive of *fæx*, 'lie.' An immediate principle of vegetables, composed of hydrogen, oxygen, and carbon. It exists in several plants, and has different names, according to that which furnishes it. When extracted from wheat or barley it is called *starch*. When from the *Cycas circina'lis*, *Sago*;—from the *Orchis morio*, *Salep*. We say, also, *Fecula* of the *Potato*, *Bryony*, *Arum*, *Manioc*, &c.

GREEN FECULA. This name is given to a green, solid matter of variable character, which is believed to be resinous, and which renders turbid several kinds of juices, extracted from vegetables. It is, also, called *Chlorophylle*.

FEC'ULENCE, *Fæculen'tia*, *Fæcos'itas*, *Fæx*, *Fæ'ces*, *Lee*, *Deposit*, *Dregs*. In *Pharmacy*, feculent, albuminous, or other substances, which are deposited from turbid fluids, are so termed.

FEC'ULENT, *Fæculen'tus*, *Trygo'des*, 'Foul, dreggy, excrementitious;' as a *fec'ulent flu'id*, *fec'ulent evacua'tions*, &c.

FECUNDA'TION, *Fæcunda'tio*, *Impregna'tion*, *Impregnatio*, *Cye'sis*, *Encye'sis*, *Encymosia*, (F) *Fécondation*. The act by which, in organized beings, the germ, contained in the generative organs of the female, receives from the male organs that which is necessary for its developement.

FECUN'DITY, *Fæcun'ditas*, (F) *Fécondité*. The faculty of reproduction, possessed by organized bodies.

It has been estimated that, throughout a country, taking one marriage with another, not more than 4 children are the result; and in towns only 35 children to 10 marriages.

FEIGNED DISEASES, *Sim'ulated diseases*, *Pretend'ed diseases*, (F) *Maladies Dis-simulées*, *M. simulées*, *M. feintes*, *M. supposés*. The tricks employed, by impostors, to induce a belief, that they are attacked with diseases when they are not.

These are generally assumed by beggars, to obtain alms;—by criminals, to escape punishment; and by soldiers, to be exempt from duty.

The following Table exhibits the chief feigned diseases, with the means of detection.

A TABLE OF FEIGNED, PRETENDED, SIMULATED, OR EXCITED DISEASES OR DISQUALIFICATIONS.

DISEASES, &c.	HOW FEIGNED.	HOW DETECTED.
1. ABORTION.	By staining the clothes and body with borrowed blood.	
2. ABSTINENCE.		By constant and minute attention.
3. AMAUROTIC BLINDNESS.	By applying the extract of belladonna or the datura stramonium to the eye.	Amaurosis is characterized by dilated pupil. Where these substances have been applied, the effects will go off in ten days or a fortnight.
4. APOPLEXY.	By falling down as if deprived of sensation and consciousness.	By powerful stimulants; an electric shock; application of hot water, sternutatories, actual cautery, &c.
5. CACHEXIA, ANÆMIA AND DEBILITY.	Using substances to make the face appear pale and livid. Indulging freely in wine, and privation of sleep prior to examination.	By examining if the pulse be strong, and the skin hot, and whether there be loss of appetite or of strength, or swelling of the limbs.
6. EXCRETION OF CALCULI.	Putting sand, pebbles, &c. into the urine.	By the aid of chymistry. We are acquainted with the chymical composition of urinary calculi.
7. CANCEROUS ULCER.	By gluing on a portion of a spleen with the smooth side to the skin, leaving on the outside the appearance of an ulcerated surface.	By noticing whether there be signs of cachexia, and by attentive examination of the part.
8. CATALEPSY.	By seeming to be suddenly motionless, the joints remaining flexible and external objects making no impression.	By powerful stimulants as recommended under apoplexy. Letting fall a drop of boiling water on the back. Proposing to use the actual cautery and seeing whether the pulse rise.
9. CHOREA.	By assuming the convulsive motions of a part which characterize chorea.	By examining the patient whilst he may imagine himself unobserved, and seeing whether the convulsive motions go on then.
10. CONTRACTION OF JOINTS IN GENERAL.		Mode of discrimination sometimes so obscure as to deceive the most practised and attentive.
11. CONTRACTION OF THE FINGERS.		Introduce a cord between the fingers and the palm of the hand, and gradually apply weights so as to expand the fingers. Confine him so that he cannot obtain his food without using his clenched hand.
12. CONVULSIONS.		When feigned, they do not present the rigidity of muscles or the rapidity of action which characterize the real. The mode of detection must be the same as in epilepsy.
13. OPAQUE CORNEA.	Produced by the application of a strong acid, by acrid powders, as quicklime, &c.	The existence of the opacity can be detected by attentive observation.
14. CUTANEOUS DISEASES.	Some articles of diet will bring on <i>urticaria</i> or <i>nettle rash</i> , in particular individuals, as shell-fish, bitter almonds, &c. By acrids, acids, or any irritants applied to the surface. An ointment of tartarized antimony causes a painful pustular eruption. See <i>Porrigio</i> , in this list.	By careful examination on the part of practitioner and nurse.
15. DEATH.	Some persons possess the power of suspending or moderating the action of the heart.	If suspected, the plan, recommended under Apoplexy, will be found most efficacious.
16. DEAF-DUMBNESS.		The really deaf and dumb acquire an expression of countenance and gestures which it is difficult to assume.
17. DEAFNESS.	It may be assumed or excited by putting a pea in the ear, or by inserting irritants, so as to induce inflammation and temporary loss of function.	Make a noise when not expected, and see if the countenance varies or pulse rises. Put to sleep by opium, and then fire a pistol close to the ear, when he may be thrown off his guard. Examine the ear to see if any trick has been played there.
18. DEBILITY, see CACHEXIA.		
19. DEFORMITY.		Examine the part and its articulation, naked, and compare it with the opposite.
20. DELIVERY.	After enlargement produced artificially, a subsidence of the tumefaction; the parts being moistened by borrowed blood and the child of another substituted as the female's own.	Can only be positively detected by examination <i>per vaginam</i> . Soon after delivery, the vagina will be relaxed and the lochial discharge be flowing—in greater abundance the shorter the time, that may have elapsed since delivery.

DISEASES, &c.	HOW FEIGNED.	HOW DETECTED.
21. DIARRHŒA.	Said to have been caused by a mixture of vinegar and burnt cork. (?) May be occasioned by the use of any of the purgative roots, &c.	When diarrhœa is feigned by the lower classes, inspect the linen; if clean, the bowels are probably not much out of order. Let every individual have a close stool of his own; and inspect the evacuations, taking care, that one, suffering under the disease does not lend his evacuations to another.
22. DROPSY.	May be feigned, like pregnancy, by wearing pads. The anasarcaous condition of the lower limbs has been caused by applying a ligature round them. By inflating the cellular membrane of the abdomen.	Can be detected by attentive examination. There will be a want of that leucophlegmatic habit, which accompanies and characterizes dropsy.
23. DYSENTERY.	May be feigned, like diarrhœa, by adding a little blood to the evacuations, or by introducing a soap or some more irritating suppository.	Same rules as under Diarrhœa.
24. EPILEPSY.	The foaming of the mouth has been produced by keeping a piece of soap in it.	Sensation in E. is totally abolished. If any remain, disease probably feigned. Incontractility of pupil, which occurs in epilepsy, cannot be feigned. Same means to be used as in feigned apoplexy.
25. FEVER.	By various stimulants, as wine, brandy, pepper; swallowing a small quantity of tobacco, or introducing it into the anus. Flour or chalk used to whiten the tongue. Redness of skin, caused by friction with a hard brush.	The deceit is generally developed by a day or two's examination. Where flour or chalk has been used to whiten the tongue, the line of demarcation, between the whitened part and the clean, healthy margin of the tongue, is too well marked to escape observation.
26. FISTULA IN ANO.	By making an incision near the verge of the anus and introducing into it an acrid tent, such as the root of <i>white hellebore</i> , &c.	By careful examination.
27. FRACTURES.	Generally nothing, here, but the man's own testimony. He complains of pain in the part; if fracture of the skull be feigned, he states, perhaps, that he becomes deranged on tasting liquor.	By attentive examination.
28. HÆMATEMESIS.	By drinking the blood of some animal or using some coloured liquid and then throwing it up.	By cutting off the supply of the fluid, and careful examination.
29. HÆMOPTYSIS.	By secreting bullocks' blood for the purpose of colouring the saliva; making small incisions in the mouth; using bole armeniac or paint of vermilion.	Blood from the lungs is frothy and light-coloured. Mouth and fauces must be carefully inspected, and the individual be observed.
30. HÆMORRHOIDS.	By introducing the bladder of rats or of small fish partly into the rectum. The linen has also been stained with borrowed blood.	The means are obvious.
31. HEART, DISEASES OF, see PALPITATION.		
32. HEPATITIS.		Unless the person be a well educated impostor, acute inflammation of the liver will be detected;—by the absence of marks of strong inflammatory action. <i>Chronic liver disease</i> is, frequently, not characterized by well marked symptoms, and hence, when assumed, is difficult of detection.
33. HERNIA.	In the same manner as hydrocele. By inflation.	The detection is easy.
34. HYDROCELE.	By puncturing the skin of the scrotum, and inflating the cellular membrane.	Do.
35. HYDROCEPHALUS.	By opening the integuments of the head, near the vertex, e. g. and blowing in air.	Do.
36. HYSTERIA.		Does not easily resist the application of strong sternutatories to the nostrils. Attentive examination necessary.
37. INSANITY.		The expression of countenance cannot easily be feigned. Nor can the affection be kept up so long as in real mental alienation. The individual cannot do so long without food, sleep, &c.
38. JAUNDICE.	By colouring the skin with an infusion of turmeric or tincture of rhubarb. <i>Clay-coloured stools</i> produced by taking daily a small quantity of muriatic acid. <i>High-coloured urine</i> by rhubarb taken internally.	The eyes cannot be coloured, although smoke has been used for this purpose. The skin must be washed to remove the colouring matter, if any exist, and the supply of acid and rhubarb be prevented.

DISEASES, &c.	HOW FEIGNED.	HOW DETECTED.
39. LAMENESS.	By keeping the limb in a contracted state, and resisting any effort to move it.	By two persons taking hold of the individual and moving rapidly along with him; and when they are tired, having relays. The impostor will generally give in.
40. MENSTRUATION.	By staining the clothes and body with borrowed blood.	By cutting off the supply.
41. MYOPIA. <i>Short-sightedness.</i>		Present an open book, and apply the leaves close to the nose. If it cannot be read distinctly, when thus placed, or when glasses, proper for short-sightedness are used, the disease is feigned.
42. OPHTHALMIA.	Excited by a variety of acrid and corrosive substances applied to the eye; as lime, &c. A portion of black muslin, spread over the cornea. The eyelashes are sometimes extracted, and caustic applied to excite disease in the palpebræ.	When ophthalmia is thus excited, its progress is, ordinarily, very rapid, arriving at its height within a few hours.
43. OZÆNA.	By impregnating a piece of sponge with some offensive juices or oils, mixed with decayed cheese, and putting the imbued sponge into the nostrils.	
44. PALPITATION.	White hellebore, given in the dose of 10 or 12 grains, and repeated, will occasion general indisposition, and undue action of the heart.	Cut off the supply.
45. PAINS.		The detection is here often difficult. The non-existence of pain cannot be proved, and great pain may be present without any appearance externally.
46. SHAKING PALSY.		The imposition is more frequently detected by inconsistencies and contradictions in the patient's history of the case, than in any other manner.
47. PARALYSIS.		May be suspected, if the person be in an ordinary state of vigour. Try violent remedies and means, recommended under Chorea.
48. PHTHISIS PULMONALIS.	Individuals with long necks and contracted shoulders have simulated phthisis, by covering the chest with blisters, cicatrices of issues, &c.; and by taking drugs, which cause paleness.	Violent remedies are here required. Cold affusion, actual cautery, electric shocks, &c.
49. POLYPUS NASI.	By introducing the testicle of a young cock or the kidney of a rabbit into the nostril, and retaining it there by means of a sponge, fastened to it.	By attentive examination of the symptoms.
50. PORRIGO. <i>Scalped Head.</i>	By applying nitric acid to the head, after protecting the face with fatty substances; but the chronic state is imitated by the use of depilatories of different kinds applied sometimes in patches, so as to resemble the <i>Porrigio decalvans</i> .	
51. PREGNANCY.	By wearing pads, and assuming the longing after particular articles of diet, &c.	By the absence of the areola; the presence of a pad; and, if necessary, by examination <i>per vaginam</i> .
52. PROLAPSUS ANI.	By a portion of the intestine of the ox, in which a sponge, filled with a mixture of blood and milk is placed.	
53. PROLAPSUS UTERI.	By a similar fraud.	
54. PULSE, WEAKNESS OR DEFECT OF.	By ligatures applied to the corresponding arm.	By examining whether the arteries of the two arms beat alike; and if a ligature be placed on the arm.
55. CHRONIC RHEUMATISM. See PAIN.		
56. SCROPHULA.	By exciting ulcers below the angles of the jaw.	By examining the general habit and observing, whether the ulcerations be glandular, and the discharge of a scrophulous character.
57. SCURVY.	By covering the teeth with wax, and then applying acrid, corrosive substances to the gums.	By examining the general habit; whether debilitated, cachectic, and possessing the usual general signs of scorbutus.

DISEASES, &c.	HOW FEIGNED.	HOW DETECTED.
58. STAMMERING.		Simulators of this defect generally state, that it is connate, or ascribe it to a fit of apoplexy or severe fever. Where the organs of speech were perfect, and the moral evidence of the previous existence of the infirmity was not satisfactory, the French authorities used to confine the soldiers, and not supply them with food, until they called for it without stammering.
59. STRICTURE OF THE URETHRA.		By passing the bougie.
60. SWELLING OF THE LEGS.	By ligatures round the thighs.	Examine the limbs uncovered.
61. SYNCOPE.	Ligatures are sometimes used to prevent the pulse being felt. By applying lotions to the face to make it pale.	By using sternutatories. By the absence of some of the symptoms of syncope. Examine the naked arms. Wash the face.
62. TYMPANY.	Persons have possessed the power of swallowing air, so as to distend the stomach, and simulate tympany.	
63. ULCER OF THE EAR.	By introducing a tent, imbued with blistering plaster, into the ear, and repeating the application, until the tube becomes ulcerated, and a discharge of puriform matter is established. The fetid smell is imitated, by dropping into the ear a mixture of empyreumatic oil, assafoetida and old cheese. Also, by introducing a little honey into the meatus.	By careful examination.
64. ULCERS OF THE LEGS, &c.	By corrosives, or irritants. Sometimes by abrasion, by rubbing sand on the shin-bone. At others, they are pretended, by gluing on a piece of a spleen or the skin of a frog.	Artificial ulcers have, usually, a more distinct margin, and are more readily healed than others; the latter being generally indicative of an impaired constitution.
65. BLOODY URINE.	The fruit of the Indian Fig (<i>Cactus opuntia</i>) colours the urine as red as blood. Cantharides will cause it. Blood may also be procured and mixed with the urine.	By making the patient pass his urine in the presence of the physician, and examining the vessel before and after. By cutting off the supply of any substance, which could cause the appearance.
66. INCONTINENCE OF URINE.		Difficult, at times, of detection. Give the person a full dose of opium, and introduce the catheter, when he is asleep. If there be urine, the incontinence is feigned.
67. VARICOSE VEINS.	By a ligature, placed tightly round the limb. They may be excited in this manner, or aggravated if already existing.	By examining the limb.

FEMALE, (F) *Femelle, Fem'ina, Gynë.* In animals, the one that engenders and bears the young. It is, also, used adjectively;—as, the *Female sex*, &c.

FEM'ORAL, Femora'lis. Belonging or relating to the thigh;—as *Femoral artery, Femoral hernia*, &c., from *femur*, 'the thigh bone.'

FEM'ORO-TIB'IAL, Femoro-tibia'lis. Belonging to the femur and tibia. The *Femoro-tibial articulation* is the knee-joint.

FEMUR, Meros, Os fem'oris. The *Thigh Bone*. (F) *L'os de la Cuisse.* The strongest and longest of all the bones of the body, extending from the pelvis to the tibia, and forming the solid part of the thigh. The femur is cylindrical, slightly curved anteriorly, unsymmetrical and oblique downwards and inwards. The body of the bone is prismatic, and has, behind, a prominent ridge:—the *Linea aspera*.

PROCESSES. { *Upper or Pelvic Extremity.* { Head supported on a collum or neck.
Great trochanter.
Lesser trochanter.
Inferior or Tibial Extremity. { External condyle.
Internal condyle.
External tuberosity.
Internal tuberosity.

The femur ossifies from five points:—one on each process of the pelvic extremity; one in the body of the bone; and two on the condyles. It is articulated with the pelvis, tibia, and patella.

FENES'TRA. A Window: (F) *Fenêtre.* Anatomists have given this name to two apertures, situate on the inner paries of the cavity of the tympanum. The *one* of these is the *Fenestra ova'lis, F. vestibula'ris*. It is oval-shaped; situate at the base of the stapes, and corresponds with the cavity of the vestibule. The *other* is the *Fenes'tra ro-*

tun'da or *F. Cochlea'ris*. It is closed by a fine, transparent membrane, called *Membrana Tym'pani secunda'ria*, and corresponds to the inner scala of the cochlea.

FENESTRAL, *Fenestra'tus*, from *fenestra*, 'a window.' (F) *Fenêtré* et *Fenestré*. Bandages, compresses, or plasters with small perforations or openings, are so called. The openings prevent the detention of the discharge.

FERINE, *Ferinus*; 'savage, brutal;' *Theorio'des*. A term, applied to any malignant or noxious disease. In France, it is used only when joined to *Toux*; *Toux férine*, a dry, obstinate, and painful cough.

FERMENT, *Fermen'tum*, *Zymē*, *Zymo'ma*, *Leven*, (F) *Lévain*. The Iatrochymists applied this name to imaginary substances, to which they attributed the power of producing diseases, by exciting a fermentation in the humours.

FERMENTATION, *Fermenta'tio*, *Zymosis*, *Æstua'tio*, *Causis*, *Brasmos*. An intestine movement, occurring spontaneously in a liquid; whence result certain substances, that did not previously exist in it.

The chemical physicians attributed all diseases to an imaginary fermentation of the humours.

FERRAMEN'TUM, *Siderion*, *Instrumen'tum fer'reum*. Any surgical instrument, made of iron. By the vulgar, in France, the word *ferrements* means the instruments used in difficult labours.

FERREIN, CANAL OF, *Ductus Ferreini*. A triangular channel, which Ferrein supposed to result from the approximation of the free edges of the eyelids applied to the globe of the eye; and which he considered adapted for directing the tears towards the puncta lachrymalia, during sleep. The canal is, probably, imaginary.

The same name is, likewise, given to the *cortical canals*,—the first portions of the uriferous ducts, whilst still in the cortical substance of the kidney.

FERREIN, PYRAMID OF, *Pyr'amis Ferrei'nii*. Each of the papillæ of the kidney, according to Ferrein, consists of, at least, 700 subordinate cones or pyramids. To these last the name, 'pyramids of Ferrein' has been given.

FERRUM, *Mars*, *Sidē'ros*, *σίδης*, *Iron*. (F) *Fer*. A metal of a bluish-gray colour; fibrous texture; brilliant and fine-grained fracture. Specific gravity 7.600 to 7.800: hard, ductile, malleable, and magnetic.

The medicinal virtues of iron are tonic; producing fetid eructations, when it takes effect, owing to its meeting with acid in the stomach, which oxidizes it, and causes the evolution of hydrogen gas. When given in the metallic state, the filings are chiefly used; but the oxides and salts are most commonly employed.

FERRI LIMATU'RA PURIFICA'TA, *Purified Iron Filings*:—purified by means of the

magnet, for internal use. The filings are, also, called *Ferri Scobs*, *F. Ramen'ta et Pila*, *Martis Limatu'ra*, *Spec'ulum In'dicum*, *Ferri in pul'verem resolu'tio*, (F) *Limaille de Fer*. They are considered to possess the general properties of iron:—the iron becoming oxidized.

FERRI SUBCAR'BONAS, *F. Car'bonas*, *F. præcipita'tum*, *Chal'ybis Rubi'go præpara'ta*, *Ferri Rubigo*. (This last term, as well as *Ferru'go*, is applied to the subcarbonate or rust, formed by the action of moist air on metallic iron.) A protoxide of iron, oxidized by the decomposition of water; the carbonic acid being attracted from the air. Dose, gr. v to ʒss.

The *Ferri Subcarbonas* is precipitated from sulphate of iron by subcarbonate of soda. (*Pharm. L.*) It is, also, called *Ox'idum ferri fuscum*, *Deuto-car'bonas Ferri fuscus*, *Crocus martis apé'riens*, (F) *Safran de Mars apéritif*.

FERRI SULPHAS, *Sal Martis*, *Vitriolum Martis*, *Vitriolum Ferri*, *Ferrum Vitriola'tum*, *Sulfas vel Protosulfas Ferri vir'idis*, *Calcadi'num*, *Cal'cator*, *Cal'cotar*, *Chalcan'thum*, *Calcite'a*, *Atramen'tum suto'rium*, *Vit'riol*, *Vitriolum viride*, *An'ima Hep'atis*, *Sulphate of Iron*, *Green Vitriol*, *Copperas*. This salt is inodorous, and of a strong styptic taste. The crystals are light-green, transparent, rhomboidal; and soluble in two parts of water. It is tonic and anthelmintic. Dose, gr. j to vj and more.

FERRUM AMMONIA'TUM, *Mu'rias Ammo'niæ et Ferri*, *Flores martia'les*, *Flores salis ammoni'aci martia'les*, *Ens Martis*, *Ens Ven'eri Boylei*, *Sal Martis muriat'icum sublima'tum*, *Sal ammoni'acum martia'lē*, *Ammo'nium muriat'icum martia'tum seu martia'le*, *Aroph Paracel'si*, *Calen'dulæ minera'les*, *Ferrum ammoniacalē*, *ammonia'ted Iron*. (F) *Muriate d'ammoniaque et de fer*. A submuriate of ammonia with red muriate of iron. Dose, gr. iij to gr. xv.

FERRUM OXYDA'TUM HYDRATUM, *Hydras Fer'ricus*, *Hydro-oxide of Iron*, *Hydrated Oxide of Iron*, *Hydrated peroxide of Iron*, *Hydrated Tritoxide of Iron*. It may be prepared by taking a solution of sulphate of iron increasing its dose of oxygen by heating it with nitric acid, and precipitating the oxide by adding pure ammonia in excess, washing the precipitate.

It has been brought forward, of late, as an antidote to arsenic; and many cases of its efficacy have been published.

From 10 to 20 parts of the hydrated oxide would seem to be more than sufficient to convert 1 part of arsenious acid into the basic salt of iron.

FERRUM TARTARIZA'TUM, *Tartras Potas'sæ et Ferri*, *Tar'tarum Ferri*, *Tar'tarus chalybea'tus*, *Mars solu'bilis*, *Tartras Kal'ico-fer'ricus*, *Chalybs tartariza'tus*, *Tortarus martia'lis*, *Tartras Potas'sæ ferrugino'sus*,

Ferrum potabile, Globus martialis, (F) *Boule de Mars, Boule de Nancy, B. de Molsheim, B. d'Acier, Globuli Tartari martiales seu martiales soluti, seu martiali, seu tartratis ferri et lixiviae, Boli Martis, Pyri martiales, Tartarized Iron, Tartrate of Potass and Iron*, (Ferri ℞j, potass. supertart. ℞ij, aquæ ℞j. Rub them together, and expose to the air, in a flat glass vessel, for 8 days: then dry, and reduce to a fine powder. Add a pint of water to the powder, and put it aside for 8 days: dry and pulverize.) It is one of the mildest of the salts of iron, and not unpalatable. Dose, gr. x to ʒss.

The TINCTURA MARTIS APERITI'VA, *Tincture of Ludwig; Alcohol cum sulphatē Ferri tartarizatus; Tinctura Martis Glauberi*, is essentially, an aqueous solution of this salt; which is, also, called *Eau de Boule*, and is used in contusions.

HELVETIUS'S STYPTIC was composed of the filings of iron and tartar, mixed to a proper consistence with French brandy. It was called in England *Eaton's Styptic*; but this is now formed of *Sulphate of Iron*.

FEVER, *Febris*, from *fervor*, 'heat,' or from *feb'ruo*, 'I purify:'—*Pyr, Pyre'tos, πυρε'tos*, (F) *Fie'vre*. One of the most frequent and dangerous affections, to which the body is liable.

A person has an attack of fever, when he is affected with rigours, followed by increased heat of skin, quick pulse, languor, and lassitude. Rigours, increased heat and frequency of pulse have each been assumed as the essential character of fever. It is not characterized, however, by any one, but depends upon the coexistence of many symptoms.

Fevers have been usually divided into *idiopathic* or *essential*, and into *symptomatic*. The idiopathic arise without any obvious local cause. The symptomatic are dependent upon local irritation.

Idiopathic fevers may be divided into three classes: 1. Those attended with distinct paroxysms:—intermittents. 2. Remittent and continued fevers: and, 3. Fevers, complicated with eruptions, or the exanthematous.

These divisions admit of great variety, owing to climate, season, soil, age, &c.

All ages and climates are liable to fever; and its exciting causes are very numerous. These causes may be *common*; as irritations in the intestines; external injuries, stimulants, &c.; or they may be *specific*; as miasmata, contagion, &c.

The greatest diversity has prevailed regarding the theory of fever. Its primary seat has been placed in the brain, mucous membrane of the stomach and intestines, skin, nerves, blood-vessels, liver, vena cava, pancreas, &c.

It would seem, however, that although, in fever, the whole of the functions are morbidly impressed, the arguments in favour of the

impression being first made on the nervous system and the capillary system of vessels are the strongest. The exciting cause of fever, whatever it may be, produces an irregular action of the capillary system, which is soon conveyed to the rest of the system, owing to the extensive sympathy which exists between every part of the body; and it is probable, that all those local inflammations and congestions are the consequence, rather than the cause, of this disordered condition of the system.

Many phenomena of fever are influenced by that *periodicity*, which we notice in the execution of several of the functions of the body. The types of intermittents are strong evidences of such an influence.

In the *treatment* of fever, it is important, 1. To bear in mind its tendency, particularly in the case of the exanthemata, to run a definite course, and terminate in restoration to health. 2. The disposition to local determinations or hyperæmiæ:—the most frequent cause of the fatal terminations of fever; a circumstance requiring the vigilant attention of the physician. 3. That the symptoms must be attentively studied, in order to deduce, as far as possible, from them, the indications of cure.

Lastly. Attention must be paid to the prevalent epidemic. There are particular seasons, in which fevers are very malignant; and others, in which they are as mild; circumstances which necessarily have an effect upon the treatment.

FEVER, ADE'NO-MENINGE'AL, *Febris ade'no-meningea, Febris mesenter'ica* (BAGLIVI), *Morbus mucosus, Febris mucosa; Pitu'itous Fever, Catar'hal Fever, Continued Lymphat'ic Fever, Phlegmop'ya, Phlegmatop'ya, Gas'tro-Bronchi'tis*. Fever, accompanied with considerable mucous secretion; especially from the digestive tube.

FEVER, ANOM'ALOUS, *Febris anom'alus, F. errat'ica, F. irregula'ris, F. vaga*. A fever, whose progress and type are irregular.

FEVER, APHON'IC, *Febris aphon'ica*. A variety of intermittent, in which the voice is lost during the paroxysm.

FEVER, APOPLECTIC, *Febris apoplec'tica, Com'atose Fever, Febris comoto'des, F. Lethar'gica, F. soporo'sa*. An intermittent or continued fever, attended with apoplectic symptoms.

FEVER, ARTIFI'CIAL, *Febris artificia'lis, Febris arte promo'ta*. Fever, produced designedly by the internal or external use of stimulants.

FEVER, ASTHEN'IC, *Febris asthen'ica*. Fever, accompanied with debility. It may include every variety of fever under certain circumstances, but is generally appropriated to typhus.

FEVER, ASTHMAT'IC, *Febris asthmat'ica*. A pernicious intermittent, accompanied with symptoms of asthma.

FEVER, ATAXO-ADYNAM'IC; *Febris atax'o-
adynam'ica*. Fever, characterized by symp-
toms of ataxia and adynamia.

FEVER, BILIOUS, *Febris biliosa*, *F. poly-
chol'ica*, *Syn'ochus bilio'sus*, *F. aso'des*, *F.
choler'ica*, *F. gas'trica*, *F. hepatica*. The
common remittent fever of summer and au-
tumn; generally supposed to be owing to, or
connected with, derangement of the biliary
system.

FEVER, CARDIAL'GIC, *Febris cardial'gica*.
A variety of pernicious intermittent, accom-
panied with violent cardialgia, during the
paroxysm.

FEVER, CEPHALAL'GIC, *Febris cephalal'gica*.
A pernicious intermittent, accompanied with
intense pain of the head. Also, intermittent
cephalalgia.

FEVER, CER'EBRAL, *Brain fever*. Fever,
generally of an ataxic character, in which
the brain is considerably affected.

FEVER, CHOL'ERIC, *Febris choler'ica*. A
variety of pernicious intermittent, accompa-
nied with symptoms of cholera morbus.

FEVER, CHRONIC, *Febris chron'ica*. Some
authors apply this name to protracted fevers;
others, to hectic fever.

FEVER, COLLIQ'UATIVE, *Febris tab'ida*, *Fe-
bris colliquati'va*. Fever, characterized by
rapid emaciation, copious evacuations, and
rapid prostration of strength.

FEVER, CONVULSIVE, *Febris convulsiva*.
A pernicious intermittent, accompanied by
convulsions.

FEVER, DELIR'IOUS, *Febris cum delir'io*, (F)
Fièvre délirante. A pernicious intermittent,
characterized by delirium in the paroxysms.

FEVER, DEP'URATORY, *Febris depurato'ria*.
A fever, to which was attributed the property
of purifying the blood; or which indicated,
that such a pretended depuration had oc-
curred.

FEVER, DIAPHORET'IC, *Febris diaphoret'ica*,
Febris sudato'ria. A pernicious intermit-
tent, with excessive sweating during the fit.

FEVER, DIGESTIVE. The chilliness, follow-
ed by increased heat and quickness of pulse,
which frequently accompanies digestion.

FEVER, DOUBLE, (F) *Fièvre double ou dou-
blée*. An intermittent, which has two par-
oxysms in a given time, instead of one.

FEVER, DOUBLE-QUARTAN. A fever, whose
paroxysms occur two days in succession, and
fail the third day: the first paroxysm re-
sembling the 4th; and the second the 5th.

FEVER, DOUBLE-QUOTID'IAN. An intermit-
tent, whose paroxysms return twice every
day at corresponding hours.

FEVER, DOUBLE-TERTIAN. An intermittent,
whose paroxysms return every day; the first
corresponding with the 3d, the second with
the 4th, and so on.

FEVER, DUODEC'IMANE, *Febris duodecima-
na*. A supposititious intermittent, whose pa-
roxysms recur on the 12th day or every 11
days.

FEVER, EPILEP'TIC, *Febris epilep'tica*. A
variety of pernicious intermittent, accompa-
nied with attacks of epilepsy.

FEVER, EROT'IC, *Febris erot'ica*, (F) *Fièvre
d'amour*. A chronic fever, occasioned by un-
propitious love.

FEVER, ERRAT'IC, *Febris errat'ica*. An in-
termittent, the recurrence of whose parox-
ysms is irregular.

FEVER, GAN'GRENOUS, *Febris gangræno'-
des*. Fever, accompanied by gangrene of va-
rious parts, and especially of the limbs and
genitals. Senac describes an intermittent of
this kind.

FEVER, GASTRIC, *Febris gas'trica*, *Sto-
mach'ic fever*, *Syn'ochus Bilio'sa*. A name,
given by some to the bilious fever, which has
appeared to them to be dependent on an af-
fection of the stomach. *Menin'go-gastric
fever*; *Harvest fever*, (F) *Fièvre de la Mois-
son*.

FEVER, GASTRO-ADYNAM'IC, *Febris gas'tro-
adynam'ica*. A fever, in which the symptoms
of bilious fever are joined with those of ady-
namic fever.

FEVER, GASTRO-ANGEIOTEN'IC. A fever, in
which the symptoms of the bilious are united
with those of the inflammatory fever.

FEVER, GASTRO-ATAXIC. A fever, in which
the symptoms of bilious fever are united with
those of ataxic fever.

FEVER, HAY, *Catarr'hus æsti'vus*, *Summer
Catarrh*. A catarrh to which certain persons
are subject in summer, and which has been
ascribed in England to the effluvium of hay,
but this is not probable. It is a catarrh with
sneezing, headache, weeping, snuffling and
cough, with, at times, fever and general dis-
comfort. It is not uncommon in this country.
It disappears spontaneously: to recur on sub-
sequent years about the same period.

FEVER, HEBDOM'ADAL. A supposititious fever,
whose paroxysms return weekly, and on the
same day.

FEVER, HÆMOP'TOIC, *Febris hæmoptoica*. A
variety of masked intermittent, in which
periodical hæmoptysis is the chief symptom.

FEVER, HEPATIC OR HEPATAL'GIC. A per-
nicious intermittent, with violent pain in the
right hypochondrium.

FEVER, HUN'GARY, *Febris Hungar'ica*, *Mor-
bus Ungar'icus*, *Cephalon'osus*, (F) *Fièvre
Hongroise ou de Hongrie*. An endemic ty-
phus, common amongst the soldiers in bar-
racks, in Hungary.

FEVER, HU'MORAL, *Febris humora'lis*. Fe-
ver, in which an alteration or deterioration of
the humours is suspected.

FEVER, HYDROPHOB'IC, *Febris hydrophob'i-
ca*. Pernicious intermittent, with dread of
liquids.

FEVER, HYSTER'IC, *Febris hyster'ica*. Hys-
teria, accompanied by fever. Hysteria, oc-
curring with each paroxysm of an intermit-
tent.

FEVER, ICTER'IC, *Febris icter'ica*. Fever,

accompanied by jaundice. Some intermittents exhibit this complication at each paroxysm.

FEVER, INSIDIOUS. Fever, which, at first, seems devoid of danger, but subsequently becomes of a more or less malignant character.

FEVER, LO'CHIAL, *Febris lochialis*. That acceleration of the circulation, which sometimes occurs during the discharge of the lochia.

FEVER, MALIG'NANT, *Febris maligna*. Fever, which makes its approaches insidiously, and subsequently becomes formidable. Any fever, which exhibits a very dangerous aspect.

FEVER, MASKED, *Febris larvata*, (F) *Fièvre larvée*. An anomalous intermittent, the paroxysms of which have not the regular stages.

FEVER, MESENTER'IC, *Febris mesenterica*. A name given, by Baglivi, to a species of fever, which appears to have belonged either to the *mucous* or *bilious*.

FEVER, MILK, *Febris lac'tea*, (F) *Fièvre de lait* ou *laiteuse*, *F. lactée*; *Galactop'ya*. The fever, which precedes or accompanies the secretion of milk, in women recently delivered. It comes on, generally, about the third day after delivery; and is characterized by quick pulse; increased heat; redness of face; diminution or temporary suppression of the lochial discharge; tumefaction and tension of the breasts. It commonly terminates in 24 hours, and often with profuse perspiration. It requires the use of antiphlogistics, with dry diet.

FEVER, NEPHRIT'IC, *Febris nephretica*. Intermittent fever, accompanied with nephritic pain during the paroxysm.

FEVER, NERVOUS, *Febris nervosa*, *Febris lenta nervosa*. A variety of typhus; the *Typhus mitior* of Cullen. By many, however, it is esteemed a distinct disease. See Typhoid Fever.

FEVER, NON'ANE, *Febris nona'na*. A supposititious fever, whose paroxysms recur every 9th day, or every 8 days.

FEVER, OC'TANE, *Febris octa'na*. An intermittent, whose paroxysms recur every 8th day.

FEVER, PERIOD'ICAL, *Febris periodica*. An intermittent or remittent fever.

FEVER, PERNI'CIOUS, *Febris pernicio'sa*. Intermittent fever, when attended with great danger, and which destroys the majority of those affected by it in the first four or five paroxysms; sometimes in the very first.

FEVER, PESTILEN'TIAL, *Febris pestilentia'lis*. The *Plague*. Also, severe cases of typhus. The yellow fever and sweating sickness have, likewise, been thus designated.

FEVER, PUER'PERAL, *Febris puerpera'lis*, *Childbed fever*. This name has been given to several acute diseases, supervening after

delivery. It means, generally, a malignant variety of peritonitis, which runs its course very rapidly, and passes into a typhoid condition, unless met, at the very onset, by the most active depleting measures. By the generality of practitioners, it is esteemed to be eminently contagious: some, however, deny that it is so. See Peritonitis.

FEVER, PU'RULENT, *Febris purulen'ta*. Fever, which accompanies suppuration.

FEVER, QUINTAN, *Febris quinta'na*. A fever, whose paroxysms return every fifth day. It rarely, if ever, occurs.

FEVER, QUOTIDIAN, *Febris quotidiana*. A fever, whose paroxysms recur daily.

FEVER, REGULAR, *Febris regula'ris*. An intermittent, whose paroxysms follow a determinate type. It is opposed to *atypic*. Sometimes opposed to *anomalous*.

FEVER, SCORBUTIC, *Febris scorbu'tica*. The febrile movement, which sometimes accompanies scorbutus or scurvy.

FEVER, SECONDARY. A febrile condition, which recurs in certain affections after having ceased:—such as the secondary fever, which comes on at the time of the suppuration of the variolous pustules, or after the eruption of scarlatina, &c. has disappeared.

FEVER, SEPTAN, *Febris septa'na*. An intermittent, whose paroxysms recur every six days, and consequently on the 7th.

FEVER, SEXTAN, *Febris sextana*. A fever, which recurs every five days, and consequently on the 6th.

FEVER, SIMPLE, *Febris simplex*. Simple fever, is that which has no predominant character,—bilious, inflammatory, or nervous; and which is unaccompanied with any local determination, hyperæmia, or complication. It may be continued, remittent, or intermittent.

FEVER, SIMPLE CONTINUED. This is the most favourable case of continued fever, and has a tendency to wear itself out, provided only the *lædientia* are avoided. The prognosis is consequently favourable, and the treatment simple; consisting in perfect repose of body and mind, abstinence, and relieving the thirst by cold acidulated drinks.

FEVER, SINGUL'TOUS, *Febris singulto'sa*. Fever, accompanied with singultus or hiccough.

FEVER, STERCORAL, *Febris stercora'lis*. Fever, produced by an accumulation of fæces in the intestines.

FEVER, SUBINTRANT, *Febris subin'trans*. An intermittent, in which one paroxysm is scarcely finished before the other begins.

FEVER, SYNCOPAL, *Febris syncopa'lis*, *F. minu'ta*. A variety of pernicious intermittent, in which there is, in every paroxysm, one or more faintings.

FEVER, SYPHILITIC, *Febris syphilitica*. Fever, accompanying syphilis, or supposed to be owing to a syphilitic taint.

FEVER, TERTIAN, *Febris tertia'na*. A fever, whose paroxysm returns on the third day, and consequently every two days.

FEVER, TRAGIC, *Febris trag'ica*. A low fever, in which the patient declaims like an actor, during the delirium.

FEVER, TRAUMATIC, *Febris traumat'ica*. The fever, which supervenes on wounds or great surgical operations.

FEVER, VERMINOUS, *Febris vermino'sa*, *Helmintho'pyra*, worm fever. Fever, produced by the presence of worms in the digestive tube, or accompanied by their expulsion.

FEVER, VERNAL, *Febris vernalis*. An intermittent or other fever occurring in the spring. Vernal intermittents were formerly considered salubrious.

"An ague in the spring
Is physic for a king."

FEVER, WALCHEREN, *Gall-sickness*. The remittents and intermittents to which the British troops were exposed, who were attached to the expedition to Walcheren, in 1809.

FEVER, YELLOW, *Febris flava*, *Typhus ictero'des*, *F. contin'ua pu'trida ictero'des Caroliniensis*, *Elo'des ictero'des*, *Febris malig'na bilio'sa Americae*, *Ochropyra*, *Syn'ochus ictero'des*, *Fièvre matelote*, *Febris malig'na flava Indiae Occident'alis*, *Endem'ial Causus of the West Indies*, *Causus trop'icus endem'icus*, *Bilious remitting yellow fever*, *Malig'nant pestilen'tial fever*,—*Fièvre jaune d'Amérique*, *Fièvre gastro-adyamique*, *Typhus miasmaticus ataxique putride jaune*, *Vomito prieto*, *Vomito negro*, *Mal de Siam*, *Fièvre de la Barbade*, *Black vomit*, *Febris toxica*, *Febris tropica*, *Typhus d'Amérique*, *Bulam Fever*, *Gibrallar Fever*, *Barcelona Fever*. A very acute and dangerous, febrile affection; so called, because complicated, in its second stage, with jaundice, and accompanied by vomiting of black matter. Sauvages, Cullen, and others regard it as a variety of typhus; and Pinel as a species of gastro-adyamic, or bilious putrid fever. It occurs, endemically, only within the tropics; but epidemically it has been met with in the temperate regions. Broussais regards the disease as gastro-enteritis, exasperated by atmospheric heat; so that it runs through its stages with much greater rapidity than the gastro-enteritis of our climates. The yellow colour of the skin, according to him, is owing to the inflammation of the small intestine,—and especially of the duodenum,—augmenting the secretion of the liver, and at the same time preventing its discharge into the duodenum.

The pathology of this affection, as well as its origin, is still unsettled. The treatment must generally be of the most active nature at the onset; consisting in bleeding largely, and exhibiting mercury so as to excite a new action if possible;—the other symptoms being combated according to general princi-

ples. It must vary, however, according to the epidemic.

FEVERISH, *Febriens*, *Febricosus*, (F) *Fièvreux*. That, which causes fever, as *feverish food*, *feverish diathesis*, &c. Also, the state of one labouring under fever.

FIBRE, *Fibra*, *Is*, *κτῆσας*, *Ctedon*, *Filum*, *Filamentum*. An organic filament, of a solid consistence, and more or less extensible, which enters into the composition of every animal and vegetable texture. The *simple* or *elementary fibre* of the ancients, from a particular assemblage and arrangement of which every texture of the body was conceived to be constituted, seems entirely ideal.

The moderns usually admit, with Haller and Blumenbach, *three elementary fibres* or *tissues*. 1. The *cellular* or *laminated*, formed chiefly of thin plates, of a whitish colour and extensible, and which seems to consist of concrete gelatine. 2. The *nervous*, *pulpy*, or *medullary*, formed of a soft substance, contained in a cellular sheath, and consisting of albumen united to a fatty matter. 3. The *muscular*, composed of round filaments, of a grayish or reddish colour, and formed of fibrine.

Chaussier has added to these the *albugineous fibre*, but it seems to differ from the cellular fibre only in the greater condensation of the molecules.

A very small fibre is called a *Fibril*, *Fibrilla*.

FIBRINE, *Fibri'na*, *Fibra san'guinis*, *Mat'ria fibro'sa*, *Lympha plastica*. An immediate animal principle—solid, white, and inodorous; insipid; heavier than water; without action on the vegetable blues: elastic, when moist; hard and brittle when dry. It enters into the composition of the chyle and the blood, and forms the chief part of the muscles of red-blooded animals. Fibrine is very nutritious. In certain diseased actions, *Fibrine* or *Coagulable lymph*, *gluten*, is separated from the blood, and is found in considerable quantity on the surfaces of membranes, and in the cavities of the body. The name, *Coagulable lymph*, has also been given to that part of the serum, which coagulates when heated, and is of an albuminous nature.

FIBRINOUS, *Fibrino'sus*. That which is composed of fibrine, or has the appearance of fibrine.

FIBRO-CARTILAGE, *Fibro-cartila'go*. An organic tissue, partaking of the nature of the fibrous tissue, and of that of cartilage. It is dense, resisting, elastic, firm, supple, and flexible.

Fibro-cartilages are distinguished into,—1. *Membraniform*, or those which serve as moulds to certain parts, as the *alæ nasi* and eyelids. 2. *Vaginiform* or those which form sheaths for the sliding of tendons. 3. *Inter-articular*, those, which are met with in the

movable articulations. 4. *Uniting Fibro-cartilages*, (F) *Fibro-cartilages d'union*, which form a junction between two bones, as at the symphysis pubis. Fibro-cartilages are, sometimes, formed adventitiously, as the result of a morbid process in different organs.

FIBRO-MUCOUS, *Fibro-muco'sus*. Fibrous membranes, intimately united with other membranes of a mucous nature, as the *pituitary membrane*, the *membrane of the urethra*.—Bichat.

FIBRO-SEROUS, *Fibro-sero'sus*. Possessing the nature of fibrous and serous membranes. Membranes, composed of a fibrous, and a serous sheet, intimately united:—as the *Dura Mater*, *Pericardium*, *Tunica albuginea testis*, &c.—Bichat.

FIBROUS, *Fibro'sus*. Composed of fibres. Certain membranes, as the *dura mater*, *periosteum*, *ligamentous capsules of the joints*, &c. are *fibrous*. The *fibrous system* of Bichat included the system of organs, formed by the *albugineous fibre* of Chaussier. It comprised, particularly, the *periosteum* and *perichondrium*; the *articular capsules* and *ligaments*; the *tendons*; the *dura mater*, *pericardium*, *tunica sclerotica*, *tunica albuginea testis*, *outer membrane of the spleen*, &c.

FIBULA, *Cruris radius*, *Canna minor*, *Os pe'rone*, *Foc'ile minus*, *Sura*, *Arun'do minor*, *Fistula Cruris*, *Tibia minima*, 'a clasp.' The *splinter bone* of the leg. (F) *Péroné*. The long, small bone, situate at the outer part of the leg. The superior or tibial extremity of the fibula is rounded and forms the *caput* or *head*. It is articulated with the tibia. Its inferior or tarsal extremity is broader than the superior. It is articulated with the tibia and astragalus, and forms the *malleolus externus* or *outer ankle* by means of its *coronoid process*. The body of the bone has three faces, having more or less prominent edges. It is separated from the tibia by the *interosseous space*; and is developed by three points of ossification; one at the body, and one at each extremity. It prevents the foot from turning outwards.

FICUS, *Syco'sis*, *Syco'ma*, *Fica'tio*, *Fico'sus Tumor*, *Fico'sa eminen'tia*, *Maris'ca*, (F) *Fic*. A fleshy excrescence, often soft and reddish, sometimes hard and scirrhus, hanging by a peduncle, or formed like a fig; occurring on the eyelids, chin, tongue, anus, or organs of generation. The *fici*, seated on the last mentioned parts, are generally of a syphilitic character.

FICUS CAR'ICA. The systematic name of the fig tree. (F) *Figuier*. *Carica*, *Ficus*, *Ficus vulga'ris*, *Ficus commu'nis*, *Syce*, *συκη*, (F) *Figue*. The fig is a pleasant fruit when ripe; as well as when dried in the state in which it is found in the shops. It is used, at times, in place of a cataplasm; especially in gum boils.

FIDGETS. Of doubtful etymology. *Dys-*

pho'ria simplex, *D. nervo'sa*, *Erethis'mus simplex*, *Tituba'tio*, (F) *Fréttillement*. General restlessness and troublesome uneasiness of the nerves and muscles; with increased sensibility; and inability of fixing the attention, accompanied with a perpetual desire of changing the position.

FIGURÉ (F). An epithet for a compressive bandage, applied over the head after bleeding from the frontal vein. It has also been called *bandage royal*.

FIL'AMENT, *Filamen'tum*, from *filum*, 'a thread.' This word is used synonymously with *fibril*; thus, we say, a *nervous* or *cellular filament*. Also, the glairy, threadlike substance, which forms in the urine, in some diseases, and which depends on a particular secretion from the mucous membrane of the urinary passages.

FIL'IFORM, *Filiform'is*, from *filum*, 'a thread,' and *forma*, 'form;' having the shape of a thread; as the *filiform papillæ* of the tongue. See *Papillæ*.

FILTRA'TION, *Filtra'tio*, *Percola'tio*. A pharmaceutical operation, which consists in passing a fluid through a filter or strainer, for the purpose of clarifying it. In ancient physiology, it meant the action, by which the different humours of the body are separated from the mass of blood.

FILTRUM. A filter. Any porous, material; such as *sand*, some kinds of *freestone*, powdered *charcoal*, pounded *glass*, *flannel*, unsized *paper*, &c., through which a fluid is passed for the purpose of separating it from the matters, suspended in it.

FIMBRIA, *Parar'ma*. A band; a fringe; as the *fimbriæ* or *fimbriated extremities* of the Fallopian Tubes.

FIMUS. *Stercus*, *Dung*.

The **FIMUS EQUI'NUS**, *Stercus equi non castra'ti*, *Stone-horse dung*, was once thought antileuritic.

FIMUS VACCÆ or *Cow-dung* was employed as a cataplasm, especially in gout.

STERCUS AN'SERIS or *Goose-dung*, was applied as a poultice to the feet in malignant fever. See *Chenocoprus*.

FISSICULA'TIO, from *fissicula're*, 'to cut off,' 'open,' 'make incisions.' An old word for an opening made with a scalpel.

FISSURE, *Fissu'ra*, from *fin'dere*, 'to cleave;' a long and narrow cleft or opening in a bone—*Rhage*, *ρᾶγη*, *Ceasma*, *κίσσμα*. (F) *Fissure*, *Fente*.

The **CENTRAL FISSURE**, is the aggregate of the cavities or ventricles of the brain. Meckel considers this but one cavity, in the form of a cross, which he calls thus.

The **GLENOID FISSURE** or *Fissure of Glase'rius*, (F) *Fissure ou scissure de Glaser*, *Fente glenoïdale ou Fêlure de Glaser*, divides the glenoid cavity of the temporal bone into two parts, and gives passage to the *corda tympani*, &c.

FISSURA VEL FOSSA MAGNA SYLVII. A

deep, narrow sulcus, which ascends obliquely backwards from the temporal ala of the sphenoid bone to near the middle of the parietal bone; and which parts the anterior and middle lobes of the cerebrum on each side.

FISSURE. Same etymon. 1. A fracture in which the bone is cracked, not separated, as in fracture,—*Catagma Fissura*. 2. A narrow, long, and superficial solution of continuity, around the external openings of the mucous membranes. A sort of chap, observed on the hands, particularly on the callous hands of workmen in certain mechanical employments. 3. Small, chapped ulcerations, sometimes noticed in young children, owing to the contact of the feces and urine with the fine, delicate skin of the thighs, nates, and genital organs. 4. Clefts, of a more or less deep nature, occurring on the genital organs, in the vicinity of the anus, in those labouring under syphilis. These are usually called *rhagades*.

FISTULA, Syrinx. A solution of continuity, of greater or less depth, and sinuosity; the opening of which is narrow, and the disease kept up by an altered texture of parts, so that it is not disposed to heal.

A fistula is *incomplete* or *blind*, when it has but one opening; and *complete* when there are two, the one opening into an internal cavity, the other externally. It is lined, in its whole course, by a membrane, which seems analogous to mucous membranes.

Incomplete fistulæ may be *internal* or *external*. The former are those, which open *internally*; the latter, those which open *externally*.

External incomplete fistulæ are kept up by caries or necrosis of bones, by extraneous bodies in any of the living textures, or by purulent cavities, the walls of which have not become united. *Internal incomplete fistulæ*, generally, become soon complete; since the discharge, which escapes from them into the cavities, where they open, has a constant tendency to make its way outwardly and soon occasions ulceration of the integuments. *Fistulæ* have received different names, according to the discharge, which they afford, and the organs in which they are seated,—as *lachrymal*, *biliary*, *salivary*, *synovial*, *urinary*.

The great object of treatment, in fistulous sores, is to bring on an altered condition of the parietes of the canal; by astringent or stimulating injections, caustics, the knife, pressure, &c. Those which are dependent on diseased bone, cartilage, tendon, &c. do not heal until after the exfoliation of the diseased part. *Fistulæ* of excretory ducts are produced, either by an injury of the duct itself, or by the retention and accumulation of the fluids to which they have to give passage. Thus, *Fistula lachrymalis*, *Emphragma lachrymale*, *Hydrops sacci lachrymalis*, *Dropsy of the lachrymal sac*, *Mucocele of the*

lachrymal sac, commonly proceeds from the obliteration of the nasal duct, or from atony of the lachrymal sac; which circumstances prevent the tears from passing into the nostrils.

Fistula in ano, *Archosyrinx*, generally occurs from some mechanical pressure or impediment. The principal indication, in the treatment of these fistulæ of the excretory canals, being,—to put a stop to the constant discharge of the secretions, &c., through the preternatural channel, the fistulous passage is at times laid open, and a communication established with the natural excretory canal; at others, strong pressure is employed to procure its obliteration.

FIXED, Fixus. A body, not capable of being volatilized by fire is said to be fixed. Thus we say *fixed oils*, in contradistinction to *volatile oils*.

FIXEN, MINERAL WATERS OF. This spring is four leagues from Waldsassen, in Bavaria. It contains carbonic acid, holding in solution carbonates of lime and magnesia, muriates of lime and magnesia, carbonate of soda and silica. In Bavaria, it replaces the Seltzer water.

FIXI DENTES. The teeth of the second dentition.

FLABELLATION, Flabella'tio, from *flabella're*, to agitate the air. An operation, recommended by Ambrose Paré, which consists in keeping fractured limbs cool, as well as the dressings surrounding them, by the renewal of the air around them, either by the use of a fan, or the repeated change of position of the parts affected.

FLACCIDITY, Flaccid'itas, from *flaccidus*, 'flabby,' 'soft.' Softness of a part, so as to offer little resistance on pressure.

FLANKS, Ilia, La'gones, Lap'ara, Ceneo'nes, (F) Flancs, Les Iles. The regions of the body, which extend on the sides, from the inferior margin of the chest to the *crista ilii*.

FLATULENCE, Flatulen'tia, Flatus, Flatuos'ity, Clydon, Physa, Polyphy'sia, Wind, Limo'sis Fla'tus, Ereux'is, Bombus, (F) Ventosité. Emission of wind by the mouth or anus; or accumulation of wind in the digestive tube.

FLEAM, Flamma, Flam'mula, Schaste'rion, Fosso'rium, Phlebot'omus. A surgical instrument, used for the operation of phlebotomy. (F) *Flamme, Flammette*. It consists of a small metallic box, containing a spear-pointed cutting instrument, which, by means of a spring, can be forced into the vein. It is much used in Germany and some other European countries; and is not unfrequently employed in America; but is scarcely ever seen in France or Great Britain.

FLEMEN, Flegmen. A tumour about the ankles. Also, chaps of the feet and hands.

FLESH, Caro, Sarx, σαγξ, (F) Chair. Every soft part of an animal is so named;

but more particularly the muscles, which are called *muscular flesh*.

FLEXIBILITY, A physical property of the tissues, which varies greatly according to the structure. The tendons exhibit this property in a marked manner.

FLEX'ION, *Flex'io*, *καμπή*, *Campé*, from *flec'tere*, 'to bend.' The state of being bent. The action of a flexor muscle.

FLEXOR. Same etymon. (F) *Fléchisseur*. A muscle, whose office it is to bend certain parts.

FLEXOR BREVIS DIGITO'RUM PEDIS, *Perforatus*, *F. Sublimis*, *Flexor brevis*, *Flexor digito'rum brevis sive perforatus pedis*, *Perforatus seu flexor secundi interno'dii digito'rum pedis*, *Calcaneo-sous-phalangettien commun.*—*Calcaneo-sous-phalangenien commun.*—(Ch.) (F) *Muscle court fléchisseur commun des orteils*. A muscle, placed at the middle part of the sole of the foot. It is narrower and thicker behind than before, where it is divided into four portions. It arises from the posterior part of the inferior surface of the os calcis, and is inserted at the inferior surface of the second phalanx of the four last toes. It bends the second phalanges of the toes on the first, and the first on the metatarsal bones; in this manner augmenting the concavity of the vault of the foot.

FLEXOR BREVIS MIN'IMI DIG'ITI PEDIS. *Para'thenar minor*, (F) *Court fléchisseur du petit orteil*, *Tarso-sous-phalangien du petit orteil*—(Ch.) A muscle, situate at the anterior and outer part of the sole of the foot. It arises from the posterior extremity of the fifth metatarsal bone, and is inserted into the posterior part of the first phalanx of the little toe, which it bends.

FLEXOR BREVIS POL'ICIS MANUS, *Flexor secundi interno'dii*, *Thenar*, *Flexor primi et secundi ossis pol'icis*—*Court fléchisseur du pouce*—*Carpophalangien du pouce*,—(Ch.) *Demi-interosseux du pouce*. A muscle, situate at the outer part of the palm of the hand. It is divided into two portions by the tendon of the *Flexor longus pollicis*. It arises from the os magnum, the anterior annular ligament of the carpus and the third metacarpal bone; and is inserted into the superior part of the first phalanx of the thumb, and into the two ossa sesamoidea at the articulation of the first phalanx with the first metacarpal bone. Its use is to bend the first phalanx of the thumb on the first metacarpal bone; and the latter upon the trapezium.

FLEXOR BREVIS POL'ICIS PEDIS. *Flexor brevis*, *Flexor hal'lucis vel brevis pol'icis*, *Tarso-phalangien du pouce*, *Court fléchisseur du gros orteil*, *Tarso-sous-phalangettien du premier orteil*,—(Ch.) It is situate at the anterior and inner part of the sole of the foot; is thin and narrow behind, thick and divided into two portions before. It arises from the inferior part of the os calcis and the two last cuneiform bones, and is inserted at the infe-

rior part of the base of the first phalanx of the great toe, and into the two sesamoid bones of the corresponding metatarso-phalangean articulation. It bends the first phalanx of the great toe on the first metacarpal bone.

FLEXOR LONGUS DIGITO'RUM PEDIS PROFUNDUS PER'FORANS; *Per'forans seu Flexor profundus*, *Perodactyleus*, *Flexor digito'rum longus sive Perforans pedis*, *Perforans seu Flexor tertii internodii digito'rum pedis*; *Tibio-phalangettien*,—(Ch.), *Grand ou long fléchisseur commun des orteils*. A muscle, situate at the posterior and deep-seated part of the leg. It is broader at its middle than extremities, the inferior of which is divided into four portions. It arises from the posterior surface of the tibia; and its tendons are attached to the posterior part of the lower surface of the three phalanges of the four last toes. It bends the three phalanges on each other, and the toes on the metatarsus, and extends the foot on the leg.

The **ACCESSO'RIVS FLEXO'RIS LONGI DIGITO'RUM PEDIS**, *Caro quadra'ta Sylvii*, *Caro accessoria*, *Planta'ris verus*; *Accessoire du long fléchisseur commun des orteils*, *Carrée*, is a small muscle of the sole of the foot, which passes obliquely from the os calcis to the outer edge of the flexor longus, whose force it augments, and corrects its obliquity.

FLEXOR LONGUS POL'ICIS MANUS, *Flexor longus pollicis*, *Flexor tertii internodii*, *Flexor tertii internodii sive longis'simus pollicis*; *Radio-phalangettien du pouce*,—(Ch.) Situate at the anterior and profound part of the forearm. It arises from the upper three-quarters of the anterior surface of the radius and interosseous ligament, and is inserted, by a tendon, into the anterior surface of the last phalanx of the thumb. It bends the second phalanx of the thumb on the first; the first on the corresponding metacarpal bone, and this upon the radius. It can, also, bend the hand on the forearm.

FLEXOR LONGUS POL'ICIS PEDIS, *Flexor Hallucis vel Pollicis longus*, *Peroneo-phalangenien du gros orteil*, *Long fléchisseur du gros orteil*, *Peroneo-sous-phalangettien du pouce*,—(Ch.) It is situate at the posterior and profound part of the leg. It arises from the posterior surface of the fibula and the interosseous ligament, and is inserted, by means of a long tendon, into the inferior part of the first phalanx of the great toe. It bends the third phalanx on the first; and this upon the corresponding metatarsal bone. It augments the concavity of the sole of the foot, and extends the foot on the leg.

FLEXOR PARVUS MIN'IMI DIG'ITI, *Abductor minimi digiti*, *Hypoth'enar Riola'ni*, *Flexor brevis minimi digiti manus*, *Hypoth'enar minimi digiti*, *Carmo-phalangien du petit doigt*—(Ch.), *Court fléchisseur du petit doigt*. It arises from the anterior annular ligament of the carpus and the process of the os unci-

forme, and is inserted at the inner side of the superior extremity of the first phalanx of the little finger. It bends the first phalanx of the little finger.

FLEXOR PROFUNDUS PERFORANS, *F. Profundus*, *F. Perforans*, *F. Perforans vulgo profundus*, *Flexor tertii internodii digitorum manus vel Perforans manus*; *Cubito-phalangettien commun*—(Ch.), *Fléchisseur, profond des doigts*. A thick, flat, long muscle, seated beneath the *Flexor sublimis perforatus*. Its upper extremity is simple, and arises from the anterior surface of the ulna and from the interosseous ligament. Its inferior extremity terminates by four tendons which, after having passed through the slits in the *sublimis*, are inserted into the anterior surface of the last phalanges of the four fingers. It bends the third phalanges on the second; and, in other respects, has the same uses as the following.

FLEXOR SUBLIMIS PERFORATUS, *F. Perforatus*, *Fléchisseur sublime ou superficiel des doigts*, *Epitroklo-phalanginien commun*—(Ch.) It is a thick, flat muscle, seated at the anterior part of the forearm. Its upper extremity, which is simple, arises from the internal condyle of the os humeri;—from the coronoid process of the ulna, and from the anterior edge of the radius. Its lower extremity divides into four tendons, which slide under the anterior annular ligament of the carpus, and are inserted into the second phalanges of the four last fingers, after having been slit to allow the tendons of the flexor profundus to pass through them. This muscle bends the second phalanges on the first; these on the carpal bones, and the hand on the forearm.

FLORIDA, WATERS OF. Near Long Lake, in Florida, U. States, which communicates with St. John's River by a small creek, there is a vast fountain of hot mineral water, issuing from a bank of the river. From its odour it would seem to be sulphureous.

FLOWERS, *Flores*, (F) *Fleurs*. The ancient chymists gave this name to different solid and volatile substances, obtained by sublimation. The term is not yet entirely banished from chymical and medical language, as *Flowers of Benjamin*, *Flowers of Sulphur*, &c.

The **FOUR CORDIAL FLOWERS**, *Quatuor flores cordiales* were, formerly, borage, bugloss, roses, and violets.

The **FOUR CARMINATIVE FLOWERS**, *Quatuor flores carminatiui*, were camomile, dill, feverfew, and melilot.

FLUCTUATION, *Fluctuatio*, from *fluctus*, 'a wave.' *Undulatio*, (F) *Ondulation*. The undulation of a fluid, collected in any natural or artificial cavity, which is felt by pressure or by percussion, properly practised. In ascites, the fluctuation is felt by one of the hands being applied to one side of the abdo-

men, whilst the other side is struck with the other hand. In abscesses, fluctuation is perceived by pressing on the tumour, with one or two fingers alternately, on opposite points.

FLUID, *Flu'idus*, from *fluere*, 'to flow.' The human body is chiefly composed of fluids. If a subject, weighing 120 pounds, be thoroughly dried in an oven, the remains will be found not to weigh more than 12 or 13 pounds: so that the proportion of fluids to liquids in the body is about 9 or 10 to 1.

TABLE OF THE FLUIDS OF THE HUMAN BODY.

1. <i>Blood</i> .	
2. <i>Lymph</i> .	
3. <i>Exhaled or Perspiratory Fluids</i> .	{ Cutaneous transpiration;—transpiration of the mucous, serous, and synovial membranes; of the cellular membrane; of the adipous cells; of the medullary membrane; of the interior of the thyroid gland; the thymus; supra-renal capsules; eye; ear; vertebral canal, &c.
4. <i>Follicular Fluids</i> .	{ Sebaceous humour of the skin; cerumen; gum of the eye; mucus of the mucous glands and follicles; that of the tonsils, of the glands of the cardia, the environs of the anus, of the prostate, &c.
5. <i>Glandular Fluids</i> .	{ Tears; saliva; pancreatic fluid; bile; urine; of the glands of Cowper; sperm; milk; fluid of the testes and mammae of the new-born child.

FLUX, *Fluxus*, *Proflu'vium*, from *fluere*, 'to flow.' A discharge. *Rhysis*. In Nosology, it comprises a series of affections, the principal symptom of which is the discharge of a fluid. Generally, it is employed for dysentery.

FLUX, BILIOUS, *Fluxus biliosus*. A discharge of bile, either by vomiting or by stool, or by both, as in cholera.

FLUXION, *Fluxio*, *Affluxus*. A flow of blood or other humour towards any organ with greater force than natural. A *determination*. Thus we say, in those disposed to apoplexy, there is a *fluxion* or *determination* of blood to the head.

FLUXION DE POITRINE (F). By this name, the French often understand, the *acute pulmonary catarrh* or *pleurisy*, but most commonly *peripneumony*.

FOC'ILE. This name was formerly given to the bones of the leg, as well as to those of the forearm: the tibia and ulna being each called *Focile majus*; the fibula and radius, *Focile minus*.

FETABULUM. An encysted abscess.—Marcus Aurelius Severinus.

FETAL, *Fætalis*. Relating to the fœtus. A name, given to parts connected with the fœtus. Thus we say—the *fœtal surface of the placenta*, in contradistinction to the *uterine* or *maternal surface*.

FETAL HEAD. The diameters of this at the full period, are as follows:—1. The *Bi-parietal* or *transverse*, extending from one

parietal protuberance to the other, and measuring $3\frac{1}{2}$ inches. 2. The *Temporal*, from one temple to another, 3 inches. 3. The *Occipito-mental*, from the occiput to the chin; the greatest of all, 5 inches. 4. The *Occipito-frontal* or *antero-posterior*, $4\frac{1}{2}$ or $4\frac{1}{2}$ inches. 5. The *Cervico-bregmatic*, from the nape of the neck to the centre of the anterior fontanelle. 6. The *Fronto-mental*, from the forehead to the chin, about $3\frac{1}{2}$ inches. 7. The *Trachelo-bregmatic*, from the front of the neck to the anterior fontanelle, $3\frac{1}{2}$ inches. 8. The *Vertical diameter*, from the vertex to the base of the cranium.

The FÆTAL CIRCULATION differs from that of the adult in several respects. Commencing with the placenta, the fœtal blood is sent from the placenta, where it probably undergoes some change analogous to what occurs in the lungs in extra-uterine existence, by the umbilical vein as far as the liver, where a part of it is poured into the vena porta; the other proceeds into the vena cava inferior: the latter, having received the suprahepatic veins, pours its blood into the right auricle. From the right auricle, a part of the blood is sent into the right ventricle; the rest passes directly through into the left auricle, by the foramen ovale. When the right ventricle contracts, the blood is sent into the pulmonary artery; but as the function of respiration is not going on, no more blood passes to the lungs than is necessary for their nutrition: the remainder goes directly through the ductus arteriosus into the aorta. The blood, received by the left auricle from the lungs, as well as that which passed through the foramen ovale, is transmitted into the left ventricle, by the contraction of which it is sent into the aorta; and by means of the umbilical arteries, which arise from the hypogastric, it is returned, by the umbilical arteries to the placenta.

FÆTUS, *Petus*, *κυνμα*, *Cye'ma*, *Epicye'*.

ma, *Epigo'nion*, from *feo*, 'I bring forth.' The unborn child. By *κυνμα*, Hippocrates meant the fecundated, but still imperfect, germ. It corresponded with the term *embryo*, as now used; whilst *εμβρυον*, 'embryo,' signified the fœtus at a more advanced stage of utero-gestation.

The majority of Anatomists apply to the germ the name *embryo*, which it retains until the third month of gestation, and with some until the period of quickening; whilst *fœtus* is applied to it in its latter stages. The terms are, however, often used indiscriminately.

When the ovule has been fecundated in the ovarium, and remained there for some days, it descends into the uterus, with which it becomes more or less connected by means of the placenta. When first seen, the fœtus has the form of a gelatinous flake, which some have compared to an ant, a grain of barley, a worm curved upon itself, &c. The fœtal increment is very rapid in the first, third, fourth, and sixth months of its formation; and at the end of nine months, it has attained its full dimensions.

Generally, there is but one fœtus in utero; sometimes, there are two; rarely three.

The fœtus presents considerable difference in its shape, weight, length, situation in the womb, proportion of its various parts to each other, arrangement and texture of its organs, state of its functions at different periods of gestation, &c. All these differences are important in an obstetrical and medico-legal point of view.

The following table exhibits the length and weight of the fœtus at different periods of gestation, on the authority of different observers. Their discordance is striking. It is proper to remark, that the Paris pound—*Poids de Marc*—of 16 ounces, contain 9216 Paris grains, whilst the avoirdupois contains only 8532.5 Paris grains, and that the Paris inch is 1.065977 English inch.

	BECK.	MAYGRIER.	GRANVILLE.	BECK.	MAYGRIER.	GRANVILLE.
	Length.			Weight.		
At 30 days.	3 to 5 lines.	10 to 12 lines.			9 or 10 grains.	
2 months.	2 inches.	4 inches.	1 inch.	2 ounces.	5 drachms.	20 grains.
3 do.	$3\frac{1}{2}$ do.	6 do.	3 inches.	2 to 3 ounces.	$2\frac{1}{2}$ ounces.	$1\frac{1}{2}$ ounce.
4 do.	5 to 6 do.	8 do.		4 or 5 do.	7 or 8 do.	
5 do.	7 to 9.	10 do.		9 or 10 do.	16 do.	
6 do.	9 to 12.	12 do.	9 inches.	1 to 2 pounds.	2 pounds.	1 pound.
7 do.	12 to 14.	14 do.	12 do.	2 to 3 do.	3 do.	2 to 4 pounds.
8 do.	16	16 do.	17 do.	3 to 4 do.	4 do.	4 to 5 do.

FOLLICLE, *Follic'ulus*, diminutive of *Follis*, a bag. See Crypta.

FOLLIC'ULI GRAAFIA'NI, *Ovula Graafia'na*, *Follicles* or *Vesicles* of *De Graaf*. Small spherical vesicles, from 15 to 20 in number, in each ovary, which are filled with an albuminous fluid. They exist in the fœtus. The ovum—*ovule* of some—is contained in them.

FOMENTA'TION, *Fomenta'tio*, *Fotus*,

Pyria, *Thermas'ma*, *Æone'sis*, *Perfu'sio*, *Asper'sio*, *Fomen'tum*, from *fove're*, 'to bathe.'

A sort of partial bathing, by the application of hot cloths, which have been previously dipped in hot water or in some medicated decoction. They act, chiefly, by virtue of their warmth and moisture, except in the case of the narcotic fomentations, where some additional effect is obtained.

A dry fomentation is a warm, dry applica-

tion to a part;—as a hot brick, wrapped in flannel;—a bag, half filled with camomile flowers made hot, &c.

FOMENTATION HERBS, *Herbæ pro fotu*. The herbs, ordinarily sold under this title by the English apothecary, are—*southernwood, tops of sea wormwood, camomile flowers*, each two parts: *bay leaves*, one part. 3 iijss of these to ℥vj of water.

To FOMENT, *Fové're*, (F) *Etuver*, *Bassiner*. To apply a fomentation to a part.

FOMES MORBI. The *focus* or seat of any disease. (F) *Foyer*. *Fomes mali*.

FOMITES, from *fomes*, 'fuel, any thing which retains heat.' *Enaus'ma*, *Zop'yron*, *εναυσμα*, *ζωπυρον*. A term, applied to substances which are supposed to retain contagious effluvia; as woollen goods, feathers, cotton, &c.

FONSANGE, MINERAL WATERS OF. Fonsange is situate near Nismes in France. The water is sulphuretted.

FONTANA, CANAL OF. A canal, of a triangular shape, at the inner side of the ciliary circle; partly formed by the groove at the inner edges of the cornea and sclerotica.

FONTANEL/LA. A *fontanel*, diminutive of *fons*, 'a fountain.' *Fons pulsat'ilis*, *Fons pulsans*, *Vertex pal'pitans*, *Fons*, *Bregma*, *Fontic'ulum*, *Lacu'na*, *Mould*. The opening of the head. A name, given to spaces occupied by a cartilaginous membrane, in the fœtus and new-born child; and situate at the union of the angles of the bones of the cranium.

There are six fontanelles. 1. The *great* or *sincipital* or *anterior*, situate at the junction of the sagittal and coronal sutures. 2. The *small* or *bregmatic* or *posterior*, situate at the part where the posterior and superior angles of the parietal bones unite with the upper part of the os occipitis. 3. The *two sphenoidal*, in the temporal fossæ and, 4. The *two mastoid*, or of Casserius, at the union of the parietal, occipital, and temporal bones.

FONTICULUS, *Fontanel'la*, (F) *Fonticule*, *Cautére*. A small ulcer produced by art, either by the aid of caustics or of cutting instruments; the discharge from which is kept up with a view of fulfilling certain therapeutical indications. The *Pea issue*, (F) *Fonticule à pois*, is kept up by means of a pea placed in it. This *pea*, (F) *Pois à cautère*, is sometimes formed of wax; at others, the young, blasted fruit of the orange is employed. The common dried garden pea answers every purpose. The seton is also an issue.

FORA'MEN, *Trema*, from *foro*, 'I pierce.' *Aulos*, (F) *Trou*. Any cavity, pierced through and through. Also, the orifice of a canal.

FORA'MEN CENTRA'LE ET LIMBUS LU'TEUS RETINÆ; the *central foramen* and *yellow spot of the retina*; discovered by Sommering. (F) *Tache jaune*. It is situate about two lines to the outside of the optic nerve, and in the direction of the axis of the eyes.

FORCE, from *fortis*, 'strong.' *Vis*, *Potent'ia*, *Energi'a*, *Dy'namis*, *Cratos*. Any power, which produces an action. Those powers, which are inherent to organization, are called *vital forces*. We say, also, *organic forces*, and *muscular forces*, to designate that of the organs in general, or of the muscles in particular. To the latter, the word *Dy'namis*, *δυναμις* corresponds; and the absence of this force is termed *adynamia*. The *vital forces* have to be studied carefully by the pathologist. The doctrine of diseases is greatly dependent on their augmentation or diminution; freedom or oppression, &c.

FORCE-REAL, MINERAL WATERS OF. The name of a mountain, situate four leagues from Perpignan in France. The water is chalybeate.

FORCEPS, quasi *fer'riceps*, from *ferrum*, 'iron,' and *cipio*, 'I take.' *Pincers*, *Labis*, *λαβει*, *Volsel'læ*. An instrument for removing bodies, which it would be inconvenient or impracticable to seize with the fingers. (F) *Pinces*, *Pincettes*.

There are various kinds of forceps.—1. The ordinary kind, contained in every dressing-case, for removing the lint, &c. from wounds or ulcers. (F) *Pinces à anneaux*. 2. The *Dissecting* or *Lig'ature* or *Arterial Forceps*, (F) *Pinces à dissection*, *P. à ligature*, to lay hold of delicate parts. 3. *Pol'y-pus Forceps*, *Tooth Forceps*, *Forceps of Museux*, for laying hold of the tonsils or other parts to be removed. The *Bullet Forceps*, *Strombul'cus*, (F) *Tire-balle*, &c. The *Lithot'omy Forceps*, *Lithol'abon*, *Tenac'ula Volsel'la*, which resemble the Craniotomy Forceps, (F) *Tenettes*.

Also, an instrument used by obstetrical practitioners to embrace the head, and bring it through the pelvis. It consists of two branches, blades or levers; one of which, in the case of the *short forceps*, is passed over the ear of the child, and the other opposite to the former, so that the blades may lock. When the head is securely included between the blades, the operation of extraction can be commenced. See Parturition.

FOREARM, *Pars inf'rior brachii*, *Cu'bitus*, (F) *Avant bras*. The part of the upper extremity, comprised between the arm and hand. It is composed of two bones—*radius* and *ulna*—and 20 muscles.

FORGES, MINERAL WATERS OF. F. is situate four leagues from Gournay, in the department of Seine Inférieure, France. There are three springs, which are acidulous chalybeates. They are called *Royale*, *Reinette*, and *Cardinal*, in honour of Louis XIII. Queen Anne of Austria, and Cardinal Richelieu, who used them.

FORMICA, *Myrmex*, *μυρμηξ*, the ant or pismire, (F) *Fourmi*. It contains an acid juice and gross oil, which were formerly extolled as aphrodisiacs. The chrysalides of the animal are said to be diuretic and carmi-

native; and have been used in dropsy. 2. Also, the name of a black wart with a broad base and cleft surface; so called because the pain, attending it, resembles the biting of an ant, *μυρμηκία*, *myrmecia*.—Forestus. 3. A varicose tumour on the anus and glans penis. 4. Also, any miliary herpes.

FORM'ICANT, *Myrme'cizon*, *Formi'cans*, from *formi'ca*, 'an ant.' (F) *Fourmillant*. An epithet, given to the pulse when extremely small, scarcely perceptible, unequal, and communicating a sensation like that of the motion of an ant through a thin texture.

FORMICA'TION, *Formica'tio*, *Myrmecias'mos*, *Myrmeciasis*. Same etymon. (F) *Fourmillement*. A pain, compared with that, which would be caused by a number of ants creeping on a part.

FOR'MULA, from *forma*, 'a form,' (F) *Formule*, *Ordonnance*. The receipt for the formation of a compound medicine; a prescription.

FOR'MULARY, *Formula'rium*, *Codex medicamenta'rius*. A collection of medical formulæ or receipts.

FORNIX, *Cam'era*, *Fornix trilat'erus*, *Psalis*, *Testu'do*, *Arcus medulla'ris*, *Trigone cérébral*—(Ch.), (F) *Voute a trois piliers*, *Triangle Médullaire*. A medullary body, observed in the brain, below the corpus callosum and above the middle ventricle, on the median line. This body, which is curved upon itself, terminates anteriorly by a prolongation, which constitutes its *anterior pillar* or *crus*, (F) *Pilier antérieur*, and posteriorly by two similar prolongations, called *posterior pillars* or *crura*.

FOSSA, from *fodio*, 'I dig,' *Scamma*. A cavity of greater or less depth, the entrance to which is always larger than the base. The fossæ of bones have been called *simple*, when they belong to one bone only, as the *parietal fossa*; and *compound*, (F) *Fosses composées*, when several concur in their formation, as the *orbital fossæ*, *temporal fossæ*, &c.

FOSSA AMYNTÆ. A kind of bandage, used in fractures of the nose; so called by Galen from Amyntas of Rhodes, its inventor. It consisted of a long band, applied round the head, the turns of which crossed at the root of the nose.

FOSSA CEREBEL'LI, (F) *Fosse cerebelleuse*. The inferior occipital fossa, which lodges the corresponding portion of the cerebellum.

FOSSÆ CEREBRA'LES, *Cerebral fossæ*. Fossæ or excavations at the base of the cranium. They are nine in number; three occupy the median line, and three are placed at each side. They are distinguished into *anterior*, *middle*, and *posterior*.

FOSSÆ CORONA'LES. The *coronal* or *frontal fossæ*. Depressions on the orbital plates of the frontal or coronal bone, which support the anterior lobes of the brain.

FOSSA CORONOIDE'A, *Coronoid fossa*, a cavity before the inferior extremity of the hu-

merus, in which the coronoid process of the ulna is engaged during flexion of the forearm.

FOSSA ETHMOIDA'LIS, *Ethmoid fossa*. A shallow gutter on the upper surface of the cribriform plate of the ethmoid bone, on which is lodged the expanded portion of the olfactory nerve.

FOSSA GUTTURA'LIS, *Guttural fossa*. The depression, which forms the guttural region of the base of the cranium, between the Foramen magnum and posterior nares.

FOSSÆ OCCIPITA'LES, *Occip'ital fossæ*. These are four in number; the *superior* or *cerebral*, and the *inferior* or *cerebellous*. They are separated by a groove, which lodges the lateral sinus.

FOSSA POPLITE'A, *Poplite'al fossa*. The hollow of the ham or the popliteal region.

FOSSETTE (F), Diminutive of *fossa*. *Scrobic'ulus*, *Bothrion*. Several depressions are so called. A *dimpled chin*, *Fossette du menton*, consists in a slight depression, which certain persons have on the chin. 2. A *dimple of the cheek*. (F) *Fossette des joues*, a depression, which occurs on the cheeks of certain persons when they laugh. (F) *Fossette du cœur*, *Scrobic'ulus cordis*, *Anticardion*, *Præcor'dium*. The depression observed on a level with the xiphoid cartilage at the anterior and inferior part of the chest. It is, also, called *pit of the stomach*, (F) *Creux de l'estomac*.

FOSSETTE, *Fos'sula*, *Anulus*, *Bothrium*, is a small ulcer of the transparent cornea, the centre of which is deep.

FOURCHE (F), from *fourché*, 'cleft,' from *furca*, 'a fork.' *Apostéma Phalan'gum*. A French provincial term, for small abscesses, which form on the fingers and hands of working people. Also, an instrument, invented by M. J. L. Petit for compressing the ranine artery, in cases of hemorrhage from that vessel.

FOURCHETTE, *Furcil'la*, a little fork, *Fur'cula*. A surgical instrument used for raising and supporting the tongue, during the operation of dividing the frænum.

Fourchette, in Anatomy, is, 1. The posterior commissure of the labia majora, called also, *Frænum* and *Fur'cula*. 2. The cartilago ensiformis; so called from its being sometimes cleft like a fork.

FO'VEA, from *fodio*, 'I dig.' *Bothros*. A slight depression; the *pudendum muliebre*; also, the *fossa navicularis*. A vapour bath for the lower extremities.

FRACTURE, *Fractu'ra*, from *fran'gere*, 'to break,' 'bruise,' *Catag'ma*, *Catag'ma Fractu'ra*, *Catax'is*, *Clasis*, *Clasma*, *Agme*, *Diar'rhage*. A solution of continuity in a bone. A *simple fracture* is, when the bone only is divided. A *compound fracture* is a division of the bone with a wound of the integuments communicating with the bone;—the bone, indeed, generally protruding. In a *comminuted fracture*, *Alphite'don*, ἀλφίτηδον,

Carye'don Catag'ma, καρυδον καταγμα, the bone is broken into several pieces: and in a complicated *F.* there is, in addition to the injury done to the bone, a lesion of some considerable vessel, nervous trunk, &c. Fractures are also termed *transverse*, *oblique*, &c., according to their direction.

The treatment of fractures consists, in general, in reducing the fragments when displaced;—maintaining them when reduced; preventing the symptoms, which may be likely to arise; and combating them when they occur. The reduction of fractures must be operated by extension, counter-extension, and coaptation. (See these words.)

The parts are kept in apposition by position, rest, and an appropriate apparatus. The position must vary according to the kind of fracture. Commonly, the fractured limb is placed on a horizontal or slightly inclined plane, in a state of extension; or rather in a middle state between extension and flexion, according to the case.

FRÆNUM, *Frænulum*, *Frenum*, *Filellum*, *Filamen'tum*. A bridle, a small bridle. A name given to several membranous folds, which bridle and retain certain organs.

The FRÆNUM or FRÆNULUM LINGUÆ, (F) *Filet de la langue*, is a triangular reflection, formed by the mucous membrane of the mouth, and situate between the inferior paries of that cavity and the inferior surface of the tongue. When the frænum extends as far as the extremity of the tongue it cramps its movements, interferes with sucking, &c. This inconvenience is remedied, by carefully snipping it with a pair of scissors. The French call this, *l'opération du filet*.

The FRÆNUM PENIS, *F*, *Præpu'tii*, *F. Glandis*, *Cynodes'mion*, (F) *Filet ou Frein de la verge*, is a membranous reflection which fixes the prepuce to the lower part of the glans. When too short, it prevents the prepuce from sliding over the glans.

FRÆNUM LABIORUM, (F) *Frein des lèvres*. There are two of these; one for the upper, the other for the lower lip. They unite these parts to the maxillary bones, and are formed by the mucous membrane of the mouth.

FRÆNUM or FRÆNULUM CLITORIDIS. A slight duplicature, formed by the union of the internal portions of the upper extremity of the nymphæ.

FRÆNA OF THE VALVE OF BAUHIN. A name given by Morgagni to the projecting lines formed by the junction of the extremities of the two lips of the ileo-cæcal valve. They are also called *Fræna* and *Retinacula Morgagnii*.

FRAGA'RIA, from *fragro*, 'I smell sweetly.' The Strawberry, *Fraga'ria vesca*, *Chamæ'batos*, (F) *Fraisier*. The fruit is agreeable and wholesome, and the roots have been used as tonic and slightly diuretic. The fruit is the *Fragum*, κομαρον, of the ancients. (F) *Fraise*.

FRAGILITAS OS'SIUM, *Osteopsathyro'sis*, *Brittleness of the bones*. *Friability of the bones*, *Paros'tia frag'ilis*, *Fragile vit'reum*. Pathologists have given this name to the extreme facility with which bones break in certain diseases of the osseous texture. It is owing to a deficiency of the animal matter.

FRAGMENT, *Fragmen'tum*, *Fragmen*, *Ramen'tum*. The French use this term for the two portions of a fractured bone; thus, they speak of the *superior* and *inferior fragment*.

FRAGMENTS, PRECIOUS. A name, formerly given, in *Pharmacy*, to the garnet, hyacinth, emerald, sapphire, and topaz. The Arabs, falsely, attributed to them cordial and alixiterial properties.

FRAMBOËSIA, from *Framboise*, (F) A raspberry, *Syph'ilis In'dica*, *Anthra'cia ru'bula*, *Thymio'sis*, *Lues In'dica*, *Variola Amboinen'sis*, *Lepra fungi'fera*. The yaws, *Epian*, *Pian*. A disease of the Antilles and of Africa; characterized by tumours, of a contagious character, which resemble strawberries, raspberries, or champignons; ulcerate and are accompanied with emaciation.

The *Pian*, for so the Indians call it, differs somewhat in America and Africa.

The *Pian* of Guinea, *Framboë'sia Guineen'sis*, *Anthra'cia Ru'bula Guineen'sis*, is common amongst the negroes, especially in childhood and youth. It begins by small spots, which appear on different parts, and especially on the organs of generation and around the anus; these spots disappear, and are transformed into an eschar, to which an excrescence succeeds, that grows slowly, and has the shape above described.

The *Pian* of America, *Framboë'sia America'na*, *Anthra'cia Ru'bula America'na*, occurs under similar circumstances, and seems to be transmitted by copulation. The tumours have a similar form, and are greater in proportion to their paucity. In some cases they are mixed with ulcers.

The treatment is nearly the same in the two varieties. The tumours will yield to mercurial friction, when small. When large, they must be destroyed by caustic. In both cases, mercury must be given to prevent a recurrence.

FRAXINUS EXCEL'SIOR. The systematic name of the Ash tree, *Frax'inus*, *Ornus seu Fraxinus sylves'tris*, *Bumel'lia*, *seu Macedon'ica Fraxinus*, *Bumelia*. Ord. Oleineæ. (F) *Frêne*. The fresh bark has a moderately strong, bitterish taste. It has been said to possess resolvent and diuretic qualities, and has been given in intermittents. The seeds, called *Birds' tongues*, *Linguae avis*, *Ornithoglos'sæ*, have been exhibited as diuretics, in the dose of a drachm. Its sap has been extolled against deafness.

FRAXINUS ORNUS. The systematic name

of the tree whence *manna* flows. *Fraxinus*, *Melia*. This substance is also called *Manna Calabri'na*, *Ros Calabri'nus*, *Aerom'eli*, *Drosom'eli*, *Drysom'eli*, *Mel aë'rium*, *Aeromeli*. In Sicily, not only the *Fraxinus Ornus*, but also the *rotundifolia* and *excelsior* are regularly cultivated for the purpose of procuring manna, which is their condensed juice. Manna is inodorous, sweetish, with a very slight degree of bitterness; in friable flakes, of a whitish or pale yellow colour; opaque, and soluble in water and alcohol. It is a laxative, and is used as a purgative for children, who take it readily on account of its sweetness. More generally, it is employed as an adjunct to other purgatives. Dose 3ss to 3ij. Its immediate principle is called *Mannite*. This has been recommended by Magendie as a substitute for manna. Dose 3ij for children.

FREINWALDE, MINERAL WATERS OF. These springs are in Brandenburg, 12 leagues from Berlin. They contain muriate of soda, sulphate of magnesia, muriate of magnesia, sulphate of lime, carbonates of lime and magnesia, iron, &c., and are used in asthenic diseases.

FRÉMISSEMENT CATAIRE (F). 'Cat's purr.' Laennec has given this name to the agitation, which is sensible to the hand, when applied on the præcordial region, and which he considers a sign of ossification or other contraction of the auriculo-ventricular openings. This name was chosen by him from the analogy of the sound to the purring of a cat.

FRICE, FRICUM, FRICO'NIUM. Any medicine, which the ancients employed under the form of friction. They distinguished the *Fricē siccum* and *F. Mollē*.—Gaubius.

FRICITION, Frictio, Frica'tio, Anat'ribē, Anatrip'sis, Trypsis, from *fricare*, 'to rub.' The action of rubbing a part of the surface of the body with more or less force; with the hands, a brush, flannel, &c.,—constituting *Xerotrib'ia*, *Frica'tio sicca*, or *dry friction*; or with ointments, liniments, tinctures, &c.—constituting *moist friction*. It is a useful means for exciting the activity of the vital properties of the skin.

FRIGIDITY, Frigid'itas, from *frig'us*, 'cold.' A sensation of cold. Also, impotence, and sterility. *Frigidity of the stomach* is a state of debility of that organ, imputed to excessive venery:—the *Anorexia exhaustorum* of Sauvages.

FRIGORIF'IC, from *frigus*, 'cold,' and *fio*, 'I make.' That which has the power of producing cold.

The best **FRIGORIFIC MIXTURES** are the following. Their effects are owing to the rapid absorption of heat when solids pass into the liquid state.

FRIGORIFIC MIXTURES WITH SNOW.

Mixtures.	Therm. falls.
Snow, or pounded ice, 2 parts by weight;	From any temperature
Muriate of Soda, 1.	
Snow, or pounded ice, 5.	to — 5°
Muriate of Soda, 2.	
Muriate of Ammonia, 1.	to — 12°
Snow, or pounded ice, 24.	
Muriate of Soda, 10.	to — 18°
Muriate of Ammonia, 5.	
Nitrate of Potash, 5.	to — 25°
Snow, or pounded ice, 12.	
Muriate of Soda, 5.	from + 32°
Nitrate of Ammonia, 5.	
Dilut. Sulph. Acid, 2.	to — 23°
Snow, 3.	
Concentr. Mur. Acid, 5.	from + 32°
Snow, 8.	
Concentr. Nitrous Acid, 4.	to — 27°
Snow, 7.	
Muriate of Lime, 5.	from + 32°
Snow, 4.	
Crystall. Mur. of Lime, 3.	to — 40°
Snow, 2.	
Fused Potash, 4.	from + 32°
Snow, 3.	
	to — 51°

Frigorific Mixtures may also be made by the rapid solution of salts, without the use of snow or ice. The salts must be finely powdered and dry.

FRIGORIFIC MIXTURES WITHOUT SNOW.

Mixtures.	Therm. falls.
Mur. of Ammonia, 5.	from + 50°
Nitrate of Potash, 5.	
Water, 16.	to — 10°
Mur. of Ammonia, 5.	
Nitrate of Potash, 5.	from + 50°
Sulphate of Soda, 8.	
Water, 16.	to + 10°
Nitrate of Ammonia, 1.	
Water, 1.	from + 50°
Nitrate of Ammonia, 1.	
Carbonate of Soda, 1.	to — 7°
Water, 1.	
Sulphate of Soda, 3.	from + 50°
Dilut. Nitrous Acid, 2.	
Sulphate of Soda, 6.	to — 3°
Mur. of Ammonia, 4.	
Nitrate of Potash, 2.	from + 50°
Dilut. Nitrous Acid, 4.	
Sulphate of Soda, 6.	to — 10°
Nitrate of Ammonia, 5.	
Dilut. Nitrous Acid, 4.	from + 50°
Phosphate of Soda, 9.	
Dilut. Nitrous Acid, 4.	to — 14°
Phosphate of Soda, 9.	
Nitrate of Ammonia, 6.	from + 50°
Dilut. Nitrous Acid, 4.	
Sulphate of Soda, 8.	to — 21°
Muriatic Acid, 5.	
Sulphate of Soda, 5.	from + 50°
Dilut. Sulphuric Acid, 4.	
	to — 3°

FROLEMENT (F). 'Grazing or touching lightly.'

FROLEMENT PERICARDIQUE. Rustling noise of the pericardium. A sound resembling that produced by the crumpling of a piece of parchment or of thick silken stuff, accompanying the systole and diastole of the heart. It indicates roughness of the pericardium induced by disease.

FRONT, *Frons, Meto'pon, Forehead, Brow.* That part of the visage, which extends from one temple to the other, and is comprised, in a vertical direction, between the roots of the hair and the superciliary ridges.

FRONTAL, *Fronta'lis*. Relating or belonging to the front. This name has been given to several parts. Winslow, Sömmering, and others, call the anterior part of the occipito-frontalis—the *frontal muscle* or *frontalis*; *Muscul'osa Frontis Cutem movens substantia Par* (Vesalius.)

The **FRONTAL BONE**, *Os frontis, Os corona'le, Os inverecun'dum, Meto'pon, Os puppis, Os Ratio'nis*. A double bone in the fœtus, single in the adult; situate at the base of the cranium, and at the superior part of the face. It forms the vault of the orbits; lodges the ethmoid bone in a notch at its middle part; and is articulated, besides, with the sphenoid, parietal, and nasal bones, the ossa unguis, superior maxillary, and malar bones.

The **FRONTAL ARTERY**, *A. supra-orbita'lis*, is given off by the ophthalmic, which is itself a branch of the internal carotid. It makes its exit from the skull at the upper part of the base of the orbit, and ascends the forehead between the bone and the orbicularis palpebrarum; dividing into three or four branches, which are distributed to the neighbouring muscles.

The **FRONTAL FURROW** extends upwards from the frontal spine, and becomes gradually larger in its course, to lodge the upper part of the superior longitudinal sinus, and to give attachment to the falx cerebri.

The **FRONTAL NERVE**, *Palpebro-frontal*,—(Ch.), is the greatest of the three branches of the ophthalmic nerve,—the first division of the 5th pair. It proceeds along the superior paries of the orbit, and divides into two branches:—the one, *internal*, which makes its exit from the orbital fossa, passing beneath the pulley of the oblique muscle:—the other, *external*, issuing from the same cavity, by the foramen orbitarium superius.

The **FRONTAL SINUSES**, *Fronta'les Sinus, Sinus Supercilia'res, S. pituita'rii frontis, Caver'næ frontis*, are two deep cavities in the substance of the frontal bone, separated from each other by a median septum, and opening, below, into the anterior cells of the ethmoid bone.

The **FRONTAL SPINE**, *Crista inter'na*, is situate in the middle of the under part of the bone, and is formed by the coalescence of the inner tables for the attachment of the falx cerebri.

Surgeons have given the name **FRONTALIS**, to a bandage or topical application to the forehead. Such have, also been called *προμετωπίδια* and *ανακολλημента*.

FROTHY, *Spum'osus*, (F) *Spumeux, Écu-meux, Mousseux*. An epithet given to the fæces or sputa, when mixed with air.

FRUGIVOROUS, *Frugiv'orus*, from *fru-*

ges, 'fruits,' and *voro*, 'I eat.' One that eats fruits.

FRUIT, *Fructus*, from *frui*, 'to enjoy;' *Carpos*. In a medical sense, it may be defined to be;—that part of a plant, which is taken as food. The effects of fruits on the body, in a medical as well as dietetical point of view, are various. They may be distinguished into classes: for, whilst the *Cereal*ia, for example, afford fruits, which are highly nutritious, the *Summer Fruits* (*Fructus Hæmæi*), which include strawberries, cherries, currants, mulberries, raspberries, figs, grapes, &c., are refrigerant and grateful, but afford little nourishment.

FRUSTRATOIRE (F). Any liquor, taken a short time after eating, for the purpose of assisting digestion, when difficult. Sugared water, *eau sucré*, or water with the addition of a little brandy, or some aromatic substance, is commonly used for this purpose.

FUCUS CRISPUS, *Lichen Carrageen, Chondrus crispus, Sphærococcus crispus, Ulva crispa, Chondrus polymor'phus, Irish moss, Carrageen* or *Corigeeen moss*, (F) *Mousse d'Islande, M. perlée*. This Fucus of the Natural Family, *Algæ*, is found on the coasts of England, Ireland, Western France, Spain, and Portugal, and as far as the Tropics. It is also a native of the United States. In Ireland it is used by the poor as an article of diet.

As met with in America, it is of a light yellow colour, and resembles plates of horn, crisped and translucent.

An agreeable jelly is obtained from it by boiling in water or milk; which forms a good article of diet in consumptive cases. Its properties are indeed exactly like those of the *Iceland Moss*.

FUCUS VESICULOSUS, *Quercus Mari'na, Fucus, Bladder Fucus, Sea Oak, Sea Wrack, Yellow Bladder Wrack*, (F) *Varec vesiculeux, Chêne marin*. It has been said to be a useful assistant to sea-water, in the cure of disorders of the glands. When the wrack, in fruit, is dried, cleaned, exposed to a red heat in a crucible with a perforated lid, and is reduced to powder, it forms the *Æthiops vegetabilis*—the *Pulvis Quercus Marinæ*—of the Dublin Pharmacopœia, which is used, like the burnt sponge, in bronchocle and other scrophulous swellings. Its efficacy depends on the iodine it contains. Dose, gr. x to ðij, mixed in molasses or honey.

FUGACIOUS, *Fugax*, from *fugere*, 'to fly.' An epithet given to certain symptoms, which appear and disappear almost immediately afterwards; as a *fugacious redness*, &c.

FUGE, from *fugo*, 'I expel,' 'an expeller.' A common suffix. Hence *Febrifuge, Vermifuge*, &c.

FUGILE. This term has several acceptations. It means, 1. The cerumen of the ear. 2. The nebulous suspension in, or the deposition from, the urine. 3. An abscess near the

ear.—Ruland and Johnson. 4. Abscess in general.—Forestus.

FULIG'INOUS, *Fuliginosus*, from *fuligo*, 'soot.' *Lignyo'des*. Having the colour of soot. An epithet given to certain parts, as the lips, teeth, or tongue, when they assume a brownish colour, or rather are covered with a coat of that colour.

FULIGO, *Soot*, (F) *Suie*, &c. *Wood soot*, *Fuligo Ligni*, consists of a volatile alkaline salt, empyreumatic oil, fixed alkali, &c. A tincture, *Tinctura Fuliginis*, prepared from it, has been recommended as a powerful antispasmodic in hysterical cases. (*Fulig. lign.* ʒij, *potass. subcarb.* ℥ss, *ammon. muriat.* ʒj, *aquæ fluiat.* ℥iij. Digest for three days.) This tincture bears the name *Soot drops* and *Fit drops*. An ointment of soot has been used in various cutaneous diseases.

FULLNESS, *Repletio*, *Plen'itude*, *Pletho'ra* (q. v.) Also, a feeling of weight or distention in the stomach or other part of the system.

FUMARIA, *Fumaria officinalis*, *Fumus terræ*, *Capnos*, *Herba melancholicifuga*, *Fumitory*, *Common Fumitory*, *Fumiter'ra*, *Sola'men Scabiosorum*, (F) *Fumeterre*. The leaves are extremely succulent, and have a bitter, somewhat saline, taste. The infusion of the dried leaves and the expressed juice of the fresh plant have been extolled for their property of clearing the skin of many disorders of the leprous kind.

FUMARIA BULBO'SA, *Aristolochia fabacea*, *Corydalis bulbosus*, *Capnor'chis*. The root of this plant was formerly given as an emmenagogue and anthelmintic. (F) *Fumeterre bulbeuse*.

FUMIGATION, *Fumigatio*, from *fumus*, 'smoke.' *Suffitus*, *Suffimen'tum*, *Apocapnis'mus*, *Thymia'ma*, *Capnis'mos*, *Hypocapnis'mos*, *Anathymi'asis*. An operation, the object of which is to fill a circumscribed space with a gas or vapour; with the intention either of purifying the air, of perfuming it, or of charging it with a substance proper for acting upon a part of the surface of the human body. Hence, fumigations have been distinguished into *aqueous*, *aromatic*, *sulphureous*, *mercurial*, *disinfecting*, *Guytonian*, &c.

Benzoin generally constitutes the chief ingredient in the *Fumigating Pastilles*, to which any variety of odoriferous substances may be added. The following is one formula:

R. *Benzoin.* ʒj, *cascarillæ* ʒss, *myrrh* ʒj, *ol. nuc. moschat.*, *ol. caryoph.* aa gtt. x, *potassæ nitrat.* ʒss, *carbon. lign.* ʒvj, *mucil. gum trag.* q. s.

FUNCTION, *Functio*, (F) *Fonction*, from *fungor*, 'I act,' 'perform.' The action of an organ or system of organs. Any act, necessary for accomplishing a vital phenomenon. A *function* is an action, which fulfils a special office in the animal economy, and which

has, as its instrument, an organ or apparatus of organs. Thus, *respiration* is a function. Its object is,—the conversion of venous into arterial blood, and its instrument is the lungs. The ancient physiologists divided the functions into *vital*, *animal*, and *natural*. They called *vital functions* those which are essential to life, as innervation, circulation, and respiration; *animal functions*, those which belong to the encephalon; viz. the functions of the intellect, the affections of the mind, and the voluntary motions; and *natural functions*, those relating to assimilation, such as the actions of the abdominal viscera, of the absorbent and exhalant vessels, &c. Bichat divided the functions into those, which relate to the preservation of the individual; and those whose object is the preservation of the species. The former he subdivided into *animal* and *organic*. The *animal functions* are those of the intellect, sensation, locomotion, and voice. The *organic functions* include digestion, respiration, circulation, exhalation, absorption, the secretions, and nutrition. The *functions*, whose object is the preservation of the species, are all those that relate to generation;—such as conception, gestation, accouchement, &c.

Each of these admits of numerous subdivisions, in a complete course of *Physiology*;—for so the doctrine of the functions is called.

FUNDA, *Sphen'donē*. (F) *Fronde*. A bandage, composed of a fillet or long compress, cleft at its extremities to within about two inches of its middle. It is used in diseases of the nose and chin, and especially in cases of fracture of the lower jaw. In such case it has, also, been called *Mentonnière*, because placed beneath the chin. ((F) *Menton*, 'the chin.')

FUNDAMENTAL. Some anatomists have called the sacrum, *Os Fundamenta'le*, because it seems to serve as a base to the vertebral column. The *sphenoid bone* has, likewise, been so denominated, from its being situate at the base of the cranium.

FUNDUS, (F) *Fond*. The base of any organ, which ends in a neck, or has an external aperture; as the *Fundus vesicæ*, *F. uteri*, &c.

FUNG'OID, *Fungoi'des*, from *fungus*, 'a mushroom,' and *eidōs*, 'resemblance.' That which has the shape of a fungus, or which grows in some measure like a mushroom.

FUNGOS'ITY, *Fungos'itas*, *Caro luxurians*, *C. fungo'sa*, *Ecsarco'ma*, *Proud Flesh*, *Hypersarco'sis*, (F) *Fongosité*. The quality of that which is fungous:—a fungous excrescence. The fungosities, which arise in wounds or ulcers, are easily repressed by gentle compression, dry lint, the sulphas cupri, or other gentle caustics. At times, the more powerful are necessary, and, sometimes, excision is required.

FUNGUS, *Myces*, (F) *Fongus*, *Champignon*. The *mushroom* order of plants; *class*

Cryptogamia, in the Linnæan system. In *Pathology*, the word is commonly used synonymously with fungosity. M. Breschet has proposed to reserve the latter name for the vegetations, which arise on denuded surfaces, and to apply the term *fungus* to the tumours, which form in the substance of the textures, without any external ulceration. Fici, and warts, e. g. would be fungi of the skin.

FUNICULUS UMBILICALIS, *Funis umbilicalis*, *Umbilical cord*, *Navel string*, from *Funis*, 'a cord.' (F) *Cordon ombilicale*. A cord-like substance, which extends from the placenta to the umbilicus of the fœtus. It is composed of the chorion, amnion, an albuminous secretion called the *Jelly of the Cord*, cellular substance, an umbilical vein, and two umbilical arteries. The former conveys the blood from the placenta to the fœtus—the latter return it. The usual length is from 16 to 22 inches.

FURCHMUEHL, MINERAL WATERS OF. These Bavarian springs contain carbonic acid, sulphuretted hydrogen, carbonates of lime and soda; muriates of lime and magnesia; oxides of iron and magnesia, &c.

FURFUR, *Bran*, *Pityron*, *Ach'yon*, *Cantabru'no*, (F) *Son*. The skin of the grain of the cerealia, when bruised and separated from the farina. The decoction is sometimes employed as an emollient.

FURFURA'CEOUS, from *furfur*, 'bran.' *Scurfy*, *Canica'ceus*, *Pithyrinus*. Resembling bran. A name given to eruptions, in which the epidermis is detached in small

scales resembling bran. Also, a bran-like sediment observed at times in the urine.

FURIA INFERNALIS, A kind of vermiform insect, scarcely two lines long, and common in Sweden, which flies about and stings both man and animals, exciting the most excruciating torture.

FURUNCULUS, from *furia're*, 'to make mad.' *Chi'adus*, *Chi'oli*, *Doth'ien*, *Furun'culus suppurato'rius*, *F. Verus*, *F. benignus*, *Absces'sus nuclea'tus*. A *Furuncle*, a *Boil*, a *Bile*, (F) *Furuncle*, *Froncle*, *Clou*. A small phlegmon, which appears under the form of a conical, hard, circumscribed tumour, having its seat in the dermoid texture. At the end of an uncertain period it becomes pointed, white or yellow, and gives exit to pus mixed with blood. When it breaks, a small, grayish, fibrous mass sometimes appears, which consists of dead cellular tissue. This is called the *core*, *Ventric'ulus Furun'culi*, (F) *Bourbillon*. The abscess does not heal until after its separation.

The indications of treatment are,—to discuss by the application of leeches and warm fomentations;—or, if this cannot be done, to encourage suppuration by warm, emollient cataplasms. When suppuration is entirely established, the part may be opened or suffered to break, according to circumstances.

FUSÉE PURULENTE (F). The long and sinuous route, which pus takes, in certain cases, in making its way to the surface. These *Fusées* almost always form beneath the skin, between the muscles, or along aponeuroses, bones, tendons, &c.

G

THE Greek *G*, *Γ*, with the ancient Greek physicians, signified an ounce.—Rhod. ad Scribonium.

GABEL'LA or **GLABEL'LA**. The space between the eyebrows, which is devoid of hair in the majority of persons.

GABIR'EA, *γαβίρηα*. A fatty kind of myrrh, mentioned by Dioscorides.

GALA, *γαλα*, genitive *γαλακτος*, milk. Hence:—

GALACTIA, *Galactirrhœ'a*, from *γαλα*, 'milk.' *Lactis redundan'tia*, *Galactacra'sia*. A redundant flow of milk, either in a female who is suckling, or in one who is not. It may occur without being provoked by suckling. When to a great extent, it sometimes causes wasting;—*Tabes lactea*, *T. nutri'cum*.

Good uses, *Galac'tia*, in his Nosology, for "morbid flow or deficiency of milk."

GALACTO'DES, from *γαλα*, 'milk,' and *ειδος*, 'resemblance.' In Hippocrates, the term signifies milkwarm, and likewise a milky colour, as of the excrements, &c.

GALACTOPH'AGOUS, *Galactoph'agus*, *Lactiv'orus*, sometimes used substantively; from *γαλα*, 'milk,' and *φαγω*, 'I eat.' That which feeds on milk. A name given to certain people, with whom milk appears to constitute the chief nourishment.

GALACTOPH'OROUS, *Lactiferous*, from *γαλα*, 'milk,' and *φερω*, 'I carry.' That which carries milk.

GALACTOPH'OROUS or **LACTIF'EROUS DUCTS** are those, which convey the milk, secreted

by the mammary gland, towards the nipple, where their external orifices are situate. The *Lacteals* have also been so called.

GALACTOPH'ORUS. Some accoucheurs have given this name to an instrument, intended to facilitate sucking, when the faulty conformation of the nipple prevents the child from laying hold of it.

GALACTOPLA'NIA, from γαλα, 'milk;' and πλανη, 'wandering.' Extravasation of milk into the cellular membrane.

GALACTOPOIET'ICA, *Galactoph'ora*; from γαλα, 'milk,' and ποιω, 'I make.' Substances, to which has been attributed the property of favouring the secretion of milk and augmenting its quantity.

GALACTOPO'SIA, from γαλα, 'milk,' and ποσι, 'drink.' Treatment of a disease by means of milk.

GALACTOP'OTES, *Galactop'otus*, *Lactipotor*. Same etymon. A drinker of milk. One, subjected to a milk diet.

GALACTO'SIS, *Galactopoi'e'sis*, from γαλακτοομαι, 'I am changed into milk,' and from γαλα, 'milk,' and ποιω, 'I make.' The secretion or formation of milk.

GAL'BULUS, from galbus, 'yellow.' A kind of congenital jaundice, in which the yellow colour continues through life. It is rather a defect in colour than a disease.—Vogel.

GA'LEA. A helmet, from γαλη, 'a cat;' of the skin of which it was formerly made. A name given to the *amnios*, and also, to the *bandage of Galen*. In *Pathology*, it indicates a headache affecting the whole head.

GALEA APONEURO'TICA CAP'ITIS, *Ga'lea tendinea Santorini*, *membra'na epicra'nia*. The tendinous expansion, which unites the frontal and occipital portions of the occipito-frontalis muscle.

GALEAN'THROPY, *Galeanthro'pia*, from γαλη, 'a cat,' and ανθρωπος, 'a man.' A variety of melancholy in which the patient believes himself changed into a cat. An affection similar to the lycanthropy and cynanthropy.

GALE'GA OFFICINA'LIS, *Galega*, *Ruta capra'ria*, *Goat's rue*, (F) *Rue de chèvre*, *Faux Indigo*. It is slightly aromatic and was once used as a sudorific and alexiterial, in malignant fevers, &c.

The **GALEGA VIRGINIA'NA** or *Virgin'ia goat's rue* or *cat gut*, is used in some parts of the United States as an anthelmintic. The decoction of the roots is given.

GALEN'IC or **GALEN'ICAL**, *Galen'icus*, from *Gale'nus*. That which relates to the doctrine of Galen or to Galenism.

Used, substantively, for drugs that are not chymical.

GA'LENISM, *Galen'ic medicine*. The doctrine of Galen.

GA'LENIST. A follower of the doctrines of Galen.

GALEOP'SIS, *Galeob'dolon*, *Galeop'dolon*,

La'mium rubrum, *Urti'ca iners magna fœtidis'sima*, *Stachys fœt'ida*, *Hedge nettle*, (F) *Ortie morte des bois*.

This plant was formerly reckoned a vulnerary and anodyne.

GALEOP'SIS GRANDIF'LORA, *G. Ochroleu'ca*, *G. Segetum*, *Herba Sideritidis*. This plant is regarded, in Germany, as a bitter resolvent. It is the basis, also, of a celebrated nostrum, the *Blankenheimer Tea*, called, likewise, *Lieber's pectoral and phthisical herbs* (*Liebersche Brust oder Auszehrungs-Krauter*), which has enjoyed great repute in pectoral complaints.

The tops of the plant are given in decoction, (3j, boiled in a pint of water for a quarter of an hour.) This quantity to be taken in the day.

The *Galeop'sis Versic'olor*, and the *G. Villosa*, are possessed of the same virtues.

GA'LIA. An ancient composition, in which galls were an ingredient; the *Galia pura*. There was, also, a *Galia aromat'ica*, *moschata* vel *musca'ta*, which consisted of a mixture of several perfumes, such as musk.

GA'LIIUM APARI'NĒ, *Apari'nē*, *Lappa*, *Philanthropus*, *Ampelocar'pus*, *Omphalocar'pus*, *Ixus*, *Asphari'nē*, *Asper'ula*, *Goose-grass*, *Cleaver's bees*, *Cleavers*, *Goose-share*, *Hay-riff*. *Family*, Rubiaceæ. *Sex. Syst.* Tetrandria Monogynia. (F) *Gaillet accrochant*, *G. crochant*, *Gratteron*.

The expressed juice has been given as an aperient and diuretic in incipient dropsies; also, in cancer.

GALIIUM MOLLU'GO, *Galium album*, *Greater ladies' bed-straw*. *Alys'sum Plin'ii*, (F) *Cailletait blanc*. The herb and flowers have been used, medicinally, in epilepsy.

GA'LIIUM VERUM, *Ga'lium*, *G. lu'teum*, *Ladies' bed-straw*, *Cheese rennet*, (F) *Gaillet jaune*, *G. vrai*, *vrai Cailletait*. The tops were used in the cure of epilepsy. The leaves and flowers possess the property of curdling milk.

GALL-BLADDER, *Vesicula fellis*, *Chol'ecyst*, *Follic'ulus fellis*, *Cystis fel'lea*, *Vesi'ca fellea*, *Vesic'ula bilis*, *Vesi'ca biliaria*, *Follic'ulus felleus*, *Cystis choled'ochus*, (F) *Vesicule du fiel* ou *Vesicule biliare*, *Réservoir de la bile*. A membranous, pyriform reservoir, lodged in a superficial depression at the inferior surface of the right lobe of the liver. It receives, by the hepatic and cystic ducts, a portion of the bile secreted by the liver, when the stomach is empty, which becomes in it more acrid, bitter, and thicker. It receives an artery called the *cystic*. Its veins empty into the vena porta. Its nerves come from the hepatic plexus, and its lymphatic vessels join those of the liver.

GALLINAG'INIS CAPUT, *Galli gallina'cei Caput*, *Verumonta'num*, *Crista urethra'lis*, *Crête uréthrale*,—(Ch.), from *Gal-linago*, 'a woodcock.' An oblong, rounded, projection, formed by the mucous membrane

in the spongy portion of the urethra, at the sides of which the ejaculatory ducts open.

GAL'LIPOT, Perhaps from *gala*, 'fine-ry.' (?) A pot painted and glazed or merely glazed, and commonly used for medicines.

GAL'VANISM, *Galvanis'mus*, *Electric'-itas anima'lis*, *E. Galvan'ica vel metal'lica*, *Irritamen'tum metal'lorum vel metal'licum*. A series of phenomena, consisting in sensible movements, executed by animal parts, which are still endowed with a remnant of irritability, when placed in connexion with two metallic plates of different nature, between which a communication is established by direct contact or by means of a metallic wire. Galvanism has been employed medicinally in the same cases as electricity, and especially in neuralgic affections. It is often applied in the form of plates. In asthma, for example, a small blister, the size of a dollar, may be placed on the neck over the course of the phrenic and pneumogastric nerves, and another on the side in the region of the diaphragm. One metal is placed mediately or immediately over the vesicated surface on the neck, and another over that in the side. They are then connected by means of a wire.

The new nervous impression, in this way induced, is often signally beneficial.

GAM'MATA FERRAMENTA, Cauteries, having the shape of the Greek letter, Γ; which were used for cauterizing hernias.

GAMMAUT. The Italians, according to Scultetus, gave this name to a kind of crooked bistouri, used for opening abscesses.

GANG'LIFORM or **GANG'LIOFORM**, *Gangliformis*. Having the shape of a ganglion. A name, generally given to a knot-like enlargement, in the course of a nerve.

GANGLION, γαγγλιον, 'a knot.' A name, given to organs differing considerably from each other in size, colour, texture, functions, &c. They are divided into *Glandiform*, *lymphatic*, and *nervous*.

1. **GLAND'IFORM GANGLIONS** called by Béchard, *Sanguineous ganglions*, are organs of whose functions we are in general, ignorant; and which have the appearance of glands. They are formed of agglomerated globules, pervaded by blood-vessels; surrounded by cellular membrane and contain a milky or yellowish fluid. To this class belong the thymus, thyroid, and supra-renal glands.

2. **LYMPHAT'IC GANGLIONS**. See Conglobate.

3. **NERVOUS GANGLIONS**, *Ganglia seu Nodi seu Noduli Nervorum*, *Ganglio'nes*, *Tumores seu plexus ganglioformes*, *Plexus glandiformes*, *Tuber'cula nodo'sa Nervorum*, *Diver'ticu'la Spirituum anima'lium*. Enlargements or knots in the course of a nerve. They belong, in general, to the system of the great sympathetic. One, however, exists on the posterior root of every spinal nerve, and one of

the cerebral,—the 5th. Bichat regarded them as so many small brains, or centres of nervous action, independent of the encephalon and intended exclusively for organic life. Being formed by the union of the cerebral and spinal nerves, they may send out the influence of both these nervous centres, to the parts to which the nerves proceeding from them are distributed. We know not, however, their precise uses, although it is probable, that they may be connected with the nutrition of the part, on which the nerves proceeding from them are dispersed.

GANGLION. Same etymon. *Emphy'ma encyst'is ganglion*. A globular, hard, indolent tumour, without change in the colour of the skin; of a size varying from that of a pea, to that of an egg, and always situate on the course of a tendon. The tumour is formed of a viscid, albuminous fluid, contained in a cyst of greater or less thickness. The cyst is sometimes loose; but in the majority of cases it communicates, by a narrow foot stalk, with the sheath of a tendon, or even with the synovial capsule of a neighbouring articulation. The *causes* are generally unknown. The *treatment* consists in compression, percussion, the use of discutients, extirpation, or incision.

GANGLION OF GASSE'RIUS. A semicircular knot on the 5th pair of nerves, before its division into three branches.

GANGLION'IC, *Ganglion'icus*. Nerves, in the course of which ganglions are met with; as the greater part of the branches of the great sympathetic or trisplanchnic, the posterior roots of the spinal nerves, &c.

GANGRENE, *Gangræ'na*, *Cancre'na*, γαγγραινα. Privation of life or partial death of an organ. Authors have generally distinguished mortification into two stages; naming the first *incipient*, or *gangrene*. It is attended with a sudden diminution of feeling in the part affected; livid discoloration; detachment of the cuticle, under which a turbid fluid is effused; with crepitation, owing to the disengagement of air in the cellular texture.

When the part has become quite black, and incapable of all feeling, circulation, and life, it constitutes the *second stage*, or *mortification*, and is called *sphacelus*. Gangrene, however, is frequently used synonymously with mortification,—*local asphyxia* being the term employed for that condition, in which the parts are in a state of suspended animation, and, consequently, susceptible of resuscitation.

When the part is filled with fluid entering into putrefaction, the affection is called *humid gangrene*; on the other hand, when it is dry and shrivelled, it constitutes *dry gangrene*. To this class belongs the *gangræna senilis* or *spontaneous gangrene* of old people, which rarely admits of cure.

Whatever may be the kind of gangrene, it

may be caused by violent inflammation, by contusion, a burn, congelation, the ligature of a large arterial trunk, or by some internal cause inappreciable to us.

The treatment, both of external and internal gangrene, varies according to the causes, which produced it. Gangrene from excessive inflammation, is obviated by antiphlogistics; and that from intense cold by cautiously restoring the circulation by cold frictions, &c. When the gangrene has become developed, the separation of the eschars must be encouraged by emollient applications, if there be considerable reaction; or by tonics and stimulants if the reaction be insufficient.

GANTELET (F). *Chirotheca*, *Fascia digita'lis*; from (F) *gant*, a glove. A sort of bandage, which envelopes the hand and fingers, like a glove. It is made with a long roller, about an inch broad; and is applied so that the fingers are covered to their tips, when it is called *Gantelet entier ou complet*. The *Demi-gantelet* includes only the hand and base of the fingers. Both bandages are used in fractures and luxations of the fingers, burns of the hand, &c. See *Chirotheca*.

GARCIN'IA MANGOSTA'NA. The systematic name of the *Mangos'tan* or *Mangous'tan tree*. *Mangostana*. It grows in great abundance in Java and the Molucca islands. The fruit, which is about the size of an orange, is delicious, and is eaten in almost every disorder. The dried bark is used medicinally in dysenteries and tenesmus; and a strong decoction has been much esteemed in ulcerated sore throat.

GARGALE, *Gar'galos*, *Gargalis'mos*, *Titilla'tio*, *Irrita'tio*, *Pruri'tus*. Titillation, irritation, itching.

GAR'GARISM, *Gargaris'mus*, *Gargaris'ma*, *Anagargalic'ta*, *Gargaris'mum*, *Colluto'rium*, *Diaclys'ma*, *Anagargaris'ton*, *Anacondylis'mos*, from *γὰρ γὰρ ἵζω*, 'I wash the mouth.' Any liquid medicine, intended to be retained in the mouth, for a certain time, and to be thrown in contact with the uvula, velum pendulum, tonsils, &c. For this purpose, the liquid is agitated by the air issuing from the larynx, the head being thrown back. Gargles are employed in cynanche tonsillaris and other diseases of the fauces; and are made of stimulants, sedatives, astringents, refrigerants, &c. according to circumstances.

The term *collutorium* or *collutorium oris*, is generally restricted to a wash for the mouth.

GARROT (F), from *garrotter*, 'to tie fast.' A small cylinder of wood, used for tightening the circular band, by which the arteries of a limb are compressed, for the purpose of suspending the flow of blood in cases of hemorrhage, aneurism, amputation, &c.

GARUM, *γάρυον*. The ancient Romans gave this name to a kind of pickle, made by collecting the liquor, which flowed from salted and half putrefied fish. It was used as a

condiment.—The *Geoponics*, Humelberg on Apicius, Martial, &c.

GASTEIN, MINERAL WATERS OF. G. is in Bavaria. The waters are saline. Temp. 106° to 117° Fahr.

GAster, *γαστήρ*. The belly in general. Also, the stomach in particular; Hence:

GAsterANAX. A name given by Do-læus to a hypothetical vital principle, corresponding to the Archeus of Van Helmont, the seat of which he placed in the lower belly.

GAsterANGIEMPHRAX'IS. Obstruction of the pylorus, from *γαστήρ*, 'stomach,' *αγχω*, 'I strangle,' and *εμφρασσα*, 'I obstruct.'—Vogel.

GAstRIC, *Gas'tricus*, from *γαστήρ*, 'the stomach.' Belonging or relating to the stomach.

The **GAstRIC AR'tERIES** are three in number. *Arte'ria gastro-epiplo'ica dextra*, *gastro-epiplo'ica sinis'tra*, and *A. corona'ria ventri'culi*.

The **GAstRIC VEINS** follow the same distribution as the arteries, and open into the *Vena porta abdominis*.

GAstRIC NERVES. The two cords by which the pneumogastric nerves terminate and which descend on the two surfaces of the stomach; as well as the filaments of the great sympathetic, which accompany the gastric vessels.

GAstRIC PLEXUS, *Plexus corona'rius ventri'culi*. A nervous net-work, formed by the solar plexus. It accompanies the *Arteria coronaria ventriculi* and passes along the lesser curvature of the stomach, to which it gives branches.

GAstRIC JUICE, *Succus gastricus*, (F) *Sac Gastrique*, *Gastric Acid*. A fluid, secreted from the mucous membrane of the stomach. As met with, it is a mixture of the fluids secreted by that organ with those of the supradiaphragmatic portion of the alimentary canal. Owing to such admixture, the most contrary properties have been assigned to it. That such a fluid is secreted, which concurs powerfully in digestion, is evident from many considerations, and has been positively proved by the author and numerous others. It is always found to contain muriatic and acetic acids.

The gastric fluid, in cases of sudden death, sometimes corrodes and perforates the stomach; giving rise to interesting questions in medical jurisprudence.

GAstRICISM, *Gastricis'mus*, from *γαστήρ*, 'the stomach.' A name, by which is designated the medical theory, that refers all, or almost all, diseases to an accumulation of saburrae in the digestive passages.

GAstRI'TIS, *Ventriculi inflamma'tio*, *Cauma gastritis*, *Inflamma'tio gastritis*, *Cardial'gia inflammato'ria*, *Febris stomach'ica inflammato'ria*, *Inflamma'tio ventriculi*, *Inflammation of the stomach*, *Empres'ma gastritis*, (F) *Gastrite*, *Catarrhe gastrique*. A disease, characterized by pyrexia, great anx-

icity; heat and pain in the epigastrium, increased by taking any thing into the stomach; vomiting and hiccup. Gastritis may either be seated in the peritoneal or mucous coat. It is most frequently in the latter (*Esogastritis*), being excited directly by acrid ingesta. It requires the most active treatment;—bleeding, blistering, fomentations, diluents, &c.

A less degree of inflammation of the mucous coat of the stomach is considered to be present in almost all fevers.

GASTROBROSIS, from γαστήρ, 'the stomach,' and βρῶσις, 'the act of gnawing.' Perforation of the stomach.—Alibert.

GASTROCELE, from γαστήρ, 'the stomach,' and κηλη, 'a tumour.' *Hernia of the Stomach, Hernia ventriculi*, (F) *Hernie de l'Estomac*. Hernia, formed by the stomach through the upper part of the linea alba:—a disease, the existence of which has been doubted by many.

GASTROCNEMII, from γαστήρ, 'the belly,' and κνήμη, 'the leg.' The name of the two fleshy masses, which occupy the posterior and superficial part of the leg; (F) *Gastrocnémiens, Jumeaux de la jambe, Gemelli, Bifemoro-calcaneus*—(Ch.); the two constituting the *Gastrocnemius externus* of English anatomists. These muscles are distinguished into *internal* and *external*, which are distinct above, but united at their inferior extremity. They are long, flat, and thick, and arise—the *former*, from the posterior part of the outer condyle of the femur;—the *latter*, from the posterior part of the inner condyle of the same bone. The aponeurosis, which unites these muscles below, joins with that of the solaris, and forms, with it, a large tendon; which, under the name *Tendo Achillis*, is inserted at the posterior part of the calcaneum. These muscles extend the foot on the leg, and the leg on the foot. They can, also, bend the leg and the thigh reciprocally on each other. For the *Gastrocnemius internus*, see *Soleus*.

GASTRO-ENTERITIS, from γαστήρ, 'the stomach,' and ἑντέρον, 'an intestine.' Inflammation of the stomach and small intestine. According to Broussais, the essential fevers of authors are gastro-enteritis, simple, or complicated.

GASTRO-EPIPLOIC, *Gastro-epiploicus*, from γαστήρ, 'the stomach,' and ἐπιπλουν, 'the epiploon.' That which relates to the stomach and epiploon.

The **GASTRO-EPIPLOIC ARTERIES** or *Gastric inferior* are two in number, and distinguished into *right* and *left*. The *right*, also called *Gastro-hepatic, Gastrica inferior dextra, Gastro-epiploica dextra*, is furnished by the hepatic artery. It descends behind the pylorus, and passes from right to left, along the great curvature of the stomach. It gives branches to the pancreas, duodenum, stomach, omentum majus, and terminates by

anastomosing with the *Gastro-epiploica sinis'tra, Gastrica sinis'tra, Gastrica inferior sinis'tra*. This—the *left*—arises from the splenic artery. It is of considerable magnitude, and passes from left to right, along the great curvature of the stomach, distributing its branches more particularly to the stomach and omentum majus. It terminates, by joining the right gastro-epiploic.

The **GASTRO-EPIPLOIC VEINS** are distinguished, like the arteries, into *right* and *left*. They empty themselves;—the former, into the superior mesenteric: the latter, into the splenic vein.

GASTRO-EPIPLOIC GLANDS are the lymphatic ganglions or glands, situate towards the great curvature of the stomach, between the two anterior laminæ of the omentum majus.

GASTRO-HEPATIC, *Gastro-hepat'icus* or *Hepato-gastricus*; from γαστήρ, 'the stomach,' and ἥπαρ, 'the liver.' Relating to the stomach and liver. This name has been given to several organs. See *Epiploon, Gastro-epiploic*, &c.

GASTRO-MALAXIA, *Gastro-mala'cia*, from γαστήρ, 'the stomach,' and μαλασσω, 'I soften.' Softening of the stomach.

GASTRO-PHRENIC, *Gastro-phren'icus*, from γαστήρ, 'the stomach,' and φρενec, 'the diaphragm.' Belonging to the stomach and diaphragm.

The **GASTRO-PHRENIC LIGAMENT** is a reflection of the peritoneum, which descends from the inferior surface of the diaphragm to the cardia.

GASTRORAPHY, *Gastrora'phia, Sutura abdomina'lis*, from γαστήρ, 'the belly,' and ραφή, 'a suture.' The suture, used for uniting wounds penetrating the abdomen, when they are too extensive or too unequal to be kept in contact by position, adhesive plaster, or appropriate bandages. The *interrupted* and *quilled* sutures are those chiefly employed.

GASTROSIS. A generic name for diseases, which are seated in the stomach.—Alibert.

GASTROTOMY, from γαστήρ, 'the belly,' and τομή, 'incision.' Several different operations have been so called. 1. The *Cæsarean Section*, which see. 2. An incision, made into the abdomen for the purpose of removing some internal strangulation or volvulus; or to reduce hernia: and, 3. The opening made into the stomach, to remove a foreign body, which has passed into it through the œsophagus.

GAULTHERIA, *Mountain Tea, Partridge Berry, Berried Tea, Grouseberry, and Deerberry*. An American plant, which is one of the principal articles of the *Materia Medica* of some Indian tribes. The infusion is stimulant and anodyne, and is said to have been used, with advantage, in asthma.

GAZ, or **GAS**, *Air*. Van Helmont first designated by this name,—the etymology of which is unknown,—the carbonic acid developed in

the vinous fermentation. Afterwards, the term was appropriated to every permanently elastic fluid; that is, which preserves its aëriform state at all temperatures: and, ultimately, it was extended to all aëriform bodies;—which were divided into *permanent* and *non-permanent* gases. The latter are generally termed vapours:—they return to the liquid state, when a portion of their caloric is abstracted.

The permanent gases, or *Gazes* properly so called, are numerous, and may be divided into four sections with regard to their effects on the animal economy.

- | | |
|---|---|
| 1. <i>Irrespirable</i> gases. | { Carbonic acid, ammoniacal gaz, muriatic acid gaz, deutoxide of azote, nitrous acid gaz, and chlorine. |
| 2. <i>Negatively deleterious</i> gases. | |
| 3. <i>Positively deleterious</i> gases. | { Oxygen, protoxide of azote, carburetted hydrogen, carbonic oxide, sulphuretted hydrogen, and arsenuretted hydrogen. |

It is proper to remark, that the term *respirable* has been very differently employed by different writers. Sometimes it has meant, the power of supporting life, when applied to the blood in the lungs. At others, all gazes have been esteemed irrespirable, which are incapable of being introduced into the lungs by voluntary efforts,—without any relation to their power of maintaining vitality; and this is perhaps the best sense.

The gazes were, at one time, employed in Medicine, under great expectations,—especially by the enthusiastic Beddoes; but they are now scarcely ever had recourse to. They differ, considerably, in their effects on the animal economy. Some, as oxygen, are exciting; others, as nitrogen, depressing;—whilst, others, again, as the *Protoxide of azote* or *laughing gaz*, produce the most singular effects.

GAZ, PUL'MONARY, *Gaz of the Lungs*. A name given to the expired air; which contains,—besides common air, an increase of carbonic acid, water, and some animal matter.

GAZ, SANG'UINIS, *Gaz anim'ale san'guinis*, *Hali'tus san'guinis*, *Aura san'guinis*. The halitus or vapour, given off by freshly drawn blood.

GEISMAR, MINERAL WATERS OF. The mineral waters of Geismar, in Bavaria, are acidulous chalybeates.

GEL'ATINE, *Gelati'na*, *Galreda*, from *gelu*, 'gelly or jelly.' An immediate animal principle. It is semitransparent, insipid, inodorous, insoluble in cold water, very soluble in hot, which it thickens, and transforms into gelly on cooling. Gelatine is a very nutritious substance; and, when dissolved in a considerable quantity of water, forms an emollient fluid, much used in therapeutics, but not the most easy of digestion.

GELATINE OF WHARTON, *Gelati'na Whartonia'na*, *Jelly of the Cord*. A soft, dense,

fluid, gelatinous substance, which envelopes the umbilical cord, and is conceived to be inservient to the nutrition of the fœtus.

GELLY or JELLY, *Jus gela'tum*, *Gelu*, *Jus coagula'tum*, (F) *Gelée*. A substance of a soft consistence, tremulous, and transparent, which is obtained, by an appropriate treatment, from animal and vegetable matters: hence the distinction into *animal* and *vegetable jelly*. The former is merely a concentrated solution of gelatine, left to cool.

Vegetable Jelly is found in the juice of the currant, mulberry, and of almost all acid fruits, when ripe. It is of itself colourless, but almost always retains a little colouring matter of the fruit which has furnished it. It has an agreeable taste: is scarcely soluble in cold water, but boiling water dissolves it readily: the gelly is, however, almost all deposited on cooling. If this aqueous solution be boiled for a long time, it becomes analogous to mucilage, and loses the property of being gellied on cooling.

GELSEMI'NUM NIT'IDUM, *Yellow Jes'samine*. The flowers, root, &c., of this shrub are narcotic, and the effluvia from the former are said sometimes to induce stupor.

GEMEL'LUS, *Gem'inus*, *Did'ymos*, *δίδυμος*, 'a twin.' (F) *Jumeau*, *Jumelle*, *Besson*, *Bessonne*. One of two children, born at the same accouchement.

GEMELLUS MUS'culus, Cowper applies this name to the long portion of the triceps brachialis united to the inner portion.

GEMUR'SA. A name given by the ancients to a disease, seated between the toes;—the nature of which is unknown to us.

GENA, The *Cheek*, *Genys*, *γενυς*, *Parcia*, *Gamphe'le*, *Gnathos*, *Mala*. (F) *Joue*. The cheeks form the lateral parts of the mouth. *Externally*, they have no precise limits: they are continuous, *above*, with the lower eyelid: *below*, they descend as far as the base of the jaw: *before*, they terminate at the alæ nasi, and at the commissures of the lips; and *behind*, at the ear. Their thickness varies, according to the degree of fatness of the individual. They are formed of three layers;—one dermoid, another muscular, and the third mucous.

GEN, *Gen'esis*, *γενεσις*, 'generation,' from *γενναω*, 'I make.' Hence *Hydrogen*, *Osteogeny*, &c.

GENEI'AS, *Lanu'go prima*. The downy hairs, which first cover the cheek. Also, a bandage which passes under the chin.

GENERA'TION, *Genera'tio*, *Gen'esis*, from *γίνομαι*, 'I arise.' Under this name, physiologists comprehend the aggregate of functions, which concur, in organized beings, towards the production of their kind. The *act of generation* means the union of the sexes. See *Coition*.

The writers of antiquity believed that all organized bodies are produced either by what is termed *univocal* or *regular generation*,

(*generatio homogenea, propagatio*), and which applies to the upper classes of animals and vegetables, or by *equivocal* or *spontaneous generation*, (*generatio heterogenea, æquivoca, primitiva, primigena, originaria, spontanea*), which they considered applicable to the very lowest classes only, as the mushroom, the worm, the frog, &c.

There are still many distinguished naturalists who consider that beings, low in the scale of animality, are produced in the latter way.

As to the mode in which regular generation is accomplished, there have been many views. According to the doctrine of Hippocrates, and of the ancient philosophers, the ovaries of the female furnish a prolific fluid, similar to that of the male; and the fœtus results from the mixture of the two seeds in copulation. Steno and others conceived, that the ovaries contain ova, which are not developed until vivified by the male sperm. Bonet and Spallanzani believed in the pre-existence of germs, created since the origin of the world, but *encased* in each other; and becoming developed in succession; whence it would follow, that the ovary of the first female must have contained the germs of all subsequent generations; and that the number of these germs must go on always diminishing, until ultimately extinct. This was the system of the *evolution of germs*. According to Leeuwenhoek, the ovaries do not contain eggs, but vesicles destined to receive animalcules; which, according to him, live in the sperm. Thousands of these animalcules are thrown into the uterus during copulation, and the most expeditious and vigorous reaches the ovary, after having scattered and destroyed its competitors. Buffon—admitting the hypothesis of the two seeds—supposed that they were formed of molecules proceeding from every part of the body of each parent; and that, by a kind of respective affinity, those which were furnished by the head, the trunk, or the extremities of the male parent could only unite with those proceeding from the same parts of the female. Before him, Maupertuis, admitting, with many of the ancient philosophers, the system of *Epigenesis*, and adopting, as regarded the composition of the sperm, a theory analogous to that of Buffon, had supposed that the molecules, capable of being organized, were attracted towards a centre; that the nose attracts the two eyes; the body, the arms; the arms, the hands, &c., nearly as the particles of a salt, dissolved in a liquid, arrange themselves in regular crystals around the same nucleus.

All these and various other systems have been successively proposed and rejected, and the mystery of generation remains impenetrable. There are, in all organized bodies, three chief modes of reproduction. 1. The *Viviparous*. 2. The *Oviparous*; and, 3. Generation by shoots, called *Gemmiparous*. The

last is the most simple kind of generation, as it is nothing more than an extension of the immediate life of the maternal stalk in the new individual.

All the acts, comprising the function of generation, may be referred to five great heads. 1. *Copulation*. 2. *Conception* or *fecundation*. 3. *Gestation* or *Pregnancy*. 4. *Delivery* or *Accouchement*: and, 5. *Lactation*.

GEN'EROUS, *Generosus*. A name given, to wines, which contain a great quantity of alcohol.

GENETHLIACUS, from γενεθλιος, 'natal,' 'pertaining to nativity.' A name given by the ancients, to certain astrologers; who, from the state of the heavens at the time of the birth of an individual, predicted his future character and the events of his life.

GENET'ICA, from γενεσις, 'origin,' 'rise.' Diseases of the sexual functions: the 5th class in Good's Nosology.

GEN'IAN, *Genianus*, from γενειον, 'the chin.' The *Genian apophysis* or *Process*, (F) *Apophyse génienne* ou *géné*, is situated at the posterior part of the symphysis menti, and is formed of four small tubercles.

GÉNIE, *Ge'nus*. The Fr. sometimes apply this term to diseases, nearly synonymously with *nature*; as *Génie inflammatoire*, *G. bilieux*, *G. adynamique*. Some use it in the same sense as *type*; as *Génie intermittent*. The unwonted predominance of any mental faculty is also so called.

GENI'O-GLOSSUS, *Genio-hyoglossus*, from γενειον, 'the chin,' and γλῶσσα, 'the tongue.' *Mesoglossus*, *Nonus lingue musculi*. The name of a flat, triangular muscle, which extends from the genian apophysis to the inferior surface of the os hyoides and tongue, which it carries forward.

GENIO-HYOIDEUS, from γενειον, 'the chin,' and ὑοειδης, 'the os hyoides.' A muscle, which arises from the genian apophysis, and is inserted at the anterior part of the body of the os hyoides. Its use is to raise the os hyoides, and carry it forwards. It may, also, contribute to depress the lower jaw in contracting towards the os hyoides.

GENIO-PHARYNGEUS, from γενειον, 'the chin,' and φαρυγξ, 'the pharynx.' A name given, by some anatomists, to a bundle of fibres, which passes from the lower jaw to the sides of the pharynx, and forms part of the *constrictor pharyngis superior*.

GENIS'TA SPINO'SA IN'DICA, *Bahel Schulli*. An Oriental tree, a decoction of the roots of which is diuretic. The leaves, boiled in vinegar, have the same effect.—Ray.

GENITAL, *Genitalis*, *Geneticos*, from γινωμαι, 'to be born.' That which belongs to generation.

The GEN'ITAL ORGANS, *Sexual organs*, *Pudenda*, *Naturalia*, *Ædæa*, *Me'dea*, *Me'zea*, *Me'sa*, *Mo'rion*, *Genital parts*, *Noble parts*, *Natural parts*, *Private parts*, *Privities*, *Privy*

parts, Privy Members, the Parts, *Partes genitales*, *Partes generatio'ni inservientes*, *Genitalia*, *Organa generatio'ni inservientia*, (F) *Organes genitiaux*, *Parties génitales*, *P. honteuses*, *P. génitoires*, *P. nobles*, *P. sexuelles*, *P. naturelles*, *les Parties*. These parts are inservient to the reproduction of the species, and are very different in the male and female. In man, they are numerous: some secreting the sperm, as the testicles and their appendages; others retaining it, as the vesiculæ seminales; and another for carrying it into the organs of the female,—the penis. In the female, the parts of generation form an apparatus, perhaps more complicated than that of the male. Some are inservient to copulation, as the vulva, vagina, &c.; others to conception and the preservation of the product for a determinate time;—as the uterus and its appendages; whilst others concur in the alimentation of the infant after birth, as the mammæ.

GENITURA, from *γεννη*, or *γονος*, 'sperm,' 'seed,' 'race.' That which is fecundated or engendered in the maternal womb. This word has been used synonymously with *embryo*, *fœtus*, and *infant*. Also, the sperm: the penis.

GENNETICON'OSI, from *γεννητικός*, 'genital,' and *νσος*, 'disease.' Diseases of the genitals.

GENTIANA LUTEA. The systematic name of the officinal gentian: *Gentiana major*, *G. vel'erum*, *Gentiana rubra*, *Yellow Gentian*, *Felwort*, *Gentiana*. Ord. *Gentianæ*, (F) *Gentiane jaune*. This is a plant common in the mountains of Europe. The root is almost inodorous, extremely bitter, and yields its virtues to ether, alcohol, and water. It is tonic and stomachic; and in large doses, aperient. Dose, gr. x to ℥ij. It is most frequently, however, used in infusion or tincture.

GENTIANA CATESBÆI; *Blue Gentian*, U. S. It is a pure and simple bitter, and the root may be used wherever that of the *Gentiana lutea* is proper.

GENTIANINA, *Gentianine*, *Gentianin*, *Gentia*. An alkali, obtained from gentian, and which is its active principle. It is intensely bitter. Dose, gr. j to iv.

GENU, *Gony*, *γονυ*, (F) *Genou*. The articulation of the leg with the thigh;—the *Femoro-tibial* joint. It is the most complicated in the body. It is formed by the inferior extremity of the femur, the superior extremity of the tibia, and the rotula. The articular surfaces of the bones are covered by layers of cartilage—more or less thick—and by the synovial membrane of the articulation.

The soft parts of this joint are,—the *ligamentum patellæ*, two lateral ligaments, distinguished by the names *internal* and *external*: a posterior ligament; two crucial ligaments;—the one anterior, and the other posterior; two interarticular fibro-cartilages;

some albugineous fibres, which form an imperfect capsule, &c. The knee receives its arteries from the femoral and popliteal. They bear the name *articular*. Its veins have the same distribution as the arteries, and discharge their blood into the saphena and crural veins. Its nerves are furnished by the sciatic, popliteal, and crural. The joint is protected by the tendons and muscles which surround it.

The French use the term *Articulation en genou* for the joints, in which the head of one bone is received into a bony cavity, where it rolls and moves in all directions.

GENUS, (F) *Genre*. A collection or group of species, analogous to each other; and which can be united by common characters. When a species cannot be referred to a known genus, it constitutes a distinct one.

GENYS, *γενυς*, 'the jaw,' also the chin. Hence:

GENYANTRAL'GIA, from *γενειον*, 'the chin,' *αντρον*, 'the antrum,' and *αλγος*, 'pain.' Pain in the antrum of Highmore.

GEOFFRÆA INERMIS, *Geoffræa*, *Geoffroya*, *Cabbage Tree*, *Cabbage-Bark Tree*, *Andira inermis*. Nat. Ord. *Leguminosæ*. Sex. Syst. *Diadelphia Decandria*. *Geoffræa Jamaicensis*, *Worm-Bark Tree*. The odour of the bark is very unpleasant. It is anthelmintic and cathartic. Dose, of the powder, ℥j to ℥ij.

The GEOFFRÆA SURINAMENSIS, *Andira Surinamensis*, has similar properties.

Huttenschmidt has separated their active principles, to which he has given the names *Jamaicine* and *Surinamine*. They are alkaline.

GEOGRAPHY, MEDICAL, *Geographia Medica*. The description of the surface of the globe as regards the influence of situation on the health, vital functions, and diseases of its inhabitants—vegetable and animal; but principally on those of man.

GERANIS, from *γερανός*, 'a crane,' which it resembled. A bandage, used by the ancients in cases of fractured clavicle. Some authors attribute it to Hippocrates; others, to Perigenes.

GERANIUM, *γερανιον*; same etymon. The *Crane's Bill*.

GERANIUM ROBERTIA'NUM: *Stinking Crane's Bill*, *Herb Robert*. (F) *Herbe à Robert*, *Bec de Grue Robertin*. This plant was, at one time, used as an antispasmodic and slight stimulant; as well as for an external application in various painful sores and inflammations.

GERANIUM MOSCHA'TUM; *Erodium Moschatum*, (F) *Bec de grue musqué*. A European plant, esteemed to be excitant and diaphoretic.

Most of the species of geranium have been used as astringents. In some of the north-western parts of the United States, the root of the *Geranium maculatum* is called *Racine à*

Becquet, after a person of that name. It is highly extolled by the Western Indians as an antisyphilitic.

GERM, *Germen*, *Blaste'ma*. The rudiment of a new being, not yet developed, or which is still adherent to the mother.

GEROCO'MIA, *Gerocom'icē*, *Gerontocom'ice*, from *γερων*, 'an aged person,' and *κομειν*, 'to take care of.' The part of Medicine, whose object is the preservation of the health of the aged:—the hygiene of old people.

GEROCOMI'UM, *Gerontocomi'um*, same etymon. An hospital for the aged.

GEROTOX'ON, *Gerontox'on*, *Gerontotox'on*, *Mac'ula cor'neæ arcua'ta*, *Arcus seni'lis*; from *γερων*, 'an old person,' and *τοξον*, 'a bow.' A bow-shaped opacity at the under margin of the cornea, common to old people.

GESTA, 'things done,' from *ger'ere*, 'to do,' 'carry.' A Latin term, introduced by Hallé into medical language, to designate, among the objects which belong to hygiene, the functions which consist in the voluntary movements of muscles and organs. In the class of *Gesta* are found, *sleep*, *the waking state*, *movements* or *locomotion*, and *rest*.

GESTA'TION, *Gesta'tio*, *Phora*, *φορα*, from *gesta're*, 'to carry.' The time, during which a female, who has conceived, carries the embryo in her uterus. Gestation, likewise, signifies the bearing or carrying of an individual; a kind of exercise, easier than that in which he moves by virtue of his own powers. Thus, we speak of *gestation on horse-back*, *in a carriage*, &c.

GESTICULA'TION, *Gesticulatio*. The act of making many gestures; a symptom in disease, which always indicates very vivid sensations. It is met with in numerous affections.

GEUM RIVA'LE, *G. palus'trē*, *Water avens*. (F) *Benoite aquatique*, *B. des Ruisseaux*. Family, Rosaceæ. Sex. Syst. Icosandria Polygynia. The root of this plant is astringent. It has been much extolled in the cure of intermittents, diarrhœas, hemorrhages, &c.

GEUM URBA'NUM, *Caryophylla'ta*, *Caryophyll'us vulga'ris*, *Sanamunda*, *Lagophthalmus*, *Caryophil'la*, *Janamun'da*, *Common Avens*, *Herb Bennet*, *Herba benedicta*, (F) *Benoite*. The root of this plant has a smell, not unlike that of cloves. Taste bitterish, austere; virtues yielded to water and alcohol. It has been used in intermittents, dysentery, chronic diarrhœa, debility, &c. Dose, 3ss to 3j of the powder.

GEUSION'OSI, from *γευσis*, 'taste,' and *νοσος*, 'disease.' *Geusionu'si*. Diseases of the organ or sense of taste.

GIBBOS'ITAS, *Gibberos'itas*, *Cypho'sis*, from (F) *Gibbeux*, (L) *Gibbus*, something arched or vaulted, prominent. *Gibbos'ity*, *Gib'bousness*. *Curvature of the spine*, *Hy-*

bo'ma. A symptom, which occurs in different diseases; particularly in rickets and caries of the vertebræ.

GIBLETS. According to Minsheu, from *Gobbet*, *Goblet*; but, according to Junius, from (F) *Gibier*, 'game.' The word seems to be the old (F) *Gibelez*, *Gibelet*, *Giblet*, &c. i. e. *Gibier*, (L) *Cibarium*, food, (F) *Abattis*. It means, generally, the parts which are cut off from a goose before it is roasted. Also, the extremities of fowls, such as the head, wings, feet; to which are sometimes added, the liver, gizzard, &c.

Soup, made from these, is moderately nutritious.

GILLE'NIA TRIFOLIA'TA, *Spiræ'a trifolia'ta*, *Common Gille'nia*, *Indian Physic*, *Beaumont root*. Nat. Ord. Rosaceæ. Sex. Syst. Icosandria Pentagynia. The root of this shrub, which grows plentifully in the United States, is a safe and efficacious emetic, in the dose of about 30 grains. It resembles, in its properties, the *ipecacuanha*.

GIM'BERNAT'SLIGAMENT. A fibrous, triangular, expansion, which is detached from the posterior and inner part of the crural arch, and is inserted into the crest of the pubis. This ligament forms the inner part of the superior aperture of the crural canal. It is one of the most frequent causes of strangulation in crural hernia.

GIN, *Hollands*, *Geneva*. This spirit, which is distilled from corn and juniper berries, or from some substitute for them, is largely used in Great Britain; and is extremely detrimental, to the lower classes particularly. It possesses the properties of other spirituous liquors; but is, in popular medicine, more used than other varieties, in cases of colic or intestinal pain of any kind.

GINGIBRA'CHIUM. A name given to the scurvy, because the gums and arms are chiefly affected by it; from *gingivæ*, 'the gums,' and *brachium*, 'the arm.' It has, also, been called *Gingipedium*, because the lower limbs are in many cases the seat of scorbutic spots.

GINGI'VÆ, from *gig'nere*, 'to beget,' because the teeth are, as it were, begotten in them.(?) The Gums, *ωλα*, *Ula*, *Carnic'ula*. (F) *Gencives*. The portion of the mucous membrane of the mouth, which covers the maxillary bones to the level of the alveolar arches. The gums are formed of a red tissue; more or less solid, and of a fibro-mucous nature, which adheres strongly to the necks of the teeth, and transmits, between their roots and the alveoli, a very thin expansion; the *alveolo-dental periosteum*. The gums fix the teeth and contribute greatly to their solidity. In the aged, after the loss of the teeth, they become fibrous and very solid, and are inservient to mastication.

GING'LYMOID, *Ginglymoideus*, from *γινγλυμος*, 'a ginglymus,' and *ειδος*, 'resem-

blance.' Resembling a ginglymus or hinge. An epithet applied to joints, which resemble a hinge, as a *ginglymoid joint*.

GIN'GLYMUS, *Cardinamen'tum*, *Cardo*, 'a hinge.' (F) *Charnière*. (F) *Articulation en charnière*. A species of diarthrodial articulation, which only admits of motion in two directions, like a hinge,—as the knee-joint or elbow-joint.

GIRL. This seems, formerly, to have been an appellation, common to both sexes. From the Su. Goth. *Karl*, 'a man,' many etymologists deduce the word. It means a young female, (L) *Filia*, from *φιλεω*, 'to love,' *Virgo*. (F) *Fille*.

GLADIOLUS COMMUNIS, *G. vulga'ris*, *Victoria'lis rotun'da*, *Cornflag*, *Victoria'lis femine'a*. (F) *Glayeul*. The root of this plant has been considered aphrodisiac. Applied in cataplasm, it has been extolled against scrophulous tumours.

GLAND, *Glan'dula*, from *glans*, 'an acorn,' *Aden*. The ancient anatomists gave this name to a number of organs, of a texture generally soft and a shape more or less globular, but differing greatly in their nature and functions. They applied it, for instance, 1. To those organs, which separate from the blood any fluid whatever. When such organs were composed of several lobules, united by common vessels, they received the name *conglomerate glands*, as the parotid, pancreas, &c. 2. To the reddish and spongy, knot-like bodies, which are met with in the course of the lymphatics. These they called *conglobate glands*. See *Ganglion*, (*lymphatic*;) and 3dly and lastly, to various other organs, whose intimate texture and functions are still unknown, as the *Pineal gland*, *Pituitary gland*, *Glands of Pacchioni*, *Thyroid gland*, *Thymus gland*, *Supra-renal glands*, &c.

Chaussier restricts the word *gland* to those softish, granular, lobated organs, composed of vessels, nerves, and a particular texture, of which there are but 8 kinds in the human body, viz. the *lachrymal*, *salivary*, and *mammary*—the *testicles*—the *ovaries*—the *liver*, *pancreas*, and *kidneys*. These are all destined to draw from the blood the molecules necessary for the formation of new fluids; and to convey these fluids externally, by means of one or more excretory ducts. Several glands, besides their excretory ducts, have especial reservoirs, in which the fluids, secreted by them, collect, remain for a greater or less space of time, and undergo slight modifications before being evacuated;—such are, the gall-bladder for the liver, the urinary bladder for the kidneys, &c. Each gland has an organization peculiar to it, but we know not the intimate nature of the glandular texture.—Malpighi believed that the vessels terminate in small, solid masses, to which he gave the name—*glandular grains*. In these, he considered, the excretory ducts originate. Ruysch thought that the glands are entirely vascular,

and that the excretory ducts are immediately continuous with the *vasa afferentia*, &c. The best view, perhaps, is, that the exhaling or secreting vessel is distributed on the animal membrane, that forms the blind extremity of the excretory duct, and that the secretion is effected through it.

The term *glande* (F) is sometimes appropriated to the tumour, formed by inflammation or engorgement of a lymphatic ganglion.

GLAND'ULAR, *Glandula'ris*, *Glandulo'sus*, (F) *Glandulaire*, *Glanduleux*. Having the appearance, form, or texture of *glands*; as a *glandular body*, a *glandular texture*, &c.

GLANDULO'SO-CARNEUS. Ruysch gives this epithet to fleshy excrescences, which he found in the bladder.

GLANS, *Bal'anus*, *Cyttaros*, *Cuspis*. (F) *Gland*. The extremity of the penis and of the clitoris. The *glans penis* is of a conical, slightly flattened shape. It is continuous with the urethra, which opens at its apex; and is circumscribed by a projecting edge called the *Corona glandis*. It is covered by a thin mucous membrane; is furnished, at its base, with sebaceous follicles, called *glan'dula odorifera Tyso'ni*, the secretion from which is termed *Smegma prepu'tii*; and can, almost always, be covered by the reflection of the skin, called the *prepuce*. Lastly, it is formed of a spongy texture, susceptible of being thrown into erection.

The GLANS CLITOR'IDIS is smaller. It is imperforate, and likewise covered with a sort of prepuce, formed by the mucous membrane of the vulva.

GLAUCO'MA, from *γλαυκος*, 'sea-green.' *Glaucó'sis*, *Glaucé'do*, *Catarac'ta glauca*, *Oculus cæsius*, *Cæ'sius*, *Phtharima glauco'ma*, *Parop'sis glauco'sis*, *Apoglaucó'sis*. Amongst the older pathologists, this word was used synonymously with cataract. It is now ordinarily applied to opacity of the vitreous humour or of the tunica hyaloidea; which manifests itself by a grayish or greenish spot, apparent through the pupil. The diagnosis is generally difficult; and it is almost always incurable.

GLECHONI'TES. Wine, impregnated with the Glechon, *γληχων*, *mentha pulegium*, or pennyroyal.

GLECO'MA HEDERA'CEA, *Heder'ula*, *Chamæcle'ma*, *Calamin'ta humil'ior*, *Chamæcis'sus*, *Hed'era terres'tris*, *Ground ivy*, *Gill*, *Gill-go-by-ground*. (F) *Lierre terrestre*, *Terrette*.

This plant has a strong smell, and a bitterish, somewhat aromatic, taste. It has been considered expectorant and tonic.

GLE'NE, *γληνη*, the pupil of the eye. *Gle'noid* or *Glenoid'al*, *glenoida'lis*, *glenoi'des gleno'des*, from *γληνη*, 'the pupil,' and *ειδος* 'resemblance.' (F) *Glénoïde* ou *Glénoïdale*. Any shallow, articular cavity, which receives the head of a bone; such as, 1. The *glenoid cavity* or *fossa* of the scapula. *Fossa*

glenoidea, *Omocot'yle*, *Entypo'sis*, is situate at the anterior angle of the scapula; and is articulated with the head of the humerus. 2. The glenoid cavity or fossa of the temporal bone. It is seated between the two roots of the zygomatic process and receives the condyle of the lower jaw.

The GLENOID LIG'AMENT, (F) *Ligament Glen'oïdien* is a fibro-cartilaginous ring or *bourrelet*, which seems formed by the expansion of the tendon of the long head of the biceps brachialis, and surrounds the glenoid cavity of the scapula, the depth of which it increases.

GLISCHRASMA, *Glischrotes*, from γλισ-χρῆνω, 'I become glutinous.' Lentor, viscosity.—Hippocrates.

GLISCHROCH'OLOS, from γλισχρος, 'viscid,' and χολη, 'bile.' Excrements, which are glutinous and bilious.

GLOBULARIA AL'YPUM, *Globularia*, *Montpel'lier Turbith*. (F) *Globulaire purgative*, *Turbith blanc*. The leaves of this plant are bitter; and have been used in intermittents and in constipation.

GLOB'ULE, *Glob'ulus*, *Sphæ'rion*: a small globe.

The GLOBULES OF THE BLOOD. (F) *Globules du sang*; *Globuli*, *Vesiculæ seu Folliculi sanguinis*, are small, spherical bodies, which are particularly observable, when the transparent parts of cold-blooded animals are examined by the aid of the microscope. They were first seen by Malpighi, and are met with in the blood of all animals.

The globules of blood are circular in the mammalia, and elliptical in birds and cold-blooded animals. They are, also, flat in all animals, and composed of a central nucleus inclosed in a membranous sac.

SIZE OF THE GLOBULES.

Sir E. Home and Bauer, with colouring matter,	1-1700th part of an inch.
Eller,	1-1930
Sir E. Home and Bauer, without colouring matter,	1-2000

Haller, Wollaston, and Weber,	1-5000
Young,	1-6060

GLOBUS HYSTER'ICUS, *Nodus hyster'icus*. A sensation, experienced by hysterical persons, as if a round body was rising from the abdomen towards the larynx, and producing a sense of suffocation.

GLOBUS UTERI'NUS. A term, applied by accoucheurs to the round tumour, formed by the uterus in the lower part of the abdomen, immediately after delivery.

GLOSSA, *Glotta*, γλωσσα, γλωττα, 'the tongue.' Hence:

GLOSSAL'GIA, *Glossagra*, from γλωσσα, 'the tongue,' and αλγος, 'pain.' Pain in the tongue.

GLOSSANTHRAX, from γλωσσα, 'the tongue,' and ανθραξ, 'a carbuncle.' *Carbuncle of the tongue*. A disease more common in cattle than man.

GLOSSITIS, from γλωσσα, 'the tongue.' *Glosson'cus inflammato'rius*, *Angi'na lingua'ria*, *Inflammation of the tongue*. When confined to the mucous membrane, it is of slight importance. That, which affects the whole of the tongue, is a serious disease, and requires the vigorous use of antiphlogistics. It is rare.

GLOSSOCAT'OCHUS, from γλωσσα, 'the tongue,' and κατεχα, 'I arrest.' *Linguae Detentor*, *Spec'ulum Oris*, (F) *Abaisseur de la langue*. An instrument, the invention of which is attributed to Paulus of Ægina, and which was employed to depress the tongue, in order to examine diseases of the fauces. It was composed of two branches; one of which had, at its extremity, a plate for depressing the tongue; whilst the other, shaped like a horse-shoe, was applied under the chin. The finger, or the handle of a spoon, or a spatula, is now alone used in similar cases.

GLOSSOCE'LE, from γλωσσα, 'the tongue,' and κηλη, 'hernia,' 'tumour.' *Hernia of the Tongue*. Projection of the tongue from the mouth. It depends, generally, on an inflammatory swelling of the organ. At times, however, a *chronic glossocele*, or sort of œdematous engorgement is met with; which proceeds to a great length; and deforms the dental arches, the lips, &c.

The inflammatory glossocele must be combated by antiphlogistics. In the œdematous kind, such as is sometimes caused by excessive salivation, the infiltrated fluid may be pressed back by the hand of the practitioner, to get the tongue behind the teeth; and it may be kept there by a piece of gauze tied over the mouth.

The chronic, elongated kind sometimes requires amputation of a portion of the organ.

GLOSSOC'OMON, *Glossoc'omum*, *Glossocomi'on*, from γλωσσα, 'the tongue,' and κομειν, 'to guard.' The ancients gave this name to a small case for holding the tongues of their wind-instruments. By extension, it was applied to the box or cradle, in which fractured limbs were kept. We find, in the ancient writers, a *Glossocomon* of Hippocrates, of Nymphodorus, Galen, &c.

GLOSSO-EPIGLOT'TICUS. That which belongs to the tongue and epiglottis. Some anatomists have so denominated certain fleshy fibres, which pass from the base of the tongue towards the epiglottis. These muscles are more evident in some of the mammalia than in man; and their use seems to be,—to raise the epiglottis, and to remove it farther from

the glottis. Santorini, who described them after Eustachius, calls them *Retractores Epiglottidis*.

GLOSSOGRAPHY, *Glossographia*, from γλωσσα, 'the tongue,' and γραφή, 'a description.' An anatomical description of the tongue.

GLOSSO-HY'AL. A name given, by Geoffroy-Saint-Hilaire, to the posterior cornua of the os hyoides.

GLOSSOL'OGY, *Glossolog'ia*, from γλωσσα, 'the tongue,' and λογος, 'a treatise,' 'a discourse.' A treatise of the tongue.

GLOSSOL'YSIS, *Glossople'gia*, from γλωσσα, 'the tongue,' and λυσις, 'solution.' Paralysis of the tongue.

GLOSSOMANTI'A, *Prognosis ex lingua*, from γλωσσα, 'the tongue,' and μαντεια, 'divination.' Prognosis from the state of the tongue.

GLOSSON'CUS, from γλωσσα, 'the tongue,' and εγκος, 'tumour.' *Exonco'sis lingua*. Swelling of the tongue.

GLOSSO-PHARYNGEUS, from γλωσσα, 'the tongue,' and φαρυγξ, 'the pharynx.' Belonging to the tongue and the pharynx. Some anatomists thus designate certain fleshy bundles, which arise from the lateral parts of the base of the tongue, and are inserted into the parietes of the pharynx. They form part of the constrictor pharyngis superior.

GLOSSOSCOPIA, from γλωσσα, 'the tongue,' and σκοπια, 'I view.' Inspection of the tongue as an index of disease.

GLOSSOSPAS'MUS, *Glossoco'ma*, from γλωσσα, 'the tongue,' and σπασμος, 'spasm.' Cramp or spasm of the tongue.

GLOSSO-STAPHYLI'NUS, from γλωσσα, 'the tongue,' and σταφυλη, 'the uvula.' *Glossopalati'nus*, *Constrictor Isthmi Faucium*. A small, thin, narrow, and long muscle, which arises from the base of the tongue, and is inserted at the inferior and lateral part of the velum palati, in the anterior pillar of which it is situate. Its use is to contract the isthmus faucium, by depressing the velum palati, and raising the base of the tongue.

GLOSSOT'OMY, *Glossotom'ia*, from γλωσσα, 'the tongue,' and τεμνειν, 'to cut.' Dissection of the tongue. Amputation of the tongue.

GLOTTIS, *Lig'ula*. A small oblong aperture, situate at the upper part of the larynx. This aperture is comprised between the *chordæ vocales*. It is narrow, anteriorly; wider, posteriorly; and is capable of being modified by muscular contraction, as may be required by the voice. It is by the *chordæ vocales*, that voice is produced. The glottis is nearly an inch long in the adult male:—less in the female and child.

Glottis is, by some, used synonymously with ventricle of the larynx: with others, it includes the whole of the larynx.

GLUTE'AL, *Glou'tius*, *Glutæ'us*, from γλουτος, 'the nates or buttocks.' (F) *Fessier*. That which belongs, or relates to the nates. This name has been given to many parts, which compose the nates.

The GLUTE'AL AR'TERY, or *Poste'rior Il'iac Ar'tery*, (F) *Artère fessière*, is one of the largest branches of the hypogastric. It makes its exit from the pelvis at the upper part of the superior sciatic foramen; gains the posterior part of the pelvis, and divides into two branches;—the one *superficial*, the other *deep-seated*. The last subdivides into three secondary branches, whose ramifications are distributed particularly to the *Glutæi*, *Longissimus Dorsi*, *Sacro-lumbalis*, &c. and anastomose with the sciatic and internal circumflex arteries.

The GLUTE'AL VEIN, (F) *Veine fessière*, follows the same march as the artery of the same name.

The GLUTE'AL NERVE, (F) *Nerf fessier*, is a large branch, furnished by the 5th pair of lumbar nerves. It is chiefly distributed to the glutæi muscles.

GLUTÆ'US MAX'IMUS, *Glutæ'us major*, *Maximus et ex'timus glutius*, *G. magnus*, *Ilio-sacro-fémoral*; *Sacro-fémoral* (Ch.), (F) *Muscle grand fessier*. This muscle is situate at the posterior part of the pelvis, and at the upper and posterior part of the thigh. It is large, thick, and quadrilateral; and is attached, *above*, to the posterior part of the crista ilii, to the part of the ilium comprised between the crista and the upper curved line, to the posterior surface of the sacrum, coccyx, and great sacro-sciatic ligament; and *below*, it terminates, by a broad aponeurosis, which is inserted into the rugged surface, that descends from the trochanter major to the linea aspera of the femur. This muscle extends the thigh on the pelvis, and rotates the thigh outwards. It is powerfully concerned in station and progression.

GLUTÆ'US ME'DIUS, *Glou'tius secundus et medius*, *Ilio-trochantérien*; *Grand Ilio-trochantérien* (Ch.), (F) *Moyen Fessier*. This muscle is situate, in part, beneath the preceding; it is broad, very thick, radiated, and triangular; attached, *above*, to the crista ilii, and to the part of the outer surface of that bone comprised between the three anterior fourths of its crista, its upper curved line, and its lower; and, *below*, it ends by a tendon, inserted at the upper edge of the great trochanter. It is an abductor of the thigh; but can turn the thigh outwards or inwards, according as its posterior or inferior fibres are thrown separately into contraction.

GLUTÆ'US MIN'IMUS, *Glutæ'us minor*, *Ilio-ischii-trochantérien*, *Tertius et In'timus Gloutius*, (F) *Petit Fessier*,—*Petit Ilio-trochantérien*, (Ch.) This muscle, which is situate beneath the preceding, is flat, triangular, and with radiated fibres. It is attached, *above*, to the external surface of the os ilium, from the inferior curved line to the acetabulum; and, *below*, is inserted into the anterior part of the great trochanter. It has the same uses as the preceding.

GLUTEN, *Glutinum*, *Lentor*, 'Paste.' An immediate principle of vegetables. It is soft, of a grayish white, viscid consistence, and very elastic. Exposed to the air, it becomes hard, brown, and fragile; and, in moist air, putrefies. Water and alcohol do not dissolve it. It is soluble in vegetable, and in weak mineral acids, at a high temperature. The *Farinæ*, in which it is found, are those preferred for the preparation of bread; on account of the property it has of making the paste rise.

GLUTINOUS, *Glutinosus*, *Colloides*, from *gluten*, 'paste, glue.' (F) *Glutineux*, *Gluant*. An epithet given to substances taken from the animal or vegetable kingdom, and endowed with unusual viscosity. The decoctions of marsh-mallows, and figs, and the jelly of hartshorn, are said to be glutinous.

GLUT' TONY, from *glutio*, 'I swallow.' *Limo'sis Helluo'num*, (F) *Gourmandise*. Excessive appetite, owing to habitual indulgence.

GLYCAS'MA, from *γλυκυσ*, 'sweet.' A sweet wine, prepared from must.—Linden.

GLYCYRRHIZA, from *γλυκυσ*, 'sweet,' and *ρίζα*, 'a root.' *Glycyrrhiza Glabra*, *Liquoritia*, *Scythica* (*Radix*), *Glyceraton*, *Glycyph' yton*, *Liquorice*, *Adip'sos*, *Alca'cas*, *Alimos*, (F) *Réglisse*. Order, Leguminosæ. *Sex. Syst.* Diadelphia Decandria. The root of this southern European plant is inodorous; has a sweet taste; is mucilaginous; and leaves, when unpeeled, a degree of bitterness in the mouth. It is used as a demulcent, and chiefly in catarrh. The extract, made from it and sold in the shops, is known under the name *Spanish Liquorice* or *Liquorice Juice*, (F) *Jus de Réglisse*.

The **PECTORAL BALSAM OF LIQUORICE**,—a quack preparation,—is said by Dr. Paris, to consist chiefly of *Paregoric Elixir*, strongly impregnated with *Oil of Aniseed*.

GLYSTER HERBS, *Herbæ pro Enem'atē*. The herbs, ordinarily sold by the English apothecary under this title, are:—*mal-low leaves*, one part; *chamomile flowers*, one part. (3iss to ℥j of water.)

GNATHOS, from *κνᾶω*, 'I scrape, rub.' The *cheek*, the *upper jaw*. Also, the part of the jaws in which the teeth are fixed.—Hippocr., Foësius.

GNOSIS, *γνῶσις*, 'knowledge.' A common suffix, as in *Diagno'sis*, *Prognō'sis*, &c.

GOBLET, **EMETIC**, *Poc'ulum emet'icum*, *Calix vomito'ria*, (F) *Gobelet émetique*. A vessel, made by pouring melted antimony into a mould. By putting wine into this, and allowing it to stand some time, it acquires the property of producing vomiting. This kind of emetic has been long rejected; as the practitioner could never be certain of the dose he exhibited.

GODFREY'S CORDIAL. A celebrated nostrum, for which Dr. Paris has given the following formula. Infuse 3ix of *sassafras* and of the seeds of *carraway*, *coriander*, and

anise, of each 3j, in six pints of *water*. Simmer the mixture until reduced to ℥iv: then add ℥vj of *treacle*, and boil the whole for a few minutes. When cold, add 3iij of *tincture of opium*.

The following form is recommended by a committee of the Philadelphia College of Pharmacy. *Tinct. Opii*, O iss; *Syrupi Nigri*, O xvj; *Alcoholis*, O ij, *Aquæ*, O xxvj, *Carbonatis Potassæ*, 3ijss, *Olei Sassafras*, f. 3iv, M.

It is anodyne.

GODRONNÉ (CANAL), *Cana'lis Petiti'anus*, *Couronne ciliaire*, *Canal de PETIT*, *Canal goudronné*, *Bullular canal of Petit*. Petit gave this name (from (F) *godron*, 'a plait or fold,') to the semicircular canal, formed by the tunica hyaloidea around the edge of the crystalline; because it appears, as it were, plaited or festooned.

GOLD, *Aurum*, *Chrysos*, (F) *Or*. A solid, yellow, very brilliant, hard, very ductile, malleable, tenacious, and heavy metal; found in nature, either in its native state, or combined with a little silver, copper, or iron. S. G. 19.25.

The **MURIATE OF GOLD**, *Chloride of Gold*, *Auri Chlo'ridum*, *A. Murias*, *A. Chlorure'tum*, *A. Muriaticum*, *A. Chlora'tum*, *A. Oxydula'tum muriat'icum*, *A. Sali'tum*, (F) *Chlorure d'or*, *Muriate d'or*, has been admitted into the Pharmacopœia of the United States, and into that of Paris, &c. The formulæ, however, differ. That of the United States is a muriate with two bases; and is prepared, according to the form of Dr. Chrestien, by dissolving the gold in a mixture of nitric and muriatic acids, and adding muriate of soda to the residuum after evaporation; then redissolving and evaporating slowly to dryness. The Parisian formula for the *Muriate d'or*, *Murias seu Chlorure'tum Auri*, consists in simply dissolving the gold in the acids, and evaporating to dryness. It has been recommended as an antisiphilitic in old, rebellious, venereal affections, exostoses, and in venereal, scrophulous, or cancerous glandular enlargements. Dose gr. 1-8th to gr. ss, rubbed on the tongue or gums. Internally, one-sixteenth of a grain in pill.

Various other preparations, as the *Cyan'ide*, (*Auri Cyani'dum*, *A. Cyanure'tum*;) the metallic gold in a state of division (*Aurum metallicum*, *Pulvis Auri*) obtained by amalgamating gold with mercury and driving the latter off by heat, and in the form of filings (*Aurum limatum*;) the *Chloride of Gold and Sodium* (*Aurum muriat'icum natrona'tum*, *A. muriat'icum*, *A. chlora'tum natrona'tum*, *Chlore'tum Auri cum Chlore'tonatrii*, *Murias Auri co-na'tricum*, *Chlorure'tum auri et natrii*, *Hydrochlorate or muriate of Gold and Soda*, (F) *Hydrochlorate ou Muriate d'or*;) the *Nitromuriate of Gold*, (*Aurum Nitrico-muriaticum*, *A. Nitromu'rias*) and the *Oxide of Gold* (*Auri Oxidum*, *Aurum Oxydatum*), have been em-

ployed in the like affections and with similar results.

GOLD-BEATERS' SKIN. The intestina recta of the ox, which have been beaten quite smooth, for the manufacture of gold leaf. Used as a defensive dressing for slight cuts, &c.

GOLD LEAF, *Aurum folia'tum*, *Aurum in libellis*. Used to gild pills, and to plug carious teeth.

GOMPHIASIS, *Gomphias'mus*, *Agomphi'asis*, γομφιασις, γομφιασμος, from γομφος, 'a nail.' A disease of the teeth, and particularly of the molares: looseness of the teeth in their sockets. Pain in the teeth.

GOMPHOSIS, *Cardinamen'tum*, *Clava'tio*, *Gompho'ma*, *Coagmenta'tio*, *Inclava'tio*, γομφωσις, from γομφος, 'a nail.' *Engompho'sis*, εγγομφωσις. An immovable articulation, in which one bone is received into another, like a nail or peg into its hole. Gomphosis is only met with in the articulations of the teeth with the alveoli. It is, also, called *Articulation par implantation*.

GONAGRA, from γονυ, 'the knee,' and αγρα, 'a prey.' That, which attacks the knees. Gout in the knees. Paracelsus calls it *Genugra*.

GONAL'GIA, from γονυ, 'the knee,' and αλγος, 'pain.' *Pain in the Knee.* *Gonyal'gia*. This is almost always produced by gout. It may, however, depend on some other disease, either of the knee or of another part;—particularly of the hip-joint.

GONE, *Gonos*, *Genitu'ra*. The semen; (hence, gonorrhœa)—the uterus.—Hippocr.

GONOIDES, from γονι, 'the seed,' and εδος, 'appearance.' *Genitu'ræ sim'ilis*. Similar to sperm. *Spermatic* or *Spermatoid*. A term appropriated to any substance, which resembles sperm.

GONORRHŒA. Erroneously called from γονι, 'the sperm,' and ρεω, 'I flow,' because the older writers believed it to be a flux of semen. *Blennorrhæ'gia*, *Blennorrhæ'a*, *Blennurê'thria*, *Phallorrhæ'a*, *Medorrhæ'a*, *Catar'rus Gonorrhæ'a*, *C. urê'thræ*, *Urethri'tis*, *Blennorrhæ'a urethra'lis*, *Catar'rus urethra'lis*, (F) *Écoulement*. An inflammatory discharge of mucus from the membrane of the urethra in both sexes; and from that of the prepuce in man, and the vagina in woman. It may be excited spontaneously, or by irritants applied directly to the membrane; but is, usually, produced by impure connexion.

Two great varieties have been generally reckoned:—

1. The **GONORRHŒA PURA VEL BENIG'NA**. That which does not follow an impure connexion; (F) *Échauffement*; the *Blennorrhagia benigna*:—and

2. The **GONORRHŒA IMPURA**, *malig'na*, *contagio'sa*, *syphilit'ica*, *et virulen'ta*; *Fluor albus malignus*, *Fluxus vene'reus*, *Blennorrhæ'a luo'des*, *Clap*, (F) *Chaude-pisse*. That which is the result of impure commerce. The French, also, distinguish the *Chaude-*

pisse sèche, or that, unaccompanied with discharge; and the *Chaude-pisse cordée*, *Gonorrhœa cordata*, or that accompanied with chordee, and which, of course, occurs only in the male.

The *Gonorrhœa Virulenta*; the kind, which will most frequently engage the attention of the practitioner, is characterized by mucous discharge from the urethra or vagina, intermixed with specific matter, and accompanied by burning pain on micturition. It is decidedly infectious. It is, however, a distinct disease from syphilis, and never produces it. Its duration is various, but the inflammatory symptoms usually subside in four or five weeks; leaving generally behind more or less of the gonorrhœa mucosa or gleet.

Gonorrhœa virulenta—indeed gonorrhœa of every kind, attended with any inflammatory symptoms—is best treated by the antiphlogistic regimen; avoiding every kind of irritation, and keeping the body cool by small doses of salts; and the urine diluted by the mildest fluids. After the inflammatory symptoms have subsided, cubebs, or the balsam of copaiba, exhibited in the dose of a teaspoonful, three times a day, will be found effectual: indeed, during the existence of the inflammatory symptoms, it often affords decided relief. Injections are rarely required.

Sometimes, gonorrhœa affects the glans; when it is called *Gonorrhœa Spuria*, *G. Balani*, *Balanoblennorrhœa*, *Balanorrhœa*, *Balanitis*, *Blennorrhæ'gia spuria vel notha*, (F) *Blennorrhagie du gland*, *Gonorrhée bâtarde*, *Fausse Blennorrhagie*. It requires only cleanliness and cooling lotions.

Some other varieties of gonorrhœa have been enumerated, but they are of little moment.

The **GONORRHŒA LAXORUM**, *G. libidino'sa*, *Spermorrhæ'a aton'ica*, consists of a pellucid discharge from the urethra, whilst awake, without erection of the penis, but with venereal thoughts:—and

The **GONORRHŒA DORMIENTIUM**, *G. Oneirog'onos*, is that seminal discharge, which occurs during sleep, and is occasioned by libidinous dreams.

In consequence of repeated attacks of gonorrhœa, or of the debility induced by a single attack, it not unfrequently happens, as already remarked, that a constant, small discharge occurs, or remains behind, after all danger of infection is removed. The great difference between it and gonorrhœa is, that it is uninfected. The discharge consists of globular particles, contained in a slimy mucus, and generally devoid of that yellow colour, which characterizes the discharge of gonorrhœa virulenta. It is unattended with pain, scalding, &c. To this state the names *Gleet*, *Gonorrhæ'a muco'sa*, *Blennorrhæ'a chron'ica*, *Blennorrhæ'a*, &c. have been given. It is commonly a disease of some duration, and demands the use of the copaiba, astringent in-

jections: and, if obstinate, the introduction of the bougie.

GONY, γονυ, 'the knee;' hence:

GONYAGRA, from γονυ, 'the knee,' and ἀγρᾶ, 'a seizure.' Gout in the knee.

GONYON'CUS, from γονυ, 'the knee,' and ογκος, 'a tumour.' A swelling of the knee.

GORGET, from (F) gorge, 'the throat.' *Canalis, Ductor canalicula'tus.* (F) *Gorgeret.* An instrument, representing a long gutter, in the shape of a throat, and which is especially employed in the operations of lithotomy and fistula in ano.

The LITHOT'OMY GORGET, (F) *Gorgeret Lithotome, Cutting Gorget*, is the one used in the operation for the stone, for the purpose of dividing the prostate and the neck of the bladder, so as to enable the surgeon to introduce the forceps, and extract the stone. At the end of this gorget is a crest or beak, which fits the groove of the staff, and admits of the gorget's being passed along it into the bladder.

Besides cutting, there are also blunt, gorgets, intended to be introduced into the wound;—their concavity serving as a guide for the forceps into the bladder.

The chief modifications in the gorget have been made by Andouillet, Bell, Blicke, Bromfield, Cline, Desault, Foubert, Hawkins, Larrey, Lefevre, Michaelis, Thomas, &c.

The GORGET FOR FISTULA IN ANO consists of a semi-cylindrical, wooden staff; four inches long, without including the handle, and furnished with a wide groove. This is introduced into the rectum to prevent the point of the bistoury from injuring the intestine, when the internal orifice of the fistula is deeply situated, and it is desirable to perform the operation by incision. This instrument, invented by Marchettis, has been modified by Percy, Runge, &c.

Desault invented an instrument for conducting the wire by the anus, in the operation for fistula by ligature. He called it *Gorgeret à repoussoir*.

GORGONEI FONTES. Fountains, described by Libavius, as containing water, which possessed a petrifying property; probably, water holding in solution super-carbonate of lime.

GOSSYP'IUM, *Gossyp'ium Herba'ceum*; *Gossip'ion Xylon, Bombax, Cotton.* (F.) *Coton.* Family. Malvaceæ. Sex. Syst. Monadelphia Polyandria. The seeds of the Cotton Tree, *Gossip'ium arbor'eum*, have been administered in coughs, on account of the mucilage they contain. The cotton wool is used in medicine for making moxas, &c.

GOUT, *Arthri'tis, Morbus articula'ris, Gutta, Arthro'sia Podagra, Podalgia, Podagra, Arthrit'icus verus, Arthri'tis Podagra, Podagra Arthri'tis, Flux'io arthrit'ica, Febris arthrit'ica, Flerecin, Gastro-arthri'tis, Misopto'chos,* (F) *Goutte.* The gout was formerly regarded as a catarrh, and received its

name from the (F) *goutte*, (L) *gutta*, 'a drop;' because it was believed to be produced by a liquid, which distilled, *goutte à goutte*, 'drop by drop,' on the diseased part. This name, which seems to have been first used about the year 1270, has been admitted into the different languages of Europe.

Gout is an inflammation of the fibrous and ligamentous parts of the joints. It almost always attacks, first, the great toe; whence it passes to the other smaller joints, after having produced, or been attended with, various sympathetic effects, particularly in the digestive organs; after this it may attack the greater articulations. It is an affection, which is extremely fugitive, and variable in its recurrence. It may be acquired or hereditary. In the former case, it rarely appears before the age of 35; in the latter, it is frequently observed earlier. It is often difficult to distinguish it from rheumatism. A combination is indeed supposed to exist sometimes—hence called *Rheumatic gout*. During the paroxysm or fit, a burning, lancinating pain is experienced in the affected joint, attended with tumefaction, tension, and redness. One or more joints may be attacked, either at the same time or in succession; and, in either case, the attack terminates by resolution in a few days. This is the *Arthritis acu'ta, inflammato'ria vel regula'ris, Regular gout, Arthro'sia podagra regularis, Goutte régulière chaude.*

At other times, pains in the joints exist, of more or less acute character; the swelling being without redness. These pains persist, augment, and diminish irregularly, without exhibiting intermission, and consequently without having distinct paroxysms. The disease is then called *aton'ic, or asthenic, imperfect or irregular gout, Chronic G., Arthritis atonica vel asthenica, Arthro'sia Podagra larva'ta.* It is, also, commonly called in France *Goutte froide, Goutte blanche.* It may appear primarily or succeed attacks of regular gout.

The gout does not always confine itself to the joints. It may attack the internal organs; when it is called *Arthritis aber'rans, errat'ica, Podagra aberrans, Vare'ni, Wandering, misplaced, or anomalous gout,* (F) *Goutte vague.*

Retrograde gout, Arthritis retrog'rada, Podagra retrograda, Arthro'sia Podagra complica'ta, Rece'dent, mispla'ced gout, (F) *Goutte remontée, G. malplacée, G. rentrée,* is when it leaves the joints suddenly, and attacks some internal organ, as the stomach, intestines, lungs, brain, &c.

Gout is also called, according to the part it may affect, *Podagra, Gonagra, Chiragra, &c.* Gout may be acute or chronic and may give rise to concretions, which are chiefly composed of urate of soda. See Calculus (Arthritic.) It may, also, give occasion to nodosities, when it is called *Arthritis nodosa,* (F) *Goutte nouée.*

The treatment of gout is of the antiphlogistic kind, and the local disorder should be but little interfered with. The colchicum seems to have great power over the disease. It forms the basis of the *Eau medicinale d'Husson*; a celebrated French gout remedy. The bowels must be kept regular by rhubarb and magnesia; and a recurrence of the disease be prevented by abstemious habits.

GOUTTIÈRE, (F) *Collic'ia*. A groove in a bone; like that used for carrying off rain. Some of these cavities are intended to facilitate the sliding of tendons, such as the *Gouttière Bicip'itale* or *Bicip'ital groove*. Others, as the *Gouttière sagittale* or *Sagit'tal groove*, lodge blood-vessels and especially veins. Others, again, are merely intended for the support of certain organs; as the *Gouttière basilaire* or *Bas'ilary groove*, which supports the medulla oblongata.

GRAC'ILIS, *Rectus int'erior fem'oris, sive Grac'ilis interior, Sous-pubio-creti-tibial, Sous-pubio-pretibial* (Ch.) *Droit ou grêle interne de la cuisse*. This muscle is situate at the inside of the thigh. It is thin and very long; and arises from the descending ramus of the pubis, to be inserted at the inner and inferior part of the tuberosity of the tibia. It bends the leg and causes adduction of the thigh.

GRAIN, *Granum*; the 60th part of a Troy, and the 72d part of an Avoirdupois, drachm.

GRAMEN CRUCIS CYPERIOÏDIS, *Gramen Ægyptiacum, Ægyptian Cock's foot grass*. The roots and plant possess the virtues of the *Triticum repens* and have been recommended in the earlier stages of dropsy. They were, formerly, considered to possess many other properties.

GRAMME, *γρᾶμμα*, an ancient weight, equivalent to the 24th part of an ounce, or to 24 grains, or a scruple, Avoirdupois. At the present day, the gramme is equal in weight to a cubed centimeter of water; or to 18 grains, Poids de Marc—15.444 grains, Troy.

GRANDE'ALÆ. The hair, which grows in the arm pits.

GRANULA'TION, *Granula'tio*, from *granum*, 'a grain.' *Gemma*, (F) *Bourgeon, B. charnu*. Granulations are the reddish, conical, flesh-like shoots, which form at the surface of suppurating wounds and ulcers. They are the product of inflammatory excitement, and may be produced in indolent ulcers, by exciting the parts by proper stimulants. They form the basis of the cicatrix.

GRANULATION is, likewise, a name, given by the modern French physicians, to an organic lesion, consisting in the formation of small, round, firm, shining, semi-transparent tumours, of the size and shape of millet seed or of a pea; which are met with in the lungs particularly, and in considerable quantity; often without materially interfering with their functions.

GRAPHIS'CUS, *Graphis'cus Di'oclis*. An instrument, invented by Diocles for extracting darts. It is described by Celsus.

GRAPHITES, *Plumba'go, Supercarbure'tum Ferri, Carbur'e'tum Ferri, Ferri Carbo-na'tum, F. Supercarbure'tum, Carbo minera'lis, Carburet of iron, Black lead, Wad*, (F) *Crayon noir, Plombagine*. This substance has been esteemed slightly astringent and desiccative. It has been advised by Weinhold in the cure of herpes.

GRAS-FONDURE (F), *Diarrhœa adiposa*, literally *molten grease*. A species of diarrhœa, referred to by older writers; accompanied with great emaciation, and in which the evacuations contain fat-like matter. According to Sauvages, the *Gras-fondure* differs from colliquative diarrhœa in not being attended with hectic fever.

GRASSEYEMENT (F), *Sonus blæsus, Rottacis'mus*, from (F) *gras*, 'thick,' 'speaking thick.' According to Sauvages, a vicious pronunciation of the letter *r*. They who speak thick, like the inhabitants of Newcastle, in England, or of Havre, in France, have difficulty in pronouncing the *r*, and they frequently substitute for it the letter *l*; but this does not properly constitute *Grasseyement*. It consists in this: that in words in which the letter *r* is joined to another consonant, a sort of *burring* or guttural rolling is heard, nearly like that produced by gargling.

GRATIOLA OFFICINA'LIS, *Digita'lis min'ima, Gratia dei, Gratiola Centaurioides. Hedge hyssop, Herb of grace*. It is a native of the South of Europe, (F) *Herbe au pauvre homme*. The plant is inodorous; taste strong, bitter, nauseous. It is possessed of anthelmintic, purgative, emetic, and diuretic properties. Dose, 10 grains.

GRAVEL, *Lithia rena'lis areno'sa, Lithiasis nephrit'ica, L. rena'lis*, (F) *Gravelle*. A disease occasioned by small concretions, similar to sand or gravel, (F) *Gravier*, which form in the kidneys, pass along the ureters to the bladder, and are expelled with the urine. These concretions, which are commonly composed of uric acid and an animal matter, are deposited at the bottom of the vessel, immediately after the excretion of the urine; and by their hardness, and resistance under the finger, differ considerably from the ordinary sediment of that liquid. A vegetable diet and alkaline drinks are the best prophylactics. See *Calculi, Urinary*.

GRAVITY SPECIFIC, *Grav'itas specifica*, (F) *Pesanteur spécifique*. The relation between the weight of a body and its bulk: thus, supposing four bodies to be of the same size, but which weigh, one 4, another 3, another 2, and the fourth 1; the specific gravity of the first will be four times greater than that of the last. The specific gravities of different bodies are therefore as the weights, bulk for bulk. For solids and liquids water is taken as the unit; atmo-

spheric air for the gases. Thus, water is 1.000; mercury at the common temperature, 13.58. Whence, we conclude, mercury is between 13 and 14 times heavier than water.

GRELE (F), *Grac'ilis*, long and thin. This epithet is given by the French to various parts, as the

APOPHYSE GRELE DU MARTEAU, the *slender apoph'ysis* or *process of the malleus*, a long process, situate at the anterior part of the neck of the malleus, which passes out by the fissure of Glaserius. It is also called the *Apoph'ysis of Raw*, although it was already known to Fabricius ab Acquapendente and to Cæcilius Follius.

GRIPPE (F), from *gripper*, 'to gripe,' 'catch hold of,' a vulgar name for several catarrhal diseases, which have reigned epidemically; as the Influenza, which see.

GROATS, Germ. *Grutze*. *Grutum*. Oatmeal, (*Yorkshire*.) Oats, hulled but unground, (*Lancashire*.) Hulled oats, half ground. Oats that have the hulls taken off: *Grits*.

A decoction of these is administered as a diluent and demulcent.

GROOVE, *Furrow*, *Sulcus*. (F) *Rainure*. Icelandic, *grafa*. Sax. *grapan*, to dig. A channel or gutter, in a bone or surgical instrument.

GROOVED. Same etymon. *Sulca'tus*, *Stria'tus*, *Canalicula'tus*, (F) *Cannelé* ou *Cannelé*. Having a small channel or gutter.

GROWTH, from Dutch *groeyen*, *Crescen'tia*, (F) *Croissance*. The development of the body; particularly in the direction of its height. Also, any adventitious tissue: thus, we speak of a *morbid growth* or *formation*.

GRUTUM. 'Groats.' *Grutum Mil'ium*, *Mil'ium*. A hard, white tubercle of the skin, resembling, in size and appearance, a millet-seed. It is confined to the face.

GRYPHIUS PES. The *Griffon's Foot*, (F) *Pied de Griffon*. An instrument of which Ambrose Paré speaks; and which was used for extracting moles from the uterus.

GRYPO'SIS, from *γρυπώω*, 'I incurvate.' *Incurva'tio*. Crookedness or incurvation of the nails; *Un'guium adunca'tio*.

GUACO. The name of a plant, described by Humboldt and Bonpland under the name *Mikania Guaco*, which grows in the valleys of Madalena, Rio-Cauca, &c. of South America. The negroes use the juice against the bites of poisonous reptiles;—both in the way of prevention and cure. It has been, of late, brought forward as a remedy in cholera.

GUA'IACUM, *G. officina'le*; *G. America'num*, *Lignum vitæ*, *L. sanctum*, *L. benedic'tum*, *Palus sanctus*, *Lignum In'dicum*, *Hagioz'yllum*, (F) *Gayac*, *Gaiac*; *Gomme Guaiac*. The resin and wood are both used in medicine. Their odour is slightly fragrant; taste warm and bitter, of the resin more so than of the wood. The resin is concrete, brittle; colour, externally, greenish;

internally, grayish. Water dissolves about one-tenth; alcohol 95 parts. It is soluble, also, in *liquor potassæ* 15 parts, *liquor ammoniæ* 38 parts. The powder is whitish, but changes to green in the air. The base of the guaiacum is a peculiar resin, called *Guaiacine*.

The guaiacum is stimulant and diaphoretic; and, in large doses, purgative. It is administered in chronic rheumatism, gout, cutaneous diseases, and the sequelæ of syphilis. Dose, of resin, gr. v to xx:—to purge, gr. xx to xl.

GUBERNAC'ULUM TESTIS, *Ligamentum suspensorium Testis*, (F) *Gouvernail du testicule*. A triangular, fibro-cellular cord; which, in the fœtus, arises from the ramus of the ischium and the skin of the scrotum, and proceeds to the posterior part of the testicle, before this organ issues from the abdomen. It is a continuation of the fascia superficialis, and, by contracting to occasion the descent of the testicle, it lengthens the fibres of the lesser oblique muscle; so as to produce the cremaster, and is itself expanded to constitute the dartos.

GUILANDI'NA MORIN'GA. A plant, which affords the Ben nut, and the Lignum nephriticum. It is also called *Moringa Oleifera*, *M. Zeylanica*. *Ben*, *Glans unguenta'ria*, *Ben Nux*, *Balanus Myrep'sica*, the *Oily Acorn* or *Ben Nut* is a West India nut which furnishes an oil, *O'leum Balani'num*, that does not become rancid by age, and is hence used by perfumers. It is purgative.

The wood of the Guilandina is called *Lignum Nephrit'icum*, and has been used, in decoction, in affections of the urinary organs.

GUM-LANCET, *Dentiscalpium*, *Odontoglyphon*, (F) *Déchaussoir*. An instrument for separating the gum from the cervix of the tooth, prior to extraction. It is formed much like a fleam.

The operation itself is called *Lancing the gums*, *Den'tium scalptu'ra*, (F) *Dechaussement*.

GUMMA. An elastic tumour, formed in the periosteum; occupying particularly the cranium and sternum, and produced by the syphilitic virus, when it has been long in the constitution. It is so called, because, when opened, it contains a matter like gum.

GUMMI, *Commī*, *ρομμί*, (F) *Gomme*. An immediate principle of vegetables. It is a solid, uncrystallizable, inodorous substance, of a mawkish taste, unchangeable in the air, insoluble in alcohol, but soluble in water, with which it forms a mucilage. It is obtained from various species of the *mimosa* and *prunus*; and, consequently, there are many varieties of gum. They are used in medicine as demulcents, emollients, and relaxants, particularly in catarrh, intestinal irritations, &c.; and in *Pharmacy*, they are employed in the formation of emulsions, pills, &c.

GUMMI-NOSTRAS, (F) *Gomme du Pays*; *Indig'enous Gum*. These generic names are given to several species of gum, which flow

spontaneously from certain European fruit trees,—such as the almond, cherry, peach, apricot, &c. The indigenous gums have nearly the same properties as gum arabic, but they are inferior to it.

GUMMI-RESINA, Gum-Resin. A milky juice, obtained by making incisions into the branches, stalks, and roots of certain vegetables. Gum-resins are compounds of resin, gum, essential oil, and different other vegetable matters. They are solid, opaque, brittle, of a strong odour, acrid taste, variable colour, and are heavier than water. Water dissolves a part of them, and alcohol another: hence proof spirit is the proper menstruum.

The generality of the gum-resins are powerful stimulants to the whole or to parts of the Economy.

The chief are *assafœtida*, *gum ammoniac*, *euphorbium*, *galbanum*, *camboge*, *myrrh*, *olibanum*, *opoponax*, *scammony*, *aloes*, &c.

GURGLING. 'Gushing with noise,' as water from a bottle. (F) *Gargouillement*. The rhonchus or *râle* heard on auscultation when there is a cavity in the lungs containing pus. It is the 'cavernous rattle,' *Râle caveux*. If the cavern be large, this *râle* will nearly resemble the gurgling of a bottle (*glouglou d'une bouteille*); if, on the contrary, the cavern be small, it will not differ from the *râle muqueux*.

GURGITELLO, MINERAL WATERS OF. A thermal spring in the Isle of Ischia. Temp. at its source, 176° Fah. It contains carbonic acid, carbonates of lime, magnesia, iron and soda, sulphates of lime and soda, muriate of soda and silica.

GUTTA. A *Drop*, *Stigma*, *Alun'sel*, *Stilla*. (F) *Goutte*. A quantity of liquid, generally valued, in Pharmacy, at the weight of a grain. It is clear, however, that the weight must vary according to the nature of the liquid:—a drop of ether, e. g., cannot weigh as much as one of sulphuric acid. The form of the mouth of the phial likewise alters the size of the drop. These and other circumstances have induced the London College to institute the *minim*, which is the sixtieth part of a fluid drachm. See *Minimum*.

GUTTA ROSEA, Gutta Rosa'cea, Ion'thus corymb'ifer, Crusta serpigino'sa, C. pruriginosa, Acnè rosa'cea, Bacchia, Butiga, Carbut'led Face, Rosy Drop, Welk. (F) *Couperose, Goutte Rose, Bourgeons*. An eruption of small, suppurating tubercles, with shining redness, and an irregular granular appearance of the skin of the part of the face which is affected. The redness commonly appears first at the end of the nose, and then spreads on both sides. It is often produced by hard drinking. Its cure must be attempted by regular regimen, and cooling means internally: weak spirituous or saturnine lotions externally. The affection is usually very obstinate.

GUTTÆ NIGRÆ. *Common Black Drop.*

(*Opii 3 viij, aceti distillat. ℞ ij.* Infuse.) It is milder than the tincture of opium.—Gray.

The celebrated *Black Drop, Lan'caster* or *Quaker's Black Drop*, is made as follows:—take half a pound of *opium*, sliced; three pints of *good verjuice* (juice of the wild crab), and one and a half ounce of nutmegs, and half an ounce of saffron. Boil to a proper thickness, and add a quarter of a pound of sugar, and two spoonfuls of yeast. Set the whole in a warm place, near the fire, for six or eight weeks; then place it in the open air until it becomes a syrup. Lastly, decant, filter, and bottle it up, adding a little sugar to each bottle. One drop is equal to three of laudanum: and it is nearly devoid of all the unpleasant exciting effects of the latter.

GUTTUR (L). The throat; the larynx; the trachea.

GUT'TURAL, Gut'turalis, from *guttur*, 'the throat.' Relating or belonging to the throat.

The *Superior Thyroideal Artery* is sometimes called *Guttural Artery*.

A *Guttural Cough* is one occasioned by irritation of the larynx or trachea.

A *Guttural Sound* is one pronounced, as it were, in the throat.

GYMNASIUM, from *γυμνος*, 'naked.' *Palæstra*. An establishment, amongst the ancients, intended for bodily exercises, as wrestling, running, &c.

GYMNAST, Gymnas'tes, Gymnas'ta; same etymon. The manager of a gymnasium. One, whose profession it was to prevent or cure diseases by gymnastics.

GYMNASTICS, Gymnas'tica, Somacet'ics; same etymon. That part of Hygienic Medicine, which treats of bodily exercises. It is called *Medical Gymnastics*. The ancients had, also, *Athletic Gymnastics*, and *Military Gymnastics*. Herodicus of Selivraea first proposed gymnastics for the cure of disease.

GYNÆCEIA, Gynæci'a, from *γυνή*, 'a woman.' The catamenia;—also, the lochia.—Hippocr., Galen, Foësius.

GYNÆCOLOGIA, from *γυνή*, 'a woman,' and *λογία*, 'a description.' The doctrine of the nature, diseases, &c. of women.

GYNÆCOMANIA, from *γυνή*, 'woman,' and *μανία*, 'mania,' 'rage.' That species of insanity, which arises from love for women. Some have used the word synonymously with nymphomania.

GYNÆCOMASTUS, from *γυνή*, 'woman,' and *μαστός*, 'a breast.' A man, whose breasts are as large as those of a woman.—Galen, Ingrassias.

A considerable enlargement of the breasts of a female was, formerly, called *Gynæcomastion*.

GYNÆCOMYSTAX, from *γυνή*, 'woman,' and *μυσταξ*, 'the beard.' The hair on the pubes of women.—Rolfink.

GYNANTHROPUS, Gynan'drus. A

hermaphrodite, who belongs more to the male than to the female sex.

GYNATRE'SIA, from *γυνή*, 'a woman,'

and *ατρητος*, 'imperforate.' Closure or imperforation of the external parts of generation of the female.

H

HABE'NA. A *Bridle*, *Telamon*. A bandage for uniting the lips of wounds; and which, in many instances, replaced the suture.—Galen.

HABIL'LA DE CARTHAGE'NA, *Bejuio*, *Carthage'na Bean*. (F) *Fève de Carthagène*. A kind of bean of South America, famed as an effectual antidote for the poison of all serpents, if a small quantity be eaten immediately.

HABIT, *Habitu'do*, *Assuetu'do*, *Mos*, *Usus*, *Consuetu'do*, *Ethos*, *ἔξικ*, *Hexis*, *Ethmos'ynē*. (F) *Habitude*, *Accoutumance*. Habit is the aptitude for repeating certain acts:—or, a facility, which results from the frequent repetition of the same acts. It is, according to vulgar expression, "a second nature." Habit may predispose to certain diseases, or it may protect us against them. It ought not to be lost sight of, in attending to the progress of disease, or its treatment.

HABIT OF BODY, *Constitu'tio*, *Hab'itus*, *Hab'itus Cor'poris*, *Catas'tasis*, *Hexis*, *ἔξικ*. (F) *Habitude extérieure*, *Habitude du corps*. The aggregate of the physical qualities of the human body.

HÆMA, *αἷμα*, *αἷματος*, 'blood.' Hence:

HÆMADON'OSOS, from *αἷμα*, 'blood,' and *νοσος*, 'a disease.' *Hæmatangion'osis*. Disease of the blood-vessels.

HÆMADOSTO'SIS, from *αἷμα*, 'blood,' and *οστωσις*, 'a bony tumour.' Ossification of the blood-vessels.

HÆMAGO'GUS, from *αἷμα*, 'blood,' and *αγω*, 'I drive off.' A medicine, which promotes the menstrual and hemorrhoidal discharges.

HÆMALO'PIA, *Hæm'alops*, from *αἷμα*, 'blood,' and *οφθαλμος*, 'the eye.' An effusion of blood into the eye.—Galen. A blood-shot eye.

HÆMAPH'OBUS, *Hæmoph'obus*, from *αἷμα*, 'blood,' and *φοβος*, 'dread.' One, who has a dread of blood:—who cannot look at it without fainting.

HÆMAPO'RIA, *Hæmatoporia*, *Oligæ'mia*, from *αἷμα*, 'blood,' and *προς*, 'poor.' Paucity of blood. See *Anæmia*.

HÆMASTAT'ICE, from *αἷμα*, 'blood,' and *ἵστημι*, 'I remain,' 'reside.' A science, which treats of the strength of the blood-vessels. *Hymastat'ics*.

HÆMATEM'ESIS, from *αἷμα*, 'blood,' and *εμεω*, 'I vomit.' *Vom'itus cruentus*: *Hæmorrha'gia Hæmatem'esis*, *Vom'itus Sanguinis*, *Gastrorrh'gia*, *Œsophagorrh'gia*, *Vomiting of Blood*. (F) *Vomissement de sang*. Hæmatemesis is generally preceded by a feeling of oppression; weight; and dull or pungent pain in the epigastric, and in the hypochondriac regions; by anxiety, and, occasionally, by syncope. Blood is then passed by vomiting, and sometimes, also, by stool: the blood being generally of a grumous aspect.

Hæmatemesis may be active or passive; acute or chronic. The blood effused proceeds, almost always, from a sanguineous exhalation at the surface of the mucous membrane of the stomach. It is often observed in females, whose menstrual secretion is irregularly performed. It is not of much danger, except when connected with diseases of some of the solid viscera of the abdomen.

On dissection of those, who have died from protracted hæmatemesis,—for the acute kind is comparatively devoid of danger,—the mucous membrane of the stomach is found red and inflamed, or black, and the vessels considerably dilated. Complete abstinence from food; rest; the horizontal posture; bleeding, if the hemorrhage be active; cold, acidulous drinks, &c., constitute the usual treatment.

HÆMATICA, from *αἷμα*, 'blood.' Diseases of the sanguineous function:—the third class in the Nosology of Good.

HÆMATINE, *Hematine*, *Hematosine*, *Zoohematine*, *Hemachroine*, *Cruorine*, *Rubrine*, *Globuline*, from *αἷμα*, 'blood.' The colouring principle of the blood. It resides in distinct particles or globules of the blood, and, in the opinion of the best observers, in the envelope of the globules.

HÆMATI'TES, from *αἷμα*, 'blood,' so called from its colour or from its fancied powers of stopping blood. *Lapis Hemati'tes*. A beautiful ore of iron, called, also, *Bloodstone*, *Ochrea rubra*, *Oxydum ferricum crystallizatum nativum*, *Ferrum Hæmatites*. When finely levigated, and freed from the grosser parts, by frequent washings with water, it has been long recommended in hemorrhage, fluxes, uterine obstructions, &c., in doses of from one scruple to three or four.

HÆMATOCATHARTICA, from *αἷμα*, 'blood,' and *καθαρσις*, 'purification or purgation.' Remedies for purifying the blood.

HÆMATOCE'LE, from *αἷμα* 'blood,' and *κῆλη*, 'tumour.' A tumour formed by blood. By some, this term has been applied to a tumour, formed by blood effused into the cellular texture of the scrotum. Others have used it for tumours, arising from the effusion of blood into the tunica vaginalis:—*hæmatocele*, according to them, differing from *hydrocele* only in the character of the effusion.—Heister. Others, again, have applied it to effusions of blood into the interior of the tunica albuginea itself.—Richter. The first is the usual acceptation. It is, most commonly, caused by wounds or contusions; and requires the use of antiphlogistics, discutients, &c. Sometimes it is necessary to evacuate the effused blood.

HÆMATOCHE'ZIA, from *αἷμα* 'blood,' and *χεῖω*, 'I go to stool.' *Catarrhex'is vera*, *Enterorrhag'ia simplex*, *Diarrhœ'a cruen'ta*. Discharge of blood by stool.

HÆMATO'DES or **HÆMATO'IDES**, *Sanguin'eus* from *αἷμα*, 'blood,' and *εἶδος*, 'appearance.' That, which contains blood, or has the colour of blood.

FUNGUS HÆMATODES, *Fungus cancrusus hæmato'des*, *Melœ'na fungo'sa carcino'des*, *Tumor fungo'sus sanguineus*, *Spon'goid inflammation*, *Pulpy* or *Med'ullary Sarcô'ma*, *Carcino'ma Hæmato'des*, *Carcino'ma spongio'sum*, *Bleeding Fungus*, *Soft Cancer*, (F) *Carcinome sanglante*, *Hématoncie fongoïde*. An extremely alarming, carcinomatous affection, which was first described, with accuracy, by Mr. John Burns of Glasgow.

It consists in the developement of cancerous tumours, in which the inflammation is accompanied with violent heat and pain, and with fungous and bleeding excrescences.

Even when the diseased part is extirpated, at a very early period,—and this is the only wise plan that can be adopted,—recovery rarely follows: other organs being generally implicated at the same time. *Fungus hæmatodes* was the term first applied to the disease by Mr. Hey of Leeds. Mr. J. Burns called it *Spongioid inflammation*, from the spongy, elastic feel, which peculiarly characterizes it, and continues even after ulceration has taken place. The disease has, most frequently, been met with in the eyeball, the upper and lower extremities, testicle and mamma: but it occurs in the uterus, ovary, liver, spleen, brain, lungs, thyroid gland, and in the hip and shoulder-joints.

Some French surgeons designate, by this name, those tumours which were formerly termed *anormales*, *caverneuses*, *variqueuses*, called *Érectiles* by Dupuytren, *Hématoncies* by Alibert, *Telangiectasiæ* by Græfe.

HÆMATOGRA'PHIA, from *αἷμα*, 'blood,' and *γραφη*, 'a description.' A description of the blood.

HÆMATOLO'GIA, from *αἷμα*, 'blood,' and *λογος*, 'a discourse.' That part of Medicine, which treats of the blood.

HÆMATO'MA, a bloody tumour, especially of the scalp of the new-born.

HÆMATOM'PHALOCE'LE, *Hæmatom'phalum*, from *αἷμα*, 'blood,' *ομφαλος*, 'the navel,' and *κῆλη*, 'a tumour.' Umbilical hernia, the sac of which incloses a bloody serum; or which has, at its surface, a number of varicose veins:—constituting the *Varicom'phalus*.

HÆMATON'CUS. (F) *Hématoncie*, from *αἷμα*, 'blood,' and *ογκος*, 'a tumour.' Alibert has given this name to the *Nævi mater'ni* or *varicose tumours*. He admits three varieties:—the *H. fongoïde*, *H. framboisée*, and *H. tubéreuse*.

HÆMATOPHLEBES'TASIS. Sudden suppression of a hemorrhage;—from *στασις αἵματος φλεβων*, 'suppression of the blood of the veins.'—Galen.

HÆMATOPHO'BIA, from *αἷμα*, 'blood,' and *φοβος*, 'dread.' Dread or horror at the sight of blood, producing syncope, &c.

HÆMATOPS, (F) *Hématopisie*. M. Capuron, of Paris, has applied the term *Hématopisie utérine*, from analogy with *Hydropisie utérine*, to a collection of blood, which sometimes takes place in the uterus, when, owing to faulty conformation, the exit of the menstrual flux is prevented.

HÆMATO'SIS, *Exæmato'sis*, *Hæmatopoi'e'sis*, *Decarboniza'tion*, *Atmospheriza'tion*, *Sanguificatio*, from *αἷμα*, 'blood.' The transformation of the venous blood and chyle into arterial blood by respiration. Called, also, *Aëration*, *Arterializa'tion of the blood*. Formation of blood in general.

HÆMATOSTAT'ICA, from *αἷμα*, 'blood,' and *στατική*, 'statics.' *Ischæmia*, *Hæmostat'ica*, *Hæmostat'ics*. The doctrine of the motion of the blood in living bodies. Also, remedies for stopping blood.

HÆMATOS'TEON, from *αἷμα*, 'blood,' and *οστέον*, 'a bone.' Effusion of blood into the bones or joints.

HÆMATOTHO'RAX, *Hæmathô'rax*, *Hæmopt'ysis inter'na*, *Pleurorrhœ'a sanguin'ea*, *Pneumorrhœ'gia inter'na*, from *αἷμα*, 'blood,' and *θώραξ*, 'the chest.' Extravasation of blood into the chest.

HÆMATOXYLON CAMPECHIA'NUM. *Aca'cia Zeylon'ica*, *Logwood*. The part of the tree, used in medicine, is the wood, *Hæmatox'yli Lignum*, *Lignum Campechen'se*, *L. Campechia'num*, *L. Campesca'num*, *L. Indicum*, *L. Sappan*, *L. Brasilia'num rubrum*, *L. cæru'leum*, (F) *Bois de Campêche*. Family, Leguminosæ. Sex. Syst. Decandria Monogynia. Logwood is almost inodorous; of a sweetish, subastringent taste; and deep red colour. Its virtues are extracted both by water and alcohol. It is astringent and tonic, and is used in the protracted stage of diarrhœa and dysentery.

HÆMATU'RIA, *Hæmaturē'sis*, from *αἷμα*, 'blood,' and *οὐρῶ*, 'I make urine.' Voiding of blood by urine. *Hæmorrhā'gia hæmatu'ria*, *Mictio cruen'ta*, *Hæmoure'sis*, *M. Sanguin'ea*, *Mictus cruen'tus*, (F) *Pissement de sang*. Hemorrhage from the mucous membrane of the urinary passages. Like other hemorrhages, it may be *active* or *passive*. It may proceed from the kidneys, bladder, or urethra. The essential symptoms are:—blood evacuated by the urethra; preceded by pain in the region of the bladder or kidneys, and accompanied by faintness. Whencesoever it proceeds, hæmaturia always takes place by exhalation. Rupture of vessels is by no means common in the mucous membranes. *Active hæmaturia* requires general or local blood-letting; diluent and cooling drinks; absolute rest, and the horizontal posture. The *chronic* kind is more troublesome. It requires acidulated or aluminous drinks; chalybeates and tonics in general. When hæmaturia is excessive, cold injections may be thrown into the rectum or into the vagina of women, and topical applications be made to the perinæum.

HÆMOCERCH'NOS. This term has received two acceptations, owing to the different senses in which *αἰσχρὸς* is employed; signifying, sometimes, *hissing*; at others, *dry*. Consequently, the Hellenists have translated the compound word, at times, by spitting of blood, with hissing in the throat; at others, by evacuation of dry matters.

HÆMO'DIA, *Hebetu'do Den'tium*, from *αἰμαδία*, 'I stupefy.' Pain of the teeth,—and more especially *Agacement* (q. v.), or the setting on edge of those bodies by acid or acerb substances. It is also called *Odon'tia Stupo'ris*, *Odontal'gia hæmo'dia*, *Dolor den'tium a stri-do're*, *Toothedge*, *Cataplex'is*.

HÆMOPHTHAL'MIA, from *αἷμα*, 'blood,' and *οφθαλμος*, 'eye.' Effusion of blood in the eye. When the extravasation is external, it is called *H. exter'na*, *Hyposphag'ma* and *Hæmalops exter'nus*; when internal, *Hæmophthal'mia interna*; *Hydrophthal'mus cruen'tus*, *Hypochysis hæmato'des*, *Hæmato'ma Oc'uli*, and *Hæmalops internus*.

HÆMOP'TYSIS, from *αἷμα*, 'blood,' and *πτύω*, 'I spit.' Spitting of blood.—*Hæmorrhā'gia Hæmop'tysis*, *Emp'toë*, *Empto'ica pas'sio*, *Hæmoptys'mus*, *Hæmopto'sis*, *Sputum sang'uinis*, *Cruen'ta expui'tio*, *Hæmorrhā'gia pulmonis*, *Pas'sio hæmopto'ica*, *Rejec'tio sang'uinis e pulmonibus*, *Expectora'tio sang'uinis*, *Hæmorrhā'gia Bron'chica*, *Pneumorrhā'gia*, *Emp'tysis*, *Hæmop'toë*, *Sputum cruen'tum*, (F) *Crachement de sang*. Hemorrhage from the mucous membrane of the lungs; characterized by the expectoration of more or less florid and frothy blood. It is generally preceded by cough; dyspnœa; sense of heat in the chest, &c.

It is important to discriminate between hæmoptysis, produced by some accidental

cause acting irregularly or periodically on the lungs; and that which is, as it were, constitutional, and dependent on some organic affection of the lungs, or some faulty conformation of the chest. These two varieties differ as much in their prognosis and method of treatment, as in their causes. Constitutional hæmoptysis is a serious disease, almost always announcing phthisis pulmonalis. The accidental variety is chiefly dangerous by frequent recurrence, or too great loss of blood.

The *general causes* of hæmoptysis are the same as those of other kinds of hemorrhage. It has, besides, *particular causes*; such as too great exercise of the lungs;—loud speaking, playing on wind instruments, breathing acrid vapours, &c. It usually occurs between puberty and the age of 35.

A sudden and terrific kind of Hæmoptysis is sometimes met with; consisting in a great afflux of blood into the lungs. This has been called *Pul'monary Ap'oplexy*, (F) *Apoplexie pulmonaire*.

Physical signs. Percussion may not always aid us, but generally a circumscribed dulness will be perceived. The inspiratory murmur, on auscultation, is feeble or absent, locally; and is replaced by bronchial respiration and *bronchophony*. A fine liquid crepitus is detected around the affected part, and in the larger tubes, near the spine, a liquid bubbling rhonchus is usually heard.

The value of these signs is determined by the nature of the expectoration.

The treatment of hæmoptysis must be like that of internal hemorrhage in general.

HÆMORRHA'GIA from *αἷμα*, 'blood,' and *εργυρμι*, 'I break forth.' *San'guinis proflu'vium copio'sum*, *Sanguiflux'us*, *Hæmatoch'ysis*, *Aimorrhæ'a*, *Hæmorrhæ'a*, *Profu'sio Sanguinis*, *Hem'orrhage*, *Loss of blood*, (F) *Hémorrhagie ou Hémorrhagie*, *Perte de sang*. Any discharge of blood from vessels destined to contain it; with or without rupture of their coats. Hemorrhages may be *spontaneous* or *traumatic*; the first belong to the domain of medicine, the latter to that of surgery. They may, also, be *internal* or *external*; *general*—as in scurvy, or *local*.

The *hemorrhages by exhalation*; those which chiefly interest the physician may be classed with Pinel as follows:

- | | |
|--|--|
| 1. Hemorrhage of the Mucous Membranes. | { Epistaxis.
Hæmoptysis.
Hæmatemesis.
Hæmorrhoids.
Hæmaturia.
Uterine Hemorrhage. |
| 2. Hemorrhage of the Tissues. | { Cutaneous.
Cellular.
Serous.
Synovial. |

Hemorrhages have generally been distinguished into *active* and *passive*: in other words, into those dependent upon augmentation of the organic action, and those dependent upon debility. According to Broussais,

no spontaneous hemorrhage is passive; all are active,—that is, produced by increased action and excess of irritation of the blood-vessels. They may occur *with* debility, but not *from* debility. He calls those only *passive hemorrhages*, which are owing to an external lesion of the vessels. Hemorrhages have been, by some, divided into *constitutional*, or those depending on original conformation:—*accidental*, or those produced by some adventitious cause; *supplementary*, or those which succeed others; *symptomatic*, *critical*, &c.

ACTIVE HÆMORRHAGES, *Hæmorrhag'gia acti'va*, *H. arterio'sa*, *Cauma hæmorrhag'icum*, *Angeiorrhagia*, occurs chiefly in the young and plethoric. Good living; the use of fermented liquors; excessive exercise, or too sedentary a life, may perhaps be ranked as predisponent causes. They are commonly preceded by heaviness and pulsation in the part,—owing to the afflux of blood and consequent hyperæmia,—and by coldness of the extremities. The blood, evacuated, is generally of a florid red. In such active hemorrhages, the great indications of treatment will be, to diminish plethora, where it exists, and to lessen the heart's action. Bleeding, purgatives, and cold, will be the chief agents.

PASSIVE HÆMORRHAGE, *Hæmorrhag'gia passi'va*, *H. Venó'sa*, *Profu'sio*, *P. hæmorrhag'ica*, occurs in those of a weak constitution; or who have been debilitated by protracted disease, poor diet, long watching, excessive evacuations, &c.

The direct causes may be:—previous active hemorrhage; scorbutus, or any thing capable of inducing atony or asthenic hyperæmia of the small vessels. These hemorrhages are not preceded by excitement or by any signs of local determination. They are usually accompanied by paleness of the countenance; feeble pulse; fainting, &c. The indications of treatment will be:—to restore the action of the small vessels and the general tone of the system; hence the utility of styptics and cold externally; and of tonics and astringents, creosote, mineral acids, &c., internally.

Hæmorrhage also occurs from mechanical hyperæmia, as when hæmoptysis is produced by tubercles in the lungs; hæmatemesis by disease of some of the solid viscera of the abdomen, &c.

In *traumatic hemorrhages*, or those, which are the consequence of wounds of arterial or venous trunks, the blood is of a florid red colour and issues by jets and impulses, if it proceed from an artery: whilst it is of a deeper red, issues slowly and by a continuous jet, if from a vein. If the capillary vessels are alone divided, the blood is merely effused at the surface of the wound.

Of the means, used for arresting these traumatic hemorrhages, some act mechanically, as *absorbents*, *ligature*, and *compression*; others chymically, as *fire*, *caustics*, *creosote*, *astringents*, &c.

HÆMORRHŒA, from *αἷμα*, 'blood,' and

ῥέω, 'I flow.' *Loss of blood*. Some writers have proposed to restrict this name to passive hemorrhages.

HÆMORRHOIDAL or HEMORRHOIDAL, *Hæmorrhoida'lis*, *Hæmorrhoidæus*. Relating to hemorrhoids; as *hemorrhoidal flux*, *hemorrhoidal tumours*, &c.

HEMORRHOIDAL VESSELS, *Vasa seda'lia*, are those vessels which are distributed to the rectum—the seat of hemorrhoids.

The HEMORRHOIDAL ARTERIES have been distinguished into *superior*, *middle*, and *inferior*. 1. The first is the termination of the inferior mesenteric artery, which assumes the name *superior hemorrhoidal*, when it reaches the upper and posterior part of the rectum. 2. The *middle hemorrhoidal* is furnished by the hypogastric or internal pudic. It ramifies on the inferior and anterior part of the rectum. 3. The *inferior hemorrhoidal* arteries are branches of the internal pudic, furnished to the inferior part of the rectum and to the muscles of the anus.

The HEMORRHOIDAL VEINS follow the same distribution, and generally empty themselves into the lesser mesenteric. Some of them assist in the formation of the hypogastric vein.

HEMORRHOIDAL NERVES. These emanate from the sciatic and hypogastric plexuses; and cover the rectum with their numerous filaments.

HÆMORRHOÏS, *Aimorr'hoïs*, from *αἷμα*, 'blood,' and *ῥέω*, 'I flow.' *Aimor'roïs*, *Proc'tica Maris'ca*, *Maris'ca*, *Proctal'gia Hæmorrhoida'lis*, *Piles*. The essential symptoms of this affection are:—Livid and painful tubercles or excrescences, (*Hæmorrhoid'al Tumours*), usually attended with a discharge of mucus or blood (*Hæmorrhoid'al flux*.) The most common causes of piles are:—a sedentary life, accumulation of fæces in the rectum; violent efforts at stool; pregnancy, &c. The precursory symptoms are:—Pains in the loins; stupor of the lower limbs; and uneasiness in the abdomen and rectum. To these follow, one or more round, smooth, renitent, painful, pulsating, and erectile tumours, around the margin of the anus, or within the anus; some pouring out blood occasionally. After having remained, for some time, tense and painful, they gradually shrink and disappear. The chief symptoms, occasioned by hemorrhoidal tumours, when much inflamed, are—constant pain, liable, however, to exacerbations, obliging the patient to preserve the horizontal posture, and to become augmented by the least pressure, or by the passage of the fæces.

Hæmorrhoids have generally been distinguished into—*H. Fluen'tes*, *Proc'tica Maris'ca cruen'ta*, *Bleeding* or *Open Piles*; and into *H. nonfluen'tes*, *Proc'tica Maris'ca cæca*, *Hæmorrhoides cæcæ*, *Shut* or *blind piles*. They have, also, been divided into *internal* or *occult*, and *external*, according to their situation; and into *accidental*, or *constitutional*.

HÆMORRHOID'AL TUMOURS are extremely troublesome, by their disposition to frequent recurrence; and they are apt to induce fistula. Otherwise, they are devoid of danger.

When anatomically examined, they are found not to consist in a varicose dilatation of the veins of the rectum; but to be formed of a very close, spongy, texture; similar to that which surrounds the orifice of the vagina; and to be erectile, like it. They are surrounded by a delicate membrane, and have no internal cavity.

The treatment, in mild cases of hæmorrhoidal tumours, is simple. Rest; the horizontal posture; the use of mild laxatives, as sulphur, castor oil, and emollient glysters, will be sufficient.

If they are much inflamed, leeches may be applied; and warm cataplasms or cold lotions, according to circumstances, be prescribed; with abstinence; and cooling drinks. Afterwards, an ointment, composed of powdered galls and opium, will afford relief. It is in the relaxed kind, that such ointment, and the internal use of *Ward's Paste*, can alone be expected to afford much benefit.

If, after repeated attacks, the tumours remain hard and painful, and threaten fistula, they may be removed.

These remarks apply to hæmorrhoidal tumours.

By HÆMORRHOID'AL FLUX, *Fluxus hæmorrhoidalis*, *Proctorrha'gia*, is meant the hæmorrhage, which takes place from the rectum, owing to hæmorrhoids. It is a common affection. The quantity of blood discharged is various; at times, it is very trifling; at others, sufficient to induce great debility, and even death. It is announced and accompanied by the same symptoms, as precede and attend hæmorrhoidal tumours. Like other hæmorrhages, it may be *active* or *passive*; *accidental* or *constitutional*. The prognosis is rarely unfavourable. The affection may, almost always, be relieved by properly adapted means. These resemble such as are necessary in hæmorrhages in general. Perfect quietude,—mental and corporeal,—light diet, cooling drinks; bleeding, if the symptoms indicate it; astringents, (if the disease be protracted and passive,) such as the *Tinctura Ferri Murialis*; aspersions of cold water on the anus; astringent injections; plugging and compression. Such will be the principal remedial agents.

When the hæmorrhage has become habitual or is vicarious, some caution may be required in checking it; and, if inconvenience arise from a sudden suppression, its return may be solicited by the semicupium; sitting over warm water; aloetic purgatives, glysters, irritating suppositories, &c.; or leeches may be applied to the anus.

Some authors have described a species of LEUCORRHO'EA ANA'LIS; or whitish discharge from the anus, which often attends ordinary hæmorrhoids. This they have called, *Proc-*

tica maris'ca mucosa, *Hæmor'rhois alba*, *Hæmor'rho'gia mucosa*, *Leucor'rhois*, &c. It requires no especial mention.

HÆMORRHOSCOPIA, *Hæmorrhosco'pia*, *Hæmat'ica*, from *αἷμα*, 'blood,' *σκοπέω*, 'I flow,' and *σκοπέω*, 'I view.' The art of forming a judgment of the state of the system from blood drawn.

HÆMOSTASIA, *Hæmos'tasis*, *Epid'esis*, from *αἷμα*, 'blood,' and *στασις*, 'stagnation.' *Stagnation of blood*. This name has, also, been given to any operation, the object of which is to arrest the flow of blood.

HAG'NIA ABYSSIN'ICA. An Abyssinian tree, which the natives plant round their habitations, as an ornament. The infusion of its flowers mixed with beer is employed by them as an anthelmintic. It is called, there, *Cusso*.

HAGGARD, (F) *Hagard*. The French use the term, *Air hagard*, *Œil hagard*, '*Haggard air*,' '*Haggard eye*,' for a physiognomy, in which there is at once, an expression of madness and terror.

HAIR, Sax. *hær*, *Crines*, *Pilus*, *Thrix*, (F) *Poil*. A conical, corneous substance; issuing to a greater or less distance from the skin, to the tissue of which it adheres, by a bulb seated in the cellular membrane,—where alone, it is sensible. The hair receives various names in different parts—as *Beard*, *Cilia*, *Eyebrows*, *Hair of the head* (*Capilli*), &c. (q. v.)

HALCHE'MIA. The alchymists so called the art of fusing salts: from *ἅλς*, 'salt,' and *χεῖω*, 'I pour out.'—Libavius.

HALELÆON, *Halelæ'um*, from *ἅλς*, 'salt,' and *ελαῖον*, 'oil.' *Oleum Sali mixtum*. A mixture of oil and salt, for removing swellings of the joints.—Galen.

HALINA'TRUM. A name, given by the ancients to subcarbonate of soda, containing a little subcarbonate of ammonia, which is found ready formed on the plaster of damp walls, in places inhabited by man or animals; from *ἅλς*, 'salt,' and *natrum* or *natron*.

HALITUOUS, *Halituo'sus*, from *hal'itus*, 'vapour,' (F) *Halitueux*. The skin is said to be *halitueuse*, when covered with a gentle moisture. The vapour, exhaled in all the cavities of the body, so long as the blood is warm, is called *Hal'itus*. The odorous vapour, exhaled by the blood itself whilst warm, is called *Halitus Sanguinis*.

HALLUCINATION, *Hallucina'tio*, *Alu'sia*, *Illu'sion*, *Allucina'tio*, *Parorasis*, *Waking dream*, *Phan'tasm*, *Ido'lum*, from *allucinari*, 'to err;' 'to be deceived.' A morbid error in one or more of the senses. Perception of objects, which do not in fact exert any impression on the senses. Hallucination, almost always, if not always, depends on disorder of the brain, but is not an index of insanity, unless the patient believes in the existence of the subjects of the hallucination.

HALMYRO'DES, *Salsugino'sus*, from *ἅλμυρος*, 'a salt liquor.' An epithet given to

any affection, in which the heat feels acrid under the finger of the physician.—Hippocrates.

HALO SIGNATUS. The impression made by the ciliary processes on the anterior surface of the vitreous humour. So called from its consisting of a circle of indentations.—Sir C. Bell. Called by Haller, *Striae retinæ subjectæ ligamento ciliari*.

HALS, ἅλς, 'salt;' hence *Halogene*, *Haloid*, &c.

HAMAME'LIS VIRGINIA'NA. The *witch hazel*. The bark of this tree, which is a native of the United States, is somewhat bitter and sensibly astringent; but it has not been much used. A cataplasm of the inner rind of the bark is said to have been found efficacious in painful inflammations of the eyes.

HAM'MA, *Nodus*, 'a tie.' A knot, used for retaining bandages on any part.—Hippocr.

HAMPSTEAD, MINERAL WATERS OF. These waters, situate in the neighbourhood of London, are a good chalybeate.

HAM'ULUS. Diminutive of *hamus*, 'a hook.' A hook or crook: *Ancistrum*. Also, any hook-like process; as the hamulus of the pterygoid process.

HAPHE, ἅψη, 'feeling, touch.' Hence:

HAPHON'OSI, *Haphonu'si*; from ἅψη, 'the touch.' *Morbi tactus*. Diseases of the sense of touch.

HAPLOTO'MIA, *Simplex sec'tio*, from ἅπλος, 'simple,' and τομή, 'incision.' A simple incision.

HARD, (G) *hart*, *Durus*, *Scleros*, (F) *Dur*. That, which offers much resistance. In Anatomy, the *hard parts* are those which compose the osseous basis of the body: in other words, the skeleton. See *Pulse*, *hard*.

HARE-LIP, *Lagocheilus*, *Lagosto'ma*, *La'bium Lepori'num*, *Olopho'nia Labii Lobata*, *Lepori'na labia*, *Lepori'num rostrum*, (F) *Bec de Lièvre*. A fissure or perpendicular division of one or both lips. It has been so called, in consequence of the upper lip of the hare being thus divided.

The hare-lip is generally *congenital*; at other times it is *accidental*, or produced by a wound, the edges of which have not been brought into contact, and have healed separately. It is *simple*, when there is but one division; *double*, when there are two; and *complicated*, when there is, at the same time, a division or cleft of the superior maxillary bone and of the palate; or projection of the teeth into the separation of the lip.

In the *Hare-lip Operation*, there are two indications to be fulfilled. First, To pare, with the knife or scissors, the edges of the cleft; and, afterwards, to preserve them in contact, in order to cause adhesion. This last object is accomplished by means of pins, passed through the edges of the division; in other words, by the twisted suture. The pro-

jecting teeth must, of course, be previously removed. If there be separation of the palate, it will become less and less after the union of the lip, or the operation of staphyloplasty may be performed upon it.

HARMONY, *Harmo'nia*, *Harmos*, from ἁρμόω, 'I adjust.' Anatomists have called—*Suture by Harmony*, or simply *Harmony*, *False or superficial suture*,—an immovable articulation, in which the depressions and eminences, presented by the bony surfaces, are but slightly marked; so that it might be presumed, that the junction of the bones took place by simple apposition of their surfaces. An instance of harmony occurs in the union of the superior maxillary bones with each other.

HAR'ROGATE, MINERAL WATERS OF. The villages of High and Low Harrogate are situate in the centre of the county of York, England, and near Knaresborough. Here are four valuable sulphureous springs, and one chalybeate. For the former, Harrogate is celebrated and frequented.

ARTIFI'CIAL HAR'ROGATE WATER may be formed of *common salt* 3v, *water* ℥iij, impregnated with the gas from *sulphuret of potass* and *sulphuric acid*, aa 3iv.

HARTFELL, MINERAL WATERS OF. This mineral water is near Moffat in Scotland. It is a chalybeate, and is much used.

HAUNCH, *Coxa*, *Cozen'dix*, of the Latins; ἄγχη, or ἰσχίον, of the Greeks, *Ancha*, *Ischion*, *Hip*, *Cossa*, (F) *Hanche*. The region of the trunk, which is formed by the lateral parts of the pelvis and the hip-joint, including the soft parts. In women, on account of the greater width of the pelvis, the haunches are more marked and prominent than in men.

HAUSTUS. A *Draught*. A liquid medicine, which can be taken at a draught.

HEAD, Sax. *heafod*, *heafod*, *heaved*; the past participle of *heafan*, 'to heave up.' *Caput*, *Cephale*, κεφαλή, κυβή, *Cybē*, (F) *Tête*. The head forms the upper extremity of the body, and tops the skeleton. It consists of the cranium and face. The first, which comprises all the superior and posterior part, has the encephalon in its cavity: the latter forms only the anterior part; and serves as the receptacle for the greater part of the organs of sense.

HEADY, same etymon. (F) *Capiteux*. That which inebriates readily. An epithet, applied to wines, which possess this quality.

HEART, Sax. *heort*, Germ. *Herz*, *Cor*, *Cear*, *Cer*, *Cardia*, καρδιά, καρδιά, (F) *Cœur*. An azygous muscle, of an irregularly pyramidal shape; situate obliquely, and a little to the left side, in the chest;—resting on the diaphragm by one of its surfaces; suspended by its base from the great vessels; free and movable in the rest of its extent, and surrounded by the pericardium. The right side

of the body of the heart is thin and sharp, and is called *Margo acutus*: the left side is thick and round, and termed *Margo obtusus*. It is hollow within, and contains four cavities; two of which, with thinner and less fleshy walls receive the blood from the lungs and the rest of the body, and pour it into two others, with thick and very fleshy parietes, which send it to the lungs and to every part of the body. Of these cavities, the former are called *auricles*, the latter *ventricles*. The right auricle and right ventricle form the *Pulmonic* or *right* or *anterior heart*, (F) *Cœur du poumon*, *C. du sang noir*, *C. droit*, *C. antérieur*: and the left auricle and ventricle the *systemic, corporeal, left, or aortic heart*, (F) *Cœur du corps*, *C. gauche*, *C. aortique* ou *C. rouge*. In the adult, these are totally distinct from each other, being separated by a partition;—the *Septum Cordis*. Into the right auricle, the *venæ cavæ*,—superior and inferior,—and the coronary vein, open;—the pulmonary artery arises from the right ventricle—the four pulmonary veins open into the left auricle, and the aorta arises from the left ventricle.

The mean weight of the heart, in the adult, from the twenty-fifth to the sixtieth year, is, according to Bouillaud, from eight to nine ounces. The dimensions, according to Lobstein and Bouillaud, are as follows:—Length, from base to apex, five inches six lines; breadth, at the base, three inches; thickness of the walls of the left ventricle, seven lines; at a finger's breadth above the apex, four lines; thickness of the walls of the right ventricle, two and a quarter lines; at the apex, half a line; thickness of right auricle one line; of the left auricle, half a line.

The heart is covered, externally, by a very thin, membranous reflection from the pericardium. The muscular structure of which it is constituted is much thicker in the parietes of the ventricles than in that of the auricles. Its cavities are lined by a very delicate membrane, the endocardium, which is continuous with the inner membrane of the arteries, as regards the left cavities; and with that of the veins, as regards the right. Its arteries—the *coronary*—arise from the commencement of the aorta. Its nerves proceed, chiefly, from the pneumogastric and the cervical ganglions of the great sympathetic.

The heart is the great agent in the circulation. By its contraction, the blood is sent over every part of the body. The heart's action does not seem to be *directly* owing to nervous influence, received from the brain or spinal marrow or from both. The circulation may, indeed, be kept up, for some time, if both brain and spinal marrow be destroyed.

When the ear is applied to the chest, a dull lengthened sound is heard, which is synonymous with the arterial pulse. This is instantly succeeded by a sharp, quick sound,

like that of the valve of a bellows or the lapping of a dog. There is then a period of repose.

The first sound appears to be produced by the contraction of the ventricles; the second by the reflux of the blood against the semilunar valves. These are what we call the *Sounds of the Heart*.

The *Beating* or *Impulse of the heart* against the parietes of the chest, is mainly caused, perhaps, by the expansive force of the heart, which tends to project it forwards. It is uncertain, however, whether the impulse is produced by the dilatation or the contraction of the ventricles.

The heart is subject to different organic diseases; the chief of which are *aneurism*, *contraction of the apertures*, and *rupture of its parietes*.

HEART, HYPERTROPHY OF THE. Supernutrition of the muscular parietes of the heart, which are thicker than usual; the cavities being generally diminished. The *physical signs* which indicate it are the following. In cases of long standing, the præcordial region is generally prominent; the pulsations of the heart are visible over a greater extent than natural; and a marked vibration is communicated to the hand when placed on the cardiac region.

The dull sound on percussion is more extensive than natural; and on auscultation there is a permanent increase of the force and extent of the heart's action; there is no increase, however, of frequency, and the rhythm is regular.

The pulse is generally strong, full and hard.

HEART, HYPERTROPHY WITH DILATATION OF THE. In this affection, the pulsations can be seen and felt over a larger space, and the apex is more to the left and lower down than natural. The impulse is less steady, but at times more violent than what accompanies simple hypertrophy. Percussion gives more distinct evidence of enlargement, the sound being dull more extensively. On auscultation, the impulse is often violent but irregular. In extreme cases it produces the sensation of a large mass of flesh rolling or revolving beneath the ear. The pulse is strong, full and vibratory. The shock of the heart's action is often transmitted to the whole person, and to the bed on which he is lying.

HEAT, past participle of Sax. hætan, 'to make warm.' *Calor*, *Therme*, *ἔσθον*. (F) *Chaleur*. The material cause, which produces the sensation,—or the particular sensation itself produced by a body of an elevated temperature, on our organs, especially on the organs of touch. Modern chymists have given the name *Caloric* to the principle, whatever may be its nature, which is the cause of heat. When we touch a body of a temperature superior to our own, a portion of caloric passes from the body to the hand, and

produces the sensation of *heat*. If, on the contrary, we touch a body of a temperature inferior to our own, we communicate a portion of our caloric to it, and experience the sensation of *cold*.

Our own sensations are but imperfect indexes of temperature. Two men meeting at the middle of a mountain,—the one ascending, the other descending,—will experience different sensations. The one ascending,

passes from a warmer to a colder atmosphere;—the one descending, from a colder to a warmer.

The chief instrument for measuring heat used in Medicine, is the thermometer. Of this there are three kinds;—that of Fahrenheit, that of Réaumur, and that of Celsius or the *Centigrade*.

The following Table exhibits the correspondence of these different thermometric scales.

Fahr.	Réaumur.	Centig.	Fahr.	Réaumur.	Centig.	Fahr.	Réaumur.	Centig.	Fahr.	Réaumur.	Centig.

^a Water boils (*Barom.* 30 inches.)

^c Heat of a stove, borne for 10 minutes by Sir Joseph Banks and Dr. Solander.

^e Alcohol boils.

^f Very pure ether distils.

ⁱ Temperature at which liquids are often drunk.

^k Temperature of the common hen.

^m Temperature of venous blood. Phosphorus melts.

^o Nitric ether boils.

^p Muriatic ether boils.

^r Ice melts.

^t Vinegar freezes.

^v A mixture of one part of alcohol and three of water freezes.

^x A mixture of equal parts of alcohol and water freezes.

^b Heat of a stove, borne by Dr. Solander.

^d Water simmers.

^g Bees' wax melts.

^h Spermaceti melts.

^j Heat observed in Scarlatina.

^l Temperature of arterial blood. (?)

ⁿ Æther boils.

^q Medium temperature of the globe.

^s Milk freezes.

^u Strong wine freezes.

^w Cold at the battle of Eylau, 1807.

^a A mixture of two parts of alcohol and one of water freezes.

^b Melting point of quicksilver.

The human body can bear a high degree of heat diffused in the atmosphere. There are cases, on record, where air of 400° and upwards of Fahrenheit's scale, has been breathed with impunity for a short time. It can likewise withstand very severe cold. In the expedition of Capt. Back to the Arctic regions, the thermometer was as low as -70° of Fahr.

Excessive heat disposes the body to gastric and intestinal diseases, and particularly to inflammation and enlargement of the liver; hence, the frequency of such affections within the torrid zone.

Heat is often used therapeutically: the actual cautery, at a white heat, disorganizes the parts to which it is applied: a lesser degree occasions violent inflammation. Heat higher than that of the human body is excitant; of a lower degree, sedative. Excessive cold acts as a powerful sedative—inducing sleep, the tendency to which, after long exposure, becomes irresistible. See Cold.

Many of the topical applications as cataplasms act wholly by virtue of their warmth and moisture.

In Pathology;—*Internal heat*, (F) *Chaleur interne*, is a sensation of heat, felt by the patient but not sensible to the touch. *External heat*, (F) *Chaleur extérieure*, that which can be felt by others. Heat, *Ardor*, is called *moist*, (F) *halitueuse*, when accompanied with moisture, like that felt after bathing; *dry*, (F) *sèche*, when the skin has not its ordinary suppleness. It is called *acid* and *pungent*, (F) *âcre et mordicante*, when it conveys a disagreeable tingling to the fingers. The French employ the terms *nervous heat* and *erratic heat*, *Chaleur nerveuse* and *Chaleur erratique*, for that which comes by flushes, alternating with chills, and which moves rapidly from one part to another. M. Double has used the term *septic heat*, (F) *Chaleur septique*, for that which produces a *piquante* sensation on the hand, similar to that of the acid heat, but milder and more uniform, and which is accompanied with feebleness and frequency of pulse, &c.

HEAVY, *Gravis*, (F) *Gravatif*, from Sax. heafan, 'to heave,' an epithet given to any pain, which consists in a sensation of weight or heaviness, or is accompanied by such sensation.

HEBE, ἡβη. This word has been em-

ployed to designate, 1. The hair which grows on the pubes. 2. The pubic region, and 3. The age of puberty.

HEBREWS, MEDICINE OF THE. Medicine seems to have been at a very low ebb with the ancient Hebrews. Of *anatomy* they knew nothing. Their *physiology* was imperfect and filled with superstitions, and their *therapeutics* unsatisfactory. *Hygiène* appears to have been most attended to: of the other departments of medicine we cannot judge of their knowledge.

HECTEUS, ἑκτεύς. A Greek measure, containing about 72 chopines or pints.

HECTIC FEVER, *Febris hec'tica*, *Hecticopyra*, *Hecticopyretos*, *Syntecopyra*, *Syntecticopyra*, *Febris marasmo'des*, *Fièvre Hectique*, *F. Étique*, *Febris tab'ida*, *Leucopyr'ia*, *Epan'etus hec'tica*, *Febris lenta*, *F. amphimer'ina hec'tica*, *Febris amato'ria*, *Chloro'sis amato'ria*, from ἑξίς, 'habit of body;' because in this disease, every part of the body is emaciated; or perhaps from ἐκτείνω, 'I consume,' 'I am exhausted.' The name of a slow, continued, or remittent fever, which generally accompanies the end of organic affections, and which has been esteemed idiopathic, although it is probably always symptomatic. It is the fever of irritability and debility; and is characterized by progressive emaciation; frequent pulse; hot skin; especially of the palms of the hands and soles of the feet; and, towards the end, colliquative sweats and diarrhœa.

Being symptomatic, it can only be removed by getting rid of the original affection. This is generally difficult and almost hopeless in the disease, which it most commonly accompanies,—consumption.

HECTISIS, (F) *Étisie*. Same etymon. The state of those who have hectic fever.

HECTOGRAMME, *Hectogram'ma*, from ἑκατον, 'a hundred,' and γράμμα, a measure of 100 grammes, i. e. 3 ounces, 2 drachms, and 12 grains, Avoirdupois.

HECTOLITRE. A measure, containing 100 litres or 26.42 wine pints.

HEDERA HELIX, *Hed'era arbo'rea*, *Bac'chica*, *Cissos*, κισσός, *Cittos*, κίττος, *Ed'e-ra*, *Corymb'etra*, *Corym'bos*. The *ivy*. (F) *Lierre*. The taste of *ivy leaves* is bitter, styptic, and nauseous. They are not used in medicine. According to Haller, they were recommended in Germany against the atro-

phy of children; and the common people of England sometimes apply them to running sores and to keep issues open.

The *berries* were supposed, by the ancients, to have an emetic and purgative quality; and a watery extract was made from them, called by Quercetanus—*Extractum purgans*. From the stalk of the tree a resinous juice exudes in warm climates, called *Gummi Hederae*, *Gomme de lierre*, *Resine de lierre*. It is possessed of tonic and astringent properties but is not used.

HEDRA, ἡδρα, ἡδρη, 'a vestige.' A fracture of the bones of the cranium, in which the trace of the fracturing instrument is still perceptible. It was, also, used, by the ancients, for the anus, the fæces, and for the bottom of an abscess.

HEL'COS, from ἑλκος, 'an ulcer.' Hence:

HELCYD'RION, *Helcyd'rium*, ἑλκυδριον, *ulcus'culum*, a small ulcer.—Galen, Paulus, Foësius.

HELCYSTER, from ἑλκω, 'I draw.' An iron hook or crotchet for extracting the fœtus. See Crotchet.

HEL'ICINE, from *Helix*, 'the tendril of the vine.'

The **HELICINE ARTERIES** of the penis, as described by Müller, are short vessels given off from the larger branches as well as from the finest twigs of the artery of the organ; most of these come off at a right angle and project into the cavity of the spongy substance, either terminating abruptly or swelling out into a club-like process without again subdividing. Almost all these vessels are bent like a horn, so that the end describes half a circle or somewhat more. They have a great resemblance to the tendrils of the vine, whence their name. A minute examination of them, either with the lens or the microscope, shows that although they at all times project into the venous cavities of the corpora cavernosa, they are not entirely naked, but are covered with a delicate membrane, which under the microscope appears granular.

HEL'ICIS MAJOR. A muscle of the ear, which originates from the anterior, acute part of the helix, upon which it ascends and is inserted into the helix. It pulls the part into which it is inserted a little downwards and forwards.

HELICIS MINOR. This muscle originates from the under and fore part of the helix, and is inserted into the helix, near the fissure in the cartilage, opposite the concha. Its use is, to contract the fissure.

HELIOTROPIUM EUROPEUM, *Veruca'ria*. The *He'liotrope*. (F) *Tournesol*, *Herbe aux verrues*. This plant is considered to possess aperient properties; and to be capable of destroying cutaneous excrescences; hence one of its names.

HELIX, ἑλιξ, *Capreolus*, from ἑλεειν, 'to envelope,' 'surround.' The fold is thus call-

ed, which forms the outer circumference or ring of the external ear.

HELIX POMA'TIA. A large kind of snail, transported from the South of Europe to England by Sir Kenelm Digby, for his lady, when in a decline. It was considered highly restorative.

HELLEBORIS'MUS or **ELLEBORIS'MUS**. The method of treating diseases, amongst the ancients, by hellebore. This comprised, not only the choice, preparation, and administration of the medicine, but, likewise, the knowledge and employment of preliminary precautions and remedies, proper for aiding its action, and preventing the pernicious effects, which it might occasion.

HELLEBORUS FETIDUS, *Helleboras'ter*, *Elleboraster*, *Stinking Hel'lebores* or *Bear's Foot*. (F) *Hellébore ou Ellébore fétide*, *Pied de Griffon*. The leaves of this plant are said to be anthelmintic. The smell of the fresh plant is extremely fetid, and the taste bitter and acrid. It usually acts as a cathartic.

HELLEBORUS NIGER, *Melampodium*, *Ec'tomon*, ἑκτομον, *Black Hel'lebores*, *Christmas Rose*. (F) *Hellébore noir*. The root of this European plant has a disagreeable odour, and bitter, acrid taste. It is possessed of cathartic properties and has been recommended as an emmenagogue. It has been given in mania, melancholia, dropsy, suppressed menses, &c. Dose, gr. x to ʒ j, as a cathartic.

HELMINTHAGOGUES, *Helminthago'ga*, *Helmin'thics*, from ἑλμινς, 'a worm,' and ἀγα, 'I expel.' Remedies, used against intestinal worms;—*Anthelmin'thics*, *Ver'mifuges*.

HELMINTHIA ERRATI'CA. Worms, introduced by accident and without finding a proper habitation in the stomach or intestines; producing spasmodic colic, with severe tormina, and occasionally vomiting or dejections of blood:—the 12th genus of the order *Enterica*, class *Cœliaca*, of Good.

HELMINTHIASIS, from ἑλμινς, 'a worm.' A generic name for diseases caused by the presence of intestinal worms. It is, also, called *Helmin'thia*, *Vermina'tio*, *Vermi'tio*, *Morbus vermino'sus*, *Status vermino'sus*, *Sabur'ra vermino'sa*, *Scoleciasis*, *Parasitis'mus intestinalis*, *Worms*, *Invermination*. See Worms.

HELMINTHOL'OGY, *Helmintholog'ia*, from ἑλμινς, 'a worm,' and λογος, 'a description.' A treatise on worms.

HELMINTHOP'YRA, *Helminthopyretos*, from ἑλμινς, 'a worm,' and πυρ 'a fever.' Fever occasioned by worms.

HELO'SIS, *Helotis*; from ἑλω, 'I turn.' Inversion of the eyelids and convulsions of the muscles of the eye.

HEMERA, ἡμερα, 'a day.' Hence:

HEMER'ALOPS, *Dorea*. One labouring under hemeralopia.

HEMERALO'PIA, from ἡμερα, 'the day,'

and *οπτομαι*, 'I see.' *Dysō'pia Tenebra'rum*, *Parop'sis Noctif'uga*, *Visus diur'nus*, *Nyc-talo'pia* (of some), *Amblyo'pia crepuscula'ris*, *Cæcitas crepuscula'ris*, *A'cies diurna*, *Day-sight*, *Day vision*, *Hen blindness*. (F) *Vue diurne*, *Aveuglement de Nuit*. A disease, in which the eyes enjoy the faculty of seeing, whilst the sun is above the horizon; but are incapable of seeing by the aid of artificial light. Its causes are not evident. The eye, when carefully examined, presents no alteration, either in its membranes or humours.

HEMEROPATHI'A, from *ἡμερα*, 'a day,' and *παθος*, 'an affection.' A disease, which continues only a day; or, which is only observed during the day.

HEMI, *ἡμι*, *ἡμισυς*, 'half,' 'semi.' Hence:

HEMICEPH'ALUS, from *ἡμι*, 'half,' and *κεφαλη*, 'head.' One who has half a head.

HEMICRA'NIA, *Migra'na*, *Grana*, *Hemipa'gia*, *Hemipe'gia*, *Heterocra'nia*, *Mono-pa'gia*, *Cephalæ'a Hemicra'nia*, *Megrim*, from *ἡμισυς*, 'half,' and *κρανιον*, 'cranium.' (F) *Migraine*. Pain, confined to one half the head. It is almost always of an intermittent character;—at times, continuing only as long as the sun is above the horizon; and hence sometimes called *Sun pain*,—and is cured by cinchona, arsenic, and the remedies adapted for intermittents.

HEMIEC'TON, **HEMIEC'TEON**, *Semi-sêxtum*. A vessel, capable of containing 36 chopines or pints, and in which fumigations were made in diseases of the uterus and vagina.—Hippocr.

HEMIMERION, from *ἡμισυς*, and *μοιρα*, 'a part.' 'One half.'—Foësius. Also, half a drachm.—Erotian.

HEM'INA, a Greek measure, answering to the *Cotylê*, *κοτυλη*, i. e. one half the sextarius; or about half a pint, English.

HEMIOBO'LION, or **HEMIOB'OLON**. Half the obolus. A weight of about five grains.—Gorræus.

HEMIO'LION. A weight of 12 drachms, or oz. 1½.—Galen.

HEMIO'PIA, *Hemiop'sis*, *Visus dimidia'tus*, *Marmor'ygê Hippoc'ratis*, from *ἡμισυς*, 'one half,' and *οπτομαι*, 'I see.' Depraved vision, in which the person sees only one half of an object.

HEMIPLE'GIA, *Hemiplex'ia*, *Paral'ysis Hemiplegia*, *Epiplegia*, from *ἡμισυς*, 'one half,' and *πλησσω*, or *πληττω*, 'I strike.' Paralysis of one side of the body. See Paralysis. One, so palsied, is said to be *hemipleg'ic*, *semi-sidera'tus*.

HEM'ISPHERE, *Hemisphe'rium*; from *ἡμισυς*, 'one half,' and *σφαιρα*, 'a sphere.' One half of a sphere or of a body having a spheroidal shape. The *hemispheres of the brain* are the upper spheroidal portions of the brain, separated from each other by the *falx cerebri*.

HEMITRITÆ'A, *Semi-tertia'na*, *Fièvre demi-tierce*, *Febris sesquialtera*. (F) *Semi-*

tierce. A semi-tertian fever, so called because it seems to possess both the characters of the tertian and quotidian intermittent.—Galen, Spigelius.

HEMIUN'GION, *Semuncia*. Half an ounce.

HEPAR, *ἥπαρ*, genitive, *ἥπατος*, 'liver.' The ancient name for the *liver of sulphur*, *Hepar sul'phuris*; which is sometimes a compound of sulphur and potassium; at others, of sulphur and potassa.

Hepar antimoniatum is a compound of a sulphuret of antimony and an alkali.

Hepar martia'le, a compound of sulphuret of potass and an oxide of iron.

HEPATAL'GIA, from *ἥπαρ*, 'liver,' and *αλγος*, 'pain.' Pain in the liver.

HEPATAPOSTE'MA, from *ἥπαρ*, the 'liver,' and *αποστημα*, 'an abscess.' Abscess of the liver.

HEPATEMPHRAX'IS, from *ἥπαρ*, 'liver,' and *εμφρασσα*, 'I obstruct.' Hepatic obstruction.—Ploucquet.

HEPATE'ROS, *Hepat'icus*, *Jecora'rius*. A variety of diarrhœa, *Fluxus hepaticus*.—Gorræus.

HEPAT'IC, *Hepaticus*, *Hepata'rius*, *Jeco-ra'rius*, from *ἥπαρ*, 'the liver.' Belonging or relating to the liver.

HEPATIC AR'TERY, *Arte'ria Hepatica*, one of the three branches given off by the *cœliac*. It passes towards the inferior surface of the liver; where it divides into two branches, a *right* and *left*, which proceed towards the corresponding parts of that organ. The right branch gives off the cystic artery. Before dividing, the hepatic artery sends off two considerable branches, the *A. pylorica* and *A. Gastro-epiploica dextra*.

The **HEPATIC VEINS** or *Supra hepatic veins* do not follow the course of the arteries of the same name. They arise in the substance of the liver; converge towards the posterior margin of that viscus and open into the *vena cava inferior*. They convey away the blood carried to the liver by the hepatic artery and *vena porta*.

The **HEPATIC DUCT**, (F) *Canal hépatique*, *Ductus hepaticus* is about three fingers' breadth in length, and of the size of a quill. It is formed by the union of all the biliary ducts, and joins the cystic duct at a very acute angle, to form the *ductus choledochus*. Its function is to convey the bile from the liver towards the duodenum.

The **HEPATIC PLEXUS**, *Plexus hepaticus*, consists of nervous filaments, sent by the *cœliac plexus* to the liver, which accompany the hepatic artery.

HEPATICA. A name formerly given to medicines, which were believed capable of removing diseases of the liver.

HEPATICA TRIL'oba, *Trifo'lium aureum*, *Liverwort*, (F) *Hépatique des jardins*. This plant is a gentle astringent, but not possessed of much virtue.

HEPATIRRHŒA, *Fluxus hepaticus*, *Dysent'ria hepatica*, *Diarrhœa hepatica*, *Hepatorrhœgia*, *Hæmate'ra*, *Aimatera*, (F) *Flux hépatique*, from ἥπαρ, 'the liver,' and γίω, 'I flow.' A species of diarrhœa in which the excreted matters seem to come from the liver; or are much mixed with bile, &c.

HEPATITIS, *Empres'ma hepatis*, *Inflamma'tio hepatis*, *I. Jecino'ris*, *Febris hepatica inflammato'ria*, *Hepatalgia phlegmonoi'des*, *Inflammation of the liver*. (F) *Hépatite*, *Inflammation du foie*, *Piece* (Provincial.) It may be seated either in the peritoneal covering or in the substance of the liver or in both; and may be acute or chronic. The peculiar symptoms are;—pain in the right hypochondrium, shooting to the back and right shoulder, and increased on pressure; difficulty of lying on the left side; sometimes jaundice and cough, and synocha.

Its termination is generally by resolution: in tropical climates it often runs on to supuration; the abscess breaking either externally, or forming a communication with the intestines or chest, or breaking into the cavity of the abdomen. The *causes* are those of inflammation in general. Heat predisposes to it; hence its greater frequency in hot climates. On dissection of those, who have died from it, the liver has been found hard and enlarged; colour of a deep purple; or the membranes have been more or less vascular: or adhesions, or tubercles, or hydatids, or abscesses, or biliary calculi have been met with. The treatment must be bold. Bleeding, general and local. Fomentations, blisters, purgatives. The antiphlogistic regimen, and, in hot climates especially, a new action must be excited by mercury as early as possible.

CHRONIC HEPATITIS or *Chronic liver disease*, is not as common as is believed. It may be suspected from the existence of the symptoms above mentioned, but in a minor degree; with enlargement and constant dull pain in the region of the liver; sallow countenance; high-coloured urine; clay-coloured fæces, &c.

The great object of treatment is, to excite a new action by mercury and counter-irritants, and to keep the liver free by cathartics.

HEPATIZA'TION, *Hepatisa'tio*, from ἥπαρ, 'the liver.' Conversion into a liver-like substance. *Splenization*. Applied to the lungs when gorged with blood or plastic matters, so that they are no longer pervious to the air. In such state they are said to be *hepatized*.

HEPATOCE'LE, from ἥπαρ, 'the liver,' and κηλη, 'a tumour.' *Hernia of the Liver*. The liver has never been found entirely out of the abdominal cavity. Increase of its bulk or injuries of the parietes of the abdomen have been the sole cause of the protrusions, which have been occasionally met with, especially in infants, in whom the upper part

of the linea alba is very weak, and indeed scarcely seems to exist. Sauvages has distinguished two species of hepatocèle;—the *ventral* (in the linea alba) and the *umbilical* or *hepatomphalum*.

HEP'ATO-COL'ICUM. A ligament of the liver, described by Haller, as passing from the gall-bladder and contiguous sinus portarum, across the duodenum to the colon. Another, termed *Hepato-renal*, descends from the root of the liver to the kidney. They are both peritoneal.

HEPATOGRAPHY, *Hepatogra'phia*; from ἥπαρ, 'the liver,' and γραφή, 'a description.' The part of Anatomy, which describes the liver.

HEPATOL'OGY, *Hepatolo'gia*; from ἥπαρ, 'the liver,' and λογος, 'a discourse,' 'treatise.' A treatise on the liver.

HEPATON'CUS, from ἥπαρ, 'the liver,' and ογκος, 'a tumour.' Tumefaction of the liver.

HEPATOPAREC'TAMA, from ἥπαρ, 'the liver,' and παρεκταμα, 'considerable extension.' Augmentation of the liver.

HEPATOT'OMY, from ἥπαρ, 'the liver,' and τέμνω, 'I cut.' Dissection of the liver.

HEPTAPHAR'MACUM, from ἑπτα, 'seven,' and φαρμακον, 'a remedy.' A medicine, composed of seven substances; cerusse, litharge, pitch, wax, colophony, frankincense, and bullock's fat. It was regarded as laxative, suppurative, and healing.

HERACLE'UM SPONDYL'IUM, *Branca ursi'na Germanica*, *Spondyl'ium*, *Cow Parsnep*, *All-heal*, (F) *Berce*, *Branc-ursine bâtarde*, *Fausse Acanthe*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. The root of this plant has a strong, rank smell; and a pungent, almost caustic, taste. It has been given as a tonic, stomachic, and carminative; both in powder and in decoction. The Russians, Lithuanians, and Poles obtain from its seeds and leaves, by fermentation, a very intoxicating spirituous liquor, which they call *Parst*.

The **HERACLE'UM LANA'TUM** or *Masterwort*, is in the secondary list of the Pharmacopœia of the United States.

HERB, *Herba*.

The **FIVE EMOLLIENT HERBS**, *Quinque herbæ emollientes*, were, anciently;—beet, mallow, marsh-mallow, French mercury, and violet.

The **FIVE CAPILLARY HERBS**, *Quinque herbæ capilla'res*, were hart's tongue, black, white, and golden maiden-hair, and spleenwort.

HERBIV'OROUS, *Herbiv'orus*, from herba, 'grass,' and voro, 'I eat.' An epithet, applied to animals which feed on herbs.

HERBORIZA'TION, *Herba'rum inquisi'tio*. An excursion, made with the view of collecting plants. Such excursions are directed by the Apothecaries' Company of London, for the use of their apprentices, &c.

HERBORIST, *Herba'rius*. One who deals in useful plants. A *Her'balist* or *Herbarist*.

HEREDITARY, *Heredita'rius*, *Gentil'ius*, *Sym'phytos*, *Syn'genes*. An epithet given to diseases, communicated from progenitors. Such diseases may exist at birth; or they may supervene at a more or less advanced period of existence.

HERMAPHRODITEITY, *Hermaphrodis'mus*, *Hermaph'rodism*; from *Ἑρμης*, 'Mercury,' and *Ἀφροδίτη*, 'Venus.' Appertaining to Mercury and Venus. Union of the two sexes in the same individual.

HERMAPHRODITE. Same etymon. *Hermaphroditus*, *Gyni'da*, *Androg'ynus*. One, who possesses the attributes of male and female: who unites in himself the two sexes. A term, applied to an animal or plant which is, at the same time, both male and female. True hermaphrodites are met with only in the lower degrees of the animal scale, amongst the zoophytes, molluscs, or gasteropodes. The individuals of the human species, regarded as hermaphrodites, owe this appearance to a vicious conformation of the genital organs; a kind of monstrosity, which renders them unfit for generation, although an attentive examination may exhibit the true sex. Hermaphrodites have, likewise, been described; who, instead of uniting the attributes of both sexes, cannot be considered male or female. These have been called *neutral hermaphrodites*.

HERMETICA DOCTRINA, (F) *Hermetique*. The doctrine of Hermes, a celebrated Egyptian philosopher, who is considered the father of Alchemy. That part of chymistry, whose object was the pretended transmutation of the metals.

HERMODACTYLUS, *Dactyle'tus*, *Anima articulo'rum*, from *Ἑρμης*, 'Mercury,' and *δακτυλος*, 'a finger;' or rather from *Hermus*, a river in Asia, upon whose banks it grows, and *δακτυλος*, 'a date;' or from *Ἑρμης*, 'Mercury,' and *δακτυλος*, 'a date.' (F) *Hermodactyle*, *Hermodacte* ou *Hermodate*. The root of the *Hermodactyl* was formerly used as a cathartic. By some it is supposed to be identical with the *Iris tuberosa*. The best testimony seems to be in favour of its being a variety of the colchicum,—the *Colchicum Illyricum*.

HERNIA, *Ramex*, *Ruptu'ra*, *Crepatu'ra*, *Ectop'ia hernio'sa*, *Celē*, *κλῆη*, *Rupture*. (F) *Hargne*, *Descente*, *Effort*, *Greveure*, *Rompereure*. Any tumour, formed by the displacement of a viscus or a portion of a viscus, which has escaped from its natural cavity by some aperture and projects externally. Herniæ have been divided into,—

1. Hernia of the Brain.—*Encephalocèle*.
2. " Thorax.—*Pneumocèle*.
3. " Abdomen.

ABDOMINAL HERNIÆ are remarkable for their frequency, variety, and the danger attending them. They are produced by the

protrusion of the viscera, contained in the abdomen, through the natural or accidental apertures in the parietes of that cavity. The organs, which form them most frequently, are the intestines and the epiploon.

These herniæ have been divided, according to the aperture by which they escape, into:

1. *In'guinal Herniæ* or *Supra-Pubian*. These issue by the inguinal canal; they are called *Bu'bonocèle*, when small;—and *Scro'tal Hernia* or *Oscheocèle* in man, when they descend into the scrotum;—*Vulvar Hernia* or *Puden'dal* or *Labial Hernia*, *Episiocèle*, in women, when they extend to the labia majora.

2. *Crural* or *Femoral Herniæ*, *Me'rocèle*, when they issue by the crural canal.

3. *Infra-Pubian Herniæ*, (F) *Hernies sous-pubiennes*, where the viscera escape through the opening, which gives passage to the infra-pubian vessels.

4. *Ischiatic Herniæ*; when they take place through the sacro-sciatic notch.

5. *Umbilical Hernia*, *Exom'phalos*, *Omphalocèle*; which occurs at the umbilicus or near it.

6. *Epigas'tric Hernia*;—occurring through the linea alba, above the umbilicus.

7. *Hypogas'tric* or *Infra-umbilical Hernia*, *Cæliocèle*, *Hypogastrocèle*,—which occurs through the linea alba, below the umbilicus.

8. *Perinæ'al Hernia*; *Mesoscelocèle*,—which takes place through the levator ani, and appears at the perineum.

9. *Vag'inal Hernia*;—through the parietes of the vagina.

10. *Diaphragmatic Hernia*; which passes through the diaphragm.

Herniæ are likewise distinguished,—according to the viscera forming them,—into *Enterocèle*, *Epiplocèle*, *En'tero-epiplocèle*, *Gastrocèle*, *Cystocèle*, *Hepatocele*, *Splenocèle*, &c.

The **CONGENITAL HERNIA**, *Hernia congenita*, is a protrusion of some of the contents of the abdomen into the *Tunica vaginalis testis*, owing to a want of adhesion between its sides, after the descent of the testicle.

When a hernia can be restored to its natural cavity, by the aid of pressure, &c., properly applied, it is said to be *reducible*. It is, on the contrary, *irreducible*, when adhesion, bulk, &c. oppose its return. When the aperture, which has given passage to the hernia, occasions more or less constriction on the protruded portion, the hernia is said to be *incarcerated* or *strangulated*: and, if the constriction be not removed, constipation, hic-cough, vomiting, and all the signs of violent inflammation, followed by gangrene, supervene, with alteration of the features, small pulse, cold extremities, and death.

The therapeutical indications are,—

1. As regards *reducible hernia*;—to re-

place the viscera in the abdomen by the taxis; and to retain them there by the use of a truss, which, if properly adapted, like that of Chase, may effect a radical cure.

2. *As regards irreducible hernia*;—to support the tumour by an appropriate suspensory bandage.

3. *As regards strangulated hernia*;—to have recourse to the taxis; blood-letting; warm bath; tobacco glysters; ice to the tumour; and, if these should not succeed, to perform an operation, which consists in dividing the coverings of the hernia, and cutting the aponeurotic ring, which causes the strangulation;—reducing the displaced viscera, unless their diseased condition should require them to be retained without;—dressing the wound appropriately, restoring the course of the fæces by means of gentle glysters;—preventing or combating inflammation of the abdominal viscera;—conducting the wound to cicatrization, by appropriate means; and afterwards supporting the cicatrix by a bandage.

HERNIA HUMORALIS, *Empres'ma Orchitis*, *Orchitis*, *Inflammatio testium*, *Inflammation of the Testicle*, *Swelled Testicle*, *Hernia ven'enis*, *Orchiocele*, *Orchidocèle*, *Orchidon'cus*. Swelling and inflammation of the testicle is a common symptom of gonorrhœa; but it may arise from external injuries, or from other causes. It is a disease, which cannot be mistaken, and the treatment must obviously be strongly antiphlogistic, supporting the testicle during the treatment, and for some time afterwards; methodical compression has also been found useful. The disease is not generally of a serious character, going off as suddenly as it comes on.

HERNIAL, *Herniarius*. (F) *Herniaire*. Belonging to, or concerning, hernias:—as *Hernial Bandage*, *Hernial Sac*, &c.

The (F) *Hernié* is applied to a part enveloped in a hernial sac; *Hernieux* means one affected with hernia; and *Chirurgien herniaire*, one who devotes himself to the treatment of hernia.

HERNIA'RIA GLABRA, *Milligra'na*, *Em'petrum*;—*Rupture Wort*. (F) *Herniaire*, *Tarquette*, *Herniole*. This plant, which, as its name imports, was formerly considered efficacious in the cure of hernia, seems destitute of all virtues.

HERNIOT'OMY, *Hernioto'mia*, from *hernia* and *τεμνω*, 'I cut.' The operation for hernia.

HERPES, *Erpes*, from *ἔρπω*, 'I creep;' because it creeps and spreads about the skin. *Ecphlysis Herpes*, *Cytis'ma Herpes*, *Tetter*, (F) *Dartre*. A vesicular disease, which, in most of its forms, passes through a regular course of increase, maturation, decline, and termination in about 10 or 14 days. The vesicles arise in distinct, but irregular clusters, which commonly appear in quick succession, and near together, on an inflamed base; generally attended with heat, pain, and

considerable constitutional disorder. The term, like all others which refer to cutaneous diseases, has not been accurately defined. The ancients had three varieties; the *miliaris*, *κεγχρίας*; *vesicular*, *φλυκταινώδης*, and *eroding*, *εσθιομενός*. Bateman has the following varieties.

1. HERPES PHLYCTÆNO'DES, *Herpes miliaris*, *Ecphlysis Herpes Miliaris*, (F) *Dartre phlyctenoides*, in which the vesicles are millet-sized; pellucid; clusters commencing on an uncertain part of the body, and being progressively strewed over the rest of the surface; succeeded by fresh crops.

2. HERPES ZOSTER, *Zoster*, *Zona ignea*, *Ignis Per'sicus*, *Cinzilla*, *Sacer ignis*, *Ecphlysis Herpes zoster*, *Herpes peris'celis*, *Erysip'elas zoster*, *Erysip'elas phlyctænoi'des*, *Zona*, (F) *Ceinture*, *C. dartreuse*, *Feu Persique*, *Erysipèle pustuleux*, *Shingles*: in which the vesicles are pearl-sized; the clusters spreading round the body, like a girdle: at times confluent, and occasionally preceded by constitutional irritation.

3. HERPES CIRCINATUS, *Formi'ca ambulato'ria*, *An'nulus repens*, *Herpes Serpi'go*, *Serpigo*, *Ecphlysis Herpes Circinatus*, *Ring-worm*, consisting of vesicles with a reddish base, uniting in rings: the area of the rings slightly discoloured; often followed by fresh crops.

4. HERPES LABIA'LIS.—5. HERPES PRÆPUTIA'LIS,—appearing, respectively, on the lips and prepuce:—and

6. HERPES IRIS, *Iris*, *Rainbow-worm*,—occurring in small circular patches, each of which is composed of concentric rings of different colour.

To these may be added the

HERPES EXEDENS, *Ecphlysis Herpes exedens*, *Herpes esthiom'enus*, *H. depas'cens*, *Agria*, *H. esthiom'enus*, *Lupus vorax*, *Formi'ca corrosi'va*, *Pop'ula fera*, *Ul'cerative Ring-worm*, *Nirles*, *H. ferus*, (F) *Dartre rongeante*, in which the vesicles are hard; clusters thronged; fluid dense, yellow or reddish, hot, acrid, corroding the subjacent skin, and spreading in serpentine trails.

All the varieties demand simply an antiphlogistic treatment, when attended with febrile irritation. The *herpes circinatus*, alone, requires the use of astringent applications, which have the power of repressing the eruption.

HERPETIC, *Herpet'icus*, (F) *Dartreux*. Possessing the nature of herpes.

HERPETON, *Herpet'icon*, from *ἔρπειν*, 'to creep.' A creeping eruption or ulcer.—Hippocr.

HETEROCRIN'IA, from *ἕτερος* 'other,' and *κρίνω*, 'I separate.' Modification in the situation of secretions.—Andral.

HETEROPHO'NIA, from *ἕτερος*, 'other,' and *φωνή*, 'voice.' A cracked or broken voice.

HETEROS, from *ἕτερος*, 'the one of two,' 'the other.' Hence:

HETERORRHYTHMOS, 'having another rhythm.' An epithet given to the pulse, when it is such in any individual, as is usually felt at a different age.

HEUCHE'RA CORTU'SA, *H. America'na*, *Alum Root*, *American San'icle*. The root is a powerful astringent, and is the basis of a *cancer powder*. The American Indians apply the powdered root to wounds, ulcers, and cancers. It is said to have been sold for the colchicum.

HEX'IS, ἕξις, habit, constitution. Hence—*hectic*, *cachectic*, &c.

HIA'TUS, from *hīa're*, 'to gape,' 'to open.' A foramen or aperture.

THE HIATUS OR FORA'MEN OF WINSLOW, is an opening—situated behind the lesser omentum, and behind the vessels and nerves of the liver—which forms a communication between the peritoneal cavity and that of the omenta.

HIBER'NICUS LAPIS, *Teg'ula Hiber'nica*, *Arde'sia Hiber'nica*, *Harde'sia*, *Irish Slate*. A kind of slate or very hard stone, found in different parts of Ireland, in masses of a bluish-black colour, which stain the hands. It has been taken, powdered, in spruce beer, against inward contusions.

HIBIS'CUS ABELMOS'CHUS. The name of the plant whose seeds are called *Grana Moschi* or *Muskseed*. It is the *Belmus'chus*, *Abelmos'chus*, *Granum Moschi*, *Ketmia Ægyptiaca*, *Moschus Ar'abum*, *Ægyptia moscha'ta*, *Bamix moscha'ta*, *Alcea*, *Alcea Indica*, *Alcea Ægyptiaca Villo'sa*, *Abelmosch*, *Abelmusk*, *Musk-mallow*, (F) *Graine de Musc*, *Herbe à la poudre de Chypre*, *Ambrette*, *Guimauve veloutée*. It is indigenous in Egypt and the Indies. The seeds are chiefly used as perfumes; and especially in the formation of the *Cyprus Powder*.

HIBIS'CUS POPULEUS, *Balimba'go*. A small Molucca tree. The fruit is full of a juice similar to camboge. The root is emetic. It is used in chronic diarrhœa, colic, dyspepsia, &c.

HI'DROS, ἰδρῶς, 'sweat.' Hence—*Hidrop'ya*, *Hidrosis*, &c.

HIERA DIACOLOCYN'THIDOS, from ἱερός, 'holy.' *Hiera of Col'ocynth*. An electuary, composed of 10 parts of *colocynth*, as much *agaric*, *germander*, *white horehound*, *stachas*:—5 parts of *opoponax*, as much *sagapenum*, *parsley*, *round birthwort root*, and *white pepper*:—4 parts of *spikenard*, *cinnamon*, *myrrh*, and *saffron*; and 3 pounds, 3 ounces, and 5 drachms of *honey*.

HIERA PICRA, from ἱερός, 'holy,' and πικρός, 'bitter.' *Holy bitter*, *Pulvis aloë'ticus*, formerly called *Hiera loga'dii*, when made into an electuary with honey. It is now kept in the form of dry powder;—prepared by mixing *socotrine aloes* one pound, with 3 ounces of *canella alba*.

HIERACI'TES, ἱερακίτης, *Lapis accip'itrum*. The ancient name of a precious stone;

believed to be capable of arresting the hemorrhoidal flux.—Pliny, Galen, Paulus.

HIERA'CIUM MURO'RUM, *Pulmona'ria Gall'ica*, *Auricula mu'ris major*, (F) *Epervière des murailles*, *Pulmonaire des Français*. A European plant; which is a slight tonic.

HIERA'CIUM PILOSEL'LA. The systematic name of the *Auricula Muris*, or *Mouse-ear*, *Pilosel'la*, *Myosotis*, (F) *La Piloselle*, *Oreille de Souris*. This plant contains a bitter, lactescent juice; which has a slight degree of astringency. The roots are more powerful than the leaves.

HIEROGLYPH'ICA, from ἱερός, 'holy,' and γλυφῶ, 'I carve.' A name given to the signs employed in medicine; and also to the folds in the hands, feet, and forehead, which afford Chiromancy its pretended oracles.

HIMAS, ἵμας, 'a thong of leather.' The uvula; likewise, elongation and extenuation of the uvula. It is also called *Himanto'sis*, *Himanto'ma*.

HIPACĒ, ἱππακῆ. A cheese prepared from mare's milk. *Ca'seus Equi'nus*,—from ἵππος, 'a horse.'

HIPPANTHRO'PIA, from ἵππος, 'a horse,' and ἀνθρωπος, 'a man.' A variety of melancholy, in which the patient believes himself changed to a horse. The Greek word ἱππανθρωπος means the fabulous Centaur.

HIPPIATRI'A, from ἵππος, 'a horse,' and ἰατρικῇ, 'medicine,' (F) *Hippiatrique*. A science, whose object is the knowledge of the diseases of the horse, and of other domestic animals.

HIPPOCAM'PUS MINOR, *Unguis*, *Unciform Em'inence*, *Collic'ulus cavæ posterioris ventriculor'um latera'lium*, (F) *Ergot*, *Éperon*. A medullary tubercle or projection, observed in the posterior cornu of the lateral ventricle of the brain.

HIPPOCRAT'IC, *Hippocrat'icus*. Relating to Hippocrates, or concerning his doctrine,—as *Hippocratic doctrine*, *Hippocratic face*, &c.

HIPPOCRATIST. A partisan of the Hippocratic Doctrine.

HIPPOPATHOL'OGY, *Hippopatholo'gia*, from ἵππος, 'a horse,' παθος, 'a disease,' and λόγος, 'a discourse.' A knowledge of the diseases of the horse. Pathology of the horse.

HIPPOSTEOL'OGY, *Hipposteolo'gia*, from ἵππος, 'a horse,' ὀστέον, 'a bone,' and λόγος, 'a discourse.' Osteology of the horse.

HIPPOT'OMY, *Hippotomia*, from ἵππος, 'a horse,' and τέμνειν, 'to cut.' Anatomy of the horse.

HIPPURIS VULGA'RIS. The systematic name of the *Horse's Tail* or *Mare's Tail*, *Equisetum minus*, *Equisetum*, (F) *Prêle*, *Presle*, *Asprêle*. It is an astringent, and frequently used, by the vulgar, as tea, in diarrhœa and hemorrhage. The same virtues are attributed to the *Equisetum arven'se*, *fluviat'ile*, *limosum*, &c.

HIPPUS, from ἵππος, 'a horse;' a disease

of the eyes, in which, from birth, they perpetually twinkle, like those of a man on horseback. Also, a tremulous condition of the Iris, which occasions repeated alternations of contraction and dilatation of the pupil.

HIPS, *Sax.* heopa. The fruit of the dog-rose, *Rosa Canina*. They are chiefly used as a confection. See *Confectio Rosæ Caninæ*.

HIRSU'TIES, *Hair'iness, Trich'osis Hir-su'ties*. Growth of hairs in extraneous parts, or superfluous growth in parts; as in cases of bearded women.—Good.

HIRU'DO, *The Leech, Sanguisuga, βδελ-λα, Bdel'la*. In medicine, the *Hiru'do Medi-cina'lis, Bde'lla Medicina'lis*, or *Medicinal Leech* is employed. (F) *Sangsue*. It lives in fresh water, and feeds on the blood of animals, which it sucks, after having pierced the skin with its three sharp teeth. This habit has been taken advantage of, to produce local blood-letting. In applying the leech, the part must be wiped dry; and if there be difficulty in making the leech bite, a little milk or cream may be applied. When satiated, it will drop off, and by applying a little salt to its head it will disgorge the blood. A good English leech will take about half an ounce of blood, including that which flows by fomenting the part subsequently. The American takes less.

HIRUN'DO, *χελιδων, Chelidon*, from *hæ-ren'do*, 'sticking;' because it sticks its nests against the houses. (?) *The Swallow*. The nests of the swallow were once employed as rubefacients, boiled in vinegar.

HISTORY, MEDICAL, Histo'ria Medi-ci'næ. A narration of the chief circumstances, and the persons connected with them, in the progress of medicine.

HISTOS, *ιστος*, 'the organic texture.' Hence:

HISTOGEN'IA, from *ιστος*, 'the organic texture,' and *γενεσις*, 'generation.' The formation of the organic textures.

HOLCĒ, *ὀλκη*, a dram.—Galen.

HOL'CIMOS, *ὀλκιμος*, from *ὀλκη*, 'a weight.' A tumour of the liver.

HOLOTON'ICUS, *ὅλος*, 'the whole,' and *τείνω*, 'I stretch.' A spasm of the whole body. A variety of tetanus.—Sauvages.

HOL'YWELL, MINERAL WATERS OF. H. is a town in Wales; and takes its name from the famous well of St. Winifred. It is a simple cold water, remarkable for its purity.

HOMO, (F) *Homme*, Man, the chief and most perfect of the mammalia; in Greek, *ανθρωπος*, from *ανω*, 'upwards,' and *τροπος*, 'I turn,' because man, alone, of all animals, possesses the natural power of standing erect. He is, also, the only animal whose incisor teeth, wedged in a projecting jaw, are absolutely vertical. Man is especially distinguished from other mammalia by the faculty, which he possesses of classing his ideas; comparing them with each other; and connecting, representing and transmitting them

by signs and articulate sounds. He possesses, in the highest degree, all the attributes of intelligence, memory, judgment, and imagination. He inhabits all countries,—the burning regions of the torrid zone, and the chilling atmosphere of the polar climes. In different situations, he presents, in his figure, colour, and stature, some differences, which have caused the human race to be divided by naturalists into different races or varieties. The number of such races can only be approximated. Cuvier admits but three, the *Caucasian*, *Negro*, and *Mongolian*; to these may be added the *American*. Every division must necessarily be arbitrary, and the individuals composing each variety are far from being alike.

HOMŒOPATHY, *Homeopathy*, from *ὁμοιος*, 'like,' and *παθος*, 'affection.' A fanciful doctrine, which maintains, that disordered actions in the human body are to be cured by inducing other disordered actions of the same kind, but only much slighter in degree.

HOMOL'OGY, from *ὁμοιος*, 'like,' and *λογος*, 'a description.' The doctrine of similar parts. Thus, the two sides of the body are said to be 'homologous.' *Homologous* tissues, are those that resemble others; in opposition to the *heterologous* or *heteroclite*, which are new formations.

HOMOIO'SIS, *Homio'sis*, from *ὁμοιωω*, 'I resemble,' 'I assimilate.' An elaboration of the nutritious juice, by which it becomes proper for assimilation.

HOMOPH'AGUS, from *ἄμω*, 'raw,' and *φαγω*, 'I eat.' One, who eats raw flesh.

HOMOT'ONOS, *Æqua'lis*, from *ὁμος*, 'equal,' and *τονος*, 'tone.' That which has the same tone. Continued fevers, whose symptoms have an equal intensity during the whole course of the disease, have been so called.

HOOK, *Sax.* hoce, hooc, Dutch *hoeck*, *Uncus, Unci'nus, Anc'ura, αγκυρα*. (F) *Erigne, Airigne, ou Érine*. An instrument, consisting of a steel wire, flattened at the middle, and having the extremities crooked and pointed. Some hooks are furnished with a handle at one extremity—the other having one or two hooks;—constituting the *single* and *double hook*.

The Hook is used by anatomists and surgeons, to lay hold of, and raise up, certain parts; the dissection of which is delicate, or which would slip from the fingers.

The *Tenaculum* is a variety of the Hook.

The **BLUNT HOOK** is an instrument which is passed over the flexures of the joints to assist in bringing down the fœtus.

HOPLOCHRY'SMA, from *ὅπλον*, 'a weapon,' and *χρῖσμα*, 'salve.' *Unguentum armatorium, Arm'atory Unguent*. A salve, which was supposed to cure wounds by sympathy:—the instrument with which the wound was inflicted being anointed with it.

HOPLOMOCH'LION, *ὀπλομοχλιον*. The

name of an iron machine or apparatus, which embraced the whole body like armour; and the figure of which is given by Fabricius ab Acquapendente.

HORDEOLUM, diminutive of *Hordeum*, *Barley*; *Sclerophthalmia*, *Crithē*, a *Stye*, a *Styan*, *Crithid'ion*, *Crythē*. (F) *Orgelet*, *Orgeolet*. A small, inflammatory tumour, of the nature of a boil, which exhibits itself near the free edge of the eyelids, particularly near the inner angle of the eye.

HORDEUM, *Crithē*. The seeds of the *Hordeum vulgare* or *Scotch Barley* are ranked amongst the *Cereal*ia. (F) *Orge*. They afford a mucilaginous decoction, which is employed as a diluent and antiphlogistic. The seeds of the *Hordeum distichon* and *H. hexastichon* possess similar properties. Barley is freed from its shells in mills; and, at times, is rubbed into small, round grains, somewhat like pearls, when it is called *Hordeum perlatum* or *Pearl Barley*, (F) *Orge perlé*, and forms the *Hordei semina tuniciis nuda'ta*, of the pharmacopœias.

HORNY EXCRESCENCES, *Lepidos'is Ichthyiasis cornig'era*, *Cornua cutanea*. (F) *Cornes de la peau*. Certain excrescences, which occasionally form in some part of the skin, and resemble, in shape, the horns of animals.

HORRIDA CUTIS, *Goose-skin*, *Cutis anseri'na*. A state of the skin accompanying the rigor of an intermittent.

HORRIPILATION, *Horripila'tio*, *Horror*, φρίκη, *Phrice*, *Phricas'mus*, from *horre're*, 'to bristle up,' and *pilus*, 'hair.' (F) *Horripilation*, *Frissonnement*. General chilliness, preceding fever; and accompanied with bristling of the hairs over the body.

HOSPITAL, *Nosocomi'um*, *Infirmari'um*, *Infirmatori'um*, *Nosodochi'um*. (F) *Hôpital*. An establishment for the reception of the sick, in which they are maintained and treated medically, until their health is restored, or they are declared incurable. Hospitals were first instituted about the end of the 4th century; a period at which the word νοσοκομειον was employed, for the first time, by St. Jerome.

HOSPITAL GANGRENE, *Phagedæ'na gangræno'sa*; *Putrid* or *Malignant Ulcer*, *Gangræ'na Nosocomio'rum*, *Hospital Sore*, *Gangræ'na contagio'sa*, *Putre'do*, (F) *Pourriture* ou *Gangrène d'hôpital*. Gangrene, occurring in wounds or ulcers, in hospitals, the air of which has been vitiated by the accumulation of patients, or some other circumstance. Hospital gangrene—many different varieties of which are met with, and always preceded or accompanied by fever—commonly commences with suppression of the suppuration of the wound, which becomes covered with a grayish and tenacious sanies. The gangrene then manifests itself. It extends from the centre of the ulcerated surface towards the edges; these become swollen, pain-

ful, and everted; and the patient dies with all the signs of typhus. The treatment must be varied, according to circumstances. Sometimes, it requires the use of stimulating, acid, caustic, and antiseptic applications; with, occasionally, the actual cautery, aided by the exhibition of tonics, internally:—at others, the antiphlogistic regimen and emollient applications may be necessary.

HOUSE-SURGEON, *Resident Surgeon*. Usually a senior pupil or graduate, who attends in an hospital, to every accident and disease, in the absence of the regular physician or surgeon. It answers, in the British hospitals, to the *Elève interne* of the French.

HUILE ACOUSTIQUE (F), *Oleum acusticum*, *Acoustic oil*. An oil for deafness, prepared of *olive oil*, 3 ij, *garlic*, *oxgall* and *bayleaves*, each 3 j; boiled for a quarter of an hour, and strained.

HUIT DE CHIFFRE. Figure of 8. A bandage in which the turns are crossed in the form of the figure 8. Such is the bandage used after bleeding from the arm.

HUMECTANTIA. A name formerly given to drinks, which appeared to possess the property of augmenting the fluidity of the blood.

HUMERAL, *Humeralis*. That which belongs to, or is connected with, the arm or humerus.

HUMERAL ARTERY, *Artéria humera'lis*. See *Brachial Artery*.

HUMERUS, *Sca'pula*, ὤμος, *Omos*, *Armus*, (F) *Épau*le. The most elevated part of the arm. The bones, which concur in forming it, are;—the scapula, head of the humerus and the clavicle, united together by strong ligaments, and covered by numerous muscles.

The *Os HU'MERI*, *Humerus*, or *Os bra'chii*, *Os adjuto'rium*, *Os brachia'le*, *Brachium*, is the cylindrical, irregular bone of the arm; the upper extremity of which has a hemispherical head, connected with the scapula; and two *tuberosities* or *tubercles*, a *greater* and *lesser*, for the attachment of muscles, between which is the *Bicipital groove* or *Fossa*. At the inferior extremity may be remarked—the *inner condyle*, the *outer condyle*; the *small head*, which is articulated with the radius; the *trochlea* articulated with the ulna, &c.

The humerus is developed by seven points of ossification;—one for the body; one for the head; one for the greater tuberosity; one for the trochlea; one for the epitrochlea; one for the epicondyle, and another for the lesser head.

HUMIDUM RADICALE, *Hu'midum primige'nium*; *Rad'ical Moisture*, (F) *Humide radicale*. This name was formerly given to the liquid, which, by means of the circulation, was conceived to give flexibility and proper consistence to the different organic textures.

HUMOUR. Every fluid substance of an

organized body;—as the blood, chyle, lymph, &c.

The *Humours*, *χυμοί*, *Chymi*, *Humores*,—differ considerably, as to number and quality, in the different species of organized beings; and even in the same species, according to the state of health or disease.

The ancients reduced them to *four*; which they called *cardinal humours*;—the blood, phlegm, yellow bile, and atrabilis or black bile. The modern classification of the humours is given under *Fluid*.

HUMORAL, *Humoralis*. Proceeding from, or connected with, the humours.

HUMORISM, *Humoral Pathology*. A medical theory, founded exclusively on the part, which the humours were considered to play in the production of disease. Although traces of this system may be found in the most remote antiquity, the creation, or at all events, the arrangement, of it may be attributed to Galen, who enveloped it in metaphysical subtleties, relating to the union between the elements and the four cardinal humours.

HUMORIST. The Galenical physicians, who attributed all diseases to a depraved state of the humours, or to vicious juices collected in the body.

HUMP. Perhaps from *umbo*, 'the boss of a buckler.' *Hunch*, *Gibbus*, *Gibba*, *Tuber*, (F) *Bosse*. A prominence, formed by a deviation of the bones of the trunk. Commonly, it is formed by the spine or sternum, and is seated at the posterior or anterior part of the trunk. It may, also, be produced by deviation of the ribs or pelvis. The spine may be curved in three principal directions. 1. *Backwards*, and this is the most common case; this the ancients called *κυφωσις*, *Cyphosis*, *gibbositas*. 2. *Forwards*, *λορδωσις*, *Lordosis*, *recurvatio*; and, 3. *Laterally*, *σκολιωσις*, *Scoliosis*, *obstipatio*.

Most *curvatures* occur at a very early age, and are caused by scrophula, rickets, &c.; and, not unfrequently, they are accompanied by caries of the vertebræ. See *Vertebral Disease*.

HUMULUS LU'PULUS, *Convolvulus perennis*; the *Hop-plant*. *Nat. Ord.* *Urticæ*. (F) *Houblon*, *Vigne du nord*. Its cones or strobiles, *Humuli strobili* (Ph. L.), have a fragrant odour; and bitter, aromatic taste, depending on a peculiar principle, named *Lupuline*, extractive and essential oil; which may be extracted, equally by water and spirit, from the dried strobiles.

The Hop is employed as a tonic and hypnotic, and enters into the composition of ale and beer.

HUNGER, *Fames*, *Limos*, *Peine*, *Esuries*, *jejunium*, *jejunitas*, *esuriatio*, *esuri-go*. (F) *Faim*. The necessity for taking food. Hunger is an internal sensation, which some authors have attributed to the friction between the sides of the stomach in its empty state; others, to the compression of the

nerves, when the organ is contracted; others, to the action of the gastric juice, &c. It is dictated by the wants of the system: farther we know not. See *Appetite*.

HY'ALOID, *Hyalodes*, *Hyaloides*, *Vitreus*, from *ύαλος*, 'glass,' and *ειδος*, 'resemblance.' Resembling glass.

The **HY'ALOID MEMBRANE**, *Tunica Hyaloidea*, *Membra'na Arachnoidea*, *T. vitrea*, is the extremely delicate membrane, which forms the exterior covering of the vitreous humour, and transmits within it prolongations, which divide it into cells. Fallopius discovered this membrane, and gave it the name *Hyaloid*. On a level with the entrance of the optic nerve into the eye, the hyaloid membrane forms, by reflection, a cylindrical canal, which pierces the vitreous humour from behind to before, as far as the posterior part of the crystalline. To this, its discoverer gave the name—*Canal hyaloidien* or *Hyaloid Canal*.

HYDATID, *Hydatidis*, *Bulla*, *Aquula*, *Hydroa*, *Tænia hydatig'ena*, *Echinococcus humanus*, from *ύδαγ*, 'water.' This name was long given to every encysted tumour, which contained an aqueous and transparent fluid. Many pathologists, subsequently, applied it to vesicles, softer than the tissue of membranes, more or less transparent, which are developed within organs, but without adhering to their tissue. It is by no means clear, that these formations are really entozoa. They have been found in various parts of the body; sometimes in the uterus, occasioning signs nearly similar to those of pregnancy, but being sooner or later expelled. The expulsion is generally attended with more or less hemorrhage. See *Acephalocystis*.

The word *Hydatidis*, *Aquula*, *Phlyctænula*, *Verruca Palpebrarum*, *Milium*, was, also, given to small, transparent tumours of the eyelids.—Galen, C. Hofmann.

HYDATIDOCE'LE, *Hydatocèle*, from *ύδατις*, 'hydatid,' and *κηλη*, 'a tumour.' A tumour, formed by hydatids. Oscheocèle, containing hydatids. The *Oscheocèle hydatidosa*, of Sauvages.

HYDATIS'MUS, from *ύδαγ*, 'water.' The noise, caused by the fluctuation of pus contained in an abscess.—Aurelian., Foësius.

HYDATOCH'OLOS, from *ύδαγ*, 'water,' and *χολη*, 'bile.' *Aquoso-bilious*. An epithet given to evacuated matters, when mixed with water and bile.—Hippocr., Foësius.

HYDATOID, *Hydatoides*, *Aqueus*, *Aquosus*, *Hydatodes*, from *ύδαγ*, 'water,' and *ειδος*, 'resemblance.' Resembling water. This name has been given to the membrane of the aqueous humour; and, also, to the aqueous humour itself.

HYDOR, from *ύδαγ*, genitive, *ύδατος*, 'water.' Hence:

HY'DRAGOGUES, *Hydrago'ga*, *Hydrop'ica*, *Hydrot'ica*, *Aquiduca*, from *ύδαγ*, 'water,' and *αγα*, 'I expel.' Medicines, believed

capable of expelling serum effused in any part of the body. These are generally cathartics or diuretics.

HYDRARGYRANATRIPSIS, from *ὑδράργυρος*, 'quicksilver,' and *ἀνὰ τριψιν*, 'rubbing in.' The rubbing in of an ointment of quicksilver. *Hydrargyrotrip'sis*.

HYDRARGYRI, CYANURETUM, H. *Borus'sias, Hydrargyrum Cyanogenatum, H. Hydrocyanicum, Prussias Hydrargyri, Cyanuret or Prussiate of Mercury.* (F) *Cyanure de Mercure.* This preparation has been strongly recommended as a powerful antisyphilitic, and is admitted into the Parisian codex. Twelve to 24 grains may be dissolved in a quart of distilled water, and 3 or 4 spoonfuls of the solution be taken daily, in a glass of any appropriate liquid.

HYDRARGYRI NITRAS, *Nitras hydrargyri in crystallos concretus*,—*Nitrate of Mercury.* It is employed in syphilis; and, externally, in fungous, obstinate ulcers.

It is used in the formation of the *Soluble Mercury of Hahnemann.*

WARD'S WHITE DROPS,—a once celebrated, antiscorbutic nostrum,—were prepared by dissolving mercury in nitric acid; and adding a solution of carbonate of ammonia; or, frequently, they consisted of a solution of sublimate with carbonate of ammonia.

HYDRARGYRI NITRICO-OXYDUM, *Hydrargyrus nitrat'us ruber, Mercurius corrosivus ruber, Mercurius præcipitatus corrosivus, M. præcipitatus ruber, Arca'num corallinum, Mercurius corallinus, Pulvis principis, Præcipitatus ruber, Oxydum hydrargyri completum, O. hydrargyr'icum, Panacea mercurii rubra, Pulvis Joan'nis de Vigo, Oxydes hydrargyri rubrum, Hyperoxodes hydrargyri, Nitric oxide of mercury, Red precipitate, Oxydum hydrargyri nitricum, Oxidum hydrargyri rubrum per ac'idum nitricum.* (F) *Oxide nitrique de mercure.* It is a stimulant and escharotic, and used as such in foul ulcers; being sprinkled on the part, in fine powder, or united with lard into an ointment.

HYDRARGYRI OXYDUM CINE'REUM, *Oxydum hydrargyri nigrum, Æthiops per se, Mercurius niger Moscati, Oxydum hydrargyrosum, Oxydum hydrargyr'icum præcipitatum, Oxydulum hydrargyri nigrum, Pulvis mercurialis cinereus, Mercurius cinereus, Turpe'thum nigrum, Mercurius præcipitatus niger, Gray or black oxide of mercury,* (F) *Oxide de mercure cendré, Oxide gris ou noir de mercure.* This oxide is made in various ways. It may be formed by boiling submuriate of mercury in lime-water. The dose of this *Pulvis hydrargyri cinereus*, is from 2 to 10 grains. There are four other preparations of it in estimation, viz. *Plenck's solution*, made by rubbing mercury with mucilage. 2. By rubbing equal parts of sugar and mercury together. 3. A compound of honey or liquorice and purified mercury. 4. The blue pill

and ointment. All these possess the usual properties of mercury.

The *Mercurius solubilis* of Hahnemann is formed from a black oxide of mercury. It is the *Mercurius solubilis Hahneman'ni seu oxidum hydrargyri nigri median'te ammo'niâ ex protonitra'te hydrar'gyri præcipita'tum.* It is used in the same cases as the *Hydrargyri Oxydum cinereum.*

HYDRARGYRI OXYDUM RUBRUM, *Mercurius calcina'tus, Hydrargyrus Calcinatus,* (F) *Oxide de mercure rouge, Red oxide of mercury.*

It is stimulant and escharotic; and, in large doses, emetic. Owing to the violence of its operation it is seldom given internally, but is chiefly used as an escharotic.

HYDRARGYRI OXYMURIAS, *Hydrargyrus muriat'us, Murias hydrargyri corrosivus, Murias hydrargyri oxygena'tus, Sublima'tus corrosivus, Mercurius corrosivus, Mercurius corrosivus sublimatus, Bichlo'ride of mercury, Hydrargyri permu'rias, Supermu'rias hydrargyri, Murias hydrargyri basi oxydi imperfecti, Murias hydrargyri corrosivum,* (F) *Muriate oxygéné de mercure, Sublimé corrosif, Oxymuriate of mercury, Corrosive sublimate.* It is used as an antisyphilitic stimulant, in venereal complaints; old cutaneous affections, &c. gr. iij to ℥j of water forms a good gargle in venereal sore throats, or an injection in gonorrhœa. Externally, it is applied in cases of tetter, and to destroy fungus or stimulate old ulcers. Dose, gr. 1-16 to gr. 1-8 in pill, once in 24 hours. White of egg is the best antidote to it, when taken in an overdose.

HYDRARGYRI SUBMURIAS, *Calom'elas, Draco mitiga'tus, Submu'rias Hydrargyri mitis, Submu'rias Hydrargyri Sublima'tum, Mercurius dulcis, M. dulcis sublima'tus; when precipitated, M. dulcis precipitatus, Panacea mercurialis* (when nine times sublimed), *Murias hydrargyri dulcis sublima'tus, Mercurius sublimatus dulcis, Aquila, Manna Metallorum, Panchymago'gum miner'alè, P. Quercetanus, Chloride of Mercury,* (F) *Mer-cure doux, Protochlorure de mercure.* Properties. Antisyphilitic and sialagogue; in large doses, purgative. Dose. One or two grains given at night gradually excite ptyalism. Gr. v to xx, purge. Children bear larger doses than adults.

The **BLACK WASH**, *Lotio Hydrargyri nigra* is formed of calomel ℥ij, *Lime water* ℥j. Used to syphilitic sores.

HYDRARGYRI SULPHURETUM NIGRUM, *Hydrargyrus vel mercurius cum sulphurè, Æthiops minera'lis, Hydrargyrus e sulphurè, Pulvis hypnot'icus, Æthiops narcot'icus,* (F) *Sulphure de mercure noir, Black sulphuret of mercury, Æthiops mineral.* Used chiefly in scrophulous and cutaneous affections. Dose, gr. x to ʒss.

HYDRARGYRI SULPHURETUM RUBRUM, *Hydrargyrus sulphura'tus ruber, Min'ium pu-*

rum, Minium Græcorum, Magnes Epilepsia, Ammion, Purpurisum, Cinnabaris, Mercurius Cinnabarinus, Cinabaris, Cinabarium, Red Sulphuret of Mercury, Cinnabar, Vermilion, (F) Sulphure de Mercure rouge, Cinabre.

It is antisyphilitic, but is chiefly used in fumigation against venereal ulcers of the nose, mouth and throat;—3ss being thrown on a red hot iron. This preparation is the basis of a nostrum, called *Boerhaave's Red Pill*.

HYDRARGYRI TARTRAS, H. PROTO-TARTRAS, *Tartrate of mercury*. Antisyphilitic. Dose, one or two grains twice a day.

HYDRARGYRUM, *Hydrargyrus*, from ὕδωρ, 'water,' and ἀργύρος, 'silver;' *Mercurius, Argentum vivum, A. mobile, A. fusum, A. fugitivum, Fumus albus, Arca arcanorum, Dædalus, Mercury, Quicksilver, (F) Mercure, M. cru, Vif Argent, Mater Metallo'rum*. A fluid, brilliant, metal; of a slightly bluish white colour; fluid above—39° of Fahr. and under 656°. S. G., when liquid, 13.568 (Cavendish); easily oxydized. Metallic quicksilver does not act on the body, even when taken into the stomach. When oxydized and combined with acids, it acts powerfully. It has been exhibited in cases of constriction of the bowels and in intussusception, from a notion, that it must certainly pass through the bowels by its gravity. The water, in which mercury has been boiled, has been recommended as a vermifuge; but it probably enjoys no such property, as chymical tests do not exhibit the presence of the metal. When the crude metal is distilled in an iron retort, it forms the *Hydrargyrum purificatum*.

HYDRARGYRUM CUM CRETA, *Hydrargyrus cum cretâ, Mercurius alkalisatus, Mercury with chalk, (F) Mercure avec la craie, Æthiops alcalisatus*. A protoxide of mercury, formed by trituration with carbonate of lime. It is somewhat uncertain; and consequently not much employed. It possesses the properties of the black oxide of mercury, and may be advantageously exhibited in cases of diarrhœa in children, dependent upon acidity and vitiated secretions. Dose, gr. v to 3ss, twice a day, in any viscid substance.

The HYDRARGYRUM CUM MAGNE'SIA of the Dublin Pharmacopœia resembles it in properties.

HYDRARGYRUM PRÆCIPITATUM, *Hydrargyrum ammonia'to-muriat'icum, Mercurius cosmet'icus, Murias oxidi hydrargyri ammonia'calis, Submu'riasammoni'aco-hydrargyr'icus, Calx Hydrargyri alba, Submu'rias Hydrargyri ammonia'tum—S. H. præcipita'tum—Murias hydrargyri sub-oxygena'tus præcipita'tionē para'tus, Præcipita'tum album, White precipitate of mercury, White precipitate,—Calcina'tum majus Pote'rii, (F) Sous-muriate de mercure précipité ou Précipité blanc*.

A peroxide, combined with muriatic acid and ammonia, forming a triple salt. It is

used, in powder, to destroy vermin; and, united with lard, for the same purpose, as well as in scabies and some other cutaneous affections.

HYDRARGYRUM SACCHARATUM, *Æthiops saccharatus, Mercurius saccharatus, Ox'idum hydrargyri saccharatum, Sac'charum hydrargyri vermifugum*. A mild mercurial formula in several of the Pharmacopœias of Continental Europe; formed by triturating one part of mercury with two of white sugar. It is used in the venereal affections of children.

HYDRARGYRUS ACETATUS, *Sperma mercurii, Terra foliata mercurii, Mercurius aceta'tus, Hydrargyri Acetas, Acetas vel Proto-acetas Hydrargyri, Ac'etate of mercury*. This was the basis of *Keyser's pills*, and was once much celebrated in the cure of the venereal disease. The dose is from three to five grains, but it is not much used.

The formula for *Keyser's Anti-venereal pills* was as follows: *Hydrarg. Acet. 3 iv, Mannæ 3 xxx, Amyl. 3 ij, Muc. G. Trag. q. s.* into pills of gr. vj each. Dose, two pills.

HYDRARGYRUS PHOSPHORATUS, *Phosphuretted mercury*. This preparation has been recommended in cases of inveterate venereal ulcers, but it is now scarcely used.

HYDRARGYRUS VITRIOLATUS, *Turpe'thum minera'le, Mercurius emet'icus flavus, Calx mercurii vitriola'ta, Mercurius caust'icus flavus, M. luteus, Hydrargyri sulphas, Subsul'phas Hydrargyri flavus, Oxydum hydrargyri sulphu'ricum, Subsul'phas hydrargyri peroxida'ti, Turbith min'eral. (F) Sous-sulfate de mercure ou turbith minéral*. Two grains of this mercurial act on the stomach violently. It is sometimes recommended as an errhine in amaurosis.

HYDRAS'TIS CANADEN'SIS, *Yellow Root*. It is used in Kentucky as a mouth-water, and as an outward application in wounds, and local inflammations.

HYDRARTHURUS, *Hydarthrus, Hydrarthrus synovia'lis, Hydrops articulo'rum, Hydar'thron, Hydar'thros, Melice'ria, Spina vento'sa* of Rhazes and Avicenna. *Arthrit'is Hydar'thros, Hydarthro'sis, Emmyx'ium articula'rē, Tumor albus*;—*White Swelling*; from ὕδωρ, 'water,' and ἄρθρον, 'a joint.' (F) *Tumeur blanche, T. lymphatique des articulations*. The French surgeons apply the term *Hydarthrus* to dropsy of the articulations.

White swelling is an extremely formidable disease. It may attack any one of the joints; but is most commonly met with in the knee, the haunch, the foot, and the elbow, and generally occurs in scrophulous children. It consists, at times, in tumefaction, and softening of the soft parts and ligaments, which surround the joint; at others, in swelling and caries of the articular extremities of bones; or both these states may exist at the same time. The treatment consists in the

employment of counter-irritants; the use of iodine internally and externally, &c.

HYDRELÆON, *Hydrolæum*, from ὕδωρ, 'water,' and ελαιον, 'oil.' A mixture of water and oil.

HYDRENCEPH'ALOID, from ὕδωρ, 'water,' εγκεφαλος, 'the brain,' and εδος, 'resemblance.' Resembling hydrencephalus. Diseases of the bowels, and exhaustion are at times attended with hydrencephaloid symptoms.

HYDRENTEROCE'LE, from ὕδωρ, 'water,' εντερον, 'intestine,' and κηλη, 'a tumour.' Intestinal hernia, the sac of which incloses fluid.

HYDRO'A, *Hidro'a*, *Aquila*, *Boa*, from ὕδωρ, 'water.' An affection, which consists in an accumulation of water or serous fluid under the epidermis. Some have used *hydro'a* synonymously with *sudamina*, others with *pemphigus*. In the first case, it has generally, however, been written *hidro'a*, from ιδρως, 'sweat,' and in the latter *hydro'a*.

HYDROA'RION, *Hydrops ova'rii*, from ὕδωρ, 'water,' and ωαριον, 'ovarium.' Dropsy of the ovary.

HYDROBLEPHARON, *Hydrops Pal'pebræ*, *Blepharœdema aquosum*. An œdema or watery swelling of the eyelids; from ὕδωρ, 'water,' and βλεφαρον, 'eyelid.'

HYDROCE'LE, *Hydrops Scroti*, *Oscheocelë*, *Oscheophyma*, *Hydror'chis*, from ὕδωρ, 'water,' and κηλη, 'a tumour.' A collection of serous fluid in the cellular texture of the scrotum or in some of the coverings, either of the testicle or spermatic cord. To the first of these varieties the names—*External Hydrocele*, *H. œdematodes*, (F) *H. par infiltration* have been given; and to the second those of *Hydrocelë interna*, *H. tunicæ vaginalis testis*, *Hydrél'ytron*, (F) *H. par épanchement*. When the collection occurs in the envelope of the testicle, it is called *H. of the tunica vaginalis*; and the epithet *congenital* is added, when the interior of the membrane, in which it is situate, still communicates freely with the cavity of the abdomen. When it exists in the spermatic cord, it is called *encysted*, or *diffused Hydrocele of the spermatic cord*, as the case may be. The tumour of the distended scrotum is oblong; greater below than above; indolent and semi-transparent. When it becomes inconveniently large, the fluid may be evacuated by puncturing with a trocar, but, as the fluid collects again, this operation can only be considered palliative. The radical cure consists, usually, in injecting, through the canula of the trocar, which has been left in after puncturing, some irritating liquid, as wine. This is kept in the tunica vaginalis for a few minutes and then withdrawn. The coat inflames; adhesion takes place, and the cavity is obliterated.

HYDROCEPH'ALUS, *Hydrocephalum*, *Hydrocephalë*, from ὕδωρ, 'water,' and κεφαλη, 'the head.' *Water in the head*, *Dropsy of*

the head, *Hydrops Cap'itis*, *Dropsy of the brain*. A collection of water within the head. It may be *internal* or *external*.

The **HYDROCEPHALUS INTER'NUS**, *Hydrocephalus Acu'tus*, *H. meningeus*, *Hydrops cer'ebrî*, *Encephalal'gia hydrop'ica*, *Phrenicula hydrocephal'ica*, *Hydrencephalus*, *Febris Hydrocephal'ica*, *Apoplex'ia hydrocephal'ica*, *Carus hydrocephalus*, is seated in the interior of the brain, and is observed particularly in childhood. Its march is extremely acute and often very rapid; admitting, generally, however, of division into three stages. The symptoms of the *first stage* are those of general febrile irritation, with headache, intolerance of light and sound, delirium, &c. Those of the *second*, which generally denote, that the inflammation has ended in effusion, are, great slowness of pulse, crying out as if in distress, moaning, dilated pupil, squinting, &c. and lastly, in the *third stage*;—profound stupor, paralysis, convulsions, involuntary evacuations, quick pulse, and frequently death.

The disease is of uncertain duration; sometimes, destroying in two or three days, at others, extending to two or three weeks. The prognosis is unfavourable. The treatment must be most active during the stage of excitement, and precisely that necessary in phrenitis. In the second stage, the indication is;—to promote the absorption of the effused fluid. This must be done by counter-irritants, and mercury, chiefly. On dissection, in these cases, water is generally found in the ventricles, or at the base of the brain; or there are signs of previous, vascular excitement, effusions of coagulable lymph, &c. (F) *Hydrocephale aigu*, *Fièvre cérébrale des Enfans*.

The **HYDROCEPHALUS CHRON'ICUS**, *Hydrencephalocelë*, *Hydrops Cap'itis*, *Hydrocephalus externus* of some, commonly commences at an early period of existence, and, the accumulation of fluid, gradually produces distention of the brain, and of the skull, with separation of the sutures. It generally proves fatal before puberty.

The *Hydrocephalus externus* of some is a mere infiltration into the subcutaneous cellular tissue of the cranium.

HYDROCIRSOCE'LE, from ὕδωρ, 'water,' κιστος, 'varix,' κηλη, 'tumour.' A tumour, formed by the varicose distention of the veins of the spermatic cord and by the accumulation of serous fluid in the cellular texture of the scrotum. *Hygrocirsocele*.

HYDROCYAN'IC ACID, *Ac'idum Hydrocyan'icum*; from ὕδωρ, 'water,' and κυανος, 'blue.' *Prussic Acid*, *Acidum Prus'sicum*, *A. Borus'sicum*, *A. Zoöt'icum*, *A. Zoötin'icum*. This acid exists in a great variety of native combinations in the vegetable kingdom, and imparts to them certain properties, which have been long known and esteemed; as in the *bitter almond*, *Cherry laurel*, leaves

of the *Peach tree*, kernels of fruit, pips of apples, &c. When concentrated, it is liquid, colourless, of a strong smell and taste, at first cool, afterwards burning. Its s. g. at 7°, centigrade, is 0.7058. It is very volatile and enters into ebullition at 26°.5, Cent. It speedily undergoes decomposition, sometimes in less than an hour, and consists of a peculiar gaseous and highly inflammable compound of carbon and azote, to which the name *Cyanogen* has been assigned; and of hydrogen, which acts as the acidifying principle—hence its name *Hydrocyanic acid*. According to Magendie, the acid, prepared after Scheele's method—the one in common use—is of irregular medicinal power; he, therefore, recommends Gay Lussac's acid, diluted with 6 times its volume, or 8.5 times its weight of distilled water, for medicinal purposes, and this he calls *Medicinal Prussic Acid*. Dr. Ure has proposed, that the specific gravity should indicate that which is proper for medicinal exhibition; and, after comparative experiments of the gravity of the acids, obtained by different processes, he states, that the acid, usually prescribed, is of s. g. 0.996 or 0.997. Great caution is, however, necessary. One drop of pure prussic acid instantly destroys, and the animal shows hardly any traces of irritability, a few moments after death. It has been advised in tracheal phthisis, in tubercular phthisis, pulmonary inflammation and irritation, dyspepsia, uterine affections, hectic cough, cancer, chronic rheumatism, and mania, and as a local remedy in impetiginous affections; but, although possessed of powerful sedative properties, it is so unmanageable and the preparation so uncertain, that it is not much used.

The dose of Scheele's Acid or of the *Medicinal Prussic Acid* is from a quarter of a drop to two drops.

HYDROCYSTIS, from ὕδωρ, 'water,' and κύστις, 'a bladder.' A cyst containing a watery or serous fluid.

HYDRO-ENTERO-EPIPOCE'LE, *Hydro-epiplo-enteroce'le*; from ὕδωρ, 'water,' εντερον, 'intestine,' and επιπλοον, 'omentum.' Entero-epiplocele; the sac of which contains a serous fluid.

HYDRO - ENTERO - EPIPLOMPHALUM, from ὕδωρ, 'water,' εντερον, 'an intestine,' επιπλοον, 'the caul,' and ομφαλος, 'the navel.' Umbilical hernia, the sac of which contains intestine, epiploon, and serum.

HYDRO - ENTEROM'PHALUM, *Hydreuterom'phalum*; from ὕδωρ, 'water,' εντερον, 'an intestine,' and ομφαλος, 'the umbilicus.' Hernia umbilicalis; the sac of which contains, intestine and serum.

HYDRO-EPIPOCE'LE, from ὕδωρ, 'water,' επιπλοον, 'omentum,' and κηλη, 'a tumour.' Hernia, formed by omentum; the sac of which contains serum.

HYDRO-EPIPLO-ENTEROCE'LE, from ὕδωρ, 'water,' επιπλοον, 'the omentum,' εντε-

ρον, 'an intestine,' and κηλη, 'a tumour.' Entero-epiploic hernia; the sac of which contains serum.

HYDRO-EPIPLOMPH'ALUM, from ὕδωρ, 'water,' επιπλοον, 'the omentum,' and ομφαλος, 'the umbilicus.' Umbilical hernia; the sac of which contains epiploon, and serum.

HYDROG'ALA, from ὕδωρ, 'water,' and γαλα, 'milk.' A mixture of water and milk.

HY'DROGEN, *Hydroge'nium*, *Inflam'mable air*, *Phlogiston*, *Princip'ium hydrogeneticum*, *P. hydroticum*, from ὕδωρ, 'water,' and γινναω, 'I produce.' This gas, when breathed, kills the animal by depriving it of oxygen. When diluted with two-thirds of atmospheric air, it occasions some diminution of muscular power and sensibility, and a reduction of the force of the circulation. It has been respired in catarrh, hæmoptysis, and phthisis.

The **CARBURETTED HYDROGEN**,—obtained by passing the vapour of water over charcoal, at the temperature of ignition, in an iron tube—has been found possessed of similar properties, when diluted, and has been used in like cases.

The **SULPHURETTED HYDROGEN**, *Hydrothi'on*, *Gaz hepat'icum*, *Gaz hydrogen'ium sulphura'tum*, *Mephitis hepat'ica* may be disengaged from any of the sulphurets by the addition of a strong acid. It is a violent poison, but has been recommended to be inhaled, diluted, to allay the increased irritability which occasionally exists after diseases of the lungs. See *Hydro-sulphuretted Water*.

HYDROGENESES. Baumes gives this name to diseases, which he fancifully considers to depend upon disturbed *hydrogenation*. In it he includes intermittent and remittent fevers.

HYDROL'OGY, *Hydrol'ogia*; from ὕδωρ, 'water,' and λογος, 'a discourse.' A treatise on waters. By the term *Medical Hydrol'ogy* is meant that part of physics, whose object is the study of water, considered as it respects medicine; and consequently embracing that of mineral waters. *Medical Hydrography* comprises the study of the influence, exerted by the sea or by navigation on the health of man.

HYDROMA'NIA, from ὕδωρ, 'water,' and μανια, 'mania.' A name given by Strambi to Pellagra, in which the patient has a strong propensity to drown himself.

HYDRO-MEDIASTI'NA. Effusion of serous fluid into the mediastinum.

HYDROM'ELI, from ὕδωρ, 'water,' and μελι, 'honey.' *Aqua mulsa*, *Meliti'tes*, *Mulsum*, *Melic'ratum*, *Braggart*, *Medo*. A liquid medicine, prepared with an ounce and a half of honey and a pint of tepid water. It is used as a demulcent and laxative, and is generally known under the name *Simple hydromel*. *Vinous hydromel*, *Mead*, *Hydrom'eli vino'sum* is a drink made by fermenting honey and water. It is much used as a drink in some countries.

HYDROMETRA, *Hydros u'teri*; from ὕδωρ, 'water,' and μήτρα, 'the womb.' *Dropsy of the womb*. A disease, characterized by circumscribed protuberance in the hypogastrium,—with obscure fluctuation,—progressively enlarging, without ischury or pregnancy. If it ever occur, it must be a rare disease.

HYDROM'PHALUM, *Hydros umbilicalis*, *Exom'phalus aquo'sus*, from ὕδωρ, 'water,' and ομφαλός, 'the navel.' A tumour, formed by the accumulation of serum in the sac of umbilical hernia; or simply by distention of the navel in cases of ascites.

HYDROMYRIN'GA, from ὕδωρ, 'water,' and myringa or myrinx, 'the membrana tympani.' Dropsy of the drum of the ear; giving rise to difficulty of hearing,—the *Dyseca'a hydropica*.

HYDROPEDE'SIS, from ὕδωρ, 'water,' and πεδᾶω, 'I break out.' Excessive sweating.

HYDROPERICAR'DIUM, *Hydropericardium*, *Hydropericarditis*, *Hydros Pericardii*, *Hydrocar'dia*,—*Dropsy of the pericardium*. This is not a common disease, and it is not easily distinguished from hydrothorax in general. Palpitations; irregular or intermitting pulse; excessive dyspnoea, amounting often to orthopnoea, will cause the pericardium to be suspected.

The treatment is that of dropsies in general. It is, usually, however, of the active kind.

HYDROPERIONE, from ὕδωρ, 'water,' περὶ, 'around,' and ᾠον, 'an egg, or ovum.' The sero-albuminous substance secreted in the uterus, prior to the arrival of the impregnated ovum in that cavity.—Breschet.

HYDROPHOBIA, *Parapho'bia*, *Phobodip'son*, *Pheugydron*, *Pheugopho'bia*, *Cynolys'sa*, *Phreni'tis latrans*, *Lyssa cani'na*, *Pantopho'bia*, *Rabies cani'na*, *Erethis'mus hydropho'bia*, *Clonos hydropho'bia*, *Hygropho'bia*, (F) *Rage*, *Canine madness*, from ὕδωρ, 'water,' and φόβος, 'dread.'

The term *Rabies* is more appropriate for the aggregate of symptoms resulting from the bite of rabid animals. *Hydrophobia* literally signifies, a 'dread of water;' and, consequently, ought to be applied to one of the symptoms of rabies, rather than to the disease itself. It is a symptom which appears occasionally in other nervous affections. Rabies is susceptible of spontaneous developement in the dog, wolf, cat, and fox; which can thence transmit it to other quadrupeds or to man; but it has not been proved that it can super-vene,—without their having been previously bitten,—in animals of other species; or that the latter can, when bitten, communicate it to others.

A number of facts induce the belief, that the saliva and bronchial mucus are the sole vehicles of the rabid virus; the effects of which upon the economy appear, sometimes, almost immediately after the bite, and are, at

others, apparently dormant for a considerable period. The chief symptoms are—a sense of dryness and constriction of the throat; excessive thirst; difficult deglutition; aversion for, and horror at, the sight of liquids as well as of brilliant objects; red, animated countenance; great nervous irritability; frothy saliva; grinding of the teeth, &c. Death most commonly happens before the fifth day.

Hydrophobia has hitherto resisted all therapeutic means. Those which allay irritation, are obviously most called for. In the way of prevention, the bitten part should always be excised, where practicable; and cauterized.

In some cases, symptoms like those which follow the bite of a rabid animal, are said to have come on spontaneously. This affection has been termed *nervous* or *spontaneous hydrophobia*.

HYDROPTHAL'MIA, from ὕδωρ, 'water,' and οφθαλμός, 'the eye.' *Dropsy of the Eye*, *Hydros Oc'uli*, *Buphthal'mus*, *Oculus Bovinus*, *Oculus Bu'bulus*, *Oculus Elephan'tinus*, *Ophthalmopto'sis*, *Parop'sis Staphylo'ma simplex*, (F) *Hydrophthalmie*, *Hydropisie de l'œil*. This affection is caused, at times, by an increase in the quantity of the aqueous, at others, of the vitreous, humour. In the former case, the iris is concave anteriorly, and pushed backwards:—in the latter, it is convex, and pushed forwards. Most commonly, the disease seems to depend on both humours at the same time. *Hydrophthalmia* sometimes affects both eyes; at others, only one. Children are more exposed to it than adults or old persons. The treatment must vary according to the causes; its longer or shorter duration; greater or less extent, &c. Hence, according to circumstances, hydragogue medicines, purgatives, general and local blood-letting, blisters, setons, moxa, cupping-glasses, fomentations, collyria, and fumigations of different kinds have been employed. When all means fail, and the disease continues to make progress, the fluid may be evacuated, by a puncture made with a cataract needle at the lower part of the transparent cornea.

HYDROPTHAL'MION. Same etymon. An œdematous swelling of the conjunctiva in hydropic persons.

HYDRO-PHYSOCE'LE, *Hydropneumatoc'e'le*, from ὕδωρ, 'water,' φυσά, 'wind,' and κηλη, 'a tumour.' Hernia, which contains a serous fluid and gas.

HYDRO'PIC, *Hydropicus*,—*Hyphydros*, ὑφύδρος, (F) *Hydropique*. One labouring under dropsy.

HYDROPNEUMO'NIA, *Hydros Pulmo'num*, from ὕδωρ, 'water,' and πνεύμων, 'the lung.' Infiltration of the lungs.

HYDROPNEUMOSAR'CA, from ὕδωρ, 'water,' πνεύμα, 'wind, air,' and σαγξ, 'flesh.' An abscess, containing water, air, and matters similar to flesh.—M. A. Severinus.

HYDROPOI'DES, from ὕδωρ, 'water,' and

ποιεω, 'I make.' Watery excretions, such as sometimes take place in Hydropics.

HYDROPOTA, *Pota'tor Aquæ*, from ὕδωρ, 'water,' and ποτης, 'a drinker.' A *Water Drinker*. One who drinks only water, or drinks it in an extraordinary quantity.

HYDROPS, from ὕδωρ, 'water,' *Phlegma'tia*, *Dropsy*, *Hyderos*, *Affectus hydero'des*, *Hydropisis*, *Hydron'osus*, (F) *Hydropisie*. A preternatural collection of a serous fluid in any cavity of the body, or in the cellular texture. When the cellular texture of the whole body is more or less filled with fluid, the disease is called *Anasarca* or *Leucophlegmatia*;—and when this variety is local or partial, it is called *Œdema*. The chief dropsies, designated from their seat, are:—*Anasarca*, *Hydrocephalus*, *Hydrorachitis*, *Hydrothorax*, *Hydropericardium*, *Ascites*, *Hydrometra*, *Hydrocele*, &c.

Encyst'ed Dropsy, *Hydrops sacca'tus*, *in-carcera'tus* vel *cyst'icus*, is that variety, in which the fluid is inclosed in a sac or cyst; so that it has no communication with the surrounding parts. *Dropsy of the Ovarium*, *Hydrops Ova'rii*, *Ascites Ova'rii*, *Ascites sacca'tus*, is an instance of this variety.

Dropsy may be active or passive. The former consists in an increased action of the exhalants, so that those vessels pour out much more fluid than is absorbed: the latter arises from a state of atony of the absorbent vessels, which allows of an accumulation of fluid. It may also be *mechanical*, or produced by obstructions to the circulation, as in cases of diseased liver.

Active dropsy, occurring accidentally in a sound individual, generally ends favourably. Those, which supervene on other diseases, or are symptomatic of some internal affection, are rarely curable.

The treatment consists in the use of all those remedies, which act on the various secretions: so that the demand being increased, the supply will have to be increased accordingly; and in this manner some of the collected fluid may be taken up by the absorbents. To this end, bleeding, if the dropsy be very active; purgatives; diuretics; sudorifics; sialagogues, &c., are the remedies chiefly depended upon.

HYDROPYR'ETOS, from ὕδωρ, 'water,' and πυρετος, 'fever.' Fever with sweating. *Hidropyretos* would be more proper, from ιδρωρ, 'sweat.'

HYDRORACHIS, from ὕδωρ, 'water,' and ραχις, 'the spine.' *Hydrorachi'tis*, *Hydror-rha'chia*, *Hydrops Cavita'tis Colum'næ Ver-tebra'lis*, *Spina bif'ida*, *Hydrops medul'læ spina'lis*, *Hydroce'le spina'lis*, *Hydrorachi'tis spinosa*, *Hydrops spinæ*, *Spinola*. A soft, frequently transparent, tumour; formed by the membranes of the spinal marrow being distended and projecting backwards from the vertebral canal, the posterior paries of which is wanting to a certain extent. The disease is often accompanied with paralysis of the

lower extremities. It is congenital, and situate in the lumbar or sacral regions. It is almost always fatal:—the tumour rupturing, and death occurring instantaneously. On *dissection*, a simple separation or complete absence of the spinous processes of the vertebræ is perceived, with, at times, destruction or absence of spinal marrow. The treatment is the same as in *hydrocephalus chronicus*; and, as in it, advantage seems occasionally to have been derived by puncturing with a fine needle.

HYDROSAC'CHARUM, *Aqua sacchara'ta*, (F) *Eau sucrée*. Sugared water.

HYDROSAR'CA, from ὕδωρ, 'water,' and σαξ, 'flesh.' A tumour, containing a fluid as well as portions of flesh. Also, *Anasarca*.

HYDROSARCOCE'LE, from ὕδωρ, 'water,' σαξ, 'flesh,' and κηλη, 'a tumour.' *Sar-co-hydroce'le*. A tumour, formed by a sarcocele, complicated with dropsy of the tunica vaginalis.

HYDROSULPHURET'ED WATER, *Aqua hydrosulphura'ta simplex*, *Aqua hepatica*, (F) *Eau hydrosulphurée simple*. (*Sulphuret of iron* 1000 parts, *sulphuric acid* 2000 parts, *distilled water* 4000 parts; add the water to the acid, and put the sulphuret of iron into a retort, to which a Wolff's apparatus of 5 or 6 vessels is adapted: the last containing about an ounce of potassa, dissolved in a quart of water. Pour the diluted acid gradually on the sulphuret: and, ultimately, throw away the water in the last vessel. *Ph. P.*) It is stimulant, diaphoretic, and deobstruent (?), and is used in rheumatism, diseases of the skin, &c.

It has been, also, called *Ac'idum Hydrothion'icum liq'uidum*.

HYDROTHORAX, from ὕδωρ, 'water,' and θωραξ, 'the chest.' *Hydrops Thora'cis*, *Hydrops pec'toris*, *Hydrops pulmo'nis*, *Dyspnæa et Orthopnæ'a hydrothora'cica*, (F) *Hydropisie de Poitrine*, *H. des Plèvres*. Idiopathic Hydrothorax, termed, by Laennec, *Hydropisie des plèvres*, *Dropsy of the Pleuræ*, is a very rare disease, and very difficult of diagnosis. It generally exists only on one side; which, if the fluid effused be considerable, projects more than the other. Dyspnæa, and fluctuation perceptible to the ear, are characteristic symptoms. When the chest is examined with the stethoscope, respiration is found to be wanting every where, except at the root of the lung. The sound is also dull on percussion.

Effusion into the chest, as a result of inflammation of some thoracic viscus, is as common as the other is rare. It is usually a fatal symptom. It has been called *symptomatic hydrothorax*.

In Hydrothorax, the course of treatment, proper in dropsies in general, must be adopted. Diuretics seem, here, to be especially useful; probably on account of the great activity of pulmonary absorption. Paracentesis can rarely, if ever, be serviceable.

HYDRO'TIS, from ὕδωρ, 'water,' and ὠς, gen. ὠτος, 'the ear.' Dropsy of the ear.

HYGIENE, from ὑγίεια, 'health.' *Hygie-sis*, *Hygiei'a*; *Conservati'va medici'na*; *Hygieiolo'gia*, from ὑγιής, 'healthy.' The part of Medicine, whose object is the preservation of health. It embraces a knowledge of healthy man, both in society and individually, as well as of the objects used and enjoyed by him, with their influence on his constitution and organs.

HYGRA, from ὕδωρ, 'water,' or ὑγρός, 'humid.' Liquid plasters. *Hygremplas'tra*.

HYGROBLEPHAR'ICI, from ὑγρός, 'humid,' and βλεφαρον, 'eyelid.' *Hygrophthal'mici*. The excretory ducts of the lachrymal gland have been so called.

HYGROL'OGY, *Zoöch'ymy*,—from ὑγρός, 'humid,' and λόγος, 'a discourse.' The anatomy of the fluids of the body.

HYGRO'MA, from ὑγρός, 'humid.' *Tumor cyst'icus sero'sus*, *Cystis sero'sa*. Dropsy of the bursæ mucosæ.

HYGROM'ETRY, *Hygrome'tria*, *Hygrosco'pia*; from ὑγρός, 'humid,' and μέτρον, 'measure.' The part of Physics, which concerns the measurement of the dryness or humidity of the atmosphere. It is probable, that diseases are as frequently caused by the varying moisture of the atmosphere, as by changes in its weight or temperature. The *hygrometer* ought, consequently, to form part of every apparatus for medical meteorological observations.

HY'LE, ὕλη, *Mate'ria*, 'Matter.' *Materia Medica*:—also, the Philosopher's Stone.

HYLOPH'AGOUS, from ὕλη, 'wood,' and φάγω, 'I eat.' One that feeds upon the young shoots of trees, roots, &c. Hylophagous tribes yet exist in some parts of Africa.

HYMEN, ὕμην, which signifies, 'marriage,' 'nuptial song,' 'membrane or pellicle.' *Claustum*, seu *Flos*, seu *Sigillum*, seu *Custodia*, seu *Columna*, seu *Zona virginita'tis*, *Cir'culus membrano'sus*, *Bucton*, *Intersep'tum virgin'ale*, *Cento virginal'is*, *Argumentum Integrita'tis*, *Munimen'tum* seu *Zona Castita'tis*, *Pannicu'lus hymenæ'us*, *Eugion*, *Valvula vagi'næ*, *Membran'ula luna'ta vaginæ*. The semilunar, parabolic, or circular fold, situate at the outer orifice of the vagina in virgins, especially during youth, and prior to menstruation. This membrane is ordinarily ruptured by the first venereal act, and is effaced by accouchement; some irregular flaps remaining, to which the name *Carun'culæ Myrtifor'mes* has been given, by reason of their resemblance to the leaves of the myrtle. Many circumstances of an innocent character may occasion a rupture or destruction of this membrane. It is often, indeed, found absent in children soon after birth; whilst it may remain entire, after copulation. Hence, the presence of the hymen does not absolutely

prove virginity; nor does its absence, incontinence: although its presence would be *primâ facie* evidence of continence.

HYMENOG'RAPHY, *Hymenogra'phia*, from ὕμην, 'a membrane,' and γράφω, 'I describe.' That part of anatomy, whose object is the description of the different membranes.

HYMENOL'OGY, *Hymenolo'gia*, from ὕμην, 'a membrane,' and λόγος, 'a description.' A treatise on the membranes.

HYMENOT'OMY, *Hymenoto'mia*, from ὕμην, 'a membrane,' and τέμνω, 'I cut,' 'I dissect.' The part of anatomy, which treats of the dissection of membranes. The term has, also, been applied to the incision of the hymen, practised in certain cases of imperforation of the vagina, in order to give exit to the blood, retained and accumulated in the cavity of the uterus.

HYO-EPIGLOTTICUS. Belonging to the os hyoides and epiglottis. Some anatomists have given the name *Hyo-epiglottic ligament* to a bundle of condensed cellular tissue, which passes from the posterior part of the body of the hyoid bone to the base of the epiglottic fibrocartilage.

HYOGLOS'SUS, *Hyodeo-glossus*, *Hyo-chondro-glossus*, *Hypsiloglossus*, *Cerato-glossus* of Douglas and Cowper;—*Basio-Cerato-Chondro-glossus*. A large, thin, quadrilateral muscle, situate at the anterior and superior part of the neck. Its insertions, at three different points of the os hyoides, permit it to be divided into three portions:—the *first* (*Cerato-glossus* of Albinus), is attached to the great cornu of the os hyoides: the *second* (*Basio-glossus* of Albinus), arises from the superior part of the body of the same bone: and the *third* (*Chondro-glossus* of Albinus), arises from the lesser cornu and the cartilage situate between the body and greater cornu. The fibres of these three bundles are inserted into the lateral and inferior parts of the tongue. This muscle depresses the base of the tongue, or raises the os hyoides, when the tongue is fixed.

HYOI'DES, OS, *Os Bico'r'nē*, *Os hypseloi'des*, *Os Lambdoi'des*, *Os Gut'turis*, *Os Lingua'e*, *Os Lingua'lē*, *Upsiloi'des*, *Ypsiloides*. The *Hyoid Bone*; from the Greek υ and ὠδός, 'shape:' having the form of the 'upsilon.' The hyoid bone is a very movable, osseous arch; of a parabolic shape; convex before, and suspended horizontally in the substance of the soft parts of the neck, between the base of the tongue and the larynx. This bone, separated entirely from the rest of the skeleton, is composed of five distinct portions, susceptible of motion on each other. The first and most central is the *body of the hyoid*, *Ossiculum medium Hyoidis*, which affords attachment to several muscles; the two others are lateral, and bear the name of *branches*, or *greater cornua*. The two last are smaller, situate above the other, and are known under the

name *lesser cornua*. The os hyoides is ossified from five points.

HYOSCY'AMUS, from ὕς, 'a swine,' and κνᾶμος, 'a bean.' *Faba suilla*, Bengi, *Jusquiamus*, *Henbane*, *Hyoscyamus niger*, *Apollina'ris alter'cum*, *Altercum*, *Ag'onē*, *Altercan'genon*. (F) *Jusquiaume*, *Fève a Cochon*, *Hannebane*, *Potélée*. The leaves and seeds are the parts used in medicine. Their odour is narcotic and peculiar; taste insipid and mucilaginous. The virtues are yielded to proof spirit. The hyoscyamus is narcotic, anodyne, antispasmodic, and slightly stimulant. It is used as a substitute for opium, where the latter disagrees; and is applied, externally, as a cataplasm in cancer and glandular swellings. Dose, gr. iij to x of the powder.

The **HYOSCYAMUS ALBUS** or *White Henbane* possesses similar virtues.

HYPÆ'MIA, from ὑπο, 'beneath,' and αἷμα, 'blood,' *Oligæ'mia*. Deficiency of blood.—Andral. Also, Extravasation of blood.

HYPALIP'TRON, ὑπαλειπτρον, *Hypaleip'trum*, *Specil'lum*, *Spatha*. A sort of spatula for spreading ointments.—Hippocr.

HYPAMAURO'SIS, from ὑπο, 'under,' and *amaurosis*. Imperfect amaurosis, *Meramauro'sis*.

HYPE'NĒ, ὑπηνη. The beard, which grows under the chin, according to some. Also, the upper lip.—Vesalius.

HY'PER, ὑπερ, 'above,' 'in excess.' Hence:

HYPERÆ'MIA, from ὑπερ, 'above,' and αἷμα, 'blood.' Preternatural accumulation of blood in the capillary vessels.—Andral.

HYPERÆSTHĒ'SIS, from ὑπερ, 'above,' and αἰσθησις, 'the faculty of feeling.' Excessive sensibility.

HYPERAPH'IA, from ὑπερ, 'in excess,' and ἄφη, 'touch.' Excessive acuteness of touch.

HYPERAUXE'SIS, from ὑπερ, 'over,' 'above,' and αὐξησις, 'augmentation.' *Hyperepidosis*. Excessive increase or enlargement of a part:—as *Hyperauxe'sis Ir'idis*, an excessive enlargement of the iris so as to stop up the pupil.

HYPERBOL'IC (*Al'titude*), ὑπερβολικός, excessive. Galen, by this term, designates certain extraordinary attitudes, in which the limbs and vertebral column are in a state of complete extension or flexion.

HYPERBO'REAN, from ὑπερ, 'beyond,' and βορρæς, 'the north wind.' A race of men, found at the extreme north of the two continents, in the vicinity of the polar circle. It includes the Thibetans, Ostiaks, Kamtschadales, Laplanders, Samoiedes, Esquimaux, &c.

HYPERCATHAR'SIS, *Hyperine'sis*, *Hyperinos*, *Superpurga'tio*, from ὑπερ, 'in excess,' and καθαρσις, 'purgation.' Superpurgation.

HYPERCORYPHO'SIS, ὑπερ, 'above,' and κορυφή, 'the vertex;' 'the extreme point of any thing.' The lobes of the liver and lungs.—Hippocr.

HYPERCRIN'IA, from ὑπερ, 'above,' and κρῖναι, 'I separate.' A morbid increase in the quantity of the secretions.

HYPER'CRISIS, same etymon. *Super-excre'tio*, *Superevacua'tio*. An excessive crisis.—A very violent, critical effort, or too copious critical evacuations.—Galen.

HYPERENCEPH'ALUS, from ὑπερ, 'above,' and κεφαλή, 'the head.' A monster whose brain is situate in the skull.—G. St. Hilaire.

HYPERESIA, ὑπηρεσία, 'a ministry.' This word is sometimes applied to the organs;—when it means function.

HYPERERETHISIA, from ὑπερ, 'in excess,' and ἐρεθίζω, 'I excite.' Excessive irritability.

HYPER'ICUM BACCIF'ERUM, *Arbus-cula gummif'era Brazilien'sis*, *Caa-opia*. A Brazilian tree, whose bark emits a juice, when wounded, which resembles Camboge.

HYPERICUM PERFORA'TUM, *Fuga Dæm'onum*, *Androsæ'mum*, *Co'rion*, *Perforated* or *Common St. John's Wort*, *Hyper'icum*, (F) *Millepertuis ordinaire*. It is aromatic and astringent, and enters into a number of aromatic preparations; and, amongst others, into the *Falltrancks*. The *Oil of St. John's Wort*, *O'leum hyper'ici*, *Bal'samum hyper'ici sim'plex*, is made by infusing 3 iv of the flowers in a quart of olive oil. It is vulnerary.

HYPERIDRO'SIS, from ὑπερ, and ἰδρωσις, 'sweating.' Excessive sweating.

HYPERO'A, from ὑπερ, 'upon,' and ὤον, 'a high place.' The palatine arch,—the base of the cranium.

HYPEROSPHERE'SIA, from ὑπερ, and οσφρησις, 'smell.' Excessive acuteness of smell.

HYPERSARCO'MA, *Hypersarco'sis*, *Hypersarx'is*, from ὑπερ, 'above,' and σαρξ, 'flesh.' A soft fungous excrescence, especially such as appears upon ulcerated parts.—Galen.

HYPERSTHENI'A, *Hyperdyna'mia*, *Hyperzoödyna'mia*, *Status inflammato'rius verus*, from ὑπερ, 'beyond,' and σθένος, 'strength.' Super-excitement. A morbid condition, characterized by over-excitement of all the vital phenomena.

HYPERTO'NIA, ὑπερ, 'beyond,' and τόνος, 'tone.' Excess of tone in parts. It is opposed to atony.

HYPERTROPHÆ'MIA, from ὑπερ, 'above,' τροφή, 'nourishment,' and αἷμα, 'blood.' Plastic powers of the blood increased.

HYPER'TROPHY, *Hypertro'phia*, from ὑπερ, 'beyond,' and τροφή, 'nourishment.' The state of a part, in which the nutrition is performed with greater activity; and which, on that account, at length acquires considerable bulk.

HYPEX'ODOS, ὑπεξόδος, from ὑπο, 'beneath,' and ἐξόδος, 'passing out.' An alvine discharge or flux.—Hippocr.

HYPNO'DES, ὑπναδης, from ὑπο, 'under,' and ὕπνος, 'sleep.' One, in a state of slumber or somnolency.

HYPNOLOG'ICA, *Hypnolog'icē*. The part of Dietetics, which treats of sleep.

HYPNOL'OGY, *Hypnolog'ia*, from ὑπνος, and λόγος, 'a discourse.' Same etymon. A treatise on sleep.

HYPO, ὑπο, 'under,' 'sub.' Hence:

HYPOCARO'DES, *Subsopora'tus*, from ὑπο, 'under,' and καρος, 'a heavy sleep.' One, who is in a state approaching carus.—Hippocr.

HYPOCATHAR'SIS, from ὑπο, 'beneath,' and καθάρσις, 'purgation.' Too feeble purgation. A word, opposed to hypercatharsis.—Hippocr., Galen.

HYPOCAUS'TUM, from ὑπο, 'beneath,' and καίω, 'I burn.' A name, given to a stove, or any such contrivance, to sweat in. Also, a furnace in any subterraneous place, used for heating baths:—ὑποκαυστόν, *Balnearium, Vaporiarium*.

HYPOCERCHA'LEON, from ὑπο, and κερχάλειος, 'hoarse.' Roughness of the fauces affecting the voice.—Hippocr.

HYPOCHLOROM'ELAS, *Sub pal'lide nigricans*, from ὑπο, χλωρός, 'green,' and μέλας, 'black.' A term applied to one whose skin is pale, with a blackish hue.—Hippocr., Galen.

HYPOCHON'DRE, *Hypochondrium, Subcartilagin'eum, Regio Hypochondriaca, Hypochondriac Region*, from ὑπο, 'under,' and χονδρός, 'a cartilage.' Each lateral and superior region of the abdomen is so called, because it is bounded by the cartilaginous margin of the false ribs, which forms the base of the chest. There is a *right* and a *left* hypochondrium.

HYPOCHON'DRIAC, *Hypochondriacus*; same etymon. Belonging to hypochondriasis. One labouring under hypochondriasis.

HYPOCHONDRIASIS. Same etymon. *Alu'sia hypochon'drias, Morbus hypochondriacus, Malum hypochondriacum, Hallucina'tio hypochondriasis, Hypochondriacismus, Dyspep'sia hypochondriasis, Pas'sio hypochondriaca, Affec'tio hypochondriaca, Anathymia'sis, Hypercine'sis gastrica, Splenes, Melancholia nervea, M. flatulo'sa, Fomes ventriculi, Hypo, Spleen*,—the *Vapours*, the *English Malady, Low Spirits*. (F) *Hypochondrie, Maladie imaginaire, Maladie Anglaise*. This disease is probably so called, from the circumstance of some hypochondriacs having felt an uneasy sensation in the hypochondriac regions. The disease seems really to be, as Pinel has classed it, a species of neurosis and of mental alienation, which is observed in persons, who, in other respects, are of sound judgment, but who reason erroneously on whatever concerns their own disease. Hypochondriasis is characterized by disordered digestion, without fever or local lesion; flatulence; borborygmi; extreme increase of sensibility; palpitations; illusions of the senses; a succession of morbid feelings, which appear to simulate the greater part of

diseases; panics; exaggerated uneasiness of various kinds, chiefly in what regards the health, &c. Indigestion has, usually, been considered the cause of hypochondriasis. They are, unquestionably, much connected with each other: but there is every reason to believe, that the seat of the affection is really, though functionally, in the brain. The disease almost always appears at the adult age, most commonly in irritable individuals; and, in those exhausted, or rather in the habit of being exhausted, by mental labour, overwhelmed with domestic or public affairs, &c.

The treatment is almost entirely moral. The condition of the digestive function must, however, be accurately attended to.

HYPOCLEP'TICUM, from ὑπο, 'beneath,' and κλέπτω, 'I steal.' A chymical vessel, formerly used for separating oil from water.

HYPOCOI'LON, from ὑπο, 'under,' and κοίλον, 'a cavity.' A cavity, situate above the upper eyelid.

HYPOCRA'NIUM, from ὑπο, 'under,' and κρανιον, 'the cranium.' A collection of pus between the cranium and dura mater.

HYPOGAS'TRIC, *Hypogastricus*. Relating or belonging to the hypogastrium.

The **HYPOGASTRIC ARTERY**, *A. Iliaca inter'na, A. Iliaca poste'rior, A. pel'viennae*,—(Ch.) is the more internal of the two branches into which the primary iliac divides. It descends into the cavity of the pelvis and gives off a considerable number of branches, which arise, at times, separately; at others, by common trunks. These branches are, 1. The *posterior*, i. e. the ilio-lumbar arteries, lateral, sacral, and gluteal. 2. The *anterior*, i. e. the umbilical, vesical, and obturator. 3. The *internal*, the middle hemorrhoidal arteries, uterine, and vaginal in women. 4. The *inferior*, i. e. the *ischiatric arteries*, and internal pudic.

The **HYPOGASTRIC VEIN** furnishes nearly the same branches.

The **HYPOGASTRIC PLEXUS**, *Plexus sous-mesentérique* of Winslow is situate at the lateral and posterior parts of the rectum and the *basfond* of the bladder. It is formed by the sacral nerves and the inferior mesenteric plexus, and gives off numerous filaments, which accompany the arteries, that pass to the rectum and genital organs.

HYPOGASTRIC OPERA'TION of lithotomy, (F) *Taille hypogastrique*. The high operation, or that practised above the pubes.

HYPOGAS'TRIUM, *Hypogastrion*, from ὑπο, 'under,' and γαστήρ, 'the stomach or belly.' *Etron, ητρον, Venter imus, V. parvus, Aqualic'ulus, Sumen, Rumen*. The lower part of the abdomen. The *Hypogastric region*, which extends as high as three fingers' breadth beneath the umbilicus, is divided into three secondary regions—one *middle* or *pubic*, and two *lateral* or *inguinal*.

HYPOGASTROCE'LĒ, from ὑπο, 'under,' γαστήρ, 'the stomach or belly,' and κήλη, 'a tumour.' Hernia in the hypogastric region,

occurring through the separated fibres of the lower part of the linea alba.

HYPOGLOSSUS, from ὑπο, 'under,' and γλῶσσα, 'the tongue.' That which is under the tongue.

The **HYPOGLOSSAL NERVE**, *Nerf Hypoglosse* ou *Grand Hypoglosse*, *Hypoglossien* (Ch), *Lingual N.*, *Gustatory N.*, *Lingua'lis Me'dius*, is the *ninth pair of nerves* of many anatomists. It arises by 10 or 12 very fine filaments from the grooves, which separate the corpora pyramidalia from the C. olivaria; issues from the cranium by the foramen condyloideum anterius; and divides, near the angle of the jaw, into two branches; the one the *cervica'lis descen'dens* or *descen'dens noni*. It forms, with the cervical plexus, a large anastomotic arch and furnishes branches to several of the muscles of the neck.

The other, the *lingual branch*, is the continuation of the principal trunk and gives its numerous filaments to the muscles of the tongue and pharynx. The ninth pair communicates motion to the muscles to which it is distributed.

HYPOGLUTIS, from ὑπο, 'under,' and γλουτος, 'the nates.' The lower and projecting part of the nates.—Gorræus.

HYPO'MIA, from ὑπο, 'under,' and ὤμος, 'the shoulder.' The projecting part of the shoulder.—Castelli, Galen.

HYPON'OMOS, *Ulcus subtus depas'cens*, from ὑπο, 'under,' and νιμω, 'I feed.' A deep fistula or ulcer.

HYPON'YCHON, from ὑπο, 'under,' and ονυξ, 'the nail.' *Ecchymo'ma Hyponychon*. Effusion of blood under a nail.

HYPOPE'DIUM, from ὑπο, 'under,' and πους, 'the foot.' A cataplasm for the sole of the foot.

HYPOPH'ASIS, from ὑπο, 'under,' and φαινω, 'I appear.' That state of the eyes in which the white only is seen through the opening of the eyelids.—Hippocrates.

HYPOPH'ORA, from ὑπο, 'under,' and φερω, 'I carry.' A fistulous ulcer.—Galen.

HYPOPH'THAL'MION, from ὑπο, 'under,' and οφθαλμος, 'the eye.' The part under the eye where œdema generally commences in chronic diseases.—Hippocrates.

HYPOPO'DIA, from ὑπο, 'under,' and πους, 'the foot.' Remedies, as sinapisms, which are applied under the foot.

HYPOPYON, *Hypopyum*, *Hypophthalmia*, *Pyophthalmus*, *Empy'e'sis Oc'uli*, *Diapye'sis Oc'uli*, *Oculus purulentus*, *Lunell'a*, *Hypog'ala*, *Hypopyum lacteum*, *Pyo'sis*, *Abscessus Oc'uli*, *Parop'sis Staphylo'ma purulentum*; from ὑπο, 'under,' and πους, 'pus,' because the pus is under the cornea. This name has been given to small abscesses between the laminae of the cornea, as well as to different purulent collections in the chambers of the eye; hence, some pathologists have distinguished *Hypo'pyon of the chambers*, and *Hypo'pyon of the Cor'nea*. In abscesses

of the chambers the purulent matter is mixed with the aqueous humour, which it renders turbid; and is deposited particularly at the lower part of the eye; forming behind the cornea a kind of whitish crescent, that rises, more or less, before the pupil, and closes it entirely or in part. It requires the use of local and general antiphlogistics, and sorbefacients. At times, it is necessary to puncture the cornea and evacuate the pus.

HYPORIN'ION, from ὑπο, 'under,' and ριν, 'the nose.' That part of the beard, which grows beneath the nose. The mustaches. Also, the upper lip.

HYPOSAR'CA, from ὑπο, 'under,' and σαρχ, 'flesh.' *Hyposarcidiosis*. *Anasarca*. In Linné's and in Cullen's Nosology, it is synonymous with *Physconia*.

HYPOSPA'DIAS, *Hypospadia*, from ὑπο, 'under,' and σπασω, 'I draw.' A malformation, in which the canal of the urethra, instead of opening at the apex of the glans, terminates at its base or beneath the penis, at a greater or less distance from the symphysis pubis. When the orifice of the urethra is very near the root of the penis, the scrotum is divided, as it were, into two great labia; and this malformation has often been taken for a case of hermaphroditism. *Hypospadias* is ordinarily incurable; and an idea has been entertained that it is the cause of impotence. It is not exactly so, but it renders impregnation less probable.

HYPOSPHAG'MA, from ὑπο, 'under,' and σφαζω, 'I kill.' The coagulated blood, which is collected when an animal is killed and used for food. Also, an effusion of blood, especially under the conjunctiva.

HYPOS'TROPHE, ὑποστρεφω, change of position, from ὑπο, and στρεφω, 'I turn.' Act of a patient's turning himself. Also, relapse, return of a disease.—Hippocrates, Foësius.

HYPOTH'ENAR, *Sub'vola*, from ὑπο, 'under,' and θενας, 'the palm of the hand or sole of the foot.'

The **HYPOTHENAR EMI'NENCE** is the fleshy projection of the palmar surface of the hand, which corresponds with the little finger, and is supported by the fifth metacarpal bone. This eminence is formed by four muscles; the *Palmaris brevis*, *Adductor minimi digiti*, *Flexor brevis minimi digiti*, and *Opponens minimi digiti*. The name *Hypothenar* has also been given to different muscles of the hand. The *Hypothenar min'imi dig'iti* of Riolan comprehended the *Adductor*, *Flexor brevis* and *Opponens minimi digiti*; and his muscle, *Hypothenar pol'licis*, corresponded to the *Adductor*, and a portion of the *Flexor brevis pollicis*. Winslow called *muscle petit hypothenar* ou *hypothenar du petit doigt*, the *Adductor minimi digiti*.

HYPOZO'MA, from ὑπο, 'under,' and ζαννυμι, 'I bind round.' *Membrana succin'gens*, a membrane or septum, as the mediastinum, diaphragm, &c.

HYPTIAS'MOS, from ὑπτιάζω, 'I lie with the face upwards.' Lying in a supine posture. Also, inversion of the stomach, as in nausea, regurgitation, or vomiting.—Hippocrates, Galen.

HYSSOPI'TES. Ancient name of a wine, of which *Hyssop* was the chief ingredient, and which Dioscorides extolled in chronic inflammation of the chest. It was regarded as diuretic and emmenagogue.

HYSSO'PUS, from the Hebr. *Azob*, *Cassiala*, *Hyssopus officinalis*, *Common hyssop*. It has been chiefly used as an aromatic, stimulant, and pectoral, in the form of infusion.

HYSTERA, ὑστερα, ὑστερη, 'the uterus.' Hence:

HYSTERAL'GIA, (F) *Fortraiture*, from ὑστερα, 'the uterus,' and αλγος, 'pain.' Pain in the uterus. Hippocrates uses the word *Hysteralgies*, ὑστεραλγης, for any thing that excites uterine pain; and, especially, for vinegar.

HYSTERIA, *Hystericis'mus*, *Hysteris'mus*, *Hyperciné'sia uteri'na*, *Utero adscensus*, *Suffoca'tio hyster'ica*, *Præfoca'tio matri'cis*, *Syspa'sia hysteria*, *Malum hyster'icum*, *Vapores uteri'ni*, *Vapours*, *Hyster'ics*, *Hysteric fit*, *Affec'tio hyster'ica*, *Passio hysterica*, *Strangula'tio uteri'na*, from ὑστερα, 'the uterus.' (F) *Hystérie*, *Mal de Mère*, *Maladie imaginaire*. A species of neurosis, classed amongst the spasmi by Sauvages and Cullen, and in the *Névroses de la génération*, by Pinel. It received the name *hysteria*, because it was reputed to have its seat in the uterus. It generally occurs in paroxysms; the principal characters of which consist in alternate fits of laughing and crying, with a sensation as if a ball set out from the uterus and ascended towards the stomach, chest, and neck, producing a sense of strangulation. If the attack be violent, there is, sometimes, loss of consciousness (although the presence of consciousness generally distinguishes it from epilepsy) and convulsions. The duration of the attacks is very variable. It appears to be dependent upon irregularity of nervous distribution in very impressible persons, and is not confined to the female; for well marked cases of hysteria are occasionally met with in men. During the fit:—dashing cold water on the face; stimulants, applied to the nose or exhibited internally, and antispasmodics form the therapeutical agents. Exercise, tranquillity of mind, amusing and agreeable occupations constitute the prophylactics.

HYSTEROCE'LE, from ὑστερα, 'the womb,' and κηλη, 'hernia.' *Hernia of the womb*. This is a rare disease. The womb

may protrude through the inguinal or the crural canal, or through the lower part of the linea alba.

HYSTERO-CYSTIC, *Hys'terocysticus*, from ὑστερα, 'the uterus,' and κυστις, 'the bladder.' Relating to the uterus and bladder. Some authors have called *Hystero-cystic Retention of urine*, that which is caused by the compression of the bladder by the uterus, during pregnancy.

HYSTERO-CYSTOCE'LE, from ὑστερα, 'the womb,' κυστις, 'the bladder,' and κηλη, 'a tumour.' Hernia of the uterus complicated with displacement of the bladder.

HYSTEROLOX'IA, *Hysterelosis*, *Obliquitas u'teri*, *Situs obli'quus uteri*, *Flexio seu versio incomple'ta uteri*, *Inclina'tio uteri*, *Metrolox'ia*, *Uterus Obli'quus*, *U. Inclina'tus*; from ὑστερα, 'the uterus,' and λοξος, 'oblique.' An oblique position of the uterus, occurring during pregnancy. *Anteversion of the uterus*, *Hysterolox'ia anterior*, *Antever'sio u'teri*, *Prona'tio uteri*, *Venter propendens*; and *Retroversion of the uterus*, *Hysterolox'ia posterior*, *Retrover'sio uteri*, *Reflex'io uteri completa*, are varieties.

HYSTEROMALA'CIA, *Hysteramalacosis*, *Malacosis uteri*, *Putrescentia u'teri gravidi*, from ὑστερα, 'the uterus,' and μαλακία, 'softness.' Softness of the uterus, during pregnancy, which renders it liable to rupture in labour.

HYSTERON'CUS, from ὑστερα, 'the uterus,' and ογκος, 'tumour.' A tumour of the uterus.

HYSTEROPH'YSIS, from ὑστερα, 'the uterus,' and φυση, 'wind.' Distention of the uterus with air. *Emphysema uteri*.

HYSTEROPTO'SIS, from ὑστερα, 'the womb,' and πτωσις, 'fall.' *Prolapsus uteri*. Also *Inversio uteri*. In a general sense, a protrusion of any of the genital organs or of excrescences from them into the genital passages: *Ædoptosis*.

HYSTEROSTOMAT'OMUS, from ὑστερα, 'the womb,' στομα, 'orifice,' and τεμνειν, 'to cut.' An instrument invented by Coutouly, for dividing the os uteri, when it is important to deliver immediately, as in cases of convulsions.

HYSTEROT'OMUS, from ὑστερα, 'the womb,' and τεμνειν, 'to cut.' An instrument for dividing the womb by the vagina. It is a kind of *Bistouri caché*, and is intended to divide the cervix uteri.

HYSTRICI'ASIS, *Hystriacis*, *Hys'trix*, *Hystricis'mus*, *Cerostró'sis*, *Trichó'sis setó'sa*, from ὑστρεξ, 'a hedgehog or porcupine.' A disease of the hairs, in which they stand erect like the quills of a porcupine.

I

IATRALEP'TES or **IATRALEIP'TES**, *Iatralip'ta*, *Med'icus Unguenta'rius*; from *ιατρος*, 'a physician,' and *αλειψω*, 'I anoint.' One who treats diseases by unguents, frictions, and by external means generally. Prodicus, a disciple of Æsculapius, was the chief of the Iatroleptes.

IATRALEIP'TICĒ, *ιατραλειπτικη τεχνη*, same etymon. The method of treating diseases adopted by the Iatroleptes.

IATRI'NĒ, *ιατρινη*, a female practitioner of medicine.

IATREUSIOLO'GIA, from *ιατρευσις*, 'the exercise of the art of healing,' and *λογος*, 'a description.' The doctrine of the exercise of the healing art.—Reil.

IĀTRI'ON, *Iatre'on*, *Iatron*. The house of a physician or surgeon. Also, the physician's fee or *honorarium*.

IBICUIBA, *Becuiba*, or *Becuiba nux*. A species of nut from Brazil, the emulsive kernel of which is ranked amongst balsamic remedies.

IBIS, *ιβις*. A bird, held sacred by the Egyptians. When sick, it is asserted, that it was wont to inject the water of the Nile into its fundament; whence, according to Langius, was learned the use of glysters.

ICE, *Glacies*, *Frozen water*. (F) *Glace*. Iced water is much used internally, as the best refrigerant in fever. It is, also, applied externally, in cases of external inflammation, as well as in phrenitic, and hernial affections, &c.

ICE-COLD, *Icy cold*, (F) *Froid glacial*. A very strong sensation of cold, compared by the patient to that which would be produced by the application of pieces of ice.

ICELAND, **MINERAL WATERS OF**. Hot springs are found in every part of Iceland. The most noted of these is one called Geyser, two days' journey from Hecla, and near Skalholt. The diameter of the basin is 59 feet; and the height, to which the water is thrown, often more than 100. The heat of the water is 212°.

I'CHOR, *ιχωρ*, *Sanies*, *Sordes*, *Virus*, *Pus malignum*, *Tabum*. A thin, aqueous, and acrid discharge.

ICH'OROUS, *Ichoro'sus*, *Ichoroï'des*. Belonging to or resembling ichor.

ICHTHYOCOL'LA, from *ιχθυς*, 'a fish,' and *κολλα*, 'glue.' *Colla Piscium*, *Fish glue*. (F) *Icthyocolle*, *Colle de Poisson*. A name given to the dried fish bladder of the *Acipenser huso*, which is almost wholly composed of gelatine, and is employed in medicine in the formation of nutritive jellies. It is, also, occasionally, used in anatomical injections. The *English Court Plaster* is made with it.

ICHTHYOPH'AGIST, *Ichthyoph'agus*, from *ιχθυς*, 'a fish,' and *φαγω*, 'I eat.' People, who feed habitually on fish;—generally the most uncivilized of mankind.

ICHTHYO'SIS, from *ιχθυς*, 'a fish;' from the resemblance of the scales to those of a fish—*Lepido'sis Ichthyiasis*, *Lepra Ichthyo'sis*, *Lepido'sis Ichthyo'sis*, *Fishskin*. A permanently harsh, dry, scaly, and, in some cases, almost horny texture of the integuments of the body, unconnected with internal disorder. Willan and Bateman have two varieties, *I. simplex*, and *I. cornea*. Alibert has three, the *I. nacrée* or *pearly*, the *I. cornée*, and the *I. pellagre* or *pellagra*.

I'CICA ARACOUCHI'NI. *Aracouchini* is a balsam extracted, by incision, from this tree in Guyana. The Galibis use it for healing wounds.

IC'TERUS, *Ic'terus flavus*, *I. verus*, from *ικτις*, a species of weasel, whose eyes are yellow. *Morbus arcua'tus vel arquatus*, *Auri'go*, *Auri'go*, *Morbus regius*, *Morbus lute'olus*, *Cholelith'ia ic'terus*, *Suffu'sio aurigino'sa*, *Il'eus flavus*, *I. Icteroides*, *Cachex'ia icter'ica*, *Fellis suffu'sio*, *Fellis obstruc'tio*, *F. Superfu'sio*, *Jaundice*. (F) *Ictère*, *Jaunisse*, *Bile repandue*. A disease, the principal symptom of which is yellowness of the skin and eyes, with white fæces and high-coloured urine. It admits of various causes; any thing which, in fact, can directly or indirectly obstruct the course of the bile, so that it is taken into the mass of blood and produces the yellowness of surface; the bile being separated by the kidneys causing the yellowness of urine, and its being prevented from reaching the intestine, occasioning the pale-coloured fæces. The *Prognosis*, in ordinary cases, is favourable;—when complicated with hepatic disease, unfavourable.

The treatment is simple:—an emetic or purgative, given occasionally so as to elicit the return of the bile to its ordinary channels; light tonics; unirritating diet; cheerful company, &c.

The **ICTERUS INFAN'TUM** or *Yellow gum*, *Pædict'erus*, *Auri'go neophyto'rum*, (F) *Ictère des nouveau-nés* is a common affection and frequently dependent upon obstruction of the choledoch duct, by the meconium. It requires time; and castor oil, occasionally.

ICTUS. A stroke or blow; *Plege*, *Plaga*, *Ictus solis*, a stroke of the sun. See *Coup de soleil*. *Ictus*, also, means the pulsation of an artery; and the sting of a bee or other insect.

IDE'A, *Ido'lum*, *ιδεα*, *Ideach* (? *Paracelsus*) *ιδεα*. (F) *Idée*. The image or representation of an object in the mind, from *ιδω*, 'I see.'

IDEN'TITY (PERSONAL), *Iden'titas*, *Sameness*. It is sometimes a question in legal medicine to decide upon personal identity; that is, whether an individual is the same he represents himself to be. Physical marks form the great criteria.

IDEOL'OGY, *Ideolo'gia*, from *ιδω*, 'I see,' and *λογος*, 'a discourse.' The science of ideas. Intellectual philosophy.

IDIOPATHI'A or **IDIOPATHEI'A**, *Protopathi'a*, *Pro'prius affec'tus*, from *ιδιος*, 'peculiar, proper,' and *παθος*, 'an affection.' A primary disease; one not depending on any other.

IDIOPATH'IC, *Proprio habitu*, *Constitutio'nē pro'pria pendens*, *idiopath'icus*. Primary affections and their symptoms are so denominated.

IDIOSYN'CRASY, *Idiosyn'crasis*, *Idiotro'phia*, *Idioc'rasis*, *Idiosyncrasis*, from *ιδιος*, 'peculiar,' *συν*, 'with,' and *κρασις*, 'temperament.' A peculiarity of constitution, in which one person is affected by an agent, which, in numerous others, would produce no effect. Thus shellfish, bitter almonds, produce urticaria in some, by virtue of their idiosyncrasies. Others faint at the sight of blood, &c.

ID'IOT, *Idio'ta*, foolish, stupid, ignorant. One who is fatuous or who does not possess sufficient intellectual faculties for the social condition, and for preserving himself from danger.

ID'IOTISM, **ID'IOCY**, **ID'IOTCY**, *Idiotis'mus*. Same etymon. *Mo'ria demens*, *Ana'a*, *Mo'ria*, *Moro'sis*, *Fatu'itas*, *Amen'tia*. A species of unsound mind, characterized by more or less complete obliteration of the intellectual and moral faculties. It frequently supervenes on mania and melancholia, but more commonly depends upon original conformation. It may, also, be symptomatic of organic disease of the brain, which has come on after birth. Idiotism exists in various degrees. Some idiots are mere automata; exhibiting scarcely any sensibility to external impressions; others are capable of articulating a few words and possess certain mental emotions to a limited extent. The physiognomy is usually vacant; step unsteady, and articulation imperfect or broken. The affection is almost always incurable.

IGNA'TIA AMA'RA. The systematic name of the plant, which affords *St. Ignatius's Bean*. *Faba In'dica*, *Faba Sancti Ignatii*, *Faba febrifuga*. (F) *Ignatie*, *Fève de Saint Ignace*. The seeds are bitter and poisonous; containing Strychnine, which see.

IGNIS, 'fire.' Hence:

IGNIS CAL'IDUS. 'A hot fire.' A violent inflammation, about to degenerate into gangrene.

IGNIS FRIG'IDUS. 'A cold fire;' a sphacelus.

IGNIS SAPIEN'TIUM. The ancient name for the heat of horses' dung.

IGNIS SYLVAT'ICUS, *I. sylves'tris*, *I. volat'icus*, *I. vola'grius*, *Stroph'ulus sylves'tris*, *S. volat'icus*. (F) *Feu sauvage*, *F. volage*. Probably, the *Porri'go larva'lis* or *crusta lactea* of infants. Also, a transient redness of the face and neck, sometimes observed in hysterical and chlorotic females.

ILECH, *Y'lech*, *Ilei'as*, *Ilias'ter*, *Ylia'ter*, *Elias'ter*, *Ilias'trum*, *Ilei'ados*, *Ilei'dos*, *Ilei-adum*, *Ili'adus*. Terms, used by Paracelsus to designate the first matter:—the beginning of every thing.

ILEO-LUMBAR, *Ileo-lumba'lis*, or *Ilio-lumbalis*. Belonging to the ilium and lumbar region.

The **ILEO-LUMBAR** or **ILIO-LUMBAR ARTERY**, *Iliaco-mus'cular* (Ch.), is given off by the hypogastric, opposite the base of the sacrum. It ascends behind the psoas muscle, and divides into two branches;—an *ascending* and *transverse*, which give off numerous ramifications to the neighbouring parts.

The **ILEO-LUMBAR LIG'AMENT**, *Ilio-lumbo-ver'tebral L.*, *Vertebro-Iliac L.*, is a broad, membraniform, triangular ligament, extending horizontally from the transverse process of the 5th lumbar vertebra to the upper and posterior part of the iliac crest. It unites the vertebral column with the pelvis.

IL'EON, *Il'eum*, *Eil'eon*, *Intesti'num circumvolu'tum*, from *ελεειν*, 'to turn,' 'to twist.' Anatomists have given this name to the longest portion of the small intestine, which extends from the jejunum to the cæcum. It was so called, from its forming a considerable number of convolutions.

ILEUS, *Eil'eos*, from *ελεειν*, 'I twist or contract.' *Col'ica Ileus*, *Colica spasmod'ica*, *Ileus spasmod'icus*, *Chordap'sus*, *Passio Iliaca*,—the *Iliac Passion*, *Vol'vulus*, *Ileo'sis*, *Misere'rē mei*, *Convol'vulus*, *Tormen'tum*. (F) *Colique de Misericorde*. A disease, characterized by deep-seated pain of the abdomen, stercoraceous vomiting, and obstinate constipation. It is often occasioned by hernia obstructing the passage of the faeces through a part of the intestinal canal. The term Ileus has been applied to various affections—to simple nervous colic, intussusception, and to strangulation of the small intestine, &c. Various remedies have been employed;—the majority for the purpose of procuring alvine evacuations: e. g. purgatives, in draught, pill, or glyster; suppositories, tobacco glysters; pure mercury; leaden bullets; antispasmodics and narcotics; blisters to the epigastrium; ice by the mouth or injected into the rectum. Some of these have, occasionally, succeeded; especially the tobacco glyster, and ice to the tumour, where the disease has been occasioned by strangulated hernia. It is very dangerous.

ILEX AQUIFO'LIUM. The systematic name of the *Common Holly*, *Aquifo'lium*, *Agrifo'lium*. (F) *Houx*, *H. commun* ou *Chêne vert*. The leaves of this plant have been re-

commended as tonic, astringent, and antiseptic, and have been prescribed in atonic gout; intermittents; dyspepsia, &c. The *Ilicine* or active principle has also been advised. It is obtained by dissolving the alcoholic extract of the leaves of the holly in water, and successively treating it with the subacetate of lead, sulphuric acid, and carbonate of lime. The filtered and evaporated product is then dissolved in alcohol: the mixture filtered and evaporated in shallow vessels.

ILEX MAJOR. From the berries of this tree, called by the Spaniards, *Bellotas*, a juice may be expressed, which forms a slightly astringent emulsion with water, and has been recommended by some Spanish physicians in humid cough, hæmoptysis, &c.

ILEX VOMITORIA, ILEX CASI'NÆ, Cassi'na, Dahoon holly, Apalachinē Gallis, South-Sea Tea, Evergreen Cassi'nē, Cassee'na, Yau-pon, Yopon. (F) *Thé des Apalaches, Houx Apalachine, Apalachine, Thé de la Mer du Sud.* A tree, indigenous in the southern parts of the United States. The leaves when dried, are aromatic, stimulant, stomachic, and expectorant, and are used as tea. When fresh, they are emetic and cathartic.

The **ILEX PARAGUEN'SIS**, a native of Paraguay, affords the celebrated *Mattee*, or *Maté*, drunk in place of the Chinese tea by the people of Paraguay.

ILIAC, Iliacus, from *Iliā*, 'the flanks.' Relating to, or connected with, the flanks.

The **ILIAC FOSSÆ** are two in number: the *internal*, the depression—presented by the ilium on its interior, and at the upper part—in which the *Iliacus internus* is lodged:—and the *external*, an excavation on the outer surface of the same bone, occupied by the *Glutæi muscles*.

The **ILIAC CREST, Crista Ilii**, is the upper margin of the ilium. (F) *Crête Iliaque.* It is very thick, and curved like the italic *S*. It affords attachment to the broad muscles of the abdomen.

The **ILIAC SPINES**, or *Spinous Proc'esses of the Ilium*, are four in number. They are distinguished into *anterior* and *posterior*. Of the *anterior*, one is *superior*. It bounds the crista ilii anteriorly, and affords origin to the sartorius muscle. The other is *inferior*, and receives the tendinous origin of the rectus femoris.

The two **POSTERIOR ILIAC SPINES** are divided, like the anterior, into *superior* and *inferior*. They afford insertion to strong ligaments, which unite the ilium with the sacrum.

The **ILIACUS INTER'NUS MUSCLE, Iliacus, Iliaco-trochantérien** (Ch.); *Femur moven'tium sep'timus, Iliac muscle*, is situate in the fossa iliaca, and at the anterior and superior part of the thigh. It is broad, radiated, triangular; and is attached, *above*, to the two upper thirds of the fossa iliaca, and to the internal part of the iliac crest:—*below*, it termi-

nates by a tendon, which is common to it and the *psoas magnus*, and is fixed into the lesser trochanter. When this muscle contracts, it bends the pelvis on the thigh, or *vice versâ*. It is also a rotator of the thigh outwards, and prevents the trunk from falling backwards.

ILIAC AR'TERIES, Arte'riæ Iliacæ. This term has been given to several arteries. The *Primary Iliacs*, (F) *A. Iliques primitives*,—*Pelvi-crurales* (Ch.), arise from the bifurcation of the aorta, opposite the body of the 4th lumbar vertebra, and descend, in a divergent manner; until, opposite the sacro-iliac symphysis, they divide into two considerable trunks,—the *internal iliac* or *Hypogastric* (which see), and the *external iliac*—*Portion Iliaque de la crurale*, (Ch.) This proceeds from the sacro-iliac juncture as far as the crural arch, when it assumes the name *Femoral Artery*. Before passing under the arch, it gives off two pretty considerable branches,—the *Epigastric* and the *Circumflexa Ilii*. This last, which is called, also, *anterior Iliac* by some anatomists,—*Circonflexe de l'Ilium* (Ch.); leaves the external iliac, at the crural arch. It ascends along the outer edge of the iliacus muscle, and divides into two branches,—an *internal* and *external*. The *Iliac Region* is the side of the abdomen between the ribs and the hips.

The **ILIACA INTER'NA MINOR vel Ilio-lumbalis** is a small artery, which sometimes arises from the hypogastric, at others, from the beginning of the gluteal. It is sent, chiefly, to the *psoas* and *iliacus internus* muscles.

ILIO-PECTINEA, belonging to the ilium and to the pecten or pubis.

The **LINEA ILIO-PECTINEA**, or *Linea innominata*, is the projecting line or ridge of the ilium and pubis, which forms part of the brim of the pelvis.

The **ILIO-PECTINEAL EMINENCE** is so called, from being formed by the junction of the ramus of the ilium with that of the pubis. It affords attachment to the *psoas minor*.

ILIO-SCROTAL, Ilio-scrotalis. Professor Chaussier calls thus the external twig, furnished by the anterior branch of the first lumbar pair of nerves. It distributes its ramifications to the muscles of the abdomen, and to the integuments of the groin, pubis and scrotum.

ILION, Ilium, Haunch Bone. The largest of the three bones, which constitute the os innominatum in the fœtus and child. It was probably so called, from its seeming to support the intestine ileon; or, perhaps, because its crest is curved upon itself, from *εἰλέω*, 'I twist,' 'I roll.' This portion of the os innominatum is usually so called in the adult. The posterior surface is called *Dorsum*, the internal, *Venter*. The upper semicircular edge is the *Crista* or *Spine*: at the anterior part of which is the *anterior and superior spinous process*; and, below, the *anterior and inferior*

spinous process. At the back part of the spine are two *spinous processes*, the *posterior* and *superior*, and *posterior* and *inferior*. See *Iliac*.

ILITHYIA, *ελιθυια*, *Lucina*, *Juno Lucina*. The Goddess, who presided over parturient females, with the Greeks and Romans.

ILLEGITIMATE, *Illegitimus*, from *in*, 'negation or opposition,' and *legitimus*, 'legitimate;' from *lex, legis*, 'law.' That which is contrary to law; which has not the conditions required by law,—as an illegitimate birth—one out of wedlock, and admitting of medico-legal discrimination.

ILLEGITIMATE OR BASTARD FEVERS are those, whose progress is anomalous.

ILLICIUM ANISATUM, *Yellow-flowered Aniseed Tree*; *Anisum stellatum*, *Anisum Sinense*, *Semen Badian*, (F) *Anis de la chine* *A. étoilé*, *Badiane*. *Fam. Magnoliaceæ*; *Sex. Syst. Polyandria Polygynia*. The seeds are used like the aniseed. The same tree is supposed to furnish the aromatic bark, called *Cortex Anisi Stellati*, or *Cortex Lavola*.

ILLO'SIS, *ιλλωσις*, from *ιλλος*, 'the eye.' Distortion of the eyes.

ILLUTAMEN'TUM, *Illutatio*. An ancient form for a topical medicine, with which the limbs of wrestlers and others were rubbed, especially after bathing.—Baccius.

ILLUTATIO, from *in*, 'upon,' and *lutum*, 'mud.' A word used, by the ancients, for the act of covering any part of the body with mud, with therapeutical views.

IMAGINATION, *Imaginatio*, *Figuratio*, *Phantasia*, *Dianoëma*, from *ima'go*, 'image.' The faculty of forming in the mind an assemblage of images and combinations of ideas, which are not always in connexion with external objects.

IMBECILITY, *Imbecillitas*. Weakness, especially of the intellect.

IMBER'BIS. One devoid of beard.

IMBIBITION, *Imbibitio*, *Emp'tosis*, *Endosmose*, *Aspiration*, from *imbibere*, 'to drink, to imbibe.' The action, by which a body becomes penetrated by a liquid. See *Endosmose*. Many of the phenomena of absorption are owing to imbibition.

IMMINENCE, *Imminen'tia*. Some authors have designated, by this term, the period which precedes the invasion of a disease; and when certain indications foretell its approach.

IMPACTION, *Impactio*, from *impingere*, 'to strike against.' A fracture of the cranium, ribs, or sternum, with depression of some of the fragments and projection of others externally.

IMPERATORIA, *I. Ostruthium*, *Ostruthium*, *Astrantia*, *Magistrantia*, *Masterwort*, (old Fr.) *Austruche*. The roots of this plant were formerly considered a *divinum remedium*. They are merely aromatic and bitter, and are not used.

IMPERFORATION, *Imperforatio*, *Atré-*

sia, *Atrétismus*, *Cap'etus*. Absence of a natural aperture; as, of the mouth, anus, vulva, nostrils, &c. It is congenital, being dependent upon faulty conformation.

IMPETIGO, from *im'peto*, 'I infest.' *Darta*, *Der'bia*, *Im'petus*, *Peti'go*, *Ecpye'sis impeti'go*, *Phlysis impeti'go*, *Running Scall* or *Tetter*. A word, used in various acceptations. In some writers, it is synonymous with itch. In others, it means a variety of herpes. Sauvages employs it as a generic term, under which he comprises syphilis, scorbutus, rachitis, elephantiasis, lepra, the itch, tinea, scrophula, &c. It forms, also, a genus in the class *Cachexiæ* of Cullen. In Bateman, it is the first genus of the 5th order, *Pustulæ*, and is defined—the *humid or running tetter*; consisting of small pustules, denominated *Psydracia*. It is unaccompanied by fever; not contagious, or communicable by inoculation. He has five species:—the *I. figura'ta*, *I. sparsa*, *I. erysipelato'des*, *I. scab'ida*, and *I. rodens*.

IMPLIC'ITI MORBI, *Implic'iti*, *complic'ati*, *M.* Diseases, which exist at the same time in an organ; and produce, concurrently, disorder of the same function.

IMPOTENCE, *Acrati'a*, *Impoten'tia*, (F) *Impuissance*. Loss of power over one or more of the members.

Commonly it means want of sexual vigour; incapacity for copulation, *Asty'sia*, *Asyno'dia*, *Adynamia virilis*. It has, also, been used synonymously with *sterility*. Impotence may be *absolute* or *relative*, *constitutional* or *local*, *direct* or *indirect*, *permanent* or *temporary*.

IMPOVERISHED, *Effe'tus*, *Depauperatus*, (F) *Appauvri*. 'Having become poor.' The Humorists applied this epithet to an humour, deprived of a part of its constituents, and particularly to the blood. This fluid was considered to be impoverished, when it was pale; without the proper consistence; and abounding in serum. It was, on the contrary, rich, in their opinion, when of a scarlet colour; possessing consistence; when it coagulated promptly, and the quantity of serum, compared with that of the clot, was by no means considerable. There is truth in these ideas.

IMPRES'SION, *Impres'sio*, *Pros'bolë*, (F) *Empreinte*. A more or less deep indentation which certain organs seem to make on others. The inequalities observable on the bones: and which appear to be made by the suprajacent organs.

DIG'ITAL IMPRES'SIONS, are the depressions of various forms, observable at the inner surface of the cranium, which look, at first view, as if they were made with the fingers.

IMPU'BER, *Impu'bes*, *Impu'bis*, *Ane'bus*, from *in*, 'negation,' and *puber'tas*, 'puberty,' (F) *Impubère*. One, who has not attained the age of puberty.

INANI'TION, *Inani'tio*, *Inan'itas*, from *inanire*, 'to empty.' *Ceno'sis*. Exhaustion

for want of nourishment. To die from inanition is—to die from such exhaustion.

INAURA'TION, *Inaura'tio*, from *in* and *aurum*, 'gold.' The gilding of pills or boluses.

INCANTA'TION, *Incanta'tio*, *Incantamen'tum*, *Ep'odē*. A mode of curing diseases by charms, &c., defended by Paracelsus, Van Helmont, and others.

INCARCERA'TION, *Incarcera'tio*, from *in*, 'in,' and *carcer*, 'prison.' A hernia is said to be *incarcerated*, when, owing to constriction about the neck of the hernial sac or elsewhere, it cannot be reduced with facility. I. is sometimes used in the same sense as strangulation.

INCAR'NANS, *Incarnat'i'vus*, *Sarco'ticus*, *Plerot'icus*, *Anaplerot'icus*. Medicines, which were fancied to promote the regeneration of the flesh. Certain bandages and the sutures have, also, been so called.

INCEN'DIUM, from *incen'dere*, 'to burn.' *Pyrca'a*, *πυρκαϊα*, *Causis*, *Phlogo'sis*. A burning fever or any burning heat:—*Incendium febrile*, *Incensio*.—Willis.

INCERA'TION, *Incera'tio*, *Encero'sis*, *εγκεροσις*, from *cera*, 'wax.' The act of incorporating wax with some other body; or rather, that operation whose object is to communicate to a dry substance the consistence of wax.

INCERNIC'ULUM, from *incer'nere*, 'to sift.' A strainer or sieve.

INCIDENTIA, from *incid'ere*, 'to cut.' (F) *Incisifs*. This name was formerly given to medicines to which was attributed the property of cutting thick or coagulated humours. The fixed alkalies, hydrosulphurets of alkalies, sulphurous water, &c. were considered to belong to this class.

INCIS'ION, *Incis'io*, *Encopē*, *Incisu'ra*, *Tomē*, (F) *Taillade*. A methodical division of the soft parts, with a cutting instrument.

INCIS'IVE, *Incisi'vus*; same etymon. The *Fossa incisiva*, *F. myrtifor'mis*, is a depression in the superior maxillary bone, above the incisor teeth.

The INCISIVE OR INCISOR TEETH, *Den'tes incis'ores*, *tom'ici*, *ctenes*, *dichasteres*, *gelasini*, *primo'res*, *raso'rii*. The teeth which occupy the anterior part of the upper and lower jaws are so called, because they are used for cutting the food in the manner of cutting instruments.

INCISO'RIUM, *Tomion*. An operating table.

INCOMPAT'IBLE, from *in*, 'negation,' and *compet'ere*, 'to agree.' A substance, which cannot be prescribed with another, without interfering with its chemical composition or medicinal activity.

INCONTINEN'TIA, from *in*, 'negation,' and *contineo*, 'I contain.' 'Incontinence.' Inability to retain the natural evacuations. Abuse of the pleasures of love.

INCORPORA'TION, *Incorpora'tio*, *Cor-*

pora'tio, *Ensomato'sis*. An operation, by which medicines are mixed with soft or liquid bodies, in order to give them a certain consistence. Also, the thorough admixture of various substances.

INCRASSAN'TIA, *Incrassati'va*, *Inviscant'ia*, *Spissan'tia*, *Ecpyc'tica*, *Condensantia*, *Pachyn'tica*, *Pycnot'ica*. Medicines, which were formerly believed to possess the power of thickening the humours, when too thin. All mucilaginous substances were so regarded.

IN'CREASE, *Incremen'tum*, *Auze'sis* from *in*, and *cres'cere*, 'to grow.' (F) *Accroissement*. Augmentation of the size or weight of a body, by the application of new molecules around those which already exist.

INCRUSTA'TION, *Incrusta'tio*, *Coniasis*. The act of forming a crust on the surface of a body, as well as the crust itself. Also, the calcareous deposits or cartilaginous plates, which sometimes form in organs.

INCUBA'TION, *Incuba'tio*, from *incuba're*, 'to lie upon.' This word, which is used in natural history for the sitting of birds upon their eggs, is employed, figuratively, in medicine for the period that elapses between the introduction of a morbid principle into the animal economy and the invasion of the disease.

IN'CUBUS. Same etymon. *Ephial'tes*, *Ephial'tes noctur'nus*, *Ephial'tes*, *Epilep'sia nocturna*, *Asthma noctur'num*, *Puigalion*, *Succubus*, *Oneirodyn'ia gravans*, *Erethis'mus oneirodyn'ia*, *Noctur'na oppres'sio*, *Epib'olē*, *Nightmare*. (F) *Cauchemar*, *Cauchevieille*, *Cochemar*, *Oneirodynie gravative*. A sensation of a distressing weight at the epigastrium during sleep, and of impossibility of motion, speech, or respiration; the patient at length awaking in terror, after extreme anxiety. The nightmare is, often, the effect of difficult digestion or of an uneasy position of the body. At other times, it occurs in consequence of severe emotions. The sensation of suffocation was formerly ascribed to the person's being *possessed*, and the male spirits were called *incubes*—the female, *succubes*. The disease requires no particular treatment. The causes must be avoided.

INCUBUS VIGILAN'TIUM, *Ephial'tes vigilan'tium*, *E. hypochondriaca*. This is produced during wakefulness; the sense of pressure being severe and extending over the abdomen; respiration frequent, laborious, and constricted; eyes fixed; sighing, deep and violent; intellect undisturbed.

INCUS, *Acmon*, *ακμων*, *Os incudi simile*, *Ossic'ulum Incudi seu molar'i denti compara'tum*. (F) *Enclume*. One of the small bones of the ear, so called from its fancied resemblance to a smith's anvil. It is situate in the cavity of the tympanum, between the malleus and orbiculare. Its body is articulated with the malleus; its *horizontal ramus*, which is the shortest, corresponds with the

entrance of the mastoid cells; and its *vertical ramus* is articulated with the os orbiculare. The incus is composed of a compact tissue and is developed from a single point of ossification.

INDEX, *Dig'itus indicato'rius*, *Lich'anos*, *Deicticos*, δεικτικός, from *indica're*, 'to point out.' The forefinger, index finger.

INDIANA (U. S.), MINERAL WATERS OF. A medicinal spring, near Jeffersonville, is much frequented. Its waters are strongly impregnated with sulphur and iron.

IN'DICANT, *In'dicans*, *Endeicticos*, ενδεικτικός. (F) *Indicatif*. Any thing which, in the course of a disease or in what precedes or accompanies it, concurs in pointing out the means to be used for its cure.

IN'DICATING DAYS, *Dies In'dices*, *D. Indicato'rii*, *D. contemplan'tes*. (F) *Jours indicateurs*. Hippocrates and others have thus called the middle day of the septenary; because they imagined, that indications were sometimes given, then, of the crises which would occur in the last day of the septenary.

INDICA'TION, *Indica'tio*, from *in'dico*, 'I show.' *Accusa'tio*, *Dela'tio*, *Endeix'is*, ενδειξις, *Boethemat'icum Semei'on*. The object proposed in the employment of any means, which are had recourse to for the cure of disease. It may, also, be defined—the manifestation afforded by the disease itself of what is proper to be done for its removal.

INDIG'ENOUS, *Indig'enus*. Whatever is native in a country, in opposition to *exotic*; as an *indigenous remedy*, *indigenous disease*, &c.

IN'DIGO, *Indigum*, *Indicus color*, *Pigmen'tum In'dicum*. A dye-stuff, in small, solid masses, of a deep azure blue colour and devoid of smell and taste. It is obtained, by a fermentative process, from the *Indigofera anil*, *I. argentea*, and *I. tinctoria*; and is sometimes used by the apothecary for colouring certain preparations. It has likewise been administered internally of late, in spasmodic diseases, especially in epilepsy. The dose may be at first grains, but it may be elevated to drams.

INDISPOSITION, *Mala disposi'tio*. (F) *Malaise*. A slight functional disturbance, which scarcely bears the name of disease.

IN'DOLENT, *In'dolens*. Exhibiting little or no pain. An epithet, particularly applied to certain tumours.

INDUC'TIO, *Apago'gē*, απαγωγή, from *in-du'cere*, 'to extend upon.' It is used especially for the action of extending a plaster upon linen.

INDURA'TION, *Indura'tio*, *Callos'itas*, *Indurescen'tia*, from *durus*, 'hard.' (F) *Endurcissement*. That hardness, which supervenes, occasionally, in an inflamed part. It is one of the terminations of inflammation, and is owing to a change in the nutrition of

the part. *Induration of the Cellular tissue*, *Indura'tio telæ cellulo'sæ neonato'rum*, *Compact Œde'ma*, *Cat'ochus Infan'tum*, *Indura'tio cellulo'sa*, *Sclere'mia*, *Sclere'mus*, (F) *Endurcissement du tissu cellulaire*, is a disease, which attacks infants a few days after birth, and which Chaussier has proposed to call *Sclérème*, from σκληρός, 'hard.'

INDU'RANS, *Sclerot'icus*. A medicine, which hardens the parts to which it is applied.

INDU'SIUM, *Chitoniscos*, χιτωνισκος. Strictly, 'a shirt,' 'a small tunic;' but some anatomists have so called the amnios.

INER'TIA, *Igna'via*. Sluggishness, inactivity.

Accoucheurs call *Iner'tia of the womb*, (F) *Inertie de la matrice*, the diminution and even total cessation of the contractions of the uterus during labour; as well as the species of languor into which it sometimes falls after the expulsion of the fœtus.

IN'FANCY, *Infantia*, from *in*, 'negation,' and *fari*, 'to speak.' Early childhood, Childhood, *Nepiotes*, *Paidi'a*. (F) *Enfance*. It generally includes the age from birth till the seventh year.

INFANS, *Paidion*, *Nepion*. (F) *Enfant*. An infant; a child; one in infancy.

INFAN'TICIDE, *Infanticid'ium*, *Tecnoc-tonia*, from *infans*, 'a child,' and *cæ'dere*, 'to kill.' The murder of a child newly born, or on the point of being born. It may be perpetrated by the mother, or by some other person; either by *commission*, i. e. in consequence of a direct, voluntary act;—or by *omission* of those cares, which are necessary for the preservation of the new-born.

INFERNAL, *Infernus*; relating to hell. A name applied to a caustic—*Lapis infernalis*—on account of its strong, burning properties.

INFIBULA'TIO, *Infibula'tion*, *Ancterias'mus*; from *fib'ula*, 'a clasp,' (F) *Bouclément*. An operation, formerly practised, which consisted in passing a ring through the prepuce, after having drawn it over the glans;—in order to prevent coition.

The ancients employed infibulation with their gladiators, to preserve all their strength by depriving them of venery. In the women, to preserve their chastity, the ring was passed through the labia majora.

INFILTRA'TION, *Infiltra'tio*, from *fil-tra're*, 'to filter.' The accumulation of a fluid in the cells of any texture, and particularly of the cellular membrane. The fluid effused is ordinarily serous;—sometimes blood or pus, fæces or urine. When infiltration of serum is general, it constitutes *anasarca*; when local, *œdema*.

INFIRMIER (F), from *infirmus*, *Infirmari'us*, νοσοκομος, *Nosoc'omus*, *Cura'tor infirmo'rum*. One employed in an hospital or infirmary, to take care of the sick.

INFIRM'ITY, *Infir'mitas*, *Astheni'a*, *In-*

valetu'do. Any disease, which has become habitual, either owing to its chronic character, or its numerous relapses.

INFLAMMA'TION, *Inflamma'tio*, from *in*, 'within,' and *flamma*, 'flame,' 'fire;' *Phleg'monē*, *Phlogo'sis*, *Phlegma'sia*, *Causo'ma*, *Hyperendosmose* (Dutrochet), *Incendium*, *Hyperhæmato'sis*, *Hyperæ'mia activa*, *Phlebo-plerō'sis ecphrac'tica*. It is so called in consequence of the acute or burning pain, felt in a part affected with it. An irritation in a part of the body occasioned by some stimulus;—owing to which the blood flows into the capillary vessels in greater abundance than natural, and those vessels become over-dilated; whence result pain, redness, heat, tension, and swelling: symptoms, which appear in greater or less severity, according to the structure, vital properties, and functions of the part affected, and its connexion with other parts, as well as according to the constitution of the individual.

The inflammations of the cellular and serous membranes greatly agree;—and those of the mucous and skin: the former being more active, and constituting the *phlegmonous* variety;—the latter, the *erysipelatous*. Inflammation may end by resolution, suppuration, gangrene, adhesion, effusion, or induration. Each of the inflammations of internal organs has received a name according to the organ affected;—as, *gastritis*, *cephalitis*, *enteritis*, *hepatitis*, &c.

Besides the inflammations—essentially morbid, there is an instinctive kind established for the union of parts, which have been divided; whether the union takes place *immediately*, or by the aid of an intermediate body. This is the *adhesive inflammation*. See Adhesion, Callus, Cicatrix.

Broussais considers, that the term *inflammation* should include every local exaltation of the organic movements, which is sufficiently great to disturb the harmony of the functions, and disorganize the texture in which it is situate. He, farther, extends the name *inflammation* to irritations, which do not induce disorganization of the textures, and which had been previously, and are still, called *fevers*.

External inflammation is easily detected by the characters already mentioned:—*internal*, by disturbance of function and pain upon pressure; but the last sign is often not available. Both forms require the removal of all irritation, and the reduction of vascular excitement and nervous irritability: hence, blood-letting—local and general—sedatives, refrigerants, and counter-irritants become valuable remedies in almost all cases of inflammation.

INFLAMMATIUN'CU'LA. A superficial and often insignificant inflammation of the skin, as in many cutaneous affections.—*Most*.

INFLAMMATORY, *Inflammatō'rius*; belonging to inflammation;—as, *inflammatory*

tumour, *inflammatory* fever, &c. The blood is said to be *inflammatory* when cupped or buffy.

INFLUENZA. The Italian for 'Influence,' *Morbus Verveci'nus*, *M. Arietis*, *Cephalal'gia contagio'sa* (epidemics of the 16th and 17th centuries:) (F) *Tac*, *Ladendo*, *Quinte*, *Florion*, *Coqueluche*, *Baraquette*, *Générale*, *Grippe*, *Follette*, *Grenade*, *Coquette*, *Petite Poste*, *Petit Courier*, *Allure*, *Epidemic catarrh*. A severe form of catarrh occurring epidemically, and generally affecting a number of persons in a community. See Catarrh, Epidemic.

Gluge, from his investigations, considers that the following is the chronological order of the return of the influenza:—14th century, 1323, 1326—15th century, 1410, 1411, 1414—16th century, 1510, 1557, 1562, 1574, 1580, and 1593—17th century, 1658, 1669, 1675, 1693—18th century, 1708, 1712, 1729, 1732, 1733, 1742, 1743, 1761, 1762, and 1775—19th century, 1800, 1803, 1831, and 1833.

INFRA-SPINA'TUS, from *infra*, 'beneath,' and *spina*, 'a spine.' Situate beneath the spine of the scapula.—*Infra-Spina'lis*.

FOSSA INFRA-SPINA'TA, (F) *Fosse sous-épineuse*. A large excavation on the posterior surface of the scapula, beneath its spine. It is filled by the

INFRA-SPINA'TUS Muscle, *Grand Scapulo-trochitérien*, *Superscapula'ris inferior*, (Ch.), (F) *Sous-épineux*, which is broad, flat, and triangular. It is attached, by its base, to the three inner quarters of the fossa; and is inserted, by a long tendon, into the middle part of the great tuberosity of the humerus, (*Trochiter*.) It turns the arm outwards, and, when the arm is elevated, carries it backwards.

INFUNDIB'ULUM, a Latin word signifying a *Funnel*:—*Choa'nē*, *Chonos*. (F) *Entonnoir*. A name, given to many parts which, more or less, resemble a funnel. It is particularly appropriated to the following organs:—

1. **THE INFUNDIB'ULUM OF THE BRAIN**, (F) *Pelvis seu Choana*, *seu Cyathus*, *seu Scyphus*, *seu Concha*, *seu Lacu'na*, *seu Embolum*, *seu Aquæduc'tus*, *seu Labrum*, *seu Concav'itas conchula'ris*, *seu Processus orbicula'ris Cer'e-bri*, *Entonnoir du ventricule moyen, du cer-veau*—*Tige pituitaire*, *Tige sus-sphénoïdale*. A depression in the inferior paries of the middle ventricle, above the pituitary gland. It was, anciently, regarded as a canal by which the fluid, collected in the ventricles of the brain, was evacuated and poured into the nasal fossæ.

2. **THE INFUNDIBULA OF THE KIDNEYS**. See Calix.

3. **THE INFUNDIBULUM OF THE ETHMOID BONE**. It is one of the anterior cells of that bone, which is broad and expanded above, and narrow below; opening, above, into the frontal sinus; below, into the anterior part of the middle meatus of the nasal fossæ.

In *Surgery*, infundibula are used to direct steam or vapours; to conduct the actual cautery to certain morbid parts, &c.

INFUNDIBULUM OF THE COCHLEA, *Scyphus Vieussenii*, *S. auditorius*, *Cucullus*, *Cana'lis Scala'rum commu'nis*. This, with the modiolus, forms the nucleus around which the gyri of the cochlea pass. It is an imperfect funnel, the apex of which is common with that of the modiolus; and the base is covered with the apex of the cochlea, termed *Cu'pola*.

INFUSION, *Infusio*, *En'chysis*, from *in-fun'dere*, 'to pour in,' 'to introduce.' A pharmaceutical operation, which consists in pouring a hot or cold fluid upon a substance, whose medical virtues it is desired to extract. *Infusion* is, also, used for the product of this operation.

In *Surgery*, infusion—*Chirur'gia infuso'ria*, *Ars clysmatica nova*—is the act of introducing into the veins, medicinal substances, by aid of an instrument called *Infusor*. This mode of introducing medicines was called the *Ars infuso'ria*.

INFUSUM, *En'chyma*. The product of an infusion.

INFUSUM ANTHEMIDIS, *Infusion of Chamomile*. (*Anthemid. flor.* 3 ij, *aq. fervent.* ℥ ss. Macerate for ten minutes in a covered vessel, and strain. *Ph. L.*) Dose, 3 j to 3 iss.

INFUSUM ARMORACIÆ COMPOSITUM, *Compound Infusion of Horse-radish*. (*Armorac. rad. recent. concis., sinapis sem. cont. sing.* 3 j, *aquæ fervent.* ℥ j. Macerate for two hours, strain, and add *sp. armorac. comp.* 3 j. *Ph. L.*) Dose, 3 j to 3 iij.

INFUSUM AURANTII COMPOSITUM, *Compound Infusion of Orange Peel*. (*Aurant. cort. sicc.* 3 ij, *limon. cort. recent.* 3 j, *caryoph. cont.* 3 ss, *aq. fervent.* ℥ ss. Macerate for 15 minutes, and strain. *Ph. L.*) Dose, 3 iss to 3 ij.

INFUSUM CALUMBÆ, *I. Calumbæ; Infusion of Calumba*. (*Calumb. rad. concis.* 3 ij, *aq. fervent.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 iss to 3 iij.

INFUSUM CARYOPHYLLO'RUM, *Infusion of Cloves*. (*Caryoph. contus.* 3 j, *aq. fervent.* ℥ ss. Macerate for two hours, and strain.) Dose, 3 iss to 3 ij.

INFUSUM CASCARIL'LÆ, *Infusion of Cascarella*. (*Cascarill. cort. cont.* 3 ss, *aq. fervent.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 iss to 3 ij.

INFUSUM CAT'ECHU COMPOSITUM, *Infusum Catechu*, *I. Aca'ciæ Catechu; Infusion of Catechu*. (*Catechu ext.* 3 iiss, *cinnam. cort. cont.* 3 ss, *aq. ferv.* ℥ ss. Macerate for an hour, and strain.) Dose, 3 iss to 3 ij.

INFUSUM CINCHO'NÆ, *I. Cinchonæ lancifolia*, *I. Cinchonæ sine calore; Infusion of Cinchona*. (*Cinch. lancifol. cort. contus.* 3 ss, *aq. fervent.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 j to 3 iij. The Pharmacopœia of the United States has an *Infusum Cincho'næ cum Aquâ Calcis*, and an *Infusum Cincho'næ cum Magne'siâ*.

INFUSUM CUSPA'RIÆ, *Infusion of Cusparia*. (*Cuspar. cort. contus.* 3 ij, *aq. ferv.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 j to 3 iij.

INFUSUM DIGITA'LIS, *I. Digitalis purpureæ; Infusion of Foxglove*. (*Digital. fol. exsicc.* 3 j, *aq. ferv.* ℥ ss. Macerate, and add *sp. cinnam.* 3 ss.) Dose, 3 j.

INFUSUM GENTIA'NÆ COMPOSITUM, *Compound Infusion of Gentian*. (*Gent. rad. concis., aurantii cort. exsicc. sing.* 3 j, *limon. cort. recent.* 3 ij, *aq. ferv.* 3 xij.) Dose, 3 j to 3 ij.

Marsden's Antiscorbutic Drops, an empirical preparation, consist of a solution of corrosive sublimate in an infusion of gentian.

INFUSUM LINI COMPOSITUM, *I. Lini usitatis'simi; Infusion of Linseed*. (*Lini usitat. sem. cont.* 3 j, *glycyrrh. rad. cont.* 3 iv, *aquæ fervent.* ℥ ij. Macerate for four hours, and strain. *Ph. L.*) Dose, a teacupful, *ad libitum*.

INFUSUM MENTHÆ COMPOSITUM, *Compound Infusion of Mint*. (*Fol. menth. sat. sicc.* 3 ij, *aq. fervent. q. s. ut colentur* 3 vj. Macerate for half an hour; and, when cold, strain: then add—*sacch. alb.* 3 ij, *ol. menth. sat. gtt* iij, dissolved in *tinct. card. c.* 3 ss. *Ph. D.*) Dose, 3 j to 3 iij.

INFUSUM QUASSIÆ, *I. Quassiæ excel'sæ; Infusion of Quassia*. (*Quassiæ lign. conc.* 9 j, *aq. ferv.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 j to 3 iv.

INFUSUM RHEI, *Infusion of Rhubarb*. (*Rhei rad. concis.* 3 j, *aq. ferv.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 j to 3 iv.

INFUSUM ROSÆ COMPOSITUM, *I. Rosæ Gallicæ; Infusion of the Rose*. (*Ros. gallic. petal. exsicc.* 3 iv, *aq. fervent.* ℥ iiss, *acid. sulph. d.* 3 iij, *sacch. purif.* 3 iss. Add the water, and afterwards the acid;—macerate for half an hour; strain, and add the sugar.) Dose, 3 iss to ℥ ss.

INFUSUM SENNÆ COMPOSITUM, *I. Cassiæ Sennæ, I. Sennæ simplex; Infusion of Senna*. (*Sennæ fol.* 3 iss, *zingib. rad. con.* 3 j, *aq. ferv.* ℥ j. Macerate for an hour, and strain. *L. D.*) Dose, 3 j to 3 iv.

The *Black Draught*, *Haustus niger*, is usually formed of this infusion. It may be made of *infus. sennæ comp.* 3 v, *aq. cinnam.* 3 j, *mannæ* 3 iv, *magnes. sulph.* 3 vj. Dose, a wineglass.

Selway's Prepared Essence of Senna is a concentrated infusion of the leaves, in combination with an alkali.

INFUSUM SIMAROU'BÆ, *Infusion of Simarouba*. (*Simaroub. cort. cont.* 3 ss, *aq. fervent.* ℥ ss. Macerate for two hours, and strain. *Ph. L.*) Dose, 3 ij.

INFUSUM TABACI, *Infusion of Tobacco*. (*Tabaci fol.* 3 j, *aq. ferv.* ℥ j. Macerate for an hour, and strain. *Ph. L.*)

INFUSUM ULMI, *Infusion of Slip'pery Elm*. This preparation, in the Pharmacopœia of the

United States, is made by infusing one ounce of *slippery elm bark*, in a pint of *boiling water*.

INFUSUM VALERIA'NÆ, *Infusion of Vale'rian*. (*Rad. valerian. in crass. pulv.* 3 ij, *aq. fervent.* 3 vij. Macerate for an hour, and strain. *Ph. D.*) Dose, 3 iss to 3 ij.

INGE'NIUM, (*Morbi.*) The genius of a disease. This word is employed, especially by the French, synonymously with *nature*. They speak, for instance, of *Génie inflammatoire, bilieux, &c.* Some, also, use *génie* in the place of *type* of an intermittent.

INGES'TA. Substances, introduced into the body by the digestive passages; as food, condiments, drinks, &c.

INGLU'VIES, *Aplestia, Victus intemperantia*:—Gluttony, Insatiableness; also, the *Crop* or *Craw* of Birds.

INGRAS'SIAS, (*Apophyses of*) the lesser alæ of the sphenoid bone.

INGUEN, *Bubon, βουβων*, 'the groin,' *Ædæon, αἰδοῖον, Hep'atis emuncto'ria*. (F) *Aine*. The oblique fold or depression, which separates the abdomen from the thigh. It is only, properly speaking, a line that extends from the anterior and superior spinous process of the ilium to the middle part of the horizontal ramus of the pubis.

IN'GUINAL, *Inguina'lis*, from *inguen*, 'the groin.' Belonging or relating to the groin. This epithet has been given to various parts met with in the region of the groin or inguinal region.

The INGUINAL or ABDOM'INAL RING, *An'nulus abdom'inis*, (F) *Anneau inguinal*, is the inferior aperture of the inguinal canal.

The INGUINAL CANAL is a canal, about two inches in length, proceeding obliquely downwards, inwards, and forwards at the lower part of the abdomen; through which passes the spermatic cord, in man; and the round ligament of the uterus, in women. This canal is formed, inferiorly and anteriorly, by the aponeurosis of the greater oblique muscle; posteriorly, by the *fascia transversalis*, which is joined to the preceding aponeurosis, and forms with it a deep channel, into which are received the lesser oblique and transversalis muscles. The inguinal canal has two apertures: the one, the *lower* and *inner*, is called the *inguinal* or *abdominal ring*. It is bounded by two strong tendinous pillars, which fix it—the innermost to the symphysis, the outermost to the spine of the pubis. The *upper and outer aperture* is formed by the *fascia transversalis*. From the edge of this aperture arises a membranous funnel,—a prolongation of the *fascia transversalis*,—which receives the spermatic vessels; forms their proper sheath, and accompanies them as far as the testicle. On its inside lies the epigastric artery. Above it, is the lower edge of the transversalis muscle; and, below, it is bounded by the channel of the greater oblique. By follow-

ing the oblique direction of this canal, and passing, consequently, on the outside of the epigastric artery, the viscera are displaced, so as to constitute internal inguinal hernia.

The INGUINAL ARTERY is that portion of the femoral artery, situate immediately beneath the crural arch in the inguinal region.

INGUINO-CUTA'NEUS. A name, given by Professor Chaussier to the middle ramus of the anterior branch of the first lumbar nerve: because it sends its numerous filaments to the groin, scrotum, and to the skin of the superior part of the thigh.

INHA'LER, MUDGE'S, an apparatus for inhaling the steam of hot water, in affections of the air-passages. It consists of a pewter tankard, provided with a lid, into which a flexible tube is inserted. Through this, the vapour is inhaled.

INHE'RENT, *Inhæ'rens*, that which adheres, or which is joined or united to any thing.

The INHERENT CAUTERY, (F) *Cautère inhérent*, is the actual cautery, left in contact with a part until it is reduced to the state of a deep eschar.

INHUMA'TION, from *in'humo*, 'I put into the ground.' *Inhumatio*. The *sepulture of the dead*. This belongs to the subject of medical police.

INION, *ινιον*. Some of the Greek physicians gave this name to the occiput; others, to the back part of the neck, and the muscles of the occiput. Blanchard says, it is the commencement of the spinal marrow.

INI'TIS, from *ις, gen. ιως*, a fibre. Fibrous inflammation.

INJACULA'TIO, a term, employed by Van Helmont to designate an acute pain of the stomach, with rigidity and immobility of the body.

IN'JECTED, from *injie'ere*, 'to throw into.' The face and other parts are said to be *injected*, when the accumulation of blood in the capillary vessels gives them an evident red colour. A subject or part of a subject is, also, said to be *injected*, when its vessels have been filled, by the anatomist, with an appropriate composition.

INJE'CTION, *Injectio, Eis'bole, εισβολη*; same etymon. The act of introducing, by means of a syringe or other instrument, a liquid into a cavity of the body.

The liquid injected is also called an *injection*. Anatomists use injections for filling the cavities of vessels, in order that they may be rendered more apparent, and their dissection be facilitated. For this purpose, they use syringes of different dimensions, and various materials. The most common injections are made of soot, wax, and turpentine, coloured with lamp-black, vermilion, &c.

There are three kinds chiefly used by anatomists,—the *coarse*, the *fine*, and the *minute*. The following are formulæ for each.

COARSE INJECTION.

No. 1.

Pure yellow wax, oz. xvj.
Bleached rosin, oz. viij.
Turpentine varnish, by measure, oz. vj.

No. 2.

Yellow rosin, lb. ij.
Yellow wax, lb. j.
Turpentine varnish, a sufficient quantity to make the mixture flexible when cold.

No. 3.

Tallow, lb. ij.
White wax, oz. x.
Common oil, oz. vj.
Venice turpentine, oz. iv.
Mix and liquefy over a slow fire or over boiling water.

To make any of these mixtures

Red—add vermilion, oz. iij.
Yellow—King's yellow, oz. iiss.
White—best flake white, oz. vss.
Pale-blue { best flake white, oz. iiiss.
 { fine blue smalt, oz. iiiss.
Dark-blue—blue verditer, oz. xss.
Black—lamp-black, oz. j.
Green { powdered verdigris, oz. ivss
 { best flake white, oz. iss.
 { powdered gamboge, oz. j.

FINE INJECTION.

Brown spirit varnish, oz. iv.
White spirit varnish, oz. iv.
Turpentine varnish, oz. j.

To make this mixture

Red—add vermilion, oz. j.
Yellow—King's yellow, oz. j½.
White—best flake white, oz. ij.
Light-blue { fine blue smalt, oz. iss.
 { best flake white, oz. j½.
Dark-blue—blue verditer, oz. iv.
Black—lamp-black, oz. ss.

MINUTE INJECTION.

Take of transparent size, broken to pieces, or Isinglass, oz. viij.
Water, lb. iss. Dissolve.

To make this mixture

Red—add vermilion, oz. v.
Yellow—King's yellow, oz. iv.
White—best flake white, oz. v.
Blue—fine blue smalt, oz. viij.
Green { powdered verdigris, oz. iij.
 { best flake white, dr. ij.
 { powdered gamboge, dr. j.
Black—lamp-black, oz. j.

COLD INJECTION.

White lead and red lead, each oz. iv; linseed oil, enough to form a thick paste, when they are rubbed well together. Liquefy this paste with turpentine varnish, oz. viij.

The advantage of this mixture is,—that the subject need not be heated.

In order to inject the arteries, the injection must be forced from the great trunks towards their ultimate ramifications. To inject the veins, on the contrary, it is indispensable, on account of their valves, to send the injection from the smallest divisions towards the greater. The lymphatics are usually injected with mercury.

The Surgeon injects, by forcing, with a syringe, liquids, such as emollient, narcotic,

stimulant, and other decoctions or infusions, into different hollow organs, e. g. the rectum, vagina, nasal fossæ, urethra, tunica vaginalis, auditory canal, &c. to fulfil various therapeutical indications.

IN'NATE, (*Diseases*), *Morbi cognati*, *M. congeniti*, (F) *Maladies innées*. Diseases, with which the infant is born. They are not always hereditary, as hereditary diseases are not always innate.

INNERVA'TION, *Innervatio*, from *in*, 'in,' and *nervus*, 'a nerve.' By this term is meant,—the nervous influence, necessary for the maintenance of life and the functions of the various organs;—an influence, of whose character and source we are ignorant. It seems to resemble the galvanic or electric agencies. See Nerves.

INNOMINA'TUM, *ανωνυμον*, from *in* priv. and *nomen*, 'a name,' (F) *Anonyme*. Having no name.

The ARTE'RIA INNOMINATA, *A. brachio-cephalique* (Ch.)—*Arte'ria anonyma*, *Right Subclavian*, (F) *Artère innominée*, is the trunk common to the right primitive carotid and to the subclavian. It arises from the anterior part of the arch of the aorta; ascends obliquely to the right, along the trachea; and, after a course of about an inch in length, divides into two trunks, which go off at right angles. The one is *external*—the *right subclavian proper*; the other *superior*—the *primitive carotid*, of the same side.

CAV'ITAS INNOMINATA. A cavity of the outer ear, between the *helix* and *anthelix*.

The VENÆ INNOMINATÆ. Vieussens has given this name to two or three veins, which arise on the anterior surface and right margin of the heart; and open into the auricle, towards its right margin.

NERVI INNOMINATI *vel* ANONYMI. Some anatomists have thus called the nerves of the 5th pair.

OS INNOMINATUM, *Os Coxen'dicis*, *Os Coxæ*, (F) *Os innominé*, *Os coxal*, *Os anonyme*, &c. A very large, flat bone, which forms the anterior and lateral parietes of the pelvis. It is curved upon itself in two opposite directions. In the first periods of life, it is composed of three portions;—the *ilium*, *ischium*, and *pubis*, which join each other in the acetabulum. It is articulated *before* with its fellow,—*behind*, with the sacrum; and *laterally*, with the femur.

OSSA INNOMINATA MINO'RA,—*Lesser Ossa innominata*. Some anatomists have given this name to the three cuneiform bones of the tarsus.

FORA'MEN INNOMINATUM. A foramen, near the middle of the anterior surface of the pars petrosa of the temporal bone, leading backwards, for the passage of the vidian nerve, reflected from the 2d branch of the 5th to the portio dura of the 7th pair.

INOCULA'TION, *Inoculatio*, *Insi'tio*, from *inocula're*, 'to ingraft;' i. e. from *in*,

'in,' and *oc'ulus*, 'an eye.' Any operation by which small-pox, cow-pox, &c. may be artificially communicated, by introducing the virus of the particular disease into the economy, by means of a puncture or scratch made in the skin.

When the word inoculation is used alone, it usually means that for the small-pox.

INORGAN'IC, *Inorgan'icus*; from *in* priv. and *or'ganum*, 'an organ.' A term, applied to bodies, which have no organs;—such as minerals. At the present day, naturalists admit of but two classes of bodies,—the *organized* and *inorganic*.

Parts of the body, which, like the Epidermis, are devoid of blood-vessels and nerves, have been called *anorganic*.

INQUI'ETUDE, *Inquietu'do*, *Jactita'tio*, from *in* priv. and *qui'es*, 'rest.' Agitation or trouble, caused by indisposition. Restlessness.

INSALIVA'TION, *Insaliva'tio*, the mixture of the food with the saliva, and other secretions of the mouth.

INSALU'BRIOUS, *Insalu'bris*, *Noso'ros*, *Noso'des*. That which is unhealthy,—which injures the health.

INSANITY, *Insa'nia*; from *in* priv., and *sanus*, 'sound.' *Mental aliena'tion*, *Aliena'tio Mentis*, *Arrep'tio*, *Unsound Mind*, *Derange'ment*, *Deranged intellect*, *Cra'ziness*, *Aphros'yne*, *Ecphro'nia*, *Delir'ia*, *Vesa'niæ*, *Delir'ium* (Crichton), *Insipien'tia*, (F) *Folie*, *Égarement d'Ésprit*. This term includes all the varieties of unsound mind,—Mania, Melancholia, and Idiocy, which see.

INSCRIPTIONES TENDIN'Æ MUSCULO'RUM, *Intersectio'nes tendin'æ musculor'um*. The tendinous portions which cross several muscles, and especially the straight muscles of the abdomen.

INSENSIBIL'ITY, *Anæsthe'sia*. Loss or absense of sensibility. It is very common in cerebral affections, and may extend to every part, or be limited to one or more. Some organs are much more sensible than others. The bones, cartilages, ligaments, &c. are insensible in health, but acutely sensible in disease.

INSEN'SIBLE, *Sensibilita'te carens*. That which is devoid of sensibility. This word is applied, also, to phenomena, which cease to be appreciable to the senses. Thus, we say, the pulse becomes *insensible*.

INSERT'ION, *Inser'tio*, *Symph'ysis*, *Eno'sis*, *ενωσις*, from *inse'rere*, 'to ingraft,' (F) *Attache*. The attachment of one part to another. Insertions occur chiefly on bones, cartilages, and fibrous organs; thus, we speak of the insertion of muscular fibres into a tendon or aponeurosis; the insertion of a tendon, aponeurosis, or ligament into a cartilage or bone. The word *insertion* has likewise been used, by pathologists, for the act of inoculating or introducing a virus into the body.

INSES'SIO, from *insidere*, 'to sit in.' This term is, sometimes, applied to a vapour bath, the person being seated in a perforated chair, beneath which a vessel, filled with hot water or the hot decoction of some plant, is placed.

INSIDEN'TIA, *Epis'tasis*, *επιστασις*. Any thing which swims on, or in, the urine. It is opposed to the *Hypos'tasis*, *υποστασις*, or *subsidentia*.

INSOLA'TION, *Insola'tio*, *Aprica'tio*, *Helio'sis*, *Siriasis*. Exposure to the sun. Exposure of a patient to the rays of the sun is, sometimes, had recourse to, with the view of rousing the vital forces, when languishing; or of producing irritation of the skin. It is occasionally used in the same sense as *coup de soleil*.

In *pharmacy*, *insolation* means the drying of chemical and pharmaceutical substances.

INSOM'NIA, *Insom'nium*, *Insom'nitas*, *Sahara*, *Zaara*, *Pervigil'ium*, *Agryp'nia*, *αγρυπνια*, *Ahyp'nia*, *αυπνια*, *Anyp'nia*, *Typhomania*, *Sleeplessness*, *Vigilance*; from *in* priv. and *somnus*, 'sleep,' 'absence of sleep.' This may exist alone and constitute a true disease; or it may be connected with another affection. It is an unequivocal sign of suffering in some organ; even when the patient experiences no pain.

INSPIRA'TION, *Inspira'tio*, *Empneumato'sis*, *Eisp'noe*, *Adspira'tio*, *Aspira'tio*, from *in*, 'into,' and *spiro*, 'I breathe.' Action by which the air penetrates into the interior of the lungs. A movement opposed to that of expiration.

As regards the average quantity of air received into the lungs at each inspiration, there is much discrepancy amongst observers. The following table sufficiently exhibits this.

	Cubic inches at each inspiration.
Reil,	42 to 100
Menzies,	
Sauvages,	
Hales,	
Haller,	
Ellis,	40
Sprengel,	
Sommering,	
Thomson,	
Bostock,	
Jurin,	35 to 38
Fontana,	35
Richerand,	30 to 40
Dalton,	30
Herholdt,	20 to 29
Jurine,	20
Allen and Pepys,	16½
J. Borelli,	15 to 40
Goodwyn,	14
Sir H. Davy,	13 to 17
Abernethy and Mojon,	12
Keutsch,	6 to 12

INSPIRATION OF VENOUS BLOOD. By this is meant the aspiration of blood towards the heart, occasioned by the approach to a vacu-

um produced by the dilatation of the thorax during inspiration.

IN'SPIRATORY. Same etymon. *Inspirationi inser'viens.* (F) *Inspirateur.* A name given to muscles, which, by their contraction, augment the size of the chest and thus produce inspiration. The diaphragm and intercostal muscles are the chief agents of inspiration. In cases, where deep inspirations are necessary, the action of these muscles is aided by the contraction of the pectoralis major and pectoralis minor, subclavius, serratus major anticus, scaleni, serratus posticus superior, &c. Most of these muscles become inspiratory, by taking their fixed point at the part which they ordinarily move, and elevating the ribs.

INSTEP, (F) *Coude-pied.* The projection at the upper part of the foot, near its articulation with the leg—the *metatarsus*, (q. v.)

INSTILLA'TION, *Enstalax'is, Instilla'tio,* from *in*, 'into,' and *stilla*, 'a drop.' The act of pouring a liquid drop by drop.

INSTINCT, *Instinctus, Bru'tia.* The action of the living principle, whenever manifestly directing its operations to the health, preservation, or reproduction of a living frame or any part of such frame. The law of instinct is, consequently, the law of the living principle, and instinctive actions are the actions of the living principle. It is natural. Reason is acquired.

INSUFFLA'TION, *Insuffla'tio.* The act of blowing a gas or vapour into some cavity of the body; as when tobacco smoke is injected into the rectum; or when air is blown into the mouths of new-born children to excite the respiratory functions.

INTEG'UMENT, *Integumen'tum, Tegumen'tum, Teg'umen, Involu'crum, seu velamen'tum corporis commu'ne,* from *teg'ere*, 'to cover.' (F) *Tegument.* Any thing, which serves to cover, to envelope. The skin, including the cuticle, rete mucosum, and cutis vera, is the *common integument*, or *tegument* of the body.

INTELLECT, *Intellectus, Nous, Noe'sis, Syn'esis,* from *intelli'gere*, 'to understand,' 'conceive,' 'know.' (F) *Entendement, Intelligence.* The aggregate of the *intellectual faculties*—perception, formation of ideas, memory, and judgment.

INTEM'PERANCE, *Intemperan'tia; Acrasia, Acola'sia, Ples'mone, Amet'ria, Aplestia,* from *in*, 'negation,' and *tempera're*, 'to temper.' Immoderate use of food and drink, especially the latter;—a fruitful source of disease.

INTEMPE'RIES. Same etymon. *Dyscra'sia.* Derangement in the constitution of the atmosphere and of the seasons; bad constitution; derangement, or disorder in the humours of the body.

INTENTION, *Inten'tio, Propos'itum.* The object, which one proposes.

In surgery, a wound is said to heal *by the*

first intention, when cicatrization occurs without suppuration; union by *the second intention* being that, which does not occur until the surfaces have suppured. To obtain union by the first intention, the edges of a recent wound must be brought in apposition and kept together by means of adhesive plasters and a proper bandage. Delpech has substituted, for those expressions, *Réunion primitive*, and *Réunion secondaire*.

INTERARTIC'ULAR, *Interarticularis.* Parts, situate between the articulations, are so called; as *interarticular* cartilages, *interarticular* ligaments, &c.

INTERCADENCE, *Intercaden'tia, Interciden'tia.* Disorder of the arterial pulsations, so that, every now and then, a supernumerary pulsation occurs. The pulse, in such case, is also said to be *intercurrent*.

INTERCAL'ARY, *Intercala'ris;* from *intercala're*, 'to insert,' *Embolimos, εμβολιμος, Interpolatus, Provocato'rius.* The days, which occur between those that are critical. The term has, also, been applied to the days of apyrexia in intermittent fevers.

INTERCEP'TIO. A bandage, by the aid of which the ancients proposed to arrest the progress of the material cause of gout and rheumatism; and which consisted in covering the affected limbs with carded wool; surrounding them, afterwards, with broad bandages, applied from the fingers to the axilla or from the toes to the groin.

INTERCLAVIC'ULAR, *Interclavicularis.* That which is placed between the clavicles.

The **INTERCLAVICULAR LIGA'MENT** is a fibrous bundle; placed transversely above the extremity of the sternum; between the heads of the two clavicles. This ligament is flat. Its fibres, which are always longer above than below, are separated by small apertures, which are traversed by vessels. It prevents the separation of the two clavicles in the forced depression of the shoulder.

INTERCOS'TAL, *Intercosta'lis, Mesopleu'rios.* That which is situate between the ribs. (F) *Sous-costaux.*

The **INTERCOS'TAL MUSCLES** are distinguished into *internal*,—*Inter-plévrocostaux of Dumas*,—and *external*. The former are inserted into the inner lip, the latter into the outer lip of the edge of the ribs. The fibres of the *external intercostals* are directed obliquely downwards and forwards; and those of the *internal* downwards and backwards. Both are inspiratory or expiratory muscles, according as they take their point of support on the upper or lower rib. Some small, fleshy fibres, seen occasionally at the inner surface of the thorax, descending obliquely from one rib to another, have been called *Infracostales*.

The **INTERCOSTAL SPACES** are the intervals which separate one rib from that immediately above or below it.

The INTERCOSTAL ARTERIES vary in number. There is constantly, however, a *superior*, *Arteria Intercostalis superior* vel *Intercostalis Subclavia*, which is given off from the posterior part of the subclavian, and which sends branches to the two or three first intercostal spaces; and, generally, eight or nine *inferior* or *aortic intercostals*. These arise from the lateral and posterior parts of the pectoral aorta, and ascend obliquely in front of the vertebral column, to gain the intercostal spaces, where they divide into a *dorsal* branch and an *intercostal*, properly so called.

The INTERCOSTAL VEINS are distinguished like the arteries. The *right superior intercostal vein* is often wanting. When it exists, it opens into the back part of the subclavian. The same vein of the left side is very large. It communicates with the demi-azygos, receives the left bronchial vein, and opens into the corresponding subclavian. The *right inferior intercostal veins* open into the vena azygos; and those of the left into the demi-azygos.

The INTERCOSTAL NERVES, *Branches sous-costales* (Ch.), *Costal* or *Dorsal nerves*, proceed from the anterior branches of the dorsal nerves. They are 12 in number; and are distributed, especially, to the muscles of the parietes of the chest and abdomen.

INTERCURREN'TES. Diseases are so called, which supervene at different seasons of the year; or which cannot be considered as belonging to any particular season.—Sydenham.

INTERDENTIUM, from *inter*, 'between,' and *dens*, 'a tooth.' The interval between teeth of the same order.—Linden.

INTERDIGITIUM, from *inter*, 'between,' and *dig'itus*, 'a finger.' The corns or warts, which grow between the fingers and toes,—especially between the latter.—Pliny.

INTERMAXILLARY, *Intermaxilla'ris*. That which is situate between the intermaxillary bones.

THE INTERMAXILLARY BONE, *inci'sive, palatine*, or *labial bone*, is a bony portion, wedged in between the two superior maxillary bones, which supports the upper incisors. This bone is found in the mammalia; and, also, in the human foetus.

INTERMISSION, *Intermis'sio, Dialeip'sis*, from *inter*, 'between,' and *mit'tere*, 'to put or send.' (F) *Intermittence*. The interval, which occurs between two paroxysms of an intermittent or other disease; during which the patient is almost in his natural state. There is said to be *intermission* of the pulse, when, in a given number of pulsations, one or more may be wanting.

INTERMITTENT, *Intermittens*. Same etymon. That which has intermissions.

INTERMITTENT FEVER, *Febris intermittens, Dialeip'ya, Intermittens, An'etus, Ague*.

(F) *Fièvre intermittente, F. d'Accès*, is a fever chiefly produced by marshy miasm; and consisting of many paroxysms;—there being a complete state of apyrexia in the intervals. The chief types are the *Quotidian, Tertian, and Quartan*.

The symptoms of intermittents are those of a decided and completely marked *cold stage*; attended with paleness; collapse; impaired sensibility; and coldness, more or less diffused, followed by general rigors. After this occurs the *hot stage*; the heat returning partially and irregularly, and, at length, becoming universal, and much above the standard of health. The pulse becomes hard and strong. Tongue white. Urine high-coloured. Thirst considerable. At length, the *sweating stage* makes its appearance; the moisture usually beginning on the forehead, face, and neck, and soon extending universally; the heat abating; thirst ceasing; the urine throwing down a sediment, and the functions being gradually restored to their wonted state.

The tertian type is the most common, and the quartan the most severe. The quotidian more readily changes into a remittent and continued fever. The quartan has, generally, the longest cold stage; the tertian the longest hot. The *exciting causes* are marsh miasmata. Ague, also, occurs in districts where there are no marshy emanations. Such districts are, generally, of a volcanic nature; farther we know not. When the disease has once attacked an individual it is apt to recur.

The *prognosis* is, in general, favourable, as far as regards life; but long protracted intermittents are apt to induce visceral obstructions and engorgements, which may end in dropsy. In some countries, however, the disease is of a very pernicious character.

The indications of treatment are, 1. To abate the violence of the paroxysm; and 2. To prevent its return. The first indication requires the adoption of the general principles and remedies required in ordinary fever. The *second* is the most important. The period of apyrexia is that for action. The means for fulfilling this indication are:—the use of emetics, purgatives, cinchona, quinine, &c., arsenic, and forcible impressions made on the mind of the patient.

INTERMUSCULAR, *Intermuscula'ris*. That which is placed between muscles.

The INTERMUSCULAR APONEUROSES are aponeurotic laminae or septa, situate between muscles to which they often give attachment.

INTERNAL, *Inner, Inter'nus*. That which is placed on the inside. This epithet is given to parts, that look towards an imaginary central plane, which divides the body into two equal and symmetrical portions; as well as to those, which correspond with a cavity. Thus, we say the *inner surface of the arm or thigh—the inner surface of the skull, &c.*

INTERNAL DISEASES, *Morbi interni* are

those, which occupy the inner parts of the body. Their investigation belongs to the physician; *external* diseases falling under the management of the surgeon.

INTEROSSEOUS, *Interos'seus*. That which is situate between the bones; from *inter*, 'between,' and *os*, 'a bone.'

INTEROSSEOUS MUSCLES. These occupy the spaces between the bones of the metacarpus and metatarsus; and, consequently, belong,—some to the hand, others to the foot.

INTEROSSEUS MANUS, (F) *Muscle inter-os-seux de la main—Métacarpo-phalangien-latéral sus-palmaire et métacarpo-phalangien-latéral*, (Ch.) These muscles are seven in number; two for each of the three middle fingers, and one for the little finger. Four are situate on the back of the hand, and three only in the palm. They are inserted into the metacarpal bones, and send a tendon to the tendon of the extensor communis. According to their office, they are, to each finger, an *adductor* and an *abductor*. The *index* has a dorsal abductor and a palmar one. The *middle finger* has two dorsal muscles for adductor and abductor; the *ring finger* has a dorsal adductor and a palmar abductor; and the *little finger* has only one interosseous abductor, which is palmar. These muscles produce abduction and adduction of the fingers, which they can also extend, owing to their connexion with the extensor tendons.

INTEROSSEI PEDIS, *Métatarso-phalangien-latéral*, (Ch.) The number, arrangement, shape, and uses of these are the same as in the case of the preceding muscles. Four are *dorsal*, and three *plantar*; six belong to the three middle toes and one to the little toe. The great toe is devoid of them. As in the hand, they are distinguished, in each toe, into abductor and adductor.

INTEROSSEOUS LIG'AMENTS. Ligaments seated between certain bones, which they unite; such are the ligaments between the radius and ulna, and between the tibia and fibula.

INTEROSSEOUS AR'TERIES OF THE FOREARM AND HAND. Of these there are several. 1. The *common interosseous artery* arises from the posterior part of the ulnar, a little below the bicipital tuberosity of the radius; passes backwards and divides into two branches: the one called *anterior interosseous* descends vertically, anterior to the interosseous ligament; the other, called *posterior interosseous*, passes above that ligament, appears at its posterior part and divides into two great branches,—the *posterior recurrent radial* and the *posterior interosseous*, properly so called. In the hand, are—1. The *dorsal metacarpal interosseous arteries*, given off by the *dorsalis carpi*, a division of the radial artery. 2. The *Palmar interosseous arteries*, which arise from the convexity of the deep palmar arch, and give off the *middle interosseous arteries*. 3. The *dorsal interosseous of the index*, proceeding directly from the radial artery. In the

foot, are distinguished—1. The *dorsal interosseous arteries*; three in number, which arise from the artery of the metatarsus, a branch of the *dorsalis tarsi*. 2. The *plantar interosseous arteries*, which are, also, three in number, and arise from the plantar arch.

The **INTEROSSEOUS VEINS** have the same arrangement as the arteries.

The **INTEROSSEOUS NERVE** is a branch, given off by the median nerve, which descends before the interosseous ligament, accompanying the artery of the same name.

INTERPELLA'TUS (*Morbus*), from *interpel'lo*, 'I interrupt.' A term, by which Paracelsus designated those diseases, whose progress is unequal, and paroxysms irregular.

INTERSCAP'ULAR, *Interscapula'ris*. That which is between the shoulders; as the *interscapular region*.

INTERSCAPU'LIUM. The spine of the scapula.

INTERSEC'TION, *Diac'opē*. The point where two lines meet and cut each other. The name, *aponeurotic intersection*, is given to fibrous bands, which certain muscles present in their length, and by which they seem interrupted. Aponeurotic intersections are found in the recti muscles of the abdomen; in the semi-membranosus, complexus, sternothyroideus, &c.

INTERSEPTUM, from *inter*, 'between,' and *septum*, 'a partition,' *Cion*, *σιων*. The uvula; also the septum narium.

INTERSPINA'LES COLLI, *Spina'les Colli mino'res*, *Spina'ti*, (F) *Interépineux-cervicaux*, *Intercervicaux*, (Ch.) These are twelve in number, and occupy, in two parallel rows, the intervals between the spinous processes of the cervical vertebræ, from that of the atlas and vertebra dentata to that between the last cervical and first dorsal vertebræ. They are flat, thin, and quadrilateral. These muscles contribute to the extension of the neck and to throwing the head backwards.

INTERSPINALES DORSI ET LUMBO'RUM; portions of the *Transversaire-épineux* of Boyer and the *sacro-spinal* of Chaussier. These muscles are of two kinds. The one (*Muscle grand épineux du dos*, of Winslow) representing fleshy bundles of different lengths, applied upon the lateral surfaces of the spinous processes, from the third dorsal vertebra to the second lumbar. The others (*Muscle petit épineux du dos*, Winslow) are covered by the preceding. They are situate on each side of the interspinal ligament, in the form of small, short, flat bundles, which pass from one spinous process to the second, third, or fourth above it. These muscles aid in extending the vertebral column; and incline it a little to one side, when they act on one side only.

INTERSPI'NAL LIG'AMENT, *Membra'na interspina'lis*, (F) *Ligament interépineux*. These occupy the intervals between the spinous

processes in the back and loins. In the neck, they are replaced by the muscles of the same name. They prevent the too great flexion of the spine, and keep the spinous processes *in situ*.

INTERSTICE, *Interstitium*, from *inter*, 'between,' and *sto*, 'I stand,' *Diastéma*, *Intervalum*. Anatomists have given this name to the intervals between organs. The *il'iac crest*—*crista ilii*, for example, has two *lips* and an interstice between them, which affords attachment to the lesser oblique muscle of the abdomen.

INTER-TRANSVERSA'LIS, *Intertransversa'rius*. That which is placed between the transverse processes of the vertebræ.

The INTERTRANSVERSALES COLLI, (F) *Intertransversaires cervicaux*, *Intertrachéliens* (Ch.) These are small, muscular bundles; quadrilateral; thin and flat; situate, in pairs, in the intervals between the transverse processes of the neck, except between the first and second, where there is only one. They are distinguished into *anterior* and *posterior*. The former are six in number; the latter five. These muscles bring the transverse processes of the neck nearer each other, and contribute to the lateral flexion of the neck.

The INTERTRANSVERSALES LUMBO'RUM, *Musculi intertransversi lumbo'rum*, (F) *Intertransversaires des lombes*. These are almost entirely fleshy, and ten in number; five on each side. They are similar to the preceding in general arrangement; except that they are more marked, and not placed in two rows. Each intertransverse space contains only one. They are quadrilateral, and flat. The first occupies the space between the transverse processes of the first lumbar and last dorsal vertebra; and the last is between that of the fourth and fifth lumbar vertebræ. These muscles incline the lumbar region laterally; and straighten it when inclined to one side.

INTERVERTEBRAL, *Intervertebra'lis*. That which is situate between the vertebræ.

The INTERVERTEBRAL CAR'TILAGES, *Intervertebral fibro-cartilages*—*Ligamenta intervertebra'lia*. These organs are of a fibro-cartilaginous nature; sections of a cylinder; flexible; whitish; resisting; and situate between the bodies of the vertebræ,—from the space between the second and third as far as that between the last vertebra and sacrum. Their form is accommodated to that of the vertebræ, with which they are in connexion; so that, in the neck and loins, they are oval, whilst in the dorsal region they are nearly circular.

INTES'TINE, *Intesti'num*, from *intus*, 'within,' *En'teron*, *Chorda*, *Gut*, *Nedyia*, *Pan'tices* (pl.), (F) *Intestin*, *Boyau*. A musculo-membranous canal, variously convoluted, which extends from the stomach to the anus, and is situate in the abdominal cavity; the

greater part of which it fills. In man, its length is six or eight times that of the body. It is divided into two principal portions, called *small intestine* and *large intestine*.

The former, (F) *Intestin grêle*, *Intestinum tenuë*, *I. gracilë*, constituting nearly four-fifths of the whole length, begins at the stomach and terminates in the right iliac region. It is divided into *duodenum*, *jejunum*, and *ileum*. Some anatomists give the name *small intestine* to the two latter only; which are kept in place by the mesentery, and form a large *paquet*, occupying the umbilical and hypogastric regions, a part of the flanks, of the iliac regions, and of the cavity of the pelvis. It is composed of, 1. A serous membrane, which is peritoneal. 2. Of a muscular coat, whose fibres are very pale, and are placed, in part, longitudinally; but the greater part transversely. 3. Of a whitish, mucous membrane; villous, and forming folds or valves—*valvulæ conniventes*—at its inner surface, and furnished with a considerable number of mucous follicles, called *glands* of Peyer. The arteries of the small intestine proceed from the superior mesenteric; its veins open into the vena porta. Its nerves proceed from the superior mesenteric plexus.

The great intestine, *Intestinum crassum*, (F) *Gros intestin*, *Megaloca'lia*, forms a sequence to the small. It is much shorter, and is solidly attached in the regions of the abdomen which it occupies. It begins in the right iliac region; ascends along the right flank; till, beneath the liver, it crosses the upper part of the abdomen, descends into the left iliac fossa and plunges into the pelvic cavity, to gain the anus. The great intestine is usually divided into three portions,—the *cæcum*, *colon*, and *rectum*. It receives its arteries from the superior and inferior mesenterics. Its veins open into the vena porta. Its nerves are furnished by the mesenteric plexuses. Its lymphatic vessels, which are much less numerous than those of the small intestine, pass into the ganglions or glands seated between the different reflections of the peritoneum, which fix it to the abdominal parietes.

The use of the intestines is;—in the *upper* part, to effect the chylication of the food and the absorption of the chyle;—in the *lower*, to serve as a reservoir, where the excrementitious portion of the food collects; and, also, as an excretory duct, which effects its expulsion.

INTES'TINAL, *Intestina'lis*. That which belongs to the intestines,—as *intestinal canal*, &c. Bordeu uses the term *Pouls intestinal* for a pulse, which he conceived to announce an approaching crisis by the intestines.

INTRIN'SIC, *Intrin'secus*; from *intra*, 'within,' and *secus*, 'towards.' Applied to the internal muscles of certain organs; as those of the ear, tongue, and larynx. Linnæus gave the name *Intrinseci* to internal diseases.

INTUMES'CENCE, *Intumescen'tia*, *Dionco'sis*, from *intumes'cere*, 'to swell.' Augmentation of size in a part or in the whole body. Sauvages uses the word *Intumescen'tiæ* for an order of diseases, in which he comprehends polysarcia, pneumatosis, anasarca, œdema, physconia, and pregnancy.

INTUSSUSCEP'TIO, from *intus*, 'within,' and *suscip'io*, 'I receive,' *Introsuscep'tio*.

In *physiology*;—the mode of increase, peculiar to organized bodies. In *pathology*, like *invagina'tio* and *Parisago'gê*, it means the introduction of one part of the intestinal canal into another, which serves it as a sort of *vagina* or sheath. Generally, it is the upper part of the small intestine, which is received into the lower, when the intussusception is said to be *progres'sive*. At times, however, it is *ret'rograde*.

As the disease cannot be positively detected by the symptoms; it must be treated upon general principles. At times, the invaginated portion has separated and been voided per anum:—the patient recovering. The disease is, however, of a very dangerous character.

IN'ULA DYSENTER'ICA. The systematic name of the *Lesser Inula*, *Conyza me'dia*, *Ar'nica Sueden'sis*, *Ar'nica spu'ria*, *Cuni'la mus'cula*, *Conyza*, *Cunila'go*, (F) *Aunée antidysentérique*, *Herbe de Saint Roch*. *Nat. Ord. Compositæ*. This plant was, once, considered to possess great antidysenteric virtues. The whole plant is acrid and somewhat aromatic.

INULA HELE'NIUM. The systematic name of the *El'ecampane*—*En'ula campa'na*, *Hele'nium*, *Common Inula*, (F) *Aunée*. The root was formerly in high esteem in dyspepsia, cachexia, pulmonary affections, &c. It is now scarcely used.

INUNC'TION, *Inunc'tio*, *Illit'io*, *Chrisis*, *Catach'risis*, *Diach'risis*, *Epich'risis*, *Uunctio*. A liniment. Also, the act of rubbing in. (F) *Onction*.

INVISCA'TIO OCU'LI. A morbid adhesion of the eyelids to each other, or to the globe of the eye.

IODINE, from *ἰώδης*, *viola'ceus*, 'of a violet colour.' *Iodi'na*, *Io'dium*, so called from the violet vapour it exhales when volatilized. (F) *Iode*. It is contained in the mother waters of certain fuci, and is obtained by pouring an excess of concentrated sulphuric acid on the water, obtained by burning different fuci, lixiviating the ashes and concentrating the liquor. The mixture is placed in a retort to which a receiver is attached, and is boiled. The iodine passes over and is condensed. It is solid, in the form of plates; of a bluish gray colour, of a metallic brightness, and smell similar to that of the chloride of sulphur. Its s. g. is 4.946. When heated, it becomes volatilized and affords the vapour, which charac-

terizes it. With oxygen it forms the *Iodic acid*, and with hydrogen, the *Hydriodic*.

The tincture of iodine and the hydriodates have been employed, with great success, in the treatment of goitre and of some scrophulous affections. It must be administered in a very small dose and for a long period. It is said to be apt, however, to induce cholera morbus,—signs of great nervous irritability and emaciation of the mammæ. When these symptoms, collectively termed *Iodism*, or *Iodosis*, are urgent, the dose may be diminished, or it may be wholly discontinued, and afterwards resumed.

Various preparations of Iodine are employed in medicine; as, *The Iodide of Iron*, (*Ferri Iodidum*, *F. Ioduretum*, (F) *Iodure de fer*), which is sorbefacient and tonic, in the dose of 3 or 4 grains: the *Proto-Iodide of Mercury*, (*Hydrar'gyri Proto-Iodure'tum*, *Hydrargyrum Iodatun flavum*, *H. Iodidula'tum*, *H. Iodatun*, *Iodi'dum Hydrargyro'sum*, *Hydrargyri Proto-Iodi'dum*), sorbefacient and antisyphilitic in the dose of 1-12th of a grain; the *Deuto-Iodide of Mercury*, (*Hydrar'gyri Deuto-Iodure'tum*, *Hydrargyrum Ioda'tum rubrum*, *H. Perioda'tum*, *Iodi'dum Hydrargyricum*, *Binioidide of Mercury*), with similar virtues, in the dose of 1-16th of a grain; the *Iodide of Starch*, (*Iodidum vel Iodure'tum Am'yli*, *Am'yllum Ioda'tum*), a weaker preparation than the usual forms of Iodine; the *Iodide of Quinine*, (*Iodidum Quininae*), used in scrophulous cases, where iodine and tonics are indicated; the *Iodide of Lead*, (*Plumbi Iodi'dum*, *P. Iodure'tum*), used externally in strumous swellings; the *Iodide of Potassium* (in solution, *Hydriodate of Potassa*), See *Potassæ Hydriodas*;—the *Iodo-hydrargyrate of Potassium*, (*Potassii Iodo-hydrargyras*), made by adding 8 grains of Iodide of Potassium, dissolved in 10 or 15 minims of water, to 11 grains of the deuto-iodide of Mercury;—the properties of which are like those of the Iodides of Mercury; the *Iodide of Sulphur*, (*Iodure'tum Sulph'uris*, *Sulph'uris Iodi'dum*, *Sulphur Ioda'tum*), used externally in cutaneous diseases, (gr. x. to cerate 3 j.) and the *Iodide of Zinc*, (*Zinci Iodidum*, *Z. Ioda'tum*), externally, (3 i to Lard 3 i.)

IONIDIUM MARCUCCI, *Cinchunchulli*—a South American plant. *Sex. Syst.* Pentandria Monogynia. *Nat. Ord.* Violariæ: said to be extremely efficacious in the Mal de San Lazaro of Columbia.

ION'THUS, *Varus*, *Violet Eruption*, from *ἰών*, 'the violet,' and *αῖθος*, 'a flower,' or *οὐθός*, 'foulness.' An unsuppurative, tubercular tumour; stationary; chiefly on the face. A genus in the class *Hæmatica*, order *Phlogotica* of Good.

IOTACIS'MUS, from the Greek letter *Iota*. Defective articulation,—the patient not being able to pronounce the palatals *j* and *g* soft.

IPECACUAN'HA. The pharmacopœial

name of the *Cephæ'lis ipecacuan'ha*, or *Calli-coc'ca ipecacuan'ha*, *Cagosanga*, *Ipecacuan'ha* root, *Ipecacuan'hæ radix*, *Radix Brazili-en'sis*. Nat. Ord. Cinchonaceæ. It is, also, obtained from the *Psycho'tria emet'ica* of Peru.

The odour of the root is faint and peculiar; taste bitter, subacid and mucilaginous; both water and alcohol extract its virtues: which depend on a peculiar principle, called *Emetine*. It is emetic in large doses; sudorific in smaller.

Dose, as an emetic, gr. xx to xxx, alone, or united with tartarized antimony, gr. i or ij.

The WHITE IPECACUAN'HA is obtained from different species of *Richardsonia*, and *Ionidium*. The *Vio'la ipecacuan'ha* also affords it. It is weaker than the gray.

IRIANCIS'TRON, *Iridancist'ron*, from *ἰρις*, and *αγκιστρων*, 'a hook.' A hooked instrument, used by Schlagintweit in the formation of an artificial pupil.

IRIS, *ἰρις*, *Grammê*, so called from its resembling the rainbow in variety of colours. A membrane, stretched vertically at the anterior part of the eye, in the midst of the aqueous humour, in which it forms a kind of circular, flat partition, separating the anterior from the posterior chamber. It is perforated by a circular opening, called the *pupil*, which is constantly varying in its dimensions, owing to the varying contractions of the fibres of the iris. Its posterior surface has been called *uvea*, from the thick, black varnish, which covers it. The greater circumference of the iris is adherent to the ciliary processes and circle.

It has an external plane of radiated fibres and an internal one of circular fibres: which serve—the one to dilate; the other to contract the aperture of the pupil.

The iris receives the irian nerves. Its arteries are furnished by the long ciliary arteries, which form two circles by their anastomoses; the one very broad, near the great circumference; the other, smaller, and seated around the circumference of the pupil. The veins of the iris empty themselves into the *Vasa vorticosa* and into the long ciliary veins.

The use of the iris seems to be:—to regulate, by its dilatation or contraction, the quantity of luminous rays, necessary for distinct vision. The different colours of the iris occasion the variety in the colours of the human eye.

IRIS FLORENTI'NA, *Flo'rentine iris* or *orris*. (F) *Iris de Florence*. The root of this plant is extremely acrid in its recent state; and, when chewed, excites a pungent heat in the mouth, that continues for several hours. When dried, the acrimony is lost, or nearly so, and the smell is very agreeable. It is indebted to its agreeable flavour for its retention

in the pharmacopœias, although it is ranked as an expectorant.

IRIS FÆTIDIS'SIMA, *Spath'ula fæt'ida*, *Xyris*, —the *stinking iris*. (F) *Iris puant*, *Glayeul puant*. The root has been held antispasmodic and narcotic.

IRIS GERMAN'ICA. The systematic name of the *Flower-de-Luce*, *Iris nostras*, *Aier'sa*, *Iris vulga'ris*, *Common iris*, or *orris*, *Gladiolus cæru'leus*, (F) *Iris commun*, *Flambe*. The fresh roots have a disagreeable smell and an acrid, nauseous taste. They are powerfully cathartic, and are given in dropsies, where such remedies are indicated.

IRIS PSEUDAC'ORUS. The systematic name of the *Yellow water-flag*, *Iris palus'tris*, *Gladiolus lu'teus*, *Ac'orus vulga'ris*, *Ac'orus adulteri'nus*, *Pseudac'orus*, *Bu'tomon*, *Acorus palus'tris*. (F) *Iris des marais*, *Faux acore*, *Flambe bâtard*, *Acore bâtard*. The root has an acrid, styptic taste. It is an er-rhine, sialogogue, and acrid astringent. The expressed juice is diuretic, and said to be a useful application to serpiginous and other cutaneous affections. Rubbed on the gums, or chewed, it is said to cure tooth-ache.

IRIS VERSIC'OLOR, *Blue flag*. The root of this is an active cathartic; and has been much used, as such, by the American Indians. It is reputed to be diuretic.

IRI'TIS, *Inflammation of the iris*. The chief symptoms are;—change in the colour of the iris; fibres less movable; tooth-like processes shooting into the pupil; pupil irregularly contracted; with the ordinary signs of inflammation of the eye. If the inflammation does not yield, suppuration takes place; and, although the matter may be absorbed, the iris remains immovable. It is often caused by syphilis.

The general principles of treatment, are, to deplete largely and exhibit mercury freely; along with attention to other means advisable in ophthalmia. The free use of the quinine is sometimes serviceable.

IRREDU'CIBLE, (F) *Irréductible*. An epithet given to fractures, luxations, herniæ, &c. when they cannot be reduced.

IRREG'ULAR, *Irregula'ris*, *Anom'alus*, *ἀνωμαλος*, from *in*, 'privative,' and *reg'ula*, 'a rule.' A term, chiefly applied to the types of disease; and, also, to the pulse, when its beats are separated by unequal intervals.

IRRITABIL'ITY, *Irritabil'itas*, from *ir-ri'to*, 'I provoke.' *Vis irritabilita'tis*, *Vis Vitæ*, *Vis in'sita* of Haller, *Vis vita'lis* of Gorter, *Oscilla'tio* of Boerhaave, *Tonic power* of Stahl, *Inherent power*, *Contractil'ity*, *Excitability*, *Incitability*, &c. A power, possessed by all living organized bodies, of being acted upon by certain stimuli and of moving responsive to such stimulation. It is the ultimate vital property.

IR'RITABLE, *irritab'ilis*. That which is endowed with irritability. Every living or-

ganized tissue is irritable: that is, capable of feeling an appropriate stimulus, and of moving responsive to such stimulus. I. is often used in the same sense as *impressible*, as when we speak of an irritable person, or habit, or temper. This last condition has been variously termed—*Debilitas nervosa*, *D. erethica*, *Hypercine'sia nervosa*, *Neurosthenia*, *Neurosthenia*, *Sensibilitas anomala*, *S. morbo'sa*, *S. aucta*.

IRRITANT, *Irritans*. That which causes irritation or pain, heat and tension; either mechanically, as punctures, acupuncture, or scarification; chemically, as the alkalies, acids, &c.; or in a specific manner, as cantharides, &c.

Irritants are of great use in the treatment of disease.

IRRITATION, *Irritatio*, *Erethismus*, from *in*, priv. and *ritus*, 'the usual manner.' The state of a tissue or organ, in which there is excess of vital movement; commonly manifested by increase of the circulation and sensibility. Broussais defines irritation to be;—the condition of an organ, the excitation of which is carried to so high a degree, that the equilibrium, resulting from the balance of all the functions, is broken. In this signification, he also uses the word *sur-irritation*, which he considered as a higher degree and as the essential cause of fever. Irritation is the precursor of inflammation.

MORBID IRRITATION or *constitutional irritation* is that excitement, which occurs after injuries done to the body, or to any part thereof;—constituting cases of *diseased sympathy*.

ISCHÆMIA, from *ισχα*, 'I retain,' and *αἷμα*, 'blood.' Morbid retention or suppression of an habitual flux of blood, as of the hemorrhoidal or menstrual flux or of epistaxis.

ISCHÆMON. Same etymon. A medicine, which restrains or stops bleeding.

ISCHIA, MINERAL WATERS OF. In this volcanic isle, five miles from Naples, there are several thermal waters: one of which—that of Gurgitello—raises the Thermometer of Fahr. to 167°.

ISCHIAGRA, from *ισχίον*, 'the haunch,' and *αἶμα*, 'a seizure.' A name given to ischiatic gout. *Femoro-popliteal neuralgia* has, also, been so called.

ISCHIATIC or **ISCHIADIC**, *Ischiadicus*, or *Ischiadicus*, from *ισχίον*, 'the haunch,' whence the word *Sciatic*. An epithet given to parts connected with the ischium. The **SCIATIC NOTCHES**, (F) *Echancrures ischiaticques*, are formed by this bone; the **ISCHIATIC SPINE** belongs to it, and gives attachment to the small sacrosciatic ligament. The **TUBEROSITY OF THE ISCHIUM**, *Os sedentarium*, *Tuber Ischii*, (F) *Tuberosité sciatique*, is formed by it. It receives the insertions of different muscles of the thigh, and forms the projection on which the body rests when seated.

The **ISCHIATIC** or **SCIATIC ARTERY**, A *Fémoro-Poplitée* (Ch.) arises singly from the hypogastric, or with the gluteal; and seems to be really a continuation of the trunk of the hypogastric. It issues from the pelvis, at the lower part of the great sciatic notch; and, afterwards, divides into a considerable number of branches, which are distributed particularly to the posterior and superior region of the thigh.

The **ISCHIATIC VEIN** presents the same arrangement.

ISCHIDRO'SIS, from *ισχα*, 'I restrain,' and *ιδρώς*, 'sweat.' Suppression of perspiration.

ISCHIOBLENNIA, *Ischoblen'nia*, from *ισχα*, 'I restrain,' and *βλεννα*, 'mucus.' The suppression of a morbid but habitual discharge of mucus.

ISCHIO-CAVERNO'SUS. Belonging to the ischium and corpus cavernosum.

The **ISCHIO-CAVERNOSUS** muscle, *Collateralis*, *Director penis*, *Erector penis*, *Ischio-urethral* (Ch.) is a small, long, flat muscle, which surrounds the origin of the corpus cavernosum. It is fixed below to the inner side of the tuberosity of the ischium, and above to the root of the penis, where it is confounded with the fibrous membrane of the corpus cavernosum. It draws the root of the penis downwards and backwards.

The **ISCHIO-CAVERNOSUS** of the female, *Erector-clitoridis*, *Ischio-clitoriden*, *Superior rotundus clitoridis*, *Ischio sous-clitorien* (Ch.), is arranged nearly as in the male, but is less bulky. It arises, by aponeurosis, from the tuberosity of the ischium, and terminates by embracing the corpus cavernosum of the clitoris, to the erection of which it appears to contribute.

ISCHIOCE'LE or **ISCHIATOCE'LE**, *Hernia ischiatica*; from *ισχίον*, 'the ischium,' and *κύλη*, 'tumour.' *Ischiatic hernia*. One in which the viscera issue by the great sciatic notch. It is a rare disease. The protruded parts must be reduced; the patient being placed in a favourable position, and they must be retained by a bandage.

ISCHIO-CLITORIA'NUS. That which is connected with the ischium and clitoris.

The **ISCHIO-CLITORIAN ARTERY** of Chaussier is a division of the internal pudic, which furnishes the two arteries of the clitoris—the *superficial* and *deep-seated*.

The **ISCHIO-CLITORIAN NERVE**, of the same professor, is the superior branch of the pudic nerve, which is distributed to the clitoris.

IS'CHION, *Ischium*, *Os ischii*, *Os coxen'dicis*, *Hip bone*, *Seat bone*, (F) *Os de l'assiette*. The lowermost of the three portions, which compose the os innominatum in the foetus and young individual. The inferior region of the same bone has, also, been called *ischion*, in the adult. According to Hesychius, the ancients designated, by the word *ischion*, the capsular ligament of the coxo-femoral articu-

lation, as well as the articulation itself. Some derive the word from *ισχίς*, the lumbar region; others from the verb *ισχάω*, 'I arrest,' 'I retain;'—because that bone serves as a base, or support for the trunk, when we are seated.

ISCHIO-PROSTATICUS. Winslow, Sanctörini, Albinus, and Sömmerring have given this name to the fibres of the transversus perinæi muscle, which go towards the prostate.

ISCHIO-TROCHANTERIA'NUS, *Gem'ini*, *Gemel'li*. Part of the *Marsupia'lis* of Cowper, *Car'neum Marsu'pium*, *Ischio-spini-trochantérien*, *Secun'dus et ter'tius quadri-gem'inus*, (F) *Muscle cannelé*, *Accessoire de l'obturateur interne*. Two small, fleshy bundles, long and flat, which arise:—the superior on the outside of the sciatic spine; the inferior behind the tuberosity of the ischium. Both pass horizontally outwards, and are attached to the tendon of the obturator internus, which they accompany into the fossa of the trochanter. These muscles are rotators of the lower limb outwards. They can, also, turn the pelvis on the femur, in standing on one foot.

ISCHNOPHO'NIA, from *ισχνος*, 'slender,' and *φωνή*, 'voice.' Slenderness of voice.—Hipp., Galen.

ISCHO, *ισχάω*, 'I keep back,' 'I restrain,' 'I hold firm.' Hence:

ISCHOGALAC'TIA, from *ισχάω*, and *γάλα*, 'milk.' Want of milk in the mam-mæ.

ISCHOLO'CHIA or **ISCHOLOCHI'A**, from *ισχάω*, 'I restrain,' and *λοχίαια*, 'the lochial discharge.' Suppression of the lochial discharge.

ISCHURET'IC, *Ischuret'icum*. Same ety-mon as the next. A medicine for relieving suppression of urine.

ISCHU'RIA, *Urinæ suppres'sio*, *Stoppage of urine*, *Suppres'sio lotii*, *Paru'ria retentio-nis*; from *ισχάω*, 'I arrest,' 'I retain,' and *ουρον*, 'urine.' Impossibility of discharging the urine. Generally restricted to suppression of the secretion, or to renal Ischuria or *Anu'ria*.

The **ISCHURIA VERA** is that in which the urine having accumulated in the bladder, the patient is unable to pass it, notwithstanding the inclination, which constantly distresses him. In the *False ischuria*, *Paru'ria inops*, *Ischuria notha*, owing to some disease of the kidney or ureters, the urine cannot reach the bladder.

Ischuria has, likewise, received various other names, according to the seat and character of the obstacle, which opposes the exit of the urine;—hence the expressions—*Renal*, *Ureteric*, *Vesical*, *Urethral*, and *Calculous*

Ischuria. The *Vesical Ischuria* is synonymous with Retention of Urine, which see.

ISOCH'RONOUS, *Isod'romos*, from *ισος*, 'equal,' and *χρονος*, 'time.' That which takes place in the same time, or in equal times. The pulsations of the arteries, in various parts of the body, are nearly isochronous.

ISOCHRY'SON, *Auro compar*; from *ισος*, 'equal,' and *χρυσος*, 'gold.' A collyrium, described by Galen as worth its weight in gold. Libavius has, also, given this name to an amalgam, made with equal parts of antimony and mercury.

ISOC'RATES; from *ισος*, 'equal,' and *κεραννυμι*, 'I mix.' A mixture of equal parts of wine and water.—Hippocrates.

ISTHMI'TIS, *Inflammat'io Fau'cium*. Inflammation of the fauces.

ISTHMUS, *Isth'mion*. A tongue of land, joining a peninsula to a continent; or which separates two seas. Anatomists have given the name *Isthmus of the Fauces*, *Isthmus Fau'cium*, *Claustrum Gut'turis*, (F) *Isthme du gosier*, to the strait which separates the mouth from the pharynx. It is formed, above, by the velum palati and uvula; at the sides, by the pillars of the fauces and the tonsils; and, below, by the base of the tongue.

The **ISTHMUS OF THE THYROID GLAND** is a narrow band, that unites the two chief lobes composing the thyroid gland.

The **ISTHMUS OF THE FOSSA OVA'LIS**, *Isth-mus Vieusse'nii*, is the prominent arch, formed above the fossa ovalis by the union of the two pillars which bound the cavity.

ITCHING, *Parap'sis pruri'tus*, *Autal'gia pruriginosa*, *Pruri'tus*, *Pruri'go*, *Cnesmos*. (F) *Prurit*, *Démangeaison*. A sensation, more inconvenient than painful; seated especially at the surface of the body, and which provokes the patient to scratch the part. It may be either an external or an internal sensation:—that is, produced by an external body, or by some modification in the organic actions of the part to which it is referred.

ITHYPHAL'LUS, from *ἴθυς*, 'straight,' and *φάλλος*, 'penis.' An amulet, in the form of a penis, anciently worn round the neck, to which were attributed alexiterial properties.

I'VORY; *Ebur*, *Elephas*. The tusk of the elephant. It is chiefly composed of phosphate of lime, and is used for the fabrication of pessaries, artificial teeth, handles of instruments, &c. Formerly, it entered into some pharmaceutical preparations, when calcined to whiteness. It was regarded as astringent and anthelmintic, and was called *Spo-dium*.

IXYS, *Ixyē*. Used by different authors for the ilia, flanks, and loins; most frequently for the last.—Hippocr.

J

JACTA'TION or **JACTITA'TION**, *Jacta'tio*, *Rhaptas'mos*, *Jactita'tio*, from *jacta're*, 'to toss about.' Extreme anxiety; excessive restlessness;—a symptom observed in serious diseases.

JALEYRAC, MINERAL WATERS OF. These waters are situate two leagues from Mauriac in France, on the road from Clermont in Auvergne. The waters contain lime and carbonate of soda, and are esteemed to be tonic, aperient, &c.

JARRETIÈRE (F), *Peris'celis*, a garter, from *garetum* or *garretum*; in low Latin, the *ham*. A kind of furfuraceous herpes, which occupies the part of the leg, where the garter is worn.

JASMINUM OFFICINA'LE, *Jasminum*, *Jeseminum*; the *Jes'samine*. (F) *Jasmin*. The flowers of this beautiful plant have a very fragrant smell, and a bitter taste. They afford, by distillation, an essential oil; which is much esteemed in Italy, for rubbing paralytic limbs, and in the cure of rheumatic pains.

JATROPHA CURCAS, *Ric'inus major*, *Ricinoi'des*, *Pi'neus purgans*, *Pinho'nes In'dici*, *Faba cathar'tica*, *Avella'na cathar'tica*, *Nux cathar'tica America'na*, *Nux Barbaden'sis*; *Physic Nut*. (F) *Pignon d'Inde*, *Mediciner cathartique*, *Grand haricot de Pérou*, *Pignon de Barbarie*, *Noix cathartique*, *N. Americaine ou des Barbades*. Nat. Order, *Euphorbiacæ*. The seeds of this plant afford a quantity of oil, which is given, in many places, like the castor oil; to which, indeed, it is nearly allied. They contain a peculiar acid, the *Jatrophic* or *Igasuric*.

The seeds of the *Jatropha Multifida* are called *Purging Nuts*, and give out a similar oil.

JATROPHA MANIHOT. The plant affording the *Cassa'da* or *Cassa'va Root*, *Caca'vi*, *Cassa'vê*, *Caza'bi*, *Pain de Madagascar*, *Ric'inus minor*, *Man'ioc*, *Magnoc*, *Man'iot*, *Yucca*, *Maniibar*, *Aipi*, *Aipima coxera*, *Aipipoca*, *Janipha*. The juice of the root is extremely acrid and poisonous. What remains, after expressing it, is formed into cakes or meal; of which the Cassada or Cassava bread is formed. This bread constitutes a principal food of the inhabitants of those parts where it grows.

The fecula of the root forms the Tapioca, *Cipipa*, *Fec'ula Tapio'ka*, which is very nutritious.

JEAN-DE-GLAINES, ST., MINERAL WATERS OF. These waters are situate two leagues from Billom in Auvergne. They contain muriate of lime, and carbonate of

magnesia; dissolved in an excess of carbonic acid.

JECTIGA'TIO. A word, used by Van Helmont for a species of epilepsy or convulsion.

JEJU'NUM, from *jejunos*, 'empty;' *Nestis*, *νηστικς*. The part of the small intestine, comprised between the duodenum and ileum. It has been so called, because it is almost always found empty in the dead body.

JOANNETTE, MINERAL WATERS OF. Several springs are found at Joannette, about five leagues from Angers, in France. The waters are both cold and warm, and contain sulphate of lime; subcarbonate of soda; muriate of soda; some iron; muriate of lime; and, sometimes, a kind of saponaceous matter. They are chiefly used as a tonic in chlorosis, leucorrhœa, &c.

JOHNE, MINERAL WATERS OF. Johne is a village near Dol in Franche-Comté, France, where is a mineral spring, which contains subcarbonate of soda, and subcarbonates of magnesia and iron. It is used chiefly as a bath in certain diseases of the skin, and other atonic affections.

JONAS, MINERAL WATERS OF. This spring is situate to the southwest of Bourbon-l'Archambault, in France. The waters contain muriate and sulphate of lime; muriate and sulphate of soda; carbonate of iron and carbonic acid gas. They are tonic and aperient.

JOUAN, ST., MINERAL WATERS OF. St. Jouan is a village, near Saint-Malo, in France. The water is a cold chalybeate.

JUDÆUS, **JUDA'ICUS** (*Lapis*), *Phœnici'tes Lapis*, *Tecol'ithos*, (F) *Pierre Judaique*. A stone, found in Judæa, Palestine, &c. Called, also, *Lapis Syriacus*. It was formerly esteemed to be diuretic and lithontriptic.

JUDGMENT, *Judic'ium*, (F) *Jugement*. The faculty of the intellect, by which ideas are compared with each other, and their relative worth appreciated.

JUGA'LIS SUTU'RA, from *ζυγον*, 'a yoke.' The suture, which unites the *Os Malæ* or *Os Jugalè* with the superior maxillary bone. Also, the sagittal suture.

JUGLANS REGIA, *Juglans*, *Nux Juglans*, *Carya basil'ica*, *καραυα*, *Carya*. The Walnut, (F) *Noyer* (the tree); *Noix* (the nut). The unripe fruit, in the state in which it is pickled, was formerly esteemed an anthelmintic. The *putamen* or green rind of the walnut has been celebrated as a powerful antisiphilitic; and used as a sort of diet drink. The *kernel* of the walnut is an agree-

able article of desert; but, like all the nuts, difficult of digestion.

JUGLANS CINEREA, *Butter Nut*, *White Walnut*. The inner bark of the root of this tree, which is abundant in the United States, is used in medicine, in the form of extract, as an efficacious and mild laxative, in doses of from 10 to 20 grains. It is in the secondary list of the Pharmacopœia of the United States.

JUGULAR, *Jugula'ris*, from *jug'ulum*, 'the throat.' Relating to the throat.

JUGULAR VEINS, *Venæ Jugula'res*, *V. sphagit'ides*, *V. apoplec'ticæ*, *V. sopora'les*. These are situate at the lateral and anterior parts of the neck. They are two on each side; one *external*, the other *internal*.

1. The *External Jugular Vein*,—*Trachélosous-cutané* (Ch.), is of less size than the internal. It descends, almost vertically, along the anterior and lateral part of the neck; from the cervix of the lower jaw to the subclavian vein, into which it opens, a little above the internal jugular. It is formed by the *internal maxillary, superficial temporal, and posterior auricular veins*. It is this vein, which is commonly opened in bleeding in the neck.

2. The *Internal Jugular Vein*, *V. Céphalique* (Ch.), *Vena apoplectica*, is much larger and more deeply seated than the preceding. It descends, vertically, along the anterior and lateral part of the neck, from the posterior part of the foramen lacerum posterius as far as the subclavian vein. It commences at the sinus of the jugular vein, and receives the blood, which returns by the *sinus of the dura mater*, and that of the *facial, lingual, pharyngeal, superior thyroid, occipital, and diploic veins*.

The **FOSSA JUGULA'RIS** is a cavity in the *petro-occipital* suture. It is formed by the petrous portion of the temporal bone, and by the occipital bone, and lodges the origin of the internal jugular vein. It is, sometimes, called *thimble-like cavity*.

JUJUBE, *Ziz'iphum*. The fruit of the *Rhamnus Ziziphus*, a native of the south of Europe. It was formerly ranked amongst the pectoral fruits. It has an agreeable sweet taste.

JULEP, *Jula'pium*, *Jule'pus*, *Zula'pium*; *Juleb* of the Persians. A sweet drink. A demulcent, acidulous or mucilaginous mixture.

JULUS, *Julos*, *Ioulos*, *ιουλος*. The first down that appears upon the chin.—Rufus of Ephesus.

JUNCUS ODORATUS, *Andropo'gon chænan'thus*, *Fœnum camelo'rum*, *Juncus aromaticus*—*Camel's hay*, *Sweet rush*, *Schænan'thus*, *Cal'amus odora'tus*, *Squinan'thus*, *Gramen orienta'le*. (F) *Jonc odorant*. The dried plant, which is generally procured from Turkey and Arabia, has an agreeable smell, and

a warm, bitterish taste. It was formerly used as a stomachic and deobstruent.

JUNIP'ERUM VINUM. Wine impregnated with juniper berries.

JUNIP'ERUS COMMUNIS, *Arceu'tos*, *The Juniper tree*; *Akatalis*, *Akat'era*. *Family*, Coniferæ. *Sex. Syst.* Diœcia Monadelphia. The tops and berries are ordered in the pharmacopœias. Their odour is strong, but not unpleasant. Taste warm, pungent. Properties dependent upon essential oil, which they yield to both water and alcohol. Dose, ʒj to ʒss, rubbed with sugar. In Holland, juniper berries are used for flavouring the gin. The oil, *Oleum juniperi*, possesses the virtues of the plant. It is called by Ruland, *Targar*. (F) *Genévrier* (the plant), *Genièvre* (the berry.)

JUNIPERUS LYCIA. This plant—*Thurea*, *Th. virga*, *Arbor thurifera*, has been supposed to afford the *true frankincense*, *Cedros*, *Olib'anum*, *Thus Libano'tos*, *Lib'anos*, *Thus mas'culum*, *Thus verum*, (F) *Encens*. By some, however, it is supposed to be the produce of an *Amyris*, and by others of the *Boswellia serra'ta*. The odour of olibanum is peculiar and aromatic: taste bitterish and slightly pungent; partly soluble in alcohol, and forming a milky emulsion, when triturated with water. It was formerly used in dysentery and hæmoptysis, but is now never employed, except as a perfume in a sick room.

JUNIPERUS SABINA, *Sabina*, *Savina*, *Sabina ster'ilis*, *Bruta*, *Cedrus baccifera*, *Common or barren savin*; *Brathu*, *Brathys*, *Barathron*, *Borathron*, (F) *Sabine*, *Savinier*. The odour of savin leaves is strong and disagreeable. Taste hot, acrid, and bitter, depending on an essential oil. Its operation is stimulant, emmenagogue, anthelmintic, and abortive; externally, escharotic. Dose, internally, gr. v to x of the powder. As an escharotic, it is applied in powder or formed into a cerate. The oil has the virtues of the savine.

JUNIPERUS VIRGINIA'NA, *Red cedar*. This tree is known through the United States by the name of *savine*, and is often used for the same purposes.

JURIBALI, *Euribali*. A tree in the forests of Pomeronia; *Nat. Fam.* Meliaceæ. *Class*, Octandria. *Order*, Monogynia. The bark is febrifuge, and may be given in powder or infusion, (ʒi to aq. bullient O ij.)

JURISPRU'DENCE, (*Medical*) *Jurisprudentia Med'ica*. This word is often used synonymously with Legal Medicine, which see. It is now, as frequently perhaps, employed for the embodied laws and regulations that relate to the teaching and practice of medicine.

JUS, *Zomos*, *ζωμος*. Soup, broth, or *bouillon*.

JUS D'HERBES (F). The juice of certain vegetables administered as depuratives; as the juices of fumitory, burdock, water trefoil, &c.

JUSTITIA ECBOLIUM, *Carim curini*. A Malabar plant, the root of which, and the leaves, in decoction, are considered in the country to be lithontriptic.

JUSTITIA PECTORALIS. A West India plant, which is slightly astringent. (F) *Carmentine*, *C. Pectorale*, *Herbe aux Charpentiers*.

JUVANS, *auxilium*, *remedium*. A medicine or substance of any kind, which relieves a disorder.

JUXTAPOSITION. The mode of increase, proper to minerals; which consists in the successive application of new molecules upon those that form the primitive nucleus. It is opposed to *intussusception*.

K

K. This letter was formerly used to designate a compound of gold.

KAAWY. Ancient name of an Indian drink, prepared from maize.

KÆMPFERIA ROTUNDA, *Zedoaria*, *Amomum zedoaria*, *Colchicum Zeylanicum*, *Zedoary*. (F) *Zedoaire rond*. The roots of this Ceylonese plant have a fragrant smell, and warm, bitterish, aromatic taste. They are in wrinkled, gray, ash-coloured, heavy, firm, short pieces; of a brownish red colour within; and are stimulant and carminative. Dose, ʒj to ʒj of the powder.

KAIB, *Kayl*. A word, employed by the alchemists for sour and coagulated milk.

KALMIA ANGUSTIFOLIA, *Ivy*, *Narrow-leaved laurel*, *Dwarf laurel*. This plant has the same virtues as the next.

KALMIA LATIFOLIA, *Calico bush*, *Broad-leaved laurel*. This plant kills sheep and other animals. The Indians use it as a poison. The powdered leaves have been applied successfully in tinea capitis; and a decoction of it has been used for the itch. The powder, mixed with lard, has been applied in herpes.

KELP, *Varec*. The impure mineral alkali, obtained by burning certain marine plants.

KENTUCKY, MINERAL WATERS OF. The Olympian Springs in this state are near the sources of Licking river. There are three different kinds, in the space of half a mile. One of these is saline, impregnated with sulphur;—another is a chalybeate, and a third a sulphureous spring. In various parts of Kentucky, there are saline waters, which are frequented by invalids. The *Salines* at Bigbone, formerly employed in the manufacture of salt, are now resorted to by invalids.

A spring, near Harrodsburg in Mercer county, is strongly impregnated with sulphate of magnesia.

KERMES or **CHERMES**. One of the species of the genus kermes lives on a green oak, and is called *Coccus ilicis*, *Kermes animal*, *Coccum*, *Cocci granum*, *Coccum baphicum*, *infectorium*, *tinctorium*, *scarlatinum*,

&c. The oak, to which allusion has been made, is known by botanists under the name, *Quercus coccifera*, and grows abundantly in the uncultivated lands of southern France, Spain, and in the islands of the Grecian Archipelago. The kermes, inhabiting it, has the appearance of a small, spherical, inanimate shell. Its colour is reddish brown; and it is covered with a slightly ash-coloured dust. This is the kermes of the shops. It is now only used in dying; but was formerly reputed to possess aphrodisiac, analeptic, anti-abortive, and other virtues.

KETCHUP or **CATCHUP**. A pickle prepared from the liquor of the mushroom, walnut, tomato, &c.

KEY, *Clavis*, *Cleis*, *Clavis Anglica*, (F) *Clef de Garangeot*. An instrument, used for extracting teeth. It consists of a firm handle, with a claw at right angles to it and moving upon a pivot. This claw embraces the tooth. It has undergone several modifications; and hence various instruments are used under this denomination. The French have the *Clef à pompe*, *Clef à pivot*, and *Clef à noix*.

KIAS'TER, *Chiaster*, from *χιαζεν* 'to cross.' A species of bandage, having the form of the Greek letter *χ*, which the ancients used for approximating, and maintaining in contact, the fragments of the patella, in cases of fracture of that bone. It was applied in the form of the figure 8.

KIDNEY. Its etymology is uncertain. Serenius derives it fancifully from *Su. Goth. qued*, the belly; and *nigh*, (*quasi*, *quidney*.) *Ren*, *Nephros*, *Protme'sis*. (F) *Rein*. The kidneys are the secretory organs of urine. They are two glands, situate deeply,—the one on the right, and the other on the left side,—in the hypochondres; at the sides of the lumbar vertebræ; behind the peritoneum; and in the midst of an abundant, fatty, cellular tissue, called *Tunica adiposa*. The kidney is of a reddish brown colour; oval form; and flattened on two surfaces. It has, at its internal margin, a deep fissure, by which the renal vessels and nerves enter or quit the organ,

and the ureter issues. It resembles, pretty accurately, the haricot or kidneybean. Two substances are readily distinguishable in it. The outer, *Secerning* or *Cortical*, *Substan'tia cortica'lis*, *S. glandulo'sa*, which secretes the urine; and the inner, *Tubular*, *Medullary*, or *Uriniferous*, *Substan'tia medulla'ris*, *S. Tubulo'sa*, *S. Fibro'sa*, which appears under the form of small cones or unequal *papillæ*, each resulting from the union of small capillary tubes, adherent by one of their extremities to the cortical substance; and opening, by the other, at the summit of the cone, into *calices*, a species of membranous tubes, more or less numerous, which transmit the urine of the *papillæ* to the *pelvis*. By this (*pelvis*) is meant a small, membranous sac, of an irregularly oval shape, at the base of which are the orifices of the calices; and the other extremity of which is continuous with the ureter. The kidney is surrounded by a fibrous membrane proper to it.

KIDNEY, BRIGHT'S, DISEASE OF THE. *Morbus Brightii*, *Nephritis albumino'sa*, *Granular Kidney of Bright*, (F) *Maladie de Bright*. A granular disease of the cortical part of the kidney, which gives occasion to the secretion of urine that contains albumen, and is of less specific gravity than natural, and which destroys by inducing other diseases. It was first described by Dr. Bright of London, about ten or twelve years ago.

KILOGRAMME, *Chiliogram'ma*, from *χίλιοι*, 'a thousand,' and *γραμμα*, 'a gramme.' The weight of a thousand grammes;—about two pounds and six drachms, Avoirdupois.

KILOLITRE, from *χίλιοι*, 'a thousand,' and *λίτρον*, 'a litre.' A measure, containing a thousand litres; equal nearly to a ton.

KINO, *Gummi Gambien'sē*, *Gummi rubrum adstrin'gens Gambien'sē*, *African kino*, *East India kino*, *Amboy'na kino*, *Gummi adstrin'gens Fothergil'li*. The tree, whence this resin is obtained, though not botanically ascertained, is known to grow in Africa on the banks of the Gambia. The London college ascribe it to the *Pterocarpus erina'cea*, the Edinburg to the *Eucalyptus resinifera*, and the Dublin to the *Butea frondosa*. On wounding the bark, the kino flows drop by drop. Kino consists, chiefly, of tannin, gallic acid, oxide of iron, and colouring matter. It is inodorous; the taste a sweetish bitter; and it is sometimes gritty between the teeth. It comes to us in fragments of a dark ruby red colour, and is easily pulverized. Its properties are powerfully astringent. Dose, gr. x to gr. xx, in powder.

KI'OTOME, *Kiot'omus*; from *κίον*, 'a pillar,' 'support,' and *τεμνειν*, 'to cut.' (F) *Coupe-bride*. An instrument, invented by Desault, to cut any accidental *brides* or filaments in the rectum and bladder; and which he, afterwards, used for the removal of the tonsils. It is composed of a flat, silver

sheath; open at one edge. This sheath is provided with a cutting blade, which can be forced through the opening, and thus all the parts can be divided with which it comes in contact.

KIRATE. A weight of four grains according to Blancard.

KIRSCHWASSER (G), *Cherry water*. An alcoholic liquor, obtained from cherries bruised with their stones, by subjecting them to distillation, after having caused them to ferment.

KIST. A weight of 14 grains.—Paracelsus.

KLOPEMA'NIA, *Clopema'nia*, from *κλοπή*, 'theft,' and *μανία*, 'mania.' Monomania, with an irresistible desire to steal.

KNIFE. Sax. *cnif*. Swed. *Knif*. Dan. *Kniv*. (F) *Canif*. *Culter*, *Smile*, *Cultellus*, *Tomei'on*, *Tomeus*, *Machæ'ra*, *Machæ'rion*, *Machæ'ris*, (F) *Couteau*. A cutting instrument, used in surgery, to divide the soft parts, and which only differs from the bistouri or scalpel in being commonly larger.

The most common knives are the following:

AMPUTA'TION KNIFE, (F) *Couteau à amputation*, *C. droit*, *Culter rectus*. This is the largest of the knives used in surgery. Formerly, they were curved; now they are straight and provided with one or two edges.

CATARACT KNIFE, *Ceratol'omus*, *Keratol'omus*, (F) *Couteau à cataracte*. The cataract knives of Richter, Wenzel, Ward, and others being intended to perform the section of the transparent cornea, are so shaped as to exactly fill the small wound made by them; and thus to prevent the discharge of the aqueous humour, until the section is completed. The blade of the knives of Wenzel and Ward resembles a very narrow lancet, blunt in the posterior five-sixths of one of its edges. The blade of that of Richter is pyramidal, cutting through the whole length of its inferior edge, and also blunt in the five-sixths of the upper.

The CROTCHET KNIFE, *Cutel'lus uncus*, (F) *Couteau à crochet*. A steel instrument, composed of a round staff, furnished with a handle at one extremity, and at the other with a curved knife. It was formerly used to cut to pieces monstrous fœtuses in utero; and to open the head when necessary.

DOUBLE EDGED KNIFE, *Anceps cutel'lus*, *Amphis'mela*, *Amphis'mile*, *Catling*, (F) *Couteau à deux tranchans*, *Couteau desarticulateur*, *C. interosseux*. A knife, the blade of which is straight and sharp on both sides. It is used for disarticulating bones; and for cutting the soft parts situate between the bones, in amputation of the leg and forearm.

CROOKED KNIFE, *Culter falca'tus*, *Culter curvus*, (F) *Couteau courbe*. A knife, which is crooked and concave on its cutting edge. It was formerly employed in amputation of the limbs.

CHESELDEN'S KNIFE. A knife with a fixed handle; very convex on its edge; concave on the back, and which was used by Cheselden in *lithotomy*.

KNIFE EN SERPETTE, (F) *Couteau en serpette*. A sort of knife, of the shape of a *serpette* or pruning knife, invented by Desault for dividing the bony paries of the maxillary sinus, for the purpose of extracting fungi from it.

LENTICULAR KNIFE, *Culter lenticula'ris*, (F) *Couteau lenticulaire*. An instrument, used in the operation of trepanning, for removing inequalities in the inner table of the skull, which may have been left by the crown of the trephine around the opening made by it. It is formed of a lenticular button, fixed at the extremity of an iron staff, which is convex on one side, flat on the other; sharp at both edges and mounted on an ebony handle.

LITHOTOMY KNIFE, (F) *Couteau lithotome*. A name, given by Foubert to a large knife, the narrow blade of which, $4\frac{1}{2}$ inches in length, was sharp in its whole extent, and made an obtuse angle with the handle. He used it in the lateral operation.

KNOT, PACKER'S, (F) *Nœud d'emballleur*. A compressive bandage, used for arresting hemorrhage from the temporal artery or its branches. The *nœud d'emballleur* is made with a double headed roller, five ells long. A graduated compress is placed over the opening in the artery, and the bandage is applied over it; the balls of the roller being carried horizontally round to the opposite temple; where they are crossed obliquely and carried back to the part where the compress is situate. The hands are then changed with the rollers, crossing them so as to form a knot, and taking one above the head; the other beneath the chin. They are then crossed again, so as to form several knots, one above the other. This bandage is called, by some surgeons, *Solar* or *oblique chevestre*, or *capistrum*.

KNOT, SURGEON'S, (F) *Nœud du chirurgien*. A double knot, made by passing the thread twice through the same noose. This knot is used frequently in the ligature of arteries, in the umbilical cord, &c.

KOLERUS. A name given by Paracelsus to dry ulcers.

KRAME'RIA RATAN'HIA, *Rhatan'ia*, *Rat'anhy*, (F) *Ratanhie*, *Ratanhia*. The *krameria* is a native of Java. The root has a bitter taste; and is astringent, diuretic, and detergent. Dose, ʒj to ʒj.

The **KRAME'RIA IXI'NA**, or *Ratanhie* of the *Antilles*, has similar virtues.

KUTUBUTH. An Arabic name for a species of melancholy, in which the patient is never quiet at any one place, but wanders

about here and there. Also the name of an insect which lives at the surface of stagnant waters, and is in a constant state of agitation. Some lexicographers imagine that it is on account of this last circumstance, that the name of the insect has been given to the disease.

KYLLO'SIS, *κυλλωσις*, from *κυλλος*, 'crooked,' 'lame,' *Cyllo'sis*. Professor Chaussier so calls the congenital distortion of the feet, *Clubfeet*, (F) *Pied bot*. Of this there are many varieties. In the first, the foot, instead of resting on the soil, by the whole plantar surface, touches it only with the metatarso-phalagian articulations. It seems as if turned backwards and broken upon the leg, (*Pes Equinus*.) In the other cases the foot is twisted inwards, (*Varus*, (F) *Cagneux*), so that it rests only on the ground on its outer edge; or it may be twisted inwards (*Valgus*), or rest only on its inner surface. In the *flat foot*, *Sar'apus*, (F) *Pied plat*, the plantar surface of the foot is flattened instead of being concave.

These deformities are rarely accidental. They are almost always congenital, and may be rectified, at an early period, by proper mechanical means to strengthen the foot gradually and restore it to its proper shape and direction; and if these means fail, the tendons and muscles concerned in the deformity may be divided.

KYST or CYST, *Kystus*, *Cystis*, from *κυστις*, 'a bladder,' 'pouch,' (F) *Kyste*. This term is generally applied to pouches or sacs, without opening, and commonly of a membranous nature, which are accidentally developed in one of the natural cavities, or in the substance of organs. Many theories have been successively emitted to explain the formation of cysts, but none are entirely satisfactory. Some are formed by a thin, translucent membrane; having scarcely the thickness of the arachnoid; others of a whitish, fibrocellular membrane, more or less thick. Some contain cartilaginous or bony flakes. The greater part have but one cavity; others, on the contrary, have several; separated by complete or imperfect septa, as is frequently seen in those developed in the ovaries. The matter, contained in cysts, is sometimes limpid, serous, yellowish, white, reddish, and, at others, more or less thick, albuminous, adipous, or caseous. The tumour, formed by them, is called *Encysted*, which see.

KYSTHI'TIS, *Cysthi'tis*, from *κυσθος*, 'the vagina.' Inflammation of the vulva and of the mucous membrane of the vagina.

KYSTHOPTO'SIS, from *κυσθος*, 'the vagina,' and *πιπταω*, 'I fall.' Prolapsus or inversion of the vagina.

KYTTARRHAGIA, from *κυτταριον*, 'an alveolus,' and *εργυριμι*, 'I break forth.' Discharge of blood from an alveolus.

L

L ABE, from λαμβανω, 'I seize,' 'I take,' Invasion. Also, employed to denote the first paroxysm of fevers.—Galen, Hippocr.

LABIAL, *Labia'lis*, from *Labium*, 'a lip.'

LABIAL GLANDS. This name is given to a multitude of muciparous follicles, of some size; round, prominent, and separate from each other; which are found on the inner surface of the lips, below the mucous membrane.

LABIAL ARTERY. Haller and Sabatier call thus the *facial artery* of the majority of anatomists.

The *labial arteries*, properly so called, or *coronary arteries of the lips*, (F) *Coronaires des lèvres*, are two in number. The *superior* arises from the facial, above, and very close to, the commissure of the lips. It is large and tortuous and is distributed to the upper lip. The *lower* arises from the facial, at a considerable distance from the commissure, and proceeds, in a serpentine course, into the substance of the lower lip, to which it is distributed.

The **LABIAL VEINS** are distinguished, like the arteries, into *superior* and *inferior*. They open into the facial vein;—a division of the internal jugular.

LABORATORY, *Laborato'rium*, *Ergasté'ron*, from *labora're*, 'to work.' A name given to any place for preparing chemical or pharmaceutical products, &c.

LABORIOUS, (F) *Accouchement laborieux*. Delivery is said to be laborious, when attended with more difficulty and suffering than usual. With some, *laborious labour* means one that requires the use of instruments. See *Dystocia*.

LABYRINTH, *Labyrinth'us*, *Antrum buccino'sum*. A place, full of turnings, the exit of which is not easily discoverable. Anatomists have given this name to the aggregate of parts, constituting the internal ear, *Labyrinth'us auris intimæ*, *In'tima pars organi auditus*. The Labyrinth is situate between the tympanum and meatus auditorius internus. It is composed of several cavities, which communicate with each other in the dried bone; as the *vestibule*, *cochlea*, *semicircular canals*, &c. It is lined by periosteum, and also by a *pulpy membrane*, constituting the *membranous labyrinth*, on which the auditory nerve is regularly dispersed. This membrane forms two sacs in the vestibule, called *sac'culus vestib'uli* and *sac'culus* (q. v.) respectively, which resemble in shape, that of the bony cavities containing them. Each sac contains calcareous matter, constituting the *Otolithes* and *Otoconies*. When the sac is laid open, upon the upper and outer part, a parti-

tion appears, partaking of the nature of the sac, and called by Meckel, *Septum vesti'buli nervo'so-membrana'ceum*.

LACCA, from *lakah*, Arab. *Gummi lacca*, *Stick-lac*, *Gum-lac*, *Seed-lac*, *Shell-lac*, (F) *Laque*. Lac is a substance formed by an insect, and deposited on different species of trees, chiefly in the East Indies. The various kinds, distinguished in commerce, are;—*stick-lac*, which is the substance in its natural state, investing the small twigs of the tree: and *seed-lac*, which is the same broken off. When melted, it is called *shell-lac*.

Lac was, at one time, used in the form of tincture, as a tonic and astringent; and it still forms part of particular dentifrices.

LACERATION, *Lacera'tio*, *Rhegma*, *Ruptu'ra*, *Rupture*, from *lacera're*, 'to tear:'—*Dilacera'tio*, *Sparagma*, (F) *Arrachement*, *Déchirement*, *Dilaceration*. The act of tearing or rending. The breach, made by tearing or rending; as a *lacerated wound*, *Tresis vulnus lacera'tum*, *Laceratu'ra*, *Vulnus lacera'tum*.

LAC'ERUM. Same etymon. Any thing torn, or appearing as if torn.

The **FORAMEN LAC'ERUM ANTE'RIUS**, (F) *Trou déchiré antérieur*, *Hiatus sphéno-pétreux*, (Ch.), is an irregular opening, formed by the sphenoid and petrous portion of the temporal bone. This foramen transmits the 3d, 4th, and 6th pair of nerves and the first branch of the 5th pair to the eye and its appendages.

The **FORAMEN LACERUM POSTE'RIUS**, *Foramen jugula'rè*, *F. lacerum in Basi Cranii*, (F) *Trou déchiré postérieur*, *Hiatus occipito-pétreux*, (Ch.), is formed by the occipital bone and the inferior edge of the petrous portion of the temporal bone. Through it, the internal jugular vein, the 8th pair of nerves, and accessory nerve pass out of the cranium.

LACHRYMAL, *Lacryma'lis*, from *lac'ryma*, 'a tear.' Belonging to the tears. This epithet is given to various parts.

The **LACHRYMAL PASSAGES**, *Via lacryma'les*, (F) *Voies lacrymales*. The organs concerned in the secretion of tears, in spreading them over the eye, and taking them up again to transmit them into the nasal fossæ. The lachrymal passages are composed of the *lachrymal gland*, *Caruncle*, *puncta*, *ducts*, the *lachrymal sac*, and the *nasal duct*.

The **LACHRYMAL GLAND**, *Glan'dula innominata Gale'ni seu lacryma'lis*, is seated in a depression of the frontal bone at the upper, anterior, and outer part of the orbit. It is of about the size of an almond; and of an oval shape, flattened above and below:—its great diameter being the antero-posterior. It is

composed of several small lobules, united by cellular tissue and separated by it as well as by vessels and nerves which creep in the intervals. This gland has 7 or 8 excretory ducts, which open behind the upper eyelid. Its use is to secrete the tears, and pour them on the globe of the eye by the excretory ducts.

LACHRYMAL CARUNCLE. See *Caruncula lacrymalis*.

The **PUNCTA LACRYMALIA**, (F) *Points lacrymaux*, are two small, round, and contractile openings, situate in the centre of a tubercle, about a line and a half distant from the inner commissure of the eyelids, and continuous with the *lacrymal ducts*. These ducts, (F) *Conduits lacrymaux*, *Lacryma'les Canaliculi*, *Canales seu Ductus lacryma'les*, *D. lacryma'les*, *Ductus lacryma'les latera'les*, *D. puncto'rum lacryma'lium*, *Cornua lacryma'lia*, *Collicia puncto'rum lacryma'lium*, *Canaliculi lina'cum*, *Cornua Lima'cum*, are two in number—a superior and an inferior—which extend from the puncta to the lacrymal sac. They seem formed by a very delicate prolongation of the conjunctiva, which is continuous with the mucous membrane of the lacrymal sac, (F) *Reservoir des larmes*:—the *Saccus*, seu *Sinus seu Lacus lacrymalis*, *Infundibulum lacrymale*, *Saccus lacryma'lis*.

The **LACHRYMAL OR NASAL CANAL OR DUCT**, *Canalis lacrymalis*, *Canalis orbitæ nasa'lis*, *Ductus nasa'lis orbitæ*, *Canalis sacci lacryma'lis*, *Ductus ad Nasum*, is formed by the superior maxillary bone, os unguis, and os turbinatum inferius; and is seated in the outer paries of the nasal fossæ. It is lined by a prolongation of the mucous membrane of the lacrymal sac; and its inferior orifice is furnished with a valvular duplicature. This duct transmits the tears, which have been absorbed at the great angle of the eye by the puncta lacrymalia, into the nasal fossæ.

The **LACHRYMAL FOSSA**, *Fossa seu Fovea lacryma'lis*, is a slight depression at the upper part of the orbit, which lodges the lacrymal gland.

The **LACHRYMAL GROOVE**, (F) *Gouttière lacrymale*, is the bony channel, which lodges the lacrymal sac. It is seated at the anterior and inner part of the orbit, and is formed by the os unguis and the ascending process of the upper jaw-bone.

The **LACHRYMAL ARTERY**, proceeds from the ophthalmic; and distributes its principal branches to the lacrymal gland.

The **LACHRYMAL VEINS** accompany the artery of the same name, and open into the ophthalmic and palpebral veins.

The **LACHRYMAL NERVE** is the smallest of the three branches formed by the ophthalmic nerve. It is distributed, particularly, to the lacrymal gland and to the upper eyelid. In its course it gives off a *sphæno maxillary* and a *malar* filament.

LACHRYMAL HERNIA OR TUMOUR, *Hernia Sacci Lacrymalis*, is when the tears enter the puncta, but cannot pass to the nose, and

accumulate. By Anel, this was called *Dropsy of the Lacrymal Sac*.

LACTA'TION, *Tithenesis*, *Thela'sis*, *Thelasmus*, *Lacta'tio*; from *lac'teo*, 'I suckle,' 'I give milk.' *Suckling*:—the giving of suck, (F) *Allaitement*.

The French have four varieties of lactation. 1. *Allaitement maternel*,—*Maternal Lactation*, when the mother suckles the child. 2. *A. étranger, mercenaire*,—when another suckles it. 3. *A. artificiel*,—when the child is brought up by hand. 4. *A. animal*, when the child is suckled by some animal.

LACTIC, *Lacteus*, from *lac*, 'milk,' appertaining to milk.

LACTIC ACID, *Acidum Lacticum*, *acid of milk*. This has been recommended as a therapeutical agent in atonic dyspepsia, owing to its being presumed to be one of the gastric acids secreted in health. It is given either in the form of lemonade or of lozenges. The acid is obtained either from milk or from the juice of the red beet.

LACTIFEROUS, *Galactoph'orus*, *Lactif'erus*, from *lac*, 'milk,' and *fero*, 'I carry.'

The **LACTIFEROUS VESSELS OR DUCTS**, *Tubuli lactiferi vel Ductus lactiferi*, (F) *Vaisseaux ou conduits lactiferes*, are the excretory ducts of the Mammary Gland, which see.

LACTEAL OR LACTIFEROUS SWELLING. A tumefaction of the breast, supposed by Sir Astley Cooper to arise from a large collection of milk in one of the lactiferous tubes, the result of chronic inflammation of the tube near the nipple, with closure of its aperture, and obliteration of the canal for an inch or more. The tube requires to be punctured.

LACTIFUGA, *Lactifuge*, from *lac*, 'milk,' and *fugo*, 'I drive away.' Medicines, which dispel milk.

LACTIN'IA, from *lac*, 'milk.' Food prepared with milk.

LACTU'CA, from *lac*, 'milk,' so called from its milky juice. *Lactuca sati'va*, *Lettuce*, *Garden Lettuce*, *Eunu'chium Meco'nis*, *Thridax*, *Cherbas*, (F) *Laitue ordinaire*. It is used as a wholesome salad. The seeds possess a quantity of oil, which, when formed into an emulsion, has been advised in ardor urinæ, &c.

The inspissated juice, *Lactuca'rium*, *Thrid'acē*, resembles, in odour and appearance, that of opium, and is, like it, narcotic, but uncertain. Dose, gr. j to x and more.

LACTUCA SCARIOLA, *L. Sylves'tris*, *Scariola*, (F) *Laitue Scariole*, *L. sauvage*, possesses a stronger degree of bitterness than the *L. sativa*. It has similar virtues with the next.

LACTUCA VIRO'SA, *L. graveolens*, *Strong-scented Lettuce*, (F) *Laitue vireuse*. The odour of this plant, the leaves of which are used in medicine, is strongly narcotic, and the taste bitter. They are narcotic, diuretic, and aperient; and have been used in dropsies.

LACUNA. A *Fossa* or *Ditch*. Anatomists have given this name to small cavities in the mucous membranes, the parietes of

which secrete a viscid humour. Certain lacunæ are but the excretory orifices of mucous crypts. They are very visible in the rectum, vagina, urethra, &c. Sometimes, *lacuna* is used synonymously with *crypt*.

LADRERIE (F), from *λαιδερος*, 'deformed.' (F) *Léproserie*, *Maladrerie*. A vulgar name for the Elephantiasis or Leprosy of the Arabs. Also, a hospital for the reception of the leprosy.

LÆTIFICAN'TIA, from *Lætifico*, 'I make glad.' Medicines, formerly used as cordials, in depression of spirits, &c.

LAGOPHTHAL'MIA, from *λαγος*, 'a hare,' and *οφθαλμος*, 'an eye.' *Hare's Eye*: *Leporinus Oculi*, (F) *Œil de Lièvre*. A vicious arrangement of the upper eyelid, which is so retracted, that it cannot cover the globe of the eye during sleep. It has been asserted, that this condition of the eye is natural in the hare, when asleep.

LAIT RÉPANDU (F), *Lait épanché*. A popular expression in France, under which is comprehended every kind of disease (and particularly vague pains), occurring after delivery:—all being ascribed to diffusion or deposition of milk.

LALLATION, *Lallatio*, *Lambdacismus*, *Lullaby speech*. Sauvages uses this term for a vicious pronunciation, in which the letter L is improperly doubled, or softened, or substituted for R.

LAMBDOID or **LAMBDOIDAL**, *Lambdoïdes*, from the Greek letter Λ, *λαμβδα*, and *σμός*, 'shape,' 'resemblance.' Anatomists have given the name **LAMBDOIDAL SUTURE**, *Sutura lambdoïdalis*, *S. Proræ*, to the suture, formed by the parietal bones and the occipital, because it resembles the Λ, *lambda*, of the Greeks. It is the *Occipito-parietal suture*,—*Sutura occipitale*, (Ch.) In this suture the ossa wormiana are most frequently met with; and the denticulations are most distinctly marked.

LAMELLAR, *Lamello'sus*, *Lamina'ted*, (F) *Lamelleux*, *Lamineux*, composed of laminae or leaves;—as the *Lamellar* or *laminated Tissue*; i. e. the *cellular tissue*.

LAMINA, *Lamel'la*, (F) *Lame*. A thin, flat part of a bone;—a plate or table;—as the cribriform lamina or plate of the ethmoid bone.

LAMINA SPIR'ALIS, *Septum scalæ*, *Septum cochleæ audit'riæ*. A partition between the scalæ of the cochlea. The larger part of this, next the modiolus, is formed of bone. The remainder, or that part next the opposite side of the scalæ, is composed of a cartilaginous membrane, called, by Valsalva, *Zona Cochleæ*. By some anatomists, the lamina is divided into a *Zona ossea*, and *Z. mollis*. By others, it is considered to consist of four laminae, when examined with a strong glass:—a *Zona ossea*, next to the modiolus,—a *Zona coriacea*, on the outer side of this: a *Zona vesicularis*,—and a *Zona membrana'cea*, which is perhaps the lining membrane of the cochlea.

LA'MIUM ALBUM, *Urti'ca mor'tua*, *Ga-*

leop'sis, *Archangel'ica*, *Dead Nettle*, *White Arch'angel Nettle*, (F) *Ortie blanche*, *Ortie morte*. Infusions of this plant have been recommended in uterine hemorrhage, and in leucorrhœa. It is not used.

LANCE DE MAURICEAU (F). An instrument, invented by Mauriceau for perforating the head of the fœtus. A perforator.

LANCET, *Lanceola*, *Lancetta*, *Schastet'ion*, (F) *Lancette*,—diminutive of *lancea*, 'a lance.' A surgical instrument, used in the operation of phlebotomy. It is composed of two parts, the handle, (F) *Chasse*, and the blade, (F) *Lame*. The former is made of two small plates of ivory, bone, or shell, movable on the blade, for whose preservation they are intended. The blade is formed of well polished steel. Lancets are made of different shapes;—some being *broad-shouldered*, others *spear-pointed*. The French distinguish three kinds. 1. *Lancette à grain d'orge*, which, on account of the almost oval shape of its point, makes a large opening. 2. The *L. à langue de serpent*, which is very narrow towards the point: and, 3. The *L. à grain d'avoine*, which holds a medium station between the two former, and is generally preferred.

The *Abscess Lancet* is merely a large lancet for the purpose of opening abscesses.

LAN'CINATING, *Lan'cinans*, from *lancina're*, 'to strike or thrust through.' (F) *Lancinant* (substantive, *Élancement*.) A species of pain, which consists in lacerations or shootings, similar to those that would be produced by the introduction of a sharp instrument into the suffering part. It is especially in cancer, that this kind of pain is felt.

LANGÉAC, MINERAL WATERS OF. Acidulous, mineral waters at Langeac, in the department of Haute-Loire, France. They are employed as refrigerant, aperient, and diuretic. They contain carbonic acid, carbonates of soda and magnesia, and a little iron.

LANGII AQUA EPILEP'TICA, *Epilep'tic Water of Langius*, formerly employed against epilepsy. It was composed of the flowers of the *convallaria* and *lavender*, *Spanish wine*, *cinnamon*, *nutmeg*, *mistletoe*, *peony*, and *dittany roots*, *long pepper*, *cubeb*, and *rosemary flowers*.

LANGUOR, *Aph'esis*. (F) *Langueur*. A species of depression or debility, which generally comes on slowly.

LAONICA CURA'TIO. A mode of treating the gout, which consisted in the employment of local applications, proper for evacuating the morbid matter.

LAPAROCE'LE, from *λαπαρα*, 'the lumbar region,' and *κληη*, 'a tumour.' *Lumbar Hernia*, through a separation of the fibres of the quadratus lumborum, and a protrusion of the aponeurosis of the transverse muscle, on the outside of the mass common to the sacrolumbalis and longissimus dorsi.—Cloquet.

LAPIDIL'LUM. Blasius has given this

name to a kind of scoop, used, in his time, for extracting stone from the bladder.

LAPIS LAZULI, *Lapis Cy'anus, Asulci, Laz'ulite*, (F) *Pierre d'azur, Outremer*. A stone, of a beautiful blue colour; opaque; and close-grained; fracture dull. It is composed of silex; alumine; carbonate and sulphate of lime; oxide of iron, and water. It was formerly looked upon as a purgative and emetic, and given in epilepsy.

LAPSA'NA, *Lampsa'na, Na'pium, Papil-la'ris herba, Dock-cresses, Nipple-wort*. (F) *Lampsane, Herbe aux Mamelles*. This plant is a lactescent bitter. It has been chiefly employed, however, as an external application to sore nipples, &c.

LA'QUEUS, *Funis*. A cord or ligature or bandage, with running knots;—a *noose*, a *loop*, *Brochos, Pach'etos*. (F) *Laq ou Lacq*. The term is applied to a bandage or fillet of any kind, attached by means of a loop upon any part with the view of fixing it; as in certain cases of labour, where a hand or foot presents; or to facilitate extension in luxations and fractures.

LAQUEUS GUTT'URIS, 'Noose of the throat.' Violent inflammation of the tonsils, in which the patient appears as if suffocated by a noose.

LARDA'CEOUS, from *lardum*, 'lard;' the fat of bacon. An epithet given to certain organic alterations in the textures, whose aspect and consistence resemble lard.

LARYNGE'AL, *Laryngeus*. (F) *Laryngé, Laryngien*. That which belongs to the larynx.

The **LARYNGEAL NERVES**, (F) *Nerfs laryngés*, are two in number;—a *superior* and *inferior*.

The *superior laryngeal nerve* is given off from the trunk of the pneumogastric, at the upper and deep part of the neck. It passes downwards and inwards, behind the internal carotid artery, and divides into two secondary branches: the one, *external*, which distributes its filaments on the outside of the larynx, to the sterno-thyroid, hyo-thyroid, constrictor inferior, crico-thyroid muscles, &c. The other, the *internal*, which crosses the thyro-hyoid membrane, and gives filaments to the epiglottis, the mucous membranes of the pharynx and larynx, to the arytenoid gland, the arytenoid and crico-thyroid muscles, and ultimately anastomoses with the inferior laryngeal nerve.

The *inferior laryngeal nerves* or *recurrents*, *Nervi reversi'vi, Rameaux Trachéaux* (Chaus.), arise from the trunk of the pneumogastric within the thorax. They ascend in the furrow, which separates the trachea from the œsophagus, to be distributed on the neck, after having been reflected;—the left, around the arch of the aorta; the right, around the corresponding subclavian. They send off filaments to the cardiac plexuses; to the parietes of the œsophagus, and trachea; to the thyroid gland; to the inferior constrictor of the pharynx; the posterior and lateral crico-arytenoid and thyro-arytenoid muscles;

and to the mucous membrane of the pharynx and larynx.

The **LARYNGEAL ARTERIES** are given off from the thyroid arteries.

The **LARYNGEAL VEINS** open into the internal jugular. Winslow gives the name *laryngeal* to the *superior thyroid artery*, (q. v.)

LARYNGITIS, *Cynan'chè laryngea, Angina laryngea*. (F) *Catarrhe laryngien, Angine laryngée, Inflammation of the Larynx*. This disease, in some measure, resembles croup; but is usually devoid of that peculiar, sonorous inspiration, which attends the latter. There is, also, pain upon pressing the larynx; and, whilst laryngitis is a disease of more advanced life, croup attacks children. The membraniform exudation is, also, absent; probably, because the inflammation, being seated above the glottis, the coagulable lymph is readily expectorated. It requires the most active treatment.

LARYNGOG'RAPHY, *Laryngogra'phia*; from *λαρυγξ*, 'the larynx,' and *γραφειν*, 'a description.' An anatomical description of the larynx.

LARYNGOL'OGY, from *λαρυγξ*, 'the larynx,' and *λογος*, 'a treatise.' A treatise on the larynx.

LARYNGOT'OMY, *Laryngoto'mia*, from *λαρυγξ*, 'the larynx,' and *τεμνειν*, 'to cut.' A surgical operation, which consists in opening the larynx, either to extract a foreign body, or to remedy any obstruction of the glottis. The operation is, sometimes, erroneously called *Bronchotomy* and *Tracheotomy*.

LAR'YNX, *λαρυγξ*, (a whistle.) *Caput seu oper'culum seu Initium seu Finis superior seu Terminus superior seu Pars prima as'peræ arte'riæ*. The apparatus of voice is situate at the superior and anterior part of the neck; and at the top of the trachea, with which it communicates. It is composed of four cartilages,—the thyroid, cricoid, and two arytenoid; is moved by a number of muscles, and lined by a mucous membrane, having certain membranous reflections, constituting the *superior ligaments of the glottis*, &c.

PARTS COMPOSING THE LARYNX.

1. Cartilages.	Thyroid, Cricoid, Two Arytenoid, Epiglottis.
2. Muscles.	Extrinsic. { Sterno-thyroid, Constrictors of the pharynx, All the muscles of the hyoid region. Intrinsic. { Crico-thyroid, Crico-arytenoid, poste- rior, Crico-arytenoid, la- teral, Thyro-arytenoid, Arytenoid.
3. A Mucous Membrane.	
4. Glands.	{ Epiglottic, Arytenoid, Thyroid.
5. Membranes.	{ Thyro-hyoid, Crico-thyroid.
6. Ligaments.	{ Crico-arytenoid, Thyro-arytenoid.

The vessels and nerves of the larynx are called *larynge'al*.

The larynx is destined to give passage to the air in the act of respiration, and to impress upon it certain modifications, which constitute the voice. Its dimensions vary in different individuals. In men, it is always larger and situate lower than in women.

LASERPITIUM, *Laser*, *Silphium*, *σποσιλαφιον*. A term applied, anciently, both to a plant and its juice, with the nature of neither of which do we possess any precise information. Bentley, Laurence, Geoffroi, &c. regard it to have been the same as our assafœtida:—Theophrastus, Dioscorides, and the ancient Scholiast on Aristophanes, however, by assigning a sweet and agreeable flavour to the laserpitium, discountenance the idea. From whatever plant obtained, it was so rare, and consequently so costly, that the Romans deposited it in the public treasury. It was obtained from Cyrene—*Succus Cyrenaicus*; and likewise from Persia,—the latter being the most valuable. The Laserpitium is called, by Avicenna, *Altihit*.

LASERPI'TIUM LATIFO'LIUM, *Gentiana alba*, *White Gentian*, *Cerva'ria alba*. (F) *Laser à larges feuilles*. The root of this plant is bitter and tonic.

LASERPI'TIUM SILER, *Ses'eli*, *Siler montanum*; *Heart-wort*, *Sermountain*. The seeds and roots are possessed of aromatic properties.

LATENT, *Latens*, from *late're*, 'to lie hid,' 'lying hid,' 'concealed.' An epithet applied to certain diseases or states of disease, in which the symptoms are so concealed and obscure, as to escape the observation of the physician. Thus, we say *latent inflammation*, *latent period of small-pox*, &c.

LATERI'TIOUS, *Lateri'tius*; from *later*, 'a brick.' An epithet applied to the brick-like sediment, occasionally deposited in the urine of people afflicted with fever.

LATIB'ULUM, from *lateo*, 'I lie hid.' The focus of febrile poison; whence it spreads to every part to induce a paroxysm.

LAT'ICA, *Amphimer'ina lat'ica* of Sauvages. A species of quotidian remittent, whose paroxysms are very long, and which is accompanied with *latent* heat, (?) whence its name.

LATIS'SIMUS DORSI, *Aniscalp'tor*, *Dorsi-lumbo-sacro-huméral*, *Brachium movens quartus*, *Lombo-huméral* (Ch.), (F) *Muscle grand dorsal*, *M. très large du dos*. A flat muscle; broad, especially below; thin; quadrilateral; and situate at the posterior, lateral, and inferior region of the trunk. It is attached to the posterior half of the outer lip of the crest of the ilium; to the posterior surface of the sacrum; to the spinous processes of the six or seven last dorsal vertebræ, and to all those of the loins, and to the last four false ribs, and is inserted by a strong tendon at the posterior edge of the bicipital groove of the

humerus. Its upper fibres are almost horizontal: the middle very long and oblique upwards and outwards; and the anterior almost vertical.

This muscle carries the arm backwards, depressing it, and making it turn on its axis. It also draws, backwards and downwards, the prominence of the shoulder. When, suspended by an arm, we make an effort to raise ourselves, it draws the trunk towards the arm. It can, also, raise the ribs by assuming its fixed point on the humerus, and become an inspiratory muscle.

LAUCA'NIA, *Leucania*, from *λαυα*, 'I enjoy,' 'I take.' The fauces and œsophagus. Also, the chin.—Gorræus.

LAUD'ANUM. Perhaps from *laus*, 'praise;' *lauda'tum*, 'praised.' Every preparation of opium, solid or liquid, but more particularly the extract and tincture, and especially the latter.

LAUDANUM ABBA'TIS ROUSSEAU, *Guttæ Abbatidis Rousseau*, *Vinum opia'tum fermentatio'nē para'tum*, *Abbé Rousseau's Drops*, (Mel. Narbonnens. 3 xij, *aquæ calidæ* ℞ iij. Set in a warm place, and, as soon as the mixture ferments, add *opium* 3 iv, dissolved in *water* 3 xij. Let it ferment for a month, and evaporate to 3 x: strain, and add *rectified spirit of wine* 3 ivss.)

LAURENT, SAINT, MINERAL WATERS OF. A thermal spring, five leagues from Joyeuse in France. Temp. 127° Fahr.

LAURUS, *Laurus nob'ilis*, *Daphne*, the *Sweet Bay*. Nat. Ord. Laurineæ. (F) *Laurier*. The leaves and berries have a sweet, fragrant smell; and an aromatic, astringent taste. Sweet bay has been advised as a stomachic and carminative, but is now rarely used. It is, sometimes, employed as a fomentation and in glysters; and the berries are an ingredient in the *Emplastrum Cumini*.

LAURUS CASSIA. The species of laurus which yields the *Cassia lignea*, *Casia*, *Cassia cinnamo'mea*, *Cortex Canel'la Malabar'ica*, *Cassia lignea Malabar'ica*, *Xylo-cassia*, *Canel'la Malabarica et Javen'sis*, *Canella Cuba'na*, *Arbor Juda'ica*, *Cassia Canel'la*, *Canellifera Malabar'ica*, *Cortex crassior*, *Cinnamo'mum Malabaricum*, *C. In'dicum*, *C. Sinen'se*, *Calihac'ha canel'la*, *Wild Cinnamon*, *Malabar Cinnamon*, *Cassia*. (F) *Cannelle de Malabar ou de Java*, ou de la Chine, ou des Indes, ou de Coromendel, *C. fausse*, *C. matte*, *Casse en bois*, *Casse aromatique*. The bark and leaves abound with the flavour of cinnamon, for which they may be substituted; but they are much weaker. The unopened flower buds are used in the same manner.

LAURUS CINNAMO'MUM, *Cinnamo'mum*, *Darse'ni*, *Darsi'ni*, *Cinnamon*, *Xylo-cinnamo'mum*, *Cuurdo Canel'la*, *C. Zeylan'ica*. (F) *Cannelle*, *Baume de Cannelle*, *Cannelle officinale*. Cinnamon bark is stimulant and carminative, and is employed, chiefly, as a grateful aromatic, to cover the taste of more

nauseous remedies. Dose gr. x to ʒj. The Flowers, called *Cassia Flores* in the shops, possess aromatic and astringent virtues, and may be used wherever cinnamon is required.

LAURUS CULILAWAN. The tree that affords the *Cortex Culilawan*, *Cullitlawan*, *Cortex caryophylloides*, *C. Caryophylloides Amboinen'sis*. This bark resembles the sassafras in appearance and properties, and is used in Java as a condiment.

LAURUS SAS'SAFRAS, *Sassafras*, *Ague-free*, *Cornus mas odora'ta*, *Anhuiba*. Indigenous in the United States. Sassafras wood and root have been considered stimulant, sudorific and diuretic. The virtues depend upon essential oil, the odour of which is not unlike that of fennel. It has been used in cutaneous diseases, chronic rheumatism, &c.

LAUTIS'SIMA VINA. Wines were formerly so called, which were strongly impregnated with myrrh.

LAVEN'DULA, from *lavo*, 'I wash;' so called from being used in baths. *Laven'dula spica*, *Common lavender*, *Lavandula*, (F) *Lavande*, *Aspic*, *Spic*. The odour of lavender flowers is fragrant and agreeable; taste warm and bitterish—depending upon an essential oil. It has been used as a stimulant; particularly in the form of the oil,—*Oleum lavendulæ*. The dried leaves have been employed as an errhine.

The French use the *Lavendula stæchas* or *French lavender*, of which they have a compound syrup, *Syrupus de stæch'adæ compos'itus*: given as a pectoral.

LAWSONIA INER'MIS, *Alcan'na vera*, *A. Orienta'lis*, *Cyprus antiquorum*, *Ligustrum Ægyptiacum*, *Smooth Lawsonia*, (F) *Henné*. An East Indian and African plant, the root of which is slightly astringent.

In India, the root of the *Lawsonia spinosa* is employed in lepra and other cutaneous affections.

LAX'ATIVE, *Laxati'vus*, from *laxa're*, 'to loosen.' *Minorati'vus*, *Soluti'vus*, *Alvidu'cus*. A medicine which gently opens the bowels; such as tamarinds, manna, &c.

LAXA'TOR TYM'PANI, *L. major tympani*, *Exter'nus mallei*, *Ante'rior mallei*, *Obli'quus auris*, *Externus auris vel Laxator inter'nus*, *Eusta'chii mus'culus*, *Spheni-salpingo-mallien*, (F) *Antérieur du marteau*. A muscle, which arises from the spine of the sphenoid bone and from the cartilage of the eustachian tube, and is inserted, by a tendon, into the apophysis of Raw. It relaxes the membrana tympani.

LAXATOR MINOR TYMPANI. A very small muscle, which extends from the upper part of the external auditory canal and is inserted at the inferior part of the process of the handle of the malleus. Its existence is denied by most anatomists.

LAXITY, *Lax'itas*, *Laxness*. Condition of a tissue, when loose or relaxed; or of one which wants tone. We say *laxity of fibre*,

laxity of skin, to express, that those parts have lost some of the tenseness proper to them.

LAZARET'TO, *Lazaret*, *Lazar-house*, from (I) *lazzero*, 'a leper.' A solitary edifice in most seaports of magnitude, intended for the disinfection of men and goods, proceeding from places where contagious diseases are prevailing.

LEB'ANON, MIN'ERAL WATERS OF. The spring at Lebanon, 26 miles east of Albany, New York, is an almost pure thermal. Temp. 72° Fahr.

LECTISTER'NIUM. The arrangement of a bed, so as to adapt it to a particular disease. Also, a supplication, with the Romans, in times of public danger, when beds or couches were spread for the gods, as if they were about to feast, and their images were taken down from their pedestals and placed upon these couches around the altars. The lectisternium was first introduced in the time of a pestilence.—Livy.

LECTUA'LIS, from *lectum*, 'a bed.' An epithet applied to a long, chronic disease.

LEDUM PALUS'TRE, *Rosmarinus sylvestris*, *Anthos sylvestris*. (F) *Lède ou Romarin sauvage*. *Nat. Order.* Ericineæ. *Sex. Syst.* Decandria Monogynia. This plant has a bitter, subastringent taste, and was formerly used in Switzerland in place of hops; the virtues are equivocal.

LEG, (Danish,) *Crus*, *Scelos*, *Cneme*. The portion of the lower extremity, which extends from the knee to the foot. It consists of three bones;—*Tibia*, *Fibula*, and *Patella*, and, also, of a great number of muscles, vessels, and nerves. The projection, formed by the muscles at the back part of the leg, has received the name of *Calf of the leg*. It is the special attribute of man, and proves that he is destined to be biped.

LEGITIMATE, *Legit'imus*, *Genuinus*, *Gnesios*. An epithet, applied to things which are according to rule. A *legitimate child* is one conceived or born during marriage. *Legitimate diseases* are those, which follow a regular march.

LEGNA, λεγνα, from λεγων, 'a fringed edge.' The orifice of the pudendum muliebre, or of the uterus.

LEGU'MEN, from *lego*, 'I gather:' (F) *Legume*, *Gousse*. So called because it is usually gathered by the hand, instead of being reaped. All kinds of *pulse*, as peas, beans, &c. are thus termed.

LEIOP'ODES, from λειος, 'smooth,' and πους, 'a foot.' Affected with *flat-footedness*, *splay-footedness*. Individuals, the soles of whose feet are flat, instead of having the concavity, which they commonly present.

LEI'OPUS, *Li'opus*, from λειος, 'smooth,' and πους, 'a foot.' One that is flat-footed, splay-footed.

LEIPHÆ'MOS, from λειπα, 'I want,' and αιμα, 'blood.' A word sometimes used adjectively; at others, substantively; either for

a vicious state of blood, or rather for a sort of anæmia—or for the patient who labours under this condition.

LEIPODER'MOS, *Lipoder'mos*, from *λεπω*, 'I want,' and *δερμα*, 'skin.' One who wants a part of his skin. It is especially applied to those who want the prepuce.

LEIPYR'IAS, from *λεπω*, 'I want,' and *πυρ*, 'fire' or 'heat.' A species of continued fever, referred to by the Greek physicians, in which there is burning heat of the internal parts and coldness of the extremities. Avicenna described, under this name, a kind of hemitritæa.

LEMONADE, (F) *Limonade*. Lemon juice, diluted with water and sweetened.

DRY LEMONADE, (F) *Limonade sèche*. Citric or tartaric acid reduced to powder and mixed with sugar. *Lemonade Powders* may be made as follows:—Pound 3 1/4 of citric acid, with a few drops of essence of lemon-peel, and 3 i or more of lump sugar. Divide into six papers, each of which will make a glass of lemonade.

NITRIC LEMONADE. Nitric acid considerably diluted with water and sweetened.

SULPHURIC LEMONADE and **TARTARIC LEMONADE** are made with the sulphuric and tartaric acids.

LEN'ITIVE, *Leniti'vus*, *Lenis*, *leniens*, from *lenio*, 'I assuage.' A medicine, which allays irritation or palliates disease; also, a laxative medicine. A *lenitive electuary* is one that purges gently.

LENTIC'ULA. Dim. of *lens*, a lentil. A freckle. Also, the eruption of lenticular fever. See *Ephelides*.

LENTICULA'RES GLAN'DULÆ, *Lenitic'ular glands*. Mucous follicles, having the shape of a lentil, which are observed especially towards the base of the tongue.

LENTIS'CINUM VINUM. Wine, impregnated with mastich; from *Lentiscus*, 'the mastich tree.'

LENTOR, from *lentus*, 'clammy.' A viscosity or siziness of any fluid.

LEONTIASIS, *Leontion*, from *λεων*, 'a lion.' A name given to lepra of the face, from some fancied resemblance between the countenance of those labouring under it and that of the lion. To this kind of lepra the epithets, *le'online* and *le'ontine*, have been given.

LEON'TODON TARAX'ACUM, *Urina'ria*, *Caput mon'achi*, *Dens leo'nis*, *Dandelion*, *Piss-a-bed*. Order. Compositæ. (F) *Pissenlit*, *Liondent*. The young leaves are sometimes eaten as salad. The roots are, also, roasted and used as a substitute for coffee. The root is, moreover, reputed to be aperient and diuretic; hence its vulgar name. Its efficacy is doubtful.

LEONU'RUS, from *λεων*, 'a lion,' and *ουρα*, 'tail.' *Lion's tail*.

LEONURUS CARDIACA, *Agripal'ma Gallis*, *Marru'bium*, *Cardiaca crispa*, *Herba cardiaca*,

H. patæ lapi'næ, *Motherwort*, (F) *Agripaume*. Its properties are those of a nauseous bitter; and hence it has been used in hysteria and other nervous affections.

LEPAS and **LEPIS**, *λεπας*, gen. *λεπαδος*, *λεπιδος*, gen. *λεπιδος*, 'a scale.' Hence:

LEPID'IUM, from *λεπιδος*, 'a scale;' so called from its supposed usefulness in cleansing the skin from scales and impurities. *Pepper-wort*.

LEPID'IUM IBE'RIS, *Ibe'ris*, *Cardamantica*, *Sciat'ica cresses*. This plant possesses a warm, penetrating, pungent taste, like other cresses, and is recommended as an antiscorbutic, antiseptic, and stomachic.

LEPIDIUM SATI'VUM, *Nasturtium hortensê*, *Garden cress*, *Dittander*, (F) *Cresson alénois*, *Cresson des Jardins*. This plant possesses warm, stimulating properties, and is used like the last.

LEPIDOSARCO'MA, *Tumor squamiformis carno'sus*. A fleshy tumour, covered with scales; from *λεπιδος*, 'a scale,' and *σαρκωμα*, 'a fleshy tumour.' Marcus Aurelius Severinus describes tumours of this kind in the interior of the mouth.

LEPRA, *λεπρα* or *λεπιγα*, from *λεπιδος*, 'a scale,' *Lepido'sis Lepriasis*, *Vitiligo*, *Lepra Græcorum*, *Leprosy*, (F) *Lèpre*, *Mal Saint-Main*. This term has been applied to various affections, very different in character. 1. To the *Leprosy of the Jews*, *Leuce*, *Lepido'sis lepriasis canes'cens*. A variety of the *Alphos* or *Lepra alphiodes*. The leuce was, generally, not scaly, but consisted of smooth, shining patches, on which the hair turned white and silky, and the skin, with the muscular flesh, lost its sensibility. It was incurable. 2. To the *Elephantiasis* or *Lepra of the Arabs*. See *Elephantiasis*; and 3. To the *Lepra of the Greeks*, which includes all the varieties met with at the present day. It is characterized by scaly patches of different sizes, but having always nearly a circular form.

Bateman and Willan describe three chief varieties of this lepra—1. The *Lepra vulgaris*, *Lepido'sis lepriasis vulgaris*, *Dartre furfuracée arrondie*, of Alibert; characterized as follows—scales glabrous, whitish; size of a crown piece; preceded by smaller reddish and glossy elevations of the skin, encircled by a dry, red, and slightly elevated border; often confluent; sometimes covering the whole of the body except the face.

2. The *Lepra alphiodes*, *Lepido'sis Lepriasis al'bida*, *Alphos*, *Morphæa alba*, *Vitiligo albus*, *Albara*, *Albaræ*, *Albaros*, *Lèpre écaillieuse* of Alibert, *White leprosy*. An affection, characterized by white patches, surrounded by a rose-coloured areola, which appear here and there on the surface; depressed in the middle, and

3. *Lepra nigricans*, *Lepra melas*—*Vitiligo melas*, *V. nigra*, *Morphæa nigra*, *Lepra maculo'sa nigra*, *Al'baras nigra*, *Melas*, *Lepi-*

dosis lepriasis nigricans, *Black leprosy*; in which the scales are livid; the size of half a dollar; and diffused over the body, but less widely than in the *Alphoides*. The French pathologists usually admit three species of lepra; to which they give the epithets *scaly* (*squamense*), *crustaceous* (*crustacée*) and *tubercular* (*tuberculeuse*), according as the skin may be covered with scales, crusts, or tubercles.

Lepra appears to be endemic in Egypt, in Java, and certain parts of Norway and Sweden. Imperfect and faulty nutriment appears to contribute to its development.

The means, best adapted for its removal, are:—a mild, unirritating diet, emollient fomentations—sulphureous baths, fumigations, &c. but, often, all remedial agents will be found ineffectual.

LEPTOS, λεπτός, 'thin,' 'light.' Hence:

LEPTOTROPHIA, from λεπτός, 'light,' and τροφή, 'nourishment.' Light nutrition.

LESION, *Læsio*, from *læsus*, 'hurt,' 'injured.' Derangement, disorder; any morbid change, either in the exercise of functions or in the texture of organs. *Organic lesion* is synonymous with *organic disease*.

LETHARGY, *Lethargus*, *Carus lethargus*, *Lethargy*, *Veter'nus*, *Lethargia*, *Oblivio iners*, from ληθην, 'oblivion,' and αργία, 'idleness.' A constant state of stupor from which it is almost impossible to arouse the individual; and, if aroused, he speedily relapses into his former condition.

LETHIFEROUS, *Lethiferus*, *Lethalis*, *Mortifer*, from ληθην, 'death,' and φέρω, 'I bear.' Death-bearing, deadly.

LEUCOMA, *Oculo'rum albu'go*, *Albu'go*, *Al'bula*. *Leucoma* and *Albugo* are often used synonymously, to denote a white opacity of the cornea. Both are essentially different from the nebula of the cornea; the nebula being usually the result of chronic ophthalmia and an effusion of a milky serum into the texture of the delicate continuation of the conjunctiva over the cornea;—the others are the result of violent, acute, ophthalmia. In this state, a thick, coagulable lymph is extravasated from the arteries, sometimes superficially, at other times deeply, into the substance of the cornea. On other occasions, the disease consists of a firm, callous, cicatrix on this membrane,—the effect of a wound or ulcer with loss of substance. The affection is more difficult of cure in proportion to its duration and to the age of the individual; the activity of the absorbents being greater in youth. If inflammation still exists, antiphlogistics must be persevered in; and, afterwards, gentle stimulants be used to excite absorption; along with the internal use of mercury or iodine.

LEUCOPHLEGMA'TIA, from λευκός, 'white,' and φλεγμα, 'phlegm.' A dropsical habit. Some writers use the word synonymously with *anasarca*; others with *emphysema*.

LEUCORRHŒA, *Fluxus* vel *fluor mulie'bris*, *Proflu'vium mulie'brē*, *Cursus mat'ricis*, *Fluxus mat'ricis*, *Elytri'tis*, *Coleositis*, *Distilla'tio u'teri*, *Fluxio alba*, *Fleurs blanches*, *Pertes blanches*, *Ecoulement blanc*, *Catarrhe utérin*, *The whites*, *Perte utérine blanche*, *Catame'nia alba*, *Menses albi*, *Menstrua alba*, *Menorrh'gia alba*, *Fluor mulie'bris non Gal'licus*, *Blennelyt'ria*, *Gonorrhœ'a benigna*, *notha invet'era*, *Purga'tio mulie'bris alba*, *Alba purgamen'ta*, *Cachex'ia uteri'na*, *Rheuma uteri*, *Uteri Cory'za*, *Medorrhœ'a femina'rum insons*, *Blennorrhœa seu Blennorrh'gia genita'lium*, *Ædœoblennorrhœ'a seu Medoblennorrhœ'a femina'rum*, from λευκός, 'white,' and ῥέω, 'I flow.' A more or less abundant discharge of a white, yellowish, or greenish mucus; resulting from acute or chronic inflammation or from irritation of the membrane lining the genital organs of the female. The *Vaginal Leucorrhœa* has been termed *Blennorrhœa seu Fluor albus vaginæ*, *Leucorrhœ'a*, *Medorrhœ'a vaginæ* and *Elytroblennorrhœ'a*:—the *Uterine Leucorrhœa* has received the names *Fluor albus uteri*, *Leucorrhœ'a*, *Medorrhœ'a uteri*, *Metroblennorrhœ'a*. It is often attended with pain and a sense of heaviness in the loins, abdomen and thighs; disordered digestive functions, &c. so that, at times, the health suffers largely, although there are few females, who are not occasionally subject to moderate leucorrhœa. Attention to the general health, change of air, keeping up a perspirable state of the surface by flannel worn next the skin, the horizontal posture, &c. do more than pharmaceutical agents; which are almost entirely confined to astringent injections. These may be employed, when the discharge is so great as to require them.

LEVA'TOR AN'GULI ORIS, *Abdu'cens labio'rum*, *Eleva'tor labiorum commu'nis*, *Caninus*, *Sus-maxillo-labial*, *Petit sus-maxillo-labial* (Ch.), (F) *Muscle canin*. A small, flat, long, quadrilateral muscle, which arises from the fossa canina, and is inserted at the commissure of the lips, where it is confounded with the triangularis. It raises the corner of the mouth, and draws it towards the ear.

LEVATOR ANI, *Levator magnus seu internus*, *Latus ani*, *Elevator ani*, *Sedem attol'lens*, *Pubio-coccygien annulaire*, *Sous-pubio-coccygien* (Ch.), (F) *Releveur de l'anus*. A muscle, situate at the lower part of the pelvis. It is broad, flat, quadrilateral, and broader above than below. It represents a kind of membranous partition, which closes the outlet of the pelvis and the upper concavity of which is opposed to that of the diaphragm. It is attached, above, to the posterior surface of the body of the pubis, to the upper part of the obturator foramen, and to the spine of the ischium; and it is inserted into the coccyx, into an aponeurotic line common to it and its fellow, and into the lateral

parts of the rectum. This muscle supports the rectum; raises it, and carries it upwards during the evacuation of the excrement. It can, also, compress the bladder and vesiculæ seminales, and thus favour the expulsion of the urine and sperm.

LEVATOR LABII INFERIORIS, *Levator menti, Elevator labii inferioris, Incisivus inferior, Elevator labii inferioris proprius, Musculus penicillatus*. A portion of the mento-labial of Chaussier. (F) *Houppes du menton, Releveur de la lèvre inférieure, Releveur du menton*. A small muscle situate before the symphysis menti. It is thick, conical; attached by its apex to a fossette at the side of the symphysis in the inferior maxillary bone. Its fibres proceed diverging and vanishing in the manner of a tuft, (F) *Houppes*, on the skin of the chin. This muscle raises the chin, and pushes upwards the lower lip.

LEVATOR LABII SUPERIORIS ALÆQUE NASI, *Incisivus lateralis et pyramidalis, Grand sus-maxillo-labial* (Ch.), (F) *Élévateur commun de l'aile du nez et de la lèvre supérieure*. This muscle is a fleshy, thin, triangular bundle, situate at the sides of the nose. It arises from the ascending process of the superior maxillary bone: thence its fibres descend in a diverging manner, a part being inserted into the ala of the nose, and a part losing themselves in the upper lip. This muscle raises the upper lip and ala nasi, which it draws a little outwards.

LEVATOR LABII SUPERIORIS PROPRIUS, *Musculus incisivus, Elevator labii superioris proprius, Moyen-sus-maxillo-labial* (Ch.), *Orbito-maxillo-labial*. This thin, flat, quadrilateral muscle is situate at the middle and inner part of the face. It arises from the os malæ and the os maxillare superius and is inserted into the upper lip, which it raises, at the same time carrying it a little outwards.

LEVATOR PALATI, *Levator Palati Mollis, Petrosalpin'go-staphilin'us vel Salpin'go-staphilin'us internus, Salpingo-staphylinus, Pterigo-staphylinus externus, Spheno-staphylinus, Spheno-palatinus, Peristaphylinus internus vel superior, Pétro-staphylin*, (Ch.) This muscle is long, narrow, and almost round above; broader and flatter inferiorly. It arises from the lower surface of the *pars petrosa*; from the cartilage of the eustachian tube; and is inserted into the substance of the velum palati. Its use is to raise the velum palati.

LEVATOR PALPEBRÆ SUPERIORIS, *Palpebræ superioris primus, Apertor Oculi, Aperiens Palpebrarum rectus, Orbito-palpebral*, (Ch.) *Orbito-sus-palpebral*. (F) *Élévateur de la paupière supérieure*. A long, small, thin, muscle, situate at the upper part of the orbital cavity. By its posterior extremity, it is inserted into the little ala of the sphenoid bone, immediately in front of the foramen opticum; and, by its anterior extremity, which is expanded, it terminates at the upper margin of the tarsal cartilage of the

eyelid. This muscle raises the upper eyelid; draws it backwards, and sinks it in the orbit.

LEVATOR PROSTATÆ, (F) *Releveur de la prostate*. Santorini has given this name to the anterior fibres of the levator ani, which embrace the prostate.

LEVATOR SCAPULÆ, *Elevator Scapulæ, Elevator seu Musculus Patientiæ, Angularis, vulgo Levator proprius, Trachelo-scapulaire* (Ch.), (F) *Angulaire de l'omoplate, Releveur de l'omoplate*. This muscle is so called, because it is attached to the upper and internal angle of the scapula. It is situate at the posterior and lateral part of the neck, and at the upper part of the back. It is long, flat, and broader above than below. In this latter direction, it is inserted into the superior internal angle of the scapula; and, in the former, into the tops of the transverse processes of the first four cervical vertebræ. It depresses the prominence of the shoulder, by raising the posterior angle of the scapula, on which it impresses a kind of rotatory motion. It can, also, draw the head to one side.

LEVATOR URETHRÆ, (F) *Releveur de l'Urèthre*. Santorini describes under this name a portion of the transversus perinæi muscle.

LEVER, from *leva're*, 'to lift up.' *Vectis, Porrec'tum*. An inflexible rod, moving round a fixed point, and used for moving bodies, bearing burdens, or raising them. The point, on which the lever moves, is called the *Fulcrum* or *Hypomoch'ion*. The force, which moves the lever, is called the *power*; and the weight to be moved, the *resistance*. There are three kinds of levers. A lever of the first kind has the fulcrum between the power and resistance. A lever of the second kind has the resistance between the fulcrum and power; whilst a lever of the third kind has the power between the fulcrum and resistance. In the locomotive system of the human body, we have examples of all the three kinds. The bones represent levers; the muscles of locomotion are powers; the weight of parts to be moved constitutes the resistance. The fulcra are, at times, the joints; at others, the ground, &c.

The head moves on the neck as a lever of the first kind; the first cervical vertebra forming the fulcrum. We rise on tiptoe by a lever of the second kind, the fulcrum being the ground under the toes: and we have examples of a lever of the third kind in the flexion of the fore-arm on the arm, in the elevation of the arm, &c.

The LEVER, *Vectis obstetri'cius, Vectis*, (F) *Levier*, is an instrument, curved at the extremity, and having a fenestra. It is used to assist the extraction of the child's head, when instrumental aid is necessary.

Levers are, also, used by the dentists for extracting stumps, &c. The *Levier de l'Écluse, Langue de Carpe*, is employed for extracting the molar teeth.

LEVIATHAN PENIS, *Priapus Ceti*, *Bale'nas*. The penis of the whale. This singular medicine was, at one time, given in powder in cases of dysentery and leucorrhœa.

LEVIGATION, *Levigatio*, from *leviga're*, 'to polish.' *Porphyrisation*. An operation, by which bodies are reduced to very fine powder. It is performed by putting substances, already pulverized, into water; the coarser parts are not long in being deposited, whilst the finer molecules remain suspended in the water. The liquid is decanted into another vessel, and suffered to remain at rest, until the fine particles are all collected at the bottom of the vessel. The fluid part is then separated by decantation.

LIBIDO. Desire, necessity. Authors speak of *Libido uri'næ*, *Libido intesti'ni*. Some employ it synonymously with *Prurigo*; others with *Salac'itas*.

LIBOS, from *λεῖβω*, 'I distil.' A defluxion from the eyes.—Galen.

LICHEN, *λεῖχην* or *λεχην*, *Exor'mia Lichen*, *Leichen*, *Serpi'go*, *Volat'ica*. The cutaneous affection, described under this name by the Greek writers, is not clearly defined. Some have believed it to be the *Impeti'go*, but this is doubtful. The name is, now, generally applied to a diffuse eruption of red pimples, accompanied with a troublesome sense of tingling or pricking. Drs. Willan and Bateman define it;—"an extensive eruption of papulæ affecting adults, connected with internal disorder, usually terminating in scurf; recurrent, not contagious." One of their varieties, however, the *Lichen Tropicus*, does not accord well with this definition: for it affects children as well as adults, and is unconnected with internal disorder.

The **LICHEN SIMPLEX**, *Exor'mia Lichen simplex*, consists of an eruption of red papulæ, appearing first on the face or arms, and afterwards extending over the body; preceded for a few days by slight febrile irritation, which usually ceases when the eruption appears; with an unpleasant sense of tingling during the night. It generally dies away in ten days or a fortnight.

The **LICHEN PILA'RIS**, *Exormia Lichen pilaris*, is merely a modification of the preceding; the papulæ appearing at the roots of the hair.

The **LICHEN CIRCUMSCRIPTUS** is characterized by clusters or patches of papulæ, having a well defined margin, and an irregularly circular form: continuing for six or eight weeks. These varieties require but little medicinal treatment. The antiphlogistic plan is all that is necessary.

The **LICHEN AGRIUS**, *Exormia Lichen ferus*, *Lichen Agrius*, *Pap'ula agria*, is distinguished by pimples in clusters or patches, surrounded by a red halo: the cuticle growing gradually harsh, thickened, and chappy; often preceded by general irritation.

In addition to antiphlogistics, a cooling ointment may be used, to allay itching.

In the **LICHEN LIVIDUS**, the papulæ have a dark red or livid hue, without any fever. The papulæ are more permanent in this variety. It requires the mineral acids and bark.

In the **LICHEN TROPICUS**, *Exor'mia Lichen tropicus*, *Eccez'ma*, *Es'sera* (?), *Sudam'ina* (?), *Prickly Heat*, *Summer Rash*, the pimples are bright red, and of the size of a small pin's head: with heat, itching, and pricking as if by needles. It is local; produced by excessive heat; and disappears when the weather becomes cooler, or the individual is inured to the climate.

The **LICHEN URTICA'TUS**, *Exor'mia Lichen urtico'sus*, is another variety. The *Nettle Lichen* consists of papulæ, accompanied with wheals like those of nettle rash.

LICHEN CANINUS, *Lichen cinereus terrestris*, *Muscus caninus*, *Phys'cia niva'lis*, *Peltig'era cani'na*, *Ash-coloured Ground Liverwort*. (F) *Lichen contre-rage*, *Lichen blanc de neige*. This cryptogamous plant was, for a long time, considered capable of preventing and curing *Rabies canina*. It has, also, been used in mania and in spasmodic asthma.

LICHEN ISLAN'DICUS, *Muscus Islandicus*, *M. cathar'ticus*, *Clado'nia Islandica*, *Physcia Islandica*, *Iceland Lichen* or *Liverwort* or *Moss*. (F) *Lichen d'Islande*. This plant is inodorous; with a bitter and mucilaginous taste. It is esteemed to be tonic, demulcent, and nutrient. Dose, 3j to 3iv, being first steeped in water holding in solution some carbonate of potass, to extract the bitter, and then boiled in milk.

LICHEN PLICA'TUS, *Muscus arbo'reus seu Querci'ni Herba*. This plant is applied, as an astringent, to bleeding vessels; and to parts which are excoriated after long journeys, by the Laplanders.

LICHEN PULMONA'RIS, *Muscus pulmonarius querci'nus*, *Pulmonaria arbo'rea*, *Loba'ria pulmonaria*, *Lichen ar'borum*, *Oak Lungs*, *Tree Lungwort*, *Hazel Crotches*. (F) *Lichen pulmonaire*. This plant is sub-astringent, and rather acid. It was once in high repute in curing diseases of the lungs.

LICHEN PYXIDA'TUS, *Muscus pyxida'tus*, *Scyphoph'orus pyxidatus*, *Mus'culus pyxoides terrestris*, *Lichen pyxidatus major*, *Lichen cocciferus*, *Cup Moss*, *Herba Ignis*. (F) *Lichen entonnoir*, *Lichen Boitier*, *L. Pyxide*. This plant is sub-astringent, and has been used in decoction in hooping-cough.

LICHEN ROCCEL'LA, *Roccel'la*, *Litmus*, *Lacmus tinctorius*, *Orchill*, *Cana'ry Archell*, *Chinney-weed*, *Herb Archel*. (F) *Orseille*. The chief use of this plant is as a blue dye. It has been employed to allay cough in phthisis, &c.

LICHEN SAXAT'ILIS, *Muscus Cranii humani*, *Usnea*. This moss, when growing on the

human skull, was formerly in high estimation against head affections, &c.

LIEN, (F) *Vin'culum*. A band, strap, or garter, used in certain operations; as to tie patients during the operation of lithotomy; to fix the apparatus in fracture, &c.

LIEN'TERY, *Liente'ria*, from *λεως*, 'smooth,' and *εντερον*, 'intestine.' *Læ'vitas intestino'rum*, *Diarrhœ'a Liente'ria*, *Fluxus Lienter'icus*, *Chymorrhœ'a*, *Diarrhœ'a seu Laxitas ingesto'rum*, *D. dyspep'tica*, *D. cum apepsia*, *Slip'periness of the Guts*. Frequent, liquid evacuations; the food only half digested. This condition is always symptomatic of great irritation in the intestinal canal; the sensibility of which is so much augmented, that it cannot bear the sojourn of the food in it.

LIFE, Sax. *lif*, *lyf*, *Vita*, *Bios*, *Biote*, *Zoe*. (F) *Vie*. The state of organized beings, during which, owing to the union of an immaterial imponderable principle with matter, they are capable of performing functions different from those, that regulate other natural bodies; all of which functions, however numerous and diversified, work to one end. Life has only a limited duration: beyond which,—the organic functions ceasing to be executed,—the body is given up to the agency of chymical affinity. Hence Bichat has defined life to be—the aggregate of the functions which resist death. On account of the difference that exists amongst the vital functions, he has applied the term *Organic Life* to the functions inservient to composition and decomposition;—as digestion, respiration, circulation, calorification, absorption, secretion, and nutrition; and *Animal Life*, to those functions which connect man and animals with external bodies; as the understanding, sensations, locomotion, and voice.

LIGAMENT, *Ligamen'tum*, from *liga're*, 'to bind;' *Desmos*, *Syndesmos*, *Colliga'men*, *Cop'ula*. A name, given to fibrous structures, which serve to unite bones, and to form articulations; hence the division of *interosseous* and *articular* ligaments. They are of a white, close texture; but little extensible, and difficult to break. The name *ligament* has, also, been given to any membranous fold, which retains an organ in its situation.

TABLE OF THE PRINCIPAL LIGAMENTS.

1. Of the Lower Jaw.	- Capsular ligament. - Suspensory ligament of the styloglossus. - Lateral ligament. - Two capsular ligaments between atlas and head.	3. Of the other Vertebrae.	- Anterior common. - Crucial intervertebral. - Ligaments running from the edge of the bony arch and spinous process of one vertebra to that of the next. - Interspinous ligament. - Ligamentum nuchæ. - Intertransverse. - Capsular. - Posterior or internal common. - Capsular of the heads of ribs. - Capsular of the tubercles. - Ligamenta transversaria interna. - Ligamenta transversaria externa. - Ligamenta cervicis costarum externa. - Ligamentous fibres running from the margins of the extremities of the ribs to the corresponding cartilages. - Radiated ligaments from cartilage of ribs to the sternum. - Capsular L. of the cartilages of the ribs. - Proper membrane of sternum. L. of cartilago ensiformis. - Tendinous expansions over the intercostales, &c. - Two transverse,—one superior, one inferior. - Ilio-sacral. - Capsular of the sacro-iliac synchondrosis. - Two sacro-ischiatic,—posterior and anterior, with the superior and inferior appendices. - Longitudinal of os coccygis. - Inguinal ligament. - Capsular of symphysis pubis. - Ligament of foramen thyroideum. - Radiated ligament. - Capsular. - Interclavicular. - Ligamentum rhomboideum. - Claviculo-acromial. - Conoid. - Trapezoid. - Anterior triangular. - Proper posterior.
2. Connecting the Head with the first and second Vertebra, and these with each other.	- Circular ligament. - Two capsular between atlas and axis. - Perpendicular ligament. - Two lateral or moderator ligaments. - Transverse ligament and its appendices.	4. Of the Ribs, Sternum, &c.	- Capsular. - Brachio-ulnar. - Brachio-radial. - Coronary of the radius. - Anterior and posterior accessory. - Intermuscular of the os humeri. - Interosseous ligament. - Oblique or chorda transversalis cubiti. - Capsular. - Capsular. - Two lateral. - Mucous. - Annular. - Capsular. - Short ligaments,—oblique, transverse, capsular, and proper.
5. Of the Pelvis.		6. Of the Clavicle.	
7. Of the Scapula.		7. Of the Scapula.	
8. Of the Shoulder-Joint.		8. Of the Shoulder-Joint.	
9. Of the Elbow-Joint.		9. Of the Elbow-Joint.	
10. Carpal extremity of Radius and Ulna, and between those bones.		10. Carpal extremity of Radius and Ulna, and between those bones.	
11. Between Fore-arm and Wrist.		11. Between Fore-arm and Wrist.	
12. Of Carpus.		12. Of Carpus.	

- | | | | |
|--|--|--|--|
| 13. Between Carpal and Metacarpal Bones. | Articular lateral, Straight, perpendicular, &c. | 24. Connecting the Metatarsal Bones. | Dorsal, plantar, and lateral, connecting the metatarsal bones. |
| 14. Between the extremities of the Metacarpal Bones. | Interosseous, at the bases and heads,—dorsal, lateral, palmar. | 25. Of the Phalanges of the Toes. | Transverse ligaments. |
| 15. At the base of the Metacarpal Bone of the Thumb, and at the first joint of the Fingers. | Capsular. Lateral. | | Capsular. |
| 16. Of the first and second joints of the Thumb, and second and third joints of the Fingers. | Capsular. Lateral. | 26. Retaining the Tendons of the Muscles of the Foot and Toes in situ. | Lateral. |
| | Annular. | | Annular. |
| 17. Retaining the Tendons of the Muscles of the Hand and Fingers in situ. | Vaginal of flexor tendons. | | Vaginal of the tendons of the peronei. |
| | Vaginal or crucial of the phalanges. | | Lacinated. |
| | Accessory of the flexor tendons. | | Vaginal of the tendon of the flexor longus pollicis. |
| | Posterior annular. | | Vaginal and crucial of the tendons of the flexors of the toes. |
| | Vaginal of extensors. | | Accessory of the flexor tendons of the toes. |
| | Transverse of extensors. | | Transverse of the extensor tendons. |
| 18. Connecting the Os Femoris with the Os Innominatum. | Capsular and accessory slips. | | |
| | Round or teres ligament. | | |
| | Cartilaginous ligament. | | |
| | Double cartilaginous ligament. | | |
| | Ligamenta mucosa. | | |
| | Lateral,—internal and external. | | |
| | External short lateral ligament. | | |
| | Posterior ligament. | | |
| 19. Of the Knee-Joint. | Ligament of the patella. | | |
| | Capsular. | | |
| | Ligamentum alare,—majus et minus. | | |
| | Ligamentum mucosum. | | |
| | Two crucial,—anterior and posterior. | | |
| | Transverse. | | |
| 20. Connecting Fibula and Tibia. | Capsular. | | |
| | Interosseous. | | |
| | Anterior superior. | | |
| | Posterior superior. | | |
| | Anterior ligament of the Fibula. | | |
| 21. Connecting the Tarsal with the Leg Bones. | Middle or perpendicular of fibula. | | |
| | Posterior of fibula. | | |
| | Deltoides of tibia. | | |
| | Capsular. | | |
| | Capsular. | | |
| | Short ligaments. | | |
| | Capsular, broad superior, and lateral ligaments, connecting astragalus and naviculare. | | |
| | Superior, lateral, and inferior, fixing os calcis to os cuboides. | | |
| | Long, oblique, and rhomboid, forming the inferior ligaments. | | |
| | Superior superficial, interosseous, and inferior transverse ligaments, fixing the os naviculare and os cuboides. | | |
| 22. Ligaments of the Tarsus. | Superior lateral, and plantar, which fix the os naviculare and cuneiforme. | | |
| | Superior superficial and plantar, connecting the os cuboides and os cuneiforme externum. | | |
| | Dorsal and plantar, uniting the ossa cuneiformia. | | |
| | The proper capsular of each bone. | | |
| 23. Ligaments between Tarsus and Metatarsus. | Capsular. | | |
| | Dorsal, plantar, lateral, straight, oblique, and transverse. | | |

The SUSPENSORY LIGAMENT OF THE LIVER, *Ligamentum latum, Suspensorium Hepatis*, is a large, triangular reflection, formed by the peritoneum between the superior surface of the liver and the diaphragm. It is constituted of two layers, and is continuous, below, with another reflection, called the *Falx of the Umbilical Vein*. See Falx.

The CORONARY LIGAMENT OF THE LIVER is a reflection formed by the peritoneum, between the posterior margin of the liver, and the lower surface of the diaphragm. See Falx.

LIGATURE, *Ligatura, Ligatio, Alligatura, Deligatio, Vincitura, Fascia, Epidesis*, from *ligo*, 'I bind.' This word has various acceptations. It means, 1. The thread with which an artery or vein is tied, to prevent or arrest hemorrhage. 2. The cord or thread or wire, used for removing tumours, &c. 3. The bandage used for phlebotomy. *Ligature* is, also, sometimes applied to the act of tying an artery or considerable vessel. When the artery alone is tied, the ligature is said to be *immediate*; when any of the surrounding parts are included, it is said to be *mediate*. The ligature occasions obliteration or adhesion of the arterial parietes, by cutting through its middle and internal coats; the adhesion being favoured by the formation of a coagulum, which acts, in some degree, as a barrier against the impulse of the blood and subsequently disappears by absorption.

LIGHT, Sax. *leoht*, *liht* (G) *Licht*—*Lux, Lumen, Luce, Phos.* (F) *Lumière*. An extremely rare fluid, diffused over the universe; emanating from the sun and fixed stars; traversing more than four millions of leagues in a minute; passing through transparent bodies, which refract it according to their density and combustibility; and arrested by opaque bodies, by which it is reflected at an angle equal to the angle of incidence. It is the cause of colour in all bodies; being entirely reflected by white surfaces and absorbed by black. It is decomposed in passing through a transparent prism into 7 rays, viz. into red, orange, yellow, green, blue, purple, and violet.

Light acts upon the body as a gentle and salutary stimulus. It urges to exercise, whilst privation of it induces sleep and inactivity, and disposes to obesity. Hence it is, that, in

rural economy, animals, which are undergoing the process of fattening, are kept in obscurity. When vegetables are deprived of light, their nutrition is interfered with, and they become *etiolated*. To a certain extent this applies to animals, and there is every reason to believe, that want of light prevents the due developement of organized bodies. Edwards found that when tadpoles were deprived of light, they did not undergo the perfect metamorphosis into the frog, but that monstrosities from arrest of developement were induced.

LIGNIN, from *Lignum*, 'wood.' Woody fibre, or the fibrous structure of vegetable substances.

LIG'ULA or **LIN'GULA**. The clavicle; also, the glottis. Also, a measure containing 3 drachms and a scruple. Scribon. Also, a species of bandage or ligature.—Scribon.

LIGUSTICUM LEVISTICUM, *Levisticum*, *Laserpitium Germanicum*, *Ligusticum*, *Lovage*. (F) *Livèche*, *Ache des montagnes*. The properties of this plant are said to be stimulant, carminative, emmenagogue, &c.

LIGUSTICUM PODAGRA'RIA, *Ægopodium podagraria*, *Ses'eli ægopodium*, *Angelica sylvestris*, *Gout weed*. A British plant, once considered useful in cases of gout.

LILIA'GO. Dim. of *Lil'ium*, the *lily*;—*Spiderwort*;—*Lilias'trum*. This plant was formerly said to be alexipharmic and carminative.

LILIUM CAN'DIDUM, *Crinon*, *L. album*. The *white lily*. (F) *Lis blanc*. The infusion of the flowers of the lily in olive oil is emollient, and often applied externally, under the name of *Lily oil*, (F) *Huile de lis*. The scales of the bulb, roasted, are sometimes employed as maturatives.

LILIUM PARACEL'SI, or **TINCTURA METALLO'RUM**, *Lili*. A medicine employed by Paracelsus. It was prepared by melting in a crucible four ounces of each of the following alloys; *Antimony and iron*, *Antimony and tin*, *Antimony and copper*, previously mixed with 18 ounces of nitrate of potass, and as much salt of tartar. The melted mass, when pulverized, was treated with rectified alcohol; which really dissolved only the potass, set at liberty by the decomposition experienced by the nitre and salt of tartar. The *Lilium Paracelsi* was used as a cordial. It entered into the composition of the theriacal elixir, &c.

LIMACIEN (F), from *limaçon*, the *cochlea* of the ear. A branch of the acoustic or labyrinthine nerve sent to the cochlea.

LIMAX, *Helix*, the *Slug* or *Snail*. (F) *Limaçon*, *Colimaçon*, *Escargot*. A syrup has been prepared from these animals, which has been given in phthisis, &c. The raw snails have also been taken in consumption. They were used as food.

LIME. A fruit like a small lemon, the juice of which is strongly acid, and is much

used for making punch. It is, also, used in long voyages as an antiscorbutic, &c. It is a species of lemon.

LIMOS, *λιμος*, 'hunger.' Hence:

LIMO'SIS, from *λιμος*, 'hunger.' *Stomach disease*, *Morbid ap'petite*. A genus in the class *Cœliaca*, order *Enterica*, of Good.

LINE, *Linea*, *Gramme*. (F) *Ligne*. Extent in length, considered without regard to breadth or thickness.

The **LINEA ALBA**, (F) *Ligne blanche*, *Ligne médiane de l'abdomen* (Ch.) *Candidula abdom'inis lin'ea*, *Lin'ea centra'lis*, is a tendinous, strong, and highly resisting cord; extending from the ensiform cartilage of the sternum to the symphysis pubis, with the umbilicus near its middle. The linea alba is formed by the decussation of the aponeuroses of the abdominal muscles; and its use is to limit the movement of the chest backwards; to prevent it from separating too far from the pelvis, and to furnish a fixed point for the muscles of the abdomen, in their contraction.

The **LINEA AS'PERA**, (F) *Ligne âpre*, *Ragged ridge*, *Ligne sous-trochantérienne* (Ch.) A rough projection at the posterior surface of the femur, which gives attachment to muscles.

The **MEDIAN LINE OF THE BODY** is an imaginary line, supposed to set out from the top of the head and to fall between the feet, so as to divide the body vertically into two equal and symmetrical parts.

The **LINEÆ SEMILUNA'RES** are the lines, which bound the outer margin of the recti muscles of the abdomen. They are formed by the union of the abdominal tendons. The lines which cross these muscles are called *Lineæ transversæ*.

LIN'EAR, *Linea'ris*; from *linea*, 'a line.' (F) *Linéaire*. Pathologists apply the epithet *linear*, to fractures which are very narrow, and in which the fragments are scarcely separated.

LIN'EAMENT, *Lineamen'tum*, from *linea*, 'a line.' A delicate *trait* observed on the countenance, which constitutes its special character, enables us to preserve its image, and is the cause of resemblance to others. A *feature*.

Bonnet gave the name *Lineament* to the first traces of organization in the embryo of man and animals.

LIN'GUAL, *Lingua'lis*. Relating or belonging to the tongue.

The **LINGUAL MUSCLE**, *Lingua'lis*, *Basio-glossus* (Cowper), *Glossia'nus*, is a small, long, fasciculus of fibres, hidden beneath the sides of the tongue, between the hyoglossus and styloglossus muscles, which are on the outside, and the genioglossus, within. This muscle passes from the base to the tip of the tongue; and, at its sides, is confounded with the muscles just referred to. It shortens the tongue, depresses its point, and can carry it to the right or left side.

The LINGUAL ARTERY, *Arte'ria lingua'lis*, arises from the external carotid; and, after several tortuosities, reaches the base of the tongue, becomes horizontal, and, under the name *Ranine*, advances to the tip, where it anastomoses with its fellow. In its course it gives off the *Dorsalis-linguæ* and *sublingual*.

The LINGUAL VEIN follows nearly the same distribution as the artery. It opens into the internal jugular.

The LINGUAL NERVE is a name, which has been given to the ninth pair or Hypoglossus, which see.

The *Lingual nerve* is, also, a term applied to a branch given off from the *Inferior maxillary*; or third branch of the fifth pair. Near its origin it anastomoses with, or simply runs close to, the *corda tympani*. It afterwards gives off a considerable number of filaments, which are distributed to the tongue, and some of which are said to have even been traced as far as the *papillæ*;—a distribution which has occasioned it to be regarded as the *Gustatory nerve*.

LINIMENT, *Linimen'tum*, *Litus*, *Enchris'ton*, *Catachris'ton*, *Perich'risis*, *Perichris'ton*, *Aleipha*, *Aleimma*, *Enchrista*, *Fric'tum*, *Fricato'rium*, *Inunc'tio*, from *lini're*, 'to anoint gently,' 'to anoint.' An unctuous medicine, containing usually oil or lard, and which is used externally, in the form of friction.

LINIMENT ANTIHEMORRHOIDALE DE SIEUR ANDRY (F). This is formed of *Narbonne honey*, *Olive oil* and *Turpentine*.

LINIMENT ANTIPARALYTIQUE (F). Composed of *Subcarbonate of ammonia*, *alcoholized oil*; *black soap*, and *oil of rosemary*.

LINIMENT, ANTISCROPH'ULOUS, OF HUFELAND. It is composed of *fresh ox's gall*, *White soap*, *Unguentum althææ*, *Volatile oil of petroleum*, *Carbonate of ammonia*, and *Camphor*.

LINIMENT RÉSOLUTIF DE POTT, composed of *oil of turpentine* and *muriatic acid*. Used in rheumatism, swellings, &c.

LINIMENT SAVONNEUX HYDROSULFURÉ DE JADELLOT. Composed of *sulphuret of potass* 3vj, *white soap* ℥ij, *oil of poppy* ℥iv, *oil of thyme* 3ij: used in the itch.

LINIMENTUM ÆRUGINIS, *Ox'ymel Æru'ginis*, *Unguentum Ægyptiacum*, *Melli'tum de aceta'te cupri*, *Liniment of verdigris*, (F) *Liniment de Vert-de-gris*, *Miel d'acétate de cuivre*. (*Ærugin. cont.* 3j, *acet.* 3vij, *mellis despum. pond.* 3xiv. Liquefied, strained, and inspissated by boiling. *Ph. L.*) It is used as an escharotic and detergent;—diluted, as a gargle in venereal ulcerations and in foul ulcers.

LINIMENTUM AMMO'NIÆ CARBONATIS, *Liniment of subcarbonate of ammo'nia*, *Linimentum ammo'niæ*, *Linimentum volat'ilè*; *Harts-horn and oil*. (F) *Liniment de carbonate d'ammoniaque*. (*Solut. subcarb. ammon.* 3j, *olei. oliv.* 3iij. Shake till they unite.) A stimu-

lating liniment, mostly used to relieve rheumatic pains, bruises, &c.

LINIMENTUM AMMO'NIÆ FORTIUS, *Sapo ammoniacalis*, *Linimentum ammonia'tum*, *seu ammo'nicum*, *seu Anglica'num*, *Sapo ammo'niæ olea'ceus*, *Unguentum album resol'vens*, *Oleum ammonia'tum*, *Linimentum ammo'niæ*, *Strong liniment of ammonia*, (F) *Liniment volatil ou ammoniacal*, *Savon ammoniacal*. (*Liq. ammon.* 3j, *olei olivæ*, 3ij. Shake till they mix. *Ph. L.*) A stimulating and rubefacient soap.

LINIMENTUM AQUÆ CALCIS, *Linimentum Calcis*, *Oleum lini cum calcè*, *Sapo calca'rius*, *Linimentum ad ambustio'nes*, *Liniment of lime water*, (F) *Liniment d'eau de chaux*, *Savon calcaire*, *Liniment calcaire*. (*Olei lini usitat., aquæ calcis, partes æquales*. *Mix. Ph. E.*) A cooling and emollient application to burns and scalds.

LINIMENTUM CAMPHORÆ, *Oleum camphora'tum*, *Solu'tio camphoræ oleo'sa*, *Camphor liniment*, (F) *Liniment camphré*. (*Camphoræ* 3iv, *olivæ olei* 3ij. Dissolve. *Ph. L.*) It is used as a stimulant and discutient.

LINIMENTUM CAMPHORÆ COMPOS'ITUM, *Ward's essence for the headache*, *Compound camphor liniment* (*Camphor* 3ij, *liq. ammoniæ* 3ij, *spirit. lavand.* ℥j. *Ph. L.*) It is stimulant and anodyne.

LINIMENTUM E CANTHARID'IBUS CAMPHORA'TUM, *Camphora'ted liniment of cantharides*, (F) *L. cantharide camphré*, (*Tinct. cantharid.* 3ss, *ol. amygd. dulc.* 3iv, *sapon. amygd.* 3j, *camphor* 3ss. Dissolve the camphor in the oil and add this mixture to the tincture and soap. *Ph. P.*) Rubefacient and discutient.

LINIMENTUM HYDRAR'GYRI, *Mercurial liniment*, (F) *L. de mercure*, (*Ung. Hyd. fort., adip. præp.* aa 3iv, *camphoræ* 3j, *sp. rect. gutt. xv*, *liquor ammon.* 3iv. Rub the camphor with the spirit; add the ointment and lard; and, lastly, gradually add the solution. *Ph. L.*) It is used as a stimulant and discutient to venereal swellings, &c.

LINIMENTUM SAPO'NIS COMPOS'ITUM, *Tinctura saponis camphora'ta*, *Opodel'doch*, *Steer's-opodel'doch*, (F) *L. de Savon*. *Compound soap Liniment*. (*Saponis duri* 3iij, *camphoræ* 3j, *sp. rorismarin.* ℥j.) The following form is given by a committee of the Philadelphia College of Pharmacy (*Alcohol* Oviij, *Sapon. alb.* 3xx, *aq. ammon. f.* 3iv, *Camphoræ* 3viij, *ol. Rorismarini*, *ol. Monard*, aa 3j.) Stimulant and anodyne; in bruises, local pains, &c.

FREEMAN'S BATHING SPIRITS consist of *lin. sapon. comp.* coloured with *Daffy's elixir*.

JACKSON'S BATHING SPIRITS differ from Freeman's in the addition of some essential oils.

LINIMENTUM SAPO'NIS ET OPII, *L. sapona'ceum opia'tum*—*Soap and opium liniment*. *Bates's anodyne balsam*, *Balsamum anodynum*, *Tinctura saponis et opii*, (F) *L. de savon opiacé*. (*Saponis duri* 3iv, *opii* 3j, *camphoræ*

3 ij, *olei rorismarin*. 3 ss, *alcohol* ℥ ij. *Ph. E.*) Anodyne; in chronic rheumatism and local pains in general.

LINIMENTUM SIMPLEX, *Simple liniment*, (*Ol. oliv.* 4 p. *ceræ albæ* 1 p. *fiat linimentum*. *Ph. E.*) Emollient, used in chaps, &c.

LINIMENTUM SAPONA'CEUM HYDROSULFURA'TUM. (*Sapon. com.* 500 p. Liquefy in a water bath in an earthen vessel; and add *ol. papav. alb.* 250 p. Mix intimately, and add dry sulphuret of potass 100 p. Beat together and add oil of poppy-seed 750 p. *Ph. P.*) In cutaneous affections, psora, herpes, &c.

LINIMENTUM TEREBIN'THINÆ, *Turpentine liniment*. (*Cerat. resinæ*, ℥ j, *ol terebinth.* ℥ ss. Melt the cerate and stir in the oil. *Ph. L.*) A stimulant. Applied to burns, &c.

LINNÆA BOREA'LIS. This plant, called after Linnæus, has a bitter, substringent taste; and is used, in some places, in the form of fomentation, in rheumatic pains. An infusion in milk is used in Switzerland for the cure of sciatica.

LINTEUM, *Lintea'men*, *Oth'one*, *Othonion*, *Xystos*, *Achnē*. A soft, flocculent substance, made by scraping old linen cloth; and employed in surgery as a dressing to wounds, ulcers, &c. either simply, or covered with ointment.

LINUM CATHARTICUM, *L. minimum*, *Chameli'num*, *Purging flax*, or *Mill mountain*, (F) *Lin purgatif*. This plant is possessed of cathartic properties, and has a bitterish, disagreeable taste. Dose, 3 j in substance.

LINUM USITATIS'SIMUM, *Common flax*, (F) *Lin*. The seed, *Sem'ina lini usitatis'simi*, *Linosp'er'mum*, *Linseed*, *Flaxseed*, (F) *Grains de lin*, are inodorous, and almost tasteless; yielding mucilage to warm water, and oil by expression. They are demulcent and emollient. Linseed, when ground into powder, form a good emollient poultice. It is only necessary to stir the powder into boiling water. The oil, *Oleum lini*, is emollient and demulcent.

LIP, Sax. and Germ. *Li ppe*, *Cheilos*, *Labium*, *Labrum*, (F) *Lèvre*. The lips are composed of different muscular fasciculi, nerves and vessels, covered by the skin and mucous membrane of the mouth. They circumscribe the anterior aperture of that cavity; and are inservient to mastication, pronunciation, &c.

They are distinguished into *upper* and *lower*—*Anochei'lon*, and *Catochei'lon*—and are placed in front of each jaw, forming the anterior aperture of the mouth between them. They unite at each side and form what are called the *angles* or *commissures* of the mouth—*Chalini*. Their free edge is covered with a mucous membrane, of a more or less vivid red, according to the individual. They receive their arteries from the external carotid. Their veins open into the two jugulars. Their lymphatic vessels descend into the ganglions, situate beneath the chin. Their

nerves are derived from the infraorbital, mental, and facial.

The LIPS, *Labia*, (F) *Lèvres de la vulve*, are folds belonging to the genital organs of the female, and distinguished into—

1. *Labia puden'di*, *Labia maj'ra*, *Alæ majores*, *Crem'noi*, (F) *Grandes Lèvres*. These are two membranous folds, thicker above than below, which limit the vulva laterally, and extend from the inferior part of the mons veneris to the perinæum. They unite anteriorly and posteriorly, forming commissures;—the posterior of which is called *Fourchette*. Their outer surface is convex; formed of skin and covered with hair. The inner surface is red and covered by a mucous membrane, continuous with that lining the other parts of the vulva. The space between the skin and mucous membrane is filled with a fatty tissue and fibrous bands, some fibres of the constrictor vaginæ muscle, vessels, and nerves.

We speak, also, of the *lips of a wound*, *ulcer*, &c., when alluding to the edges of these solutions of continuity.

LIPA, λιπα, 'fat.' Hence:

LIP'ARA, from λιπαρος, 'fatty,' and λιπα, 'fat.' Plasters, containing much oil or fat.

LIPAROC'E'LE, *Lipoccele*, from λιπαρος, 'fatty,' and κηλη, 'tumour.' A *Lipo'ma*, or fatty tumour of the scrotum.

LIPO or LEIPO, λιπω, 'I leave,' 'I forsake.' Hence, *Leipopsychia*, *Leipothymia*.

LIPOMA, *Lypo'ma*, from λιπος, 'fat,' 'a fatty tumour.' A fatty tumour, of an encysted or other character.

LIPOME'RIA, *Leipome'ria*, from λιπω, 'I leave,' and μέρος, 'a part.' Monstrosity from arrest of development or from defect. Deficiency of one or more of the parts of the body; for example, where a person has only four fingers.

LIPPITU'DO, *Ophthalmia chron'ica* of some. *Lippitude*, *Blear eye*, *Lappa*, *Lipa*, *Xerophthalmia*, *Lema*, *Lemē*, *Glama*, *Gramia*. A copious secretion of the sebaceous humour of the eyelids, which renders them gummy. It is a state of chronic inflammation of the tarsal margins; the eyelids being generally red, tumefied, and painful.

LIQUAMU'MIA, *Adeps huma'nus*. Human fat.—Ruland and Johnson.

LIQUEFAC'TION, *Liqua'tio*, *Liquefac'tio*; from liquefac'ere, 'to cause to melt.' Transformation of a solid substance into a liquid. It is used particularly in speaking of metals and fatty bodies.

LIQUIDAM'BAR STYRACIF'LUA, *Liquidam'bra*, *Sweet gum*. The name of the tree, which affords the *Liquid amber* and *Storax liquida*, *Styrax liquida* or *Liquid storax*.

Liquid amber is a resinous juice of a yellow colour, inclining to red; at first of about the consistence of turpentine; by age, hard-

ening into a solid, brittle mass. It is not used medicinally.

The **STYRAX LIQUIDA** is obtained from this plant by boiling. There are two sorts;—one more pure than the other. It is used, occasionally, as a stomachic, in the form of plaster.

LIQUOR, Hygron, Hygrotes. (F) *Liqueur*. A name given to many compound liquids, and especially to those the basis of which is alcohol.

LIQUOR ALUMINIS COMPOSITUS, Aqua aluminis composita, Aqua aluminosa Batea'na, Compound solution of alum. (F) *Liqueur d'alumine composée.* (Aluminis, zinci sulphat., sing. 3 ss, aquæ fervent. ℥ ij. Dissolve and filter through paper.) Detergent and stimulant. Used as a collyrium, when properly diluted, in ophthalmia; as an injection in gleet, and leucorrhœa, &c.

LIQUOR AMMONIÆ, Liq. ammoniæ puræ, Al'cali ammoniacum fluidum, Ammonia liquida, A. caustica liquida, A. pura liquida, Lixivium ammoniacale, Spir'itus salis ammoniaci aquosus, Aqua ammoniæ, Aqua ammoniæ causticæ, Liquid ammonia, Solution of ammonia. (F) *Ammoniaque liquide.* (Muriat. calc. 3 viii, calc. viv. recent. 3 vj, aquæ ℥ iv. Pour on the lime a pint of the water; cover the vessel and set it by for an hour. Add the muriate of ammonia and the remaining water, previously made boiling hot, and cover the vessel again. Strain the liquor when it has cooled, and distil 12 ounces. S. G. .936. Ph. L.) It is a stimulant, antacid, and rubefacient. Dose, gr. x to xx, in water or milk.

LIQUOR AMMONIÆ ACETATIS, Al'cali ammoniacum acetatum, Alkali volatile acetatum, Aqua acetatis ammoniæ, Solution of acetate of ammonia, Aqua ammoniæ acetatæ, Acetas ammoniæ, Spirit of Mindere'rus, Sal ammoniacum vegetabile, Spir'itus ophthalmicus Mindere'ri, Sal acetosus ammoniacalis. (Ammon. carbon. 3 ij, acid. acet. ℥ iv, or add the salt till the acid is saturated. Ph. L.) A sudorific: externally, cooling. Dose, 3 ij to 3 iss.

LIQUOR AMMONIÆ SUBCARBONATIS, Solu'tio subcarbonatis ammoniæ, Aqua carbonatis ammoniæ, Solution of subcarbonate of ammonia. (Ammoniæ carbon. 3 viij, aquæ distillat. ℥ j. Dissolve and filter through paper.) Use;—the same as that of the carbonate of ammonia (q. v.)

LIQUOR AMNII, Aqua amnii. The liquor of the amnios. (F) *Eaux de l'amnios.* The fluid exhaled by the amnios and which envelopes the fœtus, during the whole period of the utero-gestation. It is often simply called, the waters, (F) *Les Eaux.* Its relative quantity diminishes as pregnancy advances, although its absolute quantity continues to increase till the period of delivery. In some women, only five or six ounces are met with; in others it amounts to pints. It is lim-

pid, yellowish, or whitish, exhales a faint smell, and has a slightly saline taste. It contains water in considerable quantity; albumen; muriate of soda; phosphate of lime; an alkaline substance; and a particular acid. It facilitates the dilatation of the uterus, and aids delivery by acting as a soft wedge inclosed in its membranes, &c. It is probably inservient to useful purposes in the nutrition of the fœtus.

LIQUOR ARSENICALIS, Solu'tio arsenicalis, S. arsenica'ta, S. arseni'tis kal'icæ, Arsenical solution, Min'eral solvent, Ar'senis potassæ liquidus, Ar'senis potassæ aquosus, Fowler's solution of arsenic, Solvens minera'le, Italian poison, Aqua tofa'na (?), Aqua toffania, Acqua della toffana, Acqua di Napoli, Acquet'ta, Tasteless ague drop. (F) *Liqueur arsenicale.* (Arsenic. oxyd. præp. in pulverem subtilem triti, potassæ subcarbonatis, sing. gr. lxiv, aquæ distillat. ℥ j. Boil together in a glass vessel, until the arsenic is dissolved. When the solution is cold, add Sp. lavand. c. 3 iv, and as much distilled water as will make the whole one pint. Ph. L.) f. 3 j, contains gr. ss. of the oxyd of arsenic. Dose, gr. v, gradually increased to gr. xx.

LIQUOR CALCIS, Solu'tio calcis, Aqua calcis, Aqua benedic'ta, Calca'ria pura liquida, Aqua calca'riæ ustæ, Solution of lime, Lime Water. (F) *Eau de chaux.* (Calcis ℥ ss, aq. distill. fervent. ℥ xij. Pour the water on the lime and stir. Let it stand in a covered vessel three hours; bottle the lime and water in stopped bottles, and use the clear solution.) It is astringent, tonic, and antacid; and is used in diarrhœa, diabetes, heartburn, &c. and as a lotion to foul and cancerous ulcers, &c. Dose, 3 ij to ℥ ss, in milk.

LIQUOR CALCIS COMPOSITUS, Aqua calcis composita, Compound lime water, Aqua benedic'ta composita. (F) *Eau de chaux composée.* (Lign. guaiac. ras. ℥ ss. rad. glycyrrh. 3 j, cort. sassafras. 3 ss, semin. coriand. 3 ij, liquor. calcis ℥ vj. Macerate for 2 days and filter.) It is stimulant, diaphoretic, and astringent, and is used in cutaneous affections.

LIQUOR CUPRI AMMONIATI, Aqua cupri ammoniati, Aqua sapphari'na, Blue eyewater, Solution of ammoniated copper. (F) *Liqueur ou eau de cuivre ammoniacal.* (Cupri ammoniat. 3 j, aquæ distill. ℥ j. Dissolve and filter the solution through paper. Ph. L.) Corrosive and detergent. Used externally to foul ulcers; and, diluted with an equal part of distilled water, it is applied by means of a hair pencil to specks and films on the eye.

LIQUOR CUPRI SULPHATIS COMPOSITUS, Aqua cupri vitriola'ti composita. (Cupri sulphat., alumin. sulphat. aa 3 iij, aquæ puræ ℥ ij, acid. sulph. 3 ij. Boil the salts in the water until they are dissolved; then filter the liquor, and add the acid.) Used as an astringent in epistaxis, &c. It was also called *Aqua styptica.*

LIQUOR FERRI ALKALINI, *Solution of Alkaline Iron*, (F) *Liqueur de fer alcaline*. (Ferri 3 iiss. acid. nitric. 3 ij, aquæ distillat. 3 vj, liq. potass. subcarb. 3 vj. To the acid and water mixed, add the iron; and, after the effervescence, add the clear solution, gradually, to the liq. potassæ subcarb.; shaking it occasionally till it assumes a deep brown-red colour, and the effervescence stops. After six hours' settling, pour off the clear solution. Ph. L.) It is tonic, like other preparations of iron. Dose 3 ss to 3 iss.

LIQUOR FUMANS BOYLII, *Sulfuretum Ammoniacæ Hydrogenatum, Hydrosulphuretum Ammoniacæ, Tinctura Sulphuris Volatilis, Aqua Sulphureti Ammoniacæ*,—Boyle's *Fuming liquor*, (F) *Liqueur fumante de Boyle*. It is possessed of nauseating and emetic properties, and has been given in diabetes and diseases of excitement as a *disoxygenizer*!

LIQUOR HYDRARGYRI NITRICI, L. *Bellosti Eau mercurielle, Eau contre la gangrène, Remède du Duc d'Antin, R. du Capucin*, (Hydrarg. 120 p., acid nitr. (33°) 150 p. Dissolve and add to the solution, *distilled water*, 900 p. Ph. P.) Dose, two or three drops in a glass of water. Not much used.

LIQUOR HYDRARGYRI OXYMURIA'TIS, *Solution of Oxymuriate of Mercury, Liquor Swietenis, L. Syphiliticus Turnerii, Murias hydrargyri spirituosus liquidus, Solutio Muria'tis hydrargyri oxygenatis, S. of Corrosive Sublimate, Liquor or Solution of Van Swieten*. (Hyd. oxym. gr. viij, aquæ distill. 3 xv, sp. rect. 3 j. Dissolve in the water, and add the spirit. Ph. L.) Dose, 3 ss. or 3 j.

GREEN'S DROPS, and SOLOMON'S ANTI-IMPETIG'ENES—both nostrums—seem to be solutions of *Corrosive Sublimate*.

LIQUOR OF MONRO, *Solution of Monro*. A solution used by Monro for the preservation of anatomical preparations. It is composed of alcohol at 22° or 24°, with a drachm of nitric acid to each pint.

LIQUOR MORPHINÆ ACETA'TIS, *Solution of Acetate of Morphine, An'odyne Drops, (Acetate of morphine gr. xvj, distilled water 3 vj, dilute acetic acid, 3 ij.)* Dose, from 6 to 24 drops.

LIQUOR OPII SEDATI'VUS. An empirical preparation by a London druggist of the name of Battley. It is presumed to be a solution of acetate of morphine, or of opium, in some form in vinegar. It is devoid of many of the narcotic effects of opium.

LIQUOR PLUMBI SUBACETA'TIS, *Liquor Subaceta'tis Lithar'gyri, Solution of Subacetate of Lead, Liquor Plumbi Aceta'tis, Goulard's Extrac'tum Satur'ni, Lithar'gyri Acetum*, (F) *Liqueur de sousacétate de Plomb*. (Plumbi oxyd. semivitr. ℥ ij, acid. acetic, congium. Mix and boil down to ℥ vj, constantly stirring: then filter, after the feculence has subsided. Ph. L.) It is used externally as a cooling astringent, and discutient, when diluted with distilled water.

LIQUOR PLUMBI SUBACETA'TIS DILU'TUS, *Liquor Subaceta'tis Lithar'gyri Compositus, Aqua Satur'ni, Acetas Plumbi dilu'tum alcoholicum, Diluted Solution of Subac'etate of Lead, Aqua veg'eto-minera'lis, Tinctu'ra plumbo'sa, Aqua Lithargyri Aceta'ti composita, Liquor Plumbi Aceta'tis dilu'tus, White Wash, Royal Preventive*. (Liq. plumbi subacet. 3 j, aquæ distillat. ℥ j, spirit. tenuioris 3 j.) Properties the same as the last, but feebler.

LIQUOR POTAS'SÆ, *Aqua Potas'sæ, Aqua Kali Cau'stici, Solution of Potash, Lixiv'ium magistra'le, L. Saponarium, Soap Lees, Aqua Kali puri, Soap Ley, Lixiv'ium cau'sticum, Potas'sa liquida*, (F) *Eau, solution ou liqueur de Potasse, Potasse liquide*. (Potassæ subcarb. ℥ j, calcis recent. ℥ ss, aquæ distill. fervent. congium. Dissolve the alkali in ℥ ij of the water, and add the remainder to the limc. Mix the whole: set aside in a close vessel, and, when cold, filter through calico. Ph. L.) It is antilithic—in cases of uric acid calculi—and antacid. Externally, stimulant and escharotic. Dose, gtt. x to xx.

LIQUOR POTASSÆ HYDRIODA'TIS, *Solution of Hydriodate of Potass*. (Potassæ hydriod. 36 gr., aquæ distillat. 3 j.) Dose, gtt. xx, three times a day.

LIQUOR POTASSÆ SUBCARBONA'TIS, *Aqua Subcarbonatis Kali, O'leum Tar'tari per deliqui-um, Aqua Kali, Lixiv'ium Tartari, Aqua Kali præpara'ti, Oil of Tartar, Saline Oil of Tartar, Solution of Subcar'bonate of Potass*, (F) *Liqueur de sous-carbonate de Potasse, Lessive de Tartre*. (Potasse subcarb. ℥ j, aquæ distillat. 3 xij. Dissolve and filter through paper.) Dose, gtt. x to xxx.

LIQUOR SANG'UINIS. This term has been given by Dr. Babington to one of the constituents of the blood, the other being the red particles. He considers, from his experiments, that fibrine and serum do not exist as such in circulating blood, but that the *Liquor Sanguinis*, when removed from the circulation and no longer subjected to the laws of life, has then, and not before, the property of separating into fibrine and serum. It is the *Liquor Sanguinis*, after the red particles have subsided, which forms the buffy coat of inflammatory blood.

LIQUOR VOLAT'ILIS CORNU CERVI, L. *volat'ilis Cornu Cervi'ni, Vol'atile Liquor of Hartshorn, Spiritus Lambrico'rum, Spir'itus Millepeda'rum, Hartshorn, Spirit of Hartshorn, Spir'itus Cornu Cervi, Liquor volat'ilis os'sium; Bone Spirit*, (F) *Liqueur volatile de Corne de cerf*. This is a solution of subcarbonate of ammonia, impregnated with empyreumatic oil. It possesses the same virtues as the subcarbonate of ammonia. It is in common use to smell at, in faintings, &c.

LIQUOR ZINCI SULPHA'TIS CUM CAMPHORÂ, *Aqua Zinci vitriola'ti cum Camphorâ, Aqua vitriol'ica camphora'ta, Aqua ophthal'mica, Common Eye Water*. (Zinci sulph. 3 ss,

camphor 3 ij, boiling water ℥ ij; dissolve and filter.) Used as a lotion for ulcers; or, diluted with water, as a collyrium.

LIRIODENDRON, *Liriodendron tulipifera*, *Tulip Tree*, *Poplar Tree*, *Tulip-bearing Poplar*, *American Poplar*, *White Wood*, *Cypress Tree*, (New England.) (F) *Tulipier*. The bark—especially of the root—of this noble forest tree, which is indigenous in the United States, is a strong aromatic bitter, and has been employed advantageously as a tonic. Its active principle has been separated from it by Professor J. P. Emmet of the University of Virginia, and has been called *Liriodendrine*. It is not used in medicine.

LITE, λιτή. A plaster, formerly used, made of verdigris, wax, and resin.—Galen.

LITHAGO'GUS, from λιθος, 'a stone,' and ἀγω, 'I expel.' A remedy, which was supposed to possess the power of expelling calculi.

LITH'IA, *Lithi'asis*, *Uri'asis* (?), *Urolithi'asis*, *Cachex'ia calculo'sa*, *Cal'culi Morbus*, from λιθος, 'a stone.' The formation of stone or gravel in the human body. Also, an affection in which the eyelids are edged with small, hard, and stone-like concretions.

LITHOL'ABUM, from λιθος, 'a stone,' and λαμβανω, 'I seize.' An instrument for extracting stone from the bladder. It had various shapes.—Fabricius ab Aquapendente, Hildanus.

LITHONTRIP'TIC, *Lithontrip'ticus*, *Lithonthryp'tic*, *Calculif'ragus*, *Saxif'ragus*, from λιθος, 'a stone,' and τριβω, 'I bruise,' 'I break.' A remedy, believed to be capable of dissolving calculi in the urinary passages. There is not much reliance to be placed upon such remedies. By *antilithics*, exhibited according to the chemical character of the calculus (see Calculi Urinary), the disease may be prevented from increasing; but most of the vaunted lithontriptics, for dissolving the calculus already formed, have been found unworthy of the high encomiums which have accompanied their introduction.

LITHOPÆ'DION, *Infans lapide'us*, *Osteopæ'dion*, from λιθος, 'a stone,' and παις, 'a child.' A fœtus, petrified in the body of the mother.

LITHOSPER'MUM OFFICINA'LE, *Mil'ium Solis*, *Gromwell*, *Ægon'ychon Bastard*, *Al'kanet*, (F) *Gremil officinal*, *Herbe aux Perles*. The seeds of this plant were formerly supposed, from their stony hardness, to be efficacious in calculous affections. They have, also, been considered diuretic.

LITHOTOME, *Lithot'omus*, from λιθος, 'a stone,' and τεινω, 'I cut.' This name has been given to a number of instruments, of different shapes and size, which are used in the operation for the stone, to cut the neck or body of the bladder. They ought, with more propriety, to be called *Cystotomes*.

The **LITHOTOME CACHE** of Frère Côme is the most known, and is still occasionally used.

It is composed of a handle, and of a flattened sheath, slightly curved; in this there is a cutting blade, which can be forced out by pressing upon a *bascule* or lever, to any extent, that may be wished by the operator.

A **DOUBLE LITHOTOME** was used by Dupuytren in his bilateral operation. See Lithotomy.

LITHOT'OMIST. Same etymon. *Lithot'omus*. One, who devotes himself entirely to operating for the stone. One, who practises lithotomy.

LITHOT'OMY, *Lithoto'mia*, *Cystoto'mia*, *Urolithotom'ia*, *Sectio vesic'alis*, same etymon. (F) *Taille*. The operation, by which a stone is extracted from the bladder. The different methods, according to which this operation may be practised, are reducible to five principal; each of which has experienced numerous modifications.

1. The *Method of Celsus*, *Meth'odus Celsia'na*, *Cystoto'mia cum appa'ratu parvo*, *Appa'ratu Minor*, *Cutting on the Gripe*. This consisted in cutting upon the stone, after having made it project at the perinæum by means of the fingers introduced into the rectum. This method was attended with several inconveniences; such as the difficulty of dividing the parts neatly, injury done to the bladder, as well as the impossibility of drawing down the stone in many persons. It is sometimes, also, called the *Meth'odus Guytonia'na*; from Guy de Chauliac having endeavoured to remove from it the discredit into which it had fallen in his time. It was termed the *Apparatus Minor*, (F) *Le Petit appareil*, from the small number of instruments required in it.

2. *Apparatus Major*. This method was invented, in 1520, by John de Romani, a surgeon of Cremona, and communicated by him to Mariano Santo-di-Barletta, whence it was long called *Mariano's Method*—*Sectio Mariana'na*. It was called the *Apparatus Major*, and *Cystotom'ia vel Meth'odus cum appa'ratu magno*, (F) *Le grand appareil*, from the number of instruments required in it.

An incision was made on the median line; but the neck of the bladder was not comprehended in it. It was merely dilated.

The greater apparatus was liable to many inconveniences, such as ecchymoses; contusion; inflammation of the neck of the bladder; abscesses; urinary fistulæ; incontinence of urine; impotence, &c.

3. The *High Operation*, *Apparatus altus*, *Cystotom'ia cum appa'ratu alto*, *C. hypogas'trica*, *Epicystotom'ia*, *Laparocystotom'ia*, *Sectio seu Meth'odus Franconiana*, *S. Hypogas'trica*, *S. alta*, (F) *Haut appareil*, *Taille Hypogastrique*, *Taille sus-pubienne*, was first practised by Peter Franco, about the middle of the 16th century. It consisted in pushing the stone above the pubis by the fingers introduced into the rectum. Rousset afterwards proposed to make the bladder rise above the pubis by injecting it. The method

had fallen into discredit, when Frère Côme revived it. It is used when the calculus is very large. It was practised by opening first the membranous part of the urethra upon a catheter passed into the canal. Through this incision—the *Sonde à dard*, a species of catheter, having a spear-pointed stilet—was introduced into the bladder. An incision was then made in the linea alba, above the symphysis pubis, of about four or five fingers' breadth, and the peritoneum detached to avoid wounding it. The stilet was pushed through the bladder, and used as a director for the knife, with which the bladder was divided anteriorly, as far as the neck; and the stone extracted.

It was performed in England by Douglas, in 1719, and since by others with various modifications.

4. The *Lateral Operation*, *Cystotomia lateralis*, *Sec'tio lateralis*, *Apparatus lateralis*, (F) *Appareil latéralisé*, so named from the prostate gland and neck of the bladder being cut laterally, was probably invented by Peter Franco. It was introduced into France by Frère Jacques de Beaulieu. He performed it with rude instruments, invented by himself, and improved by the suggestions of some of the Parisian surgeons. In England, it received its earliest and most important improvements from the celebrated Cheselden. It is the method practised at the present day, according to different modes of procedure. In this method, the patient is placed upon a table; his legs and thighs are bent and separated; the hands being tied to the feet. The perinæum is then shaved, and a staff is introduced into the bladder; the handle being turned towards the right groin of the patient. An oblique incision is now made from the raphe to the middle of a line drawn from the anus to the tuberosity of the ischium of the left side; and, taking the staff for a guide, the integuments, cellular tissue of the perinæum, membranous portion of the urethra, transversus perinæi muscle, bulbo-cavernosus, some fibres of the levator ani, the prostate and neck of the bladder, are successively divided. For this latter part of the operation, the knife, the beaked bistoury, *Bistouri* ou *Lithotome Cache*, cutting gorget, &c. are used, according to the particular procedure. The forceps is now introduced into the bladder, and the stone extracted.

In the operation, care must be taken not to injure the rectum, or the great arterial vessels, distributed to the perinæum.

A variety of the *Lateral Apparatus*, called by the French *Appareil latéral* consisted in cutting into the bas-fond of the bladder without touching the neck of that organ: but it was soon abandoned on account of its inconveniences.

The *Bilateral Operation* is founded on that of Celsus. It consists in making an incision posterior to the bulb of the urethra, and ante-

rior to the anus, involving both sides of the perinæum by crossing the raphe at right angles: an incision is then made through the membranous part of the urethra, and the prostate may be cut bilaterally, either by the "double lithotome" of Dupuytren, or by the "Prostatic Bisector" of Dr. Stevens, of New York.

5. *Lithotomy by the Rectum*, *Proctocystotomia*, (F) *Taille par le Rectum*, *Taille postérieure*, *T. Recto-vésicale*. This was proposed by Vegetius in the 16th century; but was never noticed until M. Sanson, in the year 1817, attracted attention to it; since which time it has been successfully performed in many instances. It consists in penetrating the bladder through the paries corresponding with the rectum, by first cutting the sphincter ani and rectum about the root of the penis, and penetrating the bladder by the neck of that organ, dividing the prostate; or by its *bas-fond*.

Lithotomy, in women, from the shortness of the urethra, is a comparatively insignificant operation.

LITHOTRITY, *Lithotritia*, *Lithotripsy*, *Lithotripsy*, from *λίθος*, 'a stone,' and *τρίβω*, 'I break.' The operation of breaking or bruising the stone in the bladder. It has been performed, of late years, with success by French and after them by English and American surgeons. The instruments employed for this purpose are called in the abstract, *Lithotrites*, *Lithotriteurs*, and *Lithotriptors*. The most celebrated are those of Civiale, Jacobson, Heurteloup and Weiss. See *Brise Pierre articulé* and *Percuteur a Marteau*.

LITRE, *Litra*. A measure containing a cubed decimetre, which is equal nearly to 2 pints and 5 drachms. The ancients gave the name *litra*, *λίτρα*, to a measure capable of containing 16 ounces of liquid.

LIVER, Sax. *lifer*, *Hepar*, *Jecur*. (F) *Foie*. The liver is the largest gland in the body. It is an azygous organ; unsymmetrical; very heavy; and of a brownish-red colour; occupying the whole of the right hypochondrium, and a part of the epigastrium. *Above*, it corresponds to the diaphragm; *below*, to the stomach, transverse colon, and right kidney; *behind*, to the vertebral column, aorta, and vena cava; and *before*, to the base of the chest. Its upper surface is convex; the lower, irregularly convex and concave, so that anatomists have divided the liver into three lobes,—a *large* or *right* or *colic lobe*;—a *lesser lobe*, *lobule*, or *inferior lobe*, the *Lobulus Spigelii* (q. v.);—and a *middle* or *left lobe*.

At its inferior surface, are observed;—1. A *Sulcus* or *Furrow*, or *Fissure*, called *horizontal* or *longitudinal*, *great fissure*, *Fossa Umbilicalis*, (F) *Sillon horizontal*, *longitudinal*, *S. de la veine ombilicale*, *Sulcus antero-posterior Jec'oris*, *S. horizontalis Jec'oris*, *S. longitudinalis Jec'oris*, *S. sinister Jec'oris*, *S. Umbilicalis*, which lodges in the fœtus, the

umbilical vein and ductus venosus. 2. The *Principal Fissure*, termed *Sulcus Transversus* vel *Sinus Porta'rum*, (F) *Sillon transversal* ou *de la veine porte*, which receives the sinus of the vena porta. 3. The *Fissure of the Vena Cava inferior*, *Sillon de la veine cave inférieure*, situate at the posterior margin of the organ, and lodging the vena cava inferior. 4. The *Lobulus Spigellii* (q. v.), or *posterior portal eminence*. 5. The *anterior portal eminence*, *Auri'ga* vel *Lobulus anonymus* (q. v.) 6. Depressions corresponding to the upper surface of the stomach, gall-bladder, arch of the colon, right kidney, &c. Continued from the fossa umbilicalis, is a small fossa, called *Fossa Ductus Venosi*, between the left lobe and Lobulus Spigellii.

The posterior margin of the liver is very thick; much more so than the anterior. The liver is surrounded by a serous or peritoneal covering, which forms for it a *suspensory* or *broad ligament*, and two *lateral* and *triangular* ligaments. See Falx. The blood-vessels of the liver are very numerous. The hepatic artery and vena porta furnish it with the blood, necessary for its nutrition and the secretion of bile. The hepatic veins convey away the blood, which has served those purposes. The lymphatic vessels are very numerous; some being superficial; others, deep-seated. The nerves are, also, numerous, and proceed from the pneumogastric, diaphragmatic, and from the hepatic plexuses.

The intimate structure of the parenchyma of the liver is not understood. When cut, it presents a porous appearance, owing to the division of a multitude of small vessels. When torn, it seems formed of granulations;—the intimate structure of which has given rise to many hypotheses. In these granulations are contained the radicles of the excretory ducts of the bile; the union of which constitutes the hepatic duct.

The liver is the only organ, which, independently of the red blood carried to it by the hepatic artery, receives black blood by the vena porta. The general opinion is, that the vena porta is the fluid which furnishes bile; whilst that of the artery affords blood for the nutrition of the liver. It is probable, however, that bile is secreted by the latter vessel.

The liver is liable to a number of diseases. The principal are—*Hepatitis* (q. v.), or *inflammation*,—*Cancer*, *Biliary Calculi*, *encysted* and other *tumours* or *tubercles*, *hydatids*, &c., and it has, at times, been the *fashion* to refer to it as the cause of symptoms, with which it is in no wise connected.

LIVER, *Hepar*. Under this name the ancients designated several substances, having a brownish colour, analogous to that of the liver; and composed of sulphur and some other body. See Potassæ Sulphuretum or *Liver of Sulphur*.

The *Liver of Antimony* is the semi-vitreous sulphuret, &c.

LIXIV'IAL, *Lixiviosus*; from *lixivium*, 'lee.' (F) *Lixiviel*, *Lixivieux*. An ancient term for salts, obtained by washing vegetable ashes,—such as the fixed alkalies.

LIXIVIA'TION, *Elixivia'tion*, *Lixiviatio*, same etymon. An operation, which consists in washing ashes with water, so as to dissolve the soluble parts. The filtered liquor is the *lee*.

LIXIV'IUM, *Lixiv'ia*, *Conia*, *Lee*, *Ley*, (F) *Lessive*. Any solution containing potass or soda in excess; from *lix*, 'potash,' (q. v.)

LIZARD, *Lacer'ta*, *Lacertus*, *Saura*, *Sauros*, (F) *Lézard*. Lizards were formerly employed in medicine as sudorifics; and were, at one time, extolled in syphilis, cutaneous affections, and in cancer.

LOBE, *Lobus*. A round, projecting part of an organ. The liver and the lungs have lobes.

The LOBE, or LOBULE OF THE EAR, is a soft, rounded prominence, which terminates the circumference of the pavilion inferiorly, and which is pierced in those who wear rings.

The under surface of the brain is divided into *two anterior*, *two lateral*, and *two posterior lobes* or *processes*. These Chaussier calls *lobules* of the brain: the cerebral hemispheres he terms *lobes*.

LOBE'LIA INFLA'TA, *Indian Tobac'co*, *Emet'ic Weed*, *Lobelia*. The prominent virtues of this American plant are those of an emetic. In smaller doses it is sedative, and has been given as a pectoral in croup, asthma, &c. It is, also, sudorific and cathartic, and is an acronarcotic poison. Twenty grains act as an emetic.

LOBELIA SYPHILIT'ICA, *Blue Car'dinal Flower*, *Ranun'culus Virginia'nus*. The root of this plant, which is indigenous in the United States, is an emetic and drastic cathartic. It has been used against syphilis; hence its name. The mode of preparing it is to boil 3 ss of the *dried root* in ℥ xij of water, until the fluid is reduced to ℥ viij. Dose, ℥ ss.

LOB'ULE, *Lob'ulus*, diminutive of *Lobus*, a little lobe.

LOBULUS ANONYMUS, *L. accessor'ius ante'rior quadra'tus*, *L. quadratus*, (F) *Éminence porte antérieure*. This is situate in the liver between the passage for the round ligament and the gall-bladder, and is less prominent but broader than the *Lobulus caudatus*. From the lobulus anonymus a bridge runs across the passage for the round ligament. It is called *Pons* vel *Isthmus hep'atis*.

LOBULUS CAUDA'TUS, *Proces'sus caudatus*. This is merely the root or one of the angles of the lobulus spigellii, advancing towards the middle of the lower side of the great lobe, and representing a kind of tail.

LOBULUS SPIGE'LII, *L. poste'rior*, *L. post'icus papilla'tus*, (F) *Éminence porte postérieure*, *Lobule*, *Petit lobe du foie*, *Lobe de Spigel*, *Lobe duodénal*, *L. pancréatique*, is

situate near the spine, upon the left side of the great lobe of the liver, and is of a pyramidal shape, projecting, like a nipple, between the cardia and vena cava, at the small curvature of the stomach.

LOCAL, *Loca'lis*, *Topicus*. Topical. (F) *Locale*, *Topique*. An affection is called local—*Morbus loca'lis*,—when confined to a part, without implicating the general system; or, at all events, only secondarily. *Local* is thus opposed to *general*. A *local* or *topical application* is one used externally. See *Topical*.

LOCHIA or **LO'CHIA**, *Purgamen'ta Puerpe'rii*, *Purga'tio*, from *λοχος*, 'a woman in childbed,' (F) *Suites de couches*, *Vidanges*. The *cleansings*. A serous and sanguineous discharge following delivery. During the first two or three days, it is bloody, but afterwards becomes green-coloured and exhales a disagreeable and peculiar odour. The duration, quantity and character of the discharge vary according to numerous circumstances.

The lochial discharge flows from those uterine vessels, which formed a medium of communication between the mother and fœtus, and it continues until their mouths become obliterated, which usually requires from 14 to 21 days.

LOCHIORRHA'GIA, from *λοχεια*, and *εργυμι*, 'I make an irruption.' An immoderate flow of the lochia.

LOCHIORRHÆ'A, from *λοχεια*, 'the lochia,' and *ρεω*, 'I flow.' The discharge of the lochia.

LOCHODOCHI'UM, *Lochiodochium*, from *λοχος*, 'a female in childbed,' and *δεχομαι*, 'I receive.' An institution for the reception of pregnant and childbed females. A *Lying-in hospital*.

LOCOMO'TION, *Locomo'tio*, from *locus*, 'a place,' and *move're*, 'to move.' An action peculiar to animal bodies, by which they transport their bodies from place to place. The faculty is sometimes called *Locomotiv'ity* and *Locomotil'ity*.

TABLE OF THE APPARATUS OF LOCOMOTION.

Class I. ACTIVE ORGANS.	a. <i>Exciting</i> ,	{	The brain, Cerebellum, Medulla spinalis, Nerves.
	b. <i>Acting</i> , {		
	1. <i>By contraction</i>	{	The voluntary muscles, The cartilages of prolongation, Certain elastic ligaments.
	2. <i>By elasticity</i>		
Class II. PASSIVE ORGANS.	1. <i>Transmitting the action</i>	{	Tendons, Aponeuroses of insertion, Periosteum. Enveloping aponeuroses, Fibrous sheaths of tendons, Annular liga- { of the carpus, ments, { of the tarsus.
	2. <i>Concentrating or directing the action</i>		
	3. <i>Obeying or resisting action</i>		
	4. <i>Facilitating motion</i>		
		{	Long bones of the limbs, Flat bones of the cavities. Incrusting cartilages. Synovial app. { articular, of tendons.

The *Locomotion of an Artery* is the movement produced in a vessel with a curvature, by the impulse of the blood sent from the heart, which tends to straighten the artery, and causes the movement in question.

LOGIATROS, *λογιατρος*; from *λογος*, 'a word,' and *ιατρος*, 'a physician.' A physician without experience. A theorist.

LOIMOG'RAPHY, *Loimogra'phia*, from *λοιμος*, 'a plague,' and *γραφω*, 'I describe.' A description of the plague and pestilential diseases.

LOGY, *λογος*, 'a description.' A suffix denoting 'a treatise or description.' Hence, *Angiology* and *Neurology*, &c.

LONG, *Longus*, *Macros*. That which is much greater in length than in breadth; as the *long bones*. The epithet is, also, applied to several muscles, to distinguish them from others of similar function, when the latter are shorter. We say, for instance, *long flexors*, and *long extensors*, in opposition to *short flexors*, and *short extensors*.

LONGEVITY, *Longæv'itas*, *Macrobio'sis*, The prolongation of existence to an advanced age. Haller collected examples of more than 1000 centenarians. He had knowledge of 62 persons, aged from 110 to 120 years; of 29 from 120 to 130 years; and of 15, who had attained from 130 to 140 years. Beyond this advanced age, examples of longevity are much more rare and less sufficiently attested.

The following list of instances of very advanced ages has been given:

	Lived.	Age.
Apollonius of Tyana, A. D.	99	130
St. Patrick,	491	122
Attila,	500	124
Llywarch Hên,	500	150
St. Coemgene,	618	120
Piastus, King of Poland,	861	120
Thomas Parr,	1635	152
Henry Jenkins,	1670	169
Countess of Desmond,	1612	145
Thomas Damme,	1648	154
Peter Torton,	1724	185
Margaret Patten,	1739	137
John Rovin and Wife,	1741	172 and 164
St. Mongah or Kentigen,	1781	185

LONGIS'SIMUS DORSI, *Lombo-dorso-trachélien*, *Portion costo-trachélienne du sacro-spinal* (Ch.), *Semi-spina'tus*. (F) *Long dorsal*, *Long du dos*, is situate vertically at the posterior part of the trunk and fills, in a great measure, the vertebral furrows. It is thick and almost square below; thin and pointed above. It is attached to the posterior surface of the sacrum, to the transverse processes of all the lumbar and dorsal vertebræ, and to the inferior margin of the last 7 or 8 ribs. It maintains the vertebral column in a straight position; straightens it when bent forwards, and can even carry it back. It also assists in the rotary motion of the trunk.

LONGUS COLLI, *Pre-dorso-cervical*, *Pre-dorso-atloïdien* (Ch.), (F) *Long du cou*. This muscle is situate at the anterior and superior part of the vertebral column. It is long, flat, and broader at its middle than at its extremities, which are pointed. It is attached to the anterior surface of the bodies of the three first dorsal and six last cervical vertebræ; to the intervertebral ligaments; to the anterior edge of the transverse processes of the five last cervical vertebræ; and to the tubercle on the anterior arch of the first. This muscle bends the cervical vertebræ upon each other and upon the dorsal vertebræ. If the upper portion acts on one side only, it occasions the rotation of the atlas on the vertebra dentata; and, consequently, of the head on the neck.

LONICE'RA PERICLYM'ENUM, *Peryclim'enum*, *Caprifolium*, *Common Woodbine*. (F) *Chèvre-feuille*. This common plant is slightly astringent and tonic, and was formerly much used in gargles.

LOOCH, *Lohoch*. Look. A linctus. See Eclegma.

LOOCH ALBUM, *Looch amygdali'num*, *Linctus albus*, *L. amygdalinus*, *L. commu'nis*, *Ecleg'ma album*, *Eclegma gummo'so-oleosum*, (F) *Looch blanc*, *L. b. amygdalin*, *L. b. pectoral*. (*Amygd. dulc.* 3 ss, *amygd. amar.* No. ij, *sacchar. alb.* 3 iv. Make an emulsion by gradually adding 3 iv of water. Then take *pulv. tragacanth. gr.* xvj, *ol. amygd. dulc. recent.* 3 ss., *sacch.* 3 ij. Add the almond milk gradually to this, and afterwards *aq. flor. aurant.* 3 ij. *Ph. P.*) It is demulcent and pectoral.

LOOCH EX OVO, *Looch of egg*, (F) *Look d'œuf*, *Looch rouge*, *Emulsion huileuse*, *Mixture calmante*, *Potion pectorale*, *Lait adoucissant*, *Potio seu emul'sio seu mistu'ra le'niens seu oleo'sa*, *Looch pectoral'le le'niens*. (*Vitell. ovi recent.* 3 ss, *ol. amygd. dulc.* 3 iss, *syrup. althææ*, 3 j. Rub in a mortar and add by degrees *aq. flor. aurant.* 3 j, *aq. papav. rhæad.* 3 ij. *Ph. P.*) Virtues the same as the preceding.

LOOCH VIRIDE, *Look cum croco et pista'ciis*, (F) *Looch vert.* (*Syrup. violar.* 3 j, *tinct. croci gtt.* xx, *aquæ* 3 iv. Mix, and add pista-

ciæ semin. sicc. 3 vj. *Ph. P.*) Virtues like the last.

LOOCH ABSQUE EMULSIO'NE PARA'TUM, *Look préparé sans émulsion*. *Looch prepared without emulsion*. (*Pulv. g. trag. gr.* xvj to gr. xxx, *ol. amygd. dulc.* 3 ss, *sacchar.* 3 j, *aquæ* 3 iij, *aquæ flor. aurant.* 3 ij. M. by rubbing in a marble mortar.) Demulcent.

LOPEZ RADIX, *Radix lopezia'na*, *Radix In'dica lopezia'na*. The root of an unknown Indian tree, not possessed of any remarkable smell or taste, or of any appearance of resinous matter. It has been extolled, notwithstanding, in cases of colliquative diarrhœa. Gaubius compares its action to that of simarouba, but thinks it more efficacious.

LOPHIA, *Lopha'dia*. The first vertebra of the back.—Gorræus.

LOQUAC'ITY, *Garru'litas*; from *loquor*, 'I speak.' (F) *Babillement*. The act of speaking with volubility. It is, sometimes, a symptom of disease, and is observable in hysteria, &c.

LORDO'SIS, from *λογδός*, 'curved,' 'bent.' *Repanda'tio*, *Repanditas*. A name, given to curvatures of the bones in general; and particularly to that of the vertebral column forwards.

LORIND MATRI'CIS, *Epilep'sia uteri'na*, *Convulsi'vus u'teri morbus*. A barbarous name given to a pretended epilepsy of the womb.

LOTION, *Lotio*. A fluid external application. Lotions are ordinarily applied by wetting linen in them and keeping it on the part affected.

LOTION, GOWLAND'S. An empirical preparation. (*Bitter almonds*, 3 j, *sugar*, 3 ij, *distilled water*, ℥ ij. Grind together, strain and add *corrosive sublimate*, 9 ij, previously ground with *sp. vini rect.* 3 ij.) Used in obstinate eruptions.

LOTION, HYDROCYAN'IC, *Lotio Ac'idi Hydrocyan'ici*. (*Hydrocyanic acid. f.* 3 iv, *rectified spirit of wine, f.* 3 j, *distilled water, f.* 3 xss.) Used with much success in impetigo, &c.

LOTION, HANNAY'S, *Preven'tive wash*. This famous nostrum, for the prevention of venereal infection, was nothing more than a solution of caustic potass.

LOTION, STRUVE'S, *for the whooping cough*. (*Antim. tartar.* 3 j, *aquæ* 3 ij. Add *tinct. cantharid.* 3 j.)

LOVE, *Eros*, *amor*, from Sax. *lufian*, (G) *lieben*, 'to love.' (F) *Amour*. A tender and elevated feeling, which attracts one sex to the other. Love is occasionally a cause of disease, especially of insanity.

LOWER, *Tu'bercle of*, *Tuber'culum Loweri*. Anatomists have given this name to a small projection; the existence of which is by no means constant, and which is found in the sinus venosus, between the superior and inferior cava.

LOXAR'THRUS, from *λοξος*, 'oblique,' and *αρθρον*, 'articulation.' *Perversion de la tête des os et des muscles*. A vitious deviation or direction of the joints; without spasm or luxation, as in *clubfoot*.

LUCCA, MINERAL WATERS OF. The baths and waters, near this ancient Italian city, have been long celebrated. They are thermal, and resemble in properties those of Plombières in France and of Bath in England. There are 10 different sources, the temperature of which varies from 95° to 131° Fahr.

LUCID, *Lu'cidus*. In medicine, the word *lucid* is particularly applied to the *intervals* of apparent reason, which occur in mental alienation.

LUMBA'GO, from *Lumbi*, 'the loins.' *Arthro'sia lumbo'rum*, *Lumbago rheumat'ica*, *Nephral'gia rheumat'ica*, *Rhachirrheu'ma*, *Rhachiorrheu'ma*, *Rheumatis'mus dorsa'lis*. Rheumatism affecting the lumbar region. *Lumba'go psoad'ica*, *L. apostemato'sa*, *L. ab arthro'acē*—Pains in the loins from abscess.

LUMBAR, *Lumbaris* vel *Lumba'lis*. (F) *Lombaire*. Belonging or having reference to the loins.

The **LUMBAR ARTERIES** are four or five in number on each side. They arise from the sides of the abdominal aorta, and pass behind the muscles situate in front of the lumbar portion of the spine, to gain the broad muscles of the abdomen. They give off, 1. Spinal branches. 2. Anterior, posterior, and external muscular branches.

The **LUMBAR VEINS** have an arrangement analogous to that of the arteries of the same name. They communicate with the vertebral sinuses, azygous veins, &c. and pass into the vena cava inferior.

The **LUMBAR NERVES** are five in number, and issue from the vertebral column by the spinal foramina of the loins. The first lumbar nerve gives off three branches:—the *external* or *ilio-scrotal*;—the *middle* or *inguino-cutaneous*, and the *internal* or *infra pubian*. Along with the three pairs below it, it forms the lumbar plexus.

The **LUMBAR PLEXUS, *Portion lombaire du plexus crural*** (Ch.), *Plexus Lumbo-abdominal*. This plexus is formed by the union of the *Rami communican'tes* of the anterior branches of the first four lumbar nerves. It is situate behind the psoas muscle and before the transverse processes of the lumbar vertebræ. It furnishes, besides the branches which proceed from the first pair, several filaments, that are distributed to the psoas muscle, to the iliacus, the integuments, glands of the groin; and three great branches—the *crural*, *obturator*, and *lumbo-sacral*.

LUMBAR ABSCESS, *Psoas abscess*, *Aposte'ma psoat'icum*, *Absces'sus lumbo'rum*, *Morbus psoad'icus*. This abscess is so called from the matter being found on the side of the psoas muscle or betwixt that and the iliacus inter-

nus. Between these muscles is a quantity of loose, cellular substance; and, when an abscess takes place there, it can find no outlet except by a distant course. Generally, it descends along the psoas muscle, forming a swelling immediately beneath Poupart's ligament; at times, however, it extends down the thigh under the fascia. Severe hectic follows the bursting of the abscess; and, often, death. Its causes are—scrophula, injury to the loins, &c.

When, from the pain of the back continuing for some time, with other symptoms, the disease is suspected, caustics, or the moxa applied opposite the transverse processes of the lumbar vertebræ, must be recommended; and when the abscess is ready for opening, it may be emptied by repeated discharges of the matter, through a small opening, made with a lancet or small lancet-pointed trocar. The medical treatment will consist in supporting the system, under the great restorative efforts required of it.

LUMBI, *The loins*, the *lumbar region*, *Psoæ*, *Osphys*. The posterior regions of the abdomen, comprised between the base of the chest and the pelvis. The parts, which enter into the formation of the lumbar region are—the skin; a considerable quantity of cellular texture; broad and strong aponeuroses;—the *Latissimus Dorsi*, *Obliquus externus*, and *Obliquus internus abdominis*, *Transversalis abdominis*, *Quadratus lumborum*, and the mass common to the *Sacro-lumbalis*, *Longissimus dorsi* and *Multifidus spinæ*. These muscles surround the lumbar region of the vertebral column. The vessels, nerves, &c. of the loins, are called *lumbar*.

LUMBO-SACRAL. Belonging to the lumbar and sacral regions. (F) *Lombo-sacré*. Bichat calls thus a very large nerve, given off from the anterior branch of the 5th lumbar pair, which descends into the pelvis before the sacrum to join the sciatic plexus.

LUMBRICA'LIS, *Vermicula'ris*. Resembling a *lumbri'cus* or earthworm. A name, given to small muscles, met with in the palm of the hand and sole of the foot.

LUMBRICALES MANUS, *Fidicina'les*, *Flexor primi interno'dii digito'rum manus* vel *perforatus lumbrica'lis*, *Annuli-tendino-phalangiens*, *Palmi-phalangiens*. Four small, fleshy, thin, round, long, fusiform fasciculi, situate in the palm of the hand, and distinguished into first, second, third, and fourth, counting from without to within. They arise from the tendons of the flexor communis digitorum and are inserted at the outer and posterior side of the superior extremity of the first phalanges of the four last fingers. These muscles bend the fingers on the metacarpus, and fix the tendons of the flexor digitorum communis.

LUMBRICALES PEDIS, *Planti-tendino-phalangiens*, *Planti-sous-phalangiens*, (Ch.) They are analogous to those of the hand in

form, number, and arrangement. They increase the flexion of the toes and draw them inwards.

LUNA'RE, OS, Os semiluna'rē. The second bone in the upper row of the carpus.

LUNA'RIA REDIVI'VA, Leuco'ium, Bul'bonach, Satin, Honesty. Said, by Ray, to be a warm diuretic.

LU'NATIC, Lunat'icus, from *Luna*, 'the moon.' That which is under the influence of the moon. *Moonstruck.* An epithet given to diseases, which are supposed to appear at certain phases of the moon; or to those who are affected by them. Usually, it is restricted to one labouring under lunacy or mental alienation.

LUPINUS. Under this term the *white lupin, Lupi'nus albus*, is meant in some pharmacopœias. The seed, which was much eaten in the days of Pliny and of Galen, are now neglected. The meal is, however, occasionally used as an anthelmintic, and as a cataplasm.

LUPUL'NA, Lu'puline. A substance which exists in the hop, and has been pointed out by Dr. Ives, of New York. It occurs in the form of small, shining, yellowish grains, which cover the base of the scales of the hop. It is pulverulent, and of an aromatic odour. When analyzed, it is found to contain resin, volatile oil in small quantity, and a bitter principle. It is aromatic and tonic, and—according to Dr. Ives—narcotic.

LUPUS. 'The wolf,' so named from its rapacity. *Ulcus Tuberculo'sum, Cancer lupus, Noli me tan'gere.* Tubercular excrescences, with ragged, spreading ulcerations, chiefly about the alæ nasi, where they destroy the skin, &c. for some depth. Sometimes they appear in the cheek circularly, or in the shape of a sort of ring-worm, destroying the substance and leaving a deep and deformed cicatrix. The knife or caustic should be used to separate the sound from the morbid parts. Arsenic has been given internally with advantage.

LUTE, Lutum, Cæmen'tum, Mud. (F) *Lut.* A composition employed either for closing apertures in a pharmaceutical instrument, or for covering the surface of retorts, tubes, &c. which have to support a great degree of heat. Lutes are composed differently, according to the object to be accomplished. Commonly they are made of linseed meal and starch. The *fat lute* is formed of clay and drying oil. Sometimes, the white of egg and lime are used; and that which is employed for covering vessels, intended to be strongly heated, is made of clay, sifted sand, and water.

LUTRON, λουτρον. A bath. Also, an ophthalmic medicine.—Galen.

LUXA'TION, Elux'ation, from *luxa're*, 'to put out of place.' *Disloca'tion, Olisthe'ma, Apoped'asis, Luxa'tio, Disloca'tio, Ec-clisis, Strem'ma, Luxatu'ra, Ecto'pia, Ecto'ptosis, Elap'sus, Lygis'mus, Emo'tio, Ec'sta-*

sis, Exarthre'ma, Exarthro'ma, Exarthre'ma luxa'tio, Exarthro'sis, Deloca'tio, Ex-articula'tio, (F) Luxation, Dislocation, Déboîtement. A displacement of a bone from its proper cavity. A putting out of joint. A displacement of two or more bones, whose articular surfaces have lost, wholly or in part, their natural connexion; either owing to external violence (*accidental luxation*), or to disease of some of the parts about the joint (*spontaneous luxation*.)

Luxation is complete, when the bones have entirely lost their natural connexion: *incomplete,* when they partly preserve it: and *compound,* when a wound communicates with the luxated joint.

The general indications of treatment are, 1. To reduce the protruded bone to its original place. 2. To retain it *in situ.* 3. To obviate any attendant or consequent symptoms.

To reduce requires extension, counter-extension, and coaptation.

LUXEUIL, MINERAL WATERS OF. Saline waters, at the town of Luxeuil, at the foot of the Vosges, in the department of Haute Saône. Five springs are thermal, and two cold. They seem to contain carbonic acid, carbonates of iron and lime, and muriate of soda; and are employed as aperient, tonic, and stimulant.

LYCAN'CHĒ, λυκαγχη, from *λυκος*, 'a wolf,' and *αγχα*, 'I strangle.' *Wolf quincy, Wolf choak;*—as *Cynanche* means *Dog choak.* See *Lycoides.*

LYCANTHRO'PIA, from *λυκος*, 'a wolf,' and *ανθρωπος*, 'a man:' *Lyca'on, Insa'nia lupi'na.* A variety of melancholy, in which the person believes himself to be changed into a wolf, and imitates the voice and habits of that animal.

LYCOI'DES, Lycop'des, from *λυκος*, 'a wolf,' and *ειδος*, 'form.' *Lupo sim'ilis.* An epithet for a species of cynanche, absurdly attributed to excessive retention of sperm in its reservoirs, and its passage into the blood. (?)

LYCOPER'DON, from *λυκος*, 'a wolf,' and *πεδω*, 'I break wind.' *L. Bovis'ta, Crep'itus Lupi, Puff-ball, Bull Fists, Mol'lipuffs, Bovis'ta, (F) Vesseloup.* The puff-ball dries into a very fine, light, brownish dust, which is sometimes used as a mechanical styptic to arrest hemorrhage.

LYCOPER'DON TUBER, Tuber, Truffle, Agriocas'tanum, Trubs, Tuber ciba'rium, T. Gulos'orum, Tubera Terræ, (F) Truffe. A fleshy, firm body, unknown in its mode of reproduction, which is found under ground, especially in different parts of France, Italy, &c., and is much esteemed as an aliment. It seems to belong to the Champignons, and has a particular perfume. Aphrodisiac virtues have been ascribed to it.

LYCOPO'DIUM, L. Clava'tum, Cingula'ria, Muscus clava'tus, Club-moss, Wolf's-claw. This is the largest of the European

mosses. The dust, which fills the capsules of its spikes, is very inflammable, and hence has been called *Vegetable Sulphur*;—and, also, *Fari'na seu Pulvis*, seu *Semen seu Sulphur Lycopodii*. It is used in France to roll pills and boluses in: and, in Medicine, as a desiccative, in the excoriations to which infants are liable. It is collected chiefly in Switzerland and Germany for commerce.

LYCOPodium SELA'GO, *Muscus erectus*, *Upright Club-moss*, *Fir Club-moss*, *Upright Fir-moss*. The decoction of this plant acts violently as an emetic and purgative; and was formerly, on this account, used as an abortive. It is also employed to kill vermin.

LYMPH, *Lympha*, from *νῦμα*, 'water,' by changing *v* into *λ*. *White Blood*, *Lympha Nutritia*. A name given to the fluid, contained in the lymphatic vessels and thoracic duct of animals, which have been made to fast for 24 hours.

According to Chevreul, the lymph of the dog contains water, fibrine, albumen, common salt, subcarbonate of soda, phosphates of lime and magnesia, and carbonate of lime. The properties and composition of lymph vary considerably, according to the part whence the lymphatic vessels obtain it. Generally, it is under the form of a transparent, slightly alkaline fluid, sometimes of a madder-red or yellowish colour,—of a spermatic odour, and saline taste; soluble in water,—the solution becoming turbid, when mixed with alcohol. When left to itself, it coagulates. The clot or solid portion becomes of a scarlet red, if put in contact with oxygen; and of a purple red, if placed in carbonic acid.

The lymph is probably the product of internal absorption in different parts of the body; it then flows along the lymphatic vessels, uniting with the chyle, and is poured with it into the veins; thus becoming one of the materials of the blood. According to others, the blood, when it reaches the arterial radicles, is divided into two portions,—the one red, which is carried to the heart,—the other serous or white, which is absorbed by the lymphatic vessels, and constitutes the lymph. By others, again, the lymphatics are considered to be the vessels of return for the white blood sent to certain tissues.

LYMPHATIC, *Lymphaticus*, *Roriferus*. That which relates to lymph.

LYMPHATIC HEARTS. The frog and several other animals are provided with large receptacles for the lymph immediately underneath the skin, which exhibit distinct and regular pulsations like the sanguiferous heart. Their use appears to be—to propel the lymph.

The **LYMPHATIC SYSTEM** is that particular system of organs, which is inservient to the formation and circulation of lymph. These organs are:

1. The **LYMPHATIC GANGLIONS** or **GLANDS**. See Ganglions.

2. The **LYMPHATIC VESSELS**, *Lymphæductus*, *Lymphangi'a*, *Lymphang'e'a*, *Venæ lymphaticæ*, *Ductus sero'si*, and *Vasa lymphatica*. These are very numerous. Arising at the surface of membranes and of the tissue of the organs, they carry into the veins the lymph from those parts. Lymphatic vessels are found in every part of the body. Wherever they are met with, however, they form two orders,—one *superficial*, the other *deep-seated*;—the two orders frequently communicating with each other.

Lymphatic vessels are generally smaller than arteries and veins. They are very thin, diaphanous, and cylindrical; but they present, here and there, more or less considerable dilatations, caused by valves in their interior. They are slightly tortuous in their course: their anastomoses are very numerous, and they often cross each other, forming successive plexuses. Of the arrangement of the extreme radicles we are ignorant. All the branches, before joining the principal trunks, pass through lymphatic ganglions, in which they are convoluted, or subdivide almost *ad infinitum*.

They are formed of an outer cellular membrane and an internal coat, similar to that of the veins: of the latter, the valves are formed. All the lymphatics of the body ultimately discharge themselves into the subclavian and internal jugular veins. Two of these trunks are considerably larger than the others: the *thoracic duct* (q. v.), and the great trunk of the right side,—(F) *La grande veine lymphatique droite*. The former receives the lymphatics of the abdomen, of the lower extremities, the left side of the thorax, the left upper extremity, and the corresponding side of the head and neck:—the latter receives those of the right upper extremity, and of the right side of the head, neck and thorax.

LYMPHANGIOL'OGY, from *Lymphangeon*, 'a lymphatic,' and *λογος*, 'a description.' A treatise on the lymphatics.

LYMPHEURYS'MA, from *lymphe*, 'lymph,' and *ευρυω*, 'I dilate.' Morbid dilatation of a lymphatic vessel.

LYMPHOCHE'ZIA, from *lymphe*, 'lymph,' and *χεζω*, 'I go to stool.' Serous diarrhœa (q. v.)

LYMPHOSIS. The preparation or elaboration of lymph.

LYMPHOT'OMY, from *lymphe*, 'lymph,' and *τεμνω*, 'I cut.' Dissection of the lymphatics.

LYNCH'S EMBROCA'TION. An emollient nostrum, formed of *olive oil* impregnated with *bergamot* and other essences, and coloured with *alkanet root*.

LYNGO'DES, from *λυγξ*, 'the hiccough.' *Febris lyngodes*. A species of fever, commonly intermittent, of which the hiccough is a prominent symptom.

LYRA, *λῦρα*, 'the lyre.' *Psalterium*, *Corpus Psalloides*, *Lyra Davidis*. The under surface of the posterior part of the body of the fornix is impressed with numerous transverse and oblique lines, which have been so called from some resemblance they bear to the ancient lyre.

LYSIMACHIA NUMMULARIA, *Creeping Loose Strife*, *Money Wort*, *Nummularia*, *Hirundinaria*, *Centimorbia*. (F) *Herbe aux ecus*. This plant was formerly accounted vulnerary. It has been considered to possess antiscorbutic and astringent qualities, and has been used in leucorrhœa.

LYSIS, *λυσις*. Solution, a common suffix, also, a name given to crises, which are operated insensibly; that is, gradually and without critical symptoms.

LYSSODEC'TUS, from *λυσσα*, 'canine madness,' and *δακνω*, 'I bite.' *Hydrophobus*, —*Cane rabido morsus*. One who has been bitten by a mad dog, or is actually labouring under hydrophobia.

LYTE'RIOS, *λυτηριος*, 'solving.' An epithet, given to those signs, which announce the solution of a very violent disease.

LYTHRUM SALICARIA, *Lysimachia purpurea*, *Salicaria*:—the *Common or Purple Willow Herb*. The herb, root, and flowers possess a considerable degree of astringency, and are used, occasionally, in the cure of diarrhœa and dysentery, leucorrhœa, hæmoptysis, &c.

LYTTA VITTA'TA, *Cantharis vittata*, *Pota'toe Fly*. (F) *Cantharide tachetée*. Four species of meloe, that blister, are found in the United States. The lytta vittata feeds principally upon the potatoe plant, and, at the proper season of the year, may be collected in immense number.

The potatoe fly resembles the cantharides in every property, and is fully equal to them.

LYTTA RUFIPES. A variety of Lytta, peculiar to Chili, which is more active as a vesicant than the Cantharis, or the Lytta just described.

M

M. This letter signifies, in prescriptions, *manipulus*, 'a handful.' Also, *misce*, 'mix.' See Abbreviation.

MACARO'NI. An alimentary paste, moulded of a cylindrical shape, and formed of rice or wheaten flour. It is eaten—when boiled—in soup, prepared with cheese, &c.

Also, a name formerly given to a pulverulent compound of sugar and glass of antimony, carried into France by the Italian monks, and employed at the hospital, *La Charité*, in the treatment of painters' colic.

MACERA'TION, *Macera'tio*, from *mac'ero*, 'I soften by water.' An operation, which consists in infusing, usually without heat, a solid substance in a liquid, so as to extract its virtues.

MACHÆ'RION, *Machæ'ris*, *Machærid'ion*, *Gladiolus*. An amputating knife. Rufus of Ephesus asserts, that the Aruspices gave this name to a part of the liver of animals.

MACHAO'NIA ARS, *Med'icine*. The *Healing Art*:—so called after Machaon, the son of Æsculapius.

MACH'INAL, *Mechan'icus*. This epithet is added, especially by French writers, to the word *movement*, to express that the will takes no part in it.

MACHINE', *Mach'ina*, *Machinamen'tum*, *Mech'anē*, *Mechane'ma*. A more or less compound instrument, used in physics and chy-

mistry to put a body in motion, or to produce any action whatever. Physiologists, sometimes, use it for the *animal body*;—as the *machine* or *animal machine*.

MACRAU'CHEN, from *μακρος*, 'long,' and *αυχην*, 'the neck.' *Longo collo præd'itus*. One, who has a long neck.—Galen.

MACROBIOT'IC, *Macrobiot'icus*, *longæ-vus*, from *μακρος*, 'great,' 'long,' and *βιος*, 'life.' That which lives a long time. The *macrobiotic art* is the art of living a long time.

MACROCEPH'ALUS, from *μακρος*, 'great,' 'long,' and *κεφαλη*, 'head.' *Qui magnum habet caput*, 'One who has a large head.' This epithet is given to children born with heads so large, that they seem to be hydrocephalic; but in which the unusual development is owing to a large size of the brain. Such are supposed to be more than ordinarily liable to convulsions. (?) The term has also been applied, by Hippocrates, to certain Asiatics who had long heads.

MACROGLOS'SUS, from *μακρος*, 'large,' and *γλωσσα*, 'tongue.' One, who has a very large tongue. The condition is termed *macroglos'sia*.

MACROPHYSOCEPH'ALUS, from *μακρος*, 'long,' *φυσσα*, 'air,' and *κεφαλη*, 'head.' A word, used by Ambrose Paré, to designate an augmentation of the head of the fœtus, produced by a sort of emphysema, which retards delivery.

MACROPNCEA, from μακρός, 'long,' and πνῆω, 'I breathe.' A long or slow respiration. *Macrop'nus*, *macropnoos*, for one who breathes slowly, is met with in some authors.—Hippocr.

MACROSCELES, *Crura longa habens*; from μακρός, 'long,' and σκελος, 'the leg.' One, who has long legs.

MACULA. A spot. *Dyschræa*, *Celis*, κελίς, (F) *Tache*. A permanent discoloration of some portion of the skin, often with a change of its texture. *Ephelis*, *Nævus*, *Spilus*, &c. belong to the *Maculæ*.

MADAROSIS, from μάδος, 'bald.' *Madaro'ma*, *Made'sis*, *Depluma'tio*, *Milphæ*, *Milpho'sis*, *Ptilosis*. Loss of the hair, particularly of the eyelashes.

MADISTÉRIUM, *Madiste'rion*, *Tricholabium*, 'tweezers,' *Volsel'la*. An instrument for extracting hairs from the skin.

MAGDALIA, *Magda'leon*, *Magdaleo*, *Magdalis*, from μαγδαλία, 'a cylinder.' Any medicine rolled into the form of a cylinder; and particularly plasters.

MAGIS, μαγίς, 'a cake.' A sort of cake, composed of cloves of garlic and cheese beaten together.—Hippocr.

MAG'ISTERY, *Magiste'rium*, from μαγίς, 'a master.' Certain precipitates, from saline solutions, were formerly so called; as well as other medicines, the preparation of which was kept secret.

MAG'ISTRAL, *Magistra'tis*, *extempora'neous*. Medicines are so called, which are prepared extemporaneously. *Officinal*, are such as have been prepared for some time before they are prescribed.

MAGMA, (F) *Marc*, from μάδω, 'I pound,' 'I express.' The thick residuum, obtained after expressing certain substances to extract the fluid parts from them. Also, the grounds, which remain after treating a substance with water, alcohol, or any other menstruum.

The *Marc of Olives* is the residuum after the greatest possible quantity of oil has been extracted from olives, by making them ferment. It was formerly employed as a stimulant, under the form of a *bath*,—to which the name *Bain de Marc* was given by the French.

The *Marc of Grapes*, *Brytia*, was once employed for the same purposes.

MAGNES ARSENICALIS, (*Sulphur*, *white arsenic*, and *common antimony*, of each equal parts. Mix by fusion.) It is corrosive.

MAGNE'SIA, *Abar'nahas*, *Chambar*, from *magnes*, 'the magnet;' because it was supposed to have the power of attracting substances from the air.

MAGNESIA USTA, *Magnesia calcina'ta*, *Cal'cined Magnesia*, *Oxide of magnesium*. (F) *Magnésie brulée*, *Magnésie*, *M. Caustique*. This is obtained by exposing carbonate of magnesia to a strong heat. It is inodorous; taste very slightly bitter; in the form of a white, light, spongy, soft powder. S. g. 2.3;

requiring 2000 times its weight of water for its solution. It is antacid, and laxative when it meets with acid in the stomach. Dose, gr. x to ʒj in water or milk.

MAGNESIA OPALI'NA. A name given by Léméry to a mixture of equal parts of *antimony*, *nitrate of potass*, and *muriate of soda* (decrepitated). It has emetic properties, but is not used.

MAGNESIÆ CAR'BONAS, *M. Subcar'bonas*, *Magnesia* (Dublin), *M. aera'ta*, *M. carbon'ica*, *M. alba*, *Subcar'bonate of Magnesia*, *Henry's Magnesia*, *M. Subcarbon'ica*, *M. Mitis*, *M. Edinburgen'sis*, *M. Salis Ebshamen'sis*, *M. Salis ama'ri*, *Car'bonas magnes'icum*, *Lacterræ*, *Hypocar'bonas magnes'ia*, *Terra ama'ra*, *T. amara aëra'ta*, *T. absor'bens minera'lis*, *T. Talco'sa oxyanthracod'es*. (F) *Sous-carbonate de Magnésie*, *Magnésie aérée*, *M. blanche*, *M. crayeuse*, *M. douce*, *M. effervescente*, *M. Moyenne*, *Poudre de Sentinelli*, *P. de Valentini*, *P. du Comte de Palme*. Prepared from sulphate of magnesia by subcarbonate of potass. It is inodorous; insipid; light; white; spongy; opaque; effervescing with acids: insoluble in water. Properties the same as the last. But the carbonic acid, when set free, sometimes causes unpleasant distention.

MAGNESIÆ SULPHAS, *Sulphas Magnes'ia purifica'ta*, *Magnesia vitriola'ta*, *Sal cathar'ticus ama'rus*, *Sal catharticum amarum*, *Sal ama'rum*, *S. Anglicanum*, *Sulphate of Magnesia*, *Sal Epsomen'sis*, *Sal catharticus Anglica'nus*, *Sal Sedlicen'sis*, *Sal Ebsdamen'se*, *S. Seydschutzen'se*, *Terra ama'ra sulphu'rica*, *Vitriol'icum Magnes'ia*, *Epsom Salt*, *Bitter purging Salt*. (F) *Sal admirable de Lemery*, *Sel d'Egra*. Generally obtained from sea water. Its taste is bitter and disagreeable. It is soluble in an equal quantity of water at 60°. It is purgative and diuretic. Dose, as a cathartic, ʒ ss to ʒ ij.

MAGNET, *Magnes*, *Lapis heracle'us*, *L. Syderi'tis*, *L. nau'ticus*, *Magni'tis*, so called from *Magnes*, its discoverer. (F) *Aimant*. The *magnet* or *loadstone*. An amorphous, oxydulated ore of iron, which exerts an attraction on unmagnetized iron, and has the property of exhibiting poles;—that is, of pointing by one of its extremities to the north. This ore, by constant or long rubbing, communicates its properties to iron, and thus artificial magnets are formed. Magnetic ore is found in many countries, and particularly in the island of Elba.

The magnet is sometimes used to extract spicula of iron from the eye or from wounds. It has been employed as an antispasmodic; but acts only through the imagination. The powder has been given as a tonic. In *Pharmacy*, it is used to purify iron filings. It attracts the iron, and the impurities remain behind. It formerly entered, as an ingredient, into several plasters, to draw bullets and heads of arrows from the body:—as the *Em-*

plastrum divinum Nicolai, the *Emplastrum nigrum* of Augsburg, the *Opodeldoch* and *Attractivum* of Paracelsus, &c.

MAGNETIC, *Magneticus*, from *μαγνῆς*, 'the magnet.' That which belongs or relates to magnetism;—mineral or animal.

MAGNETIC FLUID. A name, given to the imponderable fluid to which the magnet owes its virtues. By analogy, it is applied to a particular principle, supposed to be the source of organic actions; which affects, it is conceived, the nervous system principally, and is susceptible of being transmitted from one living body to another, by contact or simple approximation, and especially under the influence of fixed volition. See Magnetism, Animal.

MAGNETIC PLASTER. A plaster, at present, not used. It had for its base a mixture, called *Magnes arsenicalis*; formed of equal parts of antimony, sulphur, and arsenic melted together in a glass cucurbit.

The name **MAGNETIC PLASTERS** was, likewise, given to such as contained powdered magnet.

MAGNETISM, ANIMAL, *Mesmerism*, *Neurogamia*, *Biogamia*, *Biomagnetismus*, *Zoomagnetismus*, *Exoneurism*, (proposed by Mr. H. Mayo,) *Tellurismus*. Properties attributed to the influence of a particular principle, which has been compared to that which characterizes the magnet. It is supposed to be transmitted from one person to another, and to impress peculiar modifications on organic action, especially on that of the nerves. The discussions, to which this strange belief has given rise, are by no means terminated. There is no evidence whatever of the existence of such a fluid. Highly impressible persons can be thrown into a kind of hysteric sleep and somnambulism, but farther than this, the efforts of the magnetizer cannot reach. It is a mode of action upon the nerves through the medium of the senses.

MAGNOLIA GLAUCA, *Small Magnolia*, *Magnolia*, *Swamp Sas'safras*, *Elk Bark*, *Indian Bark*, *White Laurel*, *Sweet Bay*, *Beaver Wood*, *White Bay*, *Cinchona* of Virginia. The bark is possessed of tonic properties, resembling those of cascarilla, canella, &c. The same may be said of the *Magnolia tripetala* or *Umbrel'la tree*; the *M. acuminata* or *Cucumber tree*, and the *M. grandiflora*.

MAGNUM, OS. The third bone of the lower row of the carpus; reckoning from the thumb. It is the largest bone of the carpus; and is, also, called *Os capitatum*. (F) *Grand Os*.

MAL DE CRIMÉE (F), *Lèpre des Cosaques*, *Lepra Tau'rica*. A variety of lepra in the Crimea.

MAL DE SAN LAZARO, *Cocobay*. A leprous disease common in Columbia, S. America, and said to be cured by the Cuichunchulli.

MALABATHRINUM. Ancient name of an ointment and a wine, into which the *malabathrum* entered.

MALABA'THRUM, *Cadeji-Indi*. The leaves of a tree of the East Indies. These leaves entered into the theriac, mithridate, and other ancient electuaries. They are believed to be from a species of laurel—the *Laurus Cassia*; but, according to others, from the *Laurus Malabathrum*. The *O'leum Malabathri* is obtained from it.

MALA'CIA, from *μαλακία*, 'softness.' A depravation of taste, in which an almost universal loathing is combined with an exclusive longing for some particular article of food. If the patient desires substances that are not eatable or noxious, it constitutes *Pica*, *Pisso'sis*, *Pitto'sis*, *Heterorex'ia*, *Cissa*, *Cittosis*, *Depra'ved ap'petite*, *Citta*, *Limo'sis* *Pica*, *Allotriopha'gia*, *Pella'cia*, *Picacis'mus*, *Pica'tio*. (F) *Envie*. These symptoms accompany several nervous affections,—those of females in particular. In pregnancy it is common; and is termed *Longing*.

MALACOSAR'COS, from *μαλακός*, 'soft,' and *σαρξ*, 'flesh.' One of a soft constitution: *habitu corporis molliori præditus*.—Galen.

MALÆ, OS, from *malum*, 'an apple;' so called from its roundness. *Os Jugalē*, *Os Jugamen'tum*, *Os Génæ*, *Zygo'ma*, *Os Zygomat'icum*, (F) *Os Malaire*, *Os Zygomatique*, *Os de la pommette*. The cheek or malar bone. This bone is situate at the lateral and superior part of the face; and constitutes the zygomatic region or region of the cheek. It is irregularly quadrilateral. Its outer surface is convex, covered by muscles and skin, and pierced with canals, called *malar*, through which vessels and nerves pass. Its upper surface is concave, and forms part of the orbit. Its posterior surface is concave, and enters into the composition of the temporal fossa. This bone is thick and cellular. It is articulated with the frontal, temporal, sphenoid, and superior maxillary bones, and is developed by a single point of ossification.

The part of the face rendered prominent by this bone, the French call *Pommette*.

MALAG'MA, from *μαλασσω*, 'I soften.' An emollient cataplasm, and, in general, every local application which enjoys the property of softening organic tissues.

MALANDRIA. A species of lepra or elephantiasis.—Marcellus Empiricus.

MALANDRIO'SUS, *Leprous*. Affected with a species of lepra.

To **MAL'AXATE**, *Molli're*, *Subig'ere*, *Malacissa're*, (F) *Malaxer*, from *μαλασσω*, 'I soften,' and *μαλθασσω*. To produce the softening of drugs, by kneading them.

MALAZISSA'TUS, one in whom the testicles have not descended. It has, also, been used synonymously with *emasculatus*, and *muliera'tus*.—Castelli.

MALE, *Mas'culus*. Of the sex that begets young. Not female. What belongs to the male sex; as the *male organs of generation*.

MALIG'NANT, *Malignus*, (F) *Malin*. A term, applied to any disease, whose symptoms

are so aggravated as to threaten the destruction of the patient. A disease of a very serious character, although it may be mild in appearance;—*Morbus malignus*.

MALIS, *Maliasmos*, *Coc'ytia*, *Cuta'neous vermination*. The cuticle or skin infested with animalcules,—*Phthiriasis*, *Parasitismus superficiei*. In Persia, this affection is produced by the Guinea Worm; in South America, by the Chigre; and in Europe, occasionally by the Louse. See *Phtheiariasis*.

MALLEOLAR, *Malleola'ris*, from *Malleolus*, 'the ankle.' Belonging or relating to the ankles.

The **MALLEOLAR ARTERIES** are two branches, furnished by the *anterior tibial* about the instep; the one—the *internal*—passes transversely behind the tendon of the *tibialis anticus* to be distributed in the vicinity of the *malleolus internus*:—the other—the *external*—glides behind the tendons of the *extensor communis digitorum pedis* and the *peroneus brevis*, and sends its branches to the parts, which surround the outer ankle, as well as to the outer region of the tarsus.

MALLEOLUS. Diminutive of *mal'leus*, 'a mallet or hammer:' *Rasceta*, *Raste'ta*, *Sphyra*, *Talus*, *Diab'ebos*; the Ankle. (F) *Mal-léole*, *Cheville du Pied*. The two projections, formed by the bones of the leg at their inferior part. The *inner* belongs to the tibia: the *outer* to the fibula. The ankles afford attachment to ligaments, and each has a sort of gutter, in which certain tendons slide.

MALLET, *Malleolus*, (F) *Maillet*. A kind of hammer, used, with a gouge, for removing or cutting bones in certain surgical and anatomical operations.

MAL'LEUS, *Malleolus*, *Ossic'ulum Mal-leolo assimilatam*, (F) *Marteau*. The longest and outermost of the four small bones of the ear. It is situate at the outer part of the tympanum, and is united to the membrana tympani. It has, 1. An ovoid head, which is articulated, behind, with the incus, and is supported by a narrow part called the neck: this has, anteriorly, a *long apophysis*, which is engaged in the glenoid fissure, and is called the *Apophysis of Rau*, and *Proces'sus grac'ilis*. It affords attachment to the *anterior mallei* muscle. 2. A *handle*, which forms an obtuse angle with the neck, and corresponds to the membrane of the tympanum, which it seems to draw inwards. It is furnished, at its upper extremity, with a process—the *proces'sus brevis*, to which the *internus mallei* is attached. This bone is developed by a single point of ossification.

MALPIG'HIA MOUREL'LA, (F) *Moureiller*, *Simarouba faux*. The bark of this shrub—a native of Cayenne—is reputed to be febrifuge, and useful in diarrhœa.

MALT, Sax. mealc, Dutch mout, Teut. malt; from μαλαττα, 'I soften,' (?) *Maltum*, *Brasium*, (F) *Drèche*. Barley made to ger-

minate, for the purpose of forming beer. It has been recommended in medicine as antiscorbutic, antiscrophulous, &c.

MALT SPIRIT. A spirit distilled from malt. It is the basis of most of the spirituous cordials.

MALTHA, *Malthe*, from μαλαττα, 'I soften.' Wax, particularly a soft wax.

MALUM MORTUUM. A species of lepra, in which the affected portions of skin seem to be struck with death.

MALUS INDICA, *Bilumbi biting-bing* of Bontius. The juice of this East India tree is cooling, and drunk as a cure for fevers. The leaves, boiled and made into a cataplasm with rice, are famed in all sorts of tumours. The juice, mixed with arrack, is drunk for the cure of diarrhœa. The ripe fruit is eaten as a delicacy; and the unripe is made into a pickle for the use of the table.

MALVA, *Malva sylves'tris*, *M. vulga'ris*, *Common Mallow*, (F) *Mauve sauvage*. The leaves and flowers are chiefly used in fomentations, cataplasms, and emollient enemata. Its properties are demulcent.

The *Malva rotundifolia* has like virtues; as well as the other varieties.

MALVERN, WATERS OF. The village of Great Malvern, in Worcestershire, England, has for many years been celebrated for a spring of remarkable purity, which has acquired the name of the *Holy-well*. It is a simple carbonated water; and is chiefly used externally, in cutaneous affections.

MAMA-PIAN. An ulcer of a bad aspect, which is the commencement of the pian; and which, after having destroyed the flesh, extends to the bones. It is also called the *Mother of Pians*;—*La mère des pians*.

MAMEI, *Mamoe*, *Momin*, or *Toddy Tree*. From incisions, made in the branches of this West Indian tree, a copious discharge of pellucid liquor occurs, which is called *momin* or *toddy wine*. It is very diuretic, and is esteemed to be a good antilithic and lithontriptic.

MAM'ILLARY, *Mamilla'ris*, from *Mamilla*, 'a small breast, a nipple.'

MAMILLARY EM'INENCE is a name given, 1. To more or less marked prominences on the inner surface of the bones of the cranium, which correspond to the anfractuositities of the cranium. 2. To white, round, medullary tubercles, of the size of a pea, situate at the base of the brain, behind the gray substance from which the *Tige pituitaire*, of the French anatomists, arises. These *Mamillary Tu'bercles*, *Bulbes de la voûte à trois piliers*, *Cor'pora albican'tia*, *C. Candican'tia*, *Willis's Glands*, *Tubercules pisiformes* (Ch.), *Eminen'tiæ candican'tes*, *Pri'orum crurum for'nicis bulbi*, are united to each other by a small grayish band, which corresponds with the third ventricle. They receive the anterior prolongations of the fornix. Some ancient anatomists taking the nervous trunks, to which Willis

first gave the name *olfactory nerves*, for simple appendages of the brain, called them, on account of their shape, *Carunculæ mamilla' res*. Vesalius, Fallopius, Columbus, and several others, termed them *Processus mamilla' res cer'ebri ad nares*.

MAMMA, *Masthos*, *Mazos*, *Thele*, *Titthos*. The female breast, (*Mammil'la* being the male breast,) (F) *Mamelle*. A glandular organ, proper to a class of animals—the *mammalia*—and intended for the secretion of milk. The *mammæ* exist in both sexes, but they acquire a much greater size in the female; especially during pregnancy and lactation. In women, before the age of puberty, the breasts are but little developed. At this period, however, towards the central part of each breast, the skin suddenly changes colour and assumes a rosy tint in young females. It is of a reddish brown in women, who have suckled several children. This circle has a rugous appearance, owing to the presence of sebaceous glands, and is called *Areola* or *Aureola*. These glands furnish an unctuous fluid for defending the nipple from the action of the saliva of the sucking infant. In the midst of the aureola is the nipple, a conoidal eminence, of a rosy tint, susceptible of erection, and at the surface of which the galactophorous ducts open. Besides the skin, covering them, the breasts are, also, composed of a layer of fatty cellular tissue, more or less thick; of a large gland; excretory ducts; vessels, nerves, &c. See Mammary.

The breasts are called the *bosom*, (F) *Sein*.

MAMMARY, *Mamma'rius*, from *mamma*, 'the breast.' Relating to the breasts.

The MAMMARY GLAND is the secretory organ of the milk. It is situate in the substance of the breast to which it gives shape and size.

The tissue of this gland results from the assemblage of lobes of different size, united intimately by a dense cellular tissue. Each of them is composed of several lobules, formed of round granulations, of a rosy white colour and of the size of a poppy seed. The glandular grains give rise to the radicles of the excretory canals of the mamma, which are called *galactophorous* or *lactiferous*. These excretory vessels unite in *ramusculi*, *rami*, and in trunks of greater or less size; collect towards the centre of the gland; are tortuous, very extensible, and semitransparent. All terminate in sinuses, situate near the base of the nipple, and which are commonly from 15 to 18 in number. These sinuses are very short, conical, and united by cellular tissue. From their summits a fasciculus of new ducts sets out, which occupy the centre of the nipple and open separately at its surface. The arteries of the mammary gland come from the thoracic, axillary, intercostal, and internal mammary. The veins accompany the arteries; the nerves are furnished by the intercostals and brachial plexus; the lym-

phatic vessels are very numerous and form two layers. They communicate with those of the thorax, and pass into the axillary ganglions.

The MAMMARY ARTERIES are three in number. They are distinguished into—

1. The *Internal Mammary, Arte'ria sterna'lis*, *A. Sous-sternal* (Ch.), *Internal thorac'ic*. It arises from the subclavian and descends obliquely inwards, from its origin to the cartilage of the third rib. Below the diaphragm it divides into two branches: the one *external*, the other *internal*. From its origin until its bifurcation, it gives branches to the muscles and glands of the neck, to the thymus, mediastinum, pericardium, and œsophagus. In each intercostal space, it gives off *internal* and *external musculo-cutaneous* branches, and also, on each side, the *superior diaphragmatic*. Its two ultimate branches are distributed in the parietes of the abdomen, and anastomose with the external mammary, intercostal, lumbar, circumflexa ilii, and epigastric arteries.

2. The *External Mammary Arteries* are two in number; and are distinguished into *superior* and *inferior*. The *superior external mammary, First of the thoracics* (Ch.), *Superior external thoracic, Superior thoracic*, is furnished by the axillary artery. It descends obliquely forwards between the pectoralis major and pectoralis minor, to which it is distributed by a considerable number of branches.

The *inferior external mammary*, the *second of the thoracics* (Ch.), *Long or inferior thoracic*, arises from the axillary artery, a little below the preceding. It descends vertically over the lateral part of the thorax; curves, afterwards, inwards; becomes subcutaneous and divides into a number of branches, which surround the breast. It gives branches to the pectoralis major, serratus major anticus, the intercostal muscles, the glands of the axilla and the integuments of the breast.

MAMMARY SARCOMA, *Mastoid sarcoma* of Abernethy, *Emphy'ma sarcoma mamma'rum*. Tumour, of the colour and texture of the mammary gland; dense and whitish; sometimes softer and brownish; often producing on extirpation, a malignant ulcer with indurated edges. Found in various parts of the body and limbs.

The MAMMARY VEINS follow the same course as the arteries, and have received the same denominations. The *internal mammary vein*, of the right side, opens into the superior cava; that of the left, into the corresponding subclavian vein. The *external mammary veins* open into the axillary vein.

MAMMEA AMERICA'NA. The systematic name of the tree on which the *mam-mee* fruit grows. This fruit has a delightful flavour when ripe; and is much cultivated in Jamaica, where it is generally sold in the markets as one of the best fruits of the island.

MANDRAGORITES, from *μανδραγορα*, the *Atropa mandrag'ora* or mandrake.

Wine, in which the roots of mandrake have been infused.

MANGANESE, BLACK OXIDE OF, *Tetroxide of manganese, Magnesia nigra, M. vitrario'rum, M. oxydatum nativum seu nigrum, Manganesium ochraceum nigrum, M. oxydatum nativum, Manganium oxydatum nativum, Molybdænum magnesii, Oxodes man'gani nativa, Peroxydum mangan'esii nigrum nativum, Superoxydum mangan'icum.* This oxide is not much used in medicine. It has been advised to dust the affected parts, in tinea capitis, with the powder.

MANGIFERA INDICA. The *Mango tree.* (F) *Manguier.* A tree, cultivated over Asia and in South America. Mangos, when ripe, are juicy; of a good flavour; and so fragrant as to perfume the air to a considerable distance. They are eaten, either raw or preserved with sugar. From the expressed juice a wine is prepared; and the remainder of the kernel can be reduced to an excellent flour for bread.

MANIA, *Furor mania, Insan'ia, Delir'ium mani'acum, Ecphro'nia mania, Delir'ium mania, D. furio'sum, Mania universa'lis, Vesania mania, Raving or furious madness;* from *μανομαι*, 'I am furious.' With some, it means *insan'ity.* Disorder of the intellect, in which there is erroneous judgment or hallucination, which impels to acts of fury. If the raving be not directed to a single object it is mania properly so called; if to one object it constitutes *monomania.* This term is, however, usually given to melancholia.

Mania attacks adults chiefly; and women more frequently than men. The prognosis is unfavourable. About one-third never recover; and they, who do, are apt to relapse.

Separation is one of the most effective means of treatment, with attention to the corporeal condition and every thing that can add to the mental comfort of the patient; and turn his thoughts away from the subjects of his delusion.

In the violence of the paroxysms, recourse must be had to the straight waistcoat, the shower bath, &c.

Separation should be continued for some weeks during convalescence; with the view of preventing a relapse.

MANILUVIUM, *Manulu'vium,* from *manus*, 'the hand,' and *lavo*, 'I wash.' A bath for the hands. It may be rendered stimulating by means of muriatic acid, mustard, &c.

MANIODES, *Mani'acus.* One labouring under mania, a maniac.

MANIPULATION, from *manus*, 'a hand.' Mode of working in the arts.

MANIPULUS, (F) *Poignée.* The quantity of a substance capable of filling the hand. A handful.

MANŒUVRE (F), from *main*, 'the hand,' and *œuvre*, 'work.' *Opera'tio chirurgica vel obstet'rica.* The practice of surgical or ob-

stetrical operations on the dead body or phantom.

MANUBRIUM, from *manus*, 'a hand.' The handle of any thing:—as *manubrium mallei*, 'the handle of the malleus.'

MANTIA, *mantica, mantice,* *μαντια, μαντικη*, in English, *mancy*; a common suffix, denoting 'divination.'

MANUS, *Cheir,* (F) *Main.* The hand. The part, which terminates the upper extremity in man, and which is inservient to prehension and touch. It extends from the fold of the wrist to the extremity of the fingers.

The hand is sustained by a bony skeleton, composed of a number of pieces, movable on each other; of muscles, tendons, cartilages, ligaments, vessels, nerves, &c. It is divided into three parts—the *carpus* or wrist, the *metacarpus*, and *fingers.* Its concave surface is called the *palm*; the convex surface the *back of the hand.* The facility of being able to oppose the thumb to the fingers in order to seize objects forms one of the distinctive characters of the human hand.

MANUS CHRISTI PERLATA. A name, anciently given to troches, prepared of pearls and sugar of roses. They were called *Manus Christi simplices*, when pearls were not employed.

MANUS DEI. An ancient plaster, prepared of *wax, myrrh, frankincense, mastich, Gum ammoniac, Galbanum oil,* &c.

MARAN'TA GALAN'GA, *Amomum galanga, Galanga.* The *smaller galangal.* Two kinds of galangal are mentioned in the pharmacopœias;—the *greater*, obtained from the *Kæmpferia galanga*, and the *smaller*, from the root of the *Maranta galanga.* The dried root is brought from China, in pieces, from one to two inches in length, but scarcely half as thick; branched; full of knots and joints, with several circular rings, of a reddish brown colour, on the outside, and brownish within. It was formerly much used as a warm stomachic bitter; and generally ordered in bitter infusions.

MARATHRITES, from *μαραθρον*, 'fennel.' Wine, impregnated with fennel.

MARCHANTIA POLYMORPHA, *Hepatica fontana, Lichen stella'tum, Jecora'ria, Liverwort.* (F) *Hépatique des fontaines.* This plant is mildly pungent and bitter. It is recommended as aperient, resolvent, and antiscorbutic; and is used in diseased liver, &c.

MARCHIONIS, PULVIS, *Powder of the Marquis.* A powder, formerly considered to be anti-epileptic; and composed of *Male pæony root, Mistletoe, Ivory shavings, Horn of the root of the stag, Spodium, Tooth of the monodon, coral,* &c.

MARGA CAN'DIDA, *Lac lunæ.* An ancient name for a variety of spongy, white, friable marl, which was employed as an astringent and refrigerant.

MARIS, *μαγισ.* Ancient name of a measure, containing 83 pints and 4 ounces.

MARMARYGO'DES, 'brilliant.' An epithet, joined particularly to the word *οφθαλμος*;—a *brilliant eye*, a *flashing eye*.

MAR'MELADE, *Marmela'da*, *Mar'malade*, *Miva*. Parts of vegetables, confectioned with sugar and reduced to a pultaceous consistence.

MARMELADE OF APRICOTS. A marmelade, prepared with two parts of ripe apricots deprived of their stones, and one part of white sugar.

MARMELADE OF TRONCHIN OR OF FERNEL. A kind of thick looch, of an agreeable taste, prepared with two ounces of oil of sweet almonds, as much syrup of violets, manna in tears, very fresh pulp of cassia, 16 grains of gum tragacanth, and two drachms of orange flower water. It is used as a laxative, demulcent, and pectoral.

MAR'RIOTT, DRY VOMIT OF. This once celebrated emetic, called *dry*, from its being exhibited without drink, consisted of equal portions of tartarized antimony and sulphate of copper.

MARROW, *Myelos*, *Medul'la*, *Med'ullary Juice*, *Azungia de Mum'ia*, Sax. *mepr̃*. (F) *Moëlle*, *Suc médullaire*. The oily, inflammable, whitish or yellowish juice, which fills the medullary canal of the long bones, the cancellated structure at the extremities of those bones, the diploe of flat bones, and the interior of short bones. The marrow is furnished by the exhalation of the medullary membrane. It is fluid during life, and appears under the form of small points or of brilliant grains, after death. It is enveloped in the medullary membrane.

MARRU'BIUM, *Marrubium vulga'rē*, *M. album*, *Horehound*, *Prasium*, *Phrasum*. (F) *Marrube blanc*. The leaves have a moderately strong, aromatic smell; and a very bitter, penetrating, diffusive, and durable taste. It has often been given in coughs and asthmas, united with sugar. Dose, ʒ ss to ʒ j, in infusion; dose, of extract, gr. x to ʒ ss.

FORD'S BALSAM OF HOREHOUND is made as follows:—*horehound*, liquorice root, aa ʒ iij and ʒ viij; *water*, q. s. to strain, ʒ vj. Infuse. To the strained liquor add:—*proof spirit* or *brandy*, ʒ 12; *camphor*, ʒ j and ʒ ij; *opium* and *benjamin*, aa ʒ j; *dried squills*, ʒ ij; *oil of aniseed*, ʒ j; *honey*, ʒ iij and ʒ viij.—Gray. It is pectoral.

MARSH, *Limne*, *Helos*, *Palus*, Sax. *mepr̃*, (F) *Marais*. Marshy districts give off emanations, which are the fruitful source of disease, and the cause of great insalubrity in many countries. The chief disease, occasioned by the malaria or miasm (q. v.), is intermittent fever. Hence it becomes important to drain such regions, if practicable. Marshy countries are, however, not so liable to phthisis pulmonalis, and it has been found, that where intermittents have been got rid of by draining, consumption has, at times, become frequent.

The most unhealthy periods for residence in a marshy district are during the existence of the summer and autumnal heats: at which times the water becomes evaporated, and the marshy bottom is more or less exposed to the sun's rays. This postulatam seems necessary for the production of the miasmata: for whilst the marsh is well covered with water, no miasm is given off.

MARSUM, *Mar'sium*, *Mar'sicum*. An ancient wine of Marsia, in Italy, which was used as an astringent in certain diseases of the mouth.

MARSU'PION, *Marsyp'ion*, *Marsip'pon*, *Marsu'pium*, *Sac'culus*. A sac or bag, with which any part is fomented. Also, the abdominal pouch in the Kangaroo, Opossum, &c. into which the young, born at a very early stage of development, are received and nourished with milk secreted from glands contained within the pouches. Such animals are termed *Marsupial*, or *Marsupiate*.

MARTIA'TUM UNGUEN'TUM, *Onguent de Soldat*, *Soldier's ointment*. This was composed of bay-berries, rue, marjoram, mint, sage, wormwood, basil, olive oil, yellow wax, and Malaga wine. It was invented by Martian; and was employed by soldiers as a preservative against cold.

MASCHALON'CUS, from *μασχάλη*, 'the axilla,' and *ογκος*, 'a tumour.' A tumour or bubo in the axilla.

MASK, *Larva*, (F) *Masque*. A bandage, applied over the face, as a sort of mask, in cases of burns, scalds, or erysipelas. It serves to preserve the parts from the contact of air, and to retain topical applications *in situ*. It is made of a piece of linen, of the size of the face, in which apertures are made corresponding to the eyes, nose, and mouth, and which is fixed by means of strings stitched to the four angles.

MASLACH, *Am'phion*, *An'fion*. A medicine, much used by the Turks, and into the composition of which opium enters. It is excitant.

MASS, *μαζα*, *Maza*, *Massa*, from *μασσω*, 'I mix.' The compound, from which pills have to be formed.

MASSE'TER, *μασσητηρ*, from *μασσαι*, 'I eat,' 'I chew;' *Zygomato-maxillaire*. A muscle, situate at the posterior part of the cheek, and lying upon the ramus of the lower jaw-bone. It is long, quadrilateral, and is attached, *above*, to the inferior edge and to the inner surface of the zygomatic arch; *below*, it terminates at the angle of the jaw, and at the outer surface and inferior margin of the ramus of that bone. It is composed of an intermixture of fleshy and aponeurotic fibres. Its office is to raise the lower jaw, and to act in mastication.

MASSETER'IC, *Mas'seterine*, *Masseter'icus*, *Masseteri'nus*. Relating or belonging to the masseter muscle.

The MASSETERINE ARTERY arises from the

trunk of the internal maxillary or temporalis profunda posterior, and is distributed to the masseter muscle, after having passed, horizontally, through the sigmoid notch of the lower jaw-bone.

The MASSETERINE VEIN has the same distribution as the artery. It opens into the internal maxillary vein.

The MASSETERINE NERVE is given off from the inferior maxillary branch of the 5th pair. It passes through the sigmoid notch, and is distributed on the inner surface of the masseter. In luxation of the lower jaw, this nerve is strongly stretched, and considerable pain, consequently, produced.

MASTICA'TION, *Mastica'tio*, *Mase'sis*, *Masse'sis*, *Masse'ma*, *Maste'sis*, *Manduca'tio*, *Commanduca'tio*, from *μαστιχαω*, 'I chew.' The action of chewing or bruising food, to impregnate it with saliva, and prepare it for the digestion it has to undergo in the stomach. This is executed by the joint action of the tongue, cheeks, and lips, which push the alimentary substance between the teeth; and by the motions of the lower jaw it is cut, torn, or bruised.

MAS'TICATORY, *Masticato'rium*, *Maste'ma*, *Diamaste'ma*. Same etymon. A substance, chewed with the intention of exciting the secretion of saliva.

MASTODYN'IA, *Mastal'gia*, from *μαστος*, 'the breast,' and *οδυνη*, 'pain.' Pain in the breasts: a sort of neuralgia.

MASTODYN'IA APOSTEMATO'SA, *Phleg'monē Mammæ*, *Masthelco'sis*, *Masti'tis apostemato'sa*, *Absces'sus Mammæ*, *Phleg'monē Mastodyn'ia*, *Abscess of the Breast*, *Mam'mary Abscess*. Phlegmonous inflammation of the breasts, running on to suppuration. It is one of the best examples of acute phlegmonous inflammation, and requires the active use of appropriate treatment.

MASTOID, *Mastoi'des*, *Mammillaris*, *Papil'li-aut-mammilli-formis*, *Mammiformis*; from *μαστος*, 'a breast,' and *ειδος*, 'form, resemblance.' Having the form of a nipple.

The MASTOID or MAM'MIFORM or MAM'MILARY PROCESS, is situate at the inferior and posterior part of the temporal bone, and gives attachment to the digastric and mastoid muscles.

MASTOID, *Mastoïdeus*. That which relates to the mastoid process.

The MASTOID CELLS, *Antrum mastoïdeum*, *Mastoid Sinus*. These are situate in the mastoid process; communicate with each other, and open into the cavity of the tympanum. Their use seems to be, to increase the intensity of sound.

The MASTOID FOSSA, (F) *Gouttière mastoïdienne*, is a depression at the inner surface of the mastoid portion of the temporal bone, which forms part of the lateral sinus.

The MASTOID AP'ERTURE:—the opening of communication between the cavity of the tympanum and the mastoid cells.

The MASTOID PORTION OF THE TEM'PORAL BONE, is that part which bears the mastoid process.

The MASTOID or DIGAS'TRIC GROOVE, (F) *Rainure mastoïdienne ou digastrique*, is a groove, situate at the inner side of the mastoid process, which affords attachment to the posterior belly of the digastric muscle.

The MASTOID FORA'MEN is situate behind the mastoid process, and gives passage to a small artery of the dura mater, as well as to a vein which opens into the lateral sinus.

MASTON'CUS, from *μαστος*, 'the breast,' and *ογκος*, 'a tumour.' A tumefaction of the nipple or of the breast itself.

MASTURBA'TION, *Mastupra'tio*, *Manustupra'tio*, *Manstupra'tio*, from *manus*, 'the hand,' and *stupro*, 'I ravish.' *Onania*, *O'nanism*, *Voluntary Pollu'tion*, *Self-Pollution*, (F) *Abus de soi-même*, *Attouchement*. Excitement of the genital organs by the hand.

MAT (F), *Dull*. A dull sound, *Son mat*. The obscure noise, afforded when any part, as the chest, is percussed in several diseases. It has been compared to that produced when the thigh is struck. It is opposed to the *Son clair*, or 'clear sound.'

MATERIA MEDICA, *Pharmacolo'gia*, *Pharmacol'ogy*, *Acol'ogy* or *Akol'ogy*, *Hylē Iatricē*, *Iamatol'ogy*, (F) *Matière Médicale*. The division of medical science, which treats of the knowledge of medicines; their action on the animal economy, and mode of administration.

The study of the Materia Medica is one of great importance:—it is a study of the tools, with which the practitioner has to work in the cure of disease.

Much labour has been spent in contriving classifications of the Materia Medica. Some have arranged the articles, according to their natural resemblance: others, according to their real or presumed virtues; others, according to their active constituent principles. The Pharmacopœias place them alphabetically.

Perhaps the best classification would be one founded on the agency exerted by the articles on the different tissues; but this arrangement, in the present state of science, is by no means easy; and, moreover, the action of medicines is so associated with certain terms,—as narcotics, tonics, sedatives, &c., employed to denote certain operations, which they are esteemed capable of producing, that, to abandon them, would be to throw obstacles in the way of the student, without the ultimate advantage accruing to him—of possessing a better knowledge of the *modus operandi* of medicines than when a classification, somewhat resembling those usually embraced, is adopted.

The following is the classification given by the Author in his "General Therapeutics," (Philadelphia, 1836.)

CLASSIFICATION OF THERAPEUTICAL AGENTS.

I. VITAL AGENTS.	Exci- tants.	Increasing action ge- nerally or locally or both.	Excitants proper, Tonics, Anthelmintics, Astringents, Emetics, Cathartics, Emmenagogues, Abortives, Diaphoretics, Errhines, Sialogogues, Diuretics, Expectorants, Sorbefacients, Revellents, Antispasmodics.
		Diminish- ing action directly or indirectly.	Sedatives proper, Narcotics, Refrigerants, Nauseants. Antacids, Antalkalies, Antilithics, Disinfectants.
II. CHEMICAL AGENTS.			Demulcents, Diluents.
III. MECHANICAL AGENTS.			

Of old, the *Materia Medica* consisted of more articles than at present. The tendency, indeed, is, and must be, to diminish it still farther: to get rid of those articles, which possess no advantages over others equally common, or whose properties are doubtful.

In a Dictionary, it becomes necessary to insert all that have been reputed to possess virtues; but the majority are unnecessary. The catalogue might be largely reduced, with impunity.

MATLOCK, MINERAL WATERS OF. Matlock is a village in Derbyshire, England, at which there is a mineral spring of the acidulous class. Temperature 66°. It differs but little, except in temperature, from good spring water. It is generally used as a tepid bath.

MATRASS, *Matracium*, (F) *Matrass*. A glass vessel with a long neck; and a round, and sometimes oval, body. It may be furnished with tubulures or not. It is used in *Pharmacy* for distillation, digestion, &c.

MATRICA'RIA, from *matrix*, 'the womb;' so called from its reputed virtues in affections of that organ. *Matrica'ria Parthe'nium*, *Parthe'nium febrif'uga*, *Argyrochæ'ta*, *Chrysoc'alis*, *Fever-few*, *Feather-few*, *Mother-wort*, (F) *Matricaire*. It resembles, in its properties, chamomile and tansy; and, like them, has been esteemed tonic, stomachic, resolvent, emmenagogue, vermifuge, &c. It is not much used.

MATRICA'RIA CHAMOMIL'LA, *Chamæmélum vulga'rè*, *Chamomil'la nostras*, *Leucan'themum* of *Dioscorides*; *Wild Corn*, *Dog's Cham'omile*, (F) *Camomille vulgaire*. It resembles the *Matricaria* in properties.

MATTER, *Mat'ria*, *Hyle*, *Mat'ries*, (F) *Matière*. Any substance, which enters into the composition of a body. In *Medicine*, it is sometimes applied to the substance of evacuations; and is also used synonymously with pus.

MATURA'TION, *Matura'tio*, from *matura're*, 'to ripen;' *Pepas'mos*, *Pepan'sis*. Progression of an abscess towards maturity. The state of maturity. Coction (q. v.)

MAT'URATIVE, *Matu'rans*, *Pepanticos*. A medicine which favours the maturation of an inflammatory tumour.

MATU'RITY, *Matu'ritas*. The state of fruits and seeds, when completely developed. State of an abscess, in which the pus is completely formed.

MAX'ILLARY, *Maxilla'ris*, from *maxil-la*, 'a jaw.' Relating or belonging to the jaws; from *μασσαι*, 'I chew.'

MAXILLARY BONE, *Maxil'la*, *Mandib'ula*, *Siagon*, 'jaw,' (F) *Machoire*. A name given to two bones, which support the teeth, and which, by means of them, are inservient to the cutting, bruising, and tearing of alimentary substances.

The jaw bones are two in number.

1. The upper jaw bone, *superior maxillary bone*, *Maxilla superior*, *Os maxilla'rè superius*, *Maxil'la syncra'nia*, *Os sus-maxillaire* (Ch.), *Machoire syncranienne*. The upper jaw bones are to the face what the sphenoid bone is to the cranium. They are articulated with all the portions composing it. They determine, almost alone, the shape of the face, and give it solidity. Their size is considerable; form unequal. They occupy the middle and anterior part of the face; and enter into the composition of the nasal fossæ, orbit, and mouth. The chief parts observable in the upper jaw, are, 1. *Externally*.—The *Nasal process*, (F) *Apophyse montante*, *Fora'men infra-orbita'rium*, *Zygomat'ic process*, *Canine fossa*, *Myr'tiform fossa*. 2. *Internally*.—The *Palatine process*, *Ante'rior palatine canal*, and the *Antrum of Highmore*. Its circumference is very unequal, and it has behind a round, unequal prominence called the *Maxillary tuberosity*, which is pierced by the *posterior dental canal*. Anteriorly, is a notch, which forms part of the anterior aperture of the nasal fossæ; and beneath, an eminence called the *anterior nasal spine*. The lower part of this circumference forms the *alveolar margin*.

Each superior maxillary bone is articulated with the ethmoid, frontal, nasal, lachrymal, palatine, inferior spongy, vomer, its fellow, the teeth of the upper jaw, and sometimes with the sphenoid bone. It is developed by 4 or 5 points of ossification.

The lower jaw bone, *Os Maxilla're infe'rius*, *Machoire diacranienne*, *Maxil'la inferior*, *Os maxillaire* (Ch.), is a symmetrical, nearly parabolic bone, the middle portion of which is horizontal and called the *body*;—the posterior vertical, and angular portions being termed *Rami* or *branches*. These have behind a *parotidean edge*, which forms—by uniting with the base—the *angle of the jaw*. The branches terminate above, by two processes, separated by the *sigmoid notch* or *fossa*; the

anterior of which is called the *coro'noid*; the posterior, the *condyloid* process or *maxillary condyle*, supported by a *Cervix*, *Collum*, or *Neck*. The chief parts observed on the lower jaw are—1. *Externally*,—the *Sym'physis menti*, *Apoph'ysis menti*, *Mental foramen*, and the *external oblique line*.—2. *Internally*,—the *Geniapoph'yses*, the *internal* or *Myloid oblique lines*, and the *entrance of the dental canal*.

The lower jaw has, also, an *alveolar edge*, which contains *alveoli* for the reception of the teeth.

The lower jaw bone is developed by two points of ossification, which unite at the *symphysis* of the chin. It is articulated with the temporal bones and with the teeth.

The MAXILLARY ARTERIES are three in number. 1. The *external maxillary*. See *Facial*. 2. *Internal maxillary*—*A. Gutturamaxillaire* (Ch.) This arises from the external carotid with the temporal. It is remarkable for its complex course and for the number of branches which it transmits to the deep-seated parts of the face. Immediately after its origin, it buries itself under the neck of the lower jaw, curving inwards and downwards. It then advances directly inwards; proceeding in the space between the two pterygoid muscles towards the *maxillary tuberosity*. It turns again, becomes vertical, and ascends into the bottom of the zygomatic fossa, until, having arrived at the floor of the orbit, it takes a horizontal and transverse direction; enters the sphenomaxillary fossa and divides into several branches. See *Artery*. (Table.)

The MAXILLARY VEINS present the same arrangement as the arteries they accompany.

The MAXILLARY NERVES are two in number, and formed of the second and third branches of the fifth pair.

The SUPERIOR MAXILLARY NERVE, *Nerf sus-maxillaire* (Ch.), arises from the middle of the gangliform enlargement of the 5th pair; passes forwards and issues from the cranium through the foramen rotundum of the sphenoid bone; enters the sphenomaxillary fossa, which it crosses horizontally; passes into the infra-orbital canal, which it traverses; and makes its exit to vanish on the cheek. It gives off the following branches—the *orbital*, a branch which goes to the *spheno-palatine ganglion*; *posterior dental branches*; the *anterior dental*,—and terminates in the *infra-orbital nerves*—which are divided into *superior*, *inferior*, *internal*, and *external*.

The *inferior maxillary nerve*, *Nerf maxillaire* (Ch.), is the largest of the three branches, furnished by the 5th pair. It issues from the cranium by the foramen ovale of the sphenoid. Having reached the zygomatic fossa it divides into two trunks;—the one *superior* and *external*, which gives off the *temporales profundi*, *masseterine*, *buccal* and

pterygoids; the other,—*inferior* and *internal*,—the larger of the two, which furnishes the *inferior dental*, *lingual*, and *auricular*.

MAZISCH'ESIS, from *maza*, (with some) 'the placenta,' and *σχισις*, 'holding,' 'retention.' Retention of the placenta.

MECHAN'ICAL, *Mechanicus*, from *μηχανη*, 'a machine.' An epithet given to irritating bodies, which do not act chymically,—as a *mechanical irritant*.

Mechanical or *Iatro-mathematical Physicians* are such as refer every function, healthy or morbid, to mechanical or mathematical principles.

MECHAN'ICS, AN'IMAL. That part of physiology, whose objects are to investigate the laws of equilibrium and motion of the animal body.

MECH'ANISM. The structure of a body; the collection or aggregate of the parts of a machine; the mode in which forces produce any effect, &c.

MECO'NIUM, from *μηκων*, 'a poppy.' *Poppy juice*. *Papaverculum*, *Purgamenta Infantis*. The excrement passed by the infant a short time after birth, which had accumulated in the intestines, during pregnancy. It is of a greenish or deep black colour and very viscid. It seems formed of the mucous secretions of the intestines mixed with bile.

MEDIAN, *Media'nus*; from *me'dium*, 'the middle.' That which is situate in the middle.

MEDIAN LINE. A vertical line supposed to divide a body longitudinally into two equal parts; the one right, the other left. *Chaussier* calls the *linea alba* the *ligne mediane* of the abdomen.

The MEDIAN NERVE, *Median digital* (Ch.) This nerve arises, chiefly, from the anterior branches of the two last cervical nerves and first dorsal. The 5th and 6th cervical pairs also send it a branch, which separates from the musculo-cutaneous nerve. The median nerve descends along the inner part of the arm along the biceps muscle. Opposite the elbow joint it buries itself behind the aponeurosis of that muscle, and engages itself between the two fasciculi of the pronator teres. Lower down, it is situate between the flexors—*sublimis* and *profundus*—and passes with their tendons under the anterior annular ligament: it then divides into 5 branches, which are distributed to the muscles of the thenar eminence, to the lumbricales, the integuments of the thumb, the index, middle finger, and outer part of the ring finger. This nerve gives no branches to the arm. In the forearm, it furnishes filaments to all the pronator and flexor muscles; and one of them accompanies the anterior interosseous artery. It, also, gives off a filament to the integuments of the palm of the hand.

MEDIAN VEINS. Three of the superficial veins of the forearm are so called. The *me-*

dian basilic—the median cephalic and common median or *Funis brachii*. See Basilic and Cephalic.

MEDIASTINUM, quasi, in *me'dio stans*, as being in the middle. *Mesod'mē, Media-num, Septum thora'cis, Hymen Diaphratton, Membra'na Thora'cem intersepiens*. A membranous septum formed by the *adossement* of the pleura; dividing the chest into two parts, the one right, the other left. The mediastinum, formed by a double reflection of the pleura, extends from the spine to the posterior surface of the sternum. Its anterior part, called the *Anterior mediastinum, Mediastinum pectora'le*, lodges, at its upper part, the thymus gland in the fœtus, and is filled below with fatty, cellular tissue. Its posterior part, parallel to the spine, is occupied by the œsophagus, vena azygos, thoracic duct, the lower part of the windpipe, the origin of the bronchi and a number of lymphatic glands. This part is called the *posterior mediastinum—Mediastinum dorsa'le*.

The **MEDIASTINAL ARTERIES** are very delicate arterial branches, distributed in the cellular texture of the mediastinum. They are distinguished, according to their situation, into anterior and posterior.

MEDICAMENT, *Medicamen'tum, Remēdium, Ac'esis, Aces'ma, Acos, Medica'men, Phar'macum, Med'icine, Physic, Rem'edy, Alkar, Auxil'ium, Boëthē'ma*, from *medicare*, 'to cure or heal.' A medicine. Any substance, exhibited with the view of curing or allaying morbid action. Medicines are obtained from the three kingdoms of nature, and are divided into *internal* and *external*, according as they are administered internally or applied externally.

MEDICAMENTO'SUS LAPIS, *Medic'i-nal stone*, (F) *Pierre médicamenteuse*. A name, formerly given to a mixture of *peroxyd of iron; litharge; alum; nitre; sal ammoniac*; and *vinegar*; evaporated and calcined at a red heat for an hour. The product was regarded as eminently astringent.

MEDICASTER, *Medicastra*. An ignorant practitioner. A charlatan.

MEDICA'TION, from *mederi*, 'to remedy.' The change in the animal economy, produced by the operation of remedies. Treatment by medicine.

MEDICI'NA, *Med'icine, Ars medica. The healing art, Res medica, Ars Machao'nia, Iat'ricē, Iater'ia, Iatrotechnicē, Physic*. (F) *Médecine*. A science, the object of which is the cure of disease and the preservation of health. Occasionally, it is used to comprehend all the branches of the healing art; at others, to comprise one great division, in contradistinction to *surgery* and *obstetrics*. Medicine, in this sense, includes many branches;—the chief of which are, *Anatomy, Physiology, Pathology, Therapeutics, Hygiene, Materia Medica*, and *Pharmacy*.

Medicine is, also, used in the same sense

as *Medicament* (q. v.) and for a purging potion.

MEDIC'INAL, *Medicina'lis*. Having a remedial power;—as *medicinal plants, &c.*

MEDICINA'LES DIES, *Medic'inal days*. Days on which the ancients considered that remedies might be administered; and especially evacuants. Such days were not esteemed critical.

MED'ICINE, LEGAL, *Med'ical jurisprudence* of some, *Law med'icine, Forensic medicine, Medici'na foren'sis*. (F) *Médecine légale*. The application of medical knowledge to the solution of every question, connected with the preservation of the species, and the administration of justice.

MEDIM'NUS, *Medim'nos, μεδιμνος*. An ancient measure, capable of containing about 4 pecks and 6 pints.

ME'DIUS. The middle, median.

The **MIDDLE FINGER**, (F) *Doigt du milieu*, is between the index and ring finger.

MEDUL'LA OBLONGA'TA. *Cer'ebral protu'berance, Nervous system of the senses*, (Gall.), *Cer'ebrum elonga'tum, Mésocéphale*, (Ch.) (F) *Moëlle allongée*. The medullary substance, that lies within the cranium upon the basilar process of the occipital bone. The anterior surface, which rests in the basilar groove, is impressed by the basilar artery. At the upper extremity, and on its posterior surface are the *Tubercula quadrigemina*. At the same extremity, the medulla gives rise to two prolongations, the *peduncles of the brain*, separated from each other by the mammillary eminences and becoming lost in the optic thalami. The lower extremity is called the *tail* or *Rachid'ian bulb*, and is continuous with the medulla spinalis. It is to this part only that some anatomists apply the name *Medulla oblongata*. From the posterior angles two other prolongations arise, called *Peduncles* of the cerebellum.

The medulla oblongata has several eminences—the *Pons varolii, Corpora pyramidalia, C. olivaria, &c.* (q. v.)—and it has a longitudinal fissure before, and another behind, called the *anterior* and *posterior median fissures*.

MEDUL'LA SPINA'LIS, *Æon, Notia'us, Medul'la vertebra'lis, Proces'sus rachidia'nus, Sacra fis'tula, Spinal prolonga'tion, The ver'tebral marrow, Spinal cord, The nervous system of voluntary motion and tactile impression* (Gall.), *The spinal marrow, Medul'la dorsa'lis*, (F) *Moëlle épinière, Moëlle vertebrale*, called by Chaussier, *Prolongement rachidien* of the encephalon, is the continuation of the medulla oblongata. It commences at the foramen magnum of the occipital bone, and descends in the vertebral canal as low as the 2d lumbar vertebra, without filling it; presenting, in its course, several evident enlargements. It is grooved, on both its anterior and posterior surfaces, by a furrow, which divides it, in its whole length, into two

great nervous cords, intimately united with each other. It terminates by an oval tubercle, whence a number of nerves set out, called *Cauda equina*, (F) *Queue de cheval*, from its resemblance to a horse's tail. The spinal marrow has no analogy, as regards its structure, with the marrow of long bones. It is formed of two substances; one white, the other gray, presenting an inverse arrangement to that which they have in the brain, the white being external, the cineritious at the centre. It is enveloped by a yellowish, fibrous membrane, very resisting, and which seems to be continued insensibly from the pia mater, and two other membranes, which are merely prolongations of the arachnoid and dura mater. See Nerve.
